715-720.—Chilperic II. (?-720); deposed by Charles Martel, mayor of the palace in 717, restored in 720, but soon dies at Noyon.
720-737.—Thierry IV. (712-737); son of Dagobert III.; reigned under the influence of Charles Martel who took the title "duke of the Franks."
737-741.—Interregnum, till death of Charles Martel, 741.
742-752.—Childeric III. (?-755); son of Childeric II.; last of the Merovingians; made king by Pepin, 742; deposed by him, 752.

THE CARLOVINGIANS

751-768.—Pepin the Little (714-768); son of Charles Martel.
768-814.—Charlemagne, or Charles the Great (742-814); son of Pepin the Short; Charles crowned Emperor of the West, by Leo III., 800. Carloman reigned with him three years.
814-840.—Louis I., *le Debonnaire* (778-840); son or Chalres the Great; emperor; dethroned, but restored.
843-877.—Charles the Bald (823-877); younger son of Louis le Debonnaire, king; emperor in 875; poisoned by Zedechias, a Jewish physician.
877-879.—Louis II. (846-879); son of Charles the Bald.
879-884.—Louis III. (863-882) and Carloman (?-?); sons of Louis II.; the former died 882, and Carloman reigned two years alone.
884-888.—Charles the Fat (839-888); son of Louis the German; usurps right of Charles the Simple.
888-898.—Count Eudes (?-898); Eudes, or Hugh, count of Paris.
898-922.—Charles the Simple (879-929); son of Louis the Stammerer; Charles III. (or IV.) was deposed, and died in prison in 929; he married Edgiva, daughter of Edward the Elder, of England, by whom he had a son, King Louis IV.
922-936.—Raoul (Rudolph of Burgundy) (?-?); Rudolph, or Raoul, duke of Burgundy; elected king, but never acknowledged by the southern provinces.
936-954.—Louis IV. (921-954); son of Charles the Simple; taken by his mother into England, died by fall from his horse.
954-986.—Lothaire (941-986); son of Louis IV.; ruled with his father from 952, succeeds him at fifteen years of age, protected by Hugh the Great; poisoned.
986-987.—Louis V. (966-987); son of Lothaire; poisoned (supposed by his queen, Blanche); last of race of Charlemagne.

HOUSE OF CAPET

987-996.—Hugh Capet, the Great (?-996); eldest son of Hugh the Abbot; usurps the rights of Charles of Lorraine, uncle of Louis IV. From him this race of kings is called Capetians.
996-1031.—Robert II. (971-1031); son of Hugh Capet; surnamed the Sage; died lamented.
1031-1060.—Henry I. (1011?-1060); son of Robert II.
1060-1108.—Philip I., the Fair –1052-1108); son of Henry I.; succeeded at eight years of age; ruled at fourteen.
1108-1137.—Louis VI. (le Gros) (1078-1137); son of Philip I.
1137-1180.—Louis VII. (1120-1180); son of Louis VI.; surnamed the Young; reigned with his father for some years.
1180-1223.—Philip II., Augustus (1165-1223); son of Louis VII.; succeeds at fifteen; crowned at Rheims in his father's lifetime.
1223-1226.—Louis VIII. (1187-1226); son of Philip Augustus.
1226-1270.—Louis IX., or St. Louis (1215-1270); son of Louis VIII; succeeded at fifteen, under his mother as guardian and regent; died in camp before Tunis.
1270-1285.—Philip III., the Bold (1245-1285); son of Louis IX.
1285-1314.—Philip IV., the Fair (1268-1314); son of Philip III.; king in his seventeenth year.
1314-1316.—Louis X. (1239-1316); son of Philip IV.; surnamed *Hutin*, an old word for headstrong, or mutinous.
1316-1321.—Philip the Hardy (1294-1322) second son of Philip IV.
1322-1328.—Charles IV., the Fair (1294-1328); youngest son of Philip the Fair.

HOUSE OF VALOIS

1328-1350.—Philip VI., of Valois (1293-1350); son of Charles of Valois.
1350-1364.—John II., the Good (1319-1364); son of Philip VI.; died suddenly in the Savoy in London.
1364-1380.—Charles V., the Wise (1337-1380); son of John II.
1380-1422.—Charles VI. (1368-1422); son of Charles V.
1422-1461.—Charles the Victorious (1403-1461); son of Charles VI.
1461-1483.—Louis XI. (1423-1483); son of Charles VII.; able but cruel.
1483-1498.—Charles VIII. (1470-1498); son of Louis XI.; the Father of his People; great-grandson of Charles V.
1498-1515.—Louis XII. (1462-1515); a descendant of the younger son of Charles V.
1515-1547.—Francis I. (1494-1547); son of Charles, Count of Angoulême; called the Father of Letters; great-great-grandson of Charles V.

1547-1559.—Henry II. (1519-1559); son of Francis I.; died of accidental wound by comte de Montmorency at the tournament for nuptials of his sister with the duke of Savoy.

1559-1560.—Francis II. (1543-1560); eldest son of Henry II.; married Mary Stuart, Queen of Scots.

1560-1574.—Charles IX. (1550-1574); second son of Henry II.; Catherine de' Medici, his mother, regent.

1574-1589.—Henry III. (1551-1589); third son of Henry II.; elected king of Poland; last of the house of Valois; stabbed by Jacques Clement, a Dominican friar.

HOUSE OF BOURBON

1589-1610.—Henry IV., the Great (1553-1610); son of Antoine de Bourbon, King of Navarre; son-in-law of Henry II.; assassinated by Francis Ravaillac.

1610-1643.—Louis XIII., the Just (1601-1643); son of Henry IV.

1643-1715.—Louis XIV., the Great (1638-1715); son of Louis XIII. and Anne of Austria.

1715-1774.—Louis XV. (1710-1774); great-grandson of Louis XIV.

1774-1793.—Louis XVI. (1754-1793); grandson of Louis XV.; ascended the throne in his twentieth year; married the archduchess Marie Antoinette, of Austria, May, 1770; dethroned, July, 1789; guillotined, January, 1793, and his queen, October following.

.....—Louis XVII., son of Louis XVI., never reigned; and died in prison, supposed by poison, June, 1795, aged ten years two months.

THE FIRST REPUBLIC

1792-1795.—National convention; first sat September 21, 1792; it consisted of seven hundred and fifty members.

1795-1799.—Directory nominated. November 1, 1795; the Directory (Lareveillère Lepaux, Letourneur, Rewbell, Barras, and Carnot) nominated November; abolished, and Bonaparte, Ducos, and Siéyès appointed an executive commission, November, 1799.

THE CONSULATE

1799-1804.—Napoleon Bonaparte (1769-1821); Cambacérès (1753-1824); and Lebrun (1739-1824), appointed consuls, December, 1799. Napoleon appointed consul for ten years, May, 1802; for life, August, 1802.

THE EMPIRE

(Established by the Senate, May 18, 1803.)

1804-1814.—Napoleon (Bonaparte) I. (1769-1821), decreed Emperor, May 18, 1804. He renounced the thrones of France and Italy, and accepted the Isle of Elba for his retreat, April 5, 1814. Again appeared in France, March 1, 1815. Was defeated at Waterloo, June 18, 1815. Abdicated in favor of his infant son, June 22, 1815. Banished to St. Helena, where he died, May 5, 1821.

.....—Napoleon II. (1811-1832); never reigned; he was Napoleon's son by his second wife, Maria Louisa of Austria, and later created Duke of Reichstadt, and King of Rome.

RESTORATION OF THE BOURBONS

1814-1824.—Louis XVIII. (1755-1824); brother of Louis XVI.; married Marie-Josphine-Louise of Savoy; entered Paris, and took possession of the throne, May, 1814; obliged to flee, March, 1815; returned July, same year; died without issue.

1824-1830.—Charles X. (1757-1836); younger brother of Louis XVIII.; married Marie-Thérèse of Savoy; deposed July, 1830. He resided in Great Britain till 1832, and died at Gratz, in Hungary.

HOUSE OF ORLEANS

1830-1848.—Louis Philippe (1773-1850); son of Louis-Philippe, duke of Orleans, called *Egalité*, descended from Philippe, Duke of Orleans, son of Louis XIII.; married, 1809, Maria-Amelia, daughter of Ferdinand I., king of the Two Sicilies; raised to the throne as king of the French, 1830; abdicated, 1848; died in exile, in England.

THE SECOND REPUBLIC, 1848

February 22 to December 19, 1848.—The revolution commenced in a popular insurrection at Paris, February, 1848. The royal family escaped by flight to England; a provisional government was established, monarchy abolished, and France declared a republic.

1848-1852.—Charles Louis Napoleon (1808-1873); declared by the National Assembly President of the Republic of France; and proclaimed next day, December 20, 1848; elected for ten years, December, 1851.

THE SECOND EMPIRE

1852-1870.—Napoleon III. (1808-1873); nephew of Napoleon I.; formerly president of the French Republic as Charles Louis Napoleon; elected Emperor, November, 1852; proclaimed, December, 1852; surrendered himself a prisoner to the King of Prussia at Sedan, September, 1870; deposed at Paris, September 4; died at Chislehurst, England, and buried there.

THE THIRD REPUBLIC

1870-1871.—Committee of Public Defense.

1871-1873.—I. Louis Adolphe Thiers (1797-1877); appointed President of the French Republic by the National Assembly, 1871; resigned, 1873.

1873-1879.—II. Marshal M. E. Patrice Maurice MacMahon (1808-1893); elected president, 1873.

1879-1887.—III. François Paul Jules Grévy (1807-1891); elected president, January, 1879; re-elected, 1885; resigned, December, 1887.

1887-1894.—IV. Marie-François Sadi-Carnot (1837-1894); elected president, December, 1887; assassinated, June, 1894.

1894-1895.—V. Jean Pierre Paul Casimir-Périer (1847-1907); elected president June, 1894; resigned, January, 1895; succeeded by:

1895-1899.—VI. François Félix Faure (1841-1899); elected president, January, 1895; died, February, 1899.

1899-1906.—VII. Emile François Loubet (1838———); elected president February, 1899.

1906-1913.—VIII. Armond allières (1841———); elected president, 1906.

1913-1920.—IX. Raymond Poincaré (1860———); elected president, 1913.

1920——— X. Paul E. L. Deschanel (1856-1922); elected president, January, 1920; resigned, Sept. 16, 1920; succeeded by:

1920-1924.—XI. Alexander Millerand (1859——); elected president, Sept. 23, 1920; resigned June 11, 1924; succeeded by:

1924-1931.—XII. Gaston Doumergue (1863——); elected president, June 13, 1924.

ST PETER'S, ROME

St. Peter's is the largest church in the world, covering two hundred and forty thousand square feet. It cost over sixty million dollars, took one hundred and seventy-six years to build; contains many vast and beautiful chapels, tombs of the popes, many paintings by great masters, and sculptures by Bernini, Michaelangelo, Canova and Thorwaldsen.

KINGDOM OF ITALY

Modern Italy occupies the central of the three great peninsulas of southern Europe, together with Sicily, Sardinia, and some smaller islands. The peninsula, which at the Strait of Otranto approaches within less than fifty miles of Albania, is bounded west and south by that portion of the Mediterranean known as the Tyrrhenian Sea, east by the Adriatic, and north by the Alps, separating it from France, Switzerland and Austro-Hungary. The frontier with France is estimated at three hundred and seven miles; with Switzerland at four hundred and seven miles; and with Austria at four hundred and sixty-six miles. Its greatest length is seven hundred and ten miles; the breadth ranges from three hundred and fifty-one miles in the north to about twenty between the Gulfs of St. Eufemia and Squillace, but in most places is about ninety or one hundred miles. The seaboard of the peninsula extends to two thousand two hundred and seventy-two miles.

Mountains and General Configuration.—On the northern frontier the Alps sweep round in a mighty arc from Nice to Trieste, running out in places into Piedmont, Lombardy, and Venice. For the most part they rise steep and abrupt, except where their wall is pierced by long, deep valleys; and some of the loftiest peaks in the system, including Mont Blanc and Monte Rosa, belong to this mountain-girdle.

The highest mountain entirely within the kingdom is Gran Paradiso, the culminating point of the Graian Alps, in Piedmont. Between the Alps and the Apennines spreads the broad fertile Lombardo-Venetian plain, a nearly level country, which differs altogether in character from the peninsula to the south, and for a long period was politically distinct from it. Most of this great alluvial tract, which fills nearly the whole of northern Italy, belongs to the basin of the Po; it is irrigated by numerous streams and canals, and is one of the most fruitful and flourishing districts of Italy.

This great northern plain—generally but a few feet above sea-level—round which the Alps rise like a wall, is believed to have been at one period an extension of the Adriatic Gulf, which has been gradually filled up with rich alluvial soil worn down from the steep sides of the mountains by the snow-fed torrents.

The Apennines.—The form of all the more strictly peninsular part of Italy is given by the central range of the Apennines, which extends continuously through its length from the maritime Alps of France, round the head of the Gulf of Genoa, down to Cape Spartivento in the extreme south. The Apennines have their highest part, called the Gran Sasso d'Italia, "the great rock of Italy," near the center of the long range. The slopes of these heights to the sea, northeast and southwest, are so short as to allow of only small rivers.

Nearly parallel with the southern part of the Apennine range, and westward of it, there appears a more recent chain of isolated volcanic heights. Chief of these, on the peninsula, is the cone of Vesuvius, which rises abruptly from the Campagna of Naples, above the old cities of Herculaneum and Pompeii, buried by its lava streams and ashes. North of Rome, in this volcanic region, the round lakes of Bolsena and Bracciano occupy the craters of old volcanoes. Carrying the line southward, across the Tyrrhenian Sea, we come to the volcanic group of the Lipari Islands, with the ever-active volcano of Stromboli; and farther on to Mount Etna, in Sicily, the highest of European volcanoes. Almost all the rest of Sicily, not volcanic, is covered with mountains of moderate elevation, the main line of which extends along the northern side of the island from east to west as if in continuation of the course of the Apennines across the narrow Straight of Messina.

Islands and their Surface.—The island of Sardinia, separated from Corsica by the Strait of Bonifacio, one hundred and fifty miles long from north to south, is for the most part mountainous, especially along the eastern side, in the middle of which rises the granitic Mount Gennargentu.

The island of Elba, famous as the place of Napoleon's exile, between Corsica and the peninsula, eighteen miles long, is high, its western part being formed by Mount Capanne, which rises to three thousand three hundred and twenty-three feet. Capri, south of the Bay of Naples, where the Emperor Tiberius passed the last ten years of his life, and Caprera, Garibaldi's home, on the north coast of Sardinia, are other noteworthy islands.

Rivers and Coast Waters.—The principal rivers are fed from the Alpine lakes. The Po, which descends from Monte Viso, on the western frontier, and, as it sweeps across the plain, receives the contributions of numerous important streams, ranks for its volume of water among the notable rivers of Europe. It is navigable for three hundred and twenty out of its four hundred and twenty miles, and several of its tributaries are also navigable. Many of the Po's tributaries spread out at the foot of the Alps.

The province of Venice, to the north and east of the Po, is traversed by the Adige, Brenta, Piave and Tagliamento.

Along the coast of the Adriatic, north and south of the Po delta, there exist large tracts of salt water, known as lagoons, in a flat and marshy district. They are separated from the sea by narrow banks of sand in which are inlets, so that the lagoons serve as harbors. The chief of these is that in which Venice is situated. It extends over nearly forty miles from Torcello in the north to Chioggia and Brondolo in the south. The other coast-line of northern Italy is formed by a narrow strip of land, closed in by the steep, abrupt rocks of the Apennines, and known as the Italian Riviera.

The Arno, next to the Tiber the most considerable river of central Italy, rises on Mount Falterona, an offset of the Apennines, at four thousand four hundred and forty-four feet above sea-level, and twenty-five miles north of Arezzo. It flows one hundred and forty miles westward to the sea, eleven miles below

Pisa. At Florence it is four hundred feet wide, but is fordable in summer.

The Tiber, the chief river of central Italy, and the most famous in the peninsula, rises in a dell of the Tuscan Apennines, eleven miles north of the village of Santo Stefano, whence it winds two hundred and sixty miles, and enters the Mediterranean by two branches, which enclose the Isola Sacra. Towns on or near its banks are Perugia, Orvieto, Rome and Ostia. It is navigable for boats of fifty tons to the confluence of the Nera, one hundred miles from its mouth. The Tiber is supplied mainly by turbid mountain-torrents, whence its liability to sudden overflowings. Its waters, too, are still discolored with yellow mud, as when the poet Horace described it.

Lakes.—To the south of the Alps, in the north of Lombardy and Venice, lie the beautiful Italian lakes, Lago di Garda, Maggiore, Como, Lugano, and Orto.

Lake of Como, the Lacus Larius of the Romans, is generally considered the most beautiful of the group. It is about thirty-six miles long, and its greatest width is three miles. Its shores are studded with picturesque villages and charming villas, with a background of forest and mountains, some of which are seven thousand feet high. The loveliest point is Bellagio, where the lake divides into two arms. Cadenabbia, on the western shore opposite Bellagio, is also a pleasant place.

Como, at the other extremity, is a thriving town of twenty-five thousand inhabitants, the birthplace of Pliny the Younger and of Volta. The cathedral is one of the best in Northern Italy.

Lake of Lugano, between Como and Maggiore, though much smaller than either, is scarcely their inferior in the loveliness of its scenery. It lies at the southern foot of the Alps, eight hundred and eighty-nine feet above sea-level. Its length is fourteen and one-half miles; average breadth one and one-quarter miles; area nineteen and one-half square miles; maximum depth nine hundred and fifteen feet, and average depth two hundred and forty-six feet.

Lake Maggiore (*Madjō'ray*), the largest of the Italian lakes, is about forty-five miles in length, averages three miles in breadth, lies six hundred and forty-six feet above sea-level, and has a maximum depth of one thousand two hundred and fifty feet. The river Ticino flows through it. In a southwestern expansion of the lake are the Borromean Isles. On the Isola Bella is the large palace built by Count Vitaleo Borromeo about a century ago, with terraced gardens, fountains, grottoes, etc., all very elaborate and artificial.

Lake Garda, a beautiful, clear lake, lies between Lombardy and Venetia, its northern end extending into the Austrian Tyrol. Situated two hundred and twenty-six feet above sea-level, it has an area of one hundred and fifteen square miles, a greatest length of thirty-five miles, a breadth of two to eleven miles, and a maximum depth of nine hundred and sixty-seven feet. The surface is studded with many islands. It is drained by the Mincio, a tributary of the Po. The mild climate and the beauty of the vicinity have caused its shores to be lined with villas.

Climatic and Landscape Features.—The north of Italy has the excessive climate of the temperate region of continental Europe; in the central parts of the peninsula the climate becomes more genial and sunny, and to the south almost tropical. The plain of Lombardy, with an average temperature of fifty-five degrees Fahrenheit, has winters which are as cold as those of the Scottish lowlands, and the lagoons of Venice have been frozen over; but its summers are as hot as those of Rome or Nice. The changes are few; rain lasts for weeks together in autumn, but in summer the blue sky is never clouded except when a violent thunder and hailstorm occurs.

About Florence the winters are much milder, with the same summer heat, and this difference between the seasons decreases still more to southward.

The summer of the Campagna of Rome, when a heat mist rises over the plain, is almost unbearable; in January the sky is blue, the mornings may be frosty, and fresh spring air blows over the land; in March the trees are already leafy, and in June the harvest begins; in July everything withers under the excessive heat, till the autumn rains revive the land.

In Naples and South Italy the sky is cloudless for months together, and the air is so pure that distant plains appear to be close at hand.

The chief faults of the Italian climate are the cold mountain winds called the Tramontana, like the mistral of south France, and the Bora of the north Adriatic, and, in contrast, the hot Sirocco, which occasionally blows from the African deserts, besides the malaria of the western coast marshes and of the Venetian lagoons.

Round the lakes at the base of the steep southern slope of the Alps, Mediterranean forms of vegetation appear; the chestnut reaches up to two thousand five hundred feet; above that comes the belt of beeches and oaks, still higher the pine woods, then the pretty alpine plants and high pastures. Scarcely any part of the world is so covered with irrigating canals as the highly cultivated plain of Lombardy, so that the whole of it appears like a great garden. At the northern base of the Apennines the Mediterranean flora of laurels and myrtles, cork oak and cypress, covers the first slopes; above that groups of oaks appear, then beech woods and the extensive summer pastures which reach all over the Apennine range. The Apennines have no permanent snows, but their highest summits are frequently snow-clad between October and May, and send down cold breezes into the warm valleys.

In Sicily the vegetation takes an African character, and many tropical forms flourish; it is not a well-wooded island, but forests occur here and there.

Riviera (*Ree-vee-ay'ra* "seashore"), is a term applied to the narrow strip of coast-land bordering the Gulf of Genoa, strictly from Nice to Spezzia, but generally understood to include the whole coast of the Alps Maritimes, and the Italian coast as far as Leghorn.

West of Genoa, and extending into France, it is called the Riviera di Ponente, or western coast, and beyond Genoa the Riviera di Levante, or eastern coast. From Hyères to Genoa is two hundred and three miles; from Genoa to Leghorn one hundred and twelve miles. Sheltered on the north by mountains, the district enjoys an exceptionally favored

climate, no other region north of Palermo and Valencia being so mild in winter.

The western section is the mildest and most frequented. It abounds in the most striking and beautiful scenery, and is planted with numerous health and fashion resorts—Nice, Monaco, Mentone, Ventimiglia, San Remo, Bordighera, etc.; and west of Nice are Hyères, Fréjus, Cannes, Gresse, Antibes.

The famous Corniche (Ital. *Cornice*) road, widened by Napoleon I., leads along the Mediterranean coast from Nice to Genoa, and commands magnificent views.

Products and Industries.—Of the whole surface of Italy it is estimated that eighty-three per cent is suitable for cultivation. The greatest proportion of agricultural land, however, lies in the great plain of Lombardy and the Campagna Felice of Naples. Notwithstanding this, the supply of corn grown in Italy is not sufficient for its wants, and more is imported from Russia, Egypt and North America. Maize and wheat afford the staple food of the lower classes, as polenta and macaroni.

Agriculture and Stock-Raising.—A sixth of the area of the kingdom is covered with wood or bush, the island of Sardinia having the largest forests of all the kingdom—the districts of Lake Como, of southern Tuscany, and Genoa, being the best wooded parts of the mainland. The olive grows all over peninsular Italy, and enormous quantities of oil are produced, much being exported.

All parts of the country are suited to vine-growing. Most wine, however, is made in south Italy and Sicily. Most horses are bred in Lombardy, where cattle are also numerous on the dairy farms, which supply enormous quantities of cheese. Tuscany has most sheep; Sicily the finest mules and asses; Umbria the greatest number of swine. Coral fishers go out from Naples, Leghorn (Livorno), and Genoa to the coasts of the Balearic Isles and of Algeria and Tunis in large numbers.

Minerals.—The most important mineral product of Italy is the sulphur of Sicily; iron is widely distributed, but is obtained in most considerable quantity in Lombardy and Liguria; lead is an important product of Tuscany; sea salt of the vicinity of Cagliari, the chief town of the island of Sardinia. Famous pure white marble is quarried at Carrara and Massa, on the northwest coastland of Tuscany.

Manufactures.—The zenith period of Italian manufactures, when Milan was famous for its wool-workers, Venice for its dyes, Florence for its cloth, has long since passed away, and in this respect Italy now occupies a low position.

Silk-growing, spinning, and weaving it, is now the most important branch, and in this the towns of Lombardy—Bergamo, Como, Milan, Turin—take the lead, followed by those in the plain round Naples, and by Catania and Palermo in Sicily. Glass-making has also fallen from its old position; the works at Intra, on Lake Maggiore, and the manufacture of beads and mosaics at Venice, are, however, still very important. Porcelain is made chiefly at Milan and Florence; straw hats at Vicenza, in Venetia, and in Tuscany, whence they come to us as Leghorn hats, from the port at which they are shipped.

People and Language.—The present Italian people have arisen from a perfect chaos of races. The ancient Ligurians of Iberian race and the Umbrians of the north were joined, from an unknown quarter, by the strange people called Etruscans or Tuscans by the Romans, who exercised such an immense influence on European civilization. The Greeks peopled the south, and held Sicily along with the Phœnicians; the Romans spread out from the center of the peninsula to extend their conquests far beyond its limits; then the Goths and Franks poured in from the north, and after them the Longobards, who gave their name to Lombardy. The Savoyards and Waldenses of the valleys of Piedmont along the French border appear to be of Gallic descent. Insular Sardinia was free from the irruptions of the northern people, but came under the influence of the Greeks, the Arabs, and then of the Spaniards.

Here, as in France and Spain, the Roman language endured and prevailed over all others, and now the people of Italy have one language and literature, the Italian, descended from the Latin. Its dialects show traces of the mixture of nationalities, but the Tuscan has now become classic, for the great writers, like Dante and Boccassio were Tuscans.

Religion.—The Roman Catholic Church is reorganized as the state church, but toleration is granted to all creeds. Over ninety-seven per cent of the population is Roman Catholic. By the Act of 1871 the rank of the Pope as a sovereign prince is recognized, the Vatican and Lateran palaces and the papal villa at Castel Gandolfo having the privilege of exterritoriality. Protestants number about sixty-six thousand, which include some twenty-two thousand Waldensians; and there are about thirty-eight thousand Jews, and about two thousand five hundred members of the Greek Orthodox Church.

Education is controlled by the state under a minister of public instruction, assisted by a council. Primary education is free and compulsory, and the state also maintains, partly or wholly, secondary, technical schools, and the universities. There are thirteen universities. Private schools may not be opened without state authorization.

Cities.—The largest city is Naples. Rome is the capital. Milan, Turin, Palermo, Genoa, Florence, rank next. There are four others with about one hundred and fifty thousand, and twenty-three towns over fifty thousand.

ROME, the "city of the seven hills," contains more objects of interest than any other city in the world. It is situated mainly on the left or east bank of the Tiber, about fifteen miles from its mouth. The river, which has here an average breadth of two hundred feet, is spanned by eleven bridges in its course from north to south through the city.

The Seven Hills.—On the left bank rise the famous seven hills of ancient Rome, which, from north to south, are the Aventine, Cœlian, Palatine, Capitoline, Esquiline, Viminal, and Quirinal. These hills rise from eighty to one hundred and twenty feet above the river and the intervening valleys.

VIEW OF ROME FROM ST. PETER'S

The Royal Palace and chief public offices are upon, or adjoin, the Quirinal Hill. The Aventine and the Cœlian are, in large part, not built upon. The Esquiline and Viminal are modern industrial quarters. The Palatine, with the Forum below it on the east, are covered with important ancient ruins. The Capitoline, crowned by the Capitol, the most imposing of the hills, the center of ancient life and worships, has, apart from the new monument of Victor Emmanuel, suffered little change since the sixteenth century.

Mediæval and Rome occupies chiefly the plain, known as the Campus Martius of ancient times, nearer the river, and on the slopes of the Pincian Hill, to the north, extending thence eastward to the Quirinal and Viminal. The smaller part of Rome, on the right or west bank, comprises the Borgo, or district, containing St. Peter's, the Vatican, the Castle of St. Angelo, and the Janiculum Hill, to the north, with the Trastevere quarter, to the south.

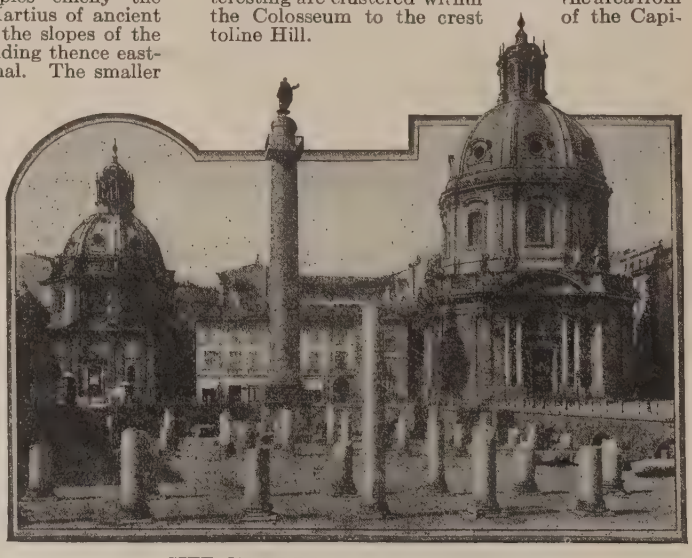
The entire city is surrounded by a wall fourteen miles in circuit, with thirteen gates, the wall on the left bank being substantially identical with Aurelian's Wall, built in the third century; while the Leonine Wall round the Borgo was extended in the early sixteenth century.

Modern Features and Districts.—The business part of the city occupies the plain on the bank between the hills and river, traversed by the Via del Corso, the principal thoroughfare in Rome, about a mile in length, leading from the Porto del Popolo to the foot of the Capitoline Hill, where is situated the great National Monument to Victor Emmanuel. From the Piazza del Popolo two great streets diverge on either side of the Corso, the Via di Ripetta to the right, skirting the Tiber, and to the left the Via del Babuino, leading to the Piazza di Spagna, whence the Scala di Spagna, the resort of artists' models, ascends to the Pincian Gardens, on the site of the gardens of Lucullus, which command a splendid view of the city, and form the fashionable drive and promenade.

Of the new streets the most important are the Via Venti Settembre, the Via Cavour, and the Via Nazionale. The older foreign quarter lay at the foot of the Pincian, around the Piazza di Spagna, but the healthier sites on the slopes and summits of the Quirinal and Esquiline are now more frequented.

Rome abounds in open Squares (*Piazzas*) adorned with fountains, obelisks, or statues. Eleven Egyptian obelisks still ornament the gardens and piazzas of Rome, brought by Augustus and others. That in the Piazza of St. John Lateran, one hundred and four feet in height, is the largest in existence. It was erected at Thebes by Thothmes III., and removed by Constantine to the Circus Maximus. The triumphal arches of Septimius Severus, of Titus, and of Constantine are still conspicuous. Of the bridges over the Tiber, three are ancient.

The antiquities are legion, some of the most interesting are clustered within the area from the Colosseum to the crest of the Capitoline Hill.



SITE OF THE FORUM OF TRAJAN

The Forum consisted of three parts: the forum proper, the huge Basilica Ulpie, and the temple of Trajan, with it colonnaded inclosure. It was once the grandest building in Rome. Trajan's Column, still standing, is a Roman Doric column of marble, on a square basement, the total height, exclusive of the present statue of St. Peter, being one hundred and twenty-seven and one-half feet. The entire shaft is occupied by vigorous and lifelike reliefs ascending in a spiral, representing Trajan's campaigns. The reliefs contain about two thousand five hundred human figures, besides those of animals and inanimate objects.

Famous Architectural Edifices, Ancient and Modern.—The remains of ancient Rome have suffered severely from the vandalism and the neglect of past centuries, but they are now carefully preserved. The Forum, in some places nearly forty feet below the present street level, has been in great part excavated, and near it are many vestiges of by-gone Roman splendor, including columns, arches and ruins of temples.

ROMAN FORUM.—In remote times, the marshy ground which later became the site of this famous Forum served as *neutral territory* whereon both the Romans (who occupied the Palatine Hill), and the Sabines (who occupied the Capitoline Hill) could meet. Gradually it became a market-place and an exchange, till, at length, all the important business of Rome and of the Empire came to be concentrated in and about the Forum.

ARCH OF CONSTANTINE

Built in 312 A. D. in honor of Constantine's triumph over Maxentius. Much of its abundant sculpture was taken from the destroyed church of Trajan.

A portico was built around the Forum, the first story being devoted to shops and the second to offices for the collection of taxes. After some centuries, these were destroyed by fire, when various basilicas and temples were erected in their places. The Forum existed as such till the eleventh century, A. D., when it was totally destroyed by Robert Guiscard. Becoming then a waste, the rubbish of the city was thrown there until the entire space was filled to the depth of twenty-four feet and the location and names of the ancient buildings lost. In the revival of learning, in the sixteenth century, interest began to be awakened in the ruins of ancient Rome, and, in 1547, excavations of the Forum were commenced, under Paul III., which, with much irregularity have continued to the present day.

The most conspicuous remains of the Forum are the columns of the Temple of Saturn, the temples of Castor and Pollux and of Vesta, and on its northern side the arch of Septimius Severus, the Curia, the Basilica Æmilia, and the temples of Antoninus and Faustina and of Romulus. In the middle of the eastern part rose the temple and forum of Julius Cæsar. The more ancient and famous forum from which Cicero spoke was at the western end.

ARCH OF SEPTIMIUS SEVERUS

An arch in the Roman Forum, dedicated 203 A. D., in commemoration of victories over the Parthians. It is of Pentelic marble, with a central arch and two side arches, flanked by four Corinthian columns on each face. There are panels over the side arches and a frieze above all with reliefs of Roman triumphs.

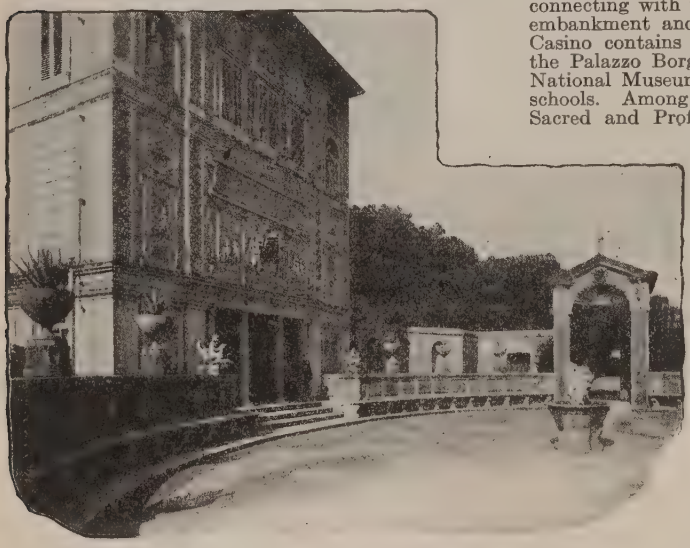
The latest excavations in the Roman Forum, including the stele and black stone of Romulus, the Basilica Æmilia, the Chapel of Santa Maria Antiqua, and the House of the Vestal Virgins, are of extraordinary interest.

It was traversed by the *Via Sacra*, a winding road which led from the southern gate of Rome to the Capitol, and was the route by which triumphal processions passed to the Temple of Jupiter. The Arch of Titus was at its summit. The great blocks of lava with which this road was paved still, for the most part, remain.

Beyond it stands the great Column of Trajan, one hundred and twenty-four feet in height, with spiral bas-reliefs repre-

senting scenes from Trajan's campaigns against the Dacians, forming the most instructive historical monument in Rome.

Palaces and Art Collections.—The Vatican Palace, the residence of the pope, adjoining St. Peter's, enjoys along with the Lateran the privilege of "exterritoriality." The massive building, said to include eleven thousand apartments, contains the finest extant collection of ancient sculpture, with many celebrated statues, a rich gallery of paintings, a famous library, and other collections, besides the Sistine Chapel, adorned with frescoes by Michaelangelo and other masters, and the Stanze and Loggie, with paintings by Raphael and his contemporaries.



VATICAN PALACE AND GARDENS

The Quirinal Palace, another huge pile on the hill of that name, is occupied by the king. In the Piazza del Quirinale are two famous marble groups of Horse-Tamers.

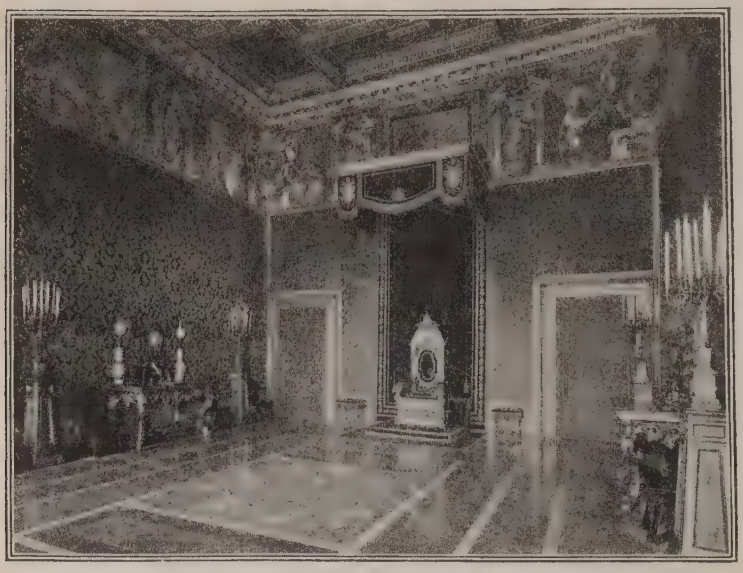
The Villa Umberto Primo, formerly Borghese, outside the Porta del Popolo, is noted for its beautiful grounds, which are a favorite promenade connecting with that on the Pincian Hill by an embankment and bridge opened in 1908. The Casino contains the picture-gallery formerly in the Palazzo Borghese. It is now an important National Museum, and is arranged according to schools. Among the masterpieces are Titian's Sacred and Profane Love, Raphael's Entombment, Correggio's Danaë, etc.

The Palazzo Barberini, built by Urban VIII., is a large and magnificent structure, but chiefly notable for a small picture-gallery, the gems of which are Raphael's Fornarina, and Guido's Beatrice Cenci. The library contains seven thousand manuscripts, many of which are rare.

Villa Medici (*ma'de-che*), was built in 1540, south of the Pincio, for Cardinal Ricci. About 1600 it came into the possession of the Medici family, and afterward into that of the grand dukes of Tuscany. Galileo was confined there 1630-1633. The French Academy of Art, founded by Louis XIV., was transferred to it in 1801, and it has a fine collection of casts.

Palaces of the Emperors.—On the western side of the Forum Romanum rises the Palatine Hill, its summit covered with the substructures of the Palaces of the Emperors, the Houses of Augustus, of Tiberius, of Livia, of Caligula, of Domitian, and of Hadrian. Most magnificent of all is the Palace of Septimius Severus, rising in seven stages of massive masonry, which form a southern extension of the Palatine Hill.

Besides these imperial palaces, the Palatine included a magnificent Stadium, the most perfect in existence, imperial reception halls, several temples, with gardens, baths, barracks for soldiers, and a basilica or hall of justice, in which St. Paul must have pleaded before the emperor.



THRONE ROOM OF THE POPE, VATICAN PALACE

The Golden House of Nero, built on the opposite side of the Forum, and occupying the greater portion of the Oppian Hill, was demolished to make room for the Colosseum and the Baths of Titus.

The Coliseum (or Colosseum), originally called the Flavian Amphitheatre, was begun by Vespasian in A. D. 72, and dedicated by Titus eight years later. It was built for gladiatorial exhibitions and for the combats of wild beasts. It is the largest structure of the kind ever built, being capable of seating from forty to fifty thousand spectators. Though scarcely a third of the

original edifice remains, it is by far the most imposing monument of antiquity that the Imperial City has to show.

THE PANTHEON is the most perfect of the ancient buildings in Rome. It was built B. C. 27 by M. Agrippa, and restored by Septimius Severus and Caracalla about A. D. 202, and has suffered much since. The vast round walls of brick, twenty feet thick, were once covered with marble. The portico (now below, but once above, the square) has sixteen huge monolithic columns of Oriental granite, thirty-nine feet high, with Corinthian capitals of famed beauty. Statues of Augustus and Agrippa once stood here. The circular interior is very impressive, and is lighted from a place twenty-eight feet across in the center of the dome, open to the sky.

This unrivalled dome is one hundred and forty feet high and one hundred and forty feet across. The gilded bronze roof-tiles were carried to Constantinople in 655; and all the other bronzes were used in making cannon for the citadel and the canopy in St. Peter's. The seven niches in which statues of the gods stood are now occupied by altars. Raphael is buried here, near his betrothed, Cardinal Bibiena's niece; and here is the tomb of King Victor Emmanuel of Italy.

THE CAPITOL, which is one hundred and sixty feet above the sea level and is best approached by the grand staircase known as La Cordonnata. At its foot are two lions of Egyptian porphyry; at its head the ancient colossal statues of Castor and Pollux. Beyond these on either side are the sculptures misnamed "the Trophies of Marius" and the statues of Constantine and his son from the Baths of Constantine on the Quirinal. The open space here is the Piazza del Campidoglio, the ancient Intermontium, where Brutus harangued the people after the murder of Cæsar. In the center is the celebrated statue of Marcus Aurelius, "the only perfect ancient equestrian statue in existence." It owes its preservation to the fact that it was long supposed to be a statue of Constantine. On the right is the Palace of the Conservatori, on the left the Museum of the Capitol, both designed by Michaelangelo; between the two, occupying the third side of the square, is the Palace of the Senator, on the site of the ancient Tabularium. The fountain at the foot of the stairs is adorned with statues of river-gods, the Tiber and the Nile. The tower contains the great bell which is rung only to announce the opening of the carnival or the death of a pope.

THE CAPITOLINE MUSEUM contains some of the most famous sculptures extant, as the Dying Gladiator, the Venus of the Capitol, the Faun of Praxiteles, the Antinous, etc. There is also the rich collection of busts and statues of Roman emperors and empresses, statesmen, philosophers, etc., "perhaps the most interesting portrait gallery in the world."

VILLA UMBERTO PRIMO (FORMERLY VILLA BORGHESE), ROME

Has art collections considered only second in importance to that of the Vatican, and, despite the removal of many works, the number of really great paintings retains for the collection its old pre-eminence.

Famous Churches.—Ancient Rome contained about three hundred temples, and modern Rome has about as many churches, eighty of which are dedicated to the Virgin. St. Peter's, St. John Lateran, S. Maria Maggiore on the top of the Esquiline, S. Paolo fuori le Mura ("outside the walls"), perhaps the most gorgeously decorated church in Rome, and S. Lorenzo fuori le Mura are the five Patriarchal churches, to one or other of which all believers throughout the world are supposed to belong. With Santa Croce in Gerusalemme and S. Sebastiano, they make up the famous "Seven Churches of Rome" frequented by pilgrims. They are also unsurpassed in their rich architectual and art interests.

THE MAGNIFICENT VILLA MEDICI, ROME

St. Peter's, adjoining the Vatican, perhaps the most famous and certainly the largest church in the world, has an area nearly twice that of St. Paul's in London, while its dome rises to the height of four hundred and three feet.

Many architects were concerned in the building of the Cathedral of St. Peter, but the principal credit is assigned to Bramante, the creator of the design, and to Michaelangelo, whose chief work is the dome. To the spectator, approaching from the Piazza di San Pietro, the majesty of the dome is lost behind the façade, erected at the instance of Pope Paul V. at the end of the nave lengthened by him in order to work out the idea of a Latin cross; the design of Bramante was a Greek cross.

The building was commenced in 1506, but was not completed until 1626; the total cost of erection was about fifty million dollars, and its maintenance absorbs annually about forty thousand dollars.

It covers about eighteen thousand square yards; the length is two hundred and thirty-two yards, of the transept one hundred and fifty yards; height of the nave one hundred and fifty-one feet; height of the dome from the pavement to the summit of the lantern four hundred and four feet; to the summit of the cross four hundred and thirty-four feet.

Besides the high altar there are twenty-nine other altars; the high altar being immediately over the Tomb of St. Peter. Round the Confessio are ninety-five lamps, always lighted. The bronze statue of St. Peter, on white marble, under a canopy, is by a pillar; the right foot of which is worn smooth by the kisses of worshipers.

CHURCH OF ST. JOHN LATERAN, ROME, THE MOTHER CHURCH OF CHRISTENDOM

St. John Lateran. (It. *San Giovanni in Laterano*), adjoining the papal palace of the Lateran, claims to be the mother-church of all Christendom. It was originally named from the Roman family Lateranus. Beside it are its ancient Baptistery and a building enclosing the Scala Santa, brought from Pilate's palace in Jerusalem in 326.

Many other of the Roman churches contain treasures of art or are interesting for their structure or history. S. Maria Sopra Minerva is the only ancient Gothic church in the city. S. Pietro in Vincoli contains Michaelangelo's famous statue of Moses; and S. Maria delle Pace Raphael's beautiful frescoes of the Sibyls. The Gesù is the chief church of the Jesuits. San Carlo al Corso is the fashionable church.

Roads.—The roads leading out of Rome beyond the Servian Walls were bordered by tombs, many of which, on the erection of the Aurelian Wall, were included within the city. The most famous of these celebrated roads was the:

Appian Way (called Regina Viarum) was begun B. C. 312 by Appius Claudius, and ran to Capua, and afterwards to Brindisi, forming main route to southern Italy, Greece and Egypt. There are beautiful views all along, of Campagna, aqueducts, and Alban Mountains.

APPIAN WAY

A famous Roman military road, the skill with which it is taken through difficult country, over hills, ravines, and marshes, is remarkable. Horace, in his first satire, describes a journey along it, and St. Paul came this way into Rome (Acts xxviii. 15).

Florence (Lat. *Florentia* Ital. *Firenze*), one of the most famous of Italian cities, is situated fifty miles from the sea, in the valley of the Arno, and is built on both sides of the river, but chiefly on the north. The outlying suburbs are singularly beautiful, and are surrounded by finely wooded hills, bright with gay villas and charming gardens. The old city itself is characterized by a somber grandness, and is full of fine buildings of historic and artistic interest.

The chief building in the city is the Duomo, or Cathedral, the foundations of which were laid with great solemnity in 1298; but not until 1887 was the completed façade uncovered. The church

MONUMENT TO VICTOR EMMANUEL II., AT ROME. THIS MEMORIAL IS EMBLEMATIC OF ITALIAN UNITY AND WAS ERECTED AT AN EXPENDITURE OF $10,000,000.—THE COSTLIEST MEMORIAL IN THE WORLD, AND POSSIBLY THE MOST MAGNIFICENT

contains sculptures by Ghiberti, Luca della Robbia, Michælangelo, Sansovino, Bandinelli, and other famous artists.

At the side of the cathedral springs up the light and elegant Campanile, detached, according to the custom of the times. In front is the Baptistery in the form of an octagon, supporting a cupola and lantern. Three bronze gates in basso rilievo are a great additional adornment of the Baptistery; the two by Ghiberti have been immortalized by Michælangelo, with the name of Gates of Paradise.

The church of the Santa Croce, the Pantheon of Florence (built in 1294), contains monuments to Galileo, Dante, Macchiavelli, Michælangelo, Alfieri and others.

Among the numerous palaces Il Bargello, long a prison, but now restored and opened as a national museum, is one of the most ancient.

The Palazzo Vecchio, the seat of the republican government from its establishment till its abolition in 1530, is an imposing mass of building. Adjoining the palace is the Piazza della Signoria a square containing a fine collection of statues, and a noble arcade, the Loggia dei Lanzi.

The Uffizi Palace is a handsome building adjoining the Palazzo Vecchio, founded by Cosmo I. On the second floor is contained the famous Florentine gallery of art. A splendid apartment, known as the Tribuna, contains the rarest treasures of the collection.

The Pitti Palace, formerly the grand-ducal residence, boasts of a superb gallery of paintings. Behind it are the beautiful Boboli Gardens royal. The Strozzi Palace is a fine type of Tuscan architecture.

Florence is the city of Dante, Petrarch, Michaelangelo, Leonardo da Vinci, Boccaccio, Machiavelli, Galileo and many more of Italy's great men, and has a history of exceptional interest. It is an educational center, and carries on a trade in straw-plaiting and silk, sculptures, jewelry, and exquisite mosaics in rare stones.

Genoa (Ital. *Genova*), is situated on the Mediterranean gulf of the same name, at the foot of the Apennines, and is an important seaport. By rail it is eight hundred and one miles southeast of Paris, one hundred and seventy-one miles northeast of Marseilles, and ninety-three miles southwest of Milan. The slopes of the hills behind the city down to the shore are covered with buildings, terraced gardens, and orange and pomegranate groves; while the bleak summits of the loftier ranges, rising still farther back, are capped with strong forts, batteries, and outworks.

While strikingly grand as viewed from the sea, and so far worthy of being entitled "Genoa the Superb," is in reality built awkwardly on irregular rising ground, and consists of a labyrinth of narrow and intricate lanes. Of the palaces the most famous are the former palace of the doges, now the meeting-place of the senate; and the Doria, presented in 1529 to the great Genoese citizen Andrea Doria. Foremost among the churches stands the Cathedral, a grand twelfth-century pile in the Italian Gothic style. The marble Municipal Palace and the palace of the Dogana must also be mentioned.

To Columbus and Mazzini, Genoa's most famous sons, there are fine monuments.

It is the commercial outlet for a wide extent of country, of which the chief exports are rice, wine, olive-oil, silk goods, coral, paper, macaroni and marble. The principal industrial establishments of the city embrace ironworks, cotton and cloth mills, macaroni-works, tanneries, sugar-refineries, and vesta-match, filigree, and paper factories. Genoa benefited greatly by the opening of the St. Gothard Railway.

Milan (*me-lan'*, *mil'an*. Ital. *Milano*, *mee-lah'no*), the capital of Lombardy, is one of the largest and wealthiest cities of Italy. It was an important town under the Romans, was sacked by Attila in 452, totally destroyed by Frederic Barbarossa in 1162, and has figured prominently in more recent history.

The city, nearly circular in shape, is surrounded on three sides by walls, has a circuit of nearly eight miles, and is entered by fourteen gates.

Of the numerous churches the magnificent Gothic Cathedral is the most famous. It is second only to St. Peter's and Seville Cathedrals in size and was built principally during the period 1386-1500. After many delays and interruptions, work was resumed under Napoleon I. in 1805, but is not yet fully completed. The façade has recently been restored. It is cruciform, with double aisles and transept-aisles, separated by fifty-two pillars, each twelve feet in diameter, with niches crowded with statues. Interior four hundred and seventy-seven feet long, one hundred and eighty-three feet wide and one hundred and fifty-five feet high. It contains six thousand statues, a pavement of marble mosaic, vast granite monoliths, superb stained windows, many tombs of magnates, St. Carlo Borromeo's wooden crucifix and gorgeous tomb, and life-size silver statues of saints. The wonderful marble roof is studded with ninety-eight Gothic turrets, hundreds of pinnacles, and over two thousand life-size marble statues.

Of the other churches S. Maria delle Grazie (fifteenth century), partly the work of Bremante, was originally an abbey church, and the refectory in the rear contains Leonardo da Vinci's celebrated fresco of the Last Supper, which, in 1909, was successfully restored.

The Brera Palace (twelfth century), formerly a Jesuit college, has now a great gallery of paintings by Raphael, Da Vinci, Luini, Mantegna, the Bellinis, Titian, Vandyck, and others, an academy of art, a collection of casts, the magnificent monument of Gaston de Foix, the National Library, an archaeological museum, and an observatory.

The colonnade of Victor Emmanuel Gallery is the finest arcade in the world, and was built in 1865-1867 at a cost of one million six hundred thousand dollars. It is nine hundred and sixty feet long, forty-eight feet wide, ninety-four feet high, surrounded by handsome shops, richly frescoed, and adorned with statues of Raphael, Galileo, Dante, Cavour, and twenty other famous Italians. The octagon under the dome (one hundred and eighty feet high) is brilliantly lighted at night, when it forms a favorite promenade

On the adjacent Piazza della Scala is Leonardo da Vinci's monument, and the massive Municipal Palace. The Arch of Peace, built of white marble, commemorates the exploits of Napoleon. The Della Scala Opera House is the second in size (after San Carlo at Naples) in Italy; and the Milan conservatoire is the most famous school of music in Europe.

Beccaria, Manzoni, the popes Pius IV. and Gregory XIV. were natives of Milan. The city now carries on a vast trade, much increased since the opening of the Gothard railroad, in raw silk, cotton, grain, rice, and cheese, and manufactures silks, velvets, gold, silver, and iron wares, railroad carriages, tobacco, porcelain, electrical apparatus, and is an active center of the printing trade.

Naples (Ital. Napoli *nä'pō-lē'*).—The capital of the province of Naples has a lovely situation within the bend of Naples Bay, spreading from the foreshore back upon wooded hills and rising terraces, behind which lie the snow-clad Apennines. To the east lies the old town with its historic Via di Roma and narrow crowded thoroughfares; the newer portion to the west is more spaciously laid out, and much has been done in recent years over the whole city to improve the sanitation and water supply. The

National Museum, rich in Pompeii relics, the University, the National Library, the Cathedral and the four mediæval gateways are the chief architectural features.

Large quantities of wine, olive-oil, chemicals, perfumery, etc., are exported, while woolen, silk, linen, glove and other factories carry on a good home trade.

Naples became incorporated in the kingdom of Italy in 1861 after the Bourbon dynasty had been swept away by Garibaldi.

RUINS OF POMPEII, ITALY

POMPEII (pron. *Pom-pay'yee*), once a Greek seaport at the mouth of the Sarnus, is fifteen miles south of Naples; it fell into the possession of Rome about 80 B. C., and was converted into a watering-place, "the pleasure haunt of paganism." The Romans erected many handsome public buildings, and their villas and theaters and baths were models of classic architecture and the scenes of unbounded luxury. The streets were narrow, provided with sidewalks, the walls often decorated with paintings, and the number of shops witnesses to the fashion and gaiety of the town. A terrible earthquake ruined it and drove out the inhabitants in A. D. 63; they returned and rebuilt it, however, in a tawdry and decadent style, and luxury and pleasure reigned as before till in A. D. 79 an eruption of Vesuvius buried everything in lava and ashes. The ruins were forgotten till accidentally discovered in 1748; since 1860 the city has been disinterred under the auspices of the Italian Government, and is now a favorite resort of tourists and archæologists.

HERCULANEUM, so called from the local worship of Hercules, was situated at the northwestern base of Mount Vesuvius, five miles east of Naples. In 63 A. D. it was seriously injured by a violent earthquake, and, in 79 A. D, buried, along with Pompeii and Stabiæ, by the memorable eruption of Vesuvius. In 1738 systematic excavations were commenced, the chief building explored being the theater, which has eighteen rows of stone seats, and could accommodate eight thousand persons; part of the Forum with a colonnade, two small temples, and a villa have also been discovered, and from these buildings many beautiful statues and remarkable paintings have been obtained.

BEAUTIFUL SORRENTO, ITALY

In 1880 ruins of extensive baths were brought to light. Among the art-relics of Herculaneum, which far exceed in value and interest those found at Pompeii, are the statues of Eschines, Agrippina, the Sleeping Faun, the Six Actresses,

Mercury, the group of the Satyr and the Goat, the busts of Plato, Scipio Africanus, Augustus, Seneca and Demosthenes—mostly now in the National Museum at Naples.

Palermo (*pä-ler'mō*), capital of the province of Palermo, Sicily, a seaport on the Bay of Palermo, at the foot of Monte Pellegrino, is picturesquely situated in the midst of a beautiful and fertile valley called the Golden Shell. It is a handsome town, with many public buildings and nearly three hundred churches in Moorish and Byzantine architecture, a university, art school, museum, and libraries.

The industries are unimportant, but a busy trade is done with Britain, France and the United States, exporting fruits, wine, sulphur, etc., and importing textiles, coal, machinery and grain.

Sorrento (*sōr-ren'tō*), a town in the province of Naples, beautifully situated on the Bay of Naples, sixteen miles south-southeast of Naples, is a favorite watering-place; was noted in antiquity for its wines; and was the birthplace of Tasso.

Turin, (Ital. Torino *tō-re'nō*).—Capital of the province of Turin, Italy, is situated on the Po, near its junction with the Dora Riparia. It is regularly built, with many squares and broad streets; is the seat of important trade for northern Italy; has varied manufactures; and is rapidly growing. It contains a university, cathedral, castle (Palazzo Madama), royal palace (with the royal armory and library), Palazzo Carignano (former seat of Parliament, now containing collections in natural history), palace of the Academy of Sciences (with a museum of antiquities and picture-gallery), monument of Cavour, etc. Victor Emmanuel and Cavour were born there.

VIEW OF THE CAMPANILE AND PALACE, VENICE, FROM THE GRAND CANAL

VISTA ON THE GRAND CANAL, VENICE

ST. MARK'S CATHEDRAL AND CAMPANILE FROM THE PLAZA

Turin was the ancient capital of the Taurini (whence the name); was captured by Hannibal in 218 B. C.; and has played an important part in the history of Europe. It figured prominently in the national movements of the nineteenth century, and was the capital of the kingdom of Italy 1859-1865.

Venice (*ven'is* Ital. *Venezia*), capital of the province of Venice, is situated in the Laguns (lagoons) in a bay of the Adriatic. Now Venice covers more than seventy-two islets, or rather mud-banks, its foundations being piles ("time-petrified") and stone. Through its two unequal portions winds for over two miles the Grand Canal, spanned by the Rialto Bridge (of stone) and two others (of iron), and into it flow one hundred and forty-six lesser canals, all bridged at frequent intervals. This vast network of waterway is patrolled by countless gondolas, while the pedestrian has his choice of innumerable lanes (calli). A railway viaduct, two and one-eighth miles long, connects Venice with the mainland.

The Piazza di San Marco, a square five hundred and seventy-six feet long and one hundred and eighty-five to two hundred and seventy feet wide

SANTA MARIA DELLA SALUTE: VENICE

One of the four "plague" churches of Venice, erected 1631-1656, in commemoration of deliverance from the pestilence of 1630, and a famous water-mark upon the Grand Canal near its merging into the canal of San Marco and the sea.

paved with gray trachyte and white Istriam marble, surrounded by time-stained marble palaces and St. Mark's Church is the picturesque center of Venetian life, especially at evening, when the bands play, and the cafés are crowded by thousands. Flocks of fat pigeons have been fed here by the city daily for seven hundred years. Palaces enclose three sides and the palace arcades are occupied by cafés and bric-a-bràc shops.

Of its public buildings the following are the principal: the Ducal Palace, standing on the site of a former official residence of the Doges, which was burned in 976. Besides its painted ceilings and walls there are many pictures by the Italian masters; the Academy of Fine Arts whose twenty rooms are filled with some of the finest works of the Old Masters. Its principal churches are St. Marco, St. Giorgio Maggiore, and Sta. Maria della Salute, are all most highly decorated with frescoes, mosaics, and carvings, besides containing many world-famed pictures. The Campanile of St. Marco has been rebuilt since its fall, on July 14, 1902, after standing a thousand years. The palaces of the nobility on the Grand Canal and other canals contain priceless collections of pictures. The Arsenal contains many models of the old Venetian ships, armor, collections of weapons, and spoils of war.

Venice was noted for its textile manufactures as early as the fifteenth century; the principal manufactures at the present time are tapestry, brocades, Venetian laces, wood carving, artistic wrought-iron work, jewelry, bronzes, machinery. and clocks, and at Murano glass and glass beads.

Italian Seaports.—The chief seaports of Italy after Genoa, "the Superb," which is the busiest of all, are in order round the coast—Livorno, or Leghorn, the port of Tuscany and Florence; Civita Vecchia, the port of Latium; Naples, with Castellamare on the south side of its bay; Messina, on the Sicilian side of the Strait named after it, with one of the finest harbors in Europe, beside the eddy which was feared as the whirlpool of Charybdis in ancient times; Palermo, "la Felice," in the vale of the Golden Shell, on the north coast of Sicily; Catania, on the east coast of the island. Coming round to the Adriatic coasts we reach the port of Brindisi, a notable point in the most direct route from western Europe to Egypt and the East. The most important line of railway in Italy, that leads from the plain of Lombardy all down the east side of the peninsula, has the port of Brindisi as its objective point. Farther north in the middle of this coast is Ancona, the port of the Marches. Lastly we come to Chioggia and Venice, the city of canals and bridges, described above.

HISTORY OF ITALY

The ancient history of Italy will be found under Rome. The modern history begins with 476 A. D., when Odoacer, chief of the Herulians, a German tribe who had invaded the country, was proclaimed king of Italy. After a reign of twelve years he and his followers were overpowered by the Ostrogoths under Theodoric the Great. The Ostrogoths were in turn subdued by Byzantine troops, and Italy came under the dominion of the Eastern emperors, who ruled through an exarch residing at Ravenna.

The Lombards.—In 568 the Lombards (Langobardi), a German people originally from the Elbe, led by their king, Alboin, conquered the Po basin, and founded a kingdom which had its capital at Pavia. The kingdom of the Lombards included Upper Italy, Tuscany and Umbria, with some outlying districts. But on the northeast coast, the inhabitants of the lagoons still retained their independence, and in 697 elected their first doge, and founded the republic of Venice.

Ravenna, the seat of the exarch, with Romagna, Rimini, Ancona, and other maritime cities on the Adriatic, and almost all the coasts of Lower Italy, remained unconquered, together with Sicily and Rome. The slight dependence of this part of Italy on the court of Byzantium disappeared almost entirely in the beginning of the eighth century.

Rise of Papal Power.—The power of the pope, though at first recognized only as a kind of paternal authority of the bishop, grew steadily in these troubled times, especially in the struggle against the Lombard kings. In consideration of the aid expected against King Astolphus, Pope Stephen III. (754) not only anointed the king of the Franks, Pepin, but appointed him patrician or governor of Rome. In return Pepin presented the exarchate of Ravenna, with the five maritime cities, to the pope, thus laying the foundation of the temporal power of the Holy See. At the invitation of Pope Hadrain I. Charlemagne made war upon Desiderius, the king of the Lombards, took him prisoner in his capital Pavia (774), and united his empire with the Frankish monarchy. Italy, with the exception of the duchy of Benevento and the republics of Lower Italy, thus became a constituent part of the Frankish monarchy, and the imperial crown of the West was bestowed on Charlemagne (800).

Port of the Holy Roman Empire.—On the break up of the Carlovingian empire, Italy became a separate kingdom, and the scene of strife between Teutonic invaders. At length Otto the Great was crowned emperor at Rome (961), and the year after became emperor of what was henceforth known as the Holy Roman Empire.

During the following centuries the towns and districts of North and Middle Italy gradually made themselves independent of the empire, and either formed themselves into separate republics or fell under the power of princes bearing various titles. A large part of Middle Italy at the same time was under the dominion of the popes, including the territory granted by Pepin, which was afterwards enlarged on several occasions.

Vicissitudes of Southern Italy.—In southern Italy there were in the time of Charlemagne several independent states. In the ninth century this part of the peninsula, as well as Sicily, was overrun by Saracens, and in the eleventh century by Normans, who ultimately founded a kingdom which embraced both Lower Italy and Sicily, and which though it more than once changed masters, continued to exist as an undivided kingdom till 1282. In that year Sicily freed herself from the oppression of the then rulers, the French, by the aid of Pedro of Aragon, and remained separate till 1435. It was again separate from 1458 to 1504, when both divisions were united with the crown of Spain. With Spain the kingdom remained till 1713, when Naples and Sicily were divided by the Treaty of Utrecht, the former being given to Austria, the latter to the Duke of Savoy. In 1720 they were again united under Austria, but in 1734 were conquered from Austria and passed under the dominion of a separate dynasty belonging to the Spanish house of Bourbon.

Mediaeval Italy.—The history of mediæval Italy is much taken up with the party quarrels of the Guelfs and Ghibellines, and the quarrels and rivalries of the free republics of Middle and Upper Italy. In Tuscany the party of the Guelfs formed themselves into a league for the maintenance of the national freedom under the leadership of Florence; only Pisa and Arezzo remained attached to the Ghibelline cause. In Lombardy it was different, Milan, Novara, Lodi, Vercelli, Asti, and Cremona formed a Guelf confederacy, while the Ghibelline league comprised Verona, Mantua, Treviso, Parma, Placenza, Reggio, Modena, and Brescia. Commercial rivalry impelled the maritime republics to mutual wars. At Meloria the Genoese annihilated (1284) the navy of the Pisans, and completed their dominion of the sea by a victory over the Venetians at Curzola (1298).

Influences of Napoleon.—Up till the time of the Napoleonic wars Italy remained subject to foreign domination, or split up into separate republics and principalities. The different states were bandied to and fro by the changes and intrigues of war and diplomacy between

Austria, Spain and the House of Savoy. During the career of Napoleon numerous changes took place in the map of Italy, and according to an act of the Congress of Vienna in 1815 the country was parcelled out among the following states:—(1) The Kingdom of Sardinia, consisting of the island of Sardinia, Savoy, and Piedmont, to which the Genoese territory was now added. (2) Austria, which received the provinces of Lombardy and Venetia, these having already been acquired by her either before or during the time of Napoleon. (3) The Duchy of Modena. (4) The Duchy of Parma. (5) The Grandduchy of Tuscany. (6) The Duchy of Lucca. (7) The States of the Church. (8) The Kingdom of the Two Sicilies. (9) The Republic of San Marino. (10) The Principality of Monaco.

Struggle for Independent Nationality.—The desire for union and independence had long existed in the hearts of the Italian people, and the governments at Naples, Rome, Lombardy, and other centers of tyranny were in continual conflict with secret political societies. The leading spirit in these agitations in the second quarter was Giuseppe Mazzini.

The year of revolutions, 1848, opened with a street massacre by the Austrians in Milan, on January 2. In February, 1849, the French Republic was declared, and then in Italy the party of Mazzini was for a moment supreme, when Charles Albert abdicated in favor of his son Victor Emmanuel. Meanwhile the pope had been driven from Rome, and a Roman republic had been established under Mazzini and Garibaldi, the leader of the volunteer bands of Italian patriots. Rome was, however, captured by the French, who came to the aid of the pope (July, 1849), who resumed his power in April, 1850, under the protection of the French, and the old absolutism was restored. Similar attempts at revolution in Sicily and Naples were also crushed, but the secret societies of the patriots continued their operations.

Establishment of the Present Kingdom.—In 1859, after the war of the French and Sardinians against Austria, the latter power was compelled to cede Lombardy to Sardina, and in the same year Romagna, Modena, Parma, and Piacenza were annexed to that kingdom, which was, however, obliged to cede the provinces of Savoy and Nice to France. In the south the Sicilians revolted, and supported by a thousand volunteers, with whom Garibaldi sailed from Genoa to their aid, overthrew the Bourbon government in Sicily. Garibaldi was proclaimed dictator in the name of Victor Emmanuel. In August Garibaldi crossed to Naples, defeated the royal army there, drove Francis II. to Gaeta, and entered the capital on the 7th September. Sardinia intervened and completed the revolution, when Garibaldi, handing over his conquests to the royal troops, retired to Caprera. A plebiscite confirmed the union with Piedmont, and Victor Emmanuel was proclaimed king of Italy, thus suddenly united almost in Mazzini's phrase, "from the Alps to the sea."

Only Venice and the Papal State now remained to be joined to the new kingdom. To obtain Venice, Italy joined Prussia in her war against Austria in 1866; and though the Italians were beaten on land at Custozza and on sea at Lissa, the triumph of Prussia was so complete that, by the peace of Prague, Venice was surrendered to Italy.

Conquest of the Papal States.—Rome was less easy to secure, because of the opposition of Roman Catholic opinion throughout Europe. French soldiers had protected the pope ever since 1849. In 1862 Garibaldi prepared to make a dash on the Papal States, but the government felt obliged to stop him. He was surrounded on Mount Aspromonte and taken prisoner. The withdrawal of the French troops from Rome (1864) was only procured by a promise to respect the Papal States, and by the transference of the capital from Turin to Florence.

In spite of the prohibition of the government, Garibaldi made another attempt on Rome in 1867; but Napoleon sent more French troops, and Garibaldi was defeated at Mentana, and had to withdraw. It was not till the fall of the French Empire in 1871 that the Italian government could act freely. As Pius IX. refused to give up the temporal power, the Italian government took the capital by force, and Pius withdrew to the Vatican, where he remained in voluntary confinement, a course followed by his successor, Leo XIII. (1878-1903), and by the present Pope, Pius X.

Difficulties of Consolidation.—The consolidation of Italy, since the formation of the kingdom, has been slow and difficult owing to the great social differences between northern and southern Italy. The nation, too, has been ambitious to be recognized as one of the great powers of Europe, which involves a vast outlay in expenditure.

In 1878 Victor Emmanuel died, and was succeeded by Humbert I.; Pius IX. being succeeded by Leo XIII. in the same year. Humbert's reign was marked by electoral reform and foreign colonization. Somaliland, along the northeast coast of Africa, was acquired between 1880 and 1890, and the dependency of Eritrea was founded in 1882. Italy's claims to a protectorate over Abyssinia led to war, which ended in an Italian defeat at Adowa, 1896, and the restoration of all land to Abyssinia by the treaty of Adis Abeba.

In 1883 Italy entered the Triple Alliance with Germany and Austria, largely owing to her distrust of France. In 1900 King Humbert was assassinated by an anarchist, and was succeeded by his only son, Victor Emmanuel III. At the beginning of the new century more friendly relations were secured with France, the Triple Alliance being still maintained.

In the recent dissensions in Morocco (1906-1911) the government gave its support to France against Germany, while France acquiesced in Italian ambitions in Tripoli.

In September, 1911, war broke out between Italy and Turkey in connection with the rights and privileges of Italian subjects in Tripoli. In November of the same year the Italian government formally proclaimed the annexation of Tripoli and Cyrenaica, which was ratified by Turkey in the treaty of Ouchy in October, 1912. In the Balkan war (1912-1913) Italy's sympathies were naturally with

the allies against her recent enemies; the royal family, moreover, is connected with that of Montenegro, Queen Elena of Italy being the daughter of King Nicholas of Montenegro.

In May, 1915, Italy renounced the Triple Alliance and entered the European war on the side of Great Britain and France. War was declared upon Austria-Hungary, and Italian forces dispatched to the Trentino. No formal declaration of war was made against Germany until August 27, 1916, subsequently, Italy requisitioned the German steamers interned in Italian ports.

Italy, by Peace Treaty with Austria and Hungary, receives parts of Dalmatia, Gorizia, Gradiska, Istria, Trieste, the Trentino and Southern Tyrol up to the Brenner Pass. Her claims to Fiume and to northern Dalmatia, including the port of Zara, conflicted with Jugoslav claims and caused Italy's temporary withdrawal from the Peace Conference. Italy's new frontier with Austria begins at the Reschen Pass on the Swiss frontier and follows in general the watershed between the basins of the Inn and the Drave on the north and Adige, Piave, and Tagliamento on the south. This line, which runs through Brenner Pass and the Peak of the Signori (Dreiherrenspitze), includes in the Italian frontiers the valley of Sachsen and the basin of Tarvis.

Italy Under Fascism Government.—The National Fascist Party (Partito Nazionale Fascista) was founded in 1919 by Signor Mussolini, and he has continued the accredited leader of *Fascism*, the *Fascisti* representing a revolutionary movement against the alleged inactivity of post-war Italian statesmen. The uniform of the movement is a black shirt and the name is derived from *fascio* or band (*cf.* the *fasces* of the Roman lictor) in which the movement was organized.

MUSSOLINI has been a member of the Italian Parliament since 1921, and formed his first Cabinet on October 30, 1922. Socialist and editor of the *Avanti!* up to the outbreak of the European War, he was expelled from the Socialist Party for his advocacy of the policy of intervening in that war on the side of the Triple Entente.

Originally the sole object of the party was to resist by force the Bolshevik tendencies of the Italian workmen and peasants. Later on it became a Conservative, Nationalist, and Imperialist Party. On October 28, 1922, its armed bands undertook a march on Rome; but the Government capitulated without endeavoring to oppose the slightest resistance, and Signor Mussolini took in his hands the reins of Government. Fascismo means absolutist and dictatorial Government. Any individual liberty is either limited or suppressed; all is subordinated to, and concentrated in, the State.

By a treaty signed at Rome (January 27, 1924) the *Free State of Fiume* came to an end. Jugo-Slavia's sovereignty over Port Baros and the Delta is established by the treaty, and Italy acquired the town and harbor works of Fiume, together with a narrow strip of hinterland. Fiume is now the Capital of the newly created Italian Provincia el Carnaro.

In November, 1924, Mussolini announced—that a committee of fifteen, popularly known as "The Solons," were set to work upon a scheme of constitutional reform. On November 20, 1925, the bill for the suppression of secret societies (e. g., Freemasonry) was approved.

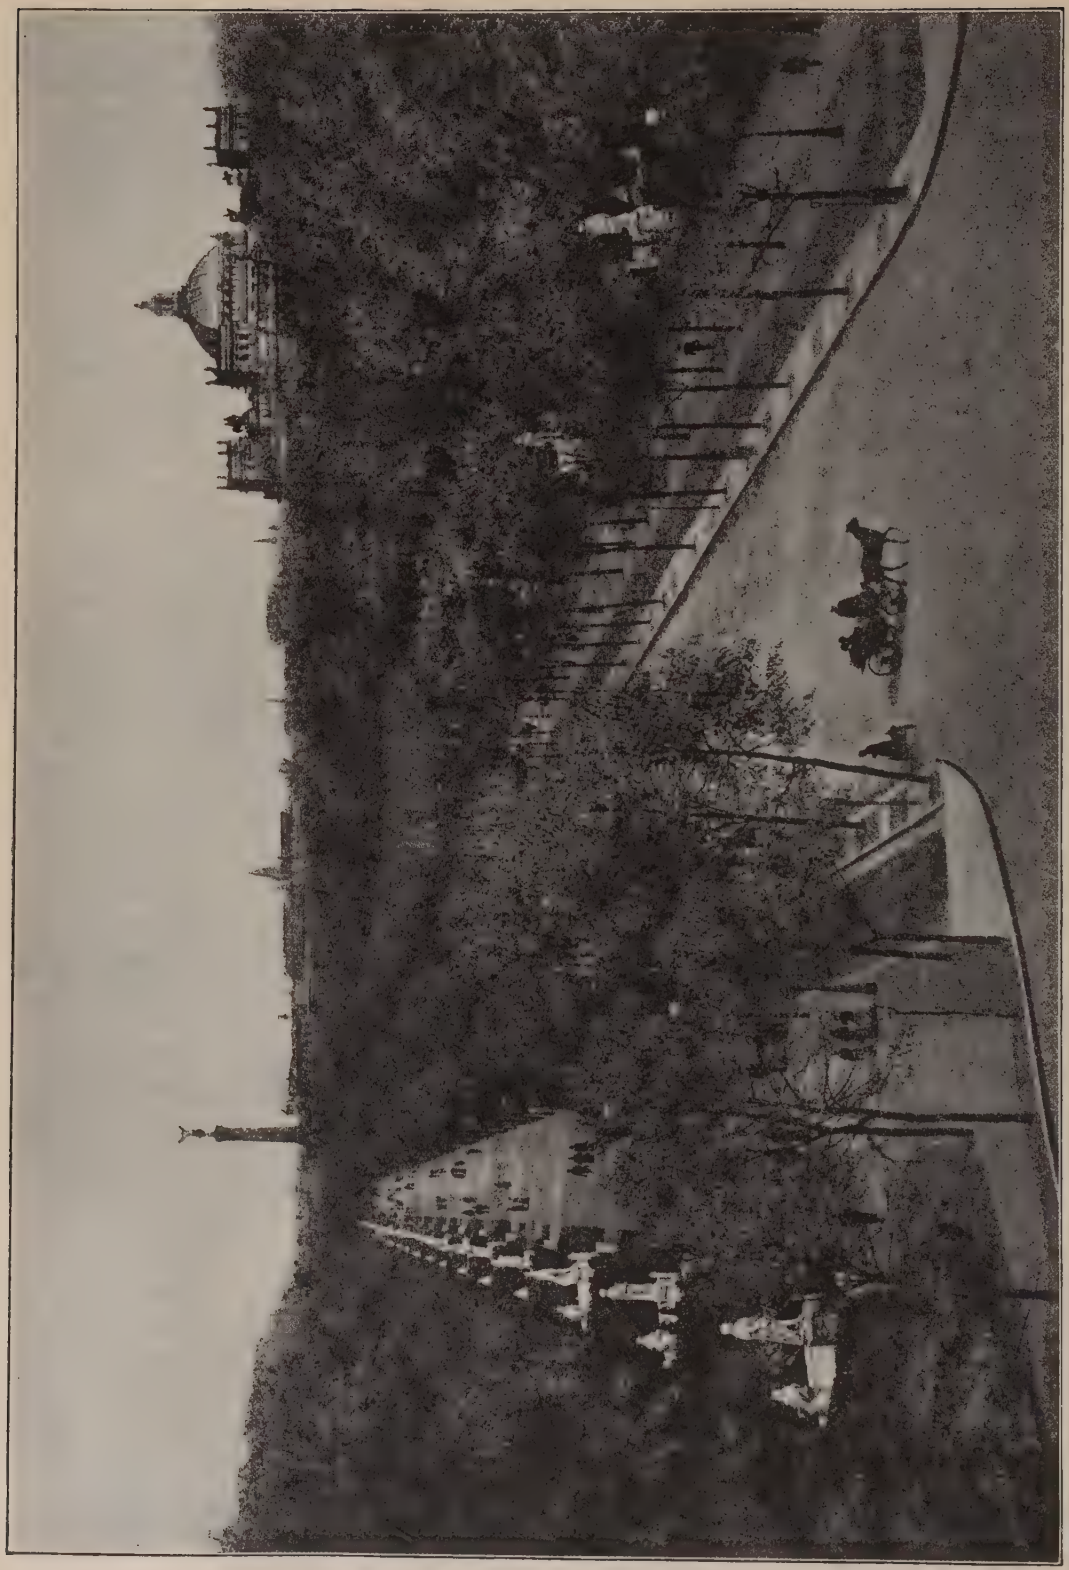
A rigorous press censorship law, passed in July, 1924, was put vigorously into effect on January 1, 1925. Fascist and anti-Fascist disturbances continued throughout the year.

Partial municipal suffrage was granted to women in a law passed May 16, 1925. It was restricted to women over twenty-five who had been decorated, or were mothers or widows of war dead, guardians over children, literate and paying annual taxes of not less than forty lire.

Municipal self-government was taken away from Rome in October, 1925, and the city administration placed in the hands of a Governor appointed by the Government by royal decree. He will have full powers hitherto possessed by the mayor, aldermen and council.

The Government of Mussolini and its reforms have been sustained by four things, exclusive of any hold it may have upon popular affection: the oratory and personality of Mussolini, the activities of the Fascist Party, the National Militia, and a stamping-out of the Freedom of the Press.

A Fascist calendar, dating from October 28, 1922, the date of the beginning of the Black Shirts' march on Rome, has been officially established by decree. In future all official documents will bear two dates—the ordinary date of the modern calendar and the Fascist date. Thus, until October 28, 1927, all official papers will be stamped "Year V."



REPUBLIC OF GERMANY

GERMANY (from Lat. Germania) is the English name of the country which the natives call Deutschland, and the French L'Allemagne.

As a result of the European War and separate revolutions in practically all of the former German kingdoms, grand duchies, duchies, and principalities, Germany became a federation of republics, called Deutsches Reich.

The larger states, such as Bavaria, Saxony, and Wurthemberg, remained intact as far as territorial extent is concerned, simply changing their form of government from that of monarchy to republic. Smaller states in some cases combined by agreement to form other or larger republican states.

In the case of Prussia, by far the largest of the former constituents of the German Empire, certain parts separated themselves from that former kingdom and formed separate states. A notable example is Prussian Rhineland, or Rhenish Republic.

The German Republic is composed of a federation of twenty-five states and free cities, self-governed. Heligoland was ceded by Britain to Germany in 1890, and Alsace-Lorraine was returned to France, 1919, by the Treaty of Versailles.

Divisions of the Republic.—The political divisions or states of the German Republic, together with their areas and population at the last census, are given in the subjoined table:

AREA AND POPULATION OF STATES

States	Area in Sq. Miles	Population at Last Census
Former Kingdoms		
1. Prussia	134,616	40,163,333
2. Bavaria	29,292	6,876,497
3. Saxony	5,789	4,802,485
4. Württemberg	7,534	2,435,611
Former Grand-Duchies		
5. Baden	5,823	2,141,832
6. Hesse	2,966	1,282,219
7. Mecklenburg-Schwerin	5,068	639,879
8. Saxe-Weimar	1,397	417,166
9. Mecklenburg-Strelitz	1,131	106,347
10. Oldenburg	2,482	482,430
Former Duchies		
11. Brunswick	1,418	494,387
12. Saxe-Meiningen	953	278,792
13. Saxe-Altenburg	511	216,313
14. Saxe-Coburg-Gotha	764	257,208
15. Anhalt	888	331,047
Former Principalities		
16. Schwarzburg-Sondershausen	333	89,984
17. Schwarzburg-Rudolstadt	363	100,712
18. Waldeck-Pyrmont	433	61,723
19. Reuss, Junior Branch	122	152,765
20. Reuss, Elder Branch	319	72,616
21. Schaumburg-Lippe	131	46,650
22. Lippe-Detmold	469	150,749
Former Free-Towns		
23. Lubeck	115	116,533
24. Bremen	99	298,736
25. Hamburg	160	1,015,707

Location and Extent.—This combination of Germanic States extends now from the Alps and the Bohemian mountains on the south to the Baltic on the north; and from the borders of France, Belgium, and Holland, on the west to those of Russia on the east; the greatest distance across it from east to west and from north to south being about five hundred miles. The coast-line measures about nine hundred and fifty miles. The most remarkable features of the coast are the expansions of the river mouths in the Baltic; the lagoons called the Kurische Haff, Frische Haff, and Stettiner Haff; the estuaries of the Elbe and Weser; and the rounded inlets of Jade Bay and the Ems mouth, on the North Sea.

The mountains on the south and the sea on the north give natural frontiers for the most part, but west and east artificial boundaries are marked out, which correspond only in a few parts with the ethnographic limits of Germanic and Romanic peoples on the one side, and Germanic and Slavonic on the other.

Surface Characteristics.—The surface of the republic falls naturally into three divisions: the lowlands in the north, the table-land of the south, and the basin of the Middle Rhine.

The Lowlands are part of the Great European plain, and are largely occupied with sandy tracts, with here and there deposits of peat. They are well watered, and in certain districts fertile, while the monotony of their level is broken by two lines of hills whose heights vary from five hundred to eight hundred feet, and which may be said to extend roughly from the Mecklenberg to the Vistula, and from the moors of Lüneburg in Hanover to Silesia

Table-lands.—In the southern plateau of Bavaria, the Fichtelgebirge is clearly the pivot round which the other mountain systems revolve. Thus, to its northwest there rises the Thuringian Forest and the Harz Mountains, and to the northeast the Erzgebirge, the Riesengebirge, and the Sudetic Mountains. Southwest radiate the Franconian and Swabian Juras and the Schwarzwald or Black Forest heights. Westward stretch the Taunus Mountains, while beyond these, and divided only by the Rhine, are the ridges of the Vosges. In the extreme southeast of Bavaria the Tyrolese or Noric Alps follow the northern bank of the Inn, and from this range rises the Zugspitze (nine thousand seven hundred feet), which is the highest summit in the whole empire. Between Basle and Mannheim, the Middle Rhine is splendidly sheltered by the Vosges and the Black Forest, which guard its course to left and right. (See further under the Rhine.)

Rivers.—By far the greater part of the country is drained northwards to the Baltic and the North Sea by its navigable highways, the Vistula, Oder, Elbe, Weser, and Rhine. The southeastern corner alone belongs to the upper basin of the Danube, flowing towards the Black Sea. (See Danube.)

The Vistula and the Oder are Baltic waterways, but more important from a commercial point of view are the Elbe, with its chief

affluents the Mulde, Havel, and the Saale, and the great Rhine, which both empty into the North Sea, along with the smaller Ems and the Weser, which latter is the only purely German stream. This fact is worth noticing, as the sources of the Oder, Elbe, and Vistula must be traced in Austria, and sections only of the Rhine and Danube traverse the empire.

Climate.—Broadly speaking, the general contours are not favorable to climate; for the level exposed flats, north and east offer no resistance to the passage in winter of the dry, piercing winds from Siberia and the Arctic, while to the south and west the mountainous tracts form effectual barriers against the moist Anti-trades. Extremes of temperature increase eastward in proportion to the distance from the Atlantic. In the warmer latitudes of the south, the elevations counteract the natural tendency to grow hotter, so that Ratisbon has the same temperature as Hamburg. In the Upper Harz the rainfall reaches sixty-six inches, but the mean annual precipitation is only about twenty inches. On the whole the climate may briefly be described as continental. It should be noted that the general slope of the country is from the southeast to northwest, that is, away from the sun, and also that the Rhine valley is so delightfully sheltered that it reaps the full benefit of its warm latitude, and thus enjoys excellent weather conditions.

Internal Communications.—The commercial prosperity of Germany may in some measure be traced to the excellence of the railways, the majority of which are managed by the state. Berlin is splendidly provided with communications by rail, and it may with truth be said that it is within twenty-four hours' reach of almost every point in the empire. Further, the trunk systems have many of them an international importance; for the great Oriental express from Paris to Constantinople traverses the line from Strassburg to Vienna through Munich, while Paris is linked with the remote Siberia by means of the lines from Cologne to Berlin and from Berlin to Warsaw. Berlin is also directly connected with Breslau, Hamburg, Danzig, and Königsberg. From Frankfort-on-Main, which is the trading center between north and south Germany, lines radiate to Cologne, Ostend, Antwerp, Flushing, Rotterdam, and Berlin northward, and in a southerly direction to Strassburg, Basle, Munich, and Vienna, while east and west it is joined up with Dresden, Breslau and Metz.

Domestic commerce has been further facilitated by an elaborate network of canals. By far the most important of these is the Kaiser-Wilhelm Canal (sixty-one miles long), which unites the North Sea and the Baltic. The Dortmund-Ems (one hundred and fifty miles long) and the Elbe-Trave (forty-three miles long) have only recently been completed. Since the building of the Rhine and Rhone canal through Mulhaüsen, it has been possible for a barge to pass from Rotterdam to Marseilles without unloading.

The union of the Danube and Rhine is effected by the Ludwigs canal, and that of the Seine and Rhine by the Rhine and Marne Canal. A number of canals, including the Teltow (opened in 1906), serve to connect the Spree, and therefore Berlin, with the Oder and the Elbe, the Oder and Vistula being joined by what is known as the Bromberger Canal.

Productions and Industries.—Following this distribution of climate, the forests which still cover a great part of Germany, and form a feature of its landscapes, are chiefly of the hardier pines in the north and east, and of deciduous trees in the south and west. About sixty-one per cent of the surface of the empire is suitable for cultivation, the forests occupy twenty-five per cent, and the uncultivable moors and mountain tracts only eight per cent.

AGRICULTURE.—There are sixty-five million acres of cultivated soil, and over twenty-one million acres of grass and pasture lands. Rye and oats are the chief grains, the former flourishing in the north despite the drawbacks of poor climate and soil. Almost as much land is devoted to potatoes as to rye; for the sandy plains of western Prussia and Pomerania seem to suit this crop equally well. Flax, hemp, and the beet—the last for the sugar industry—are grown in Saxony and in the Baltic provinces, especially in Hanover. The vine covers the dry, sunny slopes of the Vosges, and is also extensively grown along the Rhine. The rich alluvial soils of the sheltered valleys in the southwest are also favorable to the production of tobacco and hops, which are accordingly cultivated with success in Baden, Hesse, and Bavaria.

MINERALS.—Germany is rich in minerals, especially in coal and iron. The great industrial activity of the country very largely depends on the fact that these two minerals are found together, and moreover in proximity to navigable water-courses. In the Rhine basin the coal beds follow the courses of the Ruhr, Saar, and Ill, and excellent iron ore is found in both the Ruhr and Saar coal fields. Coal is also found in Silesia, while the Saxon mines in the Elbe basin yield chiefly the lignite variety.

Almost one half of the zinc produced in the world is mined in Germany, the chief centers being at Aachen (Aix-la-Chapelle), in Rhenish Prussia, and Königshütte, on the Oder coal fields, while nearly half the silver of Europe is produced from the silver, lead, and copper ores found in the Harz Mountains, Silesia, and the mines of Freiberg (Saxony). Most of the German copper comes from the Harz and Erzgebirge Mountains. Large quantities of rock and potassium salts are produced in Hanover, Saxony, Thuringia, and Anhalt. The mineral springs of Baden-Baden, Wiesbaden, Ems, etc., are world famous.

MANUFACTURES.—The industrial development of Germany proceeded at an almost unprecedented rate throughout the last century. The following catalogue will give some idea of the local distribution of the various industries: Iron goods and machinery are manufactured in the states of Prussia, Saxony, and Bavaria; steel goods in Rhenish Prussia. Woolens and worsteds are produced in Saxony and the Rhine province; cotton

goods in the states of Prussia, Saxony, Baden, and Bavaria; silk at Elberfeld (Rhenish Prussia) and in Baden; and linen goods in Westphalia, Silesia, and Saxony. The Rhine and Moselle districts are important centers for light wines; Bavaria is famous for its toys, like Nuremberg for its watches and pencils, and Meissen, Dresden, and Berlin, etc., for their porcelain. Finally there are manufactories up and down the country of chemicals, beer, sugar, tobacco, leather (in Hesse-Darmstadt), and paper.

People and Language.—The German-speaking inhabitants of the empire are about ninety-seven per cent of the total population; but a considerable proportion of these are not of the Germanic stock. Many Poles, Lithuanians, French and Czechs were re-united to their respective nationalities in 1919. Among the peoples retaining their own language are the Wends (in Silesia, Brandenburg, and Saxony), Czechs (in Silesia), some Lithuanians (in eastern Prussia), Danes (in Sleswick), French (in Rhenish Prussia), and Walloons (about Aix-la-Chapelle in Rhenish Prussia). The Germans are divided into High and Low Germans; the language of the former is the cultivated language of all the German states; that of the latter, known as Platt-Deutsch, is spoken in the north and northwest. (See further, Teutonic peoples, in Book of Races.)

Education and General Culture.—Germany stands conspicuously foremost in the filed of state education, and so far is without rival for the admirable systemization and for the variety and thoroughness of the technical trainings provided. It is established by law that every child from the age of six to fourteen must attend one of the elementary schools ("Volkschulen"), or some other recognized scholastic institution.

There are also a number of fully-equipped Technical High Schools, with the power of granting degrees, and some one thousand four hundred secondary schools (gymnasia, realschulen, oberrealschulen, etc.); numerous special schools of technology, agriculture, forestry, mining, commerce, military science, etc. There are twenty universities in Germany, located, respectively, at Königsberg, Berlin, Breslau, Greifswald (in Pomerania, southeast of Stralsund), Kiel, Halle, Göttingen, Münster, Bonn, Marburg, Rostock, Giessen, Jena, Leipzig, Heidelberg, Freiburg, Tübingen, Munich, Erlangen, and Wurzburg. All of these have the four faculties of theology, law, medicine, and philosophy, and many are some of the oldest foundations of their kind in Europe.

Outside the country the best known are probably Berlin, Munich, Leipzig, and Bonn, which also have the largest numbers of undergraduates, followed by Göttingen, Heidelberg, and Jena. Four teach theology according to the Roman Catholic doctrine, while in four others the theological faculty is open to both Protestants and Roman Catholics; the remaining universities are Protestant.

Culture is further stimulated in the large towns by public libraries, learned societies, museums, art galleries, and observatories, whereas musical knowledge and the drama diffuses itself from the highly-reputed conservatories at Leipzig, Dresden, Munich, Frankfort, and Berlin.

Religion.—The Constitution provides for entire liberty of conscience and for complete social equality among all religious confessions. The relation between Church and State varies in different parts of the empire. The Jesuit order is interdicted in all parts of Germany, and all convents and religious orders have been suppressed.

Protestantism predominates in the north and middle, and Roman Catholicism in the southeast and west, although very few states exhibit exclusively either form of faith. The Protestants belong chiefly either to the Lutheran confession, which prevails in Saxony, Thuringia, Hanover, and Bavaria east of the Rhine, or to the Reformed or Calvinistic Church, which prevails in Hesse, Anhalt, and the Palatinate. A union between these two churches has taken place in Prussia. There are five Roman Catholic archbishoprics and fourteen Roman Catholic suffragan bishoprics and six bishoprics immediately subject to Rome.

Defense.—Military service in Germany was formerly compulsory and universal, with the usual exemptions. It is now considerably modified.

Army. — By the regulations in force, every German capable of bearing arms served in the standing army for seven years (generally his twentieth to his twenty-seventh year). Two years were spent in active service and the remainder in the army of reserve. He then spent five years in the first class of the Landwehr, after which he belonged to the second class till his thirty-ninth year. Besides this, every German from seventeen to twenty-one and from thirty-nine to forty-five was a member of the Landsturm, a force only to be called out in the last necessity. Those who passed certain examinations were required to serve only one year with the colors.

The wide stretches of unprotected borderlands obliged the Germans to consider very carefully the question of frontier defenses. Thus the recent empire was divided into ten "fortress districts," in which the following were the chief fortified cities: Danzig, Königsberg, Posen, Neisse, Spandau, Magdeburg, Küstrin, Mainz, Ulm, Metz, Cologne, Koblenz, Kiel, and Strassburg.

Navy.—Rapid progress characterized in recent years the formation of a German navy. Prussia took the initiative in gathering together a fleet, but by 1851 it had grown only to fifty-one vessels, thirty-six of which were small gunboats. However, an advance was made in 1867, when every vessel in the navy flew the national colors (black, white, and red), and during the last twenty-five years the measure of progress was phenomenal.

Kiel is the chief naval station on the Baltic, and Wilhelmshaven on the North Sea, these two bases being connected by the Kaiser Wilhelm Canal across the Schleswig-Holstein peninsula. Other naval establishments are Danzig, Cuxhaven, and Sonderburg.

PANORAMIC VIEW OF THE HEART OF BERLIN, SHOWING THE MUSEUM OF ART,

Chief Cities.—German cities and towns are officially distinguished as large cities (with one hundred thousand inhabitants and upwards); medium cities (twenty thousand to one hundred thousand inhabitants); small cities (five thousand to twenty thousand inhabitants); and country towns (two thousand to five thousand inhabitants). According to the latest census, the population of cities over fifty thousand was a follows:

Cities	State	Latest Population
Berlin	Prussia	2,070,695
Hamburg	Hamburg	932,166
Munich	Bavaria	595,053
Leipzig	Saxony	587,635
Dresden	Saxony, K.	546,882
Cologne	Prussia	516,167
Breslau	Prussia	511,891
Frankfort-on-Main	Prussia	414,598
Dusseldorf	Prussia	357,702
Nürnberg	Bavaria	332,651
Charlottenburg	Prussia	305,181
Hanover	Prussia	302,384
Essen	Prussia	294,629
Chemnitz	Saxony, K.	287,340
Stuttgart	Württemberg	285,589
Magdeburg	Prussia	279,685
Bremen	Bremen	246,827
Königsberg	Prussia	245,853
Rixdorf	Prussia	237,378
Stettin	Prussia	236,145
Duisburg	Prussia	229,478
Dortmund	Prussia	214,333
Kiel	Prussia	211,044
Mannheim	Baden	193,379
Halle-on-Saale	Prussia	180,551
Schoeneberg	Prussia	172,902
Altona	Prussia	172,533
Danzig	Prussia	170,347
Elberfeld	Prussia	170,118
Gelsenkirchen	Prussia	169,530
Barmen	Prussia	169,201
Posen	Prussia	156,696
Aachen	Prussia	156,044

CITIES OF PRUSSIA

Berlin, capital both of the Republic and of the State of Prussia, is by far the most important center of population in Germany. It lies on both sides of the Spree, and by the Spandau and Tetlow canals to the Havel it is linked with the systems of the Oder and the Elbe. It is eighty-four miles from Stettin and one hundred and eighty miles from Hamburg, and is the center of the great Prussian state railway system. (See Internal Communications.)

The city itself is served by an Outer Circle (*Ringbahn*) and by the *Stadtbahn*, running east and west through the city. There are electric surface lines, an overhead, or elevated, electric railway, and a shallow underground railway.

On an island in the center of the city stands the Royal Palace, a foursquare pile built at different times between 1451 and the present day. It stands in the Schloss-platz, and is one of the few old buildings in Berlin, dating from the sixteenth century. It contains over six hundred rooms, including the great White Salon, and halls of the Black and Red Eagle orders.

Unter den Linden.—From this island stretches westward the noblest street in Berlin, Unter den Linden ("under the lime trees"). The triumphal arch at the west end of the street, the Brandenburg Gate (a copy, made in 1789-93, of the Propylæa at Athens), forms the entrance to the large park (six hundred and thirty acres) of the Thiergarten. In the east is the magnificent avenue of the Siegesallee or Avenue of Victory, adorned with thirty-two marble groups of the rulers of Prussia and Brandenburg. In the Unter den Linden are many splendid public edifices, among which are the Armory, the Opera House, the Royal Library, the new Town Hall, the University, the palaces of William I. and of Frederick III., and the monument to Frederick the Great by Rauch.

In the northeast of the Thiergarten stands the most imposing building of the city, the Imperial Diet or Parliament, erected from designs by Wallot, in 1884-94, at a cost of over five million dollars.

Business Quarter.—The Friedrichs-Stadt is the business center of Berlin, and the streets in this section are interesting. The banking street, Behrenstrasse, and the Wilhelmstrasse, the official quarter, where is the imperial chancellor's palace, lie to the south. Fine shops and restaurants line the Friedrichstrasse, while Viktoriastrasse is one of the many thoroughfares of the fashionable district, southwest. Königstrasse and Kaiser Wil-

helmstrasse are the business streets of the city proper.

The Tempelhofn Feld, also to the south, is the parade and review ground of the Berlin garrison.

The most striking bridge is the Schloss-brücke, or Palace bridge, by F. Schinkel, with colossal marble figures. It leads from Unter den Linden, to the Lustgarten, a park in which stands an equestrian statue of Frederick William III.

The Opera Platz contains statues of five generals, by Rauch, and is bounded by the Palace, University, Opera House, and St. Hedwig's Church, an imitation of the Roman Pantheon. The Schauspielhaus, the leading dramatic theater, is in Gensdarmen Markt. The Schauspielhaus, with the church on each side, is considered one of the finest architectural groups in Berlin.

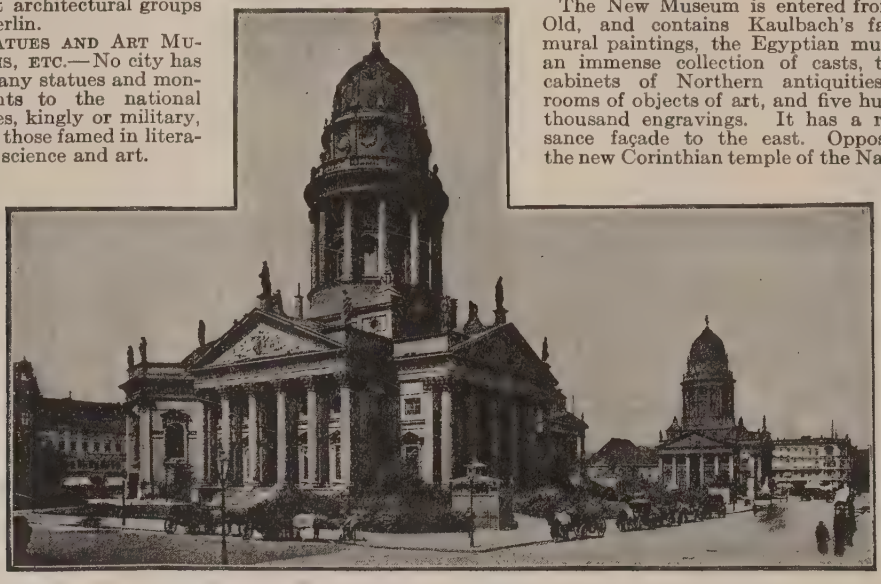
STATUES AND ART MUSEUMS, ETC.—No city has so many statues and monuments to the national heroes, kingly or military, or to those famed in literature, science and art.

The Royal Library, once in the palace, is now in the new building, built in 1909 on Unter den Linden; it contains nearly five million printed books. The University Library is housed in the same building. There is a large public library and twenty-eight municipal libraries.

DRAMATIC THEATER, GENSDARMEN MARKT

The Royal Museum, in the Lustgarten, north of the Schlossplatz, is divided into the Old and the New Museums, containing the treasures of classical and mediæval sculpture, the Egyptian collection, etc. The Old Museum is the finest building in the city, with a grand Ionic portico, adorned with colossal bronze groups, and richly frescoed halls. It has vast collections of antiquities; the halls of Greek, Roman, mediæval, and modern sculptures; and the Hall of the Heroes.

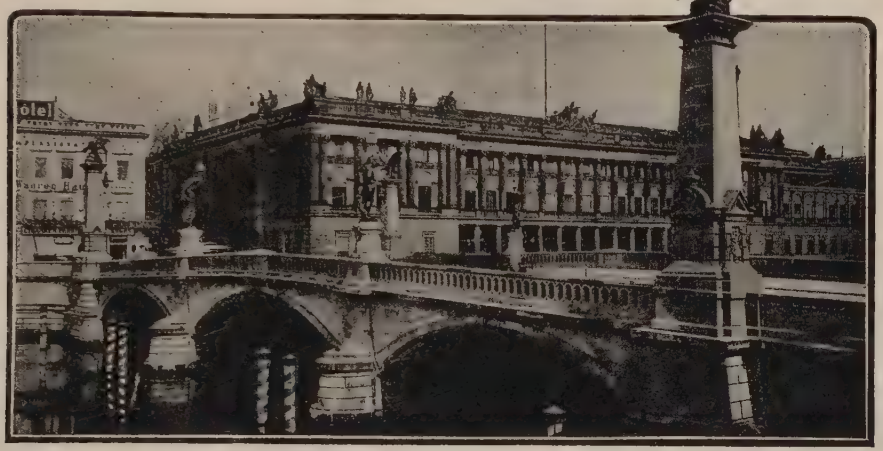
The New Museum is entered from the Old, and contains Kaulbach's famous mural paintings, the Egyptian museum, an immense collection of casts, twelve cabinets of Northern antiquities four rooms of objects of art, and five hundred thousand engravings. It has a renaissance façade to the east. Opposite is the new Corinthian temple of the National



GERMAN CATHEDRAL, GENSDARMEN MARKT

Gallery, which contains a magnificent and world-renowned collection of ancient and modern paintings.

BERLIN SUBURBS.—In recent years there has been a remarkable expansion of the suburban districts of Berlin, residential sites have sprung up in the pine woods and by the lakes of the Havel to the northwest, and Spandau, Charlottenburg, and Potsdam may almost be regarded as suburbs.



THE BOURSE, OR EXCHANGE, BERLIN

POTSDAM, "the Versailles of Prussia, with its palaces and parks, is sixteen miles from Berlin, among wooded hills and the lakelike expanses of the Havel. Here is the Sans Souci Palace, built by Frederick the Great, and full of reminiscences of him. Near by are the Picture-Gallery, the Orangery (adorned with fine statuary), and the Sicilian Garden. The New Palace has two hundred richly adorned rooms, with fine paintings, and a noteworthy Marble Saloon.

The Marble Palace is north of Potsdam, and has many paintings. Babelsberg is a new Gothic palace, with rich art-treasures. The Royal Palace (1660) is full of relics of the Great Frederick. The Garrison Church contains his tomb and military trophies. The Church of Peace is a noble Ionic basilica, with masterpieces of sculpture. The famous Sans Souci fountains play on summer Sunday afternoons.

INDUSTRIES OF BERLIN.—In its industries Berlin is almost as varied as London, but machinery, especially locomotive and electrical, woolens, dyeing, furniture and metal work are the chief. It is beginning to rival Leipzig in book production, and its breweries are large. Besides being the center of the great trade in corn and other cereals of Eastern Europe, its great banks exercise increasing international influence.

A CENTER OF EDUCATION AND CULTURE.—The famous Freidrich Wilhelm University, founded in 1810, now the largest in numbers in Germany, the splendid technical institution at Charlottenburg, and its numerous schools of all ranks, make Berlin one of the greatest intellectual and educational centers of the world. As the seat of the National Government, and National Parliament and administration, it is also the social center of the nation, and its modern wealth and luxury have made it a growing rival to Paris as a city of pleasure.

Since 1878 the city has been practically rebuilt; the sudden growth of population has resulted in much overcrowding and crushingly high rentals. Once deplorable, the sanitation, water supply, and public hygiene are now of the highest standard, and German scientific thoroughness has made it the most highly organized and best administered city in the world.

ST. HEDWIG'S CHURCH, BERLIN

THE NEW PROTESTANT CATHEDRAL, BERLIN

carrying on very extensive manufactures and a great trade by river and railway. It is also the emporium of the flax-growing district of Silesia. About the Rhenish coal fields, which yield half the supply of the kingdom, stand the manufacturing and trading towns of Cologne, Aachen or Aix, Barmen, Düsseldorf, Elberfeld, Crefeld and Dortmund, spinning cotton, wool, linen, and silk; and the famous iron and steel works of Solingen and Essen, where Krupp's steel guns are made.

Magdeburg, on the Elbe, and Cassel, on the Fulda, are the great manufacturing and trading towns of central Prussia. Much of the internal trade of Germany is still carried on at great annual fairs, and in this respect the two Frankforts (on the Main to the west, and on the Oder to the east) hold the most important place. Hanover, on the Leine, is the point of exchange of the mineral products of the Harz for the goods which come in by Bremen on the Weser, and has important manufactures of its own.

The chief ports belonging to Prussia are the Baltic ones —Königsberg, Danzig, Stettin, Stralsund, Memel, Rostock, Wismar, and Kiel, on the Baltic; Altona, on the Elbe, next Hamburg. Posen, on the Warthe, was the ancient capital of Poland, and is the most important fortress towards the Russian frontier. Wiesbaden is the most important and the oldest of the watering-places which have grown up round the mineral springs of Nassau. Eisleben, where Luther was born, and Erfurt, where he resided, both in Prussian Saxony, are notable points in connection with the history of the Reformation in Germany.

Other Prussian Cities.—Breslau on the Oder, the capital of the mining districts of Silesia, has taken rank as the second town of Prussia,

THE NEW PALACE AT POTSDAM

Erected by Frederick the Great, at a cost of $2,250,000. The principal rooms are the Shell Saloon, the rooms of Frederick the Great, the Marble (concert) room, and ball room.

Dresden and Other Cities of Saxony.—Dresden, its capital, finely placed on both banks of the Elbe, famous for its art treasures, has also many varied manufactures. Its architecture and its art collections have given it the name of "the German Florence."

The old bridge, Augustusbrücke (Augustus Bridge), may be taken as the center of the most interesting part of Dresden. Immediately to the east of the Augustusbrücke, on the Alstadt side, stretches the beautiful Brühl Terrasse, whence are fine views over the river. There are high-class concerts in the Belvedere on the Brühl Terrace.

Leipzig is not only the seat of a famous university and the great book market of Germany, but has one of the largest annual fairs in the world, to which merchants come from all parts of the earth, even from America and China.

Chemnitz and Zwickau, beside the Saxon coal field, are the great woolen and machine-manufacturing towns of Saxony. **Freiberg is famed** for its school of mines.

Cities of Bavaria.—Munich (München), the capital, stands in the midst of a bare elevated plain on the left bank of the Isar, one thousand seven hundred feet above sea-level, but has risen

THE ZWINGER, DRESDEN, CONTAINING THE WORLD-RENOWNED GALLERY OF PAINTINGS

Near the flight of steps to the terrace, facing the Royal Palace and Catholic Church, is the Rathaus (Town Hall) with an equestrian statue of King Albert in front.

The Royal Palace, just south of the Augustusbrücke, will be discovered by its lofty tower, three hundred and thirty-one feet high.

The Zwinger, to the west of the Schloss, is a range of buildings of seven pavilions, with the Museum at one corner. In the Museum are the picture gallery, with collections of engravings and drawings, and mineralogical collections, with scientific instruments.

The Picture Gallery is of world renown, containing more than two thousand four hundred paintings, mostly by Italian and Flemish masters. The gem of the collection is Raphael's "Sistine Madonna;" other masterpieces being Titian's "Tribute Money," and Correggio's "Magdalene" and "La Notte."

The Green Vault in the Royal Palace contains an unrivaled collection of precious stones, articles wrought in gold, silver, and ivory, etc. The new Hofthcater is one of the finest theaters in Europe. Of the churches the most noted are the Frauenkirche, with its lofty dome (three hundred and ten feet high).

The so-called "Dresden china" is made for the most part at Meissen, fifteen miles from Dresden.

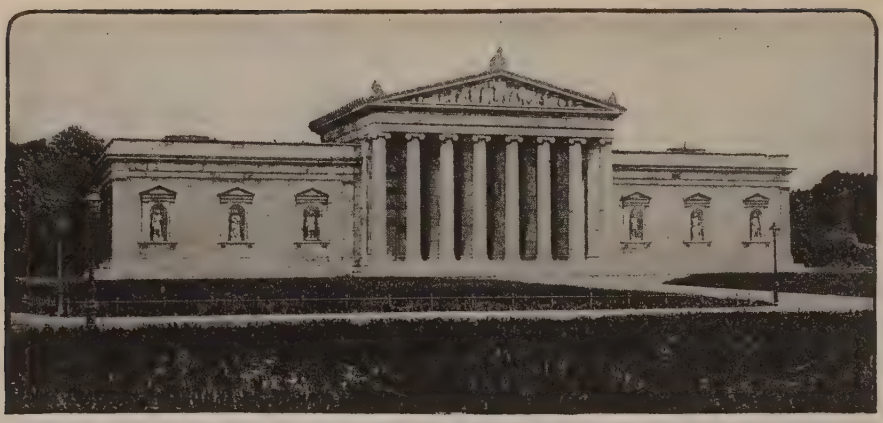
to importance as the central point of the great grain-growing plateau of southern Bavaria. It is the great corn depot of the country, and the place of manufacture of its favorite beer. In recent times it has become celebrated as a seat of the fine arts and for its splendid buildings.

Ancient Nürnburg, with its double line of walls, where watches, first called Nürnberg eggs, were invented, is the great seat of industry and commerce in the north of Bavaria, exporting toys which go to all parts of the world. It stands on the Ludwigs Canal, the most important one in the kingdom, uniting the navigable tributaries of the Rhine and Danube.

Augsburg, on the Lech, northwest of Munich, where the Protestants presented the Confession of Faith to Charles V., is a chief center of Bavarian trade and exchange. Würzburg, on the Main, is the old capital of Franconia, the district which was peopled by colonies of Franks in the sixth century.

Speyer or Spire and the fortress of Landau are also important places in the palatinate.

Cities of Württemberg.—Stuttgart, where Hegel was born, and where Schiller spent his youth, is the capital, and stands next to Leipzig and Berlin in the printing arts and book trade. The fortress of Ulm, on the Danube, where it leaves Württemberg, has a large transit trade. Heil-



THE PINAKOTHEK, MUNICH, FAMOUS GERMAN MUSEUM OF FINE ARTS

bronn is another important trading place. Tübingen is the university town.

The little territory belonging to the house of Hohenzollern, which runs into Württemberg on the south, fell by inheritance to the king of Prussia in 1849.

Cities of Baden.—Free Towns.—Carlsruhe, the capital, and Mannheim, at the confluence of the Neckar and Rhine, are its largest towns. Heidelberg (north) and Freiburg (south) are the seats of universities. Baden-Baden in the center, is a famous watering-place.

Hamburg, Bremen and Lübeck, the remaining free Hanse* towns, are republics, each governed by a senate and house of burgesses. Each of them has a small territory besides that occupied by the city. They are the great gates of the external commerce of Germany.

HAMBURG, situated on the North bank of the Elbe, is the largest seaport on the Continent, and the third largest in the world. The beauty of the city is much enhanced by the large sheets of water formed by the Alster. The canals in the city are spanned by over sixty bridges, and there are numbers of steam ferries. There are many fine public buildings; notably the Exchange, with its commercial library of over 110,000 volumes; the Rathaus, completed in 1897; the Deutsches Schauspielhaus, completed in 1900; the marine office, and numerous museums of arts, crafts, botany—natural history, etc. It has also many fine churches, viz. St. Michael, St. Peter, St. Nicholas, and St. Catharine's, dating from the 15th century. It was the home of Heine, Lessing, Klopstock, Shröder, and other noted writers.

German Colonies and Government Changes—The German National Assembly met first at Weimar on February 6, 1919. Its chief purpose was to adopt a provisional constitution and to elect a provisional government. Both of these were carried out promptly, and on July 31 of that year a constitution for the new federated republic was formally adopted. (See further under Comparative Government). This constitution was printed in the National Legislative Journal on August 13, 1919, and is now the basic law of the German Republic.

Although the Constitution itself provides that the popular legislative body shall be known as the Reichstag, it was announced on August 14 by Konstantin Fehrenbach, the President of the National Assembly, that the name German National Constituent Assembly would be retained by that body, which would exercise all the rights and duties laid down in the Constitution for the Reichstag.

The only alteration in the present Constitution likely to be effected in the near future is the changing of the famous Article 61, which provides for the admission of Austrian delegates, with voices but not votes, to the National Council. The National Council forms a sort of Upper House and corresponds largely to the old Federal Council of the empire.

Friedrich Ebert was elected the first President, February 11, 1919.

By the provisions of the Treaty of Paris, the new frontiers of Germany were laid down by the Entente Allies as indicated on the map of Europe and in the articles on the various belligerent countries.

Through the determination of these new boundaries Germany loses the following territories and populations in Europe:

	Square Miles	Population
Alsace-Lorraine, to France	5,680	1,874,014
Sarre Coal Basin, to League of Nations	738	234,200
Schleswig, to Denmark	2,787	693,984
Posen andpart of Silesia, to Poland (including Port of Danzig)	28,412	8,440,379
Malmedy, to Belgium	382	119,184

By the decision of the Peace Conference she is deprived of all her colonies:

Togoland	33,668	1,003,612
Kamerun	305,019	3,501,537
German Southwest Africa	322,432	102,586
German East Africa	384,170	7,515,666
New Guinea (exclusive of the Ladrone Islands)	92,244	545,478
Caroline Islands	560	39,000
Marshall Islands	158	16,000
Ladrone Islands	420	10,000
German Samoan Islands	993	37,980
Kiao-Chau (China)	213	196,470
Total Losses in Europe	37,999	11,361,761
Total Losses of Colonies	1,139,877	12,968,329
Grand Total of Losses	1,177,876	24,330,090

As far as Germany in Europe is concerned her pre and ante-war territory and population were:

	Square Miles	Population
Before the War	208,825	64,925,993
After the War	170,826	53,564,232
War Losses	47,999	11,361,761
Percentages	18%	17½%

*The Hansa or League of the North German towns was the first trade union of Europe, and dates from the thirteenth century. At one time it included eighty-five towns, and had several foreign factories.

PARLIAMENT BUILDINGS, BERLIN

HISTORY OF GERMANY

The earliest information we have of the Germans, the peoples and the tribes who dwelt among the dense forests that stretched from the Rhine to the Vistula and from the Danube to the Baltic Sea, comes to us from the Romans.

First Contact with Romans.—The first tribes of Germanic race to come into collision with the arms of Rome were the Cimbri and Teutones, who in 113 B. C. had invaded Styria, and there met with defeat from the troops of the consul Papirius. When in 58 B. C. Cæsar began his campaigns in Gaul, he found several hordes of Germans, mostly Marcomanni and Suevi, settled between the Rhine and the Vosges, and even on the western side of these hills.

Appealed to by the Gauls of those regions to free them from their German oppressors, Cæsar inflicted a crushing defeat upon their ambitious chieftian, Ariovistus, and chased him and his followers across the Rhine. In the period 166-74 Aurelius was engaged in beating back a formidable incursion of the Marcomanni and Quadi into Roman territory. From the third century we no longer read of single tribes, but of great confederations of tribes, as the Goths, Alemanni, Franks, Frisians, Saxons, Thuringians, and others. Of the history of Germany itself we learn little more that is authentic until we come down to the times of the Franks, by whom the kingdoms of France and Germany were subsequently formed.

Henceforward, till the time of Charlemagne, Germany was occupied by a number of chieftains, who were perpetually at war with one another, except when invasions from without forced them into transitory alliance.

Charlemagne, or Charles the Great, the Frankish king, was crowned emperor of Rome by the pope in 800, and after his death his empire was partitioned among his four sons, and the result of the family struggles which followed was the separation of Germany from Gaul and of both from Burgundy and Italy by the Treaty of Verdun in 843. (See history of France; also Empire of Charlemagne.)

A separate kingdom of Germany was then formed under Lewis the German. A temporary reunion of the dominions of Charlemagne—with the exception of Burgundy—was effected under Charles the Fat in 884, but he was deposed in 887 and the final separation into the East and West Frankish kingdoms was accomplished.

The inroads of the Norsemen were checked in 891 by Arnulf, but they were followed by the savage attacks of the Hungarians during the reign of Louis the Child, with whom ended the race of Charlemagne in 911.

Under Feudal System.—The royal power had now almost vanished, and the system of granting fiefs had resulted in the formation of a class of powerful local rulers—the dukes of the great groups or confederations of tribes. The maintenance of central authority at all was probably due only to external danger from Slavs, Norsemen, and Magyars, and even this could not prevent constant warfare between the great feudal lords. Conrad of Franconia, elected by the leading nobles, was unable to enforce his authority, and was, at his own suggestion, succeeded by his great enemy, Henry, Duke of Saxony.

Henry I. Establishes Order.—A born leader of men, statesman and general, Henry I. (919-936) introduced a new civil and military organization. He created the burgher class by the foundation of towns, compelling every tenth freeman to labor on buildings, and these towns he made the centers for judicial administration, ceremonies and festivals, markets, and trade. He broke the power of the Magyars, subdued Danes and Slavs, and before his death private war had ceased.

THE BRANDENBURG GATE

at the western terminus of the Unter den Linden, was erected 1789, at a cost of three hundred and seventy thousand dollars, after the Propylæa of Athens, and is regarded as the finest archway in Europe next to the Arc de Triomphe at Paris. The Quadriga or four-horse car of Victory, by Schadow, was taken to Paris by the French in 1806, and returned 1814.

Otto the Great Revives the Holy Roman Empire.—His son, Otto the Great (936-973), consolidated the royal power, and reduced the great Duchies to submission, keeping them in his own hands or in those of members of his family. In 951 he entered Italy to settle the affairs of the Lombard kingdom, but returned to cope with a revolt terminated only by the vital danger of an invasion by the Magyars, whose power was finally crushed in 955. Crowned Emperor by the Pope in 962, he set an example to subsequent German kings, who claimed the Imperial and Lombard crowns as of right; but the precedent led also to the continued absences of the German rulers in Italy and the severance of their interests from those of their own proper dominions. The sense of German nationality grew in his reign, yet this was accompanied by a weakening of central authority and the development of the power of the great vassals, dukes, and princes, ecclesiastical and secular.

Under the House of Franconia.—After his death constant civil war increased their power until their growing independence was checked by Conrad II. (1024-1039), the first of the Franconian Emperors, who rendered the mediate nobles, vassals of the great lords, less dependent on their feudal superiors, and formed a close alliance with the towns. His son, Henry III. (1039-1056), further strengthened the royal power, put down private war, and in 1043 proclaimed a general peace.

Struggle with the Papacy.—His attempted reformation of the Papacy and appointment of four German popes in succession commenced the long and fierce struggle between the Emperors and the Popes. During the minority of his son, Henry IV., the great nobles recovered much of their power. His opposition to the famous decree of Pope Gregory VII. in 1075 against the marriage of the clergy and their investiture by laymen was followed by his summons to Rome, his deposition of the Pope through a synod of German bishops, his excommunication and complete humiliation at Canossa in 1077. The dispute was only settled under his son, Henry V., by a compromise, the "Concordat of Worms," in 1122, but the power of the Papacy had been enormously strengthened. It had attempted to dispose of the Imperial Crown, and Innocent II. even claimed to have granted it to Lothar of Saxony (1125-1137) in 1133 as to a vassal.

Famous Hohenstaufen Line.—With Conrad III. of Franconia (1137-1152) commences the line of the famous Hohenstaufen Emperors. The two great parties supporting the Pope and the Emperor now first became known as Guelfs and Ghibelines (Welfs and Waiblings). His successor, the great Frederick Barbarossa (1152-1190), was occupied in Italy during long years with the now permanent struggle against the Popes and the Italian cities supporting them. In Germany Teutonic power was extended over the Slavonic countries along the Baltic by Henry the Lion of Saxony and Albert the Bear, to whom was granted the Mark of Brandenburg. Under Frederick II. (1212-1250) the struggle with the Papacy was continued. Sentence of excommunication was

launched against him, and a rival king was elected, and his continued absence in Italy led to the utmost anarchy in Germany. Meanwhile the conquest of the Slavonic lands now forming a great part of Prussia progressed steadily under the Knights of the Teutonic Order and of the Order of the Sword.

The period of the Hohenstaufens was one of great brilliancy. Chivalry was promoted in the Crusades, literature was in full bloom in the works of the Minnesänger, Gothic architecture received its finest developments, the towns increased in prosperity, many serfs were freed, and codes of local customs and usages were compiled, such as the Sachsenspiegel and the Schwabenspiegel. On the other hand, the greater vassals became practically independent, and the principle of inheritance was applied to their lands and offices. The privileges usurped by the ecclesiastical and secular princes were confirmed by Frederick II. in the "Pragmatic Sanctions" of 1220 and 1232, and the right of electing the Emperor was confined to the Seven Electors.

The Interregnum.—The period of anarchy culminating in the "Great Interregnum" (1250-1273) is marked by the formation of the Rhenish Confederation of some seventy leading cities for mutual defense, and of the powerful Hanseatic League.

Beginning of the Hapsburg Line.—Rudolf of Hapsburg, elected in 1273, revived the royal authority and strictly enforced justice, but his rule was unfavorable to the growing privileges of the towns. In this respect his policy was reversed by his successor, Adolf of Nassau (1291-1298), and by his son, Albert I. (1298-1308), who even befriended the serfs and the Jews. The long struggle between the Empire and the Papacy practically ended under Louis IV. (1314-1347), by the formal declaration of the Electors in 1338 that the Papal sanction was not needed to the election of the emperor. Public peace was encouraged under Louis IV., and his friendship to the towns was constant. Industry and trade flourished more and more in the cities, and their government was now becoming more democratic through the victory of the craft-guilds over the old patrician families.

House of Luxemburg.—Charles IV. (1347-1378), the first emperor who retained his hereditary lands on election, by the "Golden Bull" in 1356 regulated the method of election and confirmed the complete sovereignty of the Electors in their own territories. In 1396 the foundations of Swiss independence were laid in the victory of the "Eidgenossen" over Duke Leopold of Austria at Sempach.

Reformation Foreshadowed.—In the reign of Sigismund (1410-1437), who united the dignities of King of Hungary, King of Bohemia, and Margrave of Brandenburg, and who was the last Emperor crowned at Rome, the Hussite war, consequent on the burning of John Huss by the Council of Constance in 1415, foreshadowed the Reformation. The Mark of Brandenburg now passed to the Hohenzollerns, under whom it was to grow into the kingdom of Prussia.

The reigns of Frederick IV. (1440-1493), and Maximilian I. (1493-1519), the husband of Mary, the heiress of Charles the Bold, last Duke of Burgundy, bring the Middle Ages to a close. The age of chivalry was ended by the invention of gunpowder and the use of mercenary troops; the realities of feudalism had passed away, the Imperial authority had dwindled to nominal control, and princes and cities had attained independence. But the Imperial dignity was now permanently connected with the House of Hapsburg and combined with great territorial possessions. The semblance and, to some extent, the reality of unity were established by the growing use of Roman law, by the constitution in 1495 of an Imperial Tribunal or Court of Appeal (the "Aulic Council"), and by the division of Germany in 1501 and 1512 into "Circles," each with its own "States" charged to carry out the decisions of the Imperial Chamber.

Period of Charles V.—Luther's denunciation of indulgences was made in 1517, but the full storm of the Reformation burst after the accession of Charles V. (1519-1555), who united to the Empire the entire possessions of the kingdom of Spain. At the Diet of Worms in 1521 he took up the defense of the Church, and condemned Luther as a heretic. At the same Diet an Imperial Administrative Council was established, and a "Matricula" drawn up, settling the contingents of troops to be raised by the States, both of which existed until the fall of the Empire. The Reformation now made irresistible progress; a common name, "Protestants," was acquired by the Reformers at the Diet of Speyer in 1529, and in common statement of doctrines, the "Augsburg Confession," was drawn up in 1530.

Thirty Years' War.—The new and the old religions were put upon an equality by the Religious Peace of Augsburg in 1555, in which, however, the Calvinistic or Reformed Faith was not included. In the fearful struggle which followed the Reformation the Imperial authority was completely ruined. The reaction against the new doctrines, due mainly to the zeal of the Jesuits, gave fresh strength to the Catholic party, the Reformation was stamped out in Bohemia, and complete toleration was not acquired by Protestants (including both Lutherans and Calvinists) until the Peace of Westphalia in 1648.

This was at the close of the disastrous and merciless struggle known as the Thirty Years' war. The result of the confused period commencing with the abdication of Charles V. in 1555 must be briefly summed up. The Empire in Germany was practically ended and was now attached to the hereditary dominions of the house of Hapsburg in Austria. The population of Germany was reduced by more than one-half; industry and trade had almost ceased to exist; enormous territorial losses had been suffered, and France and Sweden had made great acquisitions. Switzerland and the United Provinces were severed from the Empire, and had acquired complete independence. Germany emerged from the war a mere lax confederation of states, whose rulers—a race of absolute and, in most cases, coarse and selfish despots—were recognized by the Peace of Westphalia as independent. Even in the cities government had passed into the

hands of local oligarchies. The only bond of union was the nominal authority remaining to the emperor, and now transferred to the Diet, of passing laws, concluding treaties, and making war and peace. One completely good result of the war was that amid the prevailing anarchy were laid, by Grotius, the foundations of a system of International Law.

Rise of Prussia to Power.—The Thirty Years' war was followed by the rise of Prussia. Brandenburg had in 1611 become united to the Duchy of Prussia, part of the possessions of the Teutonic Order, which was in 1657 declared independent of Poland, of which it had been a fief, and received further accessions under the Great Elector, Frederick William. It grew steadily in power during the long struggle against the unscrupulous aggressions of Louis XIV., and in 1701 the son of the Great Elector, Frederick I., obtained from the Emperor the recognition of the Prussian Duchy as a kingdom. In 1713 a "Pragmatic Sanction" was drawn up by the Emperor Charles VI. (1711-1740), providing for the inheritance of the Austrian dominions by his daughter, Maria Theresa, and this was ultimately guaranteed by the leading powers.

Frederick the Great and the Seven Years' War.—But his death in 1740 was the opportunity of Prussia, where Frederick II., better known as Frederick the Great, had just ascended the throne. He immediately occupied Silesia. Maria Theresa met with enthusiastic support in Hungary, and in 1745 her husband was elected emperor as Francis I. (1745-1765). An interval of peace was followed by the Seven Years' war, at the conclusion of which, in 1763, Prussia was confirmed in the possession of Silesia, took rank as a great Power, and became definitely the rival of Austria in German politics.

In 1765 Joseph II. succeeded to the imperial crown, becoming at the same time co-regent with his mother of the Austrian hereditary dominions. He joined with Russia and Prussia in the first partition of Poland (1772). He was succeeded by his brother Leopold, who, having died in 1792, was succeeded by his son, Francis II., who joined in 1793 in the second partition of Poland. He took the command of his army against the French in 1794, concluded the peace of Campo Formio with Bonaparte (1797); joined the second coalition against France in 1799, and concluded the treaty of Lunéville (1801).

In 1804 Francis took the title of hereditary emperor of Austria, renouncing two years later that of head of the German Empire, which, indeed, had ceased to exist, owing to the conquests of Napoleon. The latter's secularization of the ecclesiastical states, overthrow of Austria at Austerlitz (1805) and of Prussia at Jena and Auerstädt (1806), and formation of the Confederation of the Rhine, completed the extinction of the Holy Roman Empire.

The German Confederation.—The states of Germany were again united by the treaty of Vienna (1815), in a confederation called the German Confederation (*der Deutsche Bund*). In 1818 a general commercial league, called the Zollverein was projected by Prussia, and was gradually joined by most of the German states, exclusive of Austria. Revolutionary outbreaks caused great disturbances in various German states in 1830 and 1848, particularly the latter. The German Diet was restored in 1851 by the efforts of Prussia and Austria, who were latterly rivals for the supremacy in the confederation.

Beginning of Bismarck's Power.—In 1861 William I. succeeded to the throne of Prussia, and the conflicts between the liberals and his ultra-reactionary government led in 1863 to the entrance into the ministry of Otto von Bismarck, who soon after became its president and the minister of foreign affairs. On the death of Frederick VII. of Denmark, Prussia and Austria disputed the claims of Christian IX., his successor, to the duchies of Schleswig and Holstein, and the war which followed (1864) resulted in the cession of Schleswig-Holstein, and Lauenburg to those powers jointly.

By the treaty of Gastein, Austria and Prussia agreed to a joint occupation of the Elbe duchies; but to prevent collision it was judged prudent that Austria should occupy Holstein, and Prussia Sleswick.

Contest Between Prussia and Austria.—Already a difference of policy had begun to show itself. Prussia was believed to have the intention of annexing the duchies; while Austria began to favor the claims of Prince Frederick of Augustemburg. In the meantime, both nations were making ready for the struggle; and Italy, looking upon the quarrel as a precious opportunity to strike a blow for the liberation of Venetia, had secretly entered into an alliance with Prussia.

On July 3, 1866, was fought the decisive battle of Sadowa, in which the Austrians were routed. Not till the victorious Prussians had pushed forward towards Vienna was a truce obtained through the agency of the Emperor of the French, the Peace of Prague (August 20). Italy, though more than half-inclined to stand out for the cession by Austria of the Trentino, as well as Venetia, reluctantly agreed to the armistice (August 12).

A brief campaign sufficed for the defeat of the minor states of Germany that had joined Austria, viz.: Bavaria, Württemberg, Baden and Hesse-Darmstadt; and, after peace had at last been arranged, some of them were forced to submit to a certain loss of territory.

Independence of Austria and Union of Germany.—The war completed the dissolution of the Confederation, and secured the reconstruction of Germany on an entirely new basis. Austria was excluded from Germany, and a new confederation, the North German, was formed of the states north of the Main, under the headship of the king of Prussia. Schleswig-Holstein, Hanover, Hesse-Cassel, Nassau, and Frankfort were incorporated with that kingdom. Efforts to secure a further consolidation were opposed by the South German states, but the final solution of the question was at length brought about by France, whose demands resulted in the War of 1870. (See under France.)

In this war Germany acquired Alsace and a part of Lorraine, and south Germany now

waived any further opposition to a consolidation of all the German states under the leadership of Prussia.

Restoration of the German Empire.—On December 3 the king of Bavaria invited the king of Prussia to restore the dignity of German emperor. Most of the other states gave their assent and the North German Reichstag on December 10 adopted a motion for the establishment of the German empire under the king of Prussia. On January 18, 1871, the restoration of the imperial dignity was solemnly proclaimed by William I. at Versailles.

Subsequently the empire was largely organized under the vigorous administration of Prince Bismarck. The parliament of the new empire soon met at Berlin, and adopted the new constitution. The main result of his foreign policy was a cordial alliance with Austro-Hungary; an alliance, in 1872, between the emperors of Germany, Austria and Russia, in which, subsequently, Italy took the place of Russia, forming what is known in European politics as the Triple Alliance.

In domestic affairs many difficulties were encountered. With the birth of the new Empire commenced the long struggle of Prince Bismarck with the Papacy. The Jesuits were expelled in 1872, and in 1873 the famous "Falk Laws" imposed secular restrictions on all ecclesiastical appointments. The strict enforcement of these laws led to intense discontent and ill-feeling among Catholics. The contest ended with the grant of many concessions and the confession by Prince Bismarck in 1887 that his policy was practically changed. The democratic movement known as Socialism, aiming at the regulation and organization by the State of labor and production, grew rapidly in strength and importance, and inaugurated an era of "labor policy" by legislation compelling employers to institute a system of insurance in favor of their work-people, since followed by the adoption of an important state-aided scheme of insurance against death and old age.

In 1888 Emperor William I. died, and the premature death, after a reign of three months, of the beloved Crown Prince, who succeeded him as Frederick III., disappointed the hopes of those who had anticipated a Liberal policy on the part of the Crown.

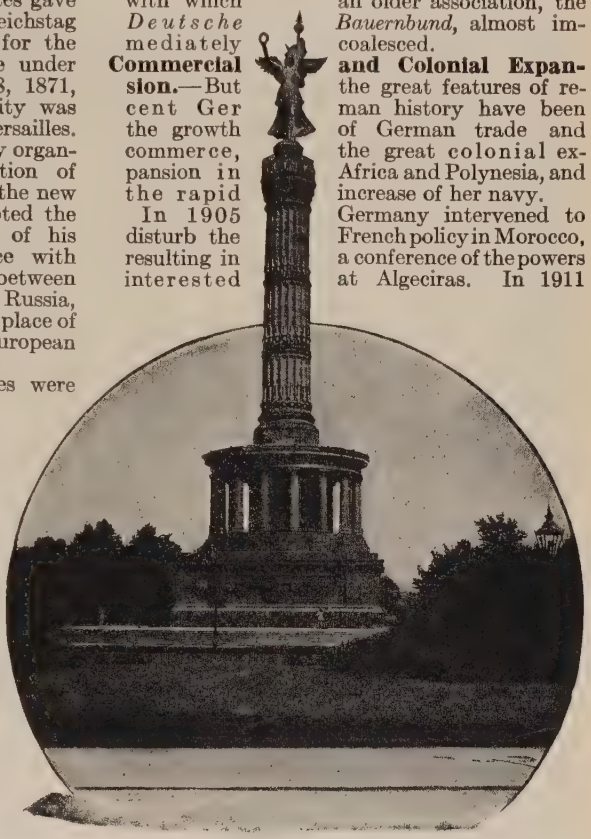
Accession of William II.—His son and successor, William II., took a strong view of his functions as emperor and king. His reign was immediately characterized by the further development of the labor policy inaugurated by Prince Bismarck. The emperor was not, however, generally in accord with the views of the great Chancellor, whose resignation was accepted in 1891.

Caprivi now became chancellor, and managed to negotiate a series of commercial treaties, in 1892-1894, with the countries of Central Europe (Austria, Belgium, Switzerland, Italy), and later with Servia and Roumania, the purpose of which was to lower the import-duty on corn on condition that the foreign states favored German manufactures. These treaties at once induced the peasants to combine and in 1893 a great agricultural union was formed, called the *Bund der Landwirte*, with which an older association, the *Deutsche Bauernbund*, almost immediately coalesced.

Commercial and Colonial Expansion.—But the great features of recent Ger man history have been the growth of German trade and commerce, and the great colonial expansion in Africa and Polynesia, and the rapid increase of her navy.

In 1905 Germany intervened to disturb the French policy in Morocco, resulting in a conference of the powers interested at Algeciras. In 1911 Germany again intervened by sending a warship to Agadir for the protection of German property and German subjects. The action occasioned a complication of the European situation, and all but resulted in war. Germany's claim for territorial compensation was not entertained by France, and Great Britain, as ally of France, claimed the right to be consulted if territory were to be conceded. The net result, after months of diplomatic intercommunication, was a readjustment of frontiers.

The history of the German Empire since 1914 is chiefly that of the leading Teutonic power in the great European War that ended with the armistice of November 11, 1918. (See further under European War.)



MONUMENT OF VICTORY, BERLIN

Erected in the Königs Platz at the conclusion of the Franco-Prussian war of 1871. It consists of a circular temple surrounded with a colonnade of sixteen pillars, standing upon a square base or pedestal, and surmounted by a cylindrical shaft bearing a colossal gilt bronze Victory, winged and holding a wreath. The total height is one hundred and ninety-four feet. It may be ascended by an interior staircase. Upon the base are elaborate reliefs of the various campaigns commemorated.

Founding of the Republic.—At the outbreak of war, August, 1914, "Germany" was a Confederate League, bearing the name "German Empire," under the hereditary presidency of the King of Prussia, holding the title of "German Emperor."

Two days before the armistice, that is, on November 9, 1918, the abdication of the German Emperor, William II., was announced. He had fled to Holland, where he has since been living under the Dutch surveillance at Doorn. The self-constituted Council of People's Commissioners took over the Government and declared the existing Imperial Parliament dissolved and proclaimed the republic. The reigning Princes of the Federal states were either deposed or abdicated. A call was issued for the election of a National Assembly. Elections, at which all Germans, men and women over twenty years of age, voted, were held in January, 1919.

The National Assembly adopted a Constitution July 31, 1919. Foreign relations, defense, customs, taxation, and railway service are declared Federal matters; each component state must have a republican Constitution; universal suffrage, secret ballot, and proportional representation are provided for. Freedom of speech, of the press and of assembly is guaranteed. Prussia no longer hereditarily occupies the chief office of State, and the "reserved" rights of the Southern States and Prussia have been withdrawn.

In 1920 the German states surrendered to the Berlin Central Government the right to control direct taxes, hitherto held jealously by the several states. The form of government in the eighteen component States must be republican.

The financial, economic and industrial catastrophe that Germany faced with the occupation of the Ruhr, in January, 1923, reached its ultimate crisis in September, 1923, with the utter collapse of the mark, widespread unemployment and despair, producing a state bordering on social revolution. Under the *Treaty of Versailles* the German Government undertook to pay the cost of the Armies of Occupation from November 11, 1918, until they shall be withdrawn, the occupied area extending to the Rhine (with "bridgeheads" on the right bank) from Eiten, on the Netherland's frontier, in the north, to the junction of the German-Lorraine frontiers, in the south. The amount of the reparations due by Germany under the Treaty was fixed in January, 1921 (by the Financial Council of the Allies at Brussels) at 132 milliards gold marks (£6,600,000,000).

A new *Reparations Scheme* was agreed to by Germany and the Allies in August, 1924, providing for standard annual payments of 2,500 million gold marks, liable to increase according to an index of prosperity, the money to be supplied from (1) taxation, (2) railway bonds, and (3) bonds imposed on private industry. The total capital Reparations liability was not refixed.

In November, 1923, was put through a *Currency Reform*, consisting in the creation of a *rentenmark*, nominally worth 1 gold mark, and in the stabilization of the depreciated paper-mark at 1 billion paper-marks to 1 gold-mark. These values have since been maintained but both currencies will be gradually exchanged for new gold-mark notes, to be issued by the Reichsbank as reconstituted under the Reparations settlement.

The Conference of Ambassadors, on November 11, 1925, received a satisfactory reply from the German Government on the question of disarmament, and on November 14 announced that the evacuation of the Cologne zone would begin at once. The British troops left January 30, 1926, their soldiers accompanied by 800 German wives. The French evacuated Bonn soon after, and the Belgians Krafield, restoring the north Rhineland zone to Germany. Allied control was to cease on January 31, 1927, and questions at issue after that date brought before the Council. (See also Comparative History of Nations, pages 440-443.)

REPUBLIC OF AUSTRIA

AUSTRIA (*ows'tri-a*), [G. *Osterreich*, "eastern kingdom], a republic of central Europe, formerly the northwestern part of the Austro-Hungarian Empire, is bounded on the north by Czecho-Slovakia and Germany, on the west by Germany, Switzerland and Italy, on the south by Italy and Jugoslavia, and on the east by Hungary and Czecho-Slovakia.

Area and Boundaries.—As a result of the European War of 1914-1918, the larger part of Austria's former territories have been taken away, and are incorporated as parts of Czecho-Slovakia, Jugoslavia, Poland, and Italy. The provinces remaining to form the Republic of Austria are Lower and Upper Austria, Salzburg, Vorarlberg, and parts of Carinthia, Styria and Tyrol. The estimated area is about 32,369 square miles, and the population about 6,535,000. The Treaty of Paris, signed in 1919, provides, temporarily, the following frontiers:

"The northern frontier facing Czecho-Slovakia follows the existing administrative boundaries formerly separating the provinces of Bohemia and Moravia from those of Upper and Lower Austria, subject to certain minor rectifications, notably in the regions of Gmund and Feldsberg and along the river Morava.

"The frontier with Italy begins at the Reschen Pass on the Swiss frontier and follows in general the watershed between the basins of the Inn and the Drave on the north and Adige, Piave, and Tagliamento on the south. This line, which runs through Brenner Pass and the peak of the Signori (Drieherrenspitze), includes in the Italian frontiers the valley of Sachsen and the basin of Tarvis.

"The western and northwestern frontiers facing Bavaria, the western frontier facing Switzerland and the eastern frontier facing Hungary remain unchanged."

Physical Features.—Austria is essentially an inland country. It is richer and more varied in landscape and scenery than any other country in Europe of like extent; for it includes the larger portion of the Alps, offshoots of the mountains of Central Germany, and highlands like Upper and Lower Austria of Austria, with low-lying plains of varying character and extent.

VILLAGE OF TRAUNKIRCHEN AND SPITZELSTEIN PEAK: SALZKAMMERGUT, NEAR SALZBURG

Three-quarters of the surface is mountainous, the most prominent being the region of the Eastern or Austrian Alps whose loftiest summit, the Ortler Spitze, has on elevation of 12,814 feet. The principal valleys are almost all parallel, wide and long, level and fertile, and they are connected by easy passes, notably the Brenner (4,428 feet), the lowest in the nigh Alps. In the Tyrol only one-sixteenth of the surface is cultivated in farms or vineyards, while in Styria they occupy almost one-fifth of the whole.

Through the Trafoi, and thence over the Stilfs ridge to Bormio and Worms, in the valley of the Adda, runs a noted road, built between 1820 and 1825, the highest practicable road (9,124 feet) in the whole of the Alps, and the richest in scenery. The lofty Tauern, the most magnificent of the Alpine chains east of the Brenner, rise beyond the mountains of the Ziller valley—a sharp ridge, 75 miles long, rising in several places above the snow-line, and divided by depressions, called "Tauern," into a number of separate mountain heads. The Grossglockner, rearing its bare, lonely cone heavenwards from the midst of a region of ice, far surpasses all the above named mountains. Though it must yield to the Ortler the honor of being the highest mountain in Austria, the latter can in no way compare with it either in beauty of contour or expanse of view. The Ankogl, to the south of Gastein, marks the farthest limit of the high Alps.

The landscape of the hilly district is composed of stretches of grassy meadow and pasture, barren sand-hills, reed-fringed pools, swaying cornfields and fruitful vineyards, and shady hedges crowning the lines of the hills. This is the character, especially of the western part, of the plain stretching from the clayey bank of the Danube to the Bakony Mountains and the Styrian highlands.

On the northwest border of Austria the Bohmer Wald Mountains.

Generally speaking, all the mountainous borders of Austria-Hungary are forest-covered, the woods occupying a third of the whole surface of those regions.

Rivers and Lakes.—Austria is traversed by the Danube, which drains about one-half of its area through its affluents, the Inn, Enns, March, Drave, Mur. The Danube first enters Austria not far from Passau, on the right bank, at the point where empty the Inn and Ilz; and at Engelhartszell, on the left bank; but from Passau onward it is hemmed in by heights, outlying arms of the Bohmer Wald on the north, spurs of the upper Austrian highlands on the south. In the Vienna basin the river divides into several branches, and receives the March on the north, and several small tributaries on the south.

The chief lake is the Traunsee, located in the region known as the Salzkammergut ("Estate of the Salt Office."), situated in the southern part of Upper Austria, adjoining Styria. The scenery here combines in rare beauty the features of the valley, mountain and lake. The region comprises about 240 square miles, and with some 18,000 inhabitants, contains over forty lakes. The center of the district is Ischl, other important towns being Gmunden, Traunkirchen, Ebensee, Laufen, Goisern, Gosau, Hallstatt, St. Gilgen, Mondsee, and Scharfling. The Dachstein (9,827 feet), the

Thorstein (9,663 feet), and the Donnerkogeln (6,730 feet) are among the highest points.

Generally speaking, the climate is anything but uniform. On the whole it is moderate, being warm in the south in summer, and severe in the mountainous parts in winter.

Nearly 37 per cent of the entire surface is forest land, but agriculture is the principal industry. Cattle-breeding is also extensively carried on. The chief mineral is salt (a state monopoly), and lignite, gypsum, mill-stones, whet and grind stones, and granite are also obtained. Among manufactures, which are less developed than in

SALZBURG, AUSTRIA, ONE OF THE MOST CHARMING TOWNS IN EUROPE, AND BIRTHPLACE OF MOZART AND HAYDN

Political Divisions.—Upper and Lower Austria, which, with Salzburg, formed the Duchy of Austria under Hapsburg dominion and the nucleus of the former Empire, are still the center of the new modern state. They extend along both banks of the Danube, which below Vienna emerges upon a broad plain, of which the Marchfeld forms the best-known part.

Lower Austria (area 7,652 square miles) is divided into a north and south half by the Danube. The south half is occupied by secondary ranges and foothills of the eastern Alps. The north is a table-land, tilted east towards the low plain of Marchfeld. The March River marks the eastern boundary of this side of the Danube, as the Letha does in part on the south of that river. Manufacturing employs 39.25 per cent of the population and agriculture 30 per cent. Most factories and mills are in Vienna, but outside the capital there is also much activity. Sawmills abound everywhere, and weaving and allied industries are important, as are brewing and distilling, brick-making, the manufacture of tobacco, glass, cottons, haberdashery, gold and silver wire, wood pulp, chemicals, sugar, leather, rubber, clocks, etc.

Upper Austria (area 4,626 square miles), is divided into two unequal parts by the Danube. The Inn and its affluent the Salzach separate it from Bavaria. The Traun and other streams drain the southern portion, while the part north of the Danube is entirely occupied by the Bohmerwald and its tablelands. South of the Danube the Alps and their subsidiary chains cover almost the whole surface. The climate varies with the altitude; it is, however, too cold for the successful culture of the vine.

Lower Austria, ironware and cutlery take the first place, chiefly at Steyr, where the well-known small-arms factory is situated. There are manufactures of linens and cottons, india-rubber, leather, paper, and glass.

Salzburg is bounded south and west by Tyrol. Area, 2,760 square miles; population (1910) 214,737. The country belongs to the eastern Alps, and is intersected by numerous picturesque valleys, and thickly dotted with lakes. It is bounded on the south by the ice-clad Hohe Tauern, and drained by the Salza, a tributary of the Inn. It is rich in minerals, notably salt, and in mineral springs. Manufactures: cigars and beer.

Styria (Ger. *Steiermark*), has an area of 8,629 square miles, and population (1910) 1,444,157, of whom 67 per cent are of German and 33 per cent of Slavonic origin. Styria is traversed by three spurs of the Alps, but not wanting in fertile plains and valleys, which are for the most part carefully cultivated. The principal rivers are the Mur, Drau, and Sau or Save. Forests cover 51.5 per cent of the area; 25.5 per cent is pastures; and 22 per cent is under cultivation. Styria's chief wealth lies in its mineral products, especially iron.

Carinthia (Ger. *Karnthen*), formed part of the old kingdom of Illyria, and has an area of 4005 square miles, and a population of (1910), 396,200. The principal river is the Drave; and the loftiest point is the Grossglockner (12,450 feet), the general aspect of the country being mountainous. Only 15 per cent of the area is devoted to tillage. Horses and cattle are reared and exported. The principal products are minerals. Klagenfurt is the capital of Carinthia. Only 30 per cent of

the population are Slavs, the remainder being Germans; and but 5 per cent are Protestants.

Tyrol (*tee-rol;* Ger. *Tirol*), lying between Bavaria, Switzerland, Italy, Salzburg, and Carinthia has an area of 10,302 square miles to which is administratively added Vorarlberg, 1,005 square miles, on the western frontier. The province is traversed from east to west by the three chains of the Alps; the central chain (11,000 to 12,500 feet), which is crossed by the road over the Brenner Pass (4,588 feet), separates the German from the Italian side.

Brenner Pass, on the road between Innsbruck and Botzen, is open at all seasons of the year, and is the lowest pass over the main chain of the Alps. In 1867 a railway through the pass was opened. The distance from Innsbruck to Botzen in a direct line is only 52 miles, but frequent windings extend the railway to 78 miles. It passes over numerous viaducts and bridges, and through 27 tunnels, one of them 935 yards long.

The population of Tyrol consists of Germans (60 per cent) and Italians (40 per cent), and numbered (with the crownland of Vorarlberg), 1,092,192 in 1910. The people are noted for their fidelity to the Catholic faith and their devotion to their country, but are somewhat backward in education.

The more important valleys are formed by the Inn (flowing north to the Danube) and the Adige (south to the Adriatic.) Pastoral pursuits furnish the chief occupations, though some grain is grown, and considerable attention is paid to the cultivation of the forests (46 per cent of the area), of fruit, wine and silkworms. The mines were formerly of great value; but little is now extracted except salt (at Hall), anthracite, and a little iron. Metal industries flourish in German Tyrol, cotton manufactures in Vorarlberg, and silk in Italian Tyrol. Innsbruck, on the Inn, is the capital.

Vorarlberg is a small mountain district which slopes down to the Rhine, which separates it from Switzerland, and the Boden See. Bregenz, at the head of the latter, is the capital. Cattle and goats are raised, and milk products exported.

Within this small district lies the still smaller principality of Liechtenstein, one of the smallest autonomous states of Europe (70 square miles, population 9,600), with Vaduz, a little market town, for its capital.

Industries and National Resources.—The occupations of Austria naturally divide themselves between the mining and pastoral industries of the mountains, and the agricultural and pastoral of the plains.

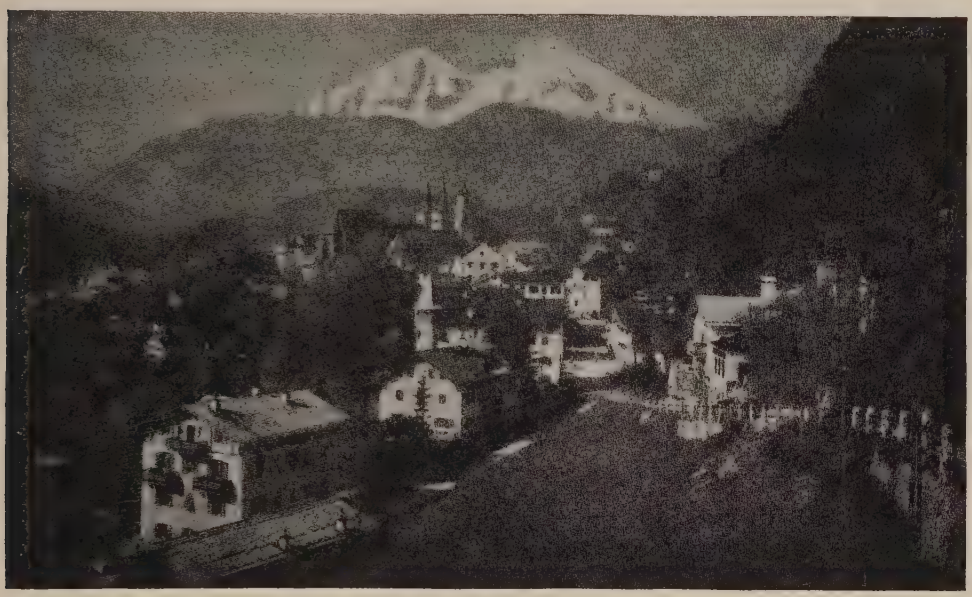
Agriculture employs by far the largest share of the population; and the lower lands of Austria are among the most fertile portions of Europe. Oats, rye, barley, wheat, and maize, are the commonest grains; flax and hemp are widely grown and tobacco in lesser degree.

Horticulture is carried to great perfection; and the orchards of Austria proper and Tyrol produce a profusion of fruit. Great quantities of cider are made in Upper Austria and Carinthia. Austria also produces excellent wines, in quality very similar to those of France. With the exception of Upper Austria, the vine is cultivated in all the provinces.

Animal Products.—The rearing of cattle is an important industry and the Alpine regions produce an exceedingly fine breed. The river fisheries are important all over the land.

Minerals.—The mineral wealth of Austria is not surpassed in any European country. Mining has been an important pursuit in Austria for centuries, and has been encouraged and promoted by the government.

Mines are worked for common coal in Lower austria; for brown coal in Styria, Lower Austria, Carinthia, Upper Austria and Tyrol. Iron ore is worked in Styria, Carinthia, Salzburg. Copper ore in Salzburg, Carinthia and Tyrol. Lead ore in Carinthia, Tyrol and



THE VILLAGE OF BERCHTESGADEN

Nowhere in Switzerland or the Tyrol is there a more exquisite village than this one on the way from Salzburg to the Königsee.

A PANORAMIC VIEW OF VIENNA

Many circumstances have combined to favor the development of modern architecture in Vienna, particularly the removal of the old fortifications in 1860. To-day Vienna is noted for the beauty of its public edifices. The building in the foreground is the Imperial Theater, while the single spire behind it is that of the famous St. Stephen's Cathedral, which dates in part from the Thirteenth Century.

Styria. Zinc in Carinthia, Tyrol and Styria. Sulphur in Styria and Tyrol. Graphite in Lower Austria and Styria; while the largest production of salt is from Upper Austria and Styria.

The useful earths and building-stones are to be had in great profusion; likewise marble, gypsum, chalk, etc.

Manufactures are most developed in the districts round Vienna and in Styria. Weaving employs the largest number of hands; next in number come the metal, stone, glass and wood workers, then the workers in leather. Iron and steel goods are made in Styria. Tyrol has long been noted for the production of carved woodwork. Paper is made chiefly in or near Vienna.

Cities and Towns.—The most important cities are the capital, Vienna, 2,031,498; Graz (*grätz*), 151,781; Linz, 67,817; Innbruck, 53,194; Laibach, 41,727; Salzburg, 36,210; Wiener-Neustadt, 32,874.

THE KARLSPLATZ AND THE KARLSKIRCHE

This is one of the chief transfer points in the city and is a station for the Stadtbahn or suburban railway. In the background is the Karlskirche, erected in 1736 by Emperor Charles VI, and flanked by two columnar belfries. To the right is the Polytechnic Institute.

ALONG THE GRABEN IN VIENNA

The Graben runs through the older section of the city and here are located many of the best shops in Vienna. The buildings on one side occupy the site of the ancient town wall. The carved group and fountain in the background is the so-called Trinity Column erected in 1693 to commemorate the cessation of a devastating plague.

Vienna (Ger. *Wien*, pron. *Veen*), the capital of Austria is situated in Lower Austria, on the Danube Canal, a south branch of the Danube, here joined by the small river Wien.

Chief Divisions.—Vienna proper consists of the Inner City and ten suburban districts surrounding it, formerly encircled by fortifications known as the Lines, which in 1892 were replaced by a boulevard, known as the Ringstrasse. The central point of the city is the Graben, a short street in the center of the inner city, a pleasant, well-built avenue, of greater width than usual for streets within the Ring. The Stadt is the fashionable quarter, where are the imperial palace, the residences of many of the nobility, the leading churches, museums, galleries, etc., and the most elegant shops.

The Ringstrasse is perhaps not surpassed in its architectural magnificence by any other street in Europe. Among the most conspicuous of the public buildings upon it are the Bourse; the University, founded in 1365 and renowned throughout the world as a medical school, has a teaching staff of five hundred and some ten thousand students; the new Rathhaus in the Gothic style, with a tower three hundred and twenty-eight feet high; the new Court Theater; the extensive and splendid Houses of Parliament; the Palace of Justice; the twin Imperial Museums of natural history and of art; the Imperial Opera House, sumptuous without and within; the Commercial Academy; the Palace of Archduke William; the Austrian Museum of Art and Industry, and the School for Art Industry.

IMPERIAL ART MUSEUM, VIENNA

This magnificent picture gallery contains many of the finest canvases in the world and is supreme in its examples of the Venetian masters, and in those of Dürer and Rubens.

THE IMPERIAL UNIVERSITY, VIENNA

Other institutions and buildings of interest are the Polytechnic Institute (with a Technological Museum); the Deaf and Dumb Asylum, founded by Maria Theresa; the splendid Public Hospital, the largest in Europe, and the Josephinum, a medical college founded in 1784, containing a large collection of anatomical models, etc.

Monuments and Parks.—Of the public monuments and most noteworthy are the equestrian statues of Joseph II., in the Josephsplatz, those of Archduke Charles and Prince Eugene, and that of Francis I. in the Hofgarten; the monument of Francis II., in the inner court of the Hofburg; the grand Maria Theresa monument; the Beethoven and the Schiller monuments; the Grillparzer monument etc. Of the many beautiful fountains the finest is that by Schwanthaler representing Austria, with the four rivers, Danube, Elbe, Vistula, and Po.

In the Volksgarten (bordering on the Ringstrasse) is the Temple of Theseus, modeled after that at Athens, and formerly containing Canova's marble Theseus and the Minotaur, which is now in the Imperial Museum of Art.

The great park of Vienna is the Prater (four thousand two hundred and seventy acres), extending for nearly four miles between the Donau Canal (a narrow arm of the Danube) and the main stream of the river. It was the site of the Great Exhibition of 1873, some of the buildings

GRAND OPERA HOUSE, VIENNA

A magnificent structure in the early French Renaissance style. The interior is sumptuously decorated, and the parapet is adorned with marble statues of the seven liberal arts. Busts of famous composers, bronze figures, operatic scenes and medallions of distinguished operatic artists further add to the embellishment of the interior.

of which are now used for exhibitions, concerts, etc.

Churches and Museums.—The ecclesiastical center and the historic church of the city, is St. Stephen's Cathedral, adjacent to the Graben.

St. Stephen's is one of the noblest Gothic edifices in Europe. It was founded in 1147, but was burned in 1258. The present edifice was begun soon after, but the tower was not finished until 1433. It has recently undergone extensive restorations, both without and within. The tower is four hundred and forty-nine feet high. The interior is rich in sculpture and in monuments; and the carved stalls in the choir and the stone pulpit are specially to be noted.

The Capuchin Church contains the burial-vault of the imperial family. The Duke of Reichstadt, son of Napoleon I., lies here among his maternal ancestors.

In the Minorite Church there is a fine mosaic copy of Leonardo da Vinci's Last Supper; also the monument of the poet Metastasio.

The Augustine Church contains Canova's monument of the Archduchess Maria Christina, one of his noblest works; and in the Loretto Chapel are the silver urns that hold the hearts of many members of the imperial family.

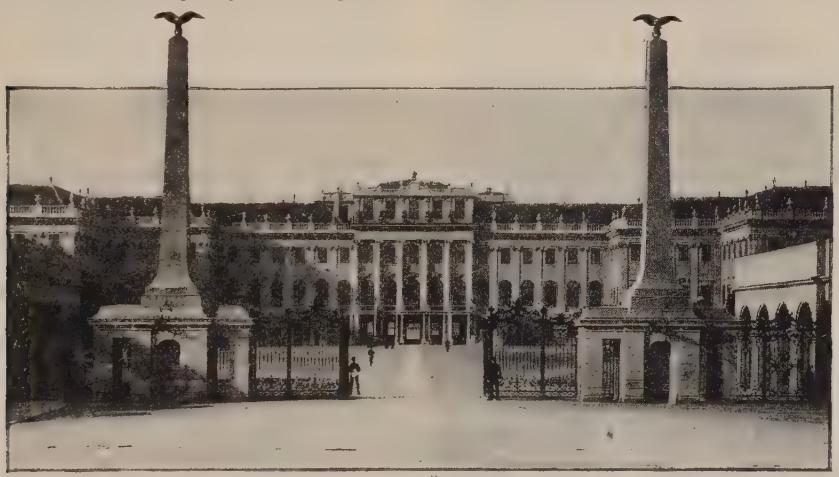
The Church of Maria-Stiegen is a Gothic structure of the fourteenth century restored in 1820, and second in beauty only to St. Stephen's.

The elegant Karlskirche, or Church of St. Charles Barromeo, was erected in 1737 in fulfilment of a vow of Charles VI., when the plague raged in Vienna; it is in Italian style, with two slender spires, one hundred and forty-five feet high, near the porch.

The Imperial Museums now contain the Picture Gallery, arranged in schools. It is second only to the Dresden collection, is specially famous for its unrivaled examples of the Venetian school, Rubens, and Dürer, the Antiquities, comprising statuary, mosaics, inscriptions, etc., mostly Austrian; and the Ambras Collection, remarkable for its ancient armor, ivories and other carvings, etc.

Industries.—Vienna is the chief industrial city in the republic. Machinery, scientific and musical instruments, artistic goods in bronze, leather, terra-cotta, porcelain, furniture, meerschaum pipes, etc., are among the noted manufactures. As a center of trade and finance Vienna is no less important.

Schönbrunn, two miles from Vienna, is the seat of the magnificent Summer Palace of the former Austrian sovereigns, with extensive gardens and pleasure-grounds. From the marble colonnade of the Gloriette there is a fine view of the city and its suburbs. In the churchyard is Canova's monument of Baroness Pillersdorf.



FORMER ROYAL PALACE, SCHÖNBRUNN, NEAR VIENNA

Graz (*gräts*), [formerly **Grätz** (*grets*) until 1843], is the capital of Styria, is a staple place for the manufacture of machinery, and one of the most agreeable of Austrian capitals, and a favorite place of residence. It is situated on the Mur river, at the head of the valley's expansion round the foot of the hill, or Schlossberg. There is railway communication both north and south across the Mur's valley, and east by the valley of the Raab.

From the principal railway station—the Sudbahnhof—on the west side, Annenstrasse leads eastward across the city to the Franz Karl bridge and the center of interest. 200 yards east of the bridge is the Haupt Platz, where, on south side is the modern Rathhaus, 1887-1892.

From south east corner of Haupt Platz runs the Herrengasse, where (west side) are the Landhaus and the adjoining Landes-Zeughaus (Arsenal) containing an interesting collection of weapons. At south end of Herrengasse is the Joanneum, where are extensive collections of paintings, antiquities, natural history objects, and a library of 140,000 volumns.

The University (about 1750 students) is in the north east quarter, about a mile from Haupt Platz. A Polytechnical School was opened in 1888, and there are other educational institutions of a high order.

The cathedral, an interesting monument of the fifteenth century, with a fine sculptured west portal. The interior possesses several excellent old paintings, and some beautiful sixteenth century Italian reliefs in ivory illustrating Petrarch's "Trionfi."

The Castle Hill was fortified till 1809, and there is a curious clock-tower on the Schlossberg. There are cold mineral springs at Radegund near by, and the health-resort, Tobelbad.

The manufactures include machinery, rails, ironwares, paper, leather, soap, beer, hats, and wine. The lignite of Kainach valley, the chief mineral fuel deposit of the Alps, is important.

Semmering, an Austrian Alpine pass (3219 feet) connecting Vienna with Graz, is traversed by the first railway (1854) to be carried across the Alps. The viaducts of the Semmering railway, some of them with several tiers of arches, are among the grandest works of engineering. The Semmering road begins at Gloggnitz, at an elevation of 1426 feet, and is carried along the face of abrupt precipices over bridges and through tunnels, affording views of the grandest and wildest scenery en route.

This part of the road is 25 miles long, and cost more than $7,000,000.

Innsbruck (*ins'brŏk*), or **Innspruck,** the capital of Tyrol, 109 miles by rail south of Munich, stands on the Inn at its junction with the Sill, 1880 feet above sea-level, surrounded and overhung by mountains 7500 to 8500 feet high. It is a beautiful place, with broad tree-shaded streets, arcaded shops, and four squares adorned with statutes.

THE MATCHLESS FIGURE OF KING ARTHUR IN INNSBRUCK.

This is one of the most striking of the bronze figures guarding Maximilian's tomb. Maximilian, as Count of Tyrol, was much beloved by his subjects. King Arthur was regarded as the finest type of the Teutonic Knights.

The Franciscan church, or Hofkirche, built in the Renaissance style in 1553-1563, contains a beautiful and elaborate cenotaph to the Emperor Maximilian I. It consists of a marble sarcophagus supporting the emperor's kneeling effigy in bronze; while on both sides of the aisle are 28 bronze figures of royal personages, by Peter Vischer and others. In the same church are monuments to Andreas Hofer and to the Tyrolese who fell in the wars against France (1796-1809).

Other buildings are the imperial castle, built by Maximilian I. and restored by Maria Theresa in 1766-1770; the "Golden Roof Palace;" the national museum, the Ferdinandeum; and the university (1677, reorganized 1826), with over 1300 students, 150 professors and lecturers, a library of 200,000 volumes, a botanical garden especially rich in Alpine flora, laboratories, etc. Among the eight monasteries is the first that the Capuchins founded in Germany (1594). A colossal statue of Hofer was unveiled in 1893.

Innsbruck manufactures cloth, machines, glass, and stained glass.

Brenner Pass (4588 feet) is in the Central Tyrol Alps, on the road between Innsbruck and Botzen, connecting Germany with northeast Italy. Open at all seasons of the year, it is the lowest pass over the main chain of the Alps. In 1867 a railway through the pass was opened. The distance from Innsbruck to Botzen in a direct line is only 52 miles, but frequent windings extend the railway to 78 miles. It passes over numerous viaducts and bridges, and through 27 tunnels, one of them 935 yards long.

About a mile south of the town is the Isel Berg, 2460 feet above sea; on the summit are the Hofer and other monuments.

Salzburg (*Shaltz'boorg*), is in Upper Austria, 28 miles from Linz, near the Bavarian frontier. It is 1350 feet above sea, under some fine hills on the Salzach, by rail 195 miles west by south of Vienna and 80 miles east by south of Munich. There is hardly a town in Europe that can compare with Salzburg and its environs in beauty of situation. The magnificent castle of Hohensalzberg, the fertile, sunny plains, its garland of steep, snow-crowned mountains, each singly would give a charm to any place; but combined together, they give the spot an unparalleled charm.

The river divides the city into two parts; on the west is the old city, with many dark, winding streets, getting access to the valley and plain on the north through a gallery (440 feet long, 39 feet high, and 23 feet wide), hewn in the solid rock of the Mönchberg. This portion of the city contains the fine cathedral, with a white marble façade, and built in imitation of St. Peter's at Rome; the Romanesque abbey church of St. Peter; the palace of the Grand Duke of Tuscany, in the Italian style; the Benedictine monastery, with a valuable library of 65,000 volumns and 900 manuscripts; and the archbishop's palace.

On the opposite bank lies the modern town, with Italian-looking, flat-roofed houses; here the most prominent buildings are Castle Mirabell; the Capuchin monastery and St. Sebastian's Church with the monument of Paracelsus. The city possesses also a theological faculty, all that remains of the former university (1623-1810); a public library of 82,000 volumns and 1400 manuscripts; a museum of Celtic and Roman antiquities, etc.

Salzburg is the birthplace of Mozart to whom a fine bronze monument has been erected, and of Hans Makart the painter.

It is built on the site of the ancient Juvavum, destroyed by Attila in 448. Subsequently it was the residence of the kings of Noricum. By the treaty of Campo Formio, in 1797, it was ceded to the Austrians, who defeated the French here in 1800.

Industry is confined chiefly to the manufacture of musical instruments, marble ornaments, etc.

The other important towns are:

Lintz (*Lintz*), capital of the Upper Austria, on the right bank of the Danube (here crossed by an iron bridge 780 feet long), 117 miles by rail west of Vienna. It has a splendid Gothic cathedral (1862-1890), the old cathedral (1670), the bishop's palace, a museum, a library of 33,000 volumes, etc. Its industries include the manufacture of woolen goods, tobacco, linen, leather, machinery, and shipbuilding.

Wiener-Neustadt (*vē'ner-noi'stät*).—A town in Lower Austria, situated on the Fischa 27 miles south by west of Vienna. It has manufactures of locomotives, etc. Formerly it was a favorite Austrian princely residence. It was conquered by Matthias Corvinus in 1486, and was unsuccessfully besieged by the Turks in 1529 and 1683. It was the birthplace of Maximilian I., and contains the ducal castle of the Babenbergs.

Steyer (*stī'er*), a town of Upper Austria, at the confluence of the Steyer and Enns, 36 miles by rail south by east of Linz, is the chief seat of the iron and steel manufactures of Austria, turning out firearms, cutlery, etc.

Klagenfurt, capital of Carinthia, Austria, 114 miles by rail south by east of Trieste. The chief manufactures are leather, white lead, machines tobacco, and cloth.

People, Religion and Education. — Austria is almost wholly a Germanic State, in traditions, language and education. A compulsory system of education prevails, and there are excellent facilities for primary, secondary, technical and university training. There are famous universities in Vienna, Graz, and Innsbruck. The state religion is the Roman Catholic, and this is professed by two-thirds of the population.

HISTORY OF.—Austria arose from the smallest beginnings at the end of the eighth century. In 796 a Margraviate, called the Eastern Mark (i. e. "March" or frontier-land), was founded as an outpost of the empire of Charlemagne, in the country between the Enns and the Raab. The name Oesterreich appears first in 996.

Rise Under the Hapsburgs.—In 1156 the mark was raised to a duchy; and after coming into the possession of the House of Hapsburg in 1282, it began its period of growth toward a powerful state. The princes of that house extended their dominion by marriage, by purchase, and otherwise, over a number of other states, including the crowns of Bohemia and Hungary; and from 1438 down to the nineteenth century they held almost without interruption the throne of the German empire (nominally "the Holy Roman Empire")—the emperor being the most conspicuous, if not always the most powerful personage among the crowned heads of Europe.

Hapsburg Power Through Marriage.—The most pronounced rise of Austria and of the House of Hapsburg to historical eminence may be said to date from the reign of Maximilian I. (1493-1519). By marrying Mary, daughter of Charles the Bold (1477), he acquired possession of the Netherlands. Through the marriage of their son Philip with Joanna of Spain, the Houses of Austria and Spain were united.

Passes to Charles V. of Germany.—As Philip died in 1506, his elder son, the celebrated Charles V., became heir to the united monarchies, and was elected emperor of Germany in 1519. Thus, by a succession of fortunate marriages, the House of Hapsburg became the most powerful dynasty in the world.

Charles V., however, resigned all his German territories to his younger brother, Ferdinand I., who was thus the continuation of the Austrian branch of the line. Under Ferdinand the power of Austria greatly increased.

Division of the Empire.—In the partition of the inheritance that took place among Ferdinand's three sons, the eldest, Maximilian II., received the imperial crown along with Austria, Hungary and Bohemia; the second, Ferdinand, Tyrol and Upper Austria; the third, Charles, got Styria, Carinthia, etc. Maximilian II. was fond of peace, tolerant in religion, and a just ruler. He died in 1576; and of his five sons, the eldest, Rudolf II., became emperor.

Rudolf II. was negligent, leaving everything to his ministers and the Jesuits. His war with the Porte and Transylvania brought him little credit; and the Protestants of Bohemia, oppressed by the Jesuits, extorted from him a charter of religious liberty. In 1608 he was obliged to cede Hungary, and in 1611 Bohemia and Austria, to his brother Matthias.

Matthias, who became emperor in 1612, ceded Bohemia and Hungary to his cousin Ferdinand, son of the Archduke Charles of Styria, third son of Maximilian II. Matthias lived to see the outbreak of the Thirty Years' war, and died in 1619.

Ferdinand II. and the Thirty Years' War.—Bohemia refused to acknowledge his successor, Ferdinand II., to whom all the Austrian possessions had again reverted and chose the Elector Palatine, Frederick V., the head of the Protestant Union, as king. This election gave the signal for the Thirty Years' war, in which the House of Austria took the lead, both as the champion of Catholicism, and the head of a power which aimed at universal domination in Germany and in the Christian world. The battle of Prague (1620) subjected Bohemia to Ferdinand, who formally set about rooting out Protestantism in that country and in Moravia. The emperor also succeeded in extorting acknowledgment of his sovereignty from the states of Austria; and here, too, Protestantism, which had made great progress since the time of Luther, was mercilessly suppressed.

Under Ferdinand's successor, the Emperor Ferdinand III. (1637-1657), Austria continued to be a theater of war; and at the peace of Westphalia (1648) had to cede Alsace to France.

Leopold I. and the War of the Spanish Succession.—Ferdinand III.'s son and successor, Leopold I., provoked the Hungarians to rebellion by his severity. The struggle between Leopold and Louis XIV. of France for the heirship to the king of Spain led to the War of the Spanish Succession, during which Leopold died, in 1705.

His eldest son and successor, the enlightened Joseph I., continued the war. He died childless in 1711, and was succeeded by his brother, Charles VI.

Hapsburg-Lorraine Line of Rulers.—With the death of Charles VI., in 1740, the male line of the Hapsburgs became extinct, and his

daughter, Maria Theresa, who was married to the duke of Lorraine, assumed the government. For many years it had been the aim of Charles to secure the adhesion of the European powers to the Pragmatic Sanction, by which the possessions of the Austrian crown should pass to Maria Theresa. Those powers during his lifetime had promised to second his wishes, but he was no sooner in his grave than nearly all of them sought to profit by the accession of a female sovereign.

War of the Austrian Succession.—A great war arose, in which England alone sided with Maria. Frederick II. of Prussia conquered Silesia. The Elector of Bavaria was crowned king of Bohemia, and elected emperor as Charles VII. in 1742. The Hungarians, however, stood by their heroic queen, who was soon able to wage a fairly successful war against her numerous foes. At the death of the empress in 1780, the monarchy had an extent of two hundred and thirty-four thousand square miles, with a population of twenty-four millions. The administration of Maria Theresa was distinguished by unwonted unity and vigor, both in home and foreign affairs.

Her successor, Joseph II., was an active reformer in the spirit of the enlightened despotism of the times, though often rash and violent in his mode of proceeding. He was succeeded in the government by his brother, the grandduke of Tuscany—as German emperor, Leopold II.—who succeeded in pacifying the Netherlands and Hungary.

Austria and the French Revolution.—At the outbreak of the revolution in France the fate of Leopold's sister, Marie Antoinette, and her husband, Louis XVI. of France, led him to an alliance with Prussia against France; but he died in 1792 before the war broke out. War was declared by France on his son, Francis II., the same year, and by the treaty of Campo Formio, 1797, Austria lost Lombardy and the Netherlands, receiving in lieu the Venetian territory.

In 1795, at the second partition of Poland, it had been augmented by western Galicia.

Francis, in alliance with Russia, renewed the war with France in 1799, which was ended by the peace of Lunéville. It is needless to follow all the alterations of boundary that the Austrian dominions underwent during these wars. The most serious was at the peace of Vienna (1809), which cost Austria forty-two thousand square miles of territory. It was in 1804, when Napoleon had been proclaimed emperor of France, that Francis declared himself dereditary emperor of Austria as Francis I. On the establishment of the Confederation of the Rhine, he laid down the dignity of German emperor, which his family had held for nearly four hundred years.

The humiliating peace of Vienna was followed (1809) by the marriage of Napoleon with the Archduchess Maria Louisa, and in 1812 Austria figured as the ally of Napoleon in his great campaign against Russia, but she did not give much active assistance. In August of the following year Austria joined the grand alliance against France and the Austrian general, Schwarzenberg, was entrusted with the chief command of the allies forces, which at the battle of Leipzig and in the campaign of 1814 broke the power of Napoleon.

Congress of Vienna and Subsequent Period of Metternich.—The sacrifices and great services rendered by Austria in the gigantic struggle received full consideration at the treaty of Vienna (1815). As recompense for the loss of the Netherlands she received Venice and Dalmatia, which afforded an outlet for her foreign trade.

After that time Austria, under the diplomatic guidance of Prince Metternich, exerted a powerful influence in European politics generally, and more especially in the German Confederation, of which her emperor was president. The death of Francis I. in 1835 made little alteration in the policy of Austria; Ferdinand I. trod in his father's footsteps. The political alliance with Russia and Prussia was drawn closer by a personal conference of the emperor with Nicholas I. and Frederick-William III. at Teplitz in 1835.

Revolution of 1848.—In Austria, after the fall of Metternich from power, the revolutionary period of 1848-1849 was one of exceptional severity, the movement for constitutional freedom being complicated by the revival of the national spirit in Hungary, Italy and Bohemia. The time was everywhere ripe for revolt, when the fall of Louis-Philippe of France (February 24, 1848), gave the signal for the outbreak of the revolutionary elements all over Europe. Nowhere was the spirit of change stronger than in Vienna, which for many months became a scene of confusion.

The leaders of the popular movement in Vienna were in sympathy with Hungary, and when the imperial troops were ordered to suppress the national rising there, the citizens again rose in insurrection. In the meantime the military forces had withdrawn from the capital in order to prevent the Hungarians coming to the aid of the Viennese. Vienna was now besieged, and surrendered at the end of October, after a resistance of eight days.

Francis Joseph Emperor.—The reaction was triumphant, and the leaders of revolt severely punished; but as Ferdinand had not shown sufficient vigor in the great crisis, he was persuaded to abdicate, and Francis Joseph was declared emperor at the age of eighteen. Thus restored, the central authority had now to assert itself in Hungary and to complete the reconquest of northern Italy. With the surrender of Venice, which took place in August, the subjugation of Italy was complete.

Conquest of Hungary.—In Hungary, the Magyars, though the Germans and Slavs within the country itself were hostile to them, began the campaign of 1849 with decided success. But the government had already solicited the aid of Russia, whose armies, entering Transylvania and Hungary, added to the imperial cause the irresistible weight of numbers. Surrounded on every side by superior forces, the Hungarians were completely beaten. It was in vain that Kossuth transferred the dictatorship to General Görgei. Görgei, whether from treachery, as the other Magyar leaders maintained, or from necessity, as he himself averred, laid down his arms to the Russians at Vilagos (August 13). The

surrender of Komorn, in September, completed the subjugation of Hungary, which was treated as a conquered country.

The ten years which followed on the revolutionary troubles of 1848 were a period of reaction and of absolutism. A constitution which had been granted in 1849 was soon annulled. The policy pursued was one of strong centralization under a bureaucratic government, by which the claims of nationality and of freedom were alike disregarded. Liberty of the press and trial by jury were set aside. A rigorous system of police was maintained. The aim was to Germanize the whole empire and to crush the aspirations of both Slavs and Hungarians. The Church pronounced against national freedom, and supported the central authority and received great privileges by the Concordat of 1855. The result of all these proceedings was only to irritate the national feeling in Hungary, Italy and Bohemia.

Struggle Between Austria and Prussia.—On the confused arena of German politics, the struggle for ascendancy was kept up between Austria and Prussia. In 1850 the two powers were armed and ready to come to blows with reference to the affairs of Hesse-Cassel; but the bold and determined policy of Schwarzenberg prevailed, and by the humiliating arrangement of Olmütz, Prussia gave way. For a few years longer the preponderance of Austria in the German Confederation was secured.

The rule of Austria in Italy had always been unsatisfactory. From her own provinces in Venice and Lombardy she controlled the policy of the courts of central and southern Italy, and her influence tended invariably towards the suppression of national feeling and popular liberty.

Loss of Italian Possessions.—Sardinia was the only state that worthily represented the spirit of the Italian people. In the spring of 1859 it began to arm against Austrian supremacy. Austria demanded immediate disarmament, on pain of war; but Sardinia refused. Austria accordingly commenced hostilities by crossing the Ticino at the end of April, 1859. Sardinia having secured the aid of France, the Austrians were defeated at Magenta, Solferino and elsewhere, and their emperor was fain to seek an armistice from Napoleon. On July 11 the two potentates met at Villafranca, and concluded a peace, ceding Lombardy to Sardinia. Venice was all that still remained of the Italian possessions of Austria.

Austro-Prussian War.—The rivalry of Prussia and Austria for influence in the Germanic body of states dated from the rise of Prussia to be a leading power. The arrangement of Olmütz in 1850 had left a painful feeling of humiliation in the minds of the Prussian statesmen. The long rivalry was now to be brought to a decisive issue. In 1864 the combined Prussian and Austrian forces drove the Danes out of Sleswick-Holstein, but the two victors quarreled about the subsequent arrangements. War was declared, and in 1866 the Austrian armies in Bohemia were completely beated by the Prussians, in a campaign of seven days, which closed with the great defeat of Königgrätz or Sadowa.

Period of Reforms.—After the great war of 1866 the history of Austria has been concerned chiefly with two important interests. In the first place, the government had to attempt an arrangement of the conflicting claims and rights of the peoples constituting the empire; in the second place, it has had to establish working relations with the great neighboring powers, Germany and Russia, and especially with the latter, on the Eastern Question.

Union of Austria and Hungary.—Hungary's claims to be recognized as a separate and distinct country were now with great advantage, pressed forward. In 1867 its political rights were successful in being regarded as justified. This agreement was the famous Ausgleich, which has since been in force, and which has to a sufficient degree justified its adoption.

At the end of 1867 the first parliamentary ministry was formed. The Concordat was set aside. Education was freed from the control of the Church. Marriage was placed under the jurisdiction of the civil power. The press laws were relaxed. Finally, the Prussian system of military organization was introduced.

In the foreign affairs of Austria the chief aim was to arrive at a satisfactory understanding with Germany and Russia. After 1871 Bismarck arranged as between Germany, Austria and Russia a "Three Emperors' Alliance," which after the Russo-Turkish war of 1877-1878 was superseded by an alliance between Germany and Austria. This, by the inclusion of Italy, in 1882, became the Triple Alliance, which remained in full force down to the great European war of 1914.

During the Turkish revolution of 1908 Austria-Hungary annexed the Turkish provinces of Bosnia and Herzegovina, which the Treaty of Berlin had placed under Austro-Hungarian administration and military occupation in 1878.

Racial Difficulties Bearing Upon the European War, 1914-1917.—The multiplicity of races and their mutual jealousies rendered the task of the central government in Austria-Hungary both delicate and difficult. (See Peoples and Races.) Russia, as a Slav nation and a great power, had long exercised a predominant influence in the Balkans. Acting under this influence, Servia secretly fostered aspirations in the direction of a Pan-Slavic propaganda with the apparent object of not only lessening Austrian influence in the Balkans but of breaking up, through internal defections, the Austrian Empire; from the accomplishment of this Servia hoped to profit.

The Slavs are closely allied with Russia. The spread of Pan-Slavism constituted a menace to the very existence of the Dual Monarchy. The growth of German and Russian aspirations directed at expansion through the Balkan States had, therefore, a direct connection with the racial element of which Pan-Slavism was but one manifestation. As an evidence of the spread of the doctrine of "Pan-Slavic Unity" and of the bitterness of the racial antipathy which it engendered, the Austrian Archduke Francis Ferdinand and his wife, the Duchess of Hohenberg, were assassinated on June 28, 1914, at Sarajevo, the capital of the Austrian province of Bosnia.

This act led directly to a declaration of war against Servia on July 28th, followed by an Austrian invasion on July 30th. (Further causes and details of the war will be found under the European War.)

SOVEREIGNS OF AUSTRIA-HUNGARY

The following is a list of the Hapsburg rulers of Austria (Dukes and, from 1453, Archdukes of Austria, from 1526, also Kings of Hungary and Bohemia, from 1804 Emperors of Austria).

HOUSE OF HAPSBURG

Albert I.	1282
*Rudolf II.	1282
*Rudolf III.	1293
Frederick (III. as rival Imperial claimant)	1307
*Leopold I.	1314
*Albert II.	1314
*Rudolf IV.	1358
*Albert III.	1365
*Albert IV.	1395
Albert V. (II. as Emperor, King of Hungary and Bohemia)	1404
*Ladislaus (King of Hungary and Bohemia)	1439
Frederick V. (III. as Emperor)	1457
Maximilian I.	1493
Charles I. (V. as Emperor)	1519
Ferdinand I.	1520
Maximilian II.	1564
Rudolf V. (II. as Emperor)	1576
Matthias	1611
Ferdinand II.	1619
Ferdinand III.	1637
Leopold I.	1658
Joseph I.	1705
Charles II. (VI. as Emperor, III. of Hungary)	1711
*Maria Theresa	1740

HOUSE OF HAPSBURG-LORRAINE

Joseph II.	1780
Leopold II.	1790
Francis I. (II. as Emperor)	1792
*Ferdinand I. (V. of Hungary)	1835
*Francis Joseph I.	1848
Charles Francis Joseph	1916–1918

The abdication of Emperor Charles of Austria was officially announced at Vienna, November 28, 1818.

PRESIDENTS

Dr. Michael Hainisch	1920

*All except those marked with an asterisk likewise filled the throne of the Holy Roman Empire.

CZECHO-SLOVAKIA (*chek′ ō slō-vāk′ēä*), [from the Bohemian, *Czechs*], a name applied to the most westerly branch of the great Slavic family of races, the term including the Bohemians, or Czechs proper, the Moravians, and the Slovaks. They number nearly 10,000,000, and live chiefly in Bohemia, Moravia and northern Hungary.

This central European republic was recognized by the United States on September 3, 1918; its territory is made up of certain portions of the former empires of Austria-Hungary and Germany, with the former Kingdom of Bohemia as the nucleus. It now includes Bohemia, Moravia, Slovakia, and part of Austrian Silesia, the autonomous territory of the Ruthenians to the south of the Carpathian Mountains. The total area is about 54,000 square miles. The natural wealth is estimated at $15,000,000,000.

Bohemia (*bō-hē′mi-ä*), [so named, from *Boii* and *heim*, home, dwelling-place], is surrounded on all sides by lofty mountain-ranges, the principal of which are the Riesengebirge on the northeast, dividing Bohemia from Silesia, highest peak the Schneekoppe (5330 feet); on the northwest, the Erzgebirge (4182); on the southwest, the Böhmerwald (4783). The country belongs to the upper basin of the Elbe, and is well watered by its many affluents, the Moldau, Eger, Iser, and others. The climate is mild and pleasant in the valleys, but raw and cold in the mountainous regions. A remnant of volcanic action still continues in the eruptions of carbonic acid gas which have established so many mineral springs of deserved repute, at Carlsbad, Eger, Marienbad, Teplitz, and elsewhere. The mineral wealth is varied and extensive, consisting of silver, tin, copper, lead, iron, cobalt, bismuth, antimony, alum, sulphur, graphite, and porcelain clay, with some precious and ornamental stones. More coal is produced than in all the rest of the Austrian empire.

The soil is generally fertile; more than one-half of the area is arable land, and forests cover nearly a third. Flax and hops are plentiful, and much fruit is exported. Some wine is produced near the Moldau and the Elbe. Bohemia is a great center of dyeing and calico-printing, of linen and woolen manufactures. Other important branches of industry are the manufacture of paper, ribbons, lace, chemicals, porcelain-ware, and the Turkish fez. The glass-works of Bohemia are celebrated, and afford employment to many thousands, and there are numerous ironworks. Beet-root sugar is manufactured extensively, and so are beer and brandy. Its position secures Bohemia a large transit-trade.

Moravia (*mō-rā′vi-ä*), [G. *Mähren*], named from the river, Morava, is enclosed on all sides by mountains, being separated from Silesia by the Sudetes, from Bohemia by the Moravian chain, and from Hungary by the Carpathians; while branches of these various chains intersect the whole country except in the south, where there are extensive plains. The March or Morava, from which the country derives its name, joins the Danube. The Oder, which rises among the mountains on the northeast, soon leaves the country.

Moravia is essentially an agricultural region. The mineral products are coal and iron, with some graphite. The industries include the manufacture of woolen, linen, and cotton goods, and beet-root sugar, silk-weaving, lace-making, iron-founding, tanning, brewing, distilling.

Slovakia (*slō-vak′ē-ä*), includes the territory formerly comprising northwest Hungary, peopled by the Slovaks, including the Waag and Gran valleys and the regions about the headwaters of the Taracz and Tapoli affluents of the Theiss. The surface of the country is mountainous, with numerous fertile valleys. The Slovaks are agriculturists and wood-cutters. They number in all about 2,500,000 and speak a dialect of the Czech language. Three-fourths of them are Roman Catholics, and Lutherans. The former largely predominating.

People, Education, Religion.—There are

approximately 13,600,000 people within the confines of Czecho-Slovakia, of which 10,000,000 are of Slavic origin. The German population is around 3,000,000, almost wholly within Bohemia and Moravia, where their influence in industry, trade, commerce and education is very great. The southern part of Bohemia, the northern part of Moravia and a narrow strip on the south boundary of Moravia (including Brünn) are German speaking districts.

The Bohemian and Moravian Czechs are among the most advanced of the Slavic peoples, and education is widely diffused. In its musical value the Czech language ranks next to Italian, and its important literature includes the names of Huss, Comenius, Schafarik, and Mendel.

There is a complete system of popular and secondary education, with about five thousand primary schools and more than six hundred secondary schools. There is a university at Prague, Bohemia, and universities are being established in Moravia and Slovakia.

There are also the technical institute at Brünn, two commercial academies at Prague, a mining academy at Pribram, a forestry academy at Weiswasser, and agricultural colleges at Tabor and Böhmisch-Leipa, besides various other institutions of a technical character. There are no illiterates. The prevailing religion is Roman Catholic, though there are substantial numbers of Lutherans, Calvinists and Jews.

Cities and Towns.—Prague, the capital, with 225,000; Brünn, capital of Moravia, with 126,000; Pilsen, 80,000; Budweis, 45,000; Aussig, 40,000; Reichenberg, 38,000; Troppan, 31,000; Eger, 28,000; Iglau, 26,000; Olmütz, 23,000; Teschen, 23,000; and Pierau, 21,000; are the chief towns. Carlsbad, Marienbad, and Teplitz, 27,000, are world-famous health resorts and fashionable watering-places.

Prague (*prāg*), [G. *Praq*, Bohem. *Praha*], formerly the capital of Bohemia, and now capital of the Republic of Czecho-Slovakia, and its chief city, is built partly in a valley and partly on the inclines

GENERAL VIEW OF PRAGUE FROM THE PETRIN HILL: CATHEDRAL IN DISTANCE

BRIDGE TOWER IN THE OLD PART OF PRAGUE: THE OLD AND THE MOST MODERN, EACH BEAUTIFUL IN ITS WAY, MEET IN THE OLDER PARTS OF PRAGUE AT EVERY STEP.

of various hills, through which flows the river Moldau, about one hundred and twenty miles south by southeast of Dresden, and two hundred and seventeen miles north by northwest of Vienna It is a picturesque town, containing many buildings of great architectural beauty and abounding in palaces and towers, with several handsome bridges spanning the river, which separates the old town from the new. The principal quarters are the Alstadt, Neustadt, Kleinseite, and Hradschin. Among its principal places of interest are the Rathhaus, where after the battle of Prague, twenty-seven Protestant leaders were executed, as also eleven officers of his own army, by command of Wallenstein, 1633; the Teynkirche, with the tomb of Tycho Brahe; and the Hradschin or Capitol. The Cathedral, grand though unfinished, containing the silver shrine of St. John Nepomuc, is rich in royal monuments, frescoes, relics, etc. It has a large and fine choir of 1385, and a modern nave built in a corresponding style. The choir contains a splendid monument of marble and alabaster to the kings of Bohemia, executed in the sixteenth century by a Flemish sculptor. The Burg or Imperial Palace, Wallenstein's Palace, and the National Museum are also full of interest. Specially to be noted is the famous old bridge (Karlsbrücke), with its throng of statues and the towers that guard it at either end. The public gardens, parks, and promenades, in the city and the suburbs, are numerous and beautiful. The magnificent Abbey of Strahow (on the highest site in the town) should be noted both for its own sake and for the view it commands. The Bohemian Museum (ethnographical, botanical, zoological, etc.) and the Picture Gallery are also to be noted. The Pulver-Turim ,or Powder Tower, erected as a gate-tower in the latter part of the fifteenth century, is a striking architectural structure in the late Gothic style.

The university, founded in 1348, was very flourishing at the epoch of Huss (the beginning of the fifteenth century). It contains two departments, German and Czech, and has a library of four hundred thousand volumes. Founded apparently about the eighth century, Prague was developed in the thirteenth and fourteenth centuries. It became the center of Hussites, having been taken by them in 1424. It possesses a fine observatory, museums of zoology and anatomy, a botanical garden, etc.

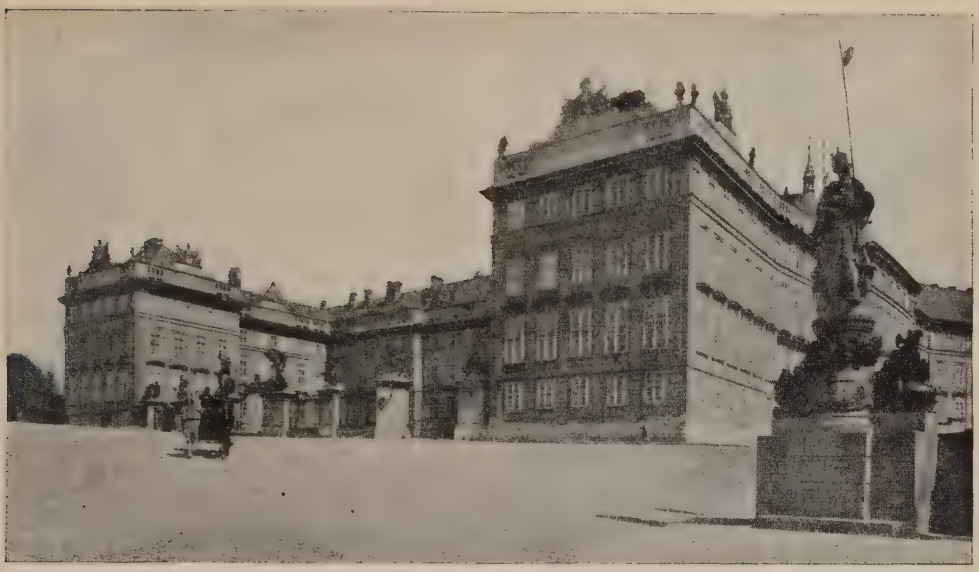
With this city are associated the names of Huss and Jerome, Wallenstein, Tycho Brahe, and Emperor Sigismund.

The manufactures include machinery, chemicals, leather, cotton, linen, gloves, beer, spirits, etc. Prague is the great center of the commerce of Bohemia, and the seat of an important transit trade.

History.—Prague was founded, according to popular tradition, in 722 by the Duchess Libussa, but really by German settlers about 1100. In 1424 Prague was conquered and almost destroyed by the Hussites, who had made a successful stand against the Emperor Sigismund's army. In the Thirty Years' war it suffered severely, and in 1620 the battle was fought at the Weissenberg, near the city, in which the Elector-Palatine, Frederick V. was completely defeated, and compelled to renounce his assumed crown. In 1744 it capitulated to Frederick the Great, who on May 6, 1757, defeated sixty thousand Austrians under Prince Charles of Lorraine. Prague was bombarded by the imperial forces in 1848, and in 1866 it was occupied bloodlessly by the Prussians, who on August 23 concluded a treaty with Austria. On April 13, 1918, the national Czecho-Slovak convention convened here which led to their independence and the formation of the Czecho-Slovak republic.

Brunn (*brün*), Slav. **Brno** (*ber'nō*).—The capital of Moravia, situated at the base of the Spielberg between the Zwittawa and Schwarzawa, is seventy miles northeast from Vienna, and one hundred and fifteen southwest by west from Prague by rail. It is the center of important commerce and manufactures, which earned for it the name of the "Austrian Manchester."

The chief manufactures are woolen cloth, silk and cotton fabrics, gloves, paper, tobacco, hard-



THE ROYAL PALACE OF HRADCANY, AT PRAGUE, BOHEMIA

On the 23rd of May, 1618, the assembled nobles threw from the windows of the council room two of the councillors who were convicted of treason to the Bohemian cause. This was the initial act of those that led to The Thirty Years' War, which devastated Central Europe, 1618-1648, resulting in the death of millions and almost in the depopulation of Bohemia, Bavaria, Saxony, etc.

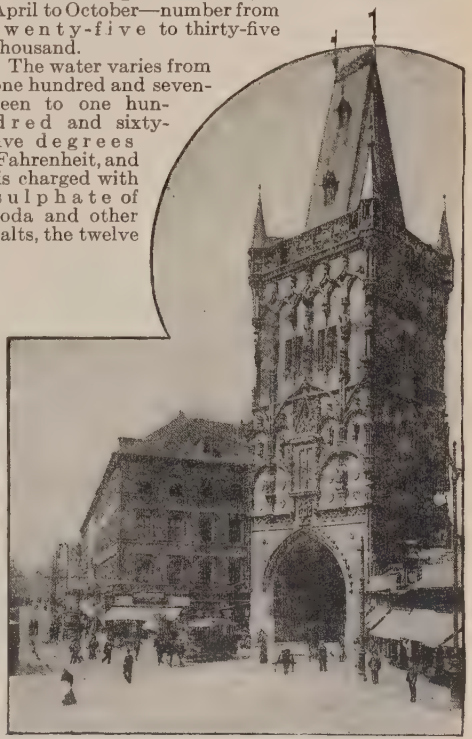
ware, and sugar. There are engineering works, oil works, breweries, flour mills, etc., and good railway communication between Brünn, Vienna, and other important cities, five lines touching the town. The old part of the city was once strongly fortified, and it stoutly held out against several sieges. It was chosen by Napoleon as his headquarters before and after the battle of Austerlitz. All the fortifications have now been converted into beautiful promenades. Many suburbs have of late years grown up around the old part, and there are numerous fine buildings, which include a cathedral and several churches, a theological college, a gymnasium, an orphanage, theatre, lunatic asylum, and many hospitals. There is also the national museum for Moravia and Silesia.

Behind the city, on the hills, is the old castle of Spielberg, which is famous for having been the prison where Silvio Pellico was kept for eight years. There is an immense park, known as the Augarten, which was given by the Austrian Emperor Joseph II., and there are many smaller parks, and public gardens. The educational institutions are of a high order, including technical, continuation, elementary, and kindergarten schools. Two-thirds of the population consists of Germans and Czechs, and the religion is principally Roman Catholicism, with about seven and one-half per cent Jews and one and one-half per cent Protestants.

Brünn was unsuccessfully besieged by the Hussites in 1428, by King George of Bohemia in 1467, by the Swedes in 1645, and by the Prussians in 1742, and was occupied by Napoleon in 1805, and by the Prussians in 1866.

Karlsbad, or **Carlsbad** (*kärls'bäd*), or **Kaiser-Karlsbad** (*kī'zer-kärls'bäd*) a famous watering-place in Bohemia, on the Tepl, near the Eger, is sixty-eight miles west by north of Prague. It is one of the principal watering-places in Europe. The town is situated in a valley between two wooded hills, and is surrounded by pretty scenery. There are numerous fine hotels, artistic colonnades and villas. It is widely celebrated for its hot mineral springs, and frequented in summer by visitors of the most aristocratic character from all parts of Europe. The permanent population numbered in 1911, 17,446 persons, who are very industrious, making jewelry, porcelain, and various articles such as are likely to find ready purchasers among the visitors, who in the season—April to October—number from twenty-five to thirty-five thousand.

The water varies from one hundred and seventeen to one hundred and sixty-five degrees Fahrenheit, and is charged with sulphate of soda and other salts, the twelve



THE GOTHIC POWDER TOWER, PRAGUE

principal springs supplying about two million gallons a day. The principal spring is the Sprudel.

Someone has described Karlsbad as a "town built upon the lid of a cauldron of boiling water." The waters were already known at the beginning of the sixteenth century, but the Emperor Charles IV. made its reputation by building a castle, some vestiges of which still remain. It was a favorite meeting-place of the German sovereigns, and in 1819 the members of the Holy Alliance held a conference there.

History.—Little is known of the early history of Bohemia beyond its settlement by the Celtic tribe of the Boii (fifth century B. C.ō). From about the time of Augustus we find Bohemia and Moravia in the possession of the Germanic Marcomanni and Quadi, who maintained the Danube as their southern frontier against the Romans. After the migration of the Marcomanni to Bavaria, early in the sixth century, their former possessions were occupied by Slavonic races, but were soon conquered by the Avars. Samo (d. 658), a Frankish immigrant, founded the first short-lived Bohemian kingdom in 630. Christianity gradually made its way into Bohemia after the time of Charlemagne, and in 864 SS. Cyril and Methodius began the conversion of Moravia. They were, however, expelled by Swatopluk (870-894), the founder of the Kingdom of Moravia, which included Bohemia.

The Kingdom of Moravia succumbed before the incursions of the Magyars, and the Premyslides took advantage of the confusion to seize Bohemia in 912 (which they held from 929 under German suzerainty) and Moravia in 1029. The attempt of Ottocar II. (1253-1278) to extend his power over Austria, Styria, Carinthia, and Carniola was shattered by his defeat by Rudolf of Hapsburg on the Marchfeld. Kings of the German house of Luxemburg inherited (1310-1437) the possessions of the Premyslides. King John, who united Silesia with Bohemia and Moravia in 1327, and his son Charles IV. (1346-1378), under whom Prague attained its greatest prosperity as capital of the German Empire, followed the example of the Premyslides in populating the frontier-mountains of Bohemia with German peasants and settling German merchants in the towns. Under Wenceslaus IV. (1378-1419; German emperor until 1400) the Czech national reaction began, largely encouraged by John Huss, and under Sigismund (1419-1437; German emperor 1411-1437) the Czech language and literature obtained the upper hand as a result of the Hussite wars. After the short reigns of Albert V. of Hapsburg, Ladislaus Posthumus, and George Podiebrad (1458-1471), a Bohemian follower of Huss, Ladislaus II. (1471-1516) of the Polish House of the Jagellons came to the throne of Bohemia, and on his election to the crown of Hungary (1490) transferred the royal residence to Ofen. The victory of the Turks at the battle of Mohacs (1526), in which Ladislaus' son Lewis was killed, annihilated the power of the Jagellons and contributed to the lasting possession of Bohemia by the Hapsburgs.

Ferdinand I. (German emperor 1556-1564) curtailed the rights of the Protestant Bohemian estates and towns at the "Bloody Diet" of 1547, but more beneficial times for the Bohemians followed under Maximilian II. (1564-

A PUBLIC SCHOOL IN PRAGUE, BOHEMIA

The Czech philosopher Comenius, who lived during the seventeenth century, the bloodiest of all centuries excepting our own, urged that all children, rich and poor, should be taught to read and write. His teachings were in part responsible for the compulsory education of all American children early enforced by American colonists.

1576) and Rudolph II. (1576-1611), from whom his brother Matthias (1611-1619) wrested Moravia in 1608 with the help of the Protestant aristocracy. The rebellion of the Bohemian and Moravian Protestants under Count Matthias von Thurn, and the election as King of the Elector Palatine Frederick V. (1619) in place of the Catholic Ferdinand II., were followed by the battle of the White Hill, which placed the emperor in possession of the land once more, and led to the expulsion of nearly all the Protestant inhabitants and to the transference of the royal residence to Vienna.

The endeavor of the Hapsburgs, assisted by the Jesuits, who were practically all-powerful in Bohemia and Moravia, to Germanize the habits and language of their Czech subjects culminated in the establishment of German public elementary schools under Joseph II. In opposition to this policy a new Czech movement gradually developed after the end of the eighteenth century, and after 1861 led, in spite of violent parliamentary opposition, to bitter feuds between German-Bohemians and Czechs.

A home-rule declaration was made in the Austrian Parliament on May 30, 1917, in the name of the Czechs of Bohemia, and by the Poles, Czecho-Slovaks and Jugo Slavs. The Slav leaders were imprisoned, and released in July, 1917, by the young Emperor Charles. Their leader, Dr. Kramar, was received by a cheering throng on his return to Prague. At that city, January 6, 1918, was held a Constituent Assembly of all Czech deputies in the Austrian Parliament, at which a resolution was adopted demanding Bohemian independence. On May 17 the assembly adopted a resolution calling for "world democracy, a real and soverign national people's government and a universal League of Nations, endowed with the necessary authority." A Declaration of Independence was published at Paris, October 18, 1918; local government taken over in Prague, October 28, 1918, and republic formally proclaimed on the 29th; draft of constitution was completed at Geneva, Switzerland, November 2, 1918, when present officers were elected. The republic was recognized by Great Britain August 3, 1918, United States, September 2, Japan, September 9, 1918; organization of Czecho-Slovak army authorized by Premier Clemenceau of France, December 10, 1917; state recognized by Premier Orlando of Italy, April 23, 1919.

Suffrage is universal, both men and women having the right to elect all officers in all departments of the government. The court system established by the Austrian Empire has been taken over by the new government. Separation of church and state has been decreed. Under this constitution all men up to twenty-six years of age throughout the republic are liable to military service. Republic maintained three armies, one in France, one in Italy, and a force of approximately seventy-five thousand policing the Trans-Siberian Railroad at the request of the Allied governments.

HUNGARY (*hung'gā-ri*), G. **UNGARN**), formerly the greater part of one of the kingdoms of the Dual Monarchy, Austria-Hungary, was declared a republic on November 17, 1919. As a result of the war Hungary lost part of its former territory (Transylvania) to Rumania (q. v.) and (Croatia and Slavonia) to the Jugo Slav State (q. v.), leaving only Hungary proper as an independent state.

Present day Hungary lies within a basin almost wholly shut in by the Carpathians and by spurs of the Alps. Its wide plains are watered by the Danube and its tributaries, which enters through a "gorge" above Pressburg, and leaves through a similar gorge, known as the "Iron Gate," below Orsova.

The Carpathians are in the north and east; the Bakony Wald and spurs of the Alps are west of the Danube. The leading physical features are the great plains of the Danube and Theiss. Besides Lake Balaton (265 square miles), Hungary contains the Lake of Neusiedl (100 square miles) and the lofty mountain tarns of the Carpathians and Tatra Mountains, known as *Meeraugen* (lake-eyes).

Owing to the protection of the Carpathian girdle on the north and east and its open situation towards the south, Hungary enjoys relatively mild climate, though a few of the northern mountainous counties have a long and severe winter.

The summers are generally hot, and the mirage is a common feature of the open sun-baked *pusztas*. But there is often a great daily range of temperature, as much as forty-six degrees Fahrenheit between sunrise and noon in summer on the *pusztas*. The rainfall is everywhere low, only just over twenty inches annually.

The chief agricultural product of Hungary is wheat, from which is made the famous Hungarian flour. Other important products are maize, barley, oats, and other cereals, as well as tobacco. Rice is grown in the south, where also experiments are being made in the cultivation of the cotton plant.

Vineyards occupy nearly 31,000 square miles; the most celebrated wine is made in the Tokay district in northern Hungary. Melons and other choice fruits are raised in great abundance. More than 800,000 fruit-bearing trees have been planted on the sides of the high-roads. The money obtained by the sale of the fruit is expended on the maintenance of the roads. Much red pepper known as paprica, is grown in some counties.

Nature has been very bountiful to Hungary in respect of valuable minerals. The Romans did much mining in the country, and derived from it their chief supply of gold. At the present day many gold and silver mines are being worked both by the state and by private proprietors. Coal is very abundant, but much of it is of rather inferior quality. A plentiful supply of iron-ore keeps several large smelting works fully occupied. Copper, lead, antimony, and zinc are also found. Hungary possesses the only opal mine in Europe. Enormous quantities of rock-salt exist in East Hungary. The salt industry is a monopoly of the state. Asphalt and petroleum are also found. Strong springs of the latter have been tapped recently near Nagyvárad and Máramaros-Sziget. But the most remarkable treasure is natural gas, which during the last few years has been found

ROYAL PALACE AND SUSPENSION BRIDGE, BUDAPEST

by deep borings in many parts of the country. These Hungarian gas wells are equal in extent and value to those of Pittsburgh and other places in the United States. Mineral waters of various kinds, both hot and cold, spring forth plentifully in many parts, and are found to be very efficacious in the treatment of disease.

The principal, indeed the only, port for foreign seaborne trade is Fiume (ten and a half millions sterling). More than three-quarters of this trade is carried on with Austria.

Cities.—Budapest, the capital, population 900,000; Szegedin (*sech-ed-ēn'*), second in importance, population 120,000; Debreczin (*dā-bret'-sin*), [Magyar, Debreczen], population 95,000; Pressburg (Magyar, Pozsony), 78,000; Klausenburg (*klou'zen-bŏrg*), Hung. Kolozsvár (*kō-lōzh-vär'*), population 60,000.

Budapest (*boo'da-pest;* Hung. pron. *boo'do-pesht'*), the capital of Hungary, consists of Buda on the west bank of the Danube, and Pest on the opposite bank.

These twin cities are joined by five bridges: a chain bridge between the two commercial quarters; the Queen Elizabeth Bridge; the Franz Josef Bridge; the Margaret Bridge; and a railway bridge.

Buda, the older and formerly the more important of the two parts, stands on and around two hills. On one stands the royal castle, erected by Maria Theresa of Austria, and a fortress, rebuilt after being destroyed by the Hungarians in 1849. The palace chapel of St. Sigismund contains the Hungarian regalia and the hand of St. Stephen. On the Blocksberg, to the south of this hill, stands the old citadel, while on a lower mound to the north is the Turkish mosque, built over the tomb of the saint Sheik Gül-Babas.

Other prominent buildings are the palace of the former Archduke Joseph of Austria, the residence of the Premier, and of the Minister of National Defense, all standing in the Georgsplatz, where is also a monument to General Hentzi, and the thirteenth-century parish church of St. John.

Pest, the more modern city, stands upon a sandy plain with fine quays along the Danube. The main streets radiate from the Belvaros, which is enclosed by boulevards replacing the old city walls.

The most notable buildings are the Houses of Parliament and Palaces of Justice, the Academy of Sciences, containing valuable art collections, and a fine library, the Bourse, and the Redoute buildings, all on the Franz Josef Quay; the National Museum Theatre and University on Museum Street; the Industrial Art Museum, on Ulloi Street; the Royal Military Academy, in the Orczy Gardens; and the Leopold Basilica on Andrassy Street, one of the most handsome thoroughfares in Europe. There are a parish Church, a Greek Church, and a Jewish synagogue, and numerous parks, including one on Margaret Island in the Danube.

Both towns have valuable baths and sulphur springs, and the united cities form a large manufacturing center for machinery, spirits, and tobacco, cutlery and metal-work, glass, etc. The most important industry is milling, the trade in grain and flour being enormous, and there is considerable commerce in cattle and swine, honey, wax, bacon and hides, timber, and coal.

Pressburg or Presburg (Hungarian *Pozsony*), stands on the left bank of the Danube, forty miles by railroad east by south of Vienna. It is situated amid beautiful scenery in the spurs of the Little Carpathians and here the coronation of the Hapsburg kings took place. Its principal buildings are the cathedral; the church of the Franciscans; the town-house; with a natural history collection; and the parliament house, in which the Hungarian representatives used to meet until 1848. The royal castle was destroyed by fire in 1811, and is now a ruin. The chief objects of manufacture are beer, dynamite, wire, starch, spirits, confectionery, biscuits, etc., and there is considerable trade in corn, sheep, cattle, swine, and wine. From 1541 (when the Turks seized Buda) down to 1784 it was the capital of Hungary. The town was taken by Bethlen Gabor in 1619, by the Austrians in 1621, and was bombarded by Davoût in 1809. Here on December 26, 1805, Napoleon concluded a treaty with the emperor after the battle of Austerlitz.

People, Education, Religion.—The dominant people in Hungary proper are the Magyars (*ma-järz'*), or Hungarians, a Finno-Ugrian or Finno-Turki people, who about 550 A. D. moved from the Ural region to the Volga, and after a long sojourn on the Russian steppe were driven west by the kindred Khazars. Under their king, Arpád, the united Hunagar-Magyar nation obtained a permanent footing in the basin of the Middle Danube before the close of the ninth century. The bulk of the population have regular features, shapely figures, black hair and eyes, dark complexion, medium stature, quick, impulsive tempera-

ROYAL PALACE AND RIVER FROM THE FRANZ JOSEF QUAY, BUDAPEST, HUNGARY

ment, and intense patriotic feeling. The Magyar language is steadily encroaching on the surrounding German, Slav, and Roumanian languages, the people of Magyar speech having increased from 8,436,000 in 1890 to 9,954,000 in 1910.

By religion 48.7 per cent of the population of Hungary proper are Roman Catholics, 11 per cent Greek Catholics, 13 per cent Greek Orientals, 21.9 per cent of the Protestants, 5 per cent are Jews, and only 0.4 per cent Unitarians. Education is making appreciable strides. There are two universities, one at Budapest and one at Kolozsvar or Klausenburg. The illiterates numbered 48½ per cent in Hungary proper in 1901.

History.—Hungary proper was included in the ancient Pannonia and Dacia. The settlement of the Magyars under Arpád took place about 895. The Magyars made many attacks on

PRESSBURG

This beautiful city, picturesquely situated on the left bank of the Danube, had been the capital of Hungary from 1541 to 1748. Memorable throughout history is the sitting of the Diet, held here in 1741, at which the Hungarian nobles swore allegiance to their young queen, Maria Theresa, and at which they promised to help her in her life-and-death struggle with Frederick the Great of Prussia

TOPOGRAPHICAL MAP OF EURASIA SHOWING TERRITORIA

UROPE AND ASIA.

neighboring lands, and were defeated by Henry the Fowler and by Otto the Great on the Lechfeld (955). Hungary was Christianized in the end of the tenth century, and became a kingdom under St. Stephen in 1000. During the next two centuries it increased its territories at the expense of the Slavs. The constitution of the "Golden Bull" was granted in 1222. The country was terribly ravaged by the Mongols in 1241. The Arpád dynasty came to an end in 1301, and was followed by the House of Anjou (1307), under which Hungary came to occupy a commanding position. Louis united the crowns of Hungary and Poland 1370-1382; and they were again united under Ladislaus, who died in 1444. War against the Turks was carried on under the leadership of Hunyady (1442-1456). Matthias Corvinus reigned 1458-1490. The crowns of Hungary and Bohemia were united 1490-1526. On the overthrow of the Hungarians by the Turks at the battle of Mohács in 1526, a great part of Hungary passed to the Turks, and Ferdinand of the Hapsburgs (later emperor) became king of the remainder (with Zapolya as rival king). Buda was recovered from the Turks in 1686. The sovereignty was made hereditary in the Hapsburg family in 1687; and Hungary was ceded by the Turks in 1699 and 1718. An eight years' rebellion was suppressed 1711. The revolution of 1848-1849, under the leadership of Kossuth and others, was suppressed with Russian assistance. The dual system of government with Austria was established under the leadership of Deák in 1867. From 1870-1902 internal politics in Hungary largely consisted of a struggle between Catholics and Protestants—Tisza (1875-1890), Wekerle (1892) Bánffy (1895) representing the latter, and Szapáry (1890-1892) and Szell (1899-1902) the former. Hungary participated in the European war of 1914-1918 on the side of the Central Powers, and its present territorial and other limitations were stipulated by the Treaty of Paris in 1919.

RUSSIA (Russian Socialist Federal Soviet Republic)

Russia (rush'ä), formerly **Muscovy** (*mus'kōvi*), extends over eastern Europe, the whole of northern Asia, and a part of central Asia. In 1915 European Russia, exclusive of Poland and the Caucasus and Finland, consisted of fifty-one governments and provinces, with an area of 1,862,524 square miles and a population of more than 122,550,700.

Under the German peace treaties of 1918, Russia was stripped of all ports and provinces on the Baltic, retaining only a frontage on the back end of the Gulf of Finland, and lost also all the frontage on the Black Sea, retaining only the shore of the Caspian. Subsequent internal upheavals, stripped the country of much of its territory. Russian Poland became a part of the new Republic of Poland, Lithuania, the Ukraine, Finland, the Baltic provinces (Esthonia, Livonia, Courland), parts of Siberia, all formed independent governments, and Bessarabia was combined with Roumania.

The Union of Socialist Soviet Republics.—The Union covers the greater part of the area of the former Russian Empire, from which the independent states of Finland, Poland, Estonia, Latvia and Lithuania have also been formed. The greater part of the remaining territory forms the Russian Socialist Federal Soviet Republic (R.S.F.S.R.), which is in union with other Soviet Republics in Russian territory to form the Russian Union. The total area of the Union is approximately 7,519,315 square miles with a population (partly enumerated and partly estimated) in 1923 of 138,000,000, the rural population forming 80 per cent. and the urban 20 per cent. Prior to the War of 1914-18 the *Russian Empire* of the Tsar Nicholas II, both Asiatic and European, covered more than 8,500,000 square miles, with a population of about 183,000,000.

The federal system of Russia was adopted by the 10th All-Russian Congress of Soviets on the 31st of December, 1922, and did not embody within its scope the *Khiva* (Khorezm) and *Bokhara* republics.

The constituent Republics of the Union now are:—

Republic.	Sq. miles.	Population.
I. R.S.F.S.R.	7,238,533	103,000,000
II. Ukraine	183,655	28,000,000
III. Transcaucasia	74,105	5,769,400
IV. White Russia	23,022	1,650,000
	7,519,315	138,419,400

The **Transcaucasian Federation** consists of three Socialist Soviet Republics, namely:

Republic.	Sq. miles.	Population.
Azerbaijan	33,570	2,097,000
Armenia	15,065	1,300,000
Georgia	25,470	2,372,400
	74,105	5,769,400

The inhabitants of European Russia mostly belong to the Slavic branch of the human race. Those of Asiatic Russia almost wholly are Mongolian in origin and character.

The various sections of European Russia as it exists today differ greatly from one another, and have thereby given rise to certain *popular divisions* that are even better known generally than the strictly governmental provinces. These, with their distinguishing features, may be indicated as follows:

Great Russia (Muscovy).—All the central and northern regions to the Arctic shores. Chief towns: Moscow, Tula.

Except on its outskirts, this region presents everywhere the same aspects, wide, undulating plains covered with cornfields and dotted with small deciduous forests. The soil is of very moderate fertility in the north, but very fertile in the black earth belt of the south.

The Great Russians, numbering about fifty-five millions, are a vigorous and manly stock, usually rather light-haired, with blue or brown eyes, well-formed hands and feet, and a serious, kindly, but somewhat crafty, temperament, an inborn disposition for a wandering life, a very small regard to the value of time, and (especially in the peasantry) an extreme carelessness and slovenliness in all details of daily life.

Eastern Russia.—Chief towns: Astrakham, Kazan, Samara, Saratoff.

This part of the country is more elevated, but less effectively drained; and vast forests stretch from the upper Volga to the Urals.

The peoples are of Turkish origin and include the Tartars of Kazan; the Nogai Tartars of the Crimea in the south, and the Kirgiz on the Caspian. The Bashkirs, Chuvash, and others, in the Ural and Volga, are Tartarized Finns. The Kalmucks may be taken as the purest type of the Mongols; they are short, swarthy, broad-shouldered horsemen, black-haired and black-eyed, the eyes slanting down toward the flat nose.

Surface Features.—In general these embody the plains of European Russia and the lowlands and plains that extend to the north of the two great plateaus of Asia—the high plateau of East Asia and the western plateau of Persia and Armenia.

In European Russia, apart from the Caucasus, the Urals, and the Crimea, the only districts rising above one thousand feet are the Valdai hills at head of the Volga, the Timan range (over three thousand feet) in the Pechora basin. The main divisions of its landscape are the treeless northern tundras, frozen in winter, grassy in summer, the immense central forest region, the cultivated parts of which supply Europe with grain; and the treeless steppes, which lie across the south of the plain from the saline borders of the northern Caspian.

In western Asia, the Caucasus is a single chain, so narrow that the same summits may be seen from the steppes which reach out from its northern base, and from the deep valleys which separate it from the heights of Armenia on the south. It has thus no great valleys in the direction of its length. The spurs descending from the main chain have deep gorges or troughs between. The culminating points are the Elbruz peak and Koshtan Tau, towards the western end of the chain; and Mount Kazbek, near the middle of it—all rising grandly from deep valleys.

The two most important passes over it were called in ancient times the Caucasian and Albanian gates. The former, now called the Dariel Pass, lies close to the eastern base of the Kazbek, and is a narrow cleft 8,215 feet above the sea, available for carriages in the summer. The latter skirts the eastern termination of the range on the shores of the Caspian.

Over the whole chain vegetation is vigorous, but more luxuriant on the warmer southern slopes. The valleys opening in that direction are highly fertile, producing rice and cotton and silk, indigo, tobacco, and vines, and luxuriant woods. The northern slopes, exposed to the keen winds of the steppes, are characterized by bare pasturelands and scattered firewoods.

All western Siberia, nearest the Ural belt and European Russia, is a vast plain rising almost imperceptibly from the shores of the Arctic Ocean to the Kirghiz steppes and the base of the Altai mountains, which spring up from it like a wall, forming the northern buttress of the great tableland of central Asia. The nothern border of this plain is occupied by the marshy frozen tundras; the broad central belt is covered with forest, in the cleared spaces of which the soil is fertile and well suited to agriculture; all the southern portion of it is occupied by treeless steppes which reach away south toward the Caspian and Aral Seas.

The chief elevation in eastern Siberia is a chain of volcanic mountains running down the center of the peninsula of Kamchatka, some of whose peaks reach an elevation of 17,000 feet.

Rivers.—The chief rivers of European Russia are the Niemen, the Dwina, the Lovat (continued by the Volkhov and the Neva), the Onega, the Dnieper, the Don and the Volga. By means of three lines of canals and canalized rivers, which connect the upper tributaries of the Volga with the streams that flow into Lakes Onega and Ladoga, the real mouth of the Volga has been transferred from the Caspian to the Gulf of Finland—Petrograd being the chief port of the Volga basin. The upper Volga and the upper Kama are also connected by canals with the North Dwina, and the Dnieper with the Düna, the Niemen, and the Vistula.

The rainfall of Russia is small, and as part of it falls in the shape of snow, the rivers are flooded in spring and in early summer. During the winter navigation of course ceases.

The Lake District.—This region lies in the north, and includes the governments of Petrograd and Novgorod. The lakes in the district are well-nigh innumerable, the government of Novgorod alone containing more than three thousand lakes. Lake Ladoga is the largest lake in Russian Europe. For a third of the year its surface is frozen. The lake abounds with fish, and has a peculiar species of seal. The Neva flows from the lake into the Gulf of Finland.

Lake Onega is joined up to the White Sea by means of a series of lakes and streams.

Lake Ilmen is formed by the meeting of a number of rivers in a shallow depression; the average depth does not exceed thirty feet.

Lake Peipus, a part of which is called the Lake of Pskov, connects with the Gulf of Riga and with the Gulf of Finland. This lake also is very shallow and does not in any part exceed a depth of ninety feet.

Seaboard and Islands.—The ports on the Arctic coast are of little importance, since for nearly three-quarters of the year the outlets are frozen.

The White Sea with its port, Archangel, had lost much of the importance which it formerly possessed until brought into use during the European war in 1916-1917.

The Bering Sea and the coasts which border on the Sea of Japan lose much of their value because they are bleak and inhospitable. The great gulf which has the town of Vladivostok at its head is separated by miles of waste land from the interior, and the value of one of the most magnificent harbors in the world suffers much from this fact.

The sea which is of most importance to Russia is the Baltic, yet it can in no respect be regarded as a Russian sea.

The chief islands of the Baltic are: Dago, Mohn, Hochland, and Kotlin, which contains the fortress of Cronstadt.

The great inland sea of Russia, the Caspian, lacks importance chiefly because of the fact that it is an inland sea. It forms a good

means of communication from the Transcaucasian provinces to Central Asia, and also between Central Asia and Persia; but although attempts have been made to unite it with the Black Sea, the fact that it lies seventy feet below sea-level prevents any real good from being done. It is, however, of vast importance as a fishing center, and supplies almost the whole of Russia with fish.

Climate.—In European Russia the climate is continental. A very cold winter, followed by a spring which sets in rapidly; a hot summer; an autumn cooler than spring; early frosts; and a small rainfall, chiefly during the summer and autumn, are the main features. The winter is cold everywhere. All the rivers are frozen over early in December, and they remain under ice for from one hundred days in the south to one hundred and sixty days in the north.

Products and Industries. — Excepting along the tundra belt on the Arctic coasts and in the saline steppes of the southeast, the cultivation of grain extends all over the great Russian plains. Rye and barley, oats and flax, are the chief crops in the north; wheat and vines, hemp and tobacco, the products of the center.

Its forests extend over about forty per cent of the surface—pine and fir and birch in the north; oak and elm and lime in the center and south. The timber is sent down the Niemen and Vistula to the Baltic, and to Archangel in the White Sea, in enormous quantities for the supply of western Europe. In Russia itself the larger portion of the houses are built of wood.

Live Stock and Fisheries.—The steppes of the south are the great pastoral lands of Russia, which possess more than forty-five millions of sheep, about twenty-five per cent yielding fine wool; twenty-five millions of cattle; and twenty millions of horses. Russian leather is famous. Swine are also kept in very large numbers all over the land; the export of bristles and brushes from Russia is very large. Camels form the wealth of the Tartars in the southeastern steppes. Hunting the bear, wolf, fox, and deer, and trapping the sable in the forests for their skins, give employment to many. The Caspian, as well as the Sea of Azof, the Black Sea, and the great rivers, are rich in fish—tunny, sturgeon, salmon, anchovy. Most caviare is made at Astrakhan on the Caspian.

Minerals.—The Obdorsk and Ural Mountains contain very great mineral riches, and, with the Altai range, are the principal seat of mining and metallic industry, producing gold, platinum, copper, iron of very superior quality, rock-salt, marble, and kaolin, or china-clay. Silver, gold, and lead are also obtained in large quantities from the mines in the Altai Mountains. Russia is now the largest producer of petroleum in the world. Great supplies of petroleum and naphtha are found in the Baku, Kerch, and Taman. An immense bed of coal, both steam and anthracite, and apparently inexhaustible, has been discovered in the basin of the Donetz (between the rivers Donetz and Dnieper). Other mineral products are: gold, platinum, pig iron, steel and rails, copper, quicksilver, salt and lead.

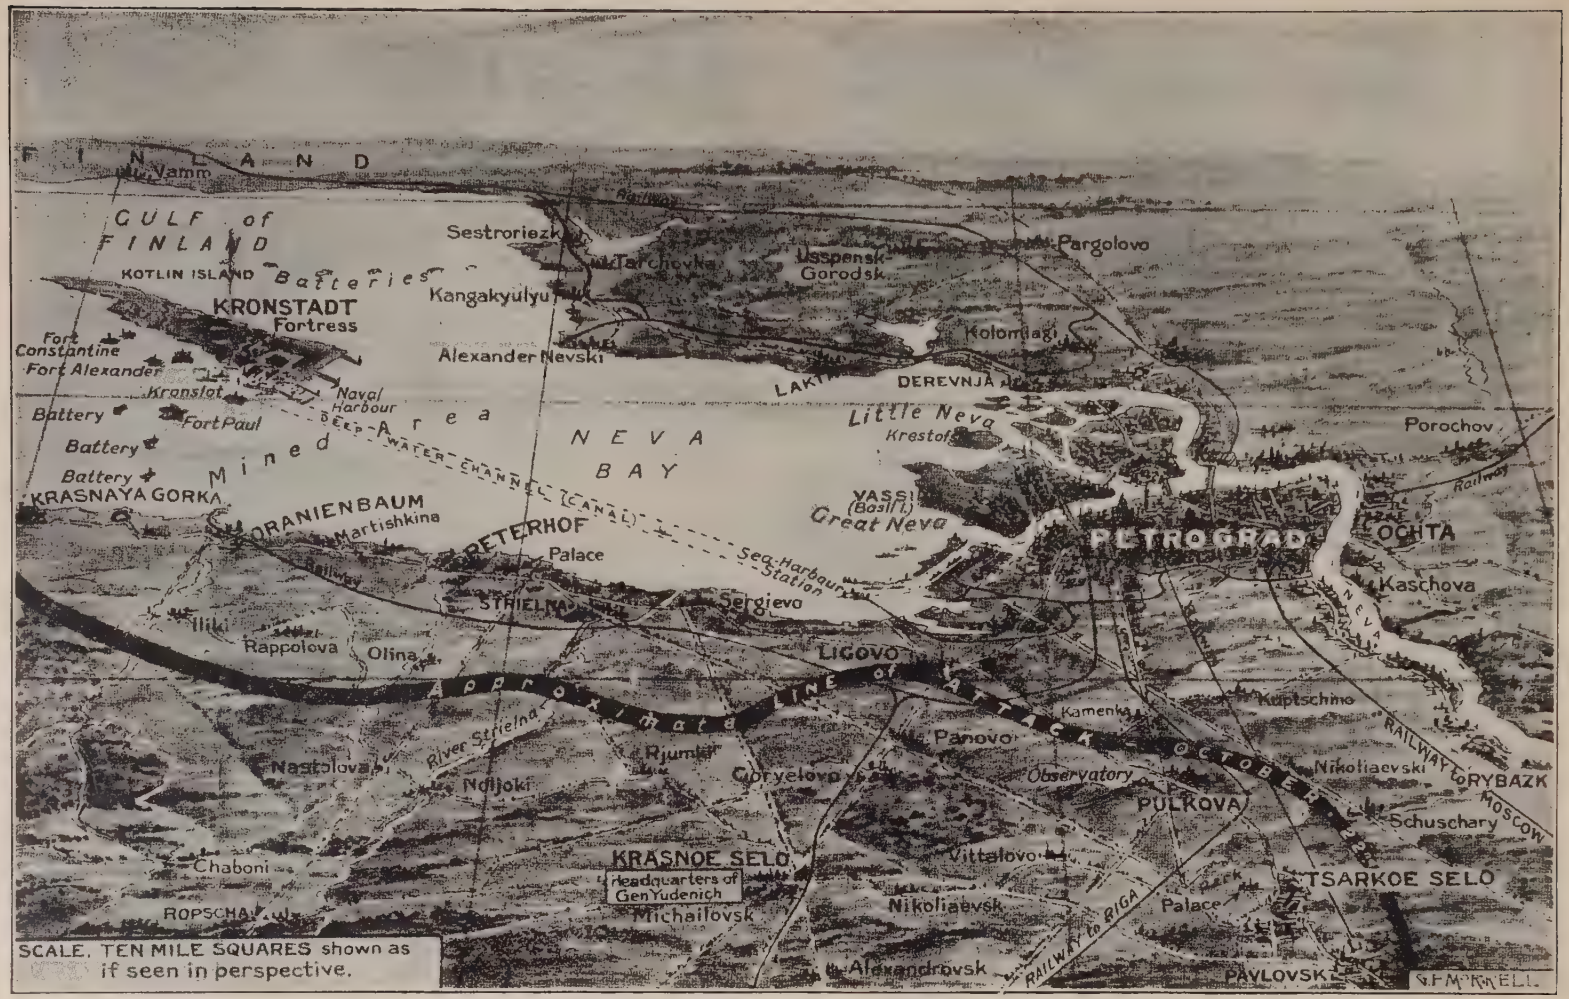
Education.—From the close of the sixteenth century onward, till 1861, the greater portion of the inhabitants of Russia were serfs, belonging either to the crown or to private individuals. Under these circumstances it is not surprising that the masses of the people in Russia are without education. Probably not more than ten per cent of the population have received instruction of any kind. The control and maintenance of primary schools is divided between the Ministry of Public Instruction and the Holy Synod. Conditions are, however, improving. Secondary institutions comprise gymnasia and good schools, but numbers and attendances are small. Special schools are increasing in number, especially in the European cities. There are universities at Kazan, Moscow, Petrograd, Saratoff, Tomsk, Yurieff.

Religion.—The great bulk of the Russians—excepting a few White Russians professing the Union—belong to the Greek-Russian Church, or to one of its numberless sects of dissenters. The members of the Holy Synod who direct its central government were formerly chosen by the Czar, and his authority was represented in the synodal meetings by the procurator-general. The clergy are divided into the 'black' or monastic, and the 'white' or parochial. From the former, always unmarried, are taken all the higher ecclesiastical officials; the latter must be married, cannot be married more than once, but can enter the monastic ranks on the death of the one wife. Pilgrimages are very important in the Russian Church—The Lavra at Kieff and the Troitsa near Moscow being the chief centers. Many dissenting sects exist, varying from the ultra-conservative and rigidly orthodox Old Believers to the Skoptsi or Eunuchs; but according to the last census, almost seventy per cent of the entire population of the empire belonged to the Greek-Russian Church, while the Old Believers numbered about one and a half per cent, and other nonconformists four per cent.

(See further under Soviet System of Government.)

Cities and Towns.—The largest towns in European Russia are Petrograd (2,018,596), Moscow (1,173,427), Lodz (351,570), Saratoff (143,431), Kazan (143,707), Rostoff (119,889), Astrakhan (121,580), Tula (109,279), and Kishineff (125,787); while Nijni Novgorod, Nikolaieff, Samara, and Minsk have populations between 90,000 and 95,000. In Asiatic Russia the Caucasus contains two towns with over 100,000 inhabitants: Baku (179,133), and Tiflis (160,645); Turkestan contains five large towns, Tashkend (156,000), Namangan, Samarkand, and Andijan; in Siberia Vladivostok has 90,000 (one-third Chinese), Tomsk, Irkutsk, and Ekaterinburg have each about 50,000 inhabitants. Nijni Novgorod, though small, is a station on the Trans-Siberian Railway, and has annually the largest fair in the world.

Petrograd, the splendid looking metropolis of present day Russia is situated on the River



MAP OF PETROGRAD AND VICINITY

Neva, near its entrance into the Gulf of Finland. The flat and low marshy ground upon which the city is built only recently emerged from the sea. The mighty Neva, which flows thirty-six miles from Lake Ladoga, subdivides into many branches, thus forming some one hundred islands.

VIEW OF PETROGRAD, RUSSIA, FROM THE ISLAND

Peter the Great began to build, in 1703, a small hut for himself, and some wooden hovels near the old fort. Now the quays form noble uninterrupted walks for several miles on each side of the broad, deep, rapid, and clear river. The climate is cold, damp, and changeable with a mean summer temperature of sixty-four degrees, mean winter temperature of fifteen degrees.

General Aspect and Divisions.—The main body of the city stands on the mainland, on the left bank of the Neva; and a beautiful granite quay, with a long series of palaces and mansions, stretches for two and one-half miles. Only three permanent bridges cross the Neva; a bridge of boats is constructed each spring and removed each autumn.

THE IMPERIAL WINTER PALACE, PETROGRAD

The island Vasilievsky, between the Great and Little Nevas, contains the Stock Exchange, the Academy of Sciences, the University, the Philological Institute, the Academy of Arts, and various schools and colleges.

On the Petrogradsky Island, between the Little Neva and the Great Neva, stands the old fortress and prison of St. Peter and St. Paul, facing the Winter Palace, and containing the mint and the cathedral wherein the members of the imperial family are buried, also the arsenal.

The Chief Center.—The main part of Petrograd has for its center the Old Admiralty. Its lofty gilded spire and the gilded dome of St. Isaac's Cathedral are among the first sights caught on approaching Petrograd by sea. Three streets radiate from it, the first of them, the famous Nevsky Prospect. The street architecture, with its huge brick houses covered with stucco and mostly painted gray, is rigid and military in aspect.

A spacious square, planted with trees, encloses the Old Admiralty on three sides. To the east of it rise the magnificent mass of the Winter Palace, the Hermitage Gallery of Art, and the semicircular buildings of the general staff.

In the Petrogradsky Square is the well-known statue of Peter I. on an immense block of Finland granite. The richly decorated cathedral of St. Isaac of Dalmatia, erected by Nicholas I., is an almost cubic building (three hundred and thirty feet long, two hundred and ninety feet broad, and three hundred and ten feet high), surmounted by one

large and lofty and four small gilded domes.

In Nevsky Prospect are the Kazan Cathedral, the Public Library, the square of Catherine II., and the Anitchkoff Palace.

The aristocratic quarter lies between the line of the Nevsky Prospect and the River Neva.

The principal places of interest are: the Imperial or Winter Palace, the Hermitage, St. Isaac's Cathedral, the Kazan Cathedral, the Cathedral of Saints Peter and Paul, the Smolnoi Church, the Academy of Science, the House of Peter the Great; and, in the environs, Tsarkoe Selo, and Peterhof. For most travelers the greatest attraction in Petrograd is:

THE HERMITAGE.—It is connected with the Winter Palace, and was originally built by the Empress Catherine II. as a retreat. The present building, erected 1840-1852, by Klenze, is in the Greek style; it is a parallelogram, five hundred and twelve feet by three hundred and seventy-five feet, and for elegance of form as well as for beauty and costliness of materials employed has scarcely a rival in Europe.

Baedeker says: "The gallery of the Hermitage unquestionably stands among the first in Europe, not on account of its numbers (it boasts over one thousand nine hundred pictures) or on account of its completeness—the art of the fourteenth and fifteenth centuries and the entire German school is lacking—but because it possesses such a number of masterpieces from the best periods of the various schools, that for the Spanish masters it ranks next to the Prado and the Louvre, in French masters it is surpassed only by the Louvre, in Flemish artists it stands on a level with the principal galleries, and it is the premier collection of the Dutch school, especially Rembrandt."

CATHEDRAL OF ST. PETER AND ST. PAUL is in the fortress. It was erected 1714-1733, and was several times damaged by lightning. It has a beautiful spire, three hundred and two feet, the loftiest in Russia, except that at Reval. All sovereigns of Russia, including and since Peter the Great, except Peter II., who was interred at Moscow, lie buried here. The tomb of Peter the Great is near the south door. On the walls are many military trophies, keys of fortresses, flags, weapons, shields, etc. Nearby the Cathedral, in a brick building, is the boat of Peter the Great, preserved exactly as when it engaged the curious attention of Peter and so led to the creation of the Russian navy, of which it is facetiously called the "Grandfather."

THE KAZAN CATHEDRAL is situated upon the Nevsky Prospect, and is approached by a circular colonnade, in imitation of St. Peter's at Rome. In front are fine statues of Smolenskoi and de Tolly. The interior corresponds in its magnificence and display to St. Isaac's. The special object of interest is the image of "Our Lady of Kazan," which is covered with gems, the diamonds of the crown being of exceeding value. Around the cathedral are banners of important victories won by Russian arms and valor.

THE SMOLNOI CHURCH, at the eastern extremity of the city, is peculiarly rich in its effects, the entire structure and all its decorations being of

THE CATHEDRAL OF ST. ISAAC

The largest in Petrograd, was begun a century ago by Catherine II.; but was rebuilt in 1819-1858, by Montferrand, in the shape of a Greek cross. It is a simple but massive pile, with one hundred and twelve pillars in the four fronts. Those at the chief entrance are sixty feet high, and seven feet diameter—all round and highly polished granite monoliths from Finland. The dome, two hundred and ninety-six feet high, is surmounted by a golden cross and covered with copper, overlaid with gold. The Altar screen is of immense value and the entire edifice cost about fifty million dollars.

STATUE OF PETER THE GREAT, PETROGRAD

A very striking equestrian statue, erected by Catherine II. in 1782. It is of colossal size, by Falconet, and stands on a huge pedestal of granite, between St. Isaac's Church and the River Neva.

the purest white. In connection with this church is a celebrated seminary for young ladies of noble birth.

CATHEDRAL AND MONASTERY OF ST. ALEXANDER NEVSKY is at the extreme east end of the Nevsky Prospect. The buildings cover much ground, and include twelve churches, the monastery, and gardens. The Cathedral, which is that of the Metropolitan, dating from 1790, is enriched with marble and agate and paintings—the altarpiece, the Anunciation, is by Raphael Mengs. On pillars opposite the altar are large portraits of Peter the Great and Catherine II. The shrine of St. Alexander Nevsky is of silver, about two thousand pounds of the metal being used in the whole; near the tomb are suspended the keys of Adrianople. The Monastery has a rich collection of jeweled mitres, gold brocaded vestments, and a mass of valuables, also many objects of interest, including the crown of St. Alexander and the bed on which Peter the Great died.

TSARSKOE SELO (*tsär'-kō-ye sā'lō*), about fifteen miles south of St. Petersburg, contains a famous imperial palace, a favorite summer residence of the court. The Old Palace, begun in 1744, is richly decorated, the walls of one room are incrusted with amber, those of another with lapis lazuli. The magnificent marble gallery, two hundred and seventy feet long, connects the palace with a detached building. The park is full of caprices, such as a Chinese tower and village, an Egyptian pyramid, a Turkish kiosk, and the so-called doll-houses of the royal princesses.

PETERHOF (*pā'ter-hōf*), near Oranienbaum, was begun in 1720, and built by Leblond for Peter the Great. A marine palace, with a long front, made to retain its original appearance, even its ancient yellow color has been continually renewed. It contains porcelain, malachite, tapestry, paintings of victories in the reign of Catherine II., and a collection of three hundred and sixty-eight portraits of women, painted by Count Rosali for the empress during a journey. All are in the national costume. The gardens are full of Neptunes and Tritons and good fountains. The well-wooded park has many curiosities:—Marli, a favorite resort of Peter the Great; the cottage of the Empress Catherine, brilliant with gold and mirrors; the Palais de Paille; the English Garden, with a ball-room.

MONUMENT TO NICHOLAS I., PETROGRAD

THE HERMITAGE OR MUSEUM OF ART,

connected with the Winter Palace, is one of most famous in Europe and contains one thousand seven hundred painting of all schools, among them being some by Murillo, Velasquez, Rubens, Van Dyke, Rembrandt, and Ruysdael.

Moscow (*mŏs'kō*), the ancient capital of the Russian Empire, is one of the most magnificent and interesting cities of the world. The city is gathered in a semi-circle around the citadel, or Kremlin, which stands immediately upon the river bank. The streets are exceedingly irregular, though generally presenting the appearance of broad, well-paved avenues of a modern European city. The innumerable white, semi-oriental structures which greet the vision from every commanding point, with their unnumbered domes, spires, belfries, towers, and minarets, give to the city a magnificence of beauty scarcely to

THE KREMLIN, MOSCOW, SHOWING THE HIGH WALL AND LOFTY WATCH-TOWERS

The Kremlin is the keystone of Russian history. The men who lived and ruled in it were those who, out of a collection of petty and weak princedoms, created the mighty Russian Empire. Originally a fort, it is now museum, mausoleum, and treasure house of things precious in Russian life and Russian religion. In no other equal area in the world is there crowded such an array of historic cathedrals and monasteries, sacred relics, trophies of war, sacerdotal robes, tombs of human saints and human devils, gold and silver vessels, precious stones, pearls, and jewels to the value of millions of dollars, etc.

NOVO-DEVITSCHY CONVENT: HISTORIC GROUP OF BUILDINGS IN MOSCOW

Within the shelter of the massive walls of this convent more than one of the royal widows, sisters, or daughters have taken refuge. Here was imprisoned the ambitious and gifted sister of Peter the Great, Sophia, who ruled when he was a boy, and who did her best, according to Peter, to put him out of the way, so that she might become permanent Empress. In front of the Russian monasteries and convents there is usually a little sentry box, where a nun or priest is always present to receive the copper which the passing peasant may volunteer.

be found elsewhere in the great cities of Europe.

THE KREMLIN.—The historic, as well as the most interesting part of the city, is within the walls of the Kremlin. It is associated with much that is held in deepest reverence by Russians—here the imperial power receives religious consecration, and the great bell of Ivan Veliky proclaims the new monarch. The Kremlin is an assemblage of many buildings, covering quite a section of the city—churches, palaces, arsenals, barracks, monuments—enclosed within a brick wall about a mile and a half in circuit. Upon the wall, which is sixty feet high, are twenty-one towers. The principal gate, the Gate of the Saviour, is on the east side. Over the passage of the gate is the venerated "Saviour" brought from Smolensk in 1685, and it is the custom for the passer-by to uncover his head.

THE TOWER OF IVAN VELIKY, or John the Great, built in 1600, and three hundred and twenty feet high, contains thirty-four bells, the largest of which weighs sixty-four tons. When all these bells are rung together at Easter the effect is wonderful. At the foot of this tower is the vast Tsar Kolokol, or Monarch of Bells. It once hung in a tower (burned in 1737), weighs four hundred and forty-four thousand pounds and is twenty feet high and sixty feet round. The value of the metal in the bell is nearly two million dollars.

Outside the Kremlin is the Chinese town, so-called, founded by Helena. Here are the Romanoff Palace, the Iberian Gate and Chapel, the University, the great Riding School, the Theaters, and the largest Bazaar in Russia, except that of Nijni-Novgorod.

THE CHURCH OF THE SAVIOUR, is conspicuous near the river, a quarter mile southwest of the Kremlin. This beautiful church, by the architect Thon, was erected 1837-1883, at a cost of more than eight million dollars. It has five cupolas, the principal being about one hundred feet in diameter; many figures in relief of patriarchs and saints upon the façade. The interior is elaborately decorated with marble and gilding; upon the walls are tablets relating to military events, admirable paintings and sculpture.

THE CATHEDRAL OF ST. BASIL, erected 1554-1557, is a remarkable edifice, consisting of eleven chapels with as many cupolas, all different, but wonderfully proportioned.

ST. SAVIOUR'S CATHEDRAL, MOSCOW

While the cost of this church (said to have been about twelve million dollars) was less than that of St. Isaac's in St. Petersburg, its location on the highest part of Moscow, together with its style of architecture, combines to make it the more beautiful of the two.

Vladivostok (*vlä-dē-vōs-tok'*), capital (since 1903) of the vice-royalty of Eastern Asia, Siberia, is situated on the east shore of Amur Gulf. It has one of the finest harbors in the world, is a naval station, has an arsenal, and is a terminus of the Siberian railroad. It escaped attack during the Russo-Japanese war, but suffered from naval mutiny and unrest in the Russian disturbances of 1905-1906. Its climate is severe—the average annual temperature being only forty degrees Fahrenheit.

HISTORY OF RUSSIA.—The Russian races were known to the ancients as Scythians, and their country as Sarmatia. It received its name from the *Routsi* or *Russ*, a tribe of Norse "rovers" or freebooters, who entered the country from the west about the eighth century. The name was later applied to the realm of Moscow, and modified to Russia.

Early Traditions.—Three brothers, Rurik, Sineus, and Truvor, Scandinavians, were invited, according to tradition, to come and protect territory in northwest Russia against the Finns and the Lithuanians. They and their successors built new forts, and took part in wars. The times of the "Sunny Vladimir" (980-1015) are the "heroic" epoch of early Russian history, and the feats and feasts of Vladimir and his "war companions" have been handed down through ages in legend and song; while his conversion to Christianity made him the hero of the annals written by monks.

Kieff the First Historic Center.—The first half of the eleventh century, during which Yaroslaff the Wise was grand prince at Kieff,

was the most brilliant time for Kieff, then the "mother of the Russian towns." The great cathedral of St. Sophia was built at that time; schools were opened, and the first written Russian law was compiled. At his death (1054) Yaroslaff was ruling over most of the Russian towns.

The next two centuries of Russian history correspond to the feudal period of Western Europe. The Russians at that time were steadily extending their territory toward the east; they colonized the Oka, the Don, and the Finnish territories in the northeast.

Settlements in and about Moscow.—Owing to the gradual colonization of the basin of the Oka and the upper Volga, a new Russian territory had grown in importance in the meantime. Suzdal and Rostoff were its chief centers. It differed from southwest Russia in many respects. Its inhabitants were Great Russians—a hard-working race, less poetical and less gifted, but more active than their southern brethern. Besides, a good many of its inhabitants were peasants, settled on the lands of the boyars, and the cities themselves, being of recent creation—like Vladimir and, later on, Moscow—had not those traditions of independence which characterized Kieff or Novgorod. It was therefore easier for the authority of the prince to develop in the northeast, under the guidance of the church and the boyars.

The first Suzdal prince, Andrei Bogolubsky (1157-1174), was the first representative of that policy. He invited many Kieff boyars to settle in the land of Suzdal, and finally he took and burnt Kieff (1169).

Supremacy of Kieff was thus destroyed, and the land of Suzdal became the Ile-de-France of Russia—the nucleus of the future Russian state. Suzdal land continued to grow and to enjoy prosperity during the next fifty years; economical, educational and literary progress were marked, and the Russian territory extended farther eastward.

Tartar Invasion.—But in the thirteenth century a great calamity visited Russia; a Mongol invasion suddenly put a stop to the development of the country and threw it into a totally new direction.

The Tartars first appeared in 1224, but their real conquest, under Batu Khan, was made in 1238 and the years immediately following. They subdued all the little Slav states except the republic of Novgorod. Latterly the rulers or princes of Moscow gained an ascendency over the other states, and formed the nucleus of a central sovereignty.

Ivan III. Expels the Tartars.—The Tartar supremacy lasted till about 1480, when Ivan III. (1462-1505) succeeded in throwing off their yoke. He did much to consolidate and extend his kingdom, and conquered Novgorod in 1478. The reign of Ivan IV. "The Terrible" (1533-1584) is of great importance. In 1547 he assumed the title of Czar or Tsar, a variant of Cæsar. He conquered Kazan and Astrakhan, and the conquest of Siberia was begun in his reign. The epithet "terrible" has reference to his cruel persecution of the boyars, a kind of powerful baronial class.

House of Romanoff Established.—The accession of the still-reigning Romanoff house took place in 1613 when the States-General elected Michael Romanoff as ruler. Under Alexei (1645-1676), son of Michael, territory was won from Poland, the Cossacks of the Ukraine had to submit, and the power of Russia greatly increased. The reign of Alexei's son, Feodor III. (1676-1682), witnessed a war with Turkey, but was signalized by many important reforms. His imbecile brother Ivan was heir apparent, but Feodor willed the throne to his half-brother Peter, known in history as the Great; but Peter only obtained sole power in 1689 after overthrowing Sophia, Ivan's sister.

Under Peter the Great.—Peter the Great opened what may be called the European period of Russian history. (See Peter the Great.) He made his country a European state. He gave it a standing army, a navy on the Baltic, the embryo of a modern administration, a diplomatic service, and a financial organization. He made canals, encouraged industry, literature and art. The heart of

PALACE OF PETER THE GREAT, FOUNDER OF PETROGRAD

PETER THE GREAT IN HOLLAND

The practical ambition of Peter the Great has probably never been surpassed by any sovereign in history. He began empire building with his travels in 1697. It was an unparalleled step for a young sovereign of twenty-five to take: to withdraw from his kingdom and journey abroad in order to learn the art of government. He was deeply interested in all branches of engineering, especially ship-building, which he first studied in Holland, working as an ordinary laborer in a dockyard. In 1698 Peter went to England to pursue

Russia might remain at Moscow, but henceforth it was to have also a head that looked out westward from the Neva.

On the other hand, Peter increased taxation; his cruelty was oriental, and serfdom under him became more and more extensive.

He completed the conquest of Siberia, waged successful war with Charles XII. of Sweden, and by the treaty of Nystad in 1721 obtained Esthonia, Livonia, Ingermannland, and part of Finland, thus gaining a large maritime territory on the Baltic Sea. He founded Petrograd in 1703, and made it the capital in place of Moscow.

The Eighteenth Century in Russian history is a century of empresses. Peter the Great was succeeded by his wife, Catherine I. (1725-1727). A grandson of Peter the Great, Peter II., followed Catherine, reigning from 1727 to 1730. The next sovereign was Anna (1730-1740), whose reign was a period of German influence. Ivan VI. (1740-1741) was soon displaced by the anti-German party, and Elizabeth (1741-1762), daughter of Peter the Great, ascended the throne. A part of Finland was obtained by the treaty of Abo, and Russia took part against Prussia in the Seven Years' war. The first Russian university, that of Moscow, was founded in 1755.

The death of Elizabeth and the accession of Peter III., in 1762, greatly relieved the hard-pressed Frederick the Great, because Peter at once reversed the Russian policy.

Catherine II.—In July, 1762, he was deposed by his wife, Catherine II. (1762-1796), whose reign is of great importance in the progress of Russian power.

Under Catherine II. successful wars were carried on against Turkey, Persia, Sweden and Poland, which largely extended the limits of the empire. The acquisition of the Crimea, which gave Russia a firm footing on the Black Sea, and the first partition of Poland, were two most important steps toward the consolidation of the empire.

Napoleonic Period.—Catherine's son and successor, Paul I. (1796-1801), at first, through apprehension of the revolution in France, joined the Austrians and British against France, but soon after capriciously withdrew and was about to commence war with Great Britain when his assassination took place. A palace conspiracy put an end to his reign and life.

His eldest son, Alexander I. (1801-1825), was at the outset desirous of peace, but was soon drawn into the vortex of the great struggle with France, in which he played a prominent part. (See Alexander I. and Napoleon.) The Holy Alliance and the example of conservative policy set by Austria exercised a pernicious influence on the later part of his reign; and the higher classes, who had looked for the introduction of at least a portion of the liberal institutions they had seen and admired in Western Europe, became so dissatisfied that, when his younger brother, Nicholas I. (1825-1855), from whom they had nothing to hope, succeeded, they broke out into open rebellion, which was speedily crushed.

The Turkish Wars.—A full stop was now put to the intellectual development of Russia. Wars were declared with Persia and Turkey; and a long and deadly struggle commenced with the Caucasian mountaineers. The cession of Erivan and Nahitchevan by Persia, of the plain of the Kubañ, of the protectorate of the Danubian principalities, and of the free right of navigation of the Black Sea, the Dardanelles, and the Danube by Turkey only induced him to further prosecute his aim of conquering for Russia a free issue from the Black Sea in the Dardanelles.

In 1830 he converted Poland into a Russian province; in 1849 he aided Austria in quelling the insurrection of the Magyars; and in 1853 he began a war with Turkey which became the Crimean war, and in which, though the allies, Great Britain, France and Sardinia, did not obtain any decided success, Russia suffered immense loss.

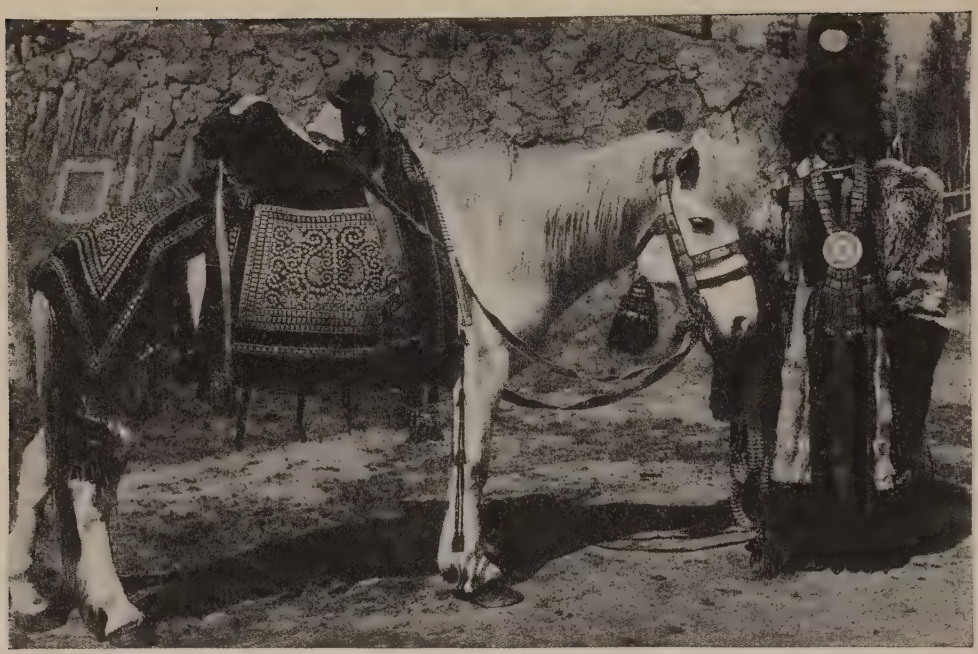
Alexander II.—The accession of Nicholas' son Alexander II. (1855-1881)—one of whose first acts was the conclusion of the peace of Paris (1856), by which Russia lost the right of navigation on the Danube, a strip of territory to the north of that river, and the right of keeping a navy in the Black Sea—was the signal for a general revival of intellectual life in Russia. Obligatory military service for all Russians was introduced in 1874.

The insurrection in Poland was suppressed with extreme severity, and in 1868 the last relics of Polish independence disappeared in the thorough incorporation of the kingdom with the Russian Empire. The subjugation of the Caucasus was completed in 1859. Russian supremacy was established over all the states of Turkestan. In 1876 the administration of the Baltic provinces was merged in that of the central government; but the autonomy of Finland was respected and even extended.

Russo-Turkish War of 1877-1878.—In 1877 the Russo-Turkish war broke out. At first the Russian progress was rapid; but the energy displayed by the Turks during the summer, and the resolute defense of Plevna by Osman Pasha from July till December, checked the progress of the Russian army. During the winter, however, she crossed the Balkans, and her vanguard, reaching the Sea of Marmora, stood in view of Constantinople. The armistice signed in January, 1878, was followed in March by the treaty of San Stefano; and after diplomatic difficulties that seemed for a time not unlikely to issue in war between Russia and Great Britain, a Congress of the Great Powers met at Berlin in June, 1878, and sanctioned the cession to Russia of the part of Bessarabia given to Moldavia in 1856, as also of the port of Batoum, of Kars, and of Ardahan.

Rise of Nihilism.—The growth of revolutionary discontent, leading to severe repressive measures, was marked by several murders of high officials, and on March 13, 1881, Alexander II. was killed by the revolutionists.

Reactionary Reign of Alexander III.—The reign of Alexander III. (1881-1894) was in the main characterized, in contrast to the liberal reforms of the last reign, by reactionary steps. Press freedom disappeared completely, and the universities were again suppressed. The Du-



A SIBERIAN BELLE

A rich Yakut girl in festival attire, showing lavish silver ornamentations on trappings and saddle-cloth of the pony. The Yakuts afford an interesting study, for, although a tribe living along the banks of the Lena,—one of the largest of the Siberian rivers,—they speak Turkish; and while nominally Christians, they do not forget their ancient nature-worship. They are a laborious and intelligent people, and largely interested in stock-raising and trade.

mas, or representative assemblies, were deprived of all real independence in 1892. Alexander II.'s judicial reforms were partly undone, and the village communities, known as mirs, were brought under the more direct control of the land owners. Russification was vigorously pursued in Poland and the Baltic provinces, and in 1890 the first steps toward the Russification of Finland were taken.

Alexander III. was not friendly to Germany, but avoided hostilities more serious than those of a tariff war, although the Bulgarian crisis of 1885 subjected their relations to a severe strain. Russia and France now began to draw close together, but a Franco-Russian alliance was not officially admitted till 1896-1897, and its terms were secret. Merv was annexed in 1884, and the occupation of Penjdeh in 1885 nearly led to war with Great Britain. Alexander III. escaped several attempts at assassination, and died of disease in November, 1894.

Russia in the Far East.—After the reign of Alexander III. comes the fateful reign of his son, Nicholas II. In 1896 China granted permission to carry the Siberian railway (begun in 1889) through Manchuria to the far eastern Russian seaport of Vladivostok. In December, 1897, in consequence of the Germans having acquired Kiauchau from China, Russia occupied Port Arthur, and in the following year obtained from China a lease of it and some neighboring territory, although in 1895 she had taken the chief part in preventing Japan from taking it as a prize of victory. She shared in the international expedition to China in 1900, and herself suppressed risings in Manchuria with the utmost cruelty. Professing to be ready, and even anxious to evacuate Manchuria as soon as possible, she was preparing for virtual annexation; but her aggressive action in Korea aroused Japanese opposition, and led to the war of 1904-1905.

By treaty of Portsmouth (1905), which ended this war, Russia lost—for the time being at least—all influence in Manchuria, Korea, and China, and had to cede to Japan Port Arthur and its territory, and also southern Sakhalien.

The Imperial Duma.—In August, 1905, the czar issued a manifesto ordering the election of an Imperial Duma or Parliament. Count Witte was made president of a reorganized Council of Ministers, with instructions to form a reform cabinet. The general strike in Finland compelled the czar to restore Finland's constitution and liberties previously taken away in 1903. The bureaucrats attemped to discredit the reform movement by instigating attacks on Jews, and other outrages, especially in Odessa, where the authorities permitted appalling atrocities.

The Imperial Duma, promised in 1905, was duly elected early in 1906, and held its first meeting on May 10 at Petrograd. It was dissolved later in the year because too liberal, and a second one, elected in 1907, met the same fate. By various devices the government managed to get a less advanced Duma elected late in 1907, which did some useful work in 1908. An important Anglo-Russian convention was signed in 1907, the signatories

agreeing to respect the territorial integrity of Thibet and the suzerainty of China. Other conventions were signed (1910) between Russia and Japan repecting the status of Manchuria, and between Russia and Germany in 1911.

After declaration of war by Austria against Servia in 1914, Russia announced that her support would be given to Servia. Consequently Russia joined France and Great Britain in the conflict that followed. (See further under European war.)

Revolution and Collapse of the Monarchy.—On account of unfavorable military results and internal convulsions the Czar, Nicholas, was forced on March 15, 1917, to abdicate. Authority was vested by the Duma in a provisional government and a Russian republic was proclaimed on September 17, 1917. Prince George Lvoff held office as Prime Minister and Minister of the Interior from March 15 to July 20. Milyukoff was Minister for Foreign Affairs and Kerensky for Justice; with the exception of the latter, who was a moderate Socialist, the Ministry was composed exclusively of Constitutional Democrats.

The new government proclaimed free speech, the right to strike, universal suffrage (including woman suffrage), a general amnesty for all political prisoners and exiles, and the maintenance of existing treaties. A constituent assembly was promised to draw up a permanent constitution. The new government was opposed to every step by the "Soviet," or Council of Workmen's and Soldiers' Delegates, at Petrograd, which called itself the true representative of Russia, to give the revolution a social character. Kerensky, May 13, succeeded Gutchkoff as Minister of War. The Bolsheviki rioted at Petrograd. The Bolsheviki leader, Nikolai Lenine, returned from exile. In June, 1917, Kronstadt set up as an independent republic, recognizing only the Petrograd Soviet; the Ukraine declared its independence, and Finland took steps to restore its autonomy. An All-Russian Congress of Workmen's and Soldiers' Delegates, sitting in Petrograd, abolished the Duma as a stronghold of the middle classes. On July 1, General Brussiloff started an offensive in Galicia, but it was soon converted into a retreat by Bolsheviki intrigue. Prince Lyoff gave way to Kerensky, who set up a new Ministry. The three councils, of workmen, of soldiers, and of peasants, backed Kerensky and voted to keep up the war. Lenine was driven into hiding. Kerensky formed a new Cabinet on August 7, from which all extreme radicals were excluded.

On August 26 an extraordinary national congress, convoked by Kerensky, met in Moscow. The capture of Riga by the Germans, September 3, caused a break between the military party and Kerensky. On September 9 General Korniloff, who had succeeded Brussiloff as commander in chief, attempted a coup d'état, which failed. A democratic congress called by the Central Council of Workmen's and Soldiers' Delegates met in Moscow on September 27, called for a preliminary parliament ("temporary council of the Russian Republic") to act until the constituent assembly should meet in December, and declared against the forming of a coalition Cabinet without the sanction of the congress. Kerensky rejected its control and proceeded immediately to admit to his Cabinet four members of the Constitutional Democratic Party. The preliminary parliament began its sessions in the last days of October, in depression caused by the German capture of Oesel and Dagö, islands at the entrance to the Gulf of Riga.

On November 2, Kerensky in an interview stated that Russia had done her work in the war and was worn out; she would not quit the conflict but was in great need of help from the Allies. The government revoked an earlier decision to remove to Moscow, but Petrograd was evacuated by a considerable part of its civil population. Strikes, food riots, and street demonstrations again broke out in the capital. Finally the Bolsheviki won over the Petrograd garrison and the navy, and on November 7 they drove Kerensky from the city. The Winter Palace was defended for a time by women soldiers (the "Battalion of Death"), but soon the government buildings were in the hands of the Bolsheviki under Lenine and Trotzky.

Under Lenine and Trotzky.—The Bolsheviki proclaimed the following programme: (1) offer of an immediate democratic peace; (2) handing over of the large estates to the peasants; (3) transfer of all authority to the Council of Workmen's and Soldiers' Delegates; (4) an honest convocation of a constituent assembly. Kerensky, escaping from Petrograd, placed himself at the head of an army, but was defeated by the defection of his own troops. For some days students of the military schools and other loyal elements battled in Petrograd against the Bolsheviki. The latter gained control of Moscow, after fighting, and Kieff and other large industrial cities came under their rule. The power of Kerensky collapsed and he disappeared from the scene. The Bolsheviki proclaimed the peasants the owners of the lands and published a number of secret treaties and diplomatic letters of the earlier governments.

Russia's Secret Treaties.—On November 24, 1917, the Bolsheviki government revealed certain alleged agreements between the Entente Powers with reference to the settlement at the end of the war. In case Russia gained Constantinople and the Dardanelles, she was to allow the freedom of passage of cargoes proceeding to other than Russian ports. Part of Arabia was to be under a separate Mussulman government, and Britain was to have certain additions to her sphere of influence in Persia. In a second document published on the same day France recognized Russia's freedom to define her western boundaries. In a separate telegram the Russian Minister of Foreign Affairs recognized that France and Great Britain should have the right to define the western boundary of Germany. On November 28 the Bolsheviki government published another document, said to have been signed in London April 26, 1915, by the representatives of Great Britain, France, Russia and Italy, by which Italy, on the conclusion of the war, was to receive the Trentino, part of the Southern Tyrol, Trieste, Istria, and Dalmatia

Treaties with Germany.—On November 24, Trotzky presented his proposal for a general armistice. He declared that he spoke as commissioner of foreign affairs for a government in the form of a council of national commissioners, founded on October 26, and headed by Lenine. The efforts of General Dukhonin (assassinated December 14) and of Generals Kaledines and Korniloff to resist the Bolsheviki failed. The meeting of the constituent assembly, set for December 11, was dispersed. Anti-Bolsheviki newspapers were suppressed, German agents were given free hand. The railways workers, who controlled the transport of troops, were won over. Lenine's policy looked toward an exclusively proletarian republic. In interviews Trotzky denied that his government would make a separate peace, but orders were issued for the reduction of the Russian armies. On December 15, 1917, a truce with Germany was signed, with provision for the immediate opening of peace negotiations, without participation of Russia's allies. After several hitches a basis of peace was reached. The treaty was ratified March 16, 1918, by the Russian provisional government, at Moscow. Russia had formally withdrawn from the war on February 10, though its Bolshevist leaders refused at that time to sign a treaty with the Germans.

In the treaty, Russia promised to cease annoying Ukrainia, Persia, Afghanistan; and the eastern frontiers of Esthonia and Livonia were thus described: "The eastern frontier of Esthonia follows in general the line of the Narova River. The eastern frontier of Livonia runs in general through Peipus Lake and Pskov Lake to the southeasterly corner of the latter, then over Lubahner (Luban) Lake in the direction of Lievenhof, on the Dvina."

The Soviets authorized a decree, published on February 3, 1918, by Lenine, separating Church and State; cutting off the church from public funds, and handing over to the state the legal title to religious properties; the congregations to have the right, however, to use the property exclusively for religious purposes; refusing exemption from duties as citizens on account of religious scruples; cancelling the religious oath and replacing it by a promise; authorizing the civil authorities to perform marriage ceremonies and register births, and abolishing religious teaching in state schools and in private schools with a similar course of studies.

A decree was issued February 7 by the Bolsheviki government ordering the adoption of the Gregorian, or "new-style" calendar, as from Thursday, February 14, 1918, "the first day after January 31, 1918, (Russian style), being reckoned as February 14."

Repudiation of Public Debts.—An official proclamation repudiating Russia's debts, dated February 8, 1918 (new style), approved by the central committee, is as follows: "(1) All loans contracted by former Russian Governments which are specified in a special list are canceled as from December 1, 1917. The December coupons of these loans will not be paid. (2) All the guarantees for these loans are cancelled. (3) All loans made from abroad are cancelled without exception and unconditionally. (4) The short-term series of state treasury bonds retain their validity. The interest on them will not be payable, but they will circulate on a par with paper money. (5) Indigent persons who hold stock not exceeding 10,000 rubles in internal loans will receive in exchange, according to the nominal value of their holdings certificates in their own name for a new loan of the Russian Socialist Federal Republic of Soviets for an amount not exceeding that of their previous holding. The conditions of this loan are specially defined. (6) Deposits in the state savings banks and the interest upon them are not to be touched. All holdings in the canceled loans belonging to these banks will be replaced by debt entered to their credit in the Great Book of the Russian Socialist Republic. (7) Co-operative and other institutions of general or democratic utility, and possessing holdings in the canceled loans, will be indemnified in accordance with the special regulations laid down by the Supreme Council of Political Economy, in agreement with their representatives, if it is proved that the holdings were acquired before the publication of the present decree. (8) The state bank is charged with the complete liquidation of loans and the immediate registration of all holders of bonds in the state loans and other funds, whether annulled or not. (9) The Soviet of the Workmen's, Soldiers', and Peasants' Deputies, in accord with the local economic councils, will form committees for the purpose of deciding whether a citizen is to be classed as "indigent." These committees will be competent to cancel entirely all savings acquired without working for them, even in the case of sums below 5,000 rubles."

The year 1919 was witness to continued military and social struggles between radical factions, and, at the opening of 1920, practically all the miltary forces of the Entente Allies were withdrawn from Russian territory.

SOVEREIGNS OF RUSSIA

A long list of dukes and grand dukes preceded the actual foundation of the Russian monarchy under the rule of a czar.

HOUSE OF RURIK

This royal house includes the descendants of Rurik, Grand Prince of Novgorod, the reputed founder of the Russian royalty. It became extinct in the person of Feodor in 1598.

1462-1505.—Ivan (Basilovitz), or John III., took the title of czar, 1482; Grand Duke of Moscow.

1505-1533.—Vasali IV., or Basil V., obtained the title of Emperor from Maximilian I.; son of Ivan the Great.

1533-1584.—Ivan IV. the Terrible; a tyrant; son of Vasily IV.

1584-1598.—Feodor, or Theodor, I.; and his son Demetrius, murdered by his successor; son of

SOVEREIGNS OF RUSSIA—Continued

Ivan the Terrible: was elected to the throne.
1598-1604.—Boris-Godonof, who usurped the throne.
1605.—Feodor II., murdered.
1606.—Vasali-Chouiski, or Zouinski.
1606-1610.—Demetrius the Impostor, a young Polish monk; pretended to be the murdered prince Demetrius; put to death.
1610-1613.—Ladislaus of Poland; retired 1613.

HOUSE OF ROMANOFF—MALE LINE

1613-1645.—Michael-Feodorovitz, of the house of Romanoff, descended from the czar Ivan Basilovitz; unanimously elected czar.
1645-1676.—Alexis, styled the father of his country; son of Michael Feodorovitch.
1676-1682.—Feodor, or Theodor, II.; eldest son of Emperor Alexis.
1682-1689.—Ivan V.; Peter I., Ivan was the half-brother of Peter the Great, in whose favor he resigned.
1689-1725.—Peter I., the Great, alone; took the title of emperor October, 1721; founded St. Petersburg; son of Alexis.
1725-1727.—Catherine I., his widow, at first the wife of a Swedish dragoon, said to have been killed on the day of marriage; was married to Peter the Great in 1707.
1727-1730.—Peter II., son of Alexis Petrovitz, and grandson of Peter the Great; deposed.

HOUSE OF ROMANOFF—FEMALE LINE

The reign of the next three sovereigns of Russia, Anne, Ivan VI., and Elizabeth, of the female line of Romanoff, formed a transition period, which came to an end with the accession of Peter III., of the house of Holstein-Gottorp.

1730-1740.—Anne, duchess of Courland, daughter of the czar Ivan.
1740-1741.—Ivan VI., an infant, grand-nephew to Peter the Great; immured in a dungeon for eighteen years; murdered in 1764.
1741-1762.—Elizabeth, daughter of Peter the Great reigned during Ivan's captivity.

HOUSE OF ROMANOFF—HOLSTIEN.

All the subsequent emperors, without exception, connected themselves by marriage with German families. The wife and successor of Peter III,, Catherine II., daughter of the Prince of Anhalt Zerbst, general in the Prussian army, left the crown to her only son Paul, who became the father of two emperors, Alexander I. and Nicholas, and the grandfather of a third, Alexander II. All these sovereigns married German princesses, creating intimate family alliances, among others, with the reigning houses of Württemberg, Baden, and Prussia.

1762.—Peter III., son of Anne and of Charles Frederick, duke of Holstein-Gottorp; deposed, and died soon after; supposed to have been murdered. Son of Charles Frederick, Duke of Holstein.
1762-1796.—Catherine II.; a great sovereign; extended the Russian territories on all sides; died 1796; wife of Peter III.
1796-1801.—Paul, her son; murdered, 1801; son of Peter III.
1801-1825.—Alexander I., died 1825; son of Paul.
1825-1855.—Nicholas I.; died 1855; third son of Paul.
1855-1881.—Alexander II., assassinated at St. Petersburg, March, 1881; son of Nicholas I.
1881-1894.—Alexander III.; died 1894; married Mary (formerly Dagmar), princess of Denmark; son of Alexander II.
1894-1917.—Nicholas II., son of Alexander III.; abdicated 1917 upon overthrow of the monarchy.

SOVIET GOVERNMENT

1917-1924.—Nikolai Lenin, Dictator.
1924——Alexis I. Rykoff, President of Council.

Ukrainia (*ū-krān'ē-ä*), or the Ukraine (*ū-krān* or *ö-krān'*) [Russ. *Ukraina*, border land], Soviet republic, is the southwest division of European Russia, lying chiefly in the valley of the middle Dnieper.

It was proclaimed free and independent by its Central Rada (parliament) November 20, 1917, with a constitution dating from December 23, 1917, and was formally recognized as such in a preliminary treaty of peace, signed at the conference at Brest-Litovsk, February 9, 1918.

Under the treaty with the Central Powers, Ukrainia was granted the territory of Kholm (Chelm), in Russian Poland. In Little Russia the Ukrainian Republic consisted, by the treaty, of the provinces of Kharkoff (21,041 square miles, population 3,452,000), Kieff (19,676 square miles, population 4,988,000), Podolia (16,224 square miles, population 4,127,600), Poltava (19,265 square miles, population 3,906,200), and Volhynia (27,699 square miles, population 4,241,800). Kholn (5,213 square miles, population 1,087,800) also was included in the treaty, but was claimed by Poland. In addition, the Ukrainians laid claim to the provinces of Chernigov (3,149,000, population, 20,232 square miles), Kherson (3,807,000 population, 27,337 square miles), Taurida (2,133,300 population, 23,312 square miles), and Yekaterinoslav (3,537,300 population, 24,477 square miles). This whole region, containing over 30,000,000 population, and more than 200,000 square miles, comprises "Little Russia," the "Southwestern Territory," and "New Russia," exclusive of the lands of the Don Cossacks. It is bounded on the west by Austria-Hungary, on the south by the Black and Azov Seas, on the east by the Don Cossacks, and on the north by Central Russia, and Lithuania. The Little Russians are seventy-five per cent of the population.

The land is low-lying, with the exception of some spurs of the Carpathians on the west, and is covered with forests, resembling Poland in this respect. The chief rivers of this district are the Dniester, the Bug, and the Pruth; of these the Dniester is the most important. Much of the soil is black, suited to wheat, hence the old name of "Black Russia." There are rich iron and coal deposits. The province of Kharkov, watered by the Donets River, is devoted to grain, wine, tobacco, and cattle.

People, Religion and Culture.—In the Ukraine many peoples are represented beside the Ukranians or the Great Russians and Little Russians: the Poles, its former masters; large colonies of Germans, with some Bohemians and more Bulgarians; Tartar communities in the south; Roumanians annexed with their territory on the southwest; and multitudes of Jews, besides Armenians, Greeks, and Gypsies everywhere.

The Ukranian language has great dialectical difference from the tongue of Moscow and Petrograd. Their religion, like their love for

THE ST. VLADIMIR MONUMENT AND THE RIVER DNIEPER: KIEFF

Sixty-two feet high, cast in bronze from the design of Baron Klodt, it was erected in 1853. The relief on the lofty pedestal represents the baptism of the Russian people. Above is the figure of the saint holding a cross. In 988 St. Vladimir adopted Christianity and married Anne, sister of the Greek Emperors, Basil and Constantine, and on his return to his own country he caused his people to be baptized.

music and poetry and their passion for country life, they share with their neighbors on the north and northeast; but in their developments of folklore and popular song, and in the more feminine character both of their physique and their intellect, they offer marked peculiarities. The Little Russians of the Dnieper basin, closely allied to the Ruthenians of Austria-Hungary (Galician Red Russia), are tending more and more to merge themselves with the Muscovite.

Ukrainian is now the official language in courts, schools, and government offices, and the Russian calendar has given way to the Gregorian.

The average of illiteracy in Ukrania is approximately sixty per cent, though there is now an established system of elementary and high schools, and universities at Kharkoff and Kieff.

Cities.—The capital of Ukrainia is Kieff, one of the oldest of Slavic towns, with a population of 500,000; Odessa, a great seaport on the Black Sea, 500,000; Kharkoff, 225,000; Ekaterinoslav, 200,000; Kherson, 70,000; Brest-Litovsk, 60,000; Poltava, 60,000; Kamanitz, 35,000; Chernigov, 35,000.

History and Government.—Kieff was the first historic center of Russia, and the "mother of Russian towns." It was at Kieff that Vladimir, one of the sons of Svatoslav, adopted the Christian faith in 988, and soon the whole country accepted the new faith. The next prince of note is Yaroslav, who flourished in the eleventh century, and published the first monument of Russian jurisprudence, the *Russkaya Pravda*. Kieff seems to have lost its importance through the jealousy of its neighbors; and just when Russia ought to have been consolidated the Mongols make their appearance, and in 1224 inflict a severe blow upon the Russians on the banks of the Kalka, near the Sea of Azov. The territory of the Ukraine then passed to Lithuania and Poland successively, and was ceded by Poland to the Cossacks in 1672. In 1682, it was obtained by Russia, Poland keeping all on the west side of the River Dnieper. By the Polish partition of 1795 Russia got the rest of the Ukraine. Mazeppa was long ago the

Ukraine hetman, or chief. The Podolia region was taken from Poland in 1793.

The province of Volhynia, which lies on the northwest border of Galicia and on the eastern side of Poland, is agricultural. In the middle ages Volhynia was a principality, which, united with Lithuania, formed a part of the Polish kingdom. It reverted to Russia during the (1793-1795) second and third partitions of Poland. In 1795 Russia annexed the whole.

ST. SOPHIA, KIEFF

The cathedral of St. Sophia, erected in 1047-1049 by Grand Prince Yaroslav out of gratitude for his victory over the Pechenegs, is surmounted by a central dome and a number of smaller ones. The exterior has suffered from seventeenth-century alterations, but the interior is architecturally very interesting.

On April 29, 1918, at Kieff, the Congress of Ukrainian Peasants chose General Skoropadski as hetman, or ruler, in succession to the Central Rada. This was a step in the civil war between the Bolsheviki, and the antis, begun December 18, 1917. The Germans invaded Ukrainia, and on May 2, 1918, established a military dictatorship there. In their independence proclamation of November 20, 1917, the Ukrainians had given the following guarantees.

"All the liberties won by the Russian revolution are to be guaranteed, namely, freedom of the press, of speech, of religion, of assembly, of union, of strikes, of inviolability of person and of habitation, the right and the possibility of using local dialects in dealing with all authorities." They had obtained from Kerensky, in July, 1917, a promise of independence provided they stayed in the Russian Provincial Republic. On May 9, 1918, a new government, pro-German, was formed, with Nicholas Oustemovitch as president.

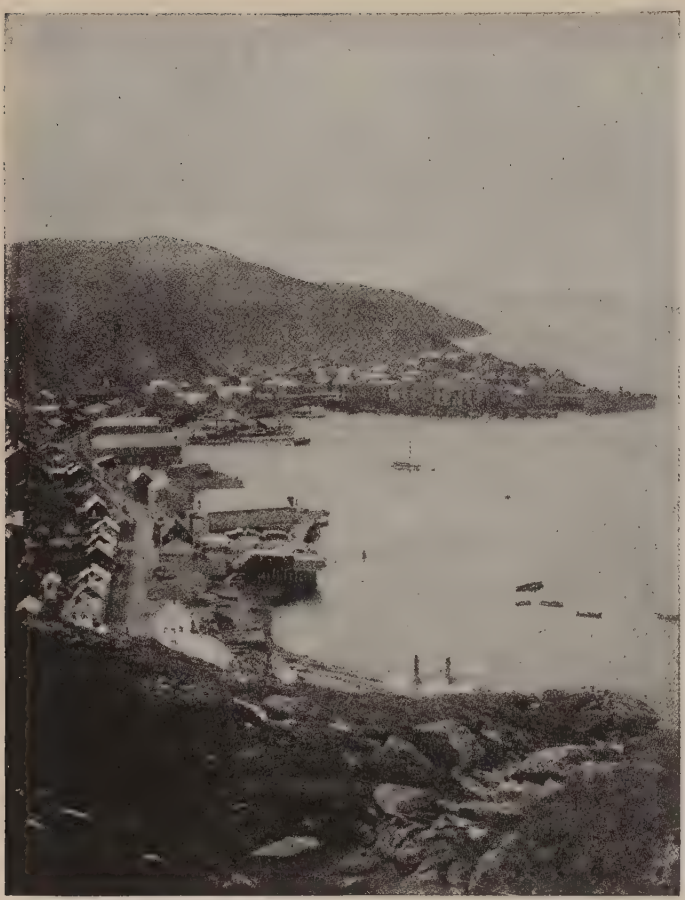
NORWAY (Norweg. *Norge*), the western division of the Scandinavian peninsula, is one thousand one hundred and sixty miles in length (coast-line three thousand miles) and varies in width from twenty to one hundred miles north of 63° N. lat; below that line it swells out to two hundred and sixty miles. The coast-line is extensive, deeply indented with numerous fiords, and fringed with an immense number of rocky islands. The surface is mountainous, consisting of elevated and barren tablelands, separated by deep and narrow valleys. The finest of the valleys stretching inland from the fiords is Romsdal, where the rounded pure gneiss mountains tower up to six thousand feet with almost perpendicular walls. The cultivated area is about one-thirtieth part of the country; forests cover nearly one-fourth; the rest consists of highland pastures or mountains.

Norway is separated from Sweden by the Kjolen Mountains (three thousand to six thousand feet), the backbone of the peninsula, which divide south of 63°; the western branch widens out into a broad plateau, undulating between two thousand and four thousand feet, and embossed with mountain-knots—Dovre, Jotun, Lang, Fille, Hardanger Fjelde (*fells*)—the separate peaks of which shoot up to six thousand feet and higher.

Rivers.—The few important rivers that Norway can claim as exclusively her own have a southerly direction, and discharge themselves into the Skager-Rack; of these the chief are the Glommen (four hundred miles), and its affluent, the Lougen. The most important river in the north is the Tana, which forms part of the boundary between Russia and Norway, and falls into the Arctic Ocean. Lofty waterfalls are numerous. Lakes are extremely numerous but generally small. The principal is the Miösen Vand. The streams are turned to account in floating down the valuable timber of the forests, and their rapids give abundant mill power.

Production and Industry.—Agriculture, though pursued with some vigor of late, is unable to furnish sufficient products for home consumption; hence it has been necessary to import considerable quantities of corn, meat, and pork. The fisheries give employment to a large part of the population throughout the year. The most important are cod and herring. The mineral products are of late increasing.

The purely industrial establishments are grouped mainly around Christiania, and include textile factories, machine shops, chemical works, flour mills, breweries, etc. The use of water power for electrical enterprises is growing. The Norwegians rank among the busiest sea carriers of the world, the Norwegian mercantile marine ranking



A general view of Hammerfest, the most northerly city in the world. It is but a short journey from here to the famous North Cape. The sun does not set in Hammerfest during midsummer and in midwinter lights are always necessary. Hammerfest is the rendezvous of the fishing fleets of the Kara Sea and the waters along the Spitzbergen coasts. Population 2,300.

the Norwegian mercantile marine ranking third among maritime nations, or first in proportion to population.

The chief exports consist of timber, matches, fish, oil, and other products of the fisheries, pulp, paper, skins and furs, nails, minerals, stone, ice, calcium carbide, condensed milk, butter, margarine, tinned goods, etc.

People.—The people of the peninsula are of Germanic race, with the exception of the small number of Finns and the Lapps in the north. The Norsemen of Norway, of middle stature, strong, generally blonde haired and blue eyed, seamen by choice, have adopted the Danish as the language of the towns and of literature, the modernized Old Norse being banished to the outlying country districts and unfrequented fiords.

Education is compulsory and free between the ages of seven and fourteen, schools being maintained by local taxation with state grants in aid. The attendance is high. Secondary schools are provided by the state, by local authorities, and privately. There are a number of special schools and technical and industrial institutes. The University of Christiania is an important institution for higher education.

Except 52,700 persons (including Methodists, Baptists, Roman Catholics, Jews, Mormons), the entire population belong to the Lutheran Church.

Government.—After the crisis of European affairs brought about by Napoleon's wars, Denmark lost her hold over Norway, which had been united to it for more than four centuries, and that country was united to Sweden in exchange for Finland, which then passed under Russian sway. Norway, however, was again separated from Sweden as an independent kingdom under King Haakon VII. in 1905.

In October, 1907, a treaty guaranteeing the integrity of Norwegian territory was signed at Christiania by the representatives of Norway, Great Britain, France, Germany, and Russia, and on January 8, 1908, received the unanimous approval of the Storthing.

The *Storthing* or Parliament consists of one hundred and twenty-three members, women being eligible and electors (since 1907); and divides for legislative purposes into two chambers called *"Odelsting"* and *"Lagting."* The King appoints an executive cabinet of at least eight Ministers, who may speak in the Storthing, but have no vote.

The Norwegians share with the Swiss the distinction of being the most democratic people in Europe; all titles of nobility were abolished in 1821. In 1912 practically all offices except in the cabinet, diplomatic service, army, navy, and church, were thrown open to women.

Cities.—The chief cities are the capital, Oslö (Christiania), and Bergen. Other important towns are Trondhjem, Stavanger and Drammen.

Oslö.—Capital and chief town is built on the northern end of Christiania Fiord. Its population is 258,520. The ancient capital is Trondhjem, "home of the throne," where the kings are still crowned. Christiania was so named after Christian IV., who commenced building it in 1624 after the destruction of the ancient city of Oslö by fire. Oslö is the seat of Parliament, of the High Court of Judicature, and of the National University. Connected with this are the students' garden, a library of four hundred and fifty thousand volumes, a botanical garden, zoological and other museums, laboratories, and observatory. The

Meteorological Institute was established in 1866. There are two national and historical palaces here, one in the city quite near the university, and one, Oscarshall, beautifully situated two miles from the city on an eminence overlooking the fiord. There is a national picture-gallery, and a very interesting museum of northern antiquities. The *Dom* or Cathedral and Trinity Church are the principal ecclesiastical buildings. The old fortress *Akershus Faestning* still remains, but has little military value.

The staple industry of Christiania is its shipping trade; its chief export is timber. A considerable industry is the brewing of *Christiania öl*, a sort of lager beer, with resinous flavor, largely consumed throughout Norway, and exported. The minor manufactures are cotton, canvas, engineworks, nailworks, paper-mills, and carriole-making. The harbor is closed by ice for three or four months most winters.

The town of Odda is charmingly situated at the southern end of the Sörfjord. This is one of the most frequented spots in the Hardanger, which is the best known of the Norwegian fjords.

Bergen (*ber'gen*), seaport and former Hanse town, was founded 1070, and is located three hundred and six miles northwest of Christiania, in a fine spot among "seven hills," and numerous islands, at the head of a deep bay on the North Sea coast, protected by several forts. Almost all the houses are built of wood, and have a picturesque appearance; the churches and a few old houses are of stone, at Torve-Almeuding (near the Exchange) and on Tydskebrygge Wharf. St. Olaf's Gothic Cathedral (1248) has portraits of bishops and a movable angel for a font; St. Mary's, or German Church, is Norman of the twelfth century. Other places of interest include a Castle, or arsenal, including the Kongshall and Valkendorf's Taarn, near the Bergenhus, or House of Correction; three hospitals; new market, or bazaar; picture Gallery, near the theatre; Library, and national Museum of Scandinavian antiquities and Runic inscriptions; Naval Academy, and a college. There are tobacco and porcelain factories, distilleries, and ropeworks, and considerable iron and wooden shipbuilding. The fishery (halibut, cod, herring) is, however, the principal business, especially the salt fish branch. Fish fairs are held in May and August. The harbor is good with deep water; but owing to the rocks, difficult of access. The people on the islands are called Streels, a primitive race. Ole Bull, the famous musician, a native, is buried in a small cemetery near the Leper Hospital.

Trondhjem or **Throndjem** (*trond'yem*), or **Drontheim** (*dront'hĭm*). A seaport and the third city in Norway, capital of Trondhjemstift, situated on the Trondhjem Fjord. This former residence of the Norwegian kings, standing on a beautiful winding fjord, was founded in 997 by Olaf Tryggvason, on the site of an ancient city, Nidaros, which had a temple dedicated to Thor and Odin. Being of wood, it has been burned several times; but since the last great fire, in 1841, all the new buildings are of brick and stone. The Norman and Gothic *Cathedral* was founded 1162; is three hundred and twenty-five feet long and has a restored eight-sided choir. It is of greenish stone, with some fine interlaced arches, and stands in a large graveyard. A copy of Thorvaldsen's grand statue of the Saviour (at Copenhagen) is on the altar. The Coronation House, where the kings are crowned is of timber. Custom is House on the site of the Orething, where the kings were elected. The Museum has a library, remains of Scandinavian armor, Norwegian minerals, birds, etc. Here are the Bank of Norway; a College; a Royal Academy of Sciences, and a seminary for the Lapps. It exports fish, copper and timber.

Stavanger (*Stah'vang-er*), the chief town of Southwest Norway, on the south side of Bukken Fjord, 100 miles south of Bergen. It has two harbors, and derives its importance from the fisheries of the adjacent coast. Dating back to the 9th century at least, it has been often destroyed by fire and is now quite a modern place. The Gothic cathedral was founded by an English bishop (Reinald) in the 11th century. Of late years Stavanger has become a favorite tourists' rendezvous.

The facade of the imposing National Theater in Christiania. The statue of Björnson in the foreground is flanked on the other side by a companion figure of Ibsen.

HOLLAND, the popular name of a country officially described as "Netherland," or "The Netherlands," is bounded by the North Sea, Prussia, and Belgium. Its greatest length, north to south, is one hundred and ninety-five miles, and its greatest breadth one hundred and ten miles. Luxemburg was, till 1890, connected with Holland.

Surface.—Almost the whole country is flat and low; the parts of it nearest the coasts are even below the sea level, the waters being kept out by dykes, which are maintained at a great annual cost. One stretch of fifty miles of the coast is guarded by a triple wall of piles driven into the soil, filled up between, and buttressed by huge granite blocks brought from Norway. If it were not for these dykes controlling the rivers and keeping out the sea, nearly half the country woud be under water.

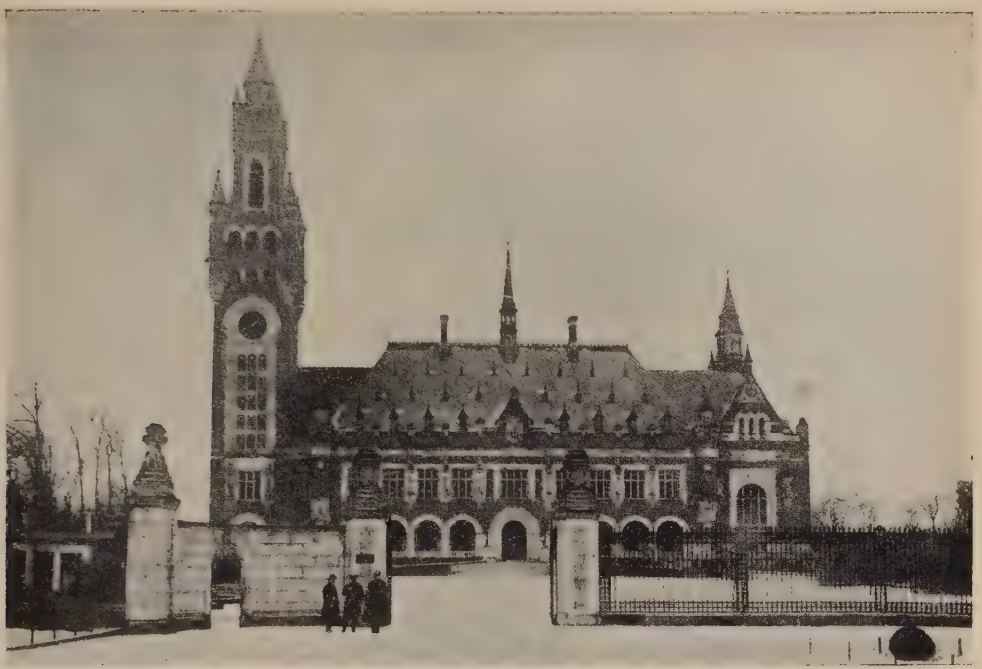
All the southern part of Holland belongs to the alluvial delta lands formed at the mouths of the Rhine (the chief branch of which is named the Waal), the Meuse or Maas and Scheldt. Opening out into broad, shallow estuaries these river mouths form a number of islands, of which Walcheren and Beveland, Schouwen and Tholen, Over Flakkee, Voorne and Beyerland, are the largest.

Toward the north appears the great shallow gulf called the Zuider Zee (or South Sea, in distinction from the North Sea outside), which was formed in the thirteenth century by the bursting of the sea into a former inland lake called "Flevo" by the Roman geographers. Outside of it a chain of islands marks the line of the former coast of the mainland.

Rivers and Canals.—Besides the natural channels formed by the estuaries of the Scheldt, the Maas, and the delta branches of the Rhine (the Waal, Lek, Old Rhine, Vecht, Amstel, and Yssel) the country is intersected in all directions by *Grachts* or larger canals, lined with rows of trees, joining river to river. No country in the world has such a network of waterways; ships' masts, and windmills with large sails, pumping the water from the smaller drainage canals, are seen everywhere.

History.—It is not until the ninth century that the story of Norway begins to emerge from the obscurities of myth and legend. At first it was occupied by Lapps and by several Gothic tribes, then became an independent kingdom, founded in 872, and was united to Denmark in 1380.

The Napoleonic crisis in Europe may be said to have severed the union, which had existed for more than four hundred years between Norway and Denmark. The latter country after having given unequivocal proofs of adhesion to the cause of Bonaparte, was compelled, after the war of 1813, to sign the treaty of Kiel in 1814, in which it was stipulated by the allied powers that she should resign Norway to Sweden. Charles XIII. was declared joint king of Sweden and Norway in 1818. From that time down to 1905 Norway remained in union with Sweden. In June of that year Norway declared the union dissolved, and the repeal of the union was signed in October of the same year. The throne was offered to and declined by a prince of the reigning house of Sweden, but was afterwards accepted by Prince Carl of Sweden, who was thereupon elected as King Haakon VII. In 1908 a treaty was signed by Great Britain, Germany, France, Russia, and Norway guaranteeing the integrity of the Norwegian kingdom.



The Palace of Peace, toward the building of which Andrew Carnegie contributed $1,500,000. Completed in 1913 the Peace Palace was dedicated as the permanent seat of the International Court of Arbitration.

Climate.—The general climate of Holland resembles that of England, opposite to it, in its rapid variations; but it is more humid. Dense sea fogs from the North Sea drive over it. In most winters the rivers and canals are frozen over for two or three months, when even women skate to market; in summer the thermometer rises to eighty or ninety degrees in the shade.

Province	Area in Square Miles	Population 1896	Per Sq. Mile 1910
North Brabant	1,980	633,155	320
Guelders	1,965	647,567	330
South Holland	1,166	1,418,097	1,216
North Holland	1,070	1,122,996	1,050
Zealand	690	234,191	340
Utrecht	534	292,131	547
Friesland	1,282	362,293	283
Overyssel	1,291	387,381	300
Groningen	790	331,248	419
Drenthe	1,030	176,043	171
Limburg	850	340,053	400
Total	12,648	5,945,155	470

Production and Industry.—Cattle rearing, butter and cheese making, are the most general industries of the country, for the grazing meadows are far more extensive than the corn lands. In the latter, rye, barley, wheat, and potatoes, are the chief crops. Flax, and beet-root for sugar, chicory, and tobacco, are grown also.

The principal manufactures are shipping, bricks, margarine, cocoa, chocolate, linen, rich damasks, cottons, woolens, cigars and other manufactured tobacco, candles, confectionery, earthenware and pottery, glass bottles and ware, chemical and pharmaceutical products, matches, perfumery, sugar, bicycles and automobiles, boots and shoes, starch, potato flour, engines, metal substances, works of art in gold and silver, incandescent lamps, machinery, motors, paper, printing, oils, beer, "geneva" and other liqueurs. Diamond cutting employs numerous hands in Amsterdam.

People.—Of the population, the greater part (seventy per cent) is formed by the Dutch or Batavians, the descendants of the Germanic tribe of the Batavi who occupied the delta of the Rhine in the time of the Roman conquest of the land. Frieslanders (fourteen per cent), descendants of the ancient Frisii, occupy the northern borders of the country, where the peasantry still speak a language closely allied to Anglo-Saxon; the Flemings (thirteen per cent) occupy the southeastern borders of the country. Their language differs little from the Dutch; but the dialects throughout the country are very numerous.

The majority, about three-fifths, belong to the several Reformed Churches; and the remainder are Roman Catholics, with about one hundred and seven thousand Jews.

Private state-aided primary instruction is encouraged rather than public, though the latter is provided, if required, by local taxation. Secondary schools for working classes are numerous, well equipped and attended. The principal universities are at Amsterdam, Groningen, Leiden, Utrecht.

Government.—The government of Holland is a limited constitutional monarchy. The crown is the executive power; legislation is vested in the States-general of two chambers, called the

First Chamber and the Second Camber. A State Council of fourteen members appointed by the Sovereign is consulted on all legislative and on most executive matters.

There is no state religion, but the state gives financial support to the different churches.

Cities.—The capital is The Hague with a population of 300,000; other cities exceeding 50,000 in 1913 were as follows: Amsterdam, 591,053; Rotterdam, 454,135; Utrecht, 123,457; Groningen, 78,670; Haarlem, 70,907; Arnhem, 64,760; Leiden, 59,297; Nymegen, 58,679; Tilburg, 54,216.

PALACE IN THE WOOD,

or Dutch "White House," is situated in a fine old plantation of beeches and oaks, round ornamental lakes and islands, is a plain building with a grand interior; and has Jordaen's masterpiece, the Apotheosis of Prince Fred. Henry.

The Hague (Dutch *Gravenhagen*, "the count's hedge"), the capital of the Netherlands is two miles from the North Sea and fifteen miles northwest of Rotterdam. It is intersected by canals and shady avenues of lime-trees, and has many fine public buildings and private houses.

In the center of it is the Vijver, or Fish-pond, to the south of which stands the old castle of the Counts of Holland, where the Dutch parliament sits. In its gatetower the brothers De Witt were confined till dragged thence and torn to pieces by the populace (1672). The picture-gallery has a splendid collection of works by native painters (Paul Potter's "Bull" and Rembrandt's "Lesson in Anatomy"); and there are the royal library with five hundred thousand volumes; the municipal and other museums; the Town-House, and the royal palaces.

Among the numerous statues are those of William I. (two in number), William II., Spinoza, Bernhard of Saxe-Weimar, and the monument which commemorates the deliverance from the French. Close to the town is the beautiful pleasure-park called "The Wood" (*Bosch*), in which stands a royal residence with the magnificent so-called "Orange Hall."

NATIONAL MONUMENT IN THE WILLEMS-PARK, THE HAGUE

The great Peace Conference was held here in 1899; The Hague is the seat of the resulting arbitration courts, for which Mr. Carnegie provided permanent buildings of great architectural beauty. Industries are iron-founding, copper and lead smelting, cannon-founding, printing, furniture and carriage making, and the manufacture of gold and silver lace.

History.—The ancient inhabitants of the country, the Batavians and the Frisians, became subjects or allies of the Romans in the first century A. D., and so remained till in the fourth century their territories were overrun by the Saxons and Salian Franks.

At the end of the eighth century the Low Countries submitted to Charlemagne, and various feudal dukedoms, counties, and lordships were gradually established (the countship of Holland in the eleventh century). In 1384 the earldom of Flanders passed to the Dukes of Burgundy, and Philip the Good (*c.*1450) made the Low Countries as prosperous as any part of his Burgundian state.

The Emperor Charles V. inherited the Burgundian dominions; and under his son, Philip II. of Spain, broke out the bitter quarrel between Holland and Spain, between Dutch Protestantism and persistence and Spanish tyranny and persecution, which ended in 1581 in the establishment of the Dutch Republic as an independent state under William the Silent (of Orange), though the war continued with intervals till 1648, and the Belgian provinces abode by their allegiance to the kings of Spain.

In the seventeenth century Dutch commerce, especially at sea, Dutch science, Dutch classical scholarship, Dutch literature and Dutch art attained an eminence hardly afterwards equalled. The rivalry of Holland and England at sea led to the

A WATER BOULEVARD IN AMSTERDAM

More beautiful in their tree-covered and green-broidered banks than the acclaimed marble, stone, and wooden pile restrained canals of Venice, there are no city highways in the world as restful as the broad water boulevards through the better residential and suburban parts of Amsterdam.

unfortunate wars of 1652-1654 and 1664-1667. The accession of William III. of Orange to the Stadtholdership of the United Provinces (1672) proved the salvation of the republic from France; in 1678 Louis XIV. signed the peace of Nymegen.

Ten years later William was hailed as the savior of English liberties, and became king of Great Britain and Ireland. On William's death, the United Provinces became a pure republic once more, the stadtholdership was re-established in 1747 but it made no difference in the downward course.

The National Convention of France having declared war against Great Britain and the stadtholder of Holland in 1793, French armies overran Belgium (1794); they were welcomed by the so-called patriots of the United Provinces and William V. and his family (January 1795) were obliged to escape from Scheveningen to England in a fishing-smack and the French rule began. After several changes Louis Bonaparte, June 5, 1806, was appointed king of Holland, but, four years later, was obliged to resign because he refused to be a mere tool in the hands of the French emperor. Holland was then added to the empire.

The fall of Napoleon I. and the dismemberment of the French empire led to the recall of the Orange family and the formation of the southern and northern provinces into the ill-managed kingdom of the Netherlands, which in 1830 was broken up by the secession of Belgium. In 1839 peace was finally concluded with Belgium; but almost immediately after national discontent with the government showed itself, and William I. in 1840 abdicated in favor of his son.

Holland, being moved by the revolutionary fever of 1848, King William II. granted a new constitution, according to which new chambers were chosen, but they had scarcely met when he died, March, 1849, and William III. (born 1817) ascended the throne.

William III. having no living male issue, the succession to the crown was vested in the princess of Orange, Wilhelmina, the only child of the king's second marriage, born in 1880. For many years the great question of internal politics was the new constitution, which, promulgated November 30, 1887, increased the electorate of Holland by no less than two hundred thousand voters. On the death of the king (November 23, 1890), when Luxemburg ceased to be connected with the crown of Holland, the Princess Wilhelmina became queen.

Queen Wilhelmina married Prince Henry of Mecklenburg-Schwerin, in 1901, and in 1909 a daughter (the Princess Juliana) was born to them.

During the years of her greatness, and while she was fighting against enormous odds for political and religious liberty, Holland added many names to the roll of the world's illustrious men. To mention a few, among explorers we find the names of Hudson, Heemskerck, Schouten, Lemaire, and Tasman; in science, Van Helmont, Huyghens, and Boerhave; in literature, Erasmus, Grotius, Vossius, Burmann, Gronovius; in art, Rubens, Rembrandt, Van Dyck, Hobbema, Potter. The liberty of the press brought much foreign printing to Holland, and the *Gazette de Leyde*, which distributed news to all parts of the world, was in existence from 1680-1814. The language of Holland, though akin to both English and German, has yet a separate identity. In the eleventh century the language, which was afterwards modified into modern Dutch, was spoken in a far wider area than that now occupied by Holland and Belgium, and old Dutch is still to be heard among villagers in the north of France. Early in the fifteenth century literary clubs were founded by the Rederijkers, or lovers of letters who met together to study literature and plays. To these clubs modern Dutch owes its origin.

Their colonial possessions, like those of Great Britain, are vastly out of proportion to the size of the mother country. Their East Indian possessions include Java and Madura, Sumatra, the Moluccas, Celebes, Timor, parts of Borneo, and New Guinea; in the West Indies, Surinam, and Curaçao are their principal possessions. The inhabitants of Boer nation are descendants of sixteenth-century Dutch colonists in South Africa.

THE COCKPIT OF EUROPE: THE ENDLESS BATTLEFIELDS OF BELGIUM

This map shows the battlefields of Belgium and its immediate vicinity for the past 250 years. The total number of battlefields is thirty-one in Belgium and eleven in the surrounding district.

BELGIUM (Fr. *Belgique*), one of the smaller European states, consists of the southern portion of the former kingdom of the Netherlands (as created by the Congress of Vienna), lying between France and Holland, the North Sea and Rhenish Prussia. Its greatest length from northwest to southeast is one hundred and seventy-three miles; and its greatest breadth from north to south one hundred and five miles.

Surface.—Belgium is, on the whole, a level, and even low lying, country; diversified, however, by hilly districts. The north and west of the country is low and level plain, like Holland, but the undulating forest plateaus of the Ardennes cover all the south and east, rising near the frontier in that direction to a height of two thousand feet above the sea. The Campine, composed of marshes, coal-bearing heaths, and irrigated lands, extends along the Dutch frontier. In Flanders dykes have been raised to check the encroachments of the sea.

Rivers.—The land slopes generally northward, and this is the direction of the numerous rivers and streams which water it. The great river of the country is the Meuse, which enters from France and passes out into Holland, being navigable all through Belgium. Its tributary, the Sambre, from France, which joins it on the left near the center of the country, is also a navigable stream; and the Ourthe, from the frontier of Luxemburg, which joins it lower down on the right, is navigable for half its course. The Escaut or Scheldt is the main river of the lowland in the west, and with its chief tributaries, the Lys on the left and the Rupel on the right, forms the waterway of the plain. These rivers and important tributaries, with cnaals make up one thousand four hundred miles of waterways.

Climate and Landscape.—Belgium has a climate which resembles that of England, opposite to it in the same latitude, but which is more excessive. The lowland of the north is foggy and damp, like Holland; the higher country south and east has clearer skies.

People.—Belgium is one of the most densely peopled countries of the world, only equaled in this respect by some parts of the plain of China, or of the valley of the Ganges in India, a result which is no doubt due to the combination of natural facilities for agriculture, manufactures, and trade, within its limits. The Flemings (of Teutonic stock) and Walloons (Celtic in origin) speak each their own dialects of Dutch and French; there are also numbers of Germans, Dutch, and French. East and West Flanders, Antwerp, and Limburg are almost wholly Flemish, and Brabant mainly so. The line between the Flemish and Walloon districts is sharply defined, the Flemish part being the richest and most cultivated. The French language has gained the ascendancy in educated society and in the offices of government, but the Flemish dialect prevails numerically in the proportion of nine to eight.

PALACE OF JUSTICE, OR PARLIAMENT BUILDINGS, AT BRUSSELS

Religion and Education.—Almost all the inhabitants of Belgium are Roman Catholics, though complete liberty and social equality is allowed to all religious confessions. Education is not yet generally diffused through the population, and was, until recently, almost entirely in the hands of the Roman Catholic clergy. There are state universities at Ghent and Liege, an independent liberal university at Brussels, and a Catholic university at Louvain.

Products and Industries.—About a fourth of all the inhabitants of Belgium are occupied in agriculture. Besides wheat, rye, and oats, hops are cultivated on a large scale, for export chiefly to France and England. Beetroot for the sugar factories, of which there are over a hundred in the country, is also a large crop, and flax is largely grown in the Flemish lowlands.

Two great coalfields extend across the central part of the country from west to east, along the valleys of the Meuse, but Belgium is essentially a manufacturing country, and it is largely dependent upon foreign supplies for its food. The mineral kindgom yields, beside coal, iron, zinc, lead and copper. The leading industries are collieries, quarries, and metal, glass, textiles, lace, flour and starch mills, sugar, distilleries, breweries, etc.

Government.—On the re-arrangement of European affairs, after the fall of Napoleon, Holland and Belgium were formed into the ill-assorted kingdom of the Netherlands under the family of Orange. The differences betweer the northern and southern divisions in race and language, in history, religion, and customs, proved too great.

In 1830 Belgium separated from Holland, and her neutrality was guaranteed by a conference of the European Powers, and by a further treaty, in 1839, signed by Austria, France, Great Britain, Prussia, the Netherlands, and Russia.

The Belgium constitution of 1831 jointly vests the legislative power in the king, the Senate, and the Chamber of Representatives. The one hundred and ten senators (with the exception of twenty-seven elected by the provincial councils) and one hundred and sixty-six representatives are elected by the people, the former for eight, the latter for four years. Universal male suffrage, with plural voting up to three votes by property and educational qualifications, was introduced by the electoral law of 1894, proportional representation being secured by an act of 1900. There are in addition representative Provincial and Communal Councils.

Cities.—Brussels, population, 1910, with suburbs, 720,347 inhabitants, is the capital. Other towns with over 100,000 inhabitants are Antwerp, the chief port (320,650 exclusive of suburbs); Ghent (165,149), the center of the iron industry, which has also large cotton and flax spinning mills, and is the second port of importance after Antwerp, while its flower shows are famous; and Liège (174,768).

Its great harbor and commercial city is Antwerp, a strongly fortified city on the Scheldt. The other harbors are Ghent, Bruges, Ostend, Nieuport, Blankenberg, and Zeebrugge.

Antwerp, the principal fortress, and Liège and Namur, also fortified, were designed to afford military protection on the line of the Meuse against a violation of neutrality by either France or Germany.

Brussels (Fr. *Bruxelles*), the capital of Belgium, is situated in a fertile plain on the ditch-like Senne, twenty-seven miles south of Antwerp, and one hundred and ninety-three miles northeast of Paris. It has a circumference of about five miles, and is built partly on the side of a hill. Though some of the streets are so steep that they can be ascended only by means of stairs, Brussels may on the whole be pronounced one of the finest cities in Europe.

The fashionable Upper Town, in which are the royal palace, public offices, and chief hotels, is much more healthy than the older Lower Town, which is greatly subject to fogs, owing to its intersection by canals and the Senne, although the stream now passes under an arched covering, which supports a boulevard. But the closely built old streets, with their numerous handsome buildings, formerly belonging to the Brabant nobility, and now occupied by successful merchants and traders, have a fine picturesque appearance, while some of the public edifices are unrivaled as specimens of Gothic architecture.

French is spoken in the upper division; but in the lower Flemish is the current language prevalent, and by many the Walloon dialect is spoken.

The walls which formerly surrounded Brussels have been removed, and their place is now occupied by pleasant boulevards extending all around the old town, and shaded by alleys of limes. The *Allée Verte*—a double avenue along the Scheldt Canal—forms a splendid promenade, and leads toward the country palace of Laeken, three miles north of the city.

THE TOWN HALL, OR

Hôtel de Ville, in Grande Place, near the center of the city, 1402, is regarded as architecturally one of the finest structures in Europe. Its tower rises to the height of three hundred and seventy feet, and is placed somewhat to one side of the center of the building.

Besides the fine park of thirty-two acres, in the Upper Town, ornamented with fountains and statues, and surrounded by the palace and other state buildings, Brussels has several other squares or places, among which are: the *Place Royale*, with its colossal monument of Godfrey of Bouillon; the *Grande Place*, in which is the hôtel-de-ville, a splendid Gothic structure of the fifteenth century, with a spire of open stonework three hundred and sixty-four feet high; and the *Place des Martyrs*, where a memorial has been erected to those who fell here in the revolution of 1830. The statue group of the Counts Egmont and Horn is notable. The cathedral of St. Gudule, dating from the thirteenth century, has many richly painted windows, and a pulpit considered to be the masterpiece of Verbruggen. The *Palais des Beaux Arts* contains the finest specimens of the Flemish school of painting and a sculpture gallery. The Royal Library adjoining has half a million volumes.

The *Palais de Justice*, built in 1866-1883 at a cost of more than ten million dollars, is one of the most magnificent buildings in Europe, dominating the lower town from the terraced slope of the upper town. The Royal Palace and the National Palace (for the chambers) are important buildings. Besides the University, there are schools of painting and sculpture, and a conservatory of music.

Brussels lace is particularly famous. Of the so-called Brussels carpets only a few are manufactured here, most of those of Belgian make being produced at Tournai. There are also manufactures of damask, linen, ribbons, embroidery, paper, jewelry, hats, soap, porcelain, carriages, etc.

History.—The history of Belgium as a kingdom can be said to date only from the time of the Congress of Vienna, in 1830, but its history as part of the Netherlands goes back to the time of the Romans.

The province of Belgica under the Romans passed under the sway of the Franks, and fell later to the Burgundian princes. On the death of Charles the Bold in 1477 it passed by marriage to the House of Hapsburg. The Spanish Netherlands remained (unlike the northern provinces which rebelled against Spain and became a Protestant republic) under the Spanish branch of the Hapsburgs, till in 1713 they were transferred to Austria. From 1794 Belgium was under French sway, but on the fall of Napoleon was united with the kingdom of the Netherlands. It rebelled in 1830, and since then, as above stated, has had a separate career as a limited constitutional monarchy. Again, in 1838, Holland and Belgium seemed on the brink of war, the cause being that Belgium had treated Lembourg and Luxembourg, which by the convention had been given to Holland, as if they were in reality a part of its territory. The crisis was terminated by the action of the Great Powers, who reduced Belgium's share of the national

debt of the Netherlands, and partitioned the territories again in dispute. The tranquillity of the country was again disturbed by the revolutionary spirit of 1848, but after 1850 the constitutional party began that series of reforms which gained for Belgium the position of one of the freest countries in Europe.

The question of Luxembourg threatened in 1861 the peace of Europe, and Belgium took part in the congress which prevented war breaking out. In 1870, on the outbreak of hostilities between France and Germany, Belgium, fearing invasion, mobilized her troops, but her neutrality was recognized and left inviolate by both parties. In 1885 the Congo Free State was acknowledged to be under the presidency of the king of Belgium, Leopold II., who had succeeded his father in 1865. The management of the colony gave cause for much bitterness, and led to a number of scandals. Leopold II. died in 1910, and was succeeded by his nephew, King Albert.

On August 2, 1914, the neutrality of Belgium was violated by the invasion of the German army at Visé, on the ground of *military necessity*. The German forces met with the most stubborn resistance from the valiant though numerically inferior Belgians at Liège and Namur. The country was subsequently completely overrun by German armies and subjected to military control. The Germans were in occupation of practically the whole country down to the armistice between the belligerent powers signed November 11, 1918. King Albert re-entered the Belgian capital November 22, 1918.

COLUMN OF THE CONGRESS, BRUSSELS

It is in Place du Congrès, two squares north from the Cathedral, was erected, 1850, in honor of the adoption, in 1831, of the present Constitution of Belgium. This is surmounted by a statue of the king. At the corners are allegorical figures of Liberty.

BULGARIA, a monarchy in the northeast part of the Balkan Peninsula between the Danube and the Balkans, was created a principality by the treaty of Berlin in 1878, greatly extended by the incorporation of East Rumelia in 1885, and declared an independent kingdom in 1908.

The net result of the wars of 1912-1913 was the increase of Bulgarian territory from 33,600 square miles to about 45,000. The population increased by about 500,000, was in 1910 4,337,513—over three-fourths Bulgarians, 465,000 Turks, 121,000 Gypsies, 80,000 Roumanians, 43,000 Greeks, and 40,000 Jews. The Bulgarians now extend into Macedonia, Bessarabia, etc., their total number being about 8,000,000.

Surface.—The north of Bulgaria is fertile plain and hilly country; the south is wooded and mountainous. The country has a fine waterway on the northern boundary, a Black Sea and Ægean seaboard, a mild climate, an agricultural country capable of much, an abundance of iron and some coal, free institutions, a peasantry possessing the solid qualities and persevering industry of northern races, and an assured economic development.

Productions.—The chief occupation of the people is agriculture, which engages about seventy per cent of the population. Cereals (wheat, maize, rye, barley, oats) are the principal crops, and rank first among the exports. Wine is produced everywhere, especially near the Black Sea. Roses are cultivated to a large extent, especially round Kazanlik and Karlavo and on the north side of the Rhodope Mountains for attar of roses, which is largely exported. Silkworms are bred in Philippopolis and Haskaro. Tobacco is carefully cultivated. There is little industry apart from domestic branches such as native cloth, carpets, trimmings and ribbons; but there is some brewing and distilling, leather work at Sumen, copper work, and pottery-making. The chief exports are grain, live stock, butter, eggs, hides, and attar of roses, sent chiefly to Turkey, France, Great Britain, and Austria-Hungary.

People.—Education has been very zealously and steadily promoted. Elementary education is compulsory. There are few technical schools. Sofia has a university.

The old Bulgarian Slavonic tongue is closely allied to the great Russian, but some Servian, Greek, Romanic, Albanian, and Turkish elements have found their way into the language.

The Orthodox Greek Church counts seventy-seven per cent as its adherents, Islam twenty-one and one-half per cent, and the others are Jews.

Government.—Bulgaria possesses one of the freest and most democratic constitutions in Europe, largely modeled on the lines of the Belgian constitution, except that there is no second chamber; and election of the *Sobranje* or National Assembly is by universal manhood

STREET SCENE IN SOFIA, CAPITAL OF BULGARIA

This modern city is quite American in its appearance. It typifies to Bulgarians the progress of their nation, and is substantial and practical rather than pleasing. The streets are broad, straight, electrically lighted, and well paved, while the houses in the newer sections are modern structures of dignified architecture. While Sofia may not impress the visitor with its beauty, it does impress him with the fact that there is a good deal of common sense and business efficiency in this part of the Balkans.

suffrage, in the proportion of one member to every twenty thousand of the population. The executive power is vested in eight ministers nominated by the king. The monarchy, independent since 1908, is hereditary.

Cities.—The chief towns of Bulgaria are Sofia, Philippopolis, Rustchuk and Varna. Varna and Burgas are ports on the Black Sea, Dedeagatch on the Ægean.

Sofia (*sofee'a*), the capital since 1878 of Bulgaria, stands in a broad valley of the Balkans, on the railway from Constantinople to Belgrade and Vienna. It lies two hundred and six miles northwest of Belgrade, while Constantinople lies three hundred miles southeast. The valley at Sofia is an upland plateau, seventeen hundred feet above sea level, and near the heart of the peninsula, between the Vitosha Mountains and the main Balkan chain. At the end of almost every vista in the city are the distant hill masses, and fringing mountains.

The city early became important as a trade center, and probably would have developed into one of the great cities of Europe had not periodical destruction, almost continual dangers of war, and centuries of misrule held it back.

The rebuilding of Sofia began around 1880. It now has many creditable public buildings, electric lighting, an electric street railway and good sewerage and water systems.

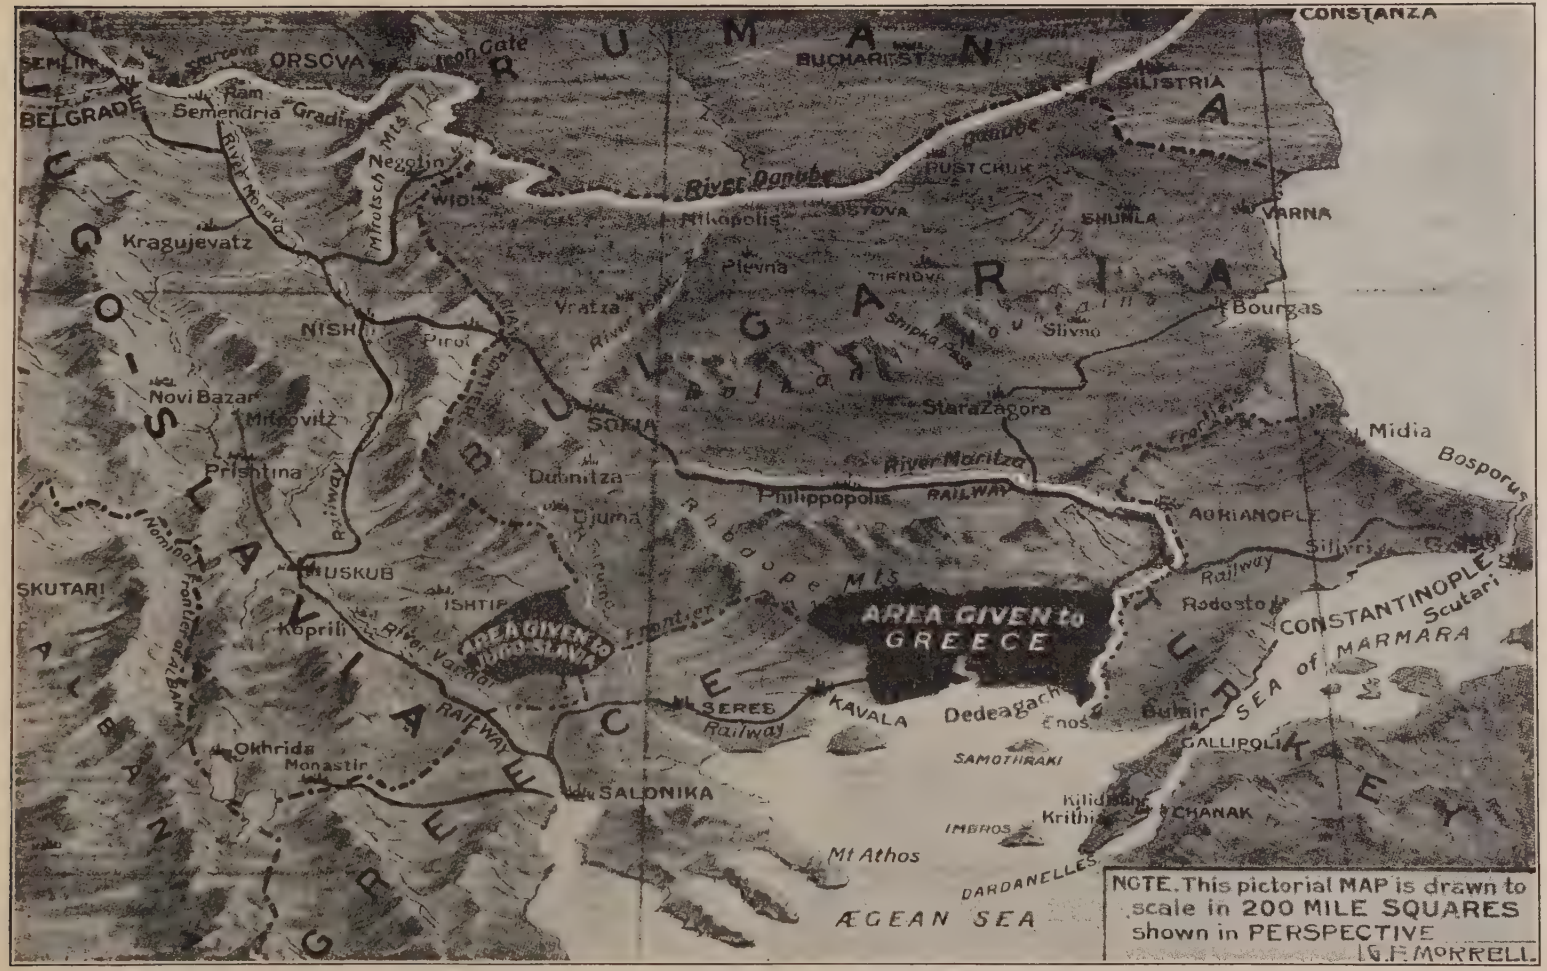
It possesses the largest theater in southeastern Europe. The Bulgarian National Theater, with a competent corps of actors and singers, and offering the best in opera and drama, is a revelation of the strides that have been made in the Balkans since the Turks were driven back a brief generation ago. The theater is a handsome modern structure, planned with greater luxury of detail than most buildings in Sofia, and it cost four hundred thousand dollars.

Sofia has a public bathhouse which is one of the finest buildings of its kind in the world. It was built over a hot mineral spring, famed since the days of the Romans. This building, in Byzantine style, including in its interior appointments all of the most modern luxuries, cost the Bulgarians six hundred thousand dollars.

Their capital city is one of the peculiar prides of the hard-working, long-enduring, persistent Bulgarians. It typifies to them the promise of a great Bulgarian future, and they also look upon it as an earnest of their right to a respected place among the civilized nations of the West.

History.—The country now known as Bulgaria was originally inhabited by Thracians, and under the Romans formed the province of Mœsia. The Bulgars originally came from the banks of the Volga and crossed the Danube in the sixth century, and occupied the East. They overcame the Slavs, adopted their language and customs, and thus became a great Slav power; but by 1186 they had split up into three principalities, and from 1393 fell under the domination of the Turks. For close upon five hundred years the Bulgars were subject to the rule of the Ottoman Empire.

The first national awakening dates from the year 1762, when the monk Paysios, then at Mt. Athos, wrote the national chronicles, and revived memories of ancient glory. A new national literature began; the first Bulgarian school was opened in 1835, and was followed by others. A newspaper appeared in 1844. The Crimean war stirred up Slavonic sympathies which Russia sedulously and naturally cherished. In 1872 the Bulgarian Church and archbishop became again independent of the supremacy of the Greek patriarch.



MAP OF BALKAN REGION SHOWING TERRITORIAL ADJUSTMENTS

By the treaty which was handed to the Bulgarian Delegates at the Quai d'Orsay, Bulgaria has to pay an indemnity of $450,000,000, has to part with the important territories shown black on the map, and is thus excluded from the Ægean.

In 1877 Russia, as guardian of the Slav races of Turkey, declared war. As a result of the war, Bulgaria was created by the treaty of Berlin, July 13, 1878, and in 1885 Eastern Rumelia was added to the newly created principality. In 1908 the country was declared to be an independent kingdom. In 1912-1913 a successful war of the Balkan League against Turkey increased the size of the kingdom, but in August, 1913, a short campaign against the remaining members of the League reduced the acquired area, and led to the surrender of about two thousand square miles to Roumania. In October, 1915, Bulgaria decided to participate in the European conflict, and sided with Germany, Austria-Hungary, and Turkey, and attacked Servia.

Rivers.—Denmark has numerous streams but no large rivers; the principal is the Guden, which flows northeast through Jutland into the Cattegat. It is navigable for part of its course. Less important streams are the Holm, the Lonborg, and the Stor Aa. All the others are insignificant brooks and streamlets.

The lakes are very numerous but not large, none exceeding five and one-half miles in length by about one and one-half miles broad. There are numerous winding inlets of the sea that penetrate far into the land. The largest of these, the Limfiord in Jutland, entering from the Cattegat by a narrow channel, winds its way through to the North Sea, thus making northern Jutland really an island. In this fiord, which widens out greatly in the interior

NEW QUARTERS OF COPENHAGEN, CAPITAL OF DENMARK

DENMARK, the smallest of the three Scandinavian kingdoms, consists of the peninsula of Jutland and a group of islands in the Baltic, and is bounded by the Skager-Rak, the Cattegat, the Sound, the Baltic, the Little Belt, Sleswick, and the North Sea.

Surface.—Except in Bornholm, the surface of Denmark is very similar in every part of the kingdom, and is uniformly low, its highest point (in southeast Jutland) being only five hundred and sixty-four feet above sea-level. The coast is generally flat, skirted by sand-dunes and shallow lagoons, especially along the west side. Both the continental portion and the islands are penetrated deeply by numerous fiords, the largest being Limfiord, which intersects Jutland, and has isolated the northern extremity of the peninsula since 1825, when it broke through the narrow isthmus which had separated it from the North Sea.

and gives off various minor fiords, there are one large and various small islands.

Climate.—The climate is milder, and the air more humid than in the more southern but continental Germany; it is not unhealthy, except in the low lying islands, such as Laaland, where the short and sudden heat of the summer occasions fevers.

Production and Industry.—The common products are wheat, rye, oats, barley, potatoes, cattle, horses, pigs, sheep, and butter. Its manufactures are, for the most part, for home consumption. Its chief exports are agricultural produce, including wheat and barley, bacon, hams, flour, butter, eggs, hides, skins, corn meal and oil cake, horses and cattle.

People.—The population of Denmark is composed almost exclusively of Danes, with a few thousand Jews and others. The Danes have regular features, fair or brownish hair, and blue eyes. They still maintain their

reputation for seafaring skill and hospitable customs. They belong to the Scandinavian branch of the Teutonic peoples, and speak the Danish form of the old Norse, which was fixed in writing about the time of the Reformation.

Since the Reformation the Danes have been adherents of the Lutheran Church. Education is well advanced, and there are very few people in the country who can neither read nor write.

Government.—The present constitution of Denmark dates from 1866. The executive power is vested in the king and his ministers, the legislative in the *Rigsdag* or Diet, comprising the *Landsthing* or Upper House, and the *Folkething* or House of Commons, partly nominated by the Crown, partly elected, indirectly, by the people.

Cities.—Copenhagen is the capital, population, 560,000; other chief towns are Odense, Aarhuus, Aalborg, Randers and Horsens.

FREDERICK'S CHURCH, COPENHAGEN

Copenhagen (*kō-pen-hāgen;* Dan. *Kjöbenhavn,* "Merchants Haven"), the capital of Denmark, is situated on the low-lying eastern shore of the island of Zealand, in the Sound, which is here about twelve miles broad. The channel forms a fine and capacious harbor, which is bridged over so as to connect the isolated suburb of Christianshavn and the main part of the city at two points. Copenhagen is still defended by the old citadel of Frederikshavn and by forts on the seaward side.

Among its buildings of historical interest or intrinsic beauty, the Cathedral, rebuilt after the bombardment of 1807, possesses statues of Christ and the Apostles, and a baptismal font, designed and in part executed by Thorwaldsen. Frederick's Church, or Trinitatiskirke, is remarkable for its round tower, which is ascended by a spiral incline instead of steps.

The Royal Palace, called Christiansborg, was rebuilt between 1794 and 1828, but suffered greatly from fire in 1884. In the castle of Rosenborg are kept the regalia; the palace of Charlottenborg, is now used as an Academy of Arts. The University, founded by Christian I. in 1479, has a library of three hundred and fifty thousand volumes; the royal library contains six hundred thousand volumes.

Copenhagen is the center, not only of Danish, but of northern literature and art, and is the seat of the unrivaled Museum of Northern Antiquities, and the Thorwaldsen Museum.

The exports include grain, rape-seed, butter, cheese, beef, cattle, wool, etc.; and porcelain, pianos, clocks, watches, mathematical instruments, chemicals, sugar, beer, and tobacco are manufactured.

History.—The early history of Denmark is lost in the twilight of the Vikings and their valiant deeds. The Danes coming from the islands occupied the lands deserted by the Jutes and Angles who had in the fifth century migrated to England. The Danish monarchy was founded in 936 by Gorm the Old, whose son became a Christian. Waldemar I. (1157-1182) ruled Norway also, and conquered Mecklenburg and Pomerania; under his son Waldemar II. further conquests were made in German and Wendish lands, so that the Baltic became a Danish sea.

By the treaty of Calmar in 1397, Norway, Sweden and Denmark, already under one monarch, Margaret, were formally united into one state. In 1448 the Danes elected as king Christian of Oldenburg, a descendant of their royal family, who was also Duke of Sleswick and Holstein; and his line continued on the throne till 1863.

Sweden became independent in 1523. Lutheranism was introduced into Denmark in 1527. In 1815 Denmark had to cede Norway to Sweden; and in 1848 the Germanic peoples of the duchies Sleswick and Holstein rebelled against Denmark. For the time the Danes succeeded in retaining the duchies, but the controversy, renewed in 1863, led to the defeat of the Danes by Austria and Prussia (1864), followed by the incorporation of the duchies in the Germanic Confederation, and, after the Austro-Prussian war of 1866, in Prussia.

Denmark although reduced to the narrow limits of the islands and Jutland, has greatly prospered, in spite of the spread of socialistic opinions, and political dissensions. Christian IX. died January 29, 1906, and was succeeded by his son, Frederick VIII.

LESSER NATIONS OF EUROPE

ALBANIA (*al-bā'ni-ä*) is an autonomous state, carved out of the former possessions of Turkey in Europe, and declared independent at the Conference of London, 1913. It extends along the western shore of the Balkan Peninsula, from the river Bojana to Cape Stylos, opposite Corfu. To the north it is bounded, since 1878-1913, by Montenegrin territory and Lake Scutari; on the east by the territories added to Serbia in 1913 and by Lake Ochrida; to the south by Greece's acquisitions in Epirus and Macedonia.

Physical Features and Products.—The country is mountainous, attaining in places about eight thousand feet. Parallel with its eastern boundary is a mountain-range. Westward of this range lie parallel chains, enclosing long elevated valleys, sinking to level strips along the coast, which mostly consist of unhealthy swamps and lagoons. The highlands advance to the sea, forming steep rocky coasts. One promontory projecting in Cape Linguetta far into the sea, reaches a height of six thousand six hundred and forty-two feet. It has a fine climate and a favorable soil. The cultivation of grain and cattle-rearing are the chief industries, but there is some mining (mineral pitch), and olive oil, valonia, sumach leaves, and tobacco are also produced.

The principal towns are Scutari and Durazzo.

People and History.—Upper or Northern Albania formed part of the Illyria of the Romans; Lower or Southern Albania was part of ancient Epirus, and the Greek element in its population resented and opposed its inclusion in the new kingdom. The greater part of the country's eight hundred thousand inhabitants form a peculiar people, the Albanians, called by the Turks Arnauts, and by themselves Skipetars. At one time the Albanians were all Christians; but after the death of their last chief, the hero Scanderbeg, in 1467, and their subjugation by the Turks, a large part became Mohammedans. By the treaty concluded then, in 1478, between the Turks and the Venetians, Albania became a Turkish province, which almost gained independence under Ali Pasha, but which, during the insurrection of Greece (1821-1828), returned to at least nominal allegiance to the Porte. Many rebellions broke out—as in 1883 and in 1911-1912. In spite of Montenegrin, Servian, and Greek ambitions, the Powers insisted on its independence in 1912-1913, and Prince William of Wied was chosen king. He was driven out, in May, 1914, by revolution and was succeeded by Essad Pasha as President of the Albanian Republic. Essad Pasha is acknowledged by the Entente Powers.

ANDORRA (*än-dor'rä*), F. **ANDORRE** (*on-dor'*). —A small republic in the Pyrenees surrounded by the department of Ariège (France) and the province of Lerida (Spain). It is enclosed by mountains, through which its river, the Balira, breaks to join the Segre at Urgel. Area, 175 square miles; population 6,000. There is much excellent pasture; vines and fruit-trees flourish on the lower grounds; and the mountains contain rich iron-mines, unwrought lead supplies, and mineral springs. The chief occupations are agriculture, cattle-breeding, trade in wood, charcoal and wool, and especially smuggling.

Andorra is said to have been declared a free state by Charlemagne. In 1278 the counts of Foix, afterwards kings of Navarre, obtained the sovereignty, reserving the rights of the bishop of Urgel in Catalonia; and with Henry IV. the feudal superiority fell to France. The republic is governed by a sovereign council of twenty-four members. Since 1882 the interests of France in the state are represented by a permanent delegate.

The Andorrans are good-natured, hard-working mountaineers, hospitable, moral, and devoted to liberty. They speak a dialect of Catalonian.

The capital is Andorra la Vieja (population 600); San Julian (500) and Canillo (500) are the other towns.

BALTIC STATE, a former Federation of the four former Baltic provinces of Russia: Esthonia, Livonia, Courland and Kovno, or Lithuania, formed after these territories gained their independence first from Russia (1917) then from Germany (1919). They became independent under action of the League of Nations in 1924.

Lithuania.—The independence of the Lithuanian Republic (Lietuva) was proclaimed at Vilna on Feb. 16, 1918. The Republic consists of the former Russian Government of Kovno and portions of the Suvalki and Vilna Governments, and is bounded by Latvia, the German district of Königsberg and Poland, by Poland, and by the Baltic Sea, the total area included in the Republic (including Memel Territory) being about 20,000 sq. miles, with an estimated population of 2,000,000. Memel Territory was occupied by Lithuania in Jan. 1923, and its final status was referred to the League of Nations. A committee appointed by the League drew up a Convention which was signed by the four Great Powers and Lithuania. Lithuania ratified the Convention in Aug. 1924.

Capital, Kovno (Kaunas), on the Niemen (population 91,000), other centers being Memel (Klaipeka), on the Baltic (50,000), and Shavli (15,000).

Courland (*kör'land*), G. **Kurland** (*kör'länd*), F. **Courlande,** is mostly level, and abounds in lakes, but in parts is hilly. Three-fourths of the inhabitants are Letts, but the land proprietors are mainly German. The prevailing religion is Protestant. Courland came under the influence of the Teutonic Knights in the middle of the thirteenth century; became an hereditary duchy and fief of Poland in 1561 or 1562; and passed to Russia in 1795. It is Russified like the other Baltic provinces. Capital, Mitau, population 40,000, but Libau, population 85,000, is the most flourishing town. Religion, Roman Catholic and Lutheran. Area, 10,435 square miles. Population 812,300.

Esthonia (*es-thō'ni-ä*), or **Wiroma**, [G. *Esthland, Estland,* or *Esthland,* F. *Esthonie,* from the *Æstii*], is covered with forests, moors, and small lakes; rivers are numerous, but mostly small and sluggish in flow; erratic boulders of

Reval, the capital of the government of Esthonia, is picturesquely situated on a bay in the Gulf of Finland. The town, more medieval in appearance than any other in the Baltic Provinces, is divided into three parts, the Upper Town, the Lower Town, and the Suburbs. These, which are beyond the town proper and extend along the shores of the bay, are the headquarters of the manufacturing district.

granite are common everywhere. The chief town is Reval. The population consists of two divisions, the Esths and the Esthlanders. The latter are a mixed race of immigrants, the German element strongly preponderating. The The Esths, a people of Finnish race, constitute the peasantry, some 366,000 in number, and the original possessors of the soil. The nobility and many of the town residents are Germans. About 519,000 of this people are also found in Livonia. In spite of six centuries of repression, the Esths have preserved their national characteristics—language, customs, clothing, dwelling, physical attributes. In religion they are mostly Lutherans, though the Russians made strenuous efforts to bring them over to the Greek Church.

Esthonia was conquered by Waldemar II. of Denmark in 1219; but in 1346 it was sold to the Teutonic Knights, and incorporated with Livonia. From 1561 it belonged to Sweden, in 1710 it was seized by Peter the Great. Serfdom was abolished in Livonia in 1816, and in Esthonia in 1819.

Religion, Lutheran. Capital, Reval (population 80,000). Area, 7,605 square miles; population, 512,500.

Latvia (*lăt'-vēē-ah*), G. **Livland** or **Liefland** (*lēf'länd*), F. **Livonie** (*lē-vō-nē*), is mainly level. It is also called Lettonia or Livonia, accordingly as its cognomen is variously translated into other languages from the Lettish tongue. The inhabitants are chiefly Letts and Esthonians. The nobility is German. The prevailing religion is Protestant. Livonia was the nucleus of the dominions of the Livonian (Sword-Bearer) Knights, who began their settlements in 1201. In 1237 they united with the Teutonic Order. The Prussian and Livonian Knights were separated in 1515. After the dissolution of the order (1558-1561) Livonia was for a short time a kingdom. After some changes it became Polish in 1582; passed to Sweden 1660 (having been conquered by Sweden in 1621-1625); and was annexed to Russia in 1721. The island of Oesel belongs to it.

Livonia, a century ago, was the "corn granary of Europe." Cereals, potatoes, flax, and dairying are now the chief industries.

Religion, Lutheran. Capital, Riga (population, 340,000). Area, 18,158 square miles; population, 1,778,500.

Osel, or Oesel (*e'zel*).—An island in the Baltic Sea, and lying across the mouth of the Gulf of Riga. It is forty-five miles long from northeast to southwest, and has an area of one thousand square miles, with a population (chiefly Esthonian) of 60,000. The surface is broken by low hills, marshy, and well watered and wooded. The only town is Arensburg, on the southeast coast (population, 4000). Long governed by the Teutonic Knights, Oesel became Danish in 1559, Swedish in 1645, and Russian in 1721. Religion, Lutheran. Area, 1,010 square miles; population, 65,000.

Courland.—See Baltic State.

DANZIG (*dant'sik*), [Pol. *Gdansk*], a free and independent city of northern Europe, so created by the Peace of Paris in 1919, was formerly the capital of the province of West Prussia, Prussia, situated on the Vistula three miles from its mouth, and on the Mottlau and Radaune rivers. The Mottlau has been deepened to fifteen feet, and the extensive shipping trade has been further aided by the construction of a harbor at Neufahrwasser, the outport of the city, and the widening of the Schuitenlake entrance. Once a great Hanse town, Danzig is still one of the chief commercial cities of northern Europe.

Danzig is the point of export for the products of the Vistula country. Corn was for centuries exported in large quantities, though the port has now less trade in grain and more in timber, sugar, oils, and spirits. The imports include coal, iron, drugs, and hides. The industries include the production of sugar, tobacco, flour, iron ware and spirits. There are extensive docks and shipbuilding yards, an artillery arsenal, saw-mills, brick-works, and amber-cutting, the making of gold and silver ornaments, and other industries. The public buildings include the church of St. Mary (1343-1502), one of the finest churches on that side of the Baltic; a Gothic town hall (fourteenth and sixteenth centuries); and a Franciscan monastery, now used as a museum, all situated in the old town.

Danzig, it is said, was founded by a Danish colony, and it has been held at various times by Swedes, Poles, and Russians. From 1308 to 1454 it belonged to the Teutonic Knights. It first fell to Prussia in 1793, was taken by the French in 1807, and reverted finally to Prussia in 1814. It joined the Hanseatic League in the fourteenth century, and in the fifteenth century its prosperity led to its being called the "Venice of the North." It has passed through some notable sieges, namely, by the Poles in 1577, by the Russians in 1734, by the French in 1807, and by the Prussians, Russians, and English in 1813. Danzig was the cradle of the infant navy of Germany, the headquarters of which were removed to Kiel and Wilhelmshaven in 1865.

The Peace of Paris provided that: a constitution for the free city of Danzig shall be drawn up by the duly appointed representatives of the free city in agreement with a High Commissioner to be appointed by the League of Nations, shall be placed under the guarantee of that tribunal.

The High Commissioner will also be intrusted with the duty of dealing in the first instance with all differences arising between Poland and the free city of Danzig in regard to this treaty or any arrangements or agreements made thereunder.

The High Commissioner shall reside at Danzig.

The principal Allied and Associated Powers undertake to negotiate a treaty between the Polish Government and the free city of Danzig which shall come into force at the same time as the establishment of said free city, with the following subjects:

1. To effect the inclusion of the free city of Danzig within the Polish customs frontiers and to establish a free area in the port.

2. To insure to Poland without any restriction the free use and service of all waterways, docks, basins, wharves, and other works within the territory of the free city necessary for Polish imports and exports.

3. To insure to Poland the control and administration of the Vistula and of the whole railway system within the free city; except such street and other railways as serve primarily the needs of the free city and of postal, telegraphic, and telephonic communication between Poland and the port of Danzig.

4. To insure to Poland the right to develop and improve the waterways, docks, basins, wharves, railways, and other works and means of communication mentioned in this article, as well as to lease or purchase through appropriate processes such land and other property as may be necessary for these purposes.

5. To provide against any discrimination within the free city of Danzig to the detriment of citizens of Poland and other persons of Polish origin or speech.

6. To provide that the Polish Government shall undertake the conduct of the foreign relations of the free city of Danzig as well as the diplomatic protection of citizens of that city when abroad.

The population is German and Polish. Religion, Lutheran, Roman Catholic, Jewish. Area, 720 square miles. Population (estimated), 250,000.

Esthonia.—See Baltic State.

FINLAND (*fin'land*), [the Finnish name is *Suomi* or *Suomenmaa*, swampy land], a north European republic, formerly part of Russia, on the Gulfs of Finland and Bothnia, declared its independence in 1918, and was recognized by the Allies in May, 1919. Its greatest length is 650 miles, its average breadth about 185 miles. The area of Finland is nearly 145,000 square miles, of which 16,000 square miles are water. Its population is about 3,280,000.

Physical Features and Products.—The coast is extremely indented, and studded with thousands of small islands, forming a perfect archipelago, while the interior of the country is occupied with countless lakes, some of vast size, and mostly connected with each other naturally or artificially by means of canals. The largest of the lakes—besides Lake Ladoga, of which part belongs to Russia—are Lakes Saima, Enare, Kemi, Uleå, and Päijänne. The surface of Finland consists of primitive rocks, as gneiss, granite, diorite, and gabbro. The minerals are very limited. About twenty-two thousand tons of cast-iron are obtained annually, and there is also a small output of copper and silver. Some gold is found on the Ivalojoki, in Lapland, and very fine granite is quarried from the Piterlaks mines. Neither fossils nor coal are found.

Finland is essentially a plain; it has no mountains worthy of the name, the highest being Haldefjäll, in Lapland, 4115 feet high, near the frontier of Norway. The forests of Finland are of vast extent, covering no less than three-fifths of the land-surface. More than half of them belong to the state. Among wild animals we find the bear, wolf, fox, lynx, ermine, otter, and hare; but the elk and beaver, which were formerly abundant, are now rare. Seals are plentiful along the coast, as also in the Saima and Ladoga lakes.

Agriculture is the chief industry of the majority of the population. Rye is the chief crop, but barley, oats, and wheat are also grown. Butter and all kinds of dairy produce are exported in large quantities. The state encourages scientific training and provides twenty-six instructors for the agricultural and horticultural schools. Currants, strawberries, and raspberries are grown with great success, and the apple, pear, and cherry tree are cultivated in the South. Fishing is a prosperous industry, salmon, trout, perch, etc., abounds in the lakes and rivers, and a kind of herring is caught off the southwestern coast. The manufacturing industries include paper, leather, textiles, machinery, etc. The chief exports are wood-pulp, timber, cardboard, hides, pitch and agricultural produce.

The climate of Finland is very severe during the winter, even along the south coast, where

THE LUTHERAN CHURCH OF ST. NICHOLAS: HELSINGFORS, FINLAND.

The culture of the capital of Finland is Swedish. The people of Finland are the best educated of any in Northern Europe, illiteracy there being no higher than in Western Europe. Women were admitted to the right of suffrage in Finland in 1906.

it varies in January between twenty and thirty degrees Fahrenheit. The ground is usually covered with snow from the middle of November till late in April. In June, July, and August the days are very long, and the weather dry and sultry.

Education in Finland is very advanced, less than ten per cent of the entire population being illiterate. The university at Helsingfors, has several thousand students, of whom over five hundred are women. There are a number of polytechnic, commercial, nautical, and agricultural schools. Women are enfranchised, and are eligible for the National Assembly.

People.—Ethnographically the Finns belong to the Ugro-Finnic (Mongolian) stock, and their language is akin to that of the Lapps, the Voguls and Ostiaks in Siberia, and the Magyars in Hungary. Their chief literary monument is the *Kalevala,* an ancient epic poem composed of innumerable popular traditions and songs in the rhythm imitated by Longfellow in *Hiawatha.* Besides the Finns there are about 400,000 Scandinavians, 6000 Russians, and the rest Germans and Lapps. All but 50,000 Greek and 800 Roman Catholics are Lutherans. The inhabitants of Helsingfors, the capital, are mostly of Swedish descent, as is also the case at Abo.

Cities.—Helsingfors, with a population of 150,000, is the capital, and a city of much importance. It is a fortified seaport and naval station, situated on a peninsula, surrounded by islands and rocky cliffs, in the Gulf of Finland, one hundred and ninety-one miles west of Petrograd by sea and two hundred and fifty-six by rail. A series of formidable batteries, called the fortifications of Sveaborg, protect the harbor. Helsingfors is the largest and handsomest town of Finland; the broad streets intersect at right angles, and there are several fine parks and public squares. Of the public buildings the most striking are the house in which the diet meets, the senate-house, and the university buildings. The university, removed, hither from Abo in 1828, has a library of three hundred thousand volumes, a hospital, a botanic garden, and observatory. Helsingfors, truly "a slumless city," is a favorite bathing-place. It carries on trade in Baltic produce; exports timber, paper, and butter, and imports iron and steel goods, machinery, colonial wares, etc. It was founded by Gustavus I. of Sweden in the sixteenth century. In August 1855, during the Crimean war, Sveaborg was bombarded, with no great result, for two days and nights by the allied fleet.

Abo (pronounced *Obo*), the second city is situated on the river Aurajoki, near its embouchure in the Gulf of Bothnia, one hundred and seventy miles west by northwest of Helsingfors by rail, has an active trade, and exports timber, and bar and cast iron. Its university was transferred to Helsingfors after the great fire of 1827. A peace

between Sweden and Russia was signed here in 1743. Population, 60,000.

History.—About the end of the seventy century or the commencement of the eighth the Finns, driven as it is supposed by the Bulgarians from their settlements on the Volga, took possession of the country they now occupy. In the twelfth century the Swedes turned their attention to Finland, more especially for the introduction of Christianity; but the struggle with paganism was long and obstinate, lasting for nearly two hundred years. Three separate crusades (1157, 1249, 1293) finally brought about the subjection of the country to Sweden, and the adoption of the Christian religion. For over six hundred years Finland was united with Sweden and thus received the incalculable advantages of Christianity, civilization, a constitution, and liberal laws. The Reformed religion was introduced into Finland by Gustavus Vasa in 1528, and King John III. raised the country to the dignity of a grand-duchy.

Finland became the theater of frequent bloody struggles between Russia and Sweden, ending in the cession of the country to Russia in 1809. Alexander I. promised the Finns that their constitution, religion, and laws should be faithfully preserved, and the promise was kept till near the end of the century. But in 1898 imperial decrees altering the military system, and invading the privileges of the parliament, caused bitter discontent, and were followed by ordinances (1901-1903) destroying Finnish autonomy and Russifying the province. During the Russian troubles of 1905, some old privileges were restored, but the Russifying policy was resumed in 1909-1910. n August 1911, considerable resentment was felt by the Finlanders at the action of the Russian government in incorporating two communes of the Finnish government of Viborg with the government of St. Petersburg.

On July 19, 1917, the Finnish Diet passed a bill giving Finland a government independent from that of Russia. The Russian Provisional Government, August 3, 1917, ordered the dissolution of the Finnish Diet and the summoning of a new one on November 1, 1917. It had been in session several days when the Kerensky Government in Russia was overthrown by Lenine and the Bolsheviki, who, through the Government of the Soviets, declared the right of the Russian peoples to secede, without waiting for the decision of the Constituent Assembly. A manifesto issued by the Peoples' Commissaries, the Bolshevist Ministers, on November 23, confirmed the right to freedom and self-determination on the part of the various nationalities in Russia, and stated that "this right of the Russian peoples to their self-determination is to be extended even as far as separation and the forming of independent states."

Finland, accordingly, on December 5, 1917, declared its own independence. On July 27, 1919, M. Stahlberg was inaugurated the first President of the Republic.

GREECE is a maritime kingdom in the southeast of Europe. The country is composed of a continental portion, almost separated into two parts by the gulfs of Patras and Lepanto on the west, and the gulf of Ægina on the east, the archipelago of the Ægean Sea and the Ionian Islands, and is divided into twenty-six provinces, called monarchies.

Surface.—The mountain range which cuts off the peninsula from the continent of Europe is an extension of the Balkans. From it run chains from north-northwest to south-southeast, which form the skeleton of Greece. The western boundary of Thessaly is formed by Pindus, the main offshoot of the Balkans. The eastern boundary is also marked not only by the sea but by important mountains derived from the Balkan system. These are Olympus, Ossa, Mavrovuni, and Pelion. Othrys, a branch of Pindus, forms the south boundary of Thessaly. This branch is continued in the celebrated mountains Parnassus and Helicon, forms the land of Attica, and reappears as the islands of Ceos, Cythnos, Seriphos, and Siphnos. The Peloponnese, "the island of Pelops," or by its modern name the Morea, is connected with northern Greece merely by the narrow isthmus of Corinth, now pierced by a canal; its highest point is Taygetus.

Rivers.—The rivers of Greece are unimportant. The chief in the Peloponnesus are the Eurotas (Basilipotamo), the Alpheus (Ruphia), draining Arcadia and Elis; and the Peneus draining Elis.

Climate.—The climate is generally mild, in the parts exposed to the sea equable and genial, but in the mountainous regions of the interior sometimes very cold. None of the mountains attain the limit of perpetual snow; but several retain it far into the summer. During summer rain scarcely ever falls, and the channels of the minor streams become dry. Toward the end of harvest rain becomes frequent and copious, and fevers become common.

Production and Industry.—The most important of the fruit trees are the olive, the vine, orange, lemon, fig, almond, citron, pomegranate, and currant grape. Its exports consist of currants, figs, olive oil, wine, cognac, tobacco, hides, lead, iron ore, magnesium, emery, marble, and sponges.

People.—The Greeks called themselves *Hellenes*, and the inhabitants of Italy called them *Graeci*. The modern Greeks are by no means pure-bred descendants of the ancient Greeks. Indeed, it has been maintained that from the seventh century A. D. there have been no pure Greeks in the country, but only Slavs. It is, however, pretty certain that the two and one-quarter million of modern inhabitants are descendants of the three races that occupied the soil at the time of the Roman conquest. They speak the modern Greek tongue, which is a greatly modified form of the old.

Education is free and compulsory, maintained by local taxation supplemented by State grants. Secondary education is somewhat backward, particularly in the country districts. There is a university of some repute at Athens, which is largely attended by Turks.

Government.—According to the constitution, which was framed by an assembly in 1864, the executive power is vested in the king and his

responsible ministry; the legislature is a single chamber of deputies called the *Boulé*, elected by the people, and meets at Athens.

Cities.—Athens is the capital, population 167,500; the towns next in size are Patras, Piræus, and Trikhala, all above 20,000; and there are eight others between 20,000 and 10,000.

Athens, in the southeast of Attica, occupies an extensive area round the site and remains of the classical city, four and one-half miles from its harbor of Piræus, on the Gulf of Ægina. The city, which takes its name from Athena, "goddess of science, arts, and arms," and its own patron divinity, was originally built on the Acropolis, a conspicuous limestone rock rising three hundred and twenty feet above the Attic plain, and afterwards spread out on the plain below. The Acropolis became the citadel and subsequently the site of a group of beautiful temples of the time of Pericles (fifth century, B. C.).

The ruins of the Parthenon, the Erechtheum, the temple of Nike Apteros ("Wingless Victory") and the Propylæa, still remain to testify to the former glory of the Acropolis. Of the other ancient buildings the most notable are the Theseum (also of the Periclean period, and still almost perfect), and the fragments of the vast temple of Zeus (begun in 530 B. C. and finished by the Roman Emperor Hadrian), with the theater of Dionysus and other structures.

Not far from the Acropolis rose the hill Lycabettus (nine hundred and eleven feet), and the hillocks or ridges of the Pnyx and the Areopagus or Mars Hill. At the greater distance the plain is bounded by Hymettus (three thousand three hundred and sixty-eight feet), Pentelicus (three thousand six hundred and forty-one feet), and other ranges.

Athens was fabled to have been founded by the hero Cecrops. The most brilliant period of its history was when, after the Persian wars (fifth century, B. C.), Athens took the lead among the Greek states, became powerful by land and sea, was adorned by Pericles with most glorious buildings, and brought Green literature and Greek philosophy to their highest development. Its decline dates from the disastrous conclusion of the Peloponnesian war (403 B. C.). It was plundered and ruined by Sulla in 87 B. C.; and neither under Byzantine nor Turkish rule ever attained any prosperity. In the days of its glory Athens had some one hundred thousand free inhabitants and twice as many slaves; when after the liberation of Greece Athens was made the capital of the new kingdom (1834), it was a wretched village of a few hundred houses. Since then it has had a prosperous growth, looks like a well built German town, with a fine royal palace, a marble stadium (restored), a university with over one hundred and fifty professors and lecturers and two thousand five hundred students, and a good deal of miscellaneous trade by the way of the Piræus. It is connected by rail also with Corinth, and the Athens-Larissa line brings Greece into railway communication with the rest of Europe. (See also under ancient Greece.)

History.—Modern Greece threw off the Turkish yoke in 1830 and was declared an independent kingdom and the boundaries were defined. The liberated state was at first governed by a national assembly, but the president, Count Capo D'Istrias, assumed autocratic powers, and sedition culminated in his assassination. Subsequently the Powers offered the throne to Prince Leopold (afterwards king of Belgium), but the offer was refused. The crown was then given to Otho, son of Louis I. of Bavaria. Throughout his reign discontent was rife, and an insurrection in 1862 resulted in the deposal of the king. George, second son of the king of Denmark, was then chosen king, and the Ionian Islands, at that time under British protection, were ceded unconditionally to the kingdom.

By the Berlin Congress of 1878, Greece was promised a modification of her frontier, and in 1881 a readjustment was accepted. The adjustment proved distasteful to the Hellenes, who demanded Crete, and hostilities commenced with Turkey in 1897. The war was short-lived, and was disastrous to the Greeks, and on the intervention of the Powers an armistice was concluded. By the Treaty of Constantinople Greece was compelled to pay an indemnity to submit to the readjustment of her frontier, and to accept the control of the Powers in financial affairs.

In October, 1912, war broke out in the Balkan states, known as the Balkan war. The permanent effects on the Greek frontier, owing to the Hellenic participation in the victory over the Turks, are not yet determinable, but all deeply affect Greek interests, and depend on the decision of the Great Powers. George, King of the Hellenes, was assassinated in Salonica by a maniac named Schinas in March, 1913. The perpetrator of the crime subsequently committed suicide. The present ruler is the late king's eldest son, who was proclaimed King Constantine XII.

Greece, as a result of the war, gained northern Epirus, Thrace (with the exception of Constantinople), Asia Minor, and the islands of the Dodecanese, to all of which territory, however, there are other claimants. Most of this territory formerly belonged to Turkey, though some of it in western Thrace belonged to Bulgaria.

JUGO-SLAVIA (*yu'go slăv'ē-ä*), [meaning the "land of the south Slavs"], a federated kingdom of southeastern Europe, was brought into being at a general convention of the National Jugo-slav Council, held at Laibach in the Austro-Hungarian province of Kraina on August 16, 1918. The new state was recognized first by Italy on September 25, 1918, and by the United States on February 7, 1919. Crown Prince Alexander of Serbia, regent of Serbia, was made regent of the new state which was to contain Serbia, Montenegro, and the Jugo-slav provinces of Austria-Hungary, Croatia, Carniola, and Slavonia, as well as Bosnia, Herzegovina, and the largest part of Dalmatia, and part of Albania. Difficulties arose over the inclusion of Fiume, which was also claimed by Italy. The total estimated area is about 158,000 square miles with a population of approximately 12,000,000.

Serbia (*ser'bi-ä*), the leading state of Jugo-Slavia, is mountainous and wooded; it is full of forests and hills, hedged fields, and fresh meadows, forming pretty but never very grand landscapes. The principal river (besides the frontier rivers) is the Morava.

ROYAL PALACE: BELGRADE, SERVIA

Production and Industry.—Nearly nine-tenths of the land is left under its primitive woods and pastures. The principal crops are maize for home consumption, and wheat for export; flax, hemp, and tobacco are also grown, and silk-culture is carried on to a limited extent. The exports consist of dried prunes, pigs, and wool, besides wheat, wine, hides, cattle, and horses. The bulk of the trade is with Austria. The mineral treasures of Serbia are considerable; gold, copper, and zinc occur in the hills which reach towards the "Iron Gates" of the Danube, and coal beds extend along the river.

Fruit trees exist in very great abundance, especially plums, from which the brandy of the Serbians (*slovovitza*) is extensively made.

Montenegro (Italian translation of the native *Czrnagora*, "Black Mountain"), lies between Herzegovina and Albania, and borders the Adriatic. The low coastal fringe has a climate like that of the south of France, but inland comes a rugged mountain-region ranging up to 6500 to 8000 feet, a confusing maze of peaks and gigantic crags and blocks, wild gorges and natural caves, the bare grey rock everywhere visible. The streams in some cases have underground channels. The interior of the country is occupied by the branching valleys of the rivers Zeta and Moratcha, which flow into Lake Scutari. East and north the country, draining to the Danube and the Drin, is mountainous and well wooded, principally with beech and pine, and affords good pasturage to sheep, goats, and cattle. The exports consist chiefly of cattle, goats, hides, smoked fish and mutton, cheese, sumach, fruits, and wine; the imports, of wheat, gunpowder, hardware, groceries, cloth and glass.

Croatia and Slavonia lies between the Adriatic sea on the southwest, where Croatia has a seaboard of about eighty-four miles, and Hungary on the northeast. The surface of Croatia falls mainly into a wooded mountain district, attaining 5751 feet. The province belongs to the basin of the Danube, its most important rivers being the Drave and Save. In Slavonia extensive marshes are found along the main rivers. Warm mineral springs are numerous, and earthquakes, especially about Agram, are frequent. The Adriatic coast is poorly supplied with harbors.

Carniola (G. *Krain*), in the extreme northwest, is traversed in the north by a continuation of the Carinthian Alps, and in the south by the Julian Alps, the loftiest summit being the Terglou (9393 feet), between the two sources of the Save, which is the principal river. The chief minerals are iron, quicksilver, and brown coal; the quicksilver mines of Idria are, next to Almaden, the most important in Europe.

Bosnia (*boz'ni-ä*) and **Herzegovina** (*hert-se-gō-vē'nä*), lie between Dalmatia and Slavonia. They have an area of 19,725 square miles of which 16,197 belong to Bosnia, and 3,528 to Herzegovina; population, 1,900,000—one-third Mohammedan. The Dinaric Alps, here attaining a maximum altitude of 7,663 feet, form the water-parting between the Adriatic and Danube basins; and four rivers—the Unna, the Vrbas, the Bosna (from which Bosnia takes its name), and the Drina—flow northwards to the Save. Flocks and herds are largely reared. The commerce is largely in the hands of Jews, the majority of whom reside in Sarajevo, the capital, which is now connected by rail both with Budapest and the Adriatic.

Dalmatia (*dal-mā'shi-ä*), comprises a narrow strip of territory extending along the Adriatic. Area, 4940 square miles; population 646,000. The coast is steep and rocky, and the chief towns, all on the coast, are Zara, Sebenico, Lissa, Spalato, Brazza, Ragusa, and Cattaro. The country is mountainous, Orjen, near Cattaro, attaining 6235 feet. Only one-ninth of the land is arable, mainly the coast strip. Nearly half is in pasture, and a third in wool. The numerous islands are not very fertile.

Cities.—The chief cities of Jugo-Slavia are: Belgrade (*bel-grād'*), Serv. Bielgorod ["The White City"], the capital, 91,000; Agram (Croatian, *Zagreb*), capital of Croatia and Slavonia, 80,000; Monastir (*mō-näs-tēr'*), 60,000; Sarajevo (*Sarī-yay-vo*), capital of Bosnia, 52,000; Laibach, or Laybach (*lī'bäch*), Slovenian *Ljubljana*], the capital of Carniola, 45,000; Prisrend (*prēs-rend'*), 42,000; Uskub (*ös'kub'*), 32,000; Nish, or Nisch (*nēsh*), or Nissa (*nēs'sä*), 25,000; Cattaro (*kät'tä-rō*), [Slav. Kotor or Kotur], Dalmatian seaport, famous for its picturesque situation, 5,500; Cettinje (*chet-lēn'yā*), capital of Montenegro, 4,500.

Fiume (*fē-ū'mā*), [Serbo-Croatian *Rieka*], is an important seaport, thirty-five miles from Trieste across the Istrian peninsula, and at the head of the beautiful Gulf of Quarnero, in the Adriatic, where the Julian Alps end. It consists of an old and new town, the latter, on the sea, being well built and laid out with many handsome streets and squares. Its extensive industries include manufactures of paper, torpedoes, tobacco, sails, ropes, and chemicals. The tunny-fisheries of the Gulf also are valuable. Fiume's chief importance, however, is as the entrepôt of a great and steadily increasing commerce. A free port from 1717 till 1891, it has a harbor with a lighthouse and several breakwaters, which have been greatly improved in recent years. The exports reach in some years a value of about thirty-five million; the imports have a value of about thirty million. The trade is almost entirely a transit trade. In 1910 the United States exported forty-one thousand metric tons of phosphates to Fiume, from which it imported fifty-seven thousand metric tons of magnesite. Area of town and territory, over twelve square miles; population 50,000 of which, in 1910, 28,000 were Hatians, and 18,000 Croatians.

Education and Religion.—Education does not reach a high standard. In Serbia more than eighty per cent are illiterate. In Montenegro education is compulsory and all males are supposed to be able to read and write. Conditions are somewhat better in the former Austro-Hungarian provinces. There are universities at Belgrade and Agram. The state religion is Greek Orthodox, but other are tolerated.

People, Government and History.—The dominant branches of the Jugo-Slavic, or Serbo-Croatian peoples are the Serbs, Croats, and Slovenes. They originally came from beyond the Carpathians and settled in the Balkan regions in the middle of the seventh century, driving out the Illyrians, the aboriginal race from whom the modern Albanians are descended. They rapidly overran a great part of the Balkan Peninsula, penetrating almost to the southernmost extremity of Greece. Later, through pressure of the Byzantines on the east, of the Bulgars on the north, and of the Albanians on the west, the Serb domain was gradually contracted to its present limits, comprising the whole of Serbia, Bosnia, Herzegovina, Croatia, Dalmatia, Montenegro, and part of Istria. Although politically dismembered, the Serb race preserved a strong national sentiment which must form a potent factor in the future reconstitution of the Balkan Peninsula. This fellow-feeling is largely due to a community of traditions, usages, and especially language and literature, which present great uniformity throughout the whole of present-day Jugo-Slavia.

Serbia became a kingdom in the eleventh century after several centuries of rule under Byzantine governors. The country was most flourishing under Stephen Dushan (about 1334-1356), who assumed the title of emperor and annexed Macedonia, Albania, etc. The Serbian power was overthrown by the Turks at the battle of Kossova in 1389, and Serbia was incorporated with Turkey about 1458. The greater part of the country was occupied by Austria, 1718-1739. A rising under Czerny George in 1804 resulted in the expulsion of the Turks, but they reconquered the country in 1813. A rising in 1815 under Milosh Obrenovitch (who was elected prince in 1817) was more successful, and Serbia became practically independent. The Turkish garrisons were withdrawn in 1867. Under his successors there was considerable progress; and after the Russo-Turkish war of 1877-1878 Serbia obtained complete independence and became a kingdom. King Milan abdicated in 1889.

In 1903 a party of officers, representing a wide conspiracy, assassinated King Alexander and Queen Draga, and Peter Karageorgevitch was proclaimed king. In 1913 Serbia, as a member of the Balkan League (Bulgaria, Greece, Serbia, and Montenegro), waged a successful war against Turkey. In August, 1913, Serbia and Greece were attacked by Bulgaria, their former ally, owing to disputes concerning the division of the spoils. The second war collapsed in a few weeks through the threatened intervention of Roumania, and ended in the Treaty of Bucharest. Serbia also became involved with the Austro-Hungarian monarchy on a question of the Albanian frontier, where desultory fighting had taken place for some months, but eventually the smaller power withdrew from the disputed area. The outcome of the military operations was the inclusion of the whole of "Old Serbia" (the greater part of Macedonia) within the Serbian boundaries, which thus embrace an area (1914) of close on thirty-four thousand square miles, with a population estimated at five million.

The assassination of the Austrian heir presumptive, in June, 1914, brought about an invasion of Serbia by the forces of Austria-Hungary, and started the Pan-European war that raged until the armistice of November 11, 1918.

Practically all of its territory was invaded by the Central Powers and held by them throughout the best part of the war. The end of the war freed it again. Serbia claims and has occupied part of southern Hungary bounded by the Danube, Theiss and Maros Rivers and the Transylvanian Carpathians. Both Hungary and Roumania dispute these claims.

Montenegro, in the fourteenth century, was tributary to Serbia, but maintained its independence when Serbia was subjugated by the Turks (1389). From that time down to 1880 the Montenegrins waged almost incessant war with the Turks, renewed victoriously in 1912 on alliance with Greece, Serbia, and Bulgaria. From 1516 till 1851 the little state was governed by ecclesiastical princes; but the civil was then separated from the ecclesiastical functions, and the throne was declared hereditary. The prince, till then an absolute sovereign, granted a constitution in 1905, with an elective Skupshtina, or

assembly, and in 1910 was proclaimed king. It became part of the new Jugoslav state by action of its parliament, which at the same time deposed King Nicholas.

Croatia and Slavonia were for the most part included in the Roman province of Pannonia; in the seventh century the territory was taken possession of by the Slavonic races. The Croats shook off the Byzantine yoke about 900, and in the following century extended their rule over Dalmatia, built a strong fleet, which they employed first for piracy, and afterwards for trade, and had their king, Dirzislav, recognized by the Eastern court in 944. His son, Crescimir Peter, one of the greatest national heroes, was acknowledged as king of Dalmatia, as were also his successors until 1091, when the kingdom was taken over by Hungary. Afterwards Croatia and Slavonia were regarded as part of the kingdom of Hungary; but among the Croatians a feeling of hostility to the Magyars grew up, which asserted itself in 1848-1849. In reward for Croatia's services during the Magyar revolt, it was declared independent of Hungary, and practically so remained until 1868, when the connection with Hungary was restored.

Bosnia and Herzegovina, in ancient times a part successively of Illyria, Pannonia, and Dalmatia, was during the great migrations occupied by Slavs or Slavonized Illyrians, at first dependent on Hungary; but it became a kingdom in 1376, under Tivartko, a native prince. Occupied by the Turks in 1401, it was annexed in 1463, but not recognized by Europe as a Turkish province till 1699. Extortionate taxation caused a rebellion of the Christians in 1849, suppressed by Omar Pasha; but a more determined rising in 1875, which the Turks failed to put down, led to the occupation of the province by the Austro-Hungarians, which the Moslem population opposed in a fierce but unavailing struggle. The treaty of Berlin formally entrusted the administration to Austria-Hungary.

Carniola received its present name (from the Slav *krai*, "frontier") after the settlement here of the Slovenians. From 972 it had margraves of its own; but in 1245 and 1364 it passed to the dukes of Austria.

Dalmatia was, in ancient times, a considerable kingdom, and, after many unsuccessful attempts, was first subjugated by the Romans in the time of Augustus. On the fall of the Western Empire, Dalmatia was captured by the Goths, from whom it was taken by the Avari (490), who in their turn yielded it to the Slavonians about 620. By the peace of Campo-Formio in 1797 Dalmatia passed to Austria.

During the war all the southern or Jugoslavs rallied together for the creation of a Jugoslav state, with access to the sea. They all acknowledge the headship of the King of Serbia. Italy has recognized this claim. The executive is vested in the king and his ministers, and the legislative authority in the king in conjunction with the National Assembly or Narodna-Skuptchina and a State Council. The former consists of one hundred and sixty-six deputies elected by universal suffrage for four years; the latter of sixteen members, eight nominated by the king and eight elected by the Assembly.

For local purposes the country is divided into departments and these into communes.

LITHUANIA (*lith-ū-ā'ni-ă*), [Pol. *Litwa*, G. *Litauen*], was formed into a republic, after the collapse of Russia, out of the independent grand duchy including the Russian governments of Vilna, Suvalki, Grodno, Mogilev, Vitebsk, and Minsk. Some of this territory is claimed by Poland. Geographically it is about as large as Switzerland, with an estimated population of 4,150,000. Lithuania proper was the region about Vilna, which was its capital.

The country is cold, flat, and somewhat unproductive, being largely covered with forests and marshes; corn, flax, rye, and hemp are produced, however. It is noted for its horses, cattle and game.

People and Language.—The original Lithuanians were Indo-Aryan, fair, light-haired, blue-eyed, tall, and strong. They were in no way related to the Slav or Teuton. They crossed from Asia to Europe about 2000 B. C. and settled along the Black Sea, near the mouth of the Danube. Gradually they went north until they came to the Baltic and here they finally settled. The Lithuanian and Lettish languages are very close to each other, but differ entirely from the Slavonic tongue, and it is doubtful if a Slavonic subject would understand a Lithuanian sentence, apart from the words or idioms borrowed from the Poles and the Russians by the two countries.

The Lithuanian and Lettish languages are the remains of a great family of languages, to which belonged the Prussian language during the Middle Ages; but the original Prussian, of which a few monuments, a small lexicon, and some catechisms remain, has been replaced by German. The Lithuanian tongue in some respects comes nearer Sanskrit than any other Aryan language, though it contains a strong admixture of Slavonic words.

History.—The first prince to gather the scattered tribal chiefs around him was Ringold (1230-1235); his policy of centralization was continued by his son Mindovg (d. 1263), who even consented to be baptized, but afterwards apostatized. During these reigns the Lithuanians waged almost incessant war against the Livonian order and the Teutonic Knights. Olgerd (1345-1377), after reviving (along with his brother Keistut, the legendary national hero of the Lithuanians) the principality of Lithuania, extended his conquests into southern Russia as far south as Odessa and the Sea of Azov, and as far east as the Moskva.

In 1569, Lithuania ceased to be a grand principality and was incorporated with the Kingdom of Poland.

The three great partitions of Lithuania—as of Poland—took place in 1772, 1792, and 1795. By these three divisions the major part of Lithuania, now called North Poland, was annexed by Russia, and the smaller, now called East Prussia, by Germany. Henceforth it became subject to the institutions and culture of Russia and Prussia. Lithuania was overswept in 1915 by the Germans, who refused to give it up when they made their treaties of peace with Russia and Ukrainia. In January, 1918, a Congress of Lithuanians, at Vilna, declared for a Lithuanian Republic, reaffirming the independence declaration made there first in 1905, and again in October, 1917. A republic was recognized by Germany, March 23, 1918, and the Kaiser, on May 12, 1918, issued a proclamation to that effect. This was followed by the organization of a provisional Lithuanian government.

The Lithuanians were pagans up till 1397, but after the union with Poland, Roman-Catholicism was the prevalent form of religion.

Cities.—Vilna, 188,000; Vitibsk, 104,000; Minsk, 100,000; Grodno, 55,000; Mogilev, 50,000; Suvalki, 25,000.

Livonia.—See Baltic State.

LUXEMBURG (*luk'sem-berg;* F. **LUXEMBOURG** (*lük-son-bör'*), since 1815 an independent grand-duchy, wedged in between France, Prussia, and Belgium, consists of a plateau, furrowed with valleys, and connecting together the uplands of Lorraine, the Forest of Ardennes, and the Eifel. Nearly all its streams flow to the Moselle, which for some twenty miles forms its eastern border. The country is well wooded, yields wheat and wine, and is rich in iron ore. Nearly all its population are Catholics, and of Low German stock, though French is the language of the educated classes. For commercial purposes Luxemburg was included in the German customs union prior to the European War of 1914-1918. The king of Holland was grand-duke till 1890, then the Duke of Nassau; on his death in 1912, his daughter became grand-duchess.

History.—Luxemburg formed part of the Holy Roman Empire. It was a countship in the middle ages. It furnished the emperors Henry VII. (1308) and Charles IV. (1347). It was united in personal union with Bohemia in 1311; became a duchy in 1354; and passed to Burgundy in 1443. It passed by the marriage of Maximilian to the house of Hapsburg, and to Spain in 1555. Part of it was ceded to France in 1659. It was ceded to Spain in 1713; was occupied by France in 1795; and was annexed in 1797. By the Congress of Vienna (1815) it was made a grand-duchy under the rule of the King of the Netherlands, and became a member of the Germanic Confederation. It joined the Belgian revolt against the Netherlands, and continued provisionally in Belgian hands until 1839, when part of it was ceded to Belgium, the King of the Netherlands ruling as grand duke over the remainder. It entered the Zollverein in 1842, and ceased to be a part of Germany in 1866. Its neutrality was guaranteed by the treaty of London in 1867. When, in 1914, Germany demanded free passage through Belgium for her armies she made the same demand upon Luxemburg; the verbal protest of the Grand Duchess was in vain, for the duchy possessed no means of defense.

It was not liberated until November, 1918. The Peace Treaty of Paris provides that Germany renounce her various treaties and conventions with the grand duchy of Luxemburg, recognize that it ceased to be a part of the German Zollverein from January 1, 1919, renounce all right of exploitation of the railroads, adhere to the abrogation of its neutrality, and accept in advance any international agreement as to it, reached by the Allied and Associated Powers. Industries, iron mining and affiliated industries. Capital, Luxemburg. Grand Duchess, Charlotte, who in succession to her sister, Marie Adelaide, acceded January 15, 1919, after the latter's abdication. Area, 999 square miles. Population (1910), 259,889.

SAN MARINO (*mä-rē'nō*), smallest republic in Europe is situated between the provinces of Forli and Pesaro e Urbino, Italy, on spurs of the Apennines. It has a frontier line of 24 miles and an area of 38 square miles, its population being 12,000. It is governed by a council of sixty members, two of whom act as regents for a term of six months. It sustains a military force of about 1000 men, including officers. Cattle-raising and agriculture are the chief industries. Wine, cattle, and stone are the principal exports. It was founded in the fifth century by a pious mason from Dalmatia, who became a monk, and its independence dates from the thirteenth century. Its independence was respected both by Napoleon and by Garibaldi, who found asylum there when escaping from the Austrian troops in 1849. The republic is under the protection of Italy, several treaties of friendship having been ratified, the last being revised in 1908. Its capital, a town of the same name, is seated on a mountain about 2,500 feet high, 17 miles northwest of Urbino. Its streets are very steep and narrow, and from a distance the houses look as though they were built one on top of another. There is only one road up the mountain leading to the town, which is otherwise inaccessible. Population under 2,000.

MONACO (*mon'ä-kō*), is a small independent principality on the Mediterranean, one hundred and forty-nine miles east by northeast of Marseilles, and nine from Nice; area, eight square miles; population, about 20,000, of whom 2,500 are in the town of Monaco, 6,500 in Condamine, and 4,000 in Monte Carlo. The territory, which is encircled by the French department of Alpes Maritimes and the sea, consists mainly of the rocky promontory on which the capital is built, and a small strip of coast.

The family of Grimaldi acquired Monaco in 968, Mentone and Roquebrune and Castillon about 1230, and Antibes in 1237. Honore II. put his country under a French protectorate in 1644. In 1846 Montone and Roquebrune were annexed by Sardinia, and after 1859 the whole territory belonged for a short time to Victor Emmanuel; and in 1861 the lawful owner sold Mentone and Roquebrune to Napoleon III. for 4,000,000 francs. About one thousand of the inhabitants are employed in the rooms and gardens of the celebrated Casino. These gambling-rooms, built at Monte Carlo on ground leased till 1913 from the Prince of Monaco, belong to a joint-stock company, and have about 400,000 visitors annually.

The climate of Monaco is milder than that of any other place in the Riviera; palms and aloes grow most luxuriantly, and rare wild flowers are found on its rocky promontory. It produces fruits, olive-oil, perfumes, liqueurs, etc. The government is an absolute monarchy.

The constitution promulgated in 1911 established a National Council of twenty-one members, elected for four years, by universal suffrage with *scrutin de liste.* Government is administered under the authority of the Prince by a Cabinet assisted by a Council of State.

Montenegro.—See Jugo-Slavia.

A VIEW OF THE OLD TOWN OF MONACO.

Standing in a picturesque position on a rock jutting out into the sea at the foot of the Tête de Chien, Monaco is a town of great antiquity, its foundation having been attributed by some writers to Hercules, who is known to have visited the district on several occasions. Since 1348 it has been the capital of a small independent principality under the rule of the ancient Genoese family of Grimaldi, who still govern it in the present day. It contains, among many curious relics of the past, a fine old castle, parts of it dating from the thirteenth century, in which the Princes of Monaco have always lived.

Poland (called by the natives *Polska*, a word of the same root as *Pole*, "a plain"), a kingdom of Europe, proclaimed in 1916, by the governments of Austria-Hungary and the German Empire as the result of conquests by the Central Powers, comprises substantially what is geographically known as Russian Poland (the kingdom of Poland formed in 1815) and Austrian Poland (or the Austrian province of Galicia). The former has an area of about 49,000 square miles, with a population of more than 12,000,000; the latter, an area of 30,300 square miles, and a population of 8,000,000.

Surface.—This extensive tract forms part of the great European central plain, and is crossed by only one range of hills, which run northeast from the Carpathians, forming the watershed between the Baltic and Black Seas.

Its principal streams are the Vistula, the Niemen, and the Dwina, all belonging to the basin of the Baltic; and the Dniester, South Bug, and Dnieper, with its tributary, Pripet, belonging to the basin of the Black Sea.

The physical configuration of the country makes it admirably adapted for agriculture. Next to grain and cattle its most important product is timber.

The soil is mostly a light fertile loam, though there are large barren tracts of sand, heath, and swamp, especially in the east. Much of the fertile soil is rich pasture land, and much is occupied with forests of pine, birch, oak, etc. Rye, wheat, barley, and other cereals, hemp, timber, honey, and wax, cattle, sheep, and horses, vast mines of salt and coal, some silver, iron, copper, and lead constitute the natural riches of the country.

People.—The present population of the provinces, included in the Poland of former days, consist chiefly of Poles, Lithuanians, Germans, Jews, Malo-Russians, Roumanians and Gypsies. The Poles, who number 10,000,000, form the bulk of the population; the Lithuanians, 2,100,000 in number, inhabit the northeast of the country; the Germans, of whom there are 2,000,000, live mostly in the towns; the Jews are very numerous being estimated at 2,200,000.

Roman Catholics preponderate; then come in order the Greek Church, Protestants, Jews, and Armenians.

Cities.—The following are the populations of the chief cities: Capital, Warsaw, 800,000; Lodz, 400,000; Lemberg, 225,000; Cracow, 160,000; Przemysl, 60,000.

Warsaw (Polish *Warszawa*), the capital of Poland, stands on the Vistula's left bank, three hundred and thirty miles east of Berlin by rail and seven hundred miles southwest of Petrograd. Two iron bridges lead to the suburb of Prague, on the opposite bank. Standing on a navigable river, with great railway lines to Moscow, Petrograd, Vienna, Danzig, and Berlin, Warsaw is one of the most important cities of eastern Europe, being smaller only than Petrograd and Moscow. Corn and flax are largely exported, and coal and manufactured goods imported. Warsaw itself manufactures electroplate, machinery, boots,

THE KERLIEKI PALACE, WARSAW

The streets of Warsaw are adorned with many fine examples of architecture: churches, cathedrals and public buildings; also palaces exhibiting the Polish nobility's love of display, of which a good example is the Kerlieki Palace.

woolens, pianos, carriages, tobacco, sugar, chemicals, beer, and spirits.

Of over one hundred Catholic churches the cathedral of St. John is the most notable; there are also several Greek churches, two Lutheran ones, and many synagogues. The castle is an imposing building, and there are many fine private palaces. The university, suppressed at various times, was reopened in 1915, and has seventy-five professors who now teach in Polish.

History.—The early history of Poland is legendary and obscure. The Poles, like the Russians, are a Slavonic race, and are first spoken of as the Polani, a tribe or people between the Vistula and Oder. The country was divided into small communities until the reign of Mieczyslaw I. (962-992) of the Piast dynasty, who renounced paganism in favor of Christianity, and was a vassal of the German emperor.

He was succeeded by Boleslaw the Great (992-1025), who raised Poland into an independent kingdom and increased its territories. In succeeding reigns the country was involved in war with Germany, the Prussians, the Teutonic knights, and with Russia. The last of the Piast dynasty was Casimir the Great (1364-1370), during whose reign the material prosperity of Poland greatly increased. He was succeeded by his nephew, Louis of Anjou, king of Hungary, whose daughter, Hedwig, was recognized as "king" in 1384, and having married Jagello, prince of Lithuania, thus established the dynasty of the Jagellons, which lasted from 1386 to 1572.

During this period Poland attained its most powerful and flourishing condition. In 1572 the Jagellon dynasty became extinct in the male line, and the monarchy, hitherto elective in theory, now became so in fact. The more important of the elective kings were Sigismund III. (1587-1637), Wladislaw or Ladislaus IV. (1632-1648), John Casimir (1648-1669), and the Polish general Sobieski, who became king under the title of John III. (1674-1696). He was succeeded by Augustus II., Elector of Saxony, who got entangled in the war of Russia with Charles XII., and had as a rival in the kingdom Stanislaus Lesczynski. Augustus III. (1733-1763) followed, and by the end of his reign internal dissensions and other causes had brought the country into a state of helplessness.

In 1772 under the last feeble king Stanislaus Augustus (1764-1795), the first actual partition of Poland took place, when about a third of her territories were seized by Prussia, Austria, and Russia, the respective shares of the spoil being Prussia 13,415 square miles, Austria 27,000 square miles, Russia 42,000 square miles.

A second division between Russia and Prussia took place in 1793. Prussia received nearly all the present province of Posen, and the western part of what is now Russian Poland; Russia received all the territory east of about long. 44°. A third division between Russia, Prussia, and Austria occurred in 1795. Prussia took a large part of the present Russian Poland, including Warsaw; Austria received part of the present Russian Poland between the Bug, Vistula, and Pilica; and Russia received all the remainder, situated east of the Niemen and Bug.

An insurrection under Koszciusko had taken place in 1794, but he was defeated at the battle of Maciejowice and taken prisoner. Suvorov (Suwarrow), the Russian general, took Warsaw, and the Polish monarchy was at an end. King Stanislaus resigned his crown, and died at Petrograd in 1798.

Part of Poland was formed by Napoleon into the duchy of Warsaw. The Congress of Vienna in 1815 made a resettlement of the territory, creating a kingdom of Poland, under Russian rule, with a constitution. An insurrection which began in November, 1830, was

MAP OF POLAND, SHOWING ITS BOUNDARIES BEFORE ITS PARTITION BY RUSSIA, PRUSSIA AND AUSTRIA IN 1740, AND ALSO THE ALLOTMENTS TO THESE POWERS. SOME OF THE MOST DESPERATE AND DEADLY BATTLES AND SIEGES OF THE WAR TOOK PLACE IN THIS REGION OF EUROPE.

suppressed in September, 1831; the constitution was abolished in 1832. From this time the independence of Poland was suppressed, and in 1832 it was declared an integral part of the Russian empire, with a separate administration, headed by a viceroy chosen by the Czar. On November 6, 1848, the republic of Cracow became Austrian; and the subsequent rebellion against Russian rule in 1863 only brought further humiliation on Polish hopes and aspirations.

During the European war Poland, in 1914, first suffered invasion and devastation by the Russian armies, and during the two following years was completely overrun by the Austro-German armies, and placed under the military rule of the latter. The proclamation of Poland as a new independent kingdom took effect in 1916, followed by that of a republic that was recognized by Russia on March 30, 1917, partially by the Allies in November, 1918, and definitely by the Treaty signed on June 28, 1919, at Versailles between Poland on the one hand, and the United States of America, the British Empire, France, Italy, and Japan on the other hand. The new republic will consist of territories formerly belonging to Germany, Austria-Hungary, and Russia. Its final boundaries, as far as they were not determined by the German and Austrian Peace Treaties, are to be subsequently determined by the principal Allied and Associated Powers. M. Demoski and Jan Paderewski were elected president and premier respectively on January 17, 1919. Area (estimated) 100,000 square miles. Population (estimated) 17,000,000.

PORTUGAL (named from Portus Cale, the Roman name of Oporto), a republic of Europe, lying between Spain and the Atlantic, on the west side of the Iberian Peninsula, is three hundred and fifty miles in length and varies in width from seventy to one hundred and forty miles. The area is 36,038 square miles—a little larger than Ireland.

Surface and Climate.—The coast is mostly low and flat, except immediately north and south of the mouth of the Tagus, and at Cape St. Vincent. The north of Portugal is diversified by spurs (five thousand feet) of the mountains of Spanish Galicia. The Sierra da Estrella (six thousand five hundred and forty feet) is a westward continuation of the Spanish Sierra Guadarrama system. The Sierra Morena is continued westwards in southern Portugal.

The principal rivers of the country—the Guadiana in the south, the Tagus in the center, and the Douro and Minho in the north—are simply the lower courses of Spanish rivers; but the Mondego has its sources in the country.

The vicinity to the ocean tempers the climate and exempts it from the dry heat of Spain. The inequalities of the surface produce, however, diversities of climate; for, while snow falls abundantly on the mountains in the northern provinces, it is never seen in the southern lowlands. Rain falls abundantly throughout the year.

Production and Industry.—The chief products are wheat, barley, oats, maize, flax, hemp, and the vine in elevated tracts; in the lowlands, rice, olives, oranges, lemons, citrons, figs, and almonds. There are extensive forests of oak, chestnut, sea pine, and cork, the cultivation of the vine and the olive being among the chief branches of industry; the rich red wine known to us as "port" is shipped from Oporto. Its mineral products are important—copper, lead, tin, antimony, coal, manganese, iron, slate, and bay salt, which last, from its hardness and purity, is in demand. Its manufactures consist of gloves, silk, woolens, linen, and cotton fabrics, metal and earthenware goods, tobacco, cigars, etc. The exports consist to the extent of fifty per cent of wine, which is the chief industrial product of the country; others are cork, cattle, copper ore, fruits, oil, sardines, and salt.

People.—The Portuguese are a mixed race—original Iberian or Basque, with later Celtic admixture. Galician blood (derived from the ancient Gallaici, presumably Gallic invaders) predominates in the north; Jewish and Arabic blood are strongly present in the center, and African in the south.

The Portuguese differ widely from their Spanish brethren, whom they regard with inveterate hatred and jealousy, mainly on account of their attempts to subvert the independence of Portugal.

Education is free and nominally compulsory between the ages of seven and fifteen, but is not strictly enforced, and over seventy-five per cent of the population above seven years old are illiterate. Secondary education is conducted in state lyceums. There are also military, naval and other special schools. The University of Coimbra is the chief higher institution.

Government.—Portugal was a constitutional monarchy till 1910, when a republic was established. The constitution of 1911 provides a Senate, elected by municipal councils, and a National Council, by direct suffrage. The two chambers united constitute the Congress of the republic. The president of the republic is elected by both chambers for a period of four years. He cannot be re-elected.

Cities.—Capital, Lisbon, on the Tagus, population, 435,359. Oporto had a population (1911) of 194,664. There are no other large towns, but Braga, Loulé, Setubal, and Funchal (Madeira) had populations exceeding 20,000 in 1911.

Lisbon (Port. *Lisboa*), capital of Portugal, stands on the northern shore of a bottle-shaped expansion of the Tagus, nine miles from its mouth; it is four hundred and twelve miles by rail west by southwest of Madrid. The city extends for four or five miles along the shore, and climbs up the slopes of a low range of hills, occupying a site of imposing beauty.

The oldest part of Lisbon is that which escaped the earthquake of 1755; it lies on the east, round the citadel, and consists of narrow, intricate streets, not over clean. It is still known by its Moorish name of Alfama. The western portions were built after the earthquake, with wide and regular streets, fine squares, and good houses. The summits are mostly crowned with what were formerly large monasteries.

The gloomy cathedral of the "patriarch," built in 1147, restored after 1755, has a Gothic façade and choir. The large church of St. Vincent contains the tombs of the former royal (Braganza) family. The church of Estrella is a reduced copy of St. Peter's at Rome. In San Roque is a chapel thickly encrusted with mosaics and costly marbles. But the finest structure in the city is the Gothic monastery and church of Belem, a monument to the great seamen of Portugal; it was begun in 1500 on the spot from which Vasco da Gama embarked (1497) on his momentous voyage. Inside the church are tombs to Camoens and Vasco da Gama, and the grave of Catherine, wife of Charles II. of England.

A fine square facing the bay is surrounded with government offices, the handsome custom-house, and the marine arsenal. There are an academy of sciences, with a library of one hundred and twenty thousand volumes, a polytechnic school, a medical school, a conservatory of music, a public library of four hundred thousand volumes and two observatories.

A magnificent aqueduct brings water to the city from springs nine miles to the northwest.

A series of forts protect the seaward approaches. The harbor is one of the finest in the world, well sheltered, deep close to the quays, and capacious enough to hold all the navies of Europe at once.

History.—Like the rest of Iberia, Portugal (the southern part of which was known to the Romans as Lusitania, often taken as a poetical name for the whole country) was thoroughly Romanized after the conquest of the Carthaginians by the Romans in 138 B. C. Then the peninsula was overrun by the Visigoths, and next by the Saracens. Northern Portugal fell under the influence of Castile; but under Alfonso I. (1143) Portugal became an independent kingdom, though the Saracens were not conquered in the south till 1250. Wars with Castile were frequent.

Under John (1385-1433) began a close alliance between Portugal and England, and the Portuguese king John married John of Gaunt's daughter. With their son, Prince Henry the Navigator began the most brilliant era of discovery and conquest, including the acquisition of Madeira, the Azores, and the doubling of the Cape of Good Hope (1486), the reaching of India by sea and settlements there (1497), and the discovery and occupation of Brazil (1500).

In the sixteenth century Portugal was one of the most powerful monarchies of Europe, and most prosperous of commercial peoples; but its decline was swift, and Philip II. annexed Portugal to Spain for sixty years. English assistance secured the independence of the kingdom in 1640; but the glory had departed. Portugal shared in the troubles of the French occupation and the Peninsular war; after Napoleon's defeat, the old family, which had taken refuge in Brazil, was restored, but the country was rent by intrigue, dissension, and civil war.

The rush of the European powers to occupy central and southern Africa stirred Portugal to cling tenaciously to her once great colonial empire in Africa; but the march of events has given to Britain, Germany, France, and Belgium much that Portugal once claimed as hers.

Popular discontent culminated in the assassination of King Carlos and his eldest son in the streets of Lisbon in February, 1908. His second son, Manoel, succeeded. In 1910 the murder of Dr. Bombarda, a republican, hastened on a revolution already arranged for. The army and navy assisted in deposing Manoel and setting up a provisional government, with Theophile Braga as provisional president. He retired in 1911, and in August of that year Dr. Manoel Arriaga was elected as the first president of the republic.

The republic was formally recognized by the United States upon the meeting of the Portuguese chambers in June, 1911, and by the other powers on the formation of the cabinet in September, 1911. In 1915 Portugal joined the Entente Allies in the European war.

ROUMANIA, a kingdom in southeast Europe, lies mainly between the Carpathians, the Purth, and the Danube (the Dobruja being south of the Danube). It includes the strip added from Bulgaria as "compensation" for changes consequent on the Balkan war of 1912-1913, from a point on the Danube above Silistria to Cape Sabla on the Black Sea. Bordering on Hungary, Russia, Bulgaria, and Servia, its area is 52,000 square miles, and population 7,500,000.

Surface.—Roumania consists for the most part of a great treeless steppe-like plain, occupying nearly the whole of the northern watershed of the Lower Danube; behind this plain rise the wooded Transylvania Alps. Between the northern bend of the river to its marshy delta and the Black Sea there rises the bare plateau called the Dobruja, partly grass-covered, partly swampy, without tree or brush. This famous old battle-ground is crossed by Trajan's double wall or rampart, built to keep the northern barbarians out of the Roman provinces.

Rivers.—All the rivers are tributaries of the Danube, and flow from the Carpathians and the Transylvanian Alps across the level steppe to join its left bank. The chief are the Purth, which now forms the boundary towards Russia, the Sereth, and the Oltu (Aluta).

People.—Most of the Roumanians are supposed to be descendants of the race formed by the alliance of the Roman colonists with the original inhabitants of Dacia. The Roumanian language is derived mainly from Latin, with Slavonic, Hungarian, and other elements.

They are strong, well-knit men, with black hair, lively, but not very active. The mass of the people live in great poverty; a few thousand Boyars, nobles or landed proprietors, really form the nation. Large numbers of Jews and Gypsies live among the Roumanians. Almost the entire population belongs to the Greek Church, but religious equality prevails.

Government.—The constitution, voted by a popular assembly in 1866, vests the executive authority in the reigning king and his council of ministers; the legislative body consists of a Senate and a Chamber of Deputies.

Production and Industry.—The agricultural products consist of wheat, maize, millet, barley, rye, beans, and peas. Vines and fruits are abundant. The forests are of great extent and importance, but the riches of the country consist mainly in its cattle and sheep. Min-

THE UNIVERSITY OF BUCHAREST

This university, founded in 1864, has contributed greatly to the intellectual development of Roumania. It has gained such an efficiency and reputation that numerous students from the neighboring Balkan States come here yearly for their education.

erals and precious metals are said to be in abundance, but only salt and petroleum are obtained.

Education is free and nominally compulsory, but owing to inadequate provision over sixty per cent of those above seven years of age are illiterate. Secondary education is relatively better, and the schools are well attended. There are also special schools and universities at Bucharest and Jassy. A government high school of commerce was opened in 1913.

Cities.—Capital, Bucharest, has a population (1912) of about 500,000. Other towns are: Jassy, 80,000; Galatz, 66,000; Braïla, 60,000; Ploesci, 50,000; Craiova, 46,000.

Bucharest (*Bucuresci*), the "Paris of the East," stands two hundred and sixty-five feet above sea-level, in the fertile but treeless plain of the small, sluggish Dambovitza. By rail it is seven hundred and sixteen miles southeast of Vienna, forty miles north of Giurgevo on the Danube, and one hundred and seventy-nine miles northwest of Varna on the Black Sea. Viewed from the hills which lie to the west and southwest, Bucharest presents a most striking appearance. It is sprawled out on both banks of the river, occupying more than twenty square miles of territory in the slight depression through which the stream makes its way.

Most of its houses are low, not more than two stories, with flat roofs that shimmer in the sun. High above them rise almost innumerable towers, cupolas and minarets of churches, in which the city abounds. The Catholic Cathedral is a fine edifice, built 1875-1884.

Great spots and stretches of greenery mark the spacious parks and gardens and the great boulevards, some of which extend along the river bank, others out to the distant sections of the city.

Three of these thoroughfares skirt the river on the left, where the greater part of the city lies. They are the Plevna, Lipcani and Vacaresci, in order. From the Lipscani extend the Elizabeth Boulevard and Calea Victorie, the avenue of Victory, which connect with another broad highway extending nearly around the city on its outskirts.

Parks and drives are frequent. Then there are the botanical and zoological gardens, and a racecourse, where meets are held at least twice a year.

In these streets the East meets the West. Women gowned in the latest Paris creations and men in perfect European dress are in contrast with the wandering bands of gypsies, the brilliant-clad Roumanian country folk come in to market, the fez-topped Turk, and the distinctly dressed Russian cabmen.

Besides the parkways and busy thoroughfares there are many beautiful buildings—the National Bank, the Athenaeum, with its collection of rare antiques dating back to the days of the Roman conquest; the National Library and Theater; the University of Bucharest, founded in 1864; the many other schools and academies; the great home for the blind established by the late Queen Elizabeth, better known by her pen name "Carmen Sylvia"; a hundred-and-one other places that go to make the city notable as a center of learning, culture and modern progress.

Nearly all of these institutions have homes that are masterpieces of architecture. The Treasury Building and the Postoffice are notable examples. It is said that the Roumanian government has the finest home for its foreign ministry of any country in Europe.

Bucharest is the center for trade between Austria and the Balkan Peninsula, the chief articles of commerce being textile fabrics, grain, hides, metal, coal, timber, and cattle. It has been several times besieged; and between 1793 and 1812 suffered twice from earthquakes, twice from inundations, once from fire, and twice from pestilence.

History.—The Roumanians are descended from the ancient inhabitants—probably Thracians or Dacians—of the country, modified by elements derived from the Roman, Gothic, Bulgarian, and Slavonic invaders. Dacia was a Roman colony from 101 A. D. till 274, when it became the prey of successive swarms of wandering tribes.

Out of numerous small states, two, Wallachia and Moldavia, had become dominant, when they had to bow to the Turkish yoke, and became tributary to the Porte. They were governed by rulers nominated by the Porte, who were generally extortionate Greeks of Constantinople. Russian intervention during the eighteenth century somewhat improved

the condition of the downtrodden principalities, which at times were wholly under Russian influence. In 1859 they elected the same prince, Couza. He ruled till he was deposed for misgovernment in 1866, and was succeeded by Prince Charles of Hohenzollern.

The Roumanians fought bravely on the Russian side in the Turkish war of 1877-1878, and at the end obtained complete independence, though they had to give Russia part of Bessarabia for the Dobruja. In 1881 the prince was recognized as a king.

Roumania is not a Balkan state, and took no part in the operations of the Balkan League (Bulgaria, Servia, Montenegro, and Greece) against the Ottoman Empire in 1912-1913; but during the second war (1913), when Bulgaria was in opposition to the remaining members of the League, Roumania was able to exact terms from Bulgaria at the Treaty of Bucharest, by which Bulgarian territory amounting to 7,609 square miles, with a population of 285,000, was surrendered to Roumania.

On August 27, 1916, Roumania declared war upon Austria-Hungary in pursuance of a secret treaty with France, Great Britain and Russia containing the following guarantees:

(1) Territorial integrity of Roumania and recognition of her right to annex certain territories in Austria-Hungary; (2) that the Treaty of Peace shall annex same; (3) Roumania engages to declare war on and attack Austria-Hungary under stipulated conditions and to cease economic relations and commercial exchanges with enemies of Allies; (4) Roumania and the Entente Powers agree not to make a separate treaty of peace; (5) Roumania is to enjoy the same rights as the Allies in the peace preliminaries and in discussions of questions at Peace Congress; (6) the treaty to be kept secret until conclusion of a general peace.

(7) Russia agreed to aid by vigorous action in Bukowina; the Russian fleet to watch the Roumanian coasts.

Roumania, as a result of the war claimed before the Peace Conference the following districts, inhabited largely by Roumanians: From Hungary—Transylvania, Bukowina and Banat of Temesvàr; From Russia—Bessarabia.

SPAIN (Span. *Espana*), occupying the larger part of the southwestern peninsula of Europe, is bounded on the south and east by the Mediterranean, on the west by the Atlantic and Portugal, and on the north by the Bay of Biscay and France, from which it is separated by the Pyrenees. Its coast line extends 1,317 miles—712 formed by the Mediterranean and 605 by the Atlantic—and it comprises a total area of 196,700 English square miles, and a population (1910) of 19,588,688.

Surface.—The interior of the peninsula consists of an elevated tableland surrounded and traversed by mountain ranges. The uniform coast line and the great elevation of its central plateau give Spain a more continental character in its extreme range of temperature than any of the other peninsulas of Europe.

Outside the plateau lie the highest summits in the country, the Pic de Néthou, in the Pyrenees, Mulhacen and Veleta in the Sierra Nevada, while the Picos de Europa in the Cantabrian Range attain over eight thousand feet. The plateau itself is traversed by four mountain ranges which separate the valley, of the Ebro from that of the Douro; and the whole of it has a general slight inclination from east or northeast to southwest. Hence all the considerable rivers except the Ebro flow westward to the Atlantic.

These include the Guadalaviar, Júcar, and Segura, important rivers of the eastern watershed. The Minho, Douro, Tagus, Guadiana, and Guadalquivir drain the western valleys, which are formed between the mountain ranges of the Peninsula. The Tagus is the largest river of the Peninsula, the estuary of which forms a magnificent harbor. The Guadalquivir, though the shortest of the larger streams, is the most important on account of its fullness and its course through the most extensive lowland of the Peninsula. The effect of the tide in it is felt for several leagues above Seville, to which city it is navigable, eighty miles from the sea.

The configuration of the country renders the climate very varied. In parts of the northwest the rainfall is among the heaviest in Europe. In the east and southeast occasionally no rain falls in the whole year. The rainfall in the western Pyrenees is very great, yet on the northern slope of the valley of the Ebro there are districts almost rainless. The western side of the great plateau, speaking generally, is more humid and much colder than the eastern, where irrigation is necessary for successful cultivation.

Production and Industry.—Galicia is almost a cattle country; Estremadura possesses vast flocks of sheep and herds of swine. The country is generally fertile, and well adapted to agriculture and the cultivation of heat-loving fruits—as olives, oranges, lemons, almonds, pomegranates, and dates. The agricultural products comprise wheat, barley, maize, oats, rice, with hemp and flax of the best quality. The vine is cultivated in every province; in the southwest, Jerez, the well-known sherry and tent wines are made; in the southeast, the Malaga and Alicante.

Spain is rich in iron, copper and lead, but the mines have been only partially developed.

The seat of the manufacturing industries is chiefly Catalonia. Cotton and woolen manufactures engage many hands, and there are also considerable silk, paper, and cork industries.

The principal exports are wine, copper and copper ores, lead, iron ores, olive oil, raisins, oranges, cork, esparto grass, wool, salt, quicksilver, grapes, etc.

People.—The basis of the population of the whole Peninsula is that of the old Iberians, modified by the admixture of Celtic, Phœnician, Roman, Germanic, and Moorish (Arab) invaders who from time to time gained ascendency in the land and became intermixed with the ancient inhabitants.

Until lately the only religion tolerated was tha of the state, the Roman Catholic; now a certain toleration is allowed to other denominations.

Education varies greatly among different classes and in different provinces. In the large towns and in some of the provinces a great effort is made to keep the higher and the technical schools on a level with the best in other European countries. In other parts the

neglect is very great. There are ten universities: Madrid, Barcelona, Granada, Oviedo, Salamanca, Seville, Santiago, Valencia, Valladolid, and Saragossa. Primary education is by law compulsory, but the law is not strictly enforced, which accounts for the large percentage of illiterates.

Government.—The government of Spain is an hereditary monarchy founded on the constitution of 1876. The Cortes consists of two bodies—the Senate, of about three hundred and sixty members (one-half elected), and a Congress of Deputies, elected at the rate of one member to every fifty thousand inhabitants.

Cities.—The principal cities are Madrid, population 597,573; Barcelona, 587,219; Valencia, 233,348; Seville, 155,366; Malaga, 136,192; Murcia, 125,380; Saragossa, 111,701; Carthagena, 96,983; Bilbao, 93,536; and San Sebastian, 92,514; and there are also twelve towns with over 50,000 inhabitants.

THE ROYAL PALACE, MADRID,

one of the finest in Europe, has a frontage of four hundred and seventy feet, is one hundred feet high, and built of white stone. Among the thirty rooms on the first floor, the largest and finest is the Hall of the Ambassadors. The vault was painted by Tiepolo, and represents the exaltation of the Spanish monarchs. The walls are draped with velvet embroidered with gold, and twelve immense mirrors also decorate it. On the right of the throne, which is guarded by four gilded bronze lions, is a statue of Prudence, and on the left that of Justice. The chapel is extremely rich, but not very handsome. There is also a library, a theatre, and the magnificent collection of Flemish tapestries.

Madrid (Span. pron. *Madh-reedh'*), the capital of Spain, is situated in the department of Madrid (part of the ancient province of New Castile), eight hundred and eighty miles by rail from Paris. It is built on a treeless, ill-watered plateau, on the left bank of the Manzanares, two thousand and sixty feet above the sea-level.

The Manzanares is merely a mountain-torrent falling into the Jarama, a tributary of the Tagus; water is brought from the Guadarrama Mountains by an aqueduct forty-two miles in length.

The general aspect of the city is clean and gay, while the older parts are picturesque; no trace now remains of the mediæval city. The new streets are generally fine, broad, and planted with trees; the houses well built, lofty, and inhabited by several families living in flats. A great feature is the magnificent open spaces, chief of which is the Prado, running north and south through the eastern part of the city, and, with its continuations, three miles long. It contains four handsome fountains with groups of statuary, a fine obelisk to commemorate the gallant struggle with the French (May 2, 1808), monuments to Columbus, Isabel the Catholic, etc.

The picture-gallery here, founded by Charles III., is one of the finest in Europe, and contains many of the masterpieces of Velasquez, Murillo, Raphael, Tintoretto, Rubens, Teniers, and Van Dyck. Two other parks are the Buen Retiro, the fashionable promenade on the east of the city, and the Casa de Campo on the west. Midway between its extremities the Prado is crossed at right angles by the Calle de Alcala, the finest street in the city, about a mile in length, and leading from outside the fine triumphal arch rebuilt by Charles III. to the Puerta del Sol, the square which is the heart of Madrid; here converge the principal electric lines, and in it and the streets branching off from it are situated the principal shops and places of business.

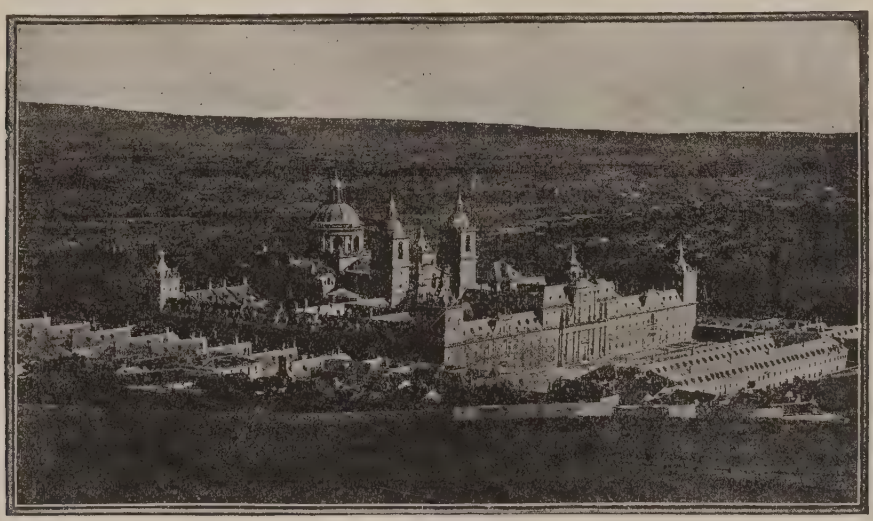
The finest square is the Plaza Mayor, formerly the scene of bull-fights; it contains a gigantic equestrian statue of Philip III., its founder. On the west of the city are the new cathedral and the royal palace; the latter, commenced in 1738 to replace the ancient Alcazar, which had been burned down, was finished in 1764 at a cost of fifteen million dollars. Other fine buildings are the palace of justice, formerly a convent; the houses of parliament; Buena Vista Palace, now the ministry of war, and the new national bank.

Besides a flourishing university, founded by Cardinal Ximenes, and two high schools, Madrid contains numerous municipal schools. Madrid

is well provided with newspapers and public libraries, the chief being the National Library, with more than half a million volumes, and the library of the university.

The opera house is one of the finest in the world; all the theaters must by law be lighted by electricity. The bull ring, situated outside the gates on the east, is a solid structure seating fourteen thousand.

Iron founding and the manufacture of furniture, carriages, and fancy articles are carried on on a small scale. The manufacture of tobacco employs many persons, chiefly women. The publishing trade is important, and books are well printed and cheap. The old tapestry factory still turns out beautiful work, as do the potteries at Moncloa.



THE ESCURIAL

is thirty-two miles from Madrid. It is called by the Spaniards the eighth wonder of the world. Philip II. built it in 1685 to commemorate the taking of St. Quentin, and to accomplish a vow which he made to St. Lawrence. This vast building has fifteen principal entrances, and more than one thousand one hundred windows. It is entirely built of granite, and its appearance is monotonous and cold. It contains a church, the Capilla Mayor, filled with royal monuments, the sacristy, a vast vaulted hall with a marble altar ornamented with bronze, the choir, and the pantheon or vault, where the kings of Spain are buried. The pantheon is reached by a magnificent staircase of colored marbles. The urn containing the remains of Charles V. was opened in 1870, and the body was even then in perfect preservation. The library of books and the manuscript library attracts the attention of scholars. The main entrance to the palace is in the middle of the north façade. The Hall of Battles, is covered with frescos representing Spanish conquests; and the apartments in which Philip II. lived and died. The Pavilion of Charles IV., called the Casa del Principe, is a charming little museum of paintings, sculptures, and mosaics. The King's Seat, where Philip II. came to sit when presiding over the work of the palace, is also to be seen.

History.—Spain was originally occupied by Iberian tribes (akin to the present Basque inhabitants of the north), who were partially overlaid by invading Celts. The Carthaginians established themselves in the south of Spain in the third century B. C. The Romans appeared in force in the next century, but it was not till after a fierce and prolonged resistance from Iberians and Celtiberians that, under Augustus, the Roman conquest was complete. Soon Spain, thoroughly Romanized, was contributing largely to Latin literature and Roman culture.

The Germanic invaders from the north, Suevi, Vandals, and Visigoths, crushed the Roman power in the fifth century A. D., and Spain became a province of the Visigothic kingdom (573 A. D.). Then followed the Moorish conquest, which was very rapid (714-732) and complete, except in the north and northwest. The several Christian kingdoms of Spain: Castile, Leon, Navarre, Aragon, etc., as well as Portugal—were formed by the gradual depression of the Moors; but Moorish Granada was not conquered till 1492, and Spain was not united under one rule till 1512.

Spain became a European state with the union of Ferdinand of Aragon and Isabella of Castile in 1469, and the New World was discovered for them. Under the Emperor Charles V., in the sixteenth century, Spain was the most important country in Europe; but the population was unequal to the drain upon it caused by constant warfare, emigration, and adverse economical and industrial conditions.

With Philip II., Charles's son, the decline of Spain set in, though now for sixty years Portugal was under the Spanish crown. The Bourbon dynasty brought complication in the wars of Louis XIV., and little advantage from the recovery of Naples and Sicily. The nadir of Spanish history is in the time of Napoleon, when Spain, in spite of some national efforts, was nominally a kingdom, but really a mere province of the French empire.

In spite of the valiant patriotism shown in resisting the French, and the ultimate recovery of national independence through the overthrow of Napoleon, the history of Spain in the nineteenth century was in the main inglorious. In Cuba there had been trouble since 1895, the final outcome of which was the disastrous Spanish-American war, leading to the loss of the greater colonies. The twentieth century has seen gradual recovery, grow-

ing toleration, a breach with the Vatican, revolutionary and repressive movements, and ambitions in northwest Africa.

In June, 1911, the situation in Morocco led to the dispatch of a Spanish force to Alcazar. But the indignation aroused in France at this action was quite overshadowed by the sensation caused when it became known that Germany had sent a warship to Agadir. Labor troubles in Spain broke out in September, 1911. Martial law was proclaimed throughout the country, and a royal decree suspended the constitutional guarantees, which were not re-established until October 22. In March, 1912, the ministry was reconstituted, but, in 1916, during the European war, again gave way over grave questions over neutrality and internal conditions.

SWEDEN (Swedish *Sverige*), a kingdom of northern Europe, occupies the eastern side of the Scandinavian peninsula. From 1814 till the amicable but definitive separation in 1905, it was associated with Norway under one crown. Its greatest length, north to south, is close to 1000 miles, its greatest breadth 300; its area 170,970 square miles; and its coast line 1550 miles. Besides many skerry islands, Sweden owns Gothland and Œland.

Surface.—The country may be generally described as a broad plain sloping southeastward from the Kjölen Mountains to the Baltic. The only mountainous districts adjoin Norway; the peaks sink in altitude from seven thousand feet in the north to three thousand eight hundred feet at the southern end of the chain. Immediately south of this point a subsidiary chain strikes off to the southeast, and, threading the lake region of central Sweden, swells out beyond into a tableland with a mean elevation of eight hundred and fifty feet and maximum of twelve hundred and forty feet. Fully two-thirds of the entire surface lies lower than eight hundred feet, and one-third lower than three hundred feet, above sea level.

Sweden is separated popularly and geographically into three great divisions—Norrland, Svealand, and Gothland. Norrland, in the north, is a region of vast and lonely forests and rapid mountain streams, often forming fine cascades and ribbon-like lakes before they reach the Gulf of Bothnia.

The central division of Svealand, or Sweden proper, is a region of big lakes, and contains most of the mines. Lakes occupy nearly fourteen thousand square miles, or eight and two-tenths per cent of the total area; several of the largest, as Vener, Vetter, Hjelmar, Mälar, are connected with one another and the sea by rivers and canals. Lake Mälar contains some thirteen hundred islands, many beautifully wooded, with royal palaces or noblemen's castles; and its shores are studded with prosperous towns, castles, palaces, and factories.

Gothland, the southern division, contains a much higher proportion of cultivated land, and its wide plains are all under agriculture.

Climate.—The climate of Sweden is continental in the north, along the Norwegian frontier, and on the southern plateau. The lakes in the colder districts of the north are ice bound for some two hundred and twenty days in the year; in the south only for about ninety days. The rainfall is greatest on the coast of the Cattegat.

Production and Industry.—The principal articles of cultivation are the various cereals—oats, rye, barley, wheat—and potatoes. The forests are very extensive, covering one-half of the surface of the country, and consisting of pine, birch, fir; these are of great importance, supplying timber, pitch, and tar, and also the chief fuel.

The mineral products are extremely rich: iron of excellent quality, that known as the Dannemora iron, being converted into the finest steel; gold and silver in small proportions; copper, lead, nickel, zinc, cobalt, alum, sulphur, porphyry, and marble. There is a railroad opening up the rich iron ore districts of Lapland, and mineral trains run from Gellivare and Kiruna to Lulea on the Gulf of Bothnia and to Narvik on the Atlantic. Considerable mines of coal are worked in Scania.

The chief articles of export are timber, butter, iron, steel, wood pulp, paper, matches, stone, iron and zinc ores, etc.

People.—The Swedes are a Germanic people, tall and strong, but with more variety of characteristics than the Norwegians. The Swedish language, allied closely to Norse and Danish, appears in very many dialects. It has had, especially since the sixteenth century, an extensive literature.

Almost the whole population is Protestant, adhering to the Lutheran Church, members of which alone are permitted to hold public offices. Education is well advanced in both countries, public instruction being gratuitous and compulsory. Sweden has the Universities of Upsala, which dates from 1477, and of Lund, founded in 1668, besides the many scientific and educational institutions of Stockholm.

Government.—The constitution of Sweden dates from 1809, but in 1866, when the separate meetings of the four estates—nobles, clergy, burghers, and peasants—were done away, the legislative system was much modified. The executive power is vested in the king, acting under the advice of a Council of State; the legislative in the two Chambers of the Diet, both of which are elected by the people—the first for nine years from proprietors, the second for three years from a lower class. The administration of justice is entirely independent of the government.

Cities.—The capital, Stockholm, has a population (1913) of 382,085. In addition to the capital, there are fourteen towns with above 20,000 population, viz.: Göteborg, 178,030; Malmö, 95,821; Norrköping, 46,180; Gefle, 35,736; Helsingborg, 37,385; Örebro, 33,182.

Malmö, on the sound opposite Copenhagen, is the outlet of the corn granary of the southern plain; Norrköping, on an inlet of the Baltic, after Stockholm, is the busiest manufacturing town of Sweden, its mills being driven by the rapids of the Motala; Gefle lies north of Stockholm, and is second only to it as a seaport on the Baltic side of the country; and Karlskrona, on the south coast, is the naval arsenal and headquarters of the fleet of Sweden.

PANORAMA OF STOCKHOLM, CAPITAL OF SWEDEN

Within recent years a network of railways has been formed over southern Sweden and Norway, connecting the capital towns with the ports of Göteborg, Malmö, and many other points.

Stockholm (*l* pronounced), stands on several islands and the adjacent mainland, between a bay of the Baltic and Lake Mälar, in a situation that is accounted one of the most picturesque in Europe.

Its nucleus is an island in mid-channel called "the Town"; on it stand the imposing royal palace; the chief church (St. Nicholas), in which the kings are crowned; the House of the Nobles; the town house; the ministries of the kingdom; and the principal wharf, a magnificent granite quay, fronting east.

Immediately west of the central island lies the Knights' Island (*Riddarholm*); it is almost entirely occupied with public buildings as the old Houses of Parliament; the old Franciscan church, in which all the later sovereigns of Sweden have been buried; the royal archives, and the chief law-courts.

North of these two islands lie the handsomely built districts of Norrmalm, separated from them by a narrow channel, in which is an islet with the new Houses of Parliament. In Norrmalm are the National Museum with valuable prehistoric collections, coins, paintings, sculptures; the principal theaters; the Academy of Fine Arts; the barracks; the Hop Garden, with the Royal Library, two hundred and fifty thousand volumes and eight thousand manuscripts, and with the statue of Linnæus; the Academy of Sciences; the Museum of Northern Antiquities; the Observatory, etc.

Ship Island (*Skeppsholm*), immediately east of "the Town" island, is the headquarters of the Swedish navy, and is connected with a smaller island on the southeast, that is crowned with a citadel. Beyond these again, and farther to the east, lies the beautiful island of the Zoological Gardens. Immediately south of "the Town" island is the extensive district of Södermalm, the houses of which climb up the steep slopes that rise from the water's edge. Handsome bridges connect the central islands with the northern and southern districts; quick little steamboats go to the beautiful islands in Lake Mälar on the west, and eastward toward the Baltic Sea, forty miles distant.

Sugar, tobacco, silks and ribbons, candles, linen, cotton, and leather are produced, and there are large iron foundries and machine shops. Though the water approaches are frozen up during winter, Stockholm exports iron and steel, oats and tar.

Stockholm was founded by Birger Jarl in 1255, and grew to be the capital only in modern times.

History.—Sweden was originally occupied by Lapps and Finns, but probably (1500 B. C.) Teutonic tribes drove them into the forests of the north, and at the dawn of history we find Svealand occupied by Swedes (Svea) and Gothland by the Goths.

Gothland was christianized and also conquered by the Danes in the ninth century, while Svealand remained fanatically heathen till the time of St. Eric (twelfth century), who conquered Finland, henceforth a Swedish possession. For a century Goths and Swedes had different kings, but gradually melted into one people toward the end of the thirteenth century.

Now arose bitter feuds between king, nobility, peasants, and universal turbulence prevailed; agriculture, industry, literature and culture progressed not at all or hardly existed. Even after the union of Sweden, Norway, and Denmark under one monarch (1397), Sweden was torn by conflicts which lasted down to the expulsion of Danish oppressors, and the restoration of Swedish autonomy by the national rising under Gustavus Vasa (1524), the ablest prince who had yet ruled the Swedes. Under him the reformation was heartily

GUSTAVUS ADOLPHUS PLACE AND THE ROYAL THEATER, STOCKHOLM

accepted. Gustavus Adolphus and the Swedes were its bulwark, not merely at home but in Germany in the Thirty Years' war; and by the acquirement of Bremen, Verden, and Pomerania, Sweden became (1648) a member of the empire.

Russia; thus reducing Sweden from the rank of a first-rate European power. After a bloody struggle Sweden had to cede Finland (1809) to Russia. Norway was united by a personal union (i. e., by the monarch) with Sweden in 1810; and in 1818 the French

NEW UNIVERSITY, UPSALA, SWEDEN

Upsala is best reached by boat from Stockholm. Here the celebrated university, founded 1477, by Jacob Ulfson, now magnificently housed, stands in the Drottninggatan. Library, the largest in Sweden, with three hundred thousand volumes, including the Codex Argenteus, or Gothic Gospel of Bishop Ulphilas (318-388), written in silver letters on purple vellum, also the Atlantica of Rudbeck, and the sacred book of the Druses, with the Edda Manuscript. An Observatory is attached to the University. The Botanical Garden has many rare plants and a bust of Linnæus (Linné), who was professor and physician here, living at Hammarby.

Under Charles XII. and his successor, the enmity of Denmark, Poland, and Russia wrested her new conquests from Sweden, and gave Livonia, Esthonia, Ingermanland, and Karelia (which had long been Swedish) to general Bernadotte was elected king (as Charles XIV.).

Norway's demand for a larger measure of home rule led in 1905 to a complete separation.

SWITZERLAND (Ger. *Schweiz;* Fr. *Suisse*). is a confederation of twenty-two cantons, lying practically in the very center of Europe, between France, Germany, Austria, and Italy. No part of it is within one hundred miles of the sea. It is also a very small country (sixteen thousand square miles), not much larger than the half of Scotland. The greatest length from east to west is two hundred and sixteen miles, the width from north to south being one hundred and thirty-seven miles. The population in 1910 was 3,741,971.

Surface.—The southern boundary lies for the most part along the highest crests of the Alps, which descend by the Italian valleys to the plain of Lombardy; the summits of the Matterhorn and Monte Rosa rise on the boundary line, which is crossed by the Great St. Bernard, Simplon, and Splügen passes. North of this mass of heights the deep valleys of the Upper Rhone flowing west to the Lake of Geneva, and of the Upper Rhine flowing northeast to that of Constance, mark a deep trench all across the country. In the heart of the country rises the mass of the Bernese Alps or Oberland, the Alps of Uri and Glarus, with the summits of the Finsteraarhorn and Jungfrau. Still farther north the country descends gradually by less elevated mountains and hills to the undulating lowland of Switzerland (still one thousand five hundred feet above the sea), which extends in a curve from the Lake of Constance on the northeast along the Valley of the Aar, by the Lakes of Biel (Bienne) and Neuchâtel to that of Geneva. Beyond this the long parallel ranges of the Jura close in the country on the northwestern frontier.

More than half of the whole country is covered by rocks, glaciers, forest, and mountain pasture, and cannot be permanently inhabited.

Rivers and Lakes.—All the northern part of the country belongs to the basin of the Rhine flowing to the North Sea. That river, having purified its waters in its passage through the Boden-See or Lake of Constance (partly in Switzerland), is joined by the Aar, which rises near the Grimsel, and flows through the lakes of Brienz and Thun. To this basin also belong the lakes of Zürich and Zug, Luzerne, Neuchâtel, and Biel or Bienne. The southwestern district drains by the Rhône to the Mediterranean, through the Lake of Geneva or Leman, which is partly in Switzerland, partly in France.

The smaller part of the southern boundary that laps over the Italian valleys of the Alps includes the head of Lake Maggiore, in Switzerland, and the upper Ticino, which flows through it to the plain of Lombardy and the Adriatic. In the east the boundary embraces only one valley, which drains to the Danube, the Engadine, through which the Upper Inn flows northeastward.

From the elevation at which they rise, and their rapids, the rivers of Switzerland are of no value in navigation. The Rhine only begins to be freely navigable at Basel, where it leaves the country. The larger lakes, however, have little steamers plying from shore to shore; that of Geneva, forty-seven miles long, has a considerable traffic.

Climate and Scenery.—The climate naturally varies with the elevation above the sea level, from that of the perennial snows at an elevation of about nine thousand feet, downward through the pastoral alpine region and the tall pine forests, to the lower lands in which the chestnut flourishes, and where orchard fruits, the vine, mulberry, and wheat can be grown. There is a variation of about thirty-four and one-half degrees in the mean temperature—between fifty-four and one-half degrees Fahrenheit at Bellinzona, and twenty degrees on the Theodule Pass.

Switzerland has been called the playground of Europe, and is visited by large numbers of tourists from all parts of the world, attracted by its magnificent mountain and lake scenery. The amount of money brought annually by tourists is estimated at twenty million dollars.

Geneva and Lausanne, on the beautiful lake of Geneva, Interlaken (between the lakes of Thun and Brienz), Luzerne and the Rigi, Schaffhausen at the Rhine fall, Zermatt beneath Monte Rosa, Lugano in the heart of the Italian lake district, are notable tourist stations; St. Moritz in the Engadine, and Leuk (Louèche) in the Rhône Valley, Pfäffers in that of the Upper Rhine, are famous for their baths. Switzerland as a whole — with its mountains, lakes, glaciers, waterfalls, valleys and cites—has been described by an American poet as a "cluster of delights and grandeurs."

STATUE OF TELL, ALTDORF, SWITZERLAND

Altdorf, near the southern end of Lake Luzerne, and capital of the canton of of Uri, is in the mountain-walled valley, and is the reputed scene of Tell's shooting the apple. The side is marked by a fountain. The colossal statue of Tell is near by. His birthplace, near Bürglen, is occupied by a frescoed chapel.

Production and Industry.—The forests, which cover about a sixth of the surface, are of immense value to the country, where most of the houses are built of wood. The mountain pastures give the characteristic employments of the people of the Alps and Jura, as herdsmen and shepherds, tending their cattle and making cheese in the mountain châlets during summer.

Agriculture is followed chiefly in the valleys, where wheat, oats, maize, barley, flax, hemp, and tobacco are produced.

The textile industries are the most important, the chief centers being Zürich, Basel, Glarus, and St. Gall. The chief are silk, cotton, and linen fabrics, besides raw silk. Next comes the clock and watchmaking industry, established at Geneva in 1587, which spread to the cantons of Neuchâtel, Berne and Vaud.

Wood carving was introduced in the Oberland about 1820. Other manufactures are chemicals, chocolate, and condensed milk.

Salt, obtained on the banks of the Rhine, is the only valuable mineral of the country.

People.—Three-fourths of the population of Switzerland, occupying all the center and north of the country, are Germanic; the remaining fourth belongs to three branches of the Romanic family—the French in the west, the Italian in the south, and the Rhœto-Romanic in the southeast. A little more than half of the population is Protestant, the remainder, chiefly in the mountain region, Roman Catholic.

Education is widely diffused, especially in the Protestant districts of the northeast, where the law of compulsory education is rigidly enforced. There are universities at Basel, Berne, Zürich, Geneva, and Lausanne.

Government.—At the close of the political storms which raged in Europe from 1789 till 1815, the affairs of Switzerland were re-arranged by the Congress of Vienna, which provided for the perpetual neutrality and independence of Switzerland in its twenty-two cantons. Since 1848 the independent states or cantons of Switzerland have become a united confederacy (Bundes Staat), the supreme legislative and executive authority of which is vested in a parliament of two chambers, sitting at Berne—the Stände Rath or States Council, and the National Rath, the first composed of two members for each canton, the second of representatives of the people according to numbers. The cantons are still, however, in a great measure, independent democracies, each making its own laws and managing its local affairs.

Referendum and Initiative.—These are two political institutions peculiar to Switzerland, the furthest developments of democracy yet attained.

The referendum, which has now spread throughout the whole Confederation, and by means of which all legislative acts passed in the Federal or Cantonal Assemblies may be referred to the people *en masse*, was fully developed in 1874, and it has been put in operation on an average once a year. The decisions have generally shown a conservative rather than a radical tendency on the part of the people.

Initiative is the exercise of the right granted to voters to initiate proposals for the enactment of new laws or for the alteration or abolition of the old ones.

Cities.—The capital of the Swiss Confederation is Berne, population (1910) 85,650. In 1910 there were twelve communes with populations exceeding 20,000: Zürich, 190,733; Bâle, 132,280; Geneva, 123,160; Berne, 85,650; Lausanne, 63,296; St. Gall, 37,657; Chaux-de-Fonds, 37,626; and Luzerne, 39,152.

THE BERNE CATHEDRAL

was built in 1421-1573, and restored in 1850, with a richly sculptured portal, some good stained glass of the fifteenth century, and a famous organ. From the Terrace in the rear of the Cathedral, the snowy peaks of the Bernese Alps are seen in a glorious panorama.

Berne, since 1849 the capital of Switzerland, sixty-eight miles by rail southwest of Basel, is situated on a lofty sandstone promontory formed by the winding Aar, which surrounds it on three sides. It is one of the best and most regularly built towns in Europe, as it is the finest in Switzerland. The houses are massive structures of freestone, resting upon shop-lined arcades. Rills of water flow through the streets. The view of the Alpine peaks from the city is magnificent.

The principal public buildings are a Gothic cathedral, the magnificent Federal Council Hall, the mint, the hospital, and the university. Berne has an interesting museum, and a valuable public library of fifty thousand volumes.

It was founded in 1191, was made a free imperial city in 1218, under Frederick II.; and between 1288 and 1339 successfully resisted the attacks of Rudolf of Hapsburg, Albert, his son, and Louis of Bavaria. The "Disputation of Berne" between Catholics and Reformers in 1528 prepared the way for the acceptance of the reformed doctrine.

On account of the traditionary derivation of its name (Swabian *bern*, "a bear"), bears are maintained in a public bear-pit.

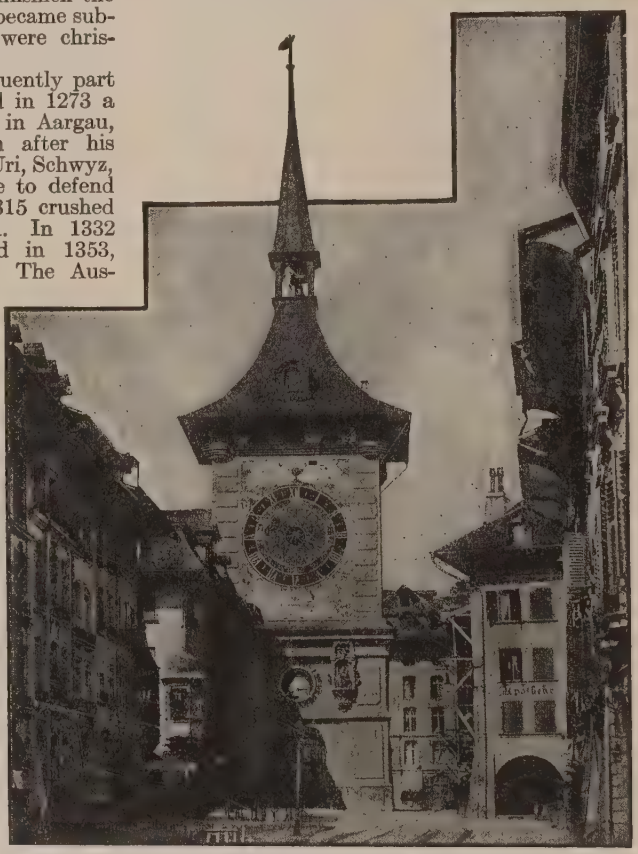
History.—The original inhabitants of Switzerland were the Celtic Helvetii, and the Rhætii of doubtful affinity. Both were conquered by Julius Cæsar and the generals of Augustus, and Romanized. Overrun by the Burgundians in the west, and their Germanic kinsmen the Alemannians in the east, Helvetia became subject to the Frankish kings and were christianized in the seventh century.

Most of the country was subsequently part of the Holy Roman Empire; and in 1273 a Swiss noble, Rudolf of Hapsburg in Aargau, became German emperor. Soon after his death (in 1291) the inhabitants of Uri, Schwyz, and Unterwalden formed a league to defend their common interests, and in 1315 crushed an Austrian army at Morgarten. In 1332 Luzerne joined the alliance, and in 1353, Berne, Zürich, Glarus, and Zug. The Austrians were again routed in Sempach in 1386, and in 1388 at Näfels.

The Swiss next had a fierce but triumphant struggle with Charles the Bold of Burgundy, whom they routed at Grandson and Morat in 1476, and finally at Nancy (where Charles was slain) in 1477.

When the Reformation began there were thirteen cantons, and the cantons took opposite sides from the beginning, not without serious turmoil and bloodshed. The treaty of Westphalia in 1648 recognized Switzerland as an independent state. Some of the cantons were strictly aristocratic and some highly democratic, and there was much discontent long before the French Revolution, when, in 1798, between civil strife and French armies, the old republic (or rather alliance) came to an end.

The Helvetic Republic of nineteen cantons, under French auspices, endured till 1805; then a new republican constitution was adopted, the Federal Pact of twenty-two cantons. On Napoleon's downfall, Valais, Neuchâtel, and Geneva, which had been incorporated with France, were restored, and Swiss neutrality and inviolability were recognized by the treaty of Vienna in 1815. Religious troubles led to a Catholic league in 1844, which was suppressed by the Federal forces in 1847. The present constitution was adopted in 1848, but revised in 1874. In 1891 a demand for popular initiative for measures was carried. In 1908 Switzerland entered into an international convention for compulsory arbitration at the court of the Hague.



BERNE CLOCK TOWER,
famous for its Bear Chimes—figures which perform every time the clock strikes.

Republic of Turkey, formerly comprised the wide but heterogeneous territories really or nominally subject to the Osmânlî Sultan; in Europe, Asia, and Africa. These territories, which once extended from the Danube to the cataracts of the Nile, and from the Euphrates to the borders of Morocco, have been greatly reduced in the nineteenth and twentieth centuries.

Turkey in Asia (200,000 sq. miles, estimated population 11,000,000) comprises the whole of Asia Minor, and extends from the Aegean Sea to the western boundaries of Georgia, Erivan and Persia, and from the Black Sea to the Mediterranean, and the northern boundaries of Syria, Arabia and Iraq. This area corresponds approximately with *Anatolia* ("Land of the Rising Sun," or Orient) and includes *Cilicia* round the Gulf of Alexandretta, assigned to France by the Allies, but restored to Turkey by the French. Alexandretta or Iskanderun, the chief port and an important strategical centre, secures the command of the Beilan Pass. Cilicia was handed over to the Kemalist forces by the French on Jan. 4, 1922. The district is now part of the Turkish Republic, and is under the control of the Assembly at Angora.

On the east the Russian boundary runs from just south of Batum to the northwest corner of Persia. The Persian boundary continues from near Mount Ararat to the Iraq at the Mosul line delimited in 1926 by treaty agreement with Great Britain. The southern (Syrian) boundary runs from Payas on the Gulf of Alexandretta to the Iraq, and, with the Mosul line, runs practically due east and west.

European Turkey consists of the provinces of Adrianople, Constantinople and Chatalja, and is separated from Asia by the Bosphorus at Constantinople and by the Dardanelles (Hellespont), the only political neighbor being Bulgaria, on the northwest.

the year, and some of the principal ranges are capped with perpetual snow; here the peasants build their dwellings underground to escape the severity of the seasons. Towards the west the winters are not quite so severe, but the variations of temperature are excessive.

PANORAMA OF THE BOSPHORUS AT THE NARROWEST PART

The Bosphorus, the straight connecting the Sea of Azov with the Black Sea, is so-called after Io, who swam over it in the shape of a heifer. On the western shore is the city of Constantinople. The Bosphorus at this point is about five hundred and fifty yards wide.

Physical Features.—Turkey in Europe is a mountainous country and the chief physical features as it is now limited is the strait of Bosphorus and the Dardenelles. The Bosphorus, which guards the approach to the Black Sea from the Sea of Marmora, is at the same time the focus of all maritime trade between the Mediterranean and Russia, etc., as well as of the overland routes from Europe into Asia Minor. It has fitly been likened to a tortuous river valley over whose wooded banks are scattered forts and towers, cities and villages, castles and parks. The southern gate of the Sea of Marmora is the Dardanelles, which gives an opening into the Ægean.

Turkey in Asia is still more mountainous. The two almost parallel ranges, Taurus and Anti-Taurus, which are the basis of its mountain system, cover almost the whole of the peninsula of Asia Minor or Anatolia with their ramifications and offshoots, forming the surface into elevated plateaus, deep valleys, and enclosed plains. From the Taurus chain the Lebanon range proceeds southwards parallel to the coast of Syria, and, diminishing in elevation in Palestine, terminates on the Red Sea coast at Sinai.

The Euphrates, Tigris, Orontes, and Kizil-Ermak are the chief rivers. (See Asia Minor.)

Climate.—The climate of Turkey in Asia is as varied as the physical features. The great plateau on the north has a distinctly continental climate, rigorous severe winters with intense scorching heat in summer; in the eastern part of the plateau region the mountains are covered with snow for two-thirds of

Products and Industry.—The soil of European Turkey is for the most part very fertile, and the cultivated products include most of those usual in central and southern Europe—maize, rice, rye, barley, millet, besides tobacco madder, and cotton. The mineral products are iron in abundance, argentiferous lead ore, copper, sulphur, salt, alum, and a little gold; some deposits of coal have been found, but none are worked. Sheep-breeding is largely carried on.

In Asiatic Turkey the mineral wealth is great; coal and iron are found together in considerable quantities; rich mines of copper exist in the mountains on the south of the Black Sea, and in the Taurus near Diarbekr lead and silver are found at intervals along a line connecting Angora, Sivas, and Trebizond in the north, and the eastern Taurus in the south; green, black, and white marble, and the finest quality of granite, are to be had in many parts of the mountain section.

With a fertile arable soil and a suitable climate, nearly every agricultural product flourishes. Oats, barley, and wheat are produced in great abundance. Almost all kinds of garden produce and orchard fruits abound, grapes and oranges are to be had all round the Mediterranean coast, as well as the choicest tobacco, opium, valonia and madder.

The mulberry is everywhere cultivated for feeding the silkworms, and cotton is grown in most of the western valleys. Vast groves of boxwood and other valuable trees clothe the seaward slopes of the hills. Dates are produced for export in the Babylonian plain, where wheat is indigenous. Petroleum and bitumen springs are found in the Euphrates valley.

Angora is famous for its flocks of goats, which produce the mohair of commerce, and enormous quantities of wool come from the countless flocks of sheep tended by the wandering Bedouin and Kurd shepherds.

There are at present no manufactures worth mention. The sponge fisheries of the Mediterranean are a source of great wealth.

Commerce.—The exports include tobacco, cereals, fruits, silk, opium, mohair, cotton, coffee, skins, wool, oil-seeds, valonia, carpets, etc., and are largely derived from the Asiatic provinces. Recently large quantities of wine and of raisins for the manufacture of wine have been exported. Since the establishment of the Anatolian railway by German enterprise the export of cereals, chiefly malting barley, has largely increased.

People.—The population consists of a singular mixture of races. Turks, Greeks, Slavs, and Albanians are largely represented, besides Armenians, Kurds, Arabs, Tartars, Jews, Circassians, and Frank residents. (See Book of Races.)

The established religion is Islam or Mohammedanism, but most other creeds are recognized and tolerated. The Protestant religion was for the first time officially recognized in 1845.

Education in all departments has of late been notably improved and has largely contributed to the complete overthrow of the antiquated and despotic system of government.

Government.—Until 1908 the government of Turkey was a pure despotism. An amazing change was swiftly and peacefully carried through in the autumn of that year. In connection with the troubles in Macedonia between Christians and Moslems, Greeks and Bulgarians, a Turkish military revolt took place, which, under the guidance of the "Young-Turkish" party (mostly educated abroad), became a great national movement. The sultan, overawed, had to acquiesce; parliamentary government was planned and carried out; equality before the law proclaimed to all races and religions of the empire; and a large measure of local self-government promised not merely to Turks but to Greeks, Bulgarians, Albanians, Armenians, Syrians, Kurds and Arabs.

The enormous difficulties of the crisis were complicated by Bulgaria proclaiming its independence, and Austria-Hungary annexing the provinces of Bosnia and Herzegovina. But government by a national assembly had taken root in Turkey.

The term "Sublime Porte," sometimes given to the Turkish government, is derived from the name of the chief gate of Constantinople.

Cities.—Of the towns by far the most populous is the capital, Constantinople (1,200,000), while after it come Adrianople (83,000), which by reason of its central position in the Maritza valley, commands an extensive inland commerce, Midia, and Gallipoli, the chief port on the Dardanelles.

The principal towns of Asiatic Turkey are Smyrna, 260,000; Aleppo, 125,000; Beyrout, 120,000; Scutari in Anatolia, 80,000, and Broussa, 80,000; Konia, 71,000; Angora, the capital, 40,000.

Constantinople was founded in 330 A. D. by Constantine the Great, from whom it derives its name, on a site partly occupied by the ancient Greek colony of Byzantium. The Turks call it Istambol or Stambol.

The city stands on a hilly promontory of triangular shape, having the Sea of Marmora and the Bosphorus on the south and east, and on the north the Golden Horn, an arm of the Bosphorus. It is thus surrounded by water on all sides but the west, where a strong wall shuts the city off, from the mainland. Like Rome, the city is built on seven hills, six of them being separated portions of one long ridge.

As in the case of all great cities, Constantinople has spread far beyond its original bounds, and may be said to include towns originally quite separate from itself.

Constantinople is excellently situated, more advantageously, perhaps, than any European city but Naples.

From the outside its appearance is most picturesque and imposing. At the taking of the city in the fifteenth century most of the churches were destroyed, and mosques were erected in the most prominent situations. Cupolas and minarets, with graceful curves and soaring spires, combine with lofty cypresses to give the city an air of unique grace, and to invest it with the mysterious glamour of the oriental world.

Within, however, the appearance is not so pleasing. The streets form a labyrinth of dirty, crooked, and ill-paved alleys, while most of the houses are low and are built of wood or rough stone. During the last half century the aspect of things has become much more European. The streets, under western influence, have been widened and improved, lighting at night is common, and a European style of building has been introduced, even for the sultan's palace. Cabs and electric cars are to be seen in most parts, while the old camel service has entirely disappeared. The dress of the people has changed in the same direction. The streets are generally dull in appearance, almost all animation being concentrated in the bazaars.

Constantinople consists of two distinct parts, besides more distant suburbs—Constantinople proper or Stambol, and what may be termed Christian Constantinople because it is there that the Christian colonies chiefly congregate. The two are separated by the Golden Horn, a safe harbor, capable of accommodating twelve hundred vessels, and so deep that the largest ironclads of the Turkish navy find enough water for their draught quite close to the shore.

Stambol or Turkish Constantinople lies on the south side of the Golden Horn, and Christian Constantinople lies on the north side; the two are connected by bridges. Stambol is on the site of Byzantium, and the old walls run a circuit of fourteen miles from the grim but now ruined and disused castle of the Seven Towers—where many sultans met thier deaths at the hands of their mutinous soldiery, and where foreign ambassadors were imprisoned upon declaration of war—to the Golden Horn, then along its south shore to Seraglio Point, and so back to the Seven Towers, close along the margin of the Propontis. Here are nearly all the monuments and antiquities worth seeing in Constantinople.

First, next the Seraglio, stands Agia Sophia, Saint Sophia, the church dedicated by Constantine to "Eternal Wisdom," and rebuilt with added splendor by Theodosius and by Justinian, and now converted into a cathedral mosque. Outside it is not worth a second glance, but within, the airy grace of its stupendous dome, and the beauty of its marbles and mosaics fascinate and amaze the vision.

Next, but not less beautiful, is the Suleymaniya, the mosque which the Great Suleyman and his

PANORAMA OF CONSTANTINOPLE

As the steamer runs up the Bosphorus, the white buildings and glittering minarets of Constantinople come into view; with the mosque of Santa Sophia, Galata Tower and Pera, the Sultan's Palaces at Beshiktash, with Scutari Suburb on the right, and then, rounding Seraglio Point, it glides at half speed into the Golden Horn, or harbor of Constantinople. At this moment, if the weather be fine and clear, a striking panorama opens to the eye of the voyager. The Golden Horn divides the city into two sections; Stamboul to the left, and Galata and Pera to the right. It is a bay, or amphitheater, surrounded by hills which are covered with buildings, domes, minarets, and palaces, embosomed by cypress groves, with hundreds of vessels and caiques skimming in all directions.

architect Sinan erected on the model of St. Sophia, but with Saracenic ornament and a loftier though not quite so expansive dome. Some of the monolithic colums are remarkable for their size and beauty, and the general effect is even more imposing than that of St. Sophia,

Scarcely less stately is the Mosque of Sultan Ahmed I. in the Hippodrome; distinguished without by its six minarets (instead of the usual four), and within by the four gigantic columns which support the dome. Here the official celebrations and formal processions take place at the great festivals.

The mosque of the conqueror, Mohammed II., is also notable, though it has been greatly altered in restoration.

There are altogether some eight hundred mosques in Constantinople, and numerous chapels; but very few of them present features of special interest, except sometimes in the beauty of their wall tiles, of the Rhodian style, for the manufacture of which the suburb of Eyyûb was famous.

The remains of the Greek churches are more interesting, and the Fanar, or Greek quarter of Stambol, recall the memories of many distinguished Fanariote statesmen; but among the relics of ancient Constantinople none is more striking than the Hippodrome or "Horse Manége", originally a circus surrounded by marble seats, long since removed, but still showing remains of antiquity, such as the famous column of the Three Serpents which once stood at the Temple of Delphi, and supported a gold tripod made out of the spoils taken by the Greeks at the battle of Platæa, but was removed to his new capital by Constantine.

Christian Constantinople, on the north side of the Golden Horn, comprises Galata, Pera, and Tophâna. Galata is pre-eminently the merchant quarter, founded by a colony of Genoese merchants in 1216. The Tower of Galata, a Genoese erection, serves the same purpose as the Seraskier's Tower on the opposite side in giving alarms of fires. A tunnelled railway drags passengers up the steep ascent to Pera.

Pera is the aristocratic quarter; here are all the embassies and consulates. The steep and badly paved Grande Rue is lined with fair if expensive shops, and has an opera house, many cafés and restaurants, besides most of the principal hotels. Turks preponderate at Tophâna, which is so named from its cannon foundry.

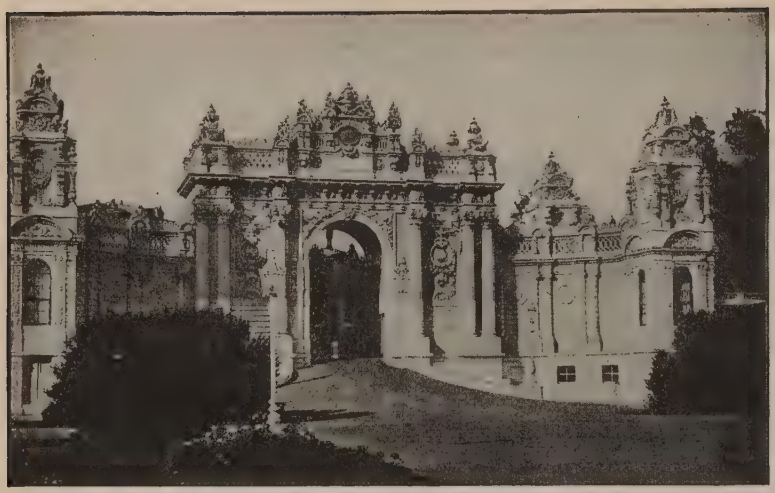
The magnificent palace of Dolmabagché is on the brink of the Bosphorus. Other suburbs are Kâsim Pasha, on the Golden Horn, the seat of the admiralty; Haskŏi, and the picturesque village of Eyyûb.

Along the European shore of the Bosphorus are the summer resorts of Therapia and Biyukderé.

The Asiatic shore is also lined with settlements from Scutari to Candili. The new palace of Yildiz Kŏshki stands at the top of the hill of Beshiktâsh, beyond Pera.

The commerce of Constantinople is increasing rapidly, though most of it is in the hands of foreigners, especially of Greek and Armenian merchants. Exports are chiefly cereals, carpets, silk, wool, hides, and all kinds of refuse and waste materials such as horns, hoofs, skins, bones, old iron, etc. Several hundreds of tons of the sweetmeat known as "Turkish delight" are also sent yearly to countries of Europe and America.

The manufactures have all taken their rise during the last twenty years or so, and even now only that of cloth making has made much headway.



ENTRANCE TO DOLMA-BAGTCHE PALACE

This palace, on the shore of the Bosphorus, was built and inhabited by Abdul-Medjid (1839-1861), is beautifully decorated in the interior and has a splendid throne room.

History.—The Osmanlis or Ottoman Turks sprang from a small clan of the Oghuz, who assisted the Seljûk sultan of Iconium, early in the thirteenth century, to resist the Mongol avalanche.

In the fourteenth century, the Turks under Osmân or Othmân conquered the Seljûk kingdom, and became known as Osmânlis or Ottomans. By 1336 they pushed their way to the Hellespont; under Murâd I. (Amurath) they occupied Adrianople and Philippopolis, received homage from the kings of Servia and Bulgaria, and practically held all the Balkan peninsula except Constantinople, which, after much fighting, fell before Mohammed II. in 1453. In the same century they conquered Albania, Greece, and the Crimea; and in the sixteenth century Syria, Egypt, Tunis, Hungary, and South Russia, and had wars with the Russians, Persians, and Venetians.

Their star began to decline in the seventeenth century; in 1682 they were driven back from Vienna, and lost Hungary, Transylvania, and Podolia. In the eighteenth century the Russians were their most successful enemies, wresting from them the territories from the Dniester to the Caspian. Greece attained independence in 1828, though Egypt failed to throw off its allegiance. The Crimean war (1854-1857) was fought in aid of the Turks against the Russians.

The next great crisis was the Russian war of 1877-1878. The worst Armenian massacres were in 1895-1896. Turkey held her own against Greece in 1897.

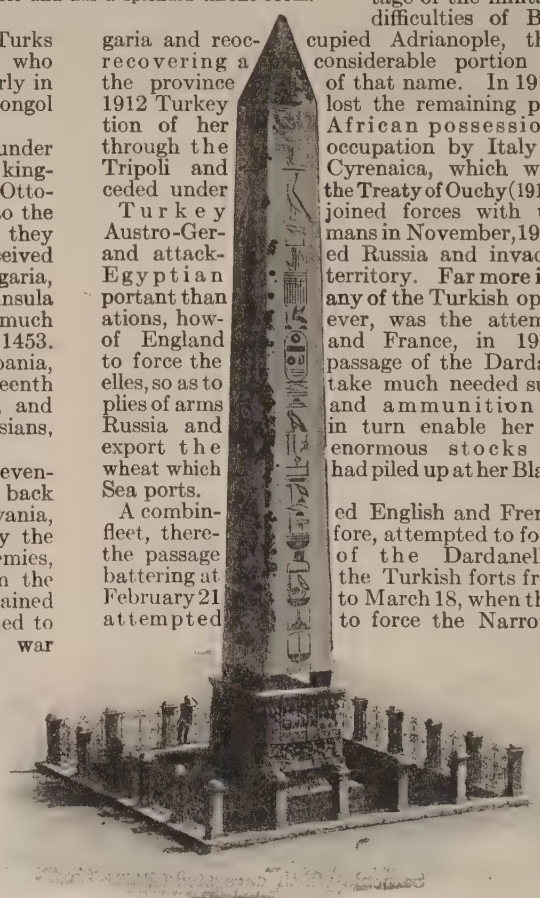
Abdul Hamid was deposed and constitutional government nominally established in 1908. But unrest and intrigue still prevent settled conditions.

Until the disastrous war of 1912-1913 with the States of the Balkan League (Bulgaria, Greece, Servia, and Montenegro) the European dominions of Turkey extended westwards to the Adriatic and northwards to Bosnia-Herzegovina (Austria). Under the Treaty of London in 1913 the northwest portion of Turkey was a line drawn from Enos, in the Ægean, to Midia, in the Black Sea, thus excluding Adrianople, which had capitulated to the Bulgarians after a prolonged siege.

During the second Balkan war (Bulgaria against the other members of the Balkan States) Turkey took advantage of the military difficulties of Bulgaria and reoccupied Adrianople, thus recovering a considerable portion of the province of that name. In 1911-1912 Turkey lost the remaining portion of her African possessions through the occupation by Italy of Tripoli and Cyrenaica, which were ceded under the Treaty of Ouchy (1912).

Turkey joined forces with the Austro-Germans in November, 1914, and attacked Russia and invaded Egyptian territory. Far more important than any of the Turkish operations, however, was the attempt of England and France, in 1915, to force the passage of the Dardanelles, so as to take much needed supplies of arms and ammunition to Russia and in turn enable her to export the enormous stocks of wheat which had piled up at her Black Sea ports.

A combined English and French fleet, therefore, attempted to force the passage of the Dardanelles, battering at the Turkish forts from February 21 to March 18, when they attempted to force the Narrows,



EGYPTIAN OBELISK, CONSTANTINOPLE

This Obelisk from Thebes, of rose colored granite, sixty feet high, was transported hither by Theodosius the Great, A. D. 390-395, and shows traces of bas-reliefs of that date, and Egyptian hieroglyphs thirty centuries old.

YILDIZ PALACE AND THE BEAUTIFUL HAMIDIEH MOSQUE,

but were repulsed, with the loss of the British battleships *Irresisible* and *Ocean*,, and the French battleships *Bouvet* and *Gaulois*, in addition to serious injury to a number of other warships engaged.

Great Britain sent an expedition to Mesopotamia and Palestine, which freed those countries and Syria from Turkish rule, while various tribal revolts in Arabia ended the Turkish suzerainty in that peninsula. On October 30, 1918, Turkey surrendered unconditionally before the conquests of the various Anglo.Indian and Imperial British columns and their Arabian allies. The Allied occupation of Constantinople became complete on March 16, 1920.

Turkey Becomes a Republic.—By the Organic Law of April, 1920 the Grand National Assembly of this new Nationalist Turkish State in Asia Minor declared itself the sole sovereign representative of the nation, and the Government of the Sultan and Parliament at Constantinople was repudiated. In November, 1922 the Assembly deposed the Sultan, declared the downfall of the Ottoman Empire, and the rise in its place of the New National State.

As a result of the Peace Conference, which met at Lausanne, a treaty was signed there on July 24, 1923. This treaty was ratified by Turkey and Greece, and came into force as between Great Britain and Turkey on August 6, 1924. The main provisions of the treaty and various instruments annexed to it are that Turkey retains Eastern Thrace, including Adrianople, while ceding Syria, Palestine, Mesopotamia and the rest of Arabia. Italy is confirmed in possession of the Dodecanese, and Greece in possession of the islands formerly held by Turkey in the Aegean, except Imbros and Tenedos. Turkish rights over Egypt, the Sudan and Cyprus come to an end.

Turkey was declared a republic in October, 1923, and a republican Constitution was promulgated in April, 1924. The seat of government was removed from Constantinople to Angora. The basic revised Constitution contained clauses designed to limit the citizenship of non-Turks and non-Moslems, and limited the franchise to males over eighteen. New Laws enacted in 1925 abolished polygamy, enforced registration of marriages, and gave the power to grant divorces to the President. This mighty change in government was the result, chiefly of the forceful campaign for national independence and westernization of manners conducted by the Nationalist Organization created in 1919 and led by Mustapha Kemal Pasha.

The National Assembly in 1926 adopted three new codes of law; the civil code was taken from Switzerland, the criminal code from Italy, and the commercial code from Germany, all with but little change. The codes are independent of religion, and the civil code replaces the various bodies of laws and codes that had grown up based on the Koran; it deals with the law of persons, of family, of inheritance, and of property. The adoption of these codes is of the utmost importance. The Swiss civil code was chosen, said the Minister of Justice, because it was the newest and most perfect and democratic."

The Gregorian Calendar was adopted, also the twenty-four-hour clock. Civil marriages were made obligatory after September 1, 1926, though a religious ceremony may follow if desired.

A mutual guarantee and neutrality treaty for three years was signed by Turkey and Russia on December 17, 1925.

THE CONTINENT OF ASIA

Asia, the main mass of the great continent of the old world (the East, the Levant, the Oriental or morning land, in contrast to the Occidental or evening land of Europe in the West), is of surpassing interest as the cradle of the human race, and of religions and civilization.

Position and Surface.—Its enormous area spreads out over nearly four times the extent of the great western promontory of Europe, and forms a third of all the land of the earth's surface.

The central zone consists of a series of vast mountain ranges and lofty plateaus, attaining its greatest breadth north and south, and its greatest altitude in the central part. The southern coasts project in three massive peninsulas—Arabia, India, and Indo-China; while west and east are the smaller peninsulas of Asia Minor, Korea, and Kamtchatka.

Asia is essentially the continent of great mountains and table-lands. It is only in the north-west that lowlands spread out very extensively. There the *Turanian and Siberian lowland,* separated from the plains of Europe only by the narrow belt of the Ural, extends from the shore of the Caspian away north to merge into the ice-covering of the Arctic Sea. On the west the plain has an enormous width, but farther east the mountain region, approaching nearer the icy sea, narrows the lowland till it becomes a comparatively small coast plain, sending branches southward along the Lena and the other great rivers.

The great mass of the Asiatic highlands extends through the whole continent, from the Mediterranean on the south-west round to Bering Strait on the north-east. Midway nearly, the plains of north-western India and of Southern Turkestan approaching one another, the highland is compressed to its narrowest, so that two unequal portions of it, an eastern and a western, are only united by the isthmus-like range of the *Hindu-Kush,* from the opposite sides of which tributaries flow to the Indus and to the Oxus.

Rivers and Lakes.—The rivers of Asia flow outward from the edges of the great highlands of the interior to the Indian Ocean, the Pacific, and the Arctic Seas; but within the borders of the great plateaus, and in the dry regions of the steppes and deserts, there is an immense area from which no rivers escape to the ocean. Flowing northward to the Arctic basin are the *Irtish, Yenisei, Lena,* and other rivers; to the Pacific—*Amur, Hoang-ho, Yang-tse kiang,* and *Mekong;* to the Indian Ocean—*Salwin, Irawadi, Brahmaputra, Ganges, Indus, Euphrates,* and *Tigris* (Shat-el-Arab).

The landlocked *continental drainage area* embraces both the wide dry region of the lowland which surrounds the Caspian and the Sea of Aral, and the interior plateaus of both great divisions of the Asiatic highlands, Tibet, Turkestan, and Mongolia in the east, and Persia and Arabia west of the isthmus of the Hindu-Kush. To the lowland region belong the great residual lakes of a former Mediterranean, the Caspian, which we have already noticed in connection with Europe, the Aral' and Lake Balkash, with many smaller salt-pools.

Political Divisions.—The larger part of Asia is under the dominion of European Powers—Russia, Britain, France, and Turkey.

Russian Possessions stretch from the Black Sea to Bering Sea, and include the whole of Siberia, Western Central Asia (Turkestan, with suzerainty over the native states of Bokhara and Khiva), and Caucasia.

British Possessions form, in the main, a tolerably compact mass in the south—India with Baluchistan and Burma, Ceylon and the Straits Settlements, and the more isolated colonies of Hong-Kong, Aden and Perim.

French Possessions are situated chiefly in Indo-China, north and east of Siam, with a few places in India.

Turkey occupies the western peninsula (Asia Minor) with neighboring territories, the west, and part of the east, coast of Arabia.

Independent States.—Arabia (which includes several governments and tribes), Persia, and Afghanistan, in the west; Tibet, in the centre; China, occupying a great part of the centre and east; Korea and Japan, in the east; and Siam, in the south-east, between the British and French possessions in Indo-China. The Philippine Islands, in the Pacific Ocean, south-east of China, were acquired by the United States after the war with Spain, 1898.

Races and Peoples.—Asia is certainly the cradle of the Mongolic, and most probably also of the Caucasic division of mankind. Apart from the dark negritos of the Malay peninsula and the Deccan, who may be regarded as intruders from the Oceanic region (Eastern Archipelago), the whole continent has been occupied since neolithic times exclusively by these two stocks—Mongols chiefly in the north, east, and centre, Caucasians chiefly in the southwest.

The ethnological parting line may have originally corresponded roughly with the western section of the main axis, running through the Caucasus and North Iranian escarpments to the Hindu-Kush and Pamir plateau. The primeval home of the Caucasic division would thus have been restricted to the Iranian table-land and the peninsulas of Arabia and Asia Minor, all the rest of the continent comprising the Mongolic division.

But already before the dawn of history this parting line had been overlapped at several points, and from the earliest times Mongols, such as the Babylonian Accads, are found encroaching on the Caucasic domain, and Caucasians, such as the Aryan Hindus, encroaching on the Mongolic domain. Such migratory movements and interminglings have continued throughout the historic period mainly to the advantage of the Mongols, who have occupied most of Asia Minor and considerable portions of the Caucasus and Irania (North and Central Persia and North Afghanistan). The Caucasian gain is chiefly represented by the more modern political ascendency of the Aryans (Russians, English, and French) in the north and south, and by the stream of Russian migration which has overflowed into central Asia, Siberia, and the Amur valley.

Religions and Sects—Asia not only has given the rest of the world most of its domesticated animals and cultivated plants; it has also been the centre in which the higher religions and civilizations have arisen, and whence these have spread outward.

The four great religions which are professed by the great majority of mankind—the Jewish, Buddhist, Christian, and Mohammedan—had their origin in Asia.

At present the inhabitants of Asia belong chiefly to the Buddhist religion, which—inclusive of the followers of Lamaism, the moral philosophy of Confucius, and the teachings of Lao-tse, who all accept more or less the Buddhist ritual—has no less than 530 to 560 millions of followers—i.e. nearly one-third of mankind. The old faith of Hinduism has no less than 227 millions of followers in India. Most of the inhabitants of Western Asia, as also of part of Central Asia, follow the religion of Islam; they may number about 90 millions.

The Christians number about 20 millions in Armenia, Caucasus, Siberia, and Turkestan. Many of the Ural-Altaians continue to maintain their ancient faith, Shamanism. Jews are scattered mostly in Western and Central Asia. A few fire-worshippers—Guebres or Parsees—who are found in the west of India and Persia are the sole remnant of the once wide-spread religion of Zoroaster.

Climatic Conditions—Even Eastern Europe has quite a continental climate. Still more continental is the climate throughout Asia, with the exception of a part of its coast regions. On account of the immense area of Asia, great differences of climate are met with, and therefore the meteorologists subdivide the continent into several very different climatic regions, of which Eastern Siberia, dry, and in winter very cold, includes Verkhoyansk, the coldest spot of the Eastern Hemisphere; while India, the Indo-Chinese Peninsula, and adjoining islands have a tropical climate, with abundant periodical rains. Asia Minor has of all Asiatic regions the most moderate and agreeable climate. During the winter, Asia, as a whole, with the exception of India, the Indo-Chinese Peninsula, and South-western Arabia, enjoys a temperature much lower than that of corresponding latitudes elsewhere; while in July, throughout all Asia, except on the coasts of the Kara Sea, Kamchatka, and the Manchurian littoral, the temperature is higher than under the same latitudes elsewhere.

Plants, Animals, Minerals—To Central Asia we owe most of the European grains and tree fruits, oranges and lemons, peaches and apricots, the fig and olive, vines and nut trees, besides hemp and flax, the garden rose, and many other cultivated flowering plants. From India the banana has spread out to all parts of the tropical world, with rice and the sugar cane, indigo and several sorts of cotton; it is also the home of several palms, the coco and the pinang, which gives the areca or betel nut; it has the largest poppy fields yielding opium, giant bamboos, ebony, and teak the most durable of shipbuilding timbers.

China is the native country of the tea plant; the East India islands and the Malay peninsula of spices, cinnamon, black pepper, and cloves, and of the large tree yielding the milky juice that hardens into "gutta percha."

The mountain region of Central Asia is the native land of the horse and the ass, of the ox and buffalo, the sheep and goat, from which the domesticated varieties appear to have derived their origin. Both varieties of the camel, the Arabian and the Bactrian, the single and the double humped, are Asiatic. The Yak ox, with its silky coat of long hair, is to the inhabitants of the highland of Tibet what the reindeer is to the tribes of the Siberian plain in the far north, almost their sole wealth and support. The elephant, of a different species from that of Africa, is a native of the tropical parts of Asia; the lion of Southern Asia is smaller than that of Africa: the tiger ranges from Java and India north to Manchuria: bears are found in all parts, the white bear in the extreme north, and other formidable species in the more temperate parts, while those of the tropical region are harmless feeders on fruits and honey. Dogs are used by some of the Siberian tribes as sledge-drawers, others are fattened in China for food, but in all Mohammedan Asia the dog is an unclean animal, and prowls about as the scavenger of the towns and villages.

Tropical Asia abounds in monkeys, the largest being the "orang outan," the "wild man of the woods" of Malacca and the south-eastern islands. Some are tailed—others, such as the orang, are tailless; but none have prehensile tails like the American monkeys.

The domestic poultry of all parts of the world seems also to be derived from the numerous gallinaceous birds of Asia; the pheasant takes its name from the Phasis river (the modern Rion flowing to the Black Sea from the Caucasus), from the banks of which it was brought at an early period into Greece; the splendid peacock is a native of the East Indies, as the exquisite birds of paradise are almost exclusively of New Guinea.

Siberia, the flora and fauna of which are almost limited to its fine woods and fur-bearing animals, makes up for this deficiency by its mineral treasures; it is the great mining-region of Asia, yielding gold, silver, and platinum, copper and lead, coal, and graphite better known as black lead; India has diamonds and other precious stones; China its fine porcelain clay or kaolin, besides vast coal-fields; the Steppes round the Caspian region are rich in salt; the steamers of the Caspian, place in of coal, now make use of the abundant naphtha or petroleum from the "fire fields of Baku, to which Ghebr fire-worshippers of Persia formerly made pilgrimages; the Dead Sea also occasionally casts up large masses of asphaltum or bitumen, whence its ancient name of Lucas Asphaltites.

Hitherto Asia has supplied Europe and the rest of the world chiefly with raw materials—gold, silver, petroleum, teak and a variety of timber-wood, furs, raw cotton, silk, wool, tallow, and so on; with the products of her

tea, coffee and spice plantations; and with a yearly increasing amount of wheat and other grain. Steam and electric power recently introduced to Asiatic industry, although but a very few years old, threatens to rival European and American manufacture. Indian cottons of European patterns and jute-stuffs already compete with those of England and the United States. The silks, printed cottons, carpets, jewelry, and cutlery of particular districts in India, China, Japan, Asia Minor, and Persia, far surpass in their artistic taste many like productions of Europe; and the export of these articles is important.

General Characteristics of Asiatic Civilization—All the central mass of the continent, from Arabia over the Caspian region northward into Siberia and eastward to Mongolia, is a region characterized by pastoral steppe and bare desert. Hence the nomadic character of so large a share of the population of these regions. The Bedouin of the Arabian and Syrian deserts wanders from pasture to pasture, carrying with him his black tent of woven goat's hair; the restless Kirghiz roam about the vast monotonous steppes that stretch north and east of the Caspian, as do the Mongols with their camel droves over the steppes north and south of the Gobi desert. In all this region the seats of settled and more cultivated men appear only like islets in a wide sea. In Siberia also, the settlements of Russian colonists, partly deported, partly voluntary exiles, begun in the sixteenth century, are only so many points in the midst of the native tribes, most of whom are nomadic fur trappers in the forests, or fishers, or owners of reindeer herds, which migrate north and south according to the season.

The south and east of the continent presents a remarkable contrast. There China and Japan, India and Indo-China, present densely peopled and highly cultivated lands, studded with great towns and venerable monuments of a civilization which dates from the most remote times, but which, with the remarkable exception of Japan, seems to have reached a point beyond which it cannot advance of its own inward vitality, one generation of men following another in the same stereotyped process.

The princes of India rode on elephants and lived in splendid palaces at the time of Alexander the Great's invasion, and the people were then skilled in the same arts they now possess, but all impulse to higher culture and progress beyond that point has come from without, and since the country began to pass under British rule.

The Chinese preceded Europeans in many inventions—in printing and paper-making, in the invention of the compass, in burning coal for fuel, in making porcelain, guns, and gunpowder,—but with these the inventive power seems to have become exhausted, and though foreigners have come and gone teaching new arts and sciences, the Chinese hold tenaciously to the same beaten paths of ancient custom.

With the nomadic tribes of Central Asia patriarchal government is associated. In the anciently civilized states of the south and east the ruler is always an absolute monarch or despot. No other form of government than this—except for village or tribal rule—has ever been known on the continent. The ancient Babylonian, Assyrian, and Persian empires, like those of the Arabs, Mongols, and Turks, following them, were all despotisms, the rulers having frequently, as at the present day in several states, the double attributes of religious and political supremacy.

History—The races formerly occupying the plains of Mesopotamia, and the mountains adjacent, the Babylonians and Assyrians, are, with the sole exception of the Egyptians, those whose inscriptions and monuments supply the earliest definite records of mankind. These records go to show that powerful kings then ruled over those countries, and that frequent changes in the boundaries of the separate states took place,—a state of affairs which lasted as long as the kingdoms themselves continued to exist. It is of course impossible to say with any exactitude how long these nations may have been in arriving at such a state of civilization, but there is no reason to suppose that the course of evolution was any more rapid then than now. (See further, Extinct Nations of the Past, and Book of Races.)

The discovery by the Portuguese in 1498 of the passage to India by the Cape of Good Hope marks a new epoch in European history in Asia. The Portuguese were the first to found colonies in India, but were soon followed by the Spaniards, Dutch, French, Danes, and British. The Mongol dynasty, however, was the chief power in India from early in the sixteenth century till late in the seventeenth. During this period the various European nations had been making some progress, and when the Mongol dynasty finally declined before Mahratta and Afghan onslaughts, the long struggle for the rule of India among Asiatic races—pre-Aryan, Aryan, Afghan, and Mogul—was destined to end in European supremacy. In the struggle between the European races the British after a struggle overcame their most formidable competitors, the French, and at length took possession of the whole of the peninsula with the exception of a few places on the sea coast. Russia, in the course of a few centuries, beginning with the conquest of Siberia by the Cossacks between 1580 and 1584, conquered and partly colonized the most favorable parts of the north-western slope of the lofty plateau of Asia, and reached the Pacific across its narrow extremity in the Northeast. An extensive territory in Farther India has of late years been taken possession of by France. China has sunk into a subordinate place, after having been regarded as the third power in Asia. The war with Japan in 1894-5 showed her weakness; recent events in China, however, appear to indicate that an awakening is taking place in that country also. Japan is now the foremost Asiatic native power, and has made wonderful progress in civilization during the last forty years, showing remarkable aptitude in assimilating the material civilization, and to some extent the institutions, of Europe and United States.

The Potala at Lhassa. This remarkable building is the headquarters of the Dalai Lama in the famous "Forbidden City" of Tibet. It has many hundreds of rooms, and its height is from eight to twelve stories. Although containing no examples of artistic work, it is probably the most imposing of the more primitive structures of the world.

LEADING COUNTRIES OF ASIA

CHINA, or more accurately the Chinese Republic, is an extensive dominion of Eastern Asia of which China proper constitutes the principal portion. For centuries this dominion has been known as the Chinese Empire, and it is still frequently referred to as such, although the form of government is now republican. China includes a number of dependencies or subject territories, viz.: Manchuria, Mongolia, Tibet, East Turkestan, and the small territories between Mongolia and Tibet.

By its natives China is never so called, but usually by the Chinese words for "The Middle State," or "The Republic of the Middle Flower." The name China (Chi-na, land of Chin) comes to us from India through Buddhism. Various old names are Serica and Cathay, and in the Bible "Land of Sinim."

China and its dependent territories have an area of 4,300,000 square miles. The population of the whole is variously estimated at from 300,000,000 to 440,000,000. The great bulk of this falls to the provinces of China proper; the population of all the dependencies (Manchuria, Tibet, Mongolia, East Turkestan), making but some 16,000,000 or 25,000,000 of the total.

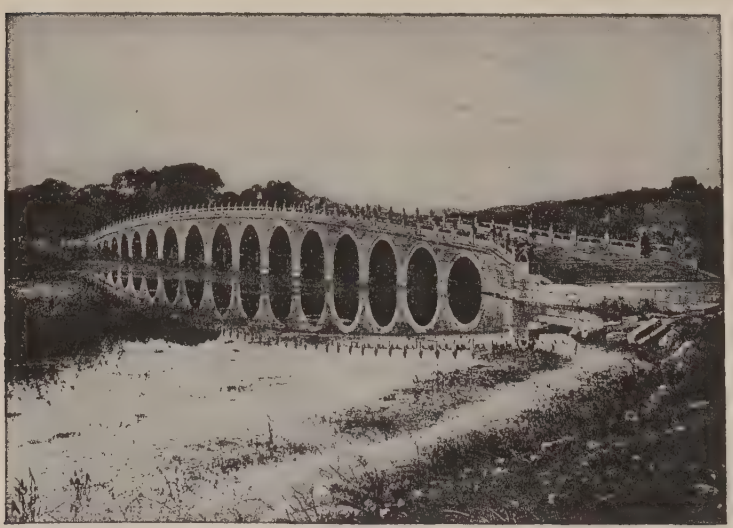
Surface.—Occupying all the central and eastern portion of the continent of Asia, the limits are for the most part very distinctly marked out by great natural features. The boundary with Russian Siberia on the north runs along the Amur River and the crests of the Sayan and Altai Mountains; towards western Turkestan the alpine heights of the Thian Shan and the Pamir form the limit; the snow clad Himalaya range separates China from the hot plains of India in the south, and the mountains of Yunnan continue the natural frontier eastward again to the coasts of the Pacific.

Within these wide exterior limits of China includes a number of regions, some of which are strongly contrasted with one another in their natural features and in the character of their population. Along the eastern or maritime border, where the rivers flowing down from the mountain region of the interior have spread out in wide alluvial plains next the sea, lie China proper and Manchuria, filled with a teaming population of busy agriculturists and townsfolk. Within, on the high plateau of Central Asia, the region of bare steppes and deserts, and the mountain skirts round it, are the countries of Mongolia, Eastern

Turkestan, and Tibet, thinly peopled for the most part by nomadic pastoral tribes.

China Proper may be described as sloping from the mountainous regions of Tibet and Nepal toward the shores of the Pacific on the east and south. The most extensive mountain range in it is the Nan Ling or Southern Range, a far extending spur of the Himalayas. Commencing in Yunnan, it bounds Kwangsi, Kwangtung, and Fukien, on the north, and, passing through Chekiang, enters the sea at Ningpo.

HUNCHBACK BRIDGE, NEAR PEKIN G, CHINA



BRIDGE AT YUEN-MING-YUEN, CHINA

North of this long range, and west of the one hundred and thirteenth meridian, on to the borders of Tibet, the country is mountainous, while to the east and from the great wall on the north to the Po-yang Lake in the south, there is the Great Plain, comprising the greater part of the provinces of Chihli, Shantung, Honan, Anhui, and Kiangsu. The Great Plain extends on both sides of the lower Hoang-ho, between the great cities of Peking and Nanking, over an area more than three times as extensive as England. Sedulously irrigated or drained, and cultivated in every corner, this great plain supports the densest agricultural population in the world.

In the provinces west from Chihli—Shansi, Shensi and Kansu—the soil is formed of what are called the loess beds, which are extremely fertile, the fields composed of it hardly requiring any other manure than a sprinkling of its own fresh loam. The husbandman in this way obtains an assured harvest two and even three times a year. This fertility, provided there be a sufficient rainfall, seems inexhaustible.

Seas, Rivers and Canals.—The semi-mediterranean seas and gulfs of the Pacific along the coasts of China are distinguished by separate names. In the north, between the Korean peninsula and the mainland of China, is the Hoang Hai or Yellow Sea, three hundred miles wide, named from the lemon color of its waters, filled with the alluvium brought down to it by the Hoang-ho, and so shallow that its muddy bed is frequently furrowed by passing vessels. Within or northward lie the Bay of Korea and the Gulfs of Pechihli and Liaotung, the two last separated almost entirely from the outer China Sea by the projecting promontories of Shantung and Liaotung. South of the Yellow Sea, between the mainland and southern Japan, with the chain of the Luchu Islands and Formosa, extends the wider Tung-

GREAT CHINESE WALL,

erected to protect the ancient empire from the inroads of nomadic Tartars about 214 B. C. The main substance of the wall is earth or rubbish, retained on each side by a strong casing of stone and brick, and terraced by a platform of square tiles. The thickness of the wall at the base is often as much as twenty-five feet. (See full description below.)

hai or Eastern Sea; and from this the Fukien Channel, between Formosa and the coast of China, one hundred miles wide, leads into the great mediterranean called the Nanhai or South Sea of China, which is almost completely shut in by Borneo and the Philippine Islands. The coasts of the Yellow Sea bordering on the great plain are low and flat; southward thence to the Island of Hainan the shores of China rise steep, and are dotted round with rocky islets.

The rivers of China—called for the most part *ho* in the north, and *chiang* (*kiang*) in the south, are one of its most distinguishing features.

Two of them stand out conspicuous among the great rivers of the world: the Ho, Hoang-ho, or Yellow River, and the Chiang, or Yang-tze-kiang. They rise not far from each other among the mountains of Tibet. The Ho pursues a tortuous course seaward through North China; the Chiang or Yang-tze through Central China. The terrible calamities caused by the inundations of the Hoang-ho have procured for it the name of "China's Sorrow." The Ho is not much under the Chiang in length—somewhat over three thousand miles.

Besides these may be noted the Pei-ho, which gathers the waters of the northern portion of the great plain, and forms a highway of communication between the capital city of Peking and the port of Tien-tsin, thirty-five miles above its mouth; the Min, the river of the province of Fukien, by which the Bohea teas are brought down to the port of Fu-chou; and the Si-kiang, the largest river of southern China, one of the delta branches of which forms the Chu-kiang, or river of the great port of Canton.

The three largest lakes of China lie immediately south of the course of the Yang-tze. The Tung-ting-hu, seventy miles long, and the Poyang-hu, nearly as large, are expansions of the mouths of the chief southern tributaries of the Yang-tze in Central China; the third, the Tai-hu, lies south of the estuary.

Canals.—Greatest of all the public works in China is the Grand Canal, which traverses the great plain for a distance of seven hundred miles, passing from Tientsin, on the Pei-ho, in the north, across the course of the Hoang-ho to the lower course of the Yang-tze, connecting a system of water communications which extends from the capital to the chief parts of the empire. It is but the greatest sample of the system of canals, great and small, which form a network over all parts of the lowlands of China. Steam communication, however, all along the eastern seaboard from Canton to Tientsin has now very much superseded its use.

The glory of making this canal is due to Kublai, the first sovereign of the Yüan dynasty.

After the Grand Canal, as a gigantic achievement, comes the Great Wall, on the north side next Mongolia. Not so useful as the canal, and having failed to answer the purpose for

which it was intended—to be a defense against the incursions of the northern tribes, there it still stands, the most remarkable artificial bulwark in the world.

It was in 214 B. C. that Shih Hwang Ti determined to erect a grand barrier all along the north of his vast empire. The wall commences at the Shanhai Pass and extends westward continuously almost into the heart of the continent for a distance of one thousand five hundred miles, over mountain and valley, and across rivers and ravines. It is a rampart of earth, ten to thirty feet high, broad enough at the top to admit of several horsemen passing abreast, and was formerly cased on the sides and top with bricks and stones, and was flanked by numerous projections or towers, gates being left at intervals for the passage of travelers and the collection of customs. Now it has fallen in many places, and its gates are negligently guarded, and northward of Peking the growing Chinese population has spread and settled the country to a considerable distance beyond its barrier.

PAGODA, NEAR PEKING, CHINA

The Pagoda, or "idol temple," in China, usually distinguishes the Buddhist from the Confucian temple. It is a tapering tower, always with an odd number of stories. First-class padodas have seven, nine, or thirteen stories, minor ones have three or five. The most famous was the Porcelain Tower of Nanking, erected in the beginning of the fifteenth century; only nine of the proposed thirteen stories, cased in white porcelain, were completed, and the height never exceeded about two hundred and sixty feet. It was destroyed by the Taipings in 1856.

Climate.—The climatic conditions naturally vary considerably over so large a stretch of country. In the lofty Tibetan plateau and the less elevated plains of Mongolia, the climate is exceedingly dry, and is marked by great extremes of hot and cold. The basins of the two great rivers, being nearer the Pacific, are moister and more equable. In this part of China proper the dry season lasts from November to February, the remaining months, particularly May, being extremely wet. The rainfall is of a copious tropical nature.

Generally speaking, China is a cold country in comparison with other regions in the same latitude. From July to September, however, the weather is intensely hot, and the heat is accompanied by typhoons, which are much dreaded for their violent and devastating effects.

Production and Industry.—Agricultural pursuits occupy the majority of the people, the chief products being tea, silk, indigo, cotton, cereals, rice, and sugar. Agriculture is held in higher estimation here than in any other land in the world. The land is freehold, and is held by families in small holdings.

There is much coal in all the provinces, and iron ore is also plentiful in Shansi. Copper ore is plentiful in Yunnan. Southern Yunnan also furnishes a variety of precious stones—rubies, amethysts, sapphires, topazes, opals, besides malachite, and the steatite or soapstone, in which the Chinese carve figures of all sorts.

The much prized Yu, or *jade*, brought formerly from Turkestan, comes now from the Hoang-ho valley; lapis lazuli (for the preparation of ultramarine) is found in the mountains of Che-kiang, in the east coast region. Large beds of porcelain clay occur in this province also, and in its neighboring one of Kiang-si.

About one-fourth of the world's supply of new silk comes from China. Cotton and wool mills, flour and rice mills are important industries.

Before European manufactures had reached their higher development, fine "Nankeen" calico was largely imported from China to Europe. "China ware," or porcelain, was first made by the Chinese, and so ignorant were the early Portuguese traders of its value, that they called it "porcellana," believing it perhaps to be made of shells; the secret of its manufacture was not discovered till the beginning of the eighteenth century. In the province of Kiang-si, not far from Yao-chou, there are porcelain factories which were founded by an emperor in 1004 A. D.

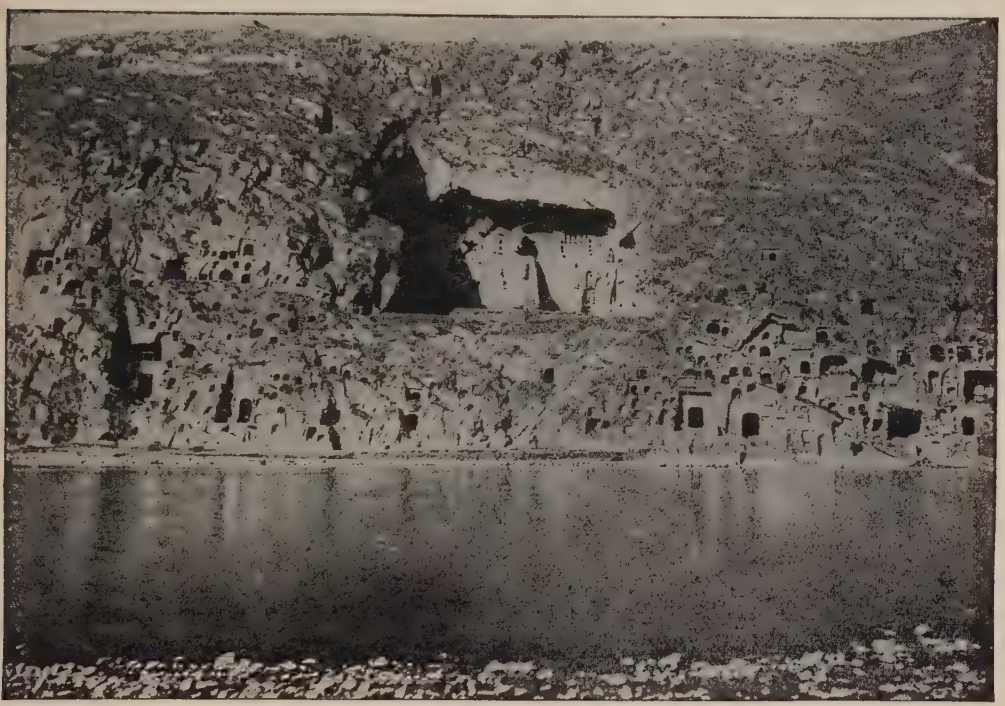
The Chinese also excel in carpentry; paper

making from the bamboo was invented among them as early as the second century B. C. They are highly skilled in the use of metals; bronze vases exist which date from 1760 B. C., and the great bells on the towers of Peking, cast during the Ming dynasty, are still perfect; the sonorous gong metal alloy is as yet a Chinese secret; in their delicate embroideries, carvings in ivory, engravings on wood and stone, lacquered wares, and rich silks and satins, they show astonishing handicraft.

Besides these three national systems, Mohammedanism has numerous adherents in the northern and western provinces.

There are temples of Confucius in every great town, and twice a year, in spring and autumn, sacrifices of animals, fruit, and wine are offered in honor of the sage.

The majority of the Tâoists, or followers of Laotse, imitate the Buddhists in their monastic life, and many of them live as hermits in the mountain caves of the upper Yang-tze, or in



VIEW OF THE ROCK-HEWN TEMPLES AT LUNG-MEN

Here, as early as the seventh century, Chinese artists sculptured religious figures in the recesses of precipitous cliffs—similar to those of Upper Egypt—and turned them into hundreds of quarried temples. The huge Buddha and attendant figures in the central recess can be clearly seen. Many smaller figures and decorations in other recesses can also be discerned.

People, Religion and Education.—The Chinese, as we have seen in the Book of Races, belong to the Mongolian race. They are stout and muscular as compared with other eastern peoples, temperate, industrious, cheerful, and easily contented; but they are addicted to gambling.

The dress of the poor is very much alike in both sexes; and though it is regulated for all classes by sumptuary laws, it is varied among the wealthy by the richness of the materials and the various ornamentation.

The three chief religions of China are Confucianism, Tâoism, and Buddhism. It is difficult to estimate the comparative number of their adherents. To claim a majority for those of any one of them is very absurd. As a matter of fact, Confucianism represents the intelligence and morality of China; Tâoism its superstitions; and Buddhism is ritualism and idolatry, while yet it acknowledges no God.

the most romantic spots of the mountains of China.

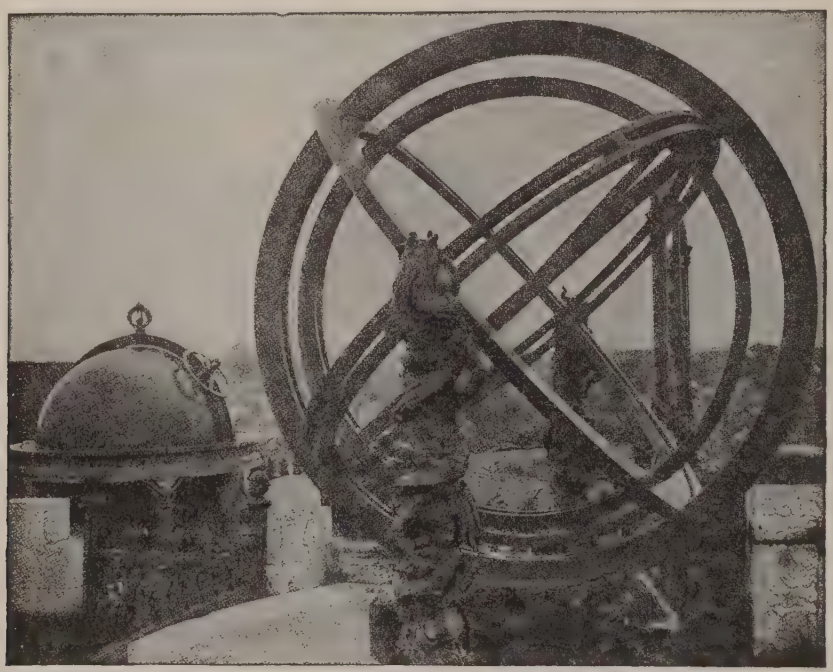
The Grand Lama of Tibet is the pope of the Buddhist Church, but the priests in China have no political power, and are viewed with contempt by the literary and governing classes. In Peking, however, several large monasteries of Tibetan and Mongolian Buddhists are supported at the expense of the government.

The native Roman Catholics of China are said to number more than a million, but Protestants are very few.

In 1906, after the Russo-Japanese war, a new system of compulsory primary education was established. The curriculum is largely based upon the Japanese. Modern sciences, history, geography, and foreign languages are taught. Special schools have been established (technical, agricultural, normal, language, etc.). Thousands of temples have been converted to educational purposes. Old style examination

halls have been pulled down, and colleges built on the sites. The educational facilities are, however, very inadequate. Girls' schools, formerly non-existent, are still very few in number. The only government medical school is an army one, but the government has recognized the Union Medical College, opened in Peking by the Protestant missions there. Many Chinese students have proceeded to Japan, America, and Europe to study there. The government is using the money returned by the American government from the Boxer indemnity to send students to America.

There is a university in Peking and a number of colleges under foreign management. In 1911 there were five hundred and forty-five foreigners employed in educational work.



ROYAL OBSERVATORY, PEKING , CHINA

The Chinese were among the very earliest observers of the heavens, though the Hindus, Chinese, Chaldeans, and Egyptians each claim the honor of having been the first students of astronomy. The Chinese have astronomical annals claiming to go back two thousand eight hundred and fifty-seven years B. C. These record little but the appearance of comets and solar eclipses. Professional astronomers were compelled to predict every eclipse under pain of death. The popular idea was that an eclipse was a monster having evil designs on the sun, and it was customary to make a great noise, by shouting, etc., in order to frighten it away. At an early period the Chinese appear to have been acquainted with the luni-solar Metonic cycle of nineteen years, and they had also divided the year into three hundred and sixty-five and one-fourth days. To the burning of all scientific books by one of their princes (Tsin-Chi-Hong-Ti), 221 B. C., the Chinese attribute the loss of many theories and methods previously in use.

Government.—Until February 12, 1912, China was a monarchy, in practice almost absolute. Since that day it has been a republic under a president who holds office for a term of five years. Many changes were made at the time of the revolution. A cabinet was substituted for the old grand council, grand secretariat, and government council; the cabinet being composed of a prime minister, two associate ministers, the various ministers of state, and the heads of various boards. A privy council was also formed. Administration is carried on by the following ministries: (1) Of Foreign Affairs; (2) Interior; (3) Finance; (4) Education; (5) War; (6) Marine; (7) Justice; (8) Agriculture, Works, and Commerce; (9) Posts and Communications; (10) Colonies. There are also a large number of minor boards and offices, divided into twenty-two provinces for local administration.

Cities.—There were in 1910 about twenty-three towns with populations exceeding 50,000, but all figures are based upon estimates.

Peking	1,000,000	Chinkiang	200,000
Canton	1,250,000	Antung	150,000
Hankow	900,000	Wuhu	130,000
Tientsin	850,000	Amoy	120,000
Shanghai	700,000	Wenchow	100,000
Fuchow	650,000	Swatow	90,000
Chungking	600,000	Chefoo	90,000
Suchow	500,000	Shasi	85,000
Ningpo	450,000	Ichang	70,000
Hangchow	400,000	Kongmun	60,000
Nanking	300,000	Wuchow	60,000
Changsha	250,000	Niuchwang	50,000

Peking, or Pei-Ching ("Northern Capital") is situated in a sandy plain, and is surrounded by walls with sixteen gates, each surmounted by towers one hundred feet high; and it consists, in fact, of two cities—the inner and the outer—known also as the Manchu or Tartar and the Chinese, the northern and the southern.

The walls of the Manchu city average fifty feet in height, and are fully sixty feet wide at the

bottom; those of the Chinese city (rectangular in plan) are thirty feet high and twenty-five feet wide. The circuit of the two cities measures twenty-one miles, including an area of nearly twenty-six square miles.

The Manchu or Inner City is divided into three portions; and at the heart of it are two enclosures, into the innermost of which entrance is forbidden to all except such as have official claims to admission. It is called the "Purple Forbidden City," is very nearly two and one-quarter miles in circuit, and in it are the palaces of the former emperors and other members of the imperial family.

The T'âi Ho, or "Hall of Grand Harmony," is built of marble on a terrace twenty feet high, and rising itself an additional one hundred and ten feet; its principal apartment is two hundred feet long and ninety feet wide. Surrounding the Forbidden City is the "August City," about six miles in circuit, and encompassed by a wall twenty feet high. In the western part of the "August City" is the "Western Park" with a large artificial lake, a summer-house, gardens, the copper statue of Buddha (sixty feet high), and the temple of "Great Happiness."

In the General City are the principal offices of the government, the observatory, the Provincial Hall for literary examinations, the Colonial Office, and the "National Academy." In the northeastern corner is the Russian mission, and west from it the "Palace of Everlasting Harmony," a grand monastery for over a thousand Mongol and Tibetan monks. A little farther west stands, amidst cypresses, the temple of Confucius. To the "Temple of Emperors and Kings," near the south wall, the emperors went to worship the spirits of nearly two hundred predecessors. The great Tutelary Temple of the capital is grimy, and full of fortune-tellers. All the foreign legations and Christian missions are within the Inner City. The new Roman Catholic Cathedral is conspicuous.

The Chinese or Outer City is very sparsely populated; much of the ground is under cultivation or wooded.

The "Altar to Heaven," with its adjunct, the "Altar of Prayer for Grain," and the "Altar of Agriculture," are both near the southern wall. The "Altar to Heaven" stands on a splendid triple circular terrace of white marble, richly carved, in a grove of fine trees. The "Altar of Prayer for Grain," was burned down in 1889.

The principal streets of the Chinese City are more than one hundred feet wide, but the side streets are mere lanes. The streets are seldom paved and are deep either in mud or in dust. In the smaller streets the houses are miserable shanties; in the main streets both private houses and shops are one-story brick edifices, the shops gay with paint and gilding.

There are three Catholic cemeteries (Portuguese, French, and native) and a Russian one; and there are mission buildings, Russian and others, and hospitals.

History.—Chinese historical documents begin with the reigns of Yâo and Shun. In 403 B. C. we find only seven great states, all sooner or later claiming to be "the kingdom," and contending for the supremacy, till Ts'in (Ch'in) put down all the others, and in 221 B. C. its king assumed the title of Hwang Tî, or emperor. From that year dates the imperial form of the Chinese government, which thus existed for more than two thousand one hundred years.

The changes of dynasty were many, two or more sometimes ruling together, each having but a nominal supremacy over the whole nation. The greater dynasties have been those of Han (206 B. C.-220 A. D.), T'ang (618-906), Sung (960-1279), Yüan (the Mongol, 1280-1367), the Ming (1368-1643), and the Ch'ing (Manchû-Tartar, from the Manchû conquest of China in 1643 to the 1912 revolution).

It was not till after the Cape of Good Hope had been doubled, and the passage to India discovered by Vasco da Gama in 1497, that intercourse between any of the European nations and China was possible by sea. It was in 1516 that the Portuguese first made their appearance at Canton; and they were followed at intervals of time by the Spaniards, the Dutch, and the English in 1635. The Chinese received none of them cordially; and Chinese dislike of them was increased by their mutual jealousies and collisions with one another. In the meantime trade gradually increased, and there grew up the importation of opium from India. From the measures of the Chinese to prevent the import of opium came the first English war with China in 1840; the result of which was the opening of Canton, Amoy, Fûchâu, Ningpo, and Shanghâi to commerce, and the cession of Hongkong to Great Britain. A second war, in 1857, France being allied with Great Britain, ended in the opening of five more treaty ports. A third war (1860) and the march on Peking did even more to open China to the world.

After a war in 1884-1885 France secured permanent control of Tongking and Annam.

In 1894 Japan, reviving old claims on Korea, drove the Chinese out of Korea, and after victories on land and at sea, captured Port Arthur and Wei-hai-wei. By the treaty of 1894 Japan secured as indemnity Formosa and the Liao-tung peninsula; but the protests of Russia, Germany, and France made Japan resign Liao-tung. Russia obtained a lease of Port Arthur and Talienwan, with railway and other privileges in Manchuria; Germany obtained Kiao-chau and concessions in Shantung; and Great Britain, as an offset, obtained a lease of Wei-hai-wei and sought to secure trading freedom in the Yang-tze-kiang valley.

Russia's refusal to evacuate Manchuria and her movements in Korea led to war with Japan in 1903, the defeat of the Russian armies in Manchuria, the destruction of the Russian fleet, and the fall of Port Arthur (1905), China being nominally neutral. By the peace (1905) Japan secured dominance in Korea, the Russian leases in Liao-tung, and great influence in southern Manchuria and on China generally.

A series of far-reaching reforms, promoted by a nationalist reform party in 1898, were summarily cancelled by the dowager empress, who assumed supreme authority. The reactionary and anti-foreign "Boxer" association ("The Fist of Righteous Harmony"), encouraged by the court, made extermination of foreigners its war cry in that year, and besieged the legislations in Peking. After a two months' siege by an army of Japanese, Russians, British, Americans, French, and Germans this condition was relieved. The constitutional movement began in 1911, followed by a revolution. The leader of the revolt at Han-kau was the able general, Li Yuan-hung, but the inspirer of the revolution was Dr. Sun Yat-sen, at that moment in America.

On October 13 the rebels proclaimed a republic in the province of Hu-peh, with Li Yuan-hung as president, and notified the foreign consuls that the property and persons of foreigners would be respected.

On February 12, 1912, the throne issued three edicts, in which it announced its will to abide by the decision of the National Convention and accept the republic, entrusting Yuan with the task of bringing about the new constitution in conjunction with the Nan-king government, and, after exhorting all to peacefully accept the new order, announced the abdication of the dynasty.

A constitution of seventy clauses was promulgated; the emperor was to retain his title and receive a pension, and be accorded the civility due to a foreign sovereign. On February 27 the Nan-king Assembly endorsed this decision by electing Yuan president, and he was formally installed on March 10.

Yuan's administration was hampered by the movements in Mongolia and Tibet towards autonomy, movements countenanced by Russia and Great Britain respectively. Difficulties were also put in the way of China by the European powers in the matter of a development loan, but President Yuan, supported by Dr. Sun Yat-sen, seems to have laid securely the foundations of the largest republic the world has yet seen.

President Yuan Shi-ki was assassinated in 1916, and succeeded by Li Yuan-hung.

INDIA, the Indian Empire of the British crown, is an extensive region of southern Asia, and next after China the most populous area in the world. It occupies the central peninsula of southern Asia, and has a length of some nineteen hundred miles, a breadth of sixteen hundred, and an area, inclusive of Burma, of 1,766,650 square miles. The natural boundaries of this vast region are, on the north, the range of the Himalaya Mountains, which separates it from Tartary, China, and Tibet; on the west, the mountainous frontiers of Afghanistan and, farther south, of Persia; on the southwest and south the Arabian Sea and the Indian Ocean; on the east the hill ranges which border upon Burma and the Bay of Bengal.

Surface.—The region presents a diversified surface and scenery. It has indeed been called "an epitome of the whole earth," consisting as it does of mountains far above the level of perpetual snow, broad and fertile plains bathed in intense sunshine, arid wastes, and impenetrable forests.

The most prominent feature in the relief of India is the great range of snowy peaks named the *Himalaya*, or "abode of snow," which rises on the edge of the Tibetan plateau, above the northern plains, stretching out in a continuous chain for nearly eighteen hundred miles. The mean height of this portion of the borders of the Tibetan plateau, defined very clearly by the channels of the Indus and the Bramaputra, is estimated at thirteen thousand feet; the mean breadth of its base is about one hundred and fifty miles. Its summits rise to twenty-nine thousand feet, and most of the difficult passes ascending from the valleys and gorges of the Indian side are not lower than about sixteen thousand feet.

Southward from the bases of the Himalaya and the Sulaiman mountains the great plain of northern India spreads out, reaching across the whole breadth of Hindustan from the Arabian Sea to the Gulf of Bengal.

Southward of the great plain the land begins to rise again. The first elevations reached in this direction are those of the long range of the Aravali hills, which extend for four hundred miles from northeast to southwest, marking the edge of the western section of the great plain. It is bold and precipitous on that side which falls toward the Indian desert, but less so on the southeast; its average height is about three thousand feet, Mount Abu, being the highest point.

Behind the Aravali hills lie the plateaus of Malwa and Bundelkhand, extending over the country generally termed central India; These are fertile tablelands of uneven surface elevated from one thousand five hundred to two thousand feet above the sea level, and traversed by a number of minor hill ridges.

The greater part of south India is occupied by the wide tableland of the Deccan. The name *ghat* was originally applied by the natives to the passes in the outer slopes of the ranges which run parallel with the two coasts of the southern portion of the great promontory of India enclosing the Deccan, and which had to be ascended to reach the high interior country from the coast; but this name Ghat has been transferred to these ranges or outer edges of the tableland themselves.

The western Ghats, about eight hundred miles in length, clothed with magnificent teak forests, form by far the boldest and most continuous escarpment of the Deccan plateau, ascending abruptly from a low base, generally at a distance of about thirty miles from the sea.

The eastern Ghats differ from the western in being much lower, in rising at a much greater distance from the coast of the Bay of Bengal, and with a gentle slope, giving access by wide openings to the interior. Their average height is about fifteen hundred feet, the highest point, near Madras, only about three thousand feet above the sea. The Deccan plateau between these supporting buttresses has thus a gradual eastward slope, and is characterized by undulating treeless plains, ridges and isolated flat-topped hills capped with basalt. Large portions of it are also covered with jungle, often overgrowing the ruins of former towns and temples, but there is no extent of forest.

Between the eastern Ghats and the sea lies the extensive maritime plain generally named the Karnatic, reaching back from the Coromandel coast for about fifty miles. The soil of this plain proves abundantly fertile when it is watered, but there are few streams, and a supply of water for irrigation has to be stored in reservoirs.

Rivers.—The river system of India consists of three great rivers: the Indus, the Ganges, the Bramaputra.

The Indus rises on the northern slopes of the Himalayas, sweeps round and enters at the western extremity of the range, and waters the Punjab.

The Ganges is formed by the amalgamation of the streams which drain the southernmost slopes of the Himalayas.

The Bramaputra rises also within easy distance of the Indus in the northern slopes of the Himalayas, flows east for some considerable distance, and then enters India at the extreme eastern point of the Himalayas. It is therefore to be noticed that the river system, of such vast importance to the people of India, is the drainage of both the northern and the southern slopes of the Himalayas.

The Ganges is the sacred river of the Hindus, rises in a snow-field of the southern face of the Himalayas at an elevation of nearly fourteen thousand feet above the sea, rushing down as a torrent to the highest accessible point on its banks (ten thousand three hundred feet), where the temple of Gangotri is built. To the Hindu a bath or a drink of the sacred water at this point has wonderful atoning virtues, and those who cannot themselves make the pilgrimage hither are supplied with flasks of the holy element bottled by the priests of Gangotri. At Allahabad the Jumna, which has followed a parallel course from the mountains, adds its strength; thence, by Benares and Patna, it passes eastward to weave its many mouths with those of the Bramaputra, and to wage a battle twice daily with the inflowing tide among the malarious islands of the Sundarbans. One of the westerly delta branches, the Hugli, on which Calcutta stands, is the most frequented highway to the sea.

Climate.—The whole country has three well-marked seasons—the cool, the hot, and the rainy. The cool months are November, December, January, and a part of February; the dry hot weather precedes, and the moist hot weather follows the periodical rains. The rainy season falls in the middle of summer and is called monsoon. It is the occasional failure of the monsoons that causes the periodical famines to which the country is liable.

The central tableland is cool, comparatively, but the alternations of heat and cold differ greatly elsewhere.

In the northwest there is burning heat with hot winds in summer, and frost at night in winter.

In the south the heat is more tempered, but the winter is cool only, and not cold.

The fall of rain varies greatly in different parts of the country. In the northeastern and other outlying parts it exceeds seventy-five inches. In the Deccan, in the upper basins of the Ganges and the Indus, it is thirty, and in the lower regions of the Indus less than fifteen inches. The remainder of India is placed between the extremes represented by these damp and dry belts.

Production and Industry.—The large majority of the population of India are engaged in agricultural pursuits, nearly 200,000,000 being either engaged in tilling the soil or dependent upon those so engaged. Great irrigation works have been carried out, the area irrigated being 42,486,724 acres.

The principal crops cultivated are rice, wheat, millet, pulse, and other food grains, oil-seeds, tea, cotton, sugar-cane, tobacco, and indigo.

Tea is grown largely under European supervision in the Eastern Himalayas, and already surpasses the China teas. Coffee is grown in the south, but with checkered success. Among the dyes, indigo and lac (red) are noteworthy. The indigenous flowers are not rich, the water lilies being the best; the flowering shrubs are very fine.

Of trees in the plains near the coasts the palm order with its several varieties strikes the observer. Inland the mango fruit-tree and the orange, the umbrageous banyan, the sacred peepul, and the bamboo are features in the landscape. In the hills the teak and other useful timber trees are obtained. In the Himalayas are the cedar, the pine, the fir, the juniper.

The cultivation of opium is a government monopoly and heavy duties are levied on the exports of opium, a duty being also paid to the Indian treasury.

Almost all the metals and minerals are represented in India, but of the useful metals, excepting iron, the quantity is not known to be large. Coal exists in many parts, especially in the northeast—at Bardwan, near Calcutta, and in Assam. Gold is found in Mysore, and in the sands of many streams; copper near Delhi and elsewhere; salt is obtained in large quantity from the mines in the northwest of the Punjab, and by evaporation from the coast lagoons all round India, and from salt lakes in Rajputana. Most of the precious gems, including diamonds, rubies, sapphires, and emeralds, are found, some abundantly, some rarely, though the supply of the once famous diamonds of Golconda seems to have ceased.

Metal and textile workers, glass and pottery workers, with their dependants, number close on twenty millions, and there are large numbers employed in service.

The textile manufactures of India were famous in long past centuries thoughout the civilized world; such were the gold brocades of Delhi, brought thence to imperial Rome, the muslins of Dacca, made for the Mongol court, and the pattern colored cloths of Calicut (calico), the shawls of Kashmir, and the silks and carpets of Multan. All these home-made fabrics, however, have declined before the products of the great factories.

Peoples.—The broad division of the peoples of India includes a northern group of Aryan nations, occupying the great plains and the northern seaboard on each side, and the non-Aryan inhabitants of the Deccan plateau in southern India. This division also corresponds to that of the languages of India, separating those related to the Sanscrit, the language of the Aryan conquerors of the north, from the Dravidian and Kolarian of the south. (See Book of Races.)

LANGUAGES.—Though nearly a hundred and fifty languages, derived from nearly twenty linguistic families, are spoken in India, three of those families—the Aryo-Indian, the Dravidian, and the Tibeto-Burman—represent the speech of ninety-seven per cent of the inhabitants.

Hindustani, a dialect of Hindi, has become the literary language of Hindustan, and is the *lingua franca* of India. English is understood by many.

RELIGIONS.—The chief religions are Hinduism (218,000,000 in 1911), Mohammedans (66,000,000), Buddhists (11,000,000), Animists (10,000,000), and Christians (4,000,000).

Government.—India is a dependency of Great Britain, consisting partly of territory under the direct administration of British officials, and partly of native states, all subordinate, in varying degrees of relationship, to British authority.

The nine great provinces are Madras, Bombay, Bengal, the United Provinces of Agra and Oudh, the Punjab, Burma, Eastern Bengal and Assam, the Central Provinces, and the Northwestern Frontier Province.

In accordance with the Royal Titles Act of 1876 the King of Great Britain and Ireland assumes the additional title of Emperor of India. The Parliament of the United Kingdom is supreme over India; but all the statutes relating to India are in the nature of either constitutional enactments or financial provisions.

In India the supreme authority, both executive and legislative, is vested in the governor-general in council. The governor-general, or viceroy, who generally holds office for five years, receives a salary of eighty-five thousand dollars a year, and has power to overrule his council in cases of emergency. The council is composed of six ordinary members, all appointed, like the governor-general himself, by the crown for a period of five years. Since 1909 one of the members has been a native of India.

The work of the council is distributed among the departments of finance, commerce, home and foreign affairs, revenue and agriculture, army, legislation, education, and public works. The foreign department is under the special care of the viceroy.

The seat of the supreme government of India is Delhi, with an annual migration to the hill-station of Simla for the hot season.

Cities.—The capital, Delhi, has a population (1911) of 391,828. The other chief cities are: Calcutta (1,216,514), Bombay (972,930), Madras (517,335), Hyberabad (499,840), Rangoon (293,316), Lucknow (260,621), Lahore (228,318), Ahmedabad (215,448), Benares (204,222). In addition there are twenty cities with populations exceeding 100,000.

Delhi (*Del'lee*), since 1912 the capital of the Indian Empire is located on the right bank of the Jumna, nine hundred and fifty-four miles northwest of Calcutta. It was the capital of the Afghan or Pathan, and afterwards of the Mogul, empire. It is the terminus of the East Indian and Rajputana railways, the former crossing the Jumna by a fine iron bridge.

Delhi is walled on three sides, has ten gates, and stands on high ground, the famous palace of Shah Jehan, now the fort, looking out over the river and a wide stretch of wooded and cultivated country. To the north, about a mile distant, rises the historic "ridge," crowned with memorials of the Indian mutiny, and commanding a fine view of the city, the domes and minarets of which overtop the encircling groves.

The palace buildings comprise the cathedral-like entrance hall, the audience hall, and several lesser pavilions, covering in all an area of one thousand six hundred feet by three thousand two hundred feet, exclusive of gateways. The beautiful inlaid work and carving of these buildings are the admiration of the world, and is worthy of its famous inscription: "If there is a heaven on earth, it is this—it is this!"

In the heart of the city stands the Jama Masjid ("great mosque"), one of the largest and finest structures of the kind in India, which also owes its origin to Shah Jehan. Among the notable monuments in the neighborhood are the imperial tombs, including that of Hamayun, second of the Mogul dynasty; the old Kala Masjid, or black mosque; and the thirteenth century Kutab Minar, ten miles to the south, which is two hundred and thirty-eight feet high, and tapers gracefully from a diameter of forty-seven feet at the base to nine feet at the summit.

Modern Delhi is noted for its broad main streets, the chief being the Chandni Chauk, or Silver Street, with its high clock tower, and the institute and museum.

Delhi has a large trade in wheat and other produce, and its bazaars are noted for gold and silver work, precious stones, shawls, and costly fabrics.

Simla, since 1864 the summer headquarters of the British government in India, stands on the slopes (seven thousand feet) of the Himalayas, in a beautiful situation, one hundred and seventy miles north of Delhi. Its first house was built in 1819, and it was first visited officially by the Indian government in 1827. There are two vice-regal residences, handsome government buildings, and a fine town hall Population sixteen thousand in winter, and considerably more in summer.

Calcutta, on the left bank of the Hughly, the largest and westernmost branch of the Ganges delta, is about eighty miles from the sea. The government buildings, Bishop's College (now an engineering school), High Court, town hall, bank, museum, university, St. Paul's cathedral, and many other English buildings have earned for it the name "City of Palaces." The native quarters, though improved, are still squalid, the houses of mud or bamboo. An esplanade, numerous quays, an excellent water-supply, gas, and tramway services, add to the amenities. There are extensive dockyards, warehouses, ironworks, timber yards, and jute mills. Extensive railway and steamboat communications make it the chief emporium of commerce in Asia.

Bombay stands on an island, connected with the coast by a causeway, and has a magnificent harbor and noble docks. It is rapidly surpassing Calcutta in trade, and is one of the greatest of seaports; its position promises to make it the most important commercial center in the East, as it already is in the cotton trade of the world. It swarms with people of every clime, and its merchandise is mainly in the hands of the Parsees, the descendants of the ancient fire worshippers. It is the most English town in India. It came to England from Portugal as dowry with Catherine of Braganza, wife of Charles II., who leased it to the East India Company for fifty dollars a year. Its prosperity began when the Civil war in the United States afforded it an opening for its cotton.

Benares, the most sacred city of the Hindus, and an important town in the Northwest Provinces, is on the Ganges, four hundred and twenty miles by rail northwest of Calcutta. It presents the amazing array of one thousand seven hundred temples and mosques with towers and domes and minarets innumerable. The bank of the river is laid with continuous flights of steps whence the pilgrims bathe; but the city itself is narrow, crooked, crowded, and dirty. Many thousands of pilgrims visit it annually. It is a seat of Hindu learning; there is also a government college. The river is spanned here by a magnificent railway bridge. There is a large trade in country produce, English goods, jewlery, and gems; while its brass work "Benares ware," is famous.

Agra, a city in the United Provinces of Agra and Oudh, is on the Jumna, one hundred and thirty-nine miles southeast of Delhi by rail, and eight hundred and forty-one miles northwest of Calcutta. The ancient walls embrace an area of eleven square miles, of which about one-half is now occupied. The houses are mostly built of red sandstone, and, on the whole, Agra is the handsomest city in upper India.

Some of the public buildings, monuments of the house of Timur, are on a scale of striking magnificence. Among these are the fortress built by Akbar, within the walls of which are the palace and audience hall of Shah Jehan, the Moti Masjid or Pearl Mosque, and the Jama Masjid or Great Mosque.

Still more celebrated is the white marble Taj Mahal, situated without the city, about a mile to the east of the fort. This extraordinary and beautiful mausoleum was built by the Emperor Shah Jehan for himself and his favorite wife, who died in 1629, and is remarkable alike for the complexity and grace of the general design, and the elaborate perfection of the workmanship. In the center, on a raised platform, is the mausoleum, surmounted by a beautiful dome, with smaller domes at each corner, and four graceful minarets (one hundred and thirty-three feet high). Of British edifices the principal are the Government House, the Government College, three missionary colleges, the English church, and the barracks.

The climate, during the hot and rainy seasons (April to September), is very trying; but the average health of the city is equal to that of any other station in the United Provinces.

The principal articles of trade are cotton, tobacco, salt, grain, and sugar. There are manufactories of shoes, pipe stems, and gold lace, and of inlaid mosaic work, for which Agra is famous.

History.—It is impossible to speak positively as to the aboriginal prehistoric populations of India; probably the most primitive peoples now left—the Dravidian hill-tribes—represent waves of invasion from the north. The history of civilization in India may, however, be traced from the invasion—probably one thousand years or more B. C.—of the Aryan race from central Asia, a race of the Indo-Germanic type in physique and speech. Their language was Sanskrit, their religion and civilization that of the Vedas, or ancient Hindu scriptures.

Out of the union of the Aryans with the earlier inhabitants the modern races of India have sprung. Buddhism arose in India with the teaching of Budda about 500 B. C., and for a while superseded the Vedic faith, corrupted as it had been by the degraded aboriginal superstitions; and India was substantially Buddhist till the revival of Hinduism, in its modern or Brahmanic form (more idolatrous and superstitious than the ancient faith), in the sixth century A. D.

In 1001 A. D. came the first wave of Mohammedanism, and soon all India fell under Mohammedan domination, though the bulk of the people clung to the Hindu religion. By the beginning of the eighteenth century a new Hindu power, that of the Mahrattas, arose, and seriously weakened the Moslem emperor, the Grand Mogul. The Dutch, Portuguese, and French, as well as the British, established themselves in the empire; in the eighteenth century the French more than rivaled the British in power. But the power of the British East India Company, originally traders, became dominant after the battle of Plassey in 1757.

Gradually English power as represented by the company, its diplomatists, and its soldiers, extended over a great part of India, and the governors—Clive, Warren Hastings, Wellesley, Amherst, Bentinck, Dalhousie, Canning—consolidated what was really the empire of Great Britain in the East. Then in 1857 came the great mutiny, stamped out in blood, and the government was assumed by the British crown in 1858. British rule in India has been steadily consolidated, but no great annexation has since taken place, except that of Upper Burma in 1886.

After the mutiny, India settled down to a period of peace, broken only by the constant suspicion of Russian intrigue in Afghanstan. This led in 1878 to the second Afghan war. The Amir was deposed, and his successor promised to receive a British resident, who was in a short time murdered, as was also his escort. This resulted in the famous march of General Roberts from Kabul to Kandahar, and eventually an Amir who was favorable to the British was set up. This Amir reigned until 1901, and his successor remained friendly to the British.

Finally, in 1907, a convention between Russia and Britain was signed, and later an agreement as to the line of delimitation of their respective spheres of influence in Persia was arrived at in 1912. Quetta and the southeastern districts of Afghanistan were annexed after the second Afghan war, and the purchase of the Suez Canal was of great use in the defense of India. British supremacy over the Afghan tribes was also recognized.

After his coronation in 1911, George V. of Great Britain visited India and held a Coronation Durbar at the beginning of 1912 in India itself, this being the first visit of an English raj to the Indian empire, and the capital of India was officially proclaimed as Delhi.

JAPAN, an island empire off the east coast of Asia, separated from Siberia by the Sea of Japan. The name Japan is a corruption of *Zipangu*, itself a corruption of the Chinese pronunciation of the native name *Nihon* or *Nippon* ("Land of the Rising Sun").

Japan comprises four large islands, Honshu (the Japanese mainland), Shikoku, Kiushu, and Yezo or Hakkaido; the Luchu Islands, Formosa, divided from China by the Formosa Channel; and Korea (annexed in 1910 and renamed Chosen). A small group of islands, Bonia, six hundred miles southeast of Tokio, also belongs to Japan.

The Kwantung province, including Port Arthur and Darien, was leased to Japan by Russia (with the consent of China) in 1905, while the southern portion of Sakhalin (ceded to Russia in 1875) became once more Japanese.

The empire includes also nearly four thousand small islands.

The islands comprising the Japanese Empire have been likened to the British Isles in their position relative to the Continent, the Sea of Japan and the Strait of Korea resembling the North Sea and Strait of Dover. In their general extent of surface the comparison also holds good. The three contiguous islands of Japan proper are, however, considerably larger than Great Britain, while the northern pos-

session of Yezo is three thousand square miles larger than Ireland.

The empire with its dependencies comprises an area of 235,886 square miles, with a population of 67,142,798.

Surface Characteristics.—The islands are eminently volcanic, and eighteen of the summits are still active; the chief of these, Fuji-san, or Fuji-yama, the loftiest and most sacred mountain of Japan, about sixty miles from Tokio, has been dormant since 1707. Japan is also liable to frequent, and occasionally disastrous, earthquakes.

The country is very mountainous, and not more than one-sixth of its area is available for cultivation. The numerous ranges extend in directions parallel to the length of the group, giving varied and picturesque landscapes of hill and valley. Their irregular coast-line is indented with splendid natural harbors, such as the Bay of Yedo on the southeast coast; the beautiful "inland sea" of Japan, with its intricate channel between hundreds of islets, separates the island of Shikoku from the larger one of Hondo, and the enclosed Suwonada and Bugo Channel, divide the southwestern island of Kiushu from both of these.

Lakes and Rivers.—From the mountainous character of the long narrow islands the rivers are generally impetuous, and of small economic importance, except for irrigation. Among the most important may be noted the Yodo-gawa, which flows from the fiddle-shaped Lake Biwa, the largest fresh water expanse in Japan, thirty-five miles long, to the "inland sea;" the broad and rapid Ten-riu-gawa, or "River of the Heavenly Dragon," which flows south from the central mountains of Nippon; and the Tone-gawa, which enters the Pacific, but sends a branch to the Bay of Yedo, which is crossed within the capital by the Nippon Bassi, or bridge of Japan, from which, as a starting point, all distances throughout the kingdom are measured.

Climate.—The islands of Japan have a climate that may be compared with that of South Britain. The extremes, however, are greater, summer being hotter, and winter colder, than in England, increasing to almost Siberian rigor in the north. June, July, and August form the Satkasi, or rainiest period; the autumn succeeding is the pleasantest and most genial season of the year. Hurricanes, storms, and fogs, are frequent in the seas round Japan, where warm and cold ocean currents also bring about great differences of sea temperature.

Products and Industries.—The islands have a very beautiful flora, including many ornamental plants. The great feature of the vegetation is the intermixture of tropical growths, such as the bamboo, palms, tree-ferns, and bananas, with those of temperate regions, the pine, oak, beech, chestnut and maple. Characteristic are the paper mulberry, the vegetable-wax tree, the camphor and lacquer trees. The cultivated crops are rice, maize, wheat, barley, tobacco, tea, and cotton.

Japan is also very rich in minerals. Gold, silver, and copper are especially abundant in the north, and coal and iron beds seem to extend throughout the group. Petroleum is also being produced in large quantities, especially in the Province of Echigo.

People.—With the exception of the wilds of Yezo, peopled by eighteen thousand Ainos, the Japanese islands are inhabited by a single race speaking various dialects of the same tongue. Probably the Japanese are the issue of the intermarriage of victorious Tartar settlers, who entered Japan from the Korean peninsula, with Malays in the south and Ainos in the main island. See Book of Races.

There are two prevailing religions in Japan—Shintoism, the indigenous faith; and Buddhism, introduced from China in 552 and still the dominant religion among the people. Francis Xavier introduced Christianity in 1549, and the Roman Catholic Church and the Greek Church both carry on a flourishing work in Japan. Of the Protestant missions there are also many actively at work.

In education, as well as in matters of religion, enormous changes and advances have have been made in recent years. Education is in the lower grades free and compulsory. Secondary schools are state aided, and prepare for a three years' course at the universities, which is largely devoted to the study of European languages. There are high schools for girls, and the technical and special schools are well attended. There are three State Universities, at Tokio, Kyoto, and Tohoku.

Production and Industry.—Agriculture is the chief occupation of the Japanese, and they are excellent and careful farmers. In the mechanical arts also they excel; especially in the use of metals, in the manufacture of porcelain and glass lacquered wares, and silk fabrics. The chief manufactures are silk and cotton, cotton yarn, matches, paper, glass, lacquer ware, porcelain, and bronze, and ship building is an important industry in the yards.

The chief exports are silk, cotton, yarns, rice, tea, fish, copper, matches, coal, camphor, straw plaits, porcelain, earthenware, lacquer-ware, and marine products.

The commercial development of Japan has of late been marvelous. There were five thousand nine hundred and eighty-five miles of railroad open in 1914, in addition to eight hundred and thirty-six miles open in Korea, while the South Manchurian Railway (China) is under Japanese control.

Government and Administration.—The government is an hereditary monarchy, the succession being now exclusively in the male line. The Cabinet consists of ten Ministers of State, presided over by a Minister President.

The Upper House, or House of Peers, consists of about three hundred and thirty members—male members of the royal house, life peers, peers elected either for life or for seven years, and other persons nominated by the emperor. The lower house, or House of Representatives, has three hundred and sixty-nine members, who serve for four years, elected by citizens paying taxes of not less than ten yen (five dollars) per annum. The first general election took place in 1890.

Penal and civil codes have been drafted on a European basis, and with a commercial code were published in 1890, and came into force in 1893.

This is one of the many Temples at Nikko, a country district in Japan whither Pilgrims come from all parts of the country to visit the sacred shrines; this particular temple is an excellent specimen of Buddhist architecture; the carving and lacquer work are very beautiful, and the worshippers take a pride in seeing that the latter is kept in perfect repair.

THE CASTLE OF OSAKA

The castle was built in 1583 by Hideyoshi. The whole building is surrounded by broad moats and massive walls, in which granite blocks as big as forty feet by ten feet are found. The castle enclosed a magnificent palace, which survived the capture of the castle by Iyeyasu in 1615, but was burned by the Tokugawa party in 1868.

THE JAPANESE PARLIAMENT IN SESSION: A DEBATE IN THE LOWER HOUSE—THE PRIME MINISTER SPEAKING.

Cities.—The capital of the Japanese Empire, Tôkiô, formerly called Yedo, is the residence of the emperor; population, 2,186,079. Other cities are: Osaka, 1,226,590; Kiôto, the ancient capital, 442,462; Nagoya, 378,231; Kōbe, 378,197; Yokohama, 394,303; Hiroshima, 142,763; Nagasaki, 176,480; Kanazawa, 110,994; Kure, 100,679. The chief ports are Yokohama, Kōbe, Osaka, Nagasaki, and Hakodate.

Tokio, or Tokei ("Eastern Capital"), is the chief city of the Japanese Empire. Until 1868, when the emperor removed his court thither from Kyōtō, it was known as Yedo ("Estuary Gate"). Its position at the mouth of the rivers which drain the largest plain of Japan, fits it to be a national center. The lower portion of the city, which is flat and intersected by canals, stretches between the two parks of Ueno (north) and Shiba (south), famous for their shrines. Midway rises the castle or palace, a fine structure in Japanese style, furnished in European manner, and lighted with electricity, within a double ring of high walls and broad moats. In spring-time the city is gay with plum and cherry blossoms. The immense enclosures, formerly inhabited by the nobles and their retainers, are gradually disappearing, and handsome modern buildings in brick for the use of the various government departments are taking their place. Of the fifteen city divisions the northern, Hongo and Kanda, are mostly educational, and contain the buildings of the Imperial University, Law School and other institutions. The student population is astonishingly large. The seaward districts of Nihonbashi, Kyobashi, and Asakusa are industrial and commercial, while the government offices are located in Kojimachi ku.

Yokohama is the port of entry (seventeen miles off), and a great harbor scheme to cost twenty million dollars was planned in 1911-1912. The city is subject to disastrous fires; that of April, 1892, burned four thousand houses in one morning. Tokio has three railway termini and a system of electric railways. Almost every phase of modern civilization is to be found within its vast area.

History.—Before 500 A. D. Japanese history is mere legend. Buddhism was introduced from Korea in 552; and in the next century Chinese civilization strongly influenced Japan. About the end of the twelfth century, the weakness of the emperor led the military head (Shogun) to assume a large share of the supreme power, and he handed it on to his descendants. Hence the statement often made that Japan had a Mikado or spiritual emperor who reigned but did not govern, and a "Tycoon" (Shogun) who did govern though he paid homage to the nominal sovereign. The military caste was now dominant until the reign of Iyeyasu (c. 1600), whose descendants reigned till 1868.

Total exclusion of foreigners was the rule till 1543, when the Portuguese effected a settlement; but in 1624 all foreigners were expelled and Christianity interdicted. The policy of isolation was rigidly pursued from 1638 till 1853, when Commodore Perry of the United States Navy steamed into a Japanese harbor, and effected a treaty with the Shogun. Soon sixteen other nations followed the American example, and free ports were opened to foreign commerce.

In 1867-1868 a sharp civil war broke the feudal power of the daimios or territorial magnates, suppressed the Shogunate, and unified the authority under the Mikado. In a very few years Japanese students took a place of their own in western science; and how thoroughly the Japanese had laid to heart what they had learned abroad in the military and naval arts was partially revealed by the swift and complete success of the war with China about Korea in 1894, and more impressively by their amazing triumph over the great military empire of Russia, in 1904-1905, whom they defeated in a succession of bloody battles, took Port Arthur, and utterly destroyed the Russian fleet. By the peace that followed the Russians not only evacuated southern Manchuria, but recognized Japan's preponderance in Korea, and gave up to Japan the "leases" of Port Arthur and the Liao-tung peninsula Russia had wrested from China.

A conspiracy against the life of the emperor was discovered in September, 1910. The same year saw the passing of a bill enabling foreigners to own land in Japan proper, under certain restrictions. But the principal event of 1910 in Japanese history was the formal annexation of Korea, the treaty with the emperor of Korea being promulgated on August 29. According to the new commercial treaty with the United States, ratified by the Senate on February 24, 1911, the clause in the old treaty was omitted, wherein each side reserved the right of regulating immigration from one country to the other. In 1910 and 1911 important agreements were also made with Russia with special reference to Manchuria.

Japan entered the European war on August 23, 1914, on the side of the Entente Allies, and immediately began the blockade and siege of the German colony at Kiao-Chow on the Shantung promontory of China. In November, 1915, Yoshihito was crowned emperor.

Under the *Treaty of Versailles*, 1919, Germany renounced the sovereignty of all her oversea possessions, and the German Pacific Islands N. of the Equator have been placed under Japanese mandate. These islands, in Micronesia, are the Pelew, Caroline, Marshall, and Ladrone groups, with a total area of about 800 sq. miles.

Japan suffered the worst disaster in its history on Sept. 1, 1923, when a great earthquake shock, followed by a tidal wave and fire, destroyed the capital city, Tokio, the third largest city in the world, Yokohama, the chief port, and many other towns and health resorts.

The Emperor Yoshihito died of pneumonia on December 25 and simultaneously Hirohito, the Prince Regent, ascended the throne as the 123d Emperor since the foundation of the dynasty by Jemmu Tenno in the Seventh century B. C.

THE CONTINENT OF NORTH AMERICA

Since the beginning of the sixteenth century America has been the general name for the two continents and adjacent islands, forming the main body of land found in the western hemisphere.

Position and Extent.—North America forms the northern section of the "New World" discovered by Columbus. It is separated from Europe by a sea nine hundred and thirty miles broad, from Asia by Bering Strait sixty miles across, and extends from the Arctic Ocean nearly to the equator.

The main mass is triangular in shape, and its outline varied by large peninsulas, broad gulfs and numerous inlets. Development of coast-line, twenty-eight thousand one hundred and thirty miles. Length, four thousand five hundred miles; breadth, three thousand one hundred miles. The area of the continental mainland is estimated at seven million one hundred and forty-six thousand six hundred and forty-one square miles; the entire area, including Greenland, the Arctic Archipelago, the West Indies, Newfoundland, and other islands, at over nine million square miles.

Islands.—It is customary to regard Greenland as a part of America, while the adjacent island of Iceland, though partially in the western hemisphere, is usually associated with Europe. The other principal American islands in the Atlantic are Newfoundland, Cape Breton, Anticosti, Prince Edward Island, Long Island, the Bermudas, the Antilles or West Indies, Joannes, Staten Island and South Georgia.

In the Pacific are the Aleutian Islands, Kadiak, the Alexander and Queen Charlotte groups, Vancouver and other British-Columbian Islands, the Santa Barbara group, Bevilla-Gigedo, the Pearl Islands, and others in the Gulf of Panama, the Galápagos, Juan Fernandez and the associated islets, Chiloe and the Chonos Archipelago. In the Arctic Ocean there are many large but unimportant islands. (See Map of Comparative Size of Islands and Table of Areas.)

Coast-line.—The coast-line of North America on the west is almost everywhere high and rocky. To the south of Puget Sound good harbors are rare, but British Columbia and Alaska have great numbers of good seaports, the coast-line being, in many places, deeply cut with high-walled fjords, or "canals," and elsewhere sheltered by ranges of high and well-wooded islands. The Atlantic coast, north of New York Bay, is generally rocky and well sheltered with islands, and has abundance of good natural harbors; but south of the parallel of New York the coast of the mainland is almost everywhere low and sandy. Many of the best ports are formed by river-mouths, and have sandbars across their entrances. Nowhere else in the world is there any such extent of low and sandy coast as on the Atlantic and Gulf seaboards of the United States.

Surface.—The western mountain-system of North America comprises a very great number of minor ranges, mostly having a north and south direction. The main chain (Sierra Madre) cannot be said to preserve an unmistakable identity throughout. The Coast Range, the Sierra Nevada, and the Cascade Mountains are the most noted of the western parallel ranges; they all lie on the Pacific slope, and contain some of the highest of North American peaks. The elevated plateau called the Great Basin (chiefly in Utah and Nevada), contains the Great Salt Lake and several smaller bodies of strongly saline water, evidently the remains of a much larger lake which once sent its waters to the sea. The eastern or great Appalachian mountain-system has a general direction nearly parallel with the Atlantic coast-line.

North of the St. Lawrence River is seen the vast and complicated Laurentian mountain-system, which extends from the Atlantic westward to near Lake Superior.

The highest summits are Mt. McKinley, in the north; Mt. Harvard, in the Rocky mountains; Mt. Whitney, in the Sierra Nevadas; and Mt. Popocatepetl or Peak of Orizaba, in Mexico. (See Tables of Mountain Peaks.)

Rivers and Lakes.—In the Rocky Mountain region of Canada, the great rivers, Yukon, Fraser, Columbia, Saskatchewan, and Mackenzie, take their rise. Between these mountains and Hudson Bay, a girdle of vast lakes, or inland seas (Great Bear, Great Slave, Athabasca,

Deer Lake, Winnipeg, and others), form a regular succession running from the Arctic Circle to Lake Superior, the first of a wonderful chain of great sea-like expansions of the Upper St. Lawrence (the others being Michigan, Huron, Erie and Ontario). North of the St. Lawrence system almost the whole country is thickly studded with lakes, which, with their connecting streams, form a network of important waterways traversable by canoes and boats.

The Atlantic slope of the United States is well supplied with water, and many of its streams afford extensive navigation. The Hudson is noted for its fine scenery; the Potomac is one of the noblest of American rivers; and important streams flowing to the Atlantic are the St. John, the Penobscot, the Kennebec, the Merrimac, the Connecticut, the Delaware, the Susquehanna, the James, and the St. John's, nearly all navigable in their lower courses.

The chief rivers flowing to the Gulf of Mexico are the Appalachicola, the Mobile, the Pearl, the great Mississippi, the Sabine, the Trinity, the Brazos, the Colorado of Texas and the Rio Grande.

Of the many large Alaskan rivers the principal are the Yukon and the Kuskoquim. The Fraser is a swift and strong river; the great river Columbia is noted alike for its navigation, its salmon fisheries, and its enormous cataracts. The Rio Colorado, whose waters flow to the Gulf of California, traverses a desert plateau. Here nearly every watercourse runs in a deep-walled cañon, a narrow valley with precipitous sides, often of prodigious height.

In the plateau of Central America the largest lake is that of Nicaragua, nearly equal to Ontario in extent, and only one hundred and thirty-one feet above the level of the sea. (See further under the respective countries of North America.)

Climate.—Largely determined by the direction of the mountain ranges. Five climatic regions, viz., an arctic region, whose mean temperature is less than thirty-two degrees Fahrenheit; an Atlantic temperate region, extending as far as the Mississippi, with abundant rains and dense woods; an inland temperate region, dry, with steppes or prairies; a Pacific coast region, and a tropical region.

Political Divisions.—The political divisions of North America are:

(1) Danish America,* which includes Greenland and three small islands of the Virgin group in the West Indies.

(2) British North America, in which division we may place the Dominion of Canada, Newfoundland, Labrador, the Bermudas, the numerous British West Indian islands, and British Honduras.

(3) The United States, including the detached territory of Alaska.

(4) Mexico.

(5) The Central American republics of Honduras, Guatemala, Salvador, Nicaragua, and Costa Rica, together with Panama—unless its southern part be regarded as belonging to the South American continent.

(6) The West Indian republics of Hayti and San Domingo.

(7) The Dutch West Indies.

(See the articles on the separate states and colonies.)

*The Danish West Indies were transferred to the sovereignty of the United States in 1917 at the purchase price of twenty-five million dollars.

THE UNITED STATES

The republic of the United States is by far the most populous, wealthy, and progressive country of all the New World.

Location and Extent.—It occupies the most valuable portion of the North American continent, the whole of it (with the exception of the territory of Alaska) lying within the temperate zone, between Canada on the north and Mexico on the south, and reaching across from the Atlantic to the Pacific Ocean.

Its boundary toward the Canadian Dominion passes through the Haro, or northern channel of the Strait of San Juan de Fuca, south of Vancouver Island, and thence along the forty-ninth parallel of latitude to Lake Superior; then midway through the center of the Great Lakes to the St. Lawrence, and down that river to the forty-fifth parallel, and an irregular boundary which separates New Brunswick from the States of New York and Maine, terminating at Passamaquoddy Bay.

In the south, the Mexican frontier runs from the Pacific coast, northward of the peninsula of California, to the Rio Grande del Norte, which it follows to the Gulf of Mexico.

From Atlantic to Pacific, the breadth of the United States is not less than twenty-five hundred miles; and from north to south the country extends nearly seventeen hundred miles.

Surface.—The surface of the United States from east to west may be divided as follows: (1) The Atlantic Plain, which extends from the coast to the Allegheny Mountains. (2)

The Mississippi Valley and Great Central Plain, which extends from the Allegheny Mountains west to the Rocky Mountains. (3) The Western Highlands. (4) The Pacific slope, which extends from the Rocky Mountains to the Pacific Ocean.

Mountains and Plains.—The chief mountain systems are the Appalachian region in the east and the Rocky Mountains in the west.

The Appalachian System begins in the northern part of New England (in Maine without the appearance of regular ranges) and New York, and extends southwestward to Alabama and Georgia, being divided by the Hudson River valley and Lake Champlain, and that of the Mohawk River into three distinct sections.

A coast-plain extends from its eastern base to the Atlantic. It is narrow in Maine, where it terminates in a bold rocky coast indented by bays, and broken into projecting promontories and islands. South of Massachusetts the coast becomes lower and more sandy, and the plain grows gradually wider, with the exception of a narrow belt at New York, until in North Carolina it attains a width of two hundred miles.

In the southern part of New England it is characterized by hills, and below New York by a distinct coast region and a more elevated slope. This higher region, which is in Virginia and thence southward, is marked by a somewhat abrupt terrace, varies in altitude from a few hundred to more than a thousand feet, and is known as the Piedmont plateau. The lower coast region is seldom more than one hundred feet above the sea. It has a sandy soil, and in many places there are large swamps near the coast. Much of this swampy country is uninhabitable, but when reclaimed, as it has been in many parts of North and South Carolina, it makes valuable rice-land. Many acres of fertile agricultural land have also been secured in Florida by draining its swamps. The middle elevated region is diversified by hills and valleys, and has a productive soil. The dividing line between it and the low coast-plain marks the head of navigation of most of the streams, and also determines the sites of many important towns.

The surface of this region today is a series of parallel ranges divided by fertile valleys. The various ridges are named as follows: The Blue Ridge, which lies nearest the Atlantic; the Kittatinny Chain; the Allegheny Mountains, which lie in the western part of Virginia and the central part of Pennsylvania; the Cumberland Mountains, on the eastern boundary of Tennessee and Kentucky; the Catskill Mountains, in the State of New York, which are continued in the Sacondago Chain; the Green Mountains, in the State of Vermont; the Hudson River Highlands, and the hills of New Hampshire. There is no peak of marked elevation in the Appalachian region, the highest point being Mt. Washington, in New Hampshire, which reaches a height of nearly seven thousand feet.

Great Central Plain.—West of the Appalachian system and lying between it and the western highland is a great central valley, forming part of the continental depression which extends from the Arctic Ocean to the Gulf of Mexico. It is almost an absolute plain, rising gradually from the Gulf toward the chain of Great Lakes in the north, and toward the mountains on the east and west. The only important departure from its uniform level character is an elevation of from five hundred to two thousand feet, running from southern Missouri through northwestern Arkansas into eastern Oklahoma, and known as the Ozark Mountains.

This great valley occupies about one-half the entire area of the United States, and the fertile prairies and bottom-lands of the eastern and central portions make it the most important agricultural basin of the globe. From an irregular line west of the Mississippi River the land rises in an almost imperceptible slope till it reaches the base of the western plateau.

The Rocky Mountain System extends a distance of about two thousand miles. The system is continued in Canada. The Rocky Mountains are not a single range, but are double and sometimes threefold. These ranges are the edge of a region of plateaus and hills which extends to the coastal mountains. The chief mountain ranges belonging to the United States Rockies are the Bitter Root Mountains, the Blue Mountains, and the Big Horn Mountains in the north; the Wahsatch Mountains, the Wind River Mountains, and the White Mountains in the center; and the Sierra Madre and the Sangra de Cristo Range in the south. In the western part of the southern Rockies lies the Great Basin of Colorado, with the Wahsatch Mountains on the east and the Sierra Nevada on the west. This basin is extremely arid, has suffered much volcanic action.

The Western or Pacific System forms a part of the vast elevation which extends from the northern to the southern extremity of the western continent. In the United States it is a great plateau of four thousand to ten thousand feet surmounted by a complex system of ranges, in its widest part more than one thousand miles broad. Of this Cordilleran region the Rocky Mountains form the eastern and the Sierra Nevada and Cascade Mountains and the Coast Ranges the western border.

In the ranges of central Colorado alone nearly forty of the summits have an altitude of more than fourteen thousand feet. In the Wind River Mountains, in Wyoming, are the head-waters of the Colorado, the Columbia, and the Mississippi, the three great river-systems of the United States; and in the northwestern corner of the same state is situated the National Park, famous for its hot springs and geysers as well as for its magnificent scenery (see Yellowstone).

Between the Wahsatch Range and the lofty masses of mountains in Colorado is a region of peculiar interest, consisting of level plateaus in which the changes of elevation from one plain to another are marked by abrupt descents and steep cliffs. It is furrowed by cañons or gorges, whose sides are nearly vertical; and the bed of the Colorado is in some places more than a mile and a quarter below the surface of the plateau. (See Grand Cañon under Colorado River.)

Between the Wahsatch Range and the Sierra Nevada lies the Great Basin, an immense tract having at best but little rainfall, except upon the summits of the ranges by which it is traversed, and none of whose waters are drained to either ocean. The saline swamps, salt lakes, and sinks of Nevada indicate the former location of one of these lakes; Great Salt Lake is all that now remains of the other.

The Sierra Nevada and the Cascade Range are topographically continuous, and constitute a great mountain-wall, which so far as the height of the peaks and the grandeur of the scenery are concerned, is one of the most striking portions of the Cordilleran system. Most of the peaks of the Sierras are, however, of granite and metamorphic rock, while those of the Cascade Range are volcanic. The greatest altitude is attained with Mt. Whitney as the culminating point. The lofty character of the range is maintained throughout the greater part of California, and the sublimity of the scenery is justly celebrated. (See Yosemite Valley.)

From this point there extends northward one of the most remarkable groups of extinct or faintly active volcanoes to be found anywhere in the world: the lava overflows in this region cover an area of above two hundred thousand square miles. The most prominent peaks are Mt. Shasta, in California, and Mt. Rainier, in Washington. In three separate places rivers have cut a passage through the volcanic portion of the range. The most notable is the passage of the Columbia River in a grand cañon more than three thousand feet in depth.

The Coast Ranges of Washington, Oregon, and northern California consist of numerous and approximately parallel chains, which as a rule pitch off abruptly toward the sea, leaving no coast-plain. Between the Coast Ranges and the Sierra Nevada and Cascade Range is a series of broad valleys, occupied mainly in Oregon by the Willamette River, and in California by the Sacramento and San Joaquin. In southern California the mountains of the Coast Ranges diminish in height, but throughout their whole extent they are interspersed with picturesque and fertile valleys.

Coast.—The Atlantic coast has a length of about twelve thousand three hundred and sixty miles; the Gulf Coast of five thousand seven hundred and fifty miles, and the Pacific Coast of three thousand two hundred and fifty miles.

On the coast of the New England states there are many indentations which, though small, furnish commodious harbors. Long Island Sound adds greatly to the commercial importance of New York harbor, and farther south are Delaware and Chesapeake Bays, Albemarle and Pamlico sounds, and several small indentations, such as those which form the harbors of Charleston and Savannah. The Chesapeake Bay is the largest indentation of the Atlantic Coast and runs inland in a northward direction for more than one hundred and eighty miles, with an average breadth of about fifteen miles. From Cape Hatteras to Cape Sable, however, the coast is swampy, and, especially in Florida, fringed with lagoons. The harbors of this part of the coast are not good naturally. The coast of the Gulf of Mexico is low and very swampy, but is of special climatic and commercial importance.

The Pacific Coast of the United States has a very narrow Continental Shelf, and few bays or capes. With the exception of Puget Sound, the Bay of San Francisco, and the harbor of San Diego, there is scarcely a noticeable break in the continuity of the coast line.

Islands.—There are many small rocky islands along the coast of Maine, and on the southern New England Coast is a group to which belongs Long Island, the largest of the islands of the United States. Farther south, off the Atlantic Coast, and also in portions of the Gulf of Mexico, are many low sand-spits lying parallel to the coast and having behind them shallow channels, lagoons and swamps. On the Pacific Coast there are no islands of importance except the Santa Barbara group off the southern coast of California.

Rivers.—The rivers of the Atlantic Plain rise in the Appalachian system, and are comparatively short. In many cases they are too rapid to be of much value for navigation, but are valuable for supplying water power. These rivers almost without exception have good harbors at their mouths. The chief are: the Hudson, the Delaware, the Susquehanna, the Potomac, the James, and the Savannah.

The Great Central Plain is drained by the Mississippi-Missouri river system, the basin of which covers half the area of the United States, and is equal in area to about one-third the area of Europe.

The Mississippi rises in Lake Itasca, in Minnesota, at about fifteen hundred feet above sea-level. After flowing for about one hundred miles in an easterly direction it turns south, and is joined by numerous tributaries. The chief are: St. Peter's River, which joins the main stream nine miles above St. Anthony's Falls; the Missouri, which enters the Mississippi just above St. Louis; the Ohio, which joins the main river at Cairo; the Arkansas, the Wisconsin, the Illinois, and the Red River.

The Mississippi-Missouri has made a broad flood plain, varying in width from thirty to sixty miles. This plain is subject to severe inundations, for it slopes very gently away from the river bed, which is in many parts of the river above the level of the surrounding plain. The river carries a vast amount of silt, which it deposits at its mouth, thus forming a delta which stretches a series of long, narrow, tentacle-like arms seaward.

Other rivers falling into the Gulf of Mexico are the Mobile and the Rio Grande. The Mobile, which enters the gulf at the town of Mobile, is the union of the Alabama and the Tombigbee. The Rio Grande forms the boundary between Texas and Mexico.

The rivers flowing into the Pacific are comparatively short, owing to the nearness of the coast ranges to the sea. The Colorado River flows into the Gulf of California, after crossing an arid plateau. (See description below.)

The San Joaquin and the Sacramento rivers unite and flow into the harbor of San Francisco; these and the Columbia are the only important rivers entering the Pacific.

The Great Basin of California is largely an area of inland drainage. The rivers flow into lakes with no outlets to the sea.

Colorado River (Spanish for "red" or "reddish"), is a remarkable river formed by the union of the Grand and Green Rivers, and flowing through the great plateau region. Below the junction of the Green and Grand, the main affluent in Utah is the San Juan, which drains an interesting region in the southwest of Colorado and the northwest of New Mexico. In Arizona the main affluents are the Colorado Chiquito or Flax River, the Bill Williams, and the Rio Gila, all from the left. The only important affluent the Colorado receives from the right is the Rio Virgen. From the junction of the Grand and Green the general course of the stream is to the southwest through the southern part of Utah and northwestern Arizona; and it afterwards separates Arizona from Nevada and California. The lower part of its course is in Mexican territory, where it flows into the northern extremity of the Gulf of California.

The most striking features of the Colorado basin are its dryness, and the deeply channeled surface of the greater part of the country. Almost every stream and watercourse, and most of all the Colorado itself, has cut its way through stratum after stratum of rock, until now it flows in a great part of its course, at the bottom of a deep trench or cañon.

THE GRAND CAÑON.—The main stream, for nearly four hundred miles below the mouth of the Colorado Chiquito, thus makes its way through a great plateau, forming what is called the Grand Cañon of the Colorado, the most extensive and marvelous example of the kind anywhere known.

Throughout the upper part of the great cañon the walls are from four thousand to seven thousand feet in height, and are often nearly perpendicular. Frequently they are terraced and carved into a myriad of pinnacles and towers, tinted with various brilliant colors. At some points the walls on either side rise sheer from the water; at others there is a talus of fallen rock, or occasionally a strip of fertile soil, on one or both banks. There are two main trails by which the bottom of the cañon may be reached. The Bright Angel Trail is seven miles down from the rim to the river and requires three hours for the descent. The Grand View Trail is somewhat longer and more difficult.

This over-drained river basin has an area of two hundred and twenty-five thousand square miles. The whole course of the river below the junction is about nine hundred miles; to its remotest sources it is over two thousand miles. Navigation is possible for light-draft steamers for over six hundred miles. The river is subject to vast and frequent changes of volume, and except where confined by cañon-walls, the river channel shifts to and fro in a very remarkable degree.

Hudson River, one of the most beautiful and important in America, rises in the Adirondack Mountains, four thousand three hundred and twenty-six feet above the level of the sea, where its head-streams are the outlets of many mountain-lakes. At Glens Falls it has a fall of fifty feet, and soon after, taking a southerly course, runs nearly in a straight line to its mouth, at New York City. It is tidal up to Troy, one hundred and fifty-one miles from its mouth, and magnificent steamboats ply daily between New York and Albany.

Below Newburg, sixty miles from New York, the river enters the highlands, which rise abruptly from the water to the height of sixteen hundred feet. Here historical associations add to the interest of varied scenery of singular beauty and grandeur: here was the scene of Arnold's treason and of André's fate; and at West Point, the seat of the United States military academy, eight miles below Newburg, are the ruins of Fort Putnam, built during the War of Independence.

Emerging from the highlands the river widens into a broad expanse called Tappan Bay, which is four and one-half miles wide and thirteen miles long. Below, on the right bank, a steep wall of trap rock, called the Palisades, rises from the river's brink to a height of three hundred to five hundred and ten feet, and extends for nearly twenty miles to the upper portion of the city of New York.

The river from here is known as the North River, and is from one to two miles wide; and after passing between New York and Hoboken and Jersey City, it falls into New York Bay. Its whole length is about three hundred and fifty miles, and its principal tributaries are the Sacondaga, Mohawk, and Walkill.

The Hudson has valuable shad and sturgeon fisheries, and has large commercial value. It is connected by the Erie Canal with Buffalo and the Great Lakes, while the Richelieu Canal connects it with Montreal. The Hudson River Railroad, connecting New York with Albany, runs along the east bank.

The river is named for the English navigator who explored it in 1609. Robert Fulton's first successful experiment in steamboat navigation was made on this river in 1807.

The St. Lawrence, issuing from Lake Ontario, flows northeast for some seven hundred and fifty miles—part of the way forming the boundary between Canada and the United States—and falls into the Gulf of St. Lawrence by a broad estuary. But in its widest acceptation the name includes the whole system of the Great Lakes and their connecting streams, with a total length from source to mouth of two thousand miles, and a drainage basin of five hundred and sixty-five thousand two hundred square miles. It pours more fresh water into the ocean than any other river except the Amazon.

This mighty artery rises, under the name of the St. Louis, on the spacious plateau which sends forth also the Mississippi toward the Gulf of Mexico, and the Red River of the North toward Hudson Bay. Lake Superior (six hundred and two feet above sea-level), the next link in the chain, finds its way to Lake Huron through St. Mary's River, whose rapids have a fall of twenty and one-half feet. Below Lake Huron, which receives Lake Michigan from the south, St. Clair River, Lake St. Clair, Detroit River, and Lake Erie, maintain pretty nearly the same level (there is a fall of some eight feet, however, in Detroit River) till the river Niagara descends three hundred and twenty-six feet to Lake Ontario, which is itself still two hundred and forty-seven feet above the sea-level.

The St. Lawrence proper, with a number of lakelike expansions (such as the Lake of the Thousand Isles, of St. Francis, St. Peter, etc.), presents the character first of a river, and then of an estuary, down to the gulf. What is known as the Lake of the Thousand Islands contains about seventeen hundred islands, big and little, many of them extremely picturesque. This is a famous tourist region, with numerous hotels and other resorts as well as many fine private estates.

Prior to 1858 only vessels drawing not more than eleven feet of water could pass up the river above Quebec, but since then a channel has been made in the shallow parts of the river, three hundred feet wide and twenty-seven and one-quarter deep, which permits the passage up to Montreal of large vessels.

Between Lake Ontario and Montreal there are several rapids, which, however, may be all avoided by means of canals that have been constructed at a very great expense. Immediately above the

island of Montreal, the St. Lawrence is joined by its principal auxiliary, the Ottawa, from the northwest; and a little more than half-way between this confluence and Three Rivers, the highest point of tidal influence, the Richelieu from the south brings in the tribute of Lake Champlain. Other principal tributaries are the St. Maurice, the Saguenay, and the Batiscan. The width of the St. Lawrence varies from less than one to four miles; the estuary at its mouth is above one hundred miles across. During winter the river is frozen over and navigation closed.

Lakes.—Of the Great Lakes of North America, Lake Michigan lies within the United States, and the southern shores of Lake Ontario, Lake Erie, Lake Huron, and Lake Superior are United States territory. These lakes were formed by the action of the glacier which once covered the continent as far south as the forty-second parallel, roughly speaking. They are remainders of much larger lakes and are of the utmost importance as waterways.

New England has very many smaller lakes, which are also the result of glacial action. The largest lake of the United States apart from the Great Lakes is the Great Salt Lake of Utah. The extremely low rainfall of this region and the intense evaporation consequent upon the high temperature are responsible for the salinity of the waters of the lake.

The Great Lakes.—The five Great Lakes cover a total area of over ninety thousand square miles, forming the largest collective mass of fresh water in the world.

LAKE SUPERIOR.—The northern shores of Superior are mostly precipitous cliffs ranging from three hundred to one thousand feet in height. On the southeast sandy coasts prevail. The coast on the south and southwest is composed largely of sandstone cliffs, rich in iron and other metal deposits. The bed of Superior is supposed to be an ancient volcanic crater. Its depth of one thousand and eight feet represents a depression extending four hundred feet below sea-level. Superior is, therefore, distinct in origin from the other lakes of the group, whose beds represent ancient river systems and date from the glacial period. The basin of the lake, closely circumscribed by the Mississippi and Hudson Bay watersheds, receives many streams, but all of them short.

LAKE HURON, the second of the Great Lakes, is bounded north, east and south by the Province of Ontario, and south and west by the State of Michigan, including Georgian Bay (five thousand six hundred and twenty-six square miles), and North Passage, one thousand five hundred and fifty-six square miles. It is connected with Lake Michigan by the Straits of Mackinac, three and one-half miles broad and one hundred and thirty-five feet deep.

The discharge of Lake Huron is about two hundred and seventeen thousand cubic feet per second. By reason of evaporation and rainfall, the level of the lake varies annually between four and five feet, but much greater local variation is caused by the strong winds. The densely wooded northeast is broken by many low islands of limestone and glacial débris. Elsewhere the shores are almost unbroken and low, except when cliffs of one hundred or one hundred and fifty feet high rise from the northeast border and afford good sites for the many Canadian towns and villages. Nearly all the harbors on this coast are protected by breakwaters.

LAKE MICHIGAN.—The area of Lake Michigan includes Green Bay on the northwestern shore, and Grand Travers Bay directly on the eastern shore. Many islands lie in the lake between these two breaks in the shore, which elsewhere is low and unbroken.

About the southern and eastern borders are immense heaps of sand which have been piled up by waves and currents, and drift inland by the winds, sometimes, as at Sleeping Bear bluffs, completely burying the heavy forests.

The level of Michigan varies, but not as greatly as does that of Huron, according to the direction and force of the winds, the changes in rainfall, evaporation, atmospheric pressure, etc. Except when caused by protracted gales blowing steadily in one direction, this variation rarely exceeds one and three-tenths feet. The lake has a lunar tide with accompanying variation of from one and one-half inches neap to about three inches spring tide, and the water is warmer than the air in winter and cooler in summer, and visibly ameliorates the climate of the shores, as may be shown in the quantity and rich quality of the Michigan fruits. Like all the Great Lakes, Michigan abounds in fish, such as whitefish and trout.

LAKE ERIE has a northeast and southwest direction, bounded on the entire upper shore by the Province of Ontario, and on the southern and eastern shores by Ohio, Pennsylvania and New York. At its southwestern end it is connected with Lake St. Clair by the Detroit River. At its northwestern end it discharges into Lake Ontario through the Niagara River. It is connected by the Welland Canal with Lake Ontario and by other canals with the Hudson and Ohio Rivers, making it thus a link in the waterway from east to west.

Besides the drainage from the Lake Superior system, Lake Erie receives the Grand River, the Maumee from the west, and the Sandusky and Cuyahoga from the south. The west coast is broken by the islands of Put-in-Bay.

LAKE ONTARIO is the most eastern, with a northeast and southwest direction, like Lake Erie. It is the lowest of the Great Lakes, and has naturally the largest discharge, three hundred thousand cubic feet per second. The shores are flat, except in the Bay of Quinte, which extends on the northeast fifty miles inland. There are many harbors and flourishing ports. The waters have a surface current, due to the fact that the larger axis of the lake coincides with the direction of the prevailing westerly winds. This, added to frequent violent storms, keeps the lake from freezing, except a few miles in width along the shores.

Lake Ontario is connected with the Erie Canal and Hudson River by the Oswego Canal and with the Ottawa River by the Rideau Canal.

Great Salt Lake, in Utah, stretches along the western base of the Wahsatch Mountains, about four thousand two hundred feet above the sea, forming a principal drainage center of the Great Basin. Well-marked shore-lines on the mountains around, reaching one thousand feet higher than the present level, show that the lake had formerly a vastly greater extent; this prehistoric sea has been named Lake Bonneville. Great Salt Lake is over eighty miles long and from twenty to thirty-two broad, but for the most part exceedingly shallow. It contains several islands, the largest Antelope I., about eighteen miles long. Its tributaries are the Bear, Ogden, Jordan and Weber, the Jordan bringing the fresh waters of Lake Utah; but Great Salt Lake has no outlet save evaporation, and its clear water consequently holds at all times a considerable quantity of saline matter in solution. Several species of insects and a brine-shrimp have been found in its waters, but no fishes; large flocks of water-fowls frequent the shores.

The first mention of Great Salt Lake was by the Franciscan friar Escalante in 1776, but it was first explored and described in 1843 by Fremont.

Champlain is a beautiful lake separating the states of New York and Vermont, and penetrating, at its north end, about six miles into the Dominion of Canada. Lying ninety-one feet above sea-level, it is one hundred and ten miles long, by from one to fifteen broad, empties itself into the St. Lawrence by the Richelieu River, and has communication by canal with the Hudson. The lake, now an important trade channel, was the scene of several incidents of the French and Indian revolutionary wars; and here a British flotilla was defeated by the Americans September 11, 1814. It was discovered by Champlain in 1609, and in 1909 tercentenary celebrations of its discovery were held along its shores.

Natural Wonders.—Of the great natural wonders the chief are the Niagara Falls, the Grand Cañon of Colorado, and Yellowstone Park. The Sequoia, General Grant and Calaveras Parks—all reservations of the famous big trees, many thousands of years old, have also great scenic interest. Mt. Ranier Park, in Washington, encloses the noblest and most interesting mountain of our Pacific Coast. The chief feature of Crater Lake Park, in southern Oregon, is a lake two thousand feet deep, occupying the crater of an extinct volcano on the summit of the Cascade Range, with walls one thousand to two thousand feet high. The latest addition is Glacier Park, in northwestern Montana. It is named from its glaciers, of which there are over sixty within an area of five square miles, and contains numerous snow-capped peaks seven thousand to twelve thousand feet high. It also contains Lake McDonald, one of the most beautiful alpine lakes. Among the national monuments are the petrified forests in Arizona.

Garden of the Gods, a region in Colorado, is noted for its view of Pike's Peak, and its weird and grotesque rock pinnacles, needles, etc., some of which receive descriptive names such as Cathedral Spires. The region is about five hundred acres in extent, and in 1908 was presented to Colorado Springs city.

Grand Canyon.—See under Colorado River.

Mammoth Cave, in Kentucky, is eighty-five miles by railroad southwest of Louisville. The cave is about ten miles long; but it is said to require upwards of one hundred and fifty miles of traveling to explore its multitudinous avenues, chambers, grottoes, rivers and cataracts. It is the largest cavern in the world. The main cave is only four miles long, but it is from forty to three hundred feet wide, and rises in height to one hundred and twenty-five feet. Lucy's Dome is three hundred feet high, the loftiest of the many vertical shafts that pierce through all the levels.

It is estimated that there are more than four thousand sink-holes and five hundred open caverns. Some avenues are covered with a continuous incrustation of the most beautiful crystals; stalactites and stalagmites abound.

There are several lakes or rivers connected with Green River outside the cave, rising with the river, but subsiding more slowly, so that they are generally impassible for more than six months in the year. The largest is Echo River, three-fourths of a mile long, and in some places two hundred feet wide. The air of the cave is pure; the temperature keeps at about fifty-four degrees.

Among the most striking facts which exploration has revealed are the following: there is a pit, named the Bottomless Pit, one hundred and five feet deep, besides Scylla, one hundred and thirty-five feet deep. Crevice Pit, with Klett's Dome, which forms a part of it, is one hundred and fifty feet in total vertical measurement. Cleveland

GARDEN OF THE GODS, COLORADO,

is a tract of land about five hundred acres in extent, thickly strewn with grotesque rocks and cliffs of red and white sandstone. Among the chief features are the Cathedral Spires, the Balanced Rock, etc. The Gateway of the Garden of the Gods consists of two enormous masses of bright red rock, three hundred and thirty feet high and separated just enough for the roadway to pass between.

BIG TREE, CALIFORNIA

The Mariposa Grove of Big Trees (six thousand five hundred feet), so-called from its situation in Mariposa ("butterfly") County, occupies a tract of land four square miles in area, reserved as a State Park, and consists of two distinct groves, one-half mile apart. The Lower Grove contains about two hundred and forty fine specimens of the Sequoia Gigantea, including the "Grizzly Giant," the largest of all, with a circumference of ninety-four feet and a diameter of thirty-one feet. Its main limb, two hundred feet from the ground, is six and one-half feet in diameter. In ascending to the Upper Grove, which contains three hundred and sixty big trees, the road goes through a tunnel, ten feet high and nine and one-half feet wide (at the bottom), cut directly through the heart of a living Sequoia, twenty-seven feet in diameter. (See illustration.) About ten of the trees exceed two hundred and fifty feet in height and about twenty trees have a circumference of over sixty feet, three of these being over ninety feet. The Calaveras Grove has taller trees than any in the Mariposa Grove, but the latter has those of greatest circumference. At Santa Cruz there is a grove which contains about a score of the genuine Redwood with a diameter of ten feet and upwards. The largest is twenty-three feet across; one of the finest, named the Giant, has a circumference of seventy feet. Here is a large hollow tree in which General Fremont camped for several days in 1847. Another stump is covered with a platform, which holds twelve to fourteen people.

Avenue is two miles long, Silliman's one and one-half miles and in places two hundred feet in width. Large stretches of water have been christened Dead Sea, Lake Lethe; also there are the Styx, and Roaring and Echo rivers. In the outer galleries of the cave millions of bats are congregated. There are also blind fish, crayfish, crickets, and other abnormal insect inhabitants of the cave.

Niagara Falls.—See under Famous Waterfalls.

Yosemite Valley is the name of a cleft in the west slope of the Sierra Nevada, about the center of California, and one hundred and forty miles east of San Francisco. The name Yosemite is an Indian word which signifies "large grizzly bear." This celebrated valley, noted for the sublimity and beauty of its scenery, is about six miles long and from one-half to nearly two miles in breadth, and is traversed by the Merced River. The beholder is awed and impressed by the massiveness of its mountain elevations, the nearly perpendicular granite walls, from three thousand to six thousand feet high, by which it is shut in throughout its entire length, and the grandeur of its waterfalls, which are in some respects the most remarkable in the world.

At the lower end of the valley stands the striking cliff known as El Capitan, three thousand three hundred feet high, while from near its lower corner the Virgin's Tears Fall descends one thousand feet. But the eye turns from it to the remarkable fall opposite, happily named the Bridal Veil, which leaps from the brow of a cliff nine hundred feet high, and descends in a broad sheet of spray and finally mist, swaying in the wind and constantly changing its form of fleecy beauty. Farther up the valley are Cathedral Rock (two thousand six hundred and sixty feet), the Three Brothers (three thousand eight hundred and thirty feet), Sentinel Rock (three thousand and forty-three feet), and directly opposite it the grand Yosemite Falls. (See Famous Waterfalls.) Above the falls are the North Dome (three thousand five hundred and sixty-eight feet) and the vast Half Dome, nearly one mile (four thousand seven hundred and thirty-seven feet) high, whose summit can now be reached by a long climb. Two miles above the great falls the stream enters the main valley in two arms, coming out of two canyons. In that of the south fork is the Illilouet Fall, some six hundred feet high; in the main canyon are Vernal Fall and Nevada Fall, the latter one of the finest in the world. (See Famous Waterfalls.)

The country surrounding the valley and constituting the National Park is a rolling and hilly region varying from eight thousand to ten thousand feet above sea-level. There is little soil or vegetation except a scattered forest growth. Small glaciers still remain near the summits of some of the adjacent mountains. Bare granite peaks rise still higher from this surface.

Yellowstone National Park comprises a tract of land originally comprising three thousand five hundred and seventy-five square miles in northwestern Wyoming, set apart by act of Congress in 1872 as a national park to preserve from destructive molestation the most wonderful group of natural features and phenomena known within the boundaries of the United States. It is readily reached over the Northern Pacific Railroad, which has a branch from Livingston to Gardiner, just outside the north park boundary, thirty-six hours' ride from St. Paul; or it may be reached from the Oregon Short Line R. R. from the west side by a more difficult stage connection.

The whole park plateau lies between six thousand and eight thousand feet above sea-level. The mountains rise in great grandeur upon this plateau, giving evidence of their volcanic origin, though now extinct, by their form, and their rock structure, and the many evidences of pent-up heat that one sees in the hot springs and geysers for which the locality is justly famous. Twenty-four peaks rise over ten thousand feet, several over eleven thousand. Electric Peak on the border is eleven thousand one hundred and fifty-five feet. Many have been glaciated. Just outside the Teton Range peaks rise to nearly fourteen thousand feet. It is a part of the continental divide and from Two-ocean Pond the waters may flow into either the Atlantic or the Pacific. The Yellowstone, Snake and Madison rivers are fed by the waters from this area.

The surface of the park is dotted with lakes, the largest being Yellowstone Lake, standing seven thousand seven hundred and forty-one feet above sea-level, ten by twenty miles in average dimensions, the largest body at so great elevation in the United States.

The streams contain numerous falls and rapids, twenty-five of special interest, some as picturesque as the Falls of the Yellowstone, though not on such a grand scale, and some far removed from the usual routes of travel. The falls and canyons of the Yellowstone are considered among the most wonderful in the world. The canyon is cut more than two thousand feet deep into the lavas and sediments, exhibiting the most fantastic carvings of erosion, modified by an exquisite blending of colors. Into it plunges the river by two great leaps, the Upper and the Lower Falls, one hundred and twelve and three hundred and ten feet high respectively, and then flows on as a narrow ribbon scarcely more than one hundred and sixty to two hundred feet wide for twelve miles of this wonderfully beautiful chasm.

Yellowstone Park includes within its borders the largest geysers in the world. There are about seventy in all, included in six groups or geyser basins. Norris, Upper, Middle and Lower basins, ten to fifteen miles apart, are on the headwaters of the Madison, here called Five Hole River. The Upper is most active and is called the Great Geyser Basin. A group is also found at Shoshone Lake, at the head of Snake River, and another group at Heart Lake. Fifty geysers spout water and steam from thirty to two hundred and fifty feet into the air. Some spout from open bowl-shaped basins, and others have built cones or tubes by their deposits. Extinct geysers are marked by the remains of these cones, among which is Liberty Cap. Excelsior geyser is the largest of all. It has a bowl-shaped opening two hundred by three hundred feet, flows four thousand gallons of boiling hot water per minute, and throws a fifty-foot column of water and steam seventy-five feet to two hundred and fifty feet high. Giant throws a five-foot column over two hundred feet high for an hour. Old Faithful, so named because of its exceptional regularity, every sixty-four to sixty-five minutes without a failure within the memory of the oldest observers, discharges a column one hundred and fifty feet high amounting to one and a half million gallons of water at each eruption. There is every gradation in size and violence and periodicity.

In the Mammoth Hot Springs area, near the northern boundary, where there are fifty active springs within an area of one hundred and seventy acres, there is a travertine accumulation of one thousand feet. Others deposit silica in similar manner, both types aided much by algous plant growth in the mineralized warm waters. In some places sulphur has been deposited.

Nine-tenths of the whole area is forest. The tree limit varies from nine thousand four hundred to nine thousand seven hundred feet. Few of the plateau localities are bare. Pine, poplar, balsam, cedar and spruce grow abundantly and many to large size. In the spring and geyser localities the trees are often covered by deposits and buried. Whole forests have been thus entombed. Petrified trees are common. Wild animals are wholly unmolested. Deer, elk, buffalo and bear may be seen and approached near enough to photograph. Trout abound in the waters throughout.

The first white man to attempt an exploration

NATURAL BRIDGE OF VIRGINIA

The Natural Bridge of Virginia (one thousand five hundred feet above the sea) is a huge monolithic limestone arch, two hundred and fifteen feet high, one hundred feet wide, and ninety feet in span, crossing the ravine of the Cedar Creek. It seems to be a remnant of a great horizontal bed of limestone rock that entirely covered the gorge of the brook, which originally flowed through a subterranean tunnel. The rest of this roof has fallen in and been gradually washed or worn away. The bridge is finely situated in a beautiful amphitheater, surrounded by mountains, on land originally granted by George III. to Thomas Jefferson, who built a cabin here for the use of visitors. Among the names upon the smooth side of the archway is that of George Washington (west side, about twenty-five feet up), which was the highest of all until a student named Piper actually climbed from the bottom to the top of the arch in 1818.

of the region was a trapper named Coulter, who in 1805 traversed a part of this district. His tales were disbelieved, but were confirmed thirty years later by the discoveries of Bridger. In 1870 the first official survey was made, and in 1871 Hayden's famous expedition revealed the glories of the Yellowstone district.

Climate and Irrigation.—The United States, stretching over such a vast area and having such great tracts of mountain and plain, must necessarily present a great variety of climate. The mean annual temperature ranges from under forty degrees to seventy-five degrees. The isotherm of fifty-five degrees mean annual temperature crosses the center of the country from east to west, passing through St. Louis. The mean annual rainfall for the whole country is about thirty inches, but there is a great difference in this respect between different parts. The rainfall is most abundant on the northwest Pacific Coast, on the Gulf Coast, and on the higher mountain ranges. On the great plains it is only ten to twenty inches, and there are large desert stretches in the Rocky Mountain region with a rainfall of less than ten inches.

Irrigation.—As far as lack of rainfall is concerned in the so-called rainless regions of the United States, this has been notably offset by great works of irrigation that have been steadily going forward. Agriculture, horticulture and vitaculture are, therefore, no longer dependent on chance but science, as the National Irrigation Congress expresses it.

Modern irrigation in the United States began in 1750 with the watering of the gardens in the hills and deserts of the coast of California by the adventurous missionaries from Mexico. Irrigation by English-speaking people had its origin in Utah one hundred years later. There the Mormons, separated by one thousand miles of untrodden desert from all cultivated land, found in irrigation their only means of escape from starvation.

In 1870 there were twenty thousand acres under irrigation, followed by a rapid development of small ditches, until in 1880 there were one million acres irrigated. Today (1917) upward of fifty million acres are included in reclamation projects, and it is estimated that there are upward of four hundred and fifty million acres still awaiting the scientific use of water.

The diversity of methods used in irrigation in the United States is remarkable. Practically every system to be found in the world can be seen in some part of the arid west. This is due to the fact that many of the irrigators have come from distant parts of the world and each seeks to introduce on his farm customs and practices of his old environments. This is particularly noticeable in California, where the Chinese irrigate their truck gardens in Chinese fashion, and Italians, Spaniards and Mexicans imitate for a time at least the practices of their forefathers.

Upward of one hundred and fifty thousand miles of irrigation canals, with reservoirs and supplementary works, have been built at a cost of more than six hundred million dollars. These projects are distributed through the States of Arizona, California, Colorado, Idaho, Kansas, Montana, Nebraska, Nevada, New Mexico, North Dakota, Oklahoma, Oregon, South Dakota, Texas, Utah, Washington and Wyoming. The most notable among them are: the Truckee-Carson Canal and Reservoir, in Nevada; the Minidoka project, in southern Idaho; that of the Uncompahgre Valley, in Colorado; the Roosevelt Dam, in the Salt River Valley, Arizona; the Klamath Reservoir, on the Oregon-California boundary; the Boisé project, Idaho; that of Yuma, on the Arizona-California boundary; North Platte, on the Nebraska-Wyoming boundary; and the gigantic Elephant Butte Reservoir, in New Mexico—the second largest in the world.

Political Divisions.—Under its present organization the United States comprises fifty-one political divisions. Of these forty-eight are states enjoying the full privileges afforded by the federal constitution. The three territories —Alaska, Hawaii and Porto Rico—all are organized but not yet admitted to statehood. The Philippines have a modified territorial government.

(See Tables appended.)

It is worthy of remark that the center of population advanced westward during the ten decades since 1790 in a nearly uniform line along the thirty-ninth parallel of latitude.

THE CENTER OF POPULATION

Census Year	Approximate Location by Important Towns	From Point to Point in Direct Line†
1790	Twenty-three miles east of Baltimore, Md.	.....
1800	Eighteen miles west of Baltimore, Md.	40.6
1810	Forty miles northwest by west of Washington, D. C.	36.9
1820	Sixteen miles north of Woodstock, Va.	50.5
1830	Nineteen miles west by southwest of Moorefield, W. Va.*	40.4
1840	Sixteen miles south of Clarksburg, W. Va.*	55.0
1850	Twenty-three miles southeast of Parkersburg, W. Va.*	54.8
1860	Twenty miles south of Chillicothe, Ohio	80.6
1870	Forty-eight miles east by north of Cincinnati, Ohio	44.1
1880	Eight miles west by south of Cincinnati, Ohio	58.1
1890	Twenty miles east of Columbus, Ind.	48.6
1900	Six miles southeast of Columbus, Ind.	14.6
1910	In the city of Bloomington, Ind.	39.0
1920	In Owen county, Ind., 8.3 miles southeast of Spencer, Ind.	

*West Virginia formed part of Virginia until 1860.
†Movement in mines during preceding decade.

Public Lands.—The United States originally owned nearly all the area of the states, with the exception of the original thirteen. Homesteads have been given, or sold at a nominal price, to all bona fide settlers. Vast areas have been given to railroad companies and in aid of education. The country's Indian wards have been provided with ample reservations. The government has established great national parks, and it has reserved more than seventy-two thousand square miles of forest land.

The following tabulations give numerous important facts concerning the states and territories:

TABLE OF STATES AND TERRITORIES OF THE UNITED STATES

Date of Admission Into Union	State or Territory Origin and Meaning of Name Area and Population Motto and Meaning	Settlement Where, When, By Whom Original Territory from Which Derived	Capitals and Populations Chief Productions of State
1819	**Alabama** (Indian—Here we rest). 51,998 sq. miles. Pop. 2,348,174 Motto: *Here we rest.*	Mobile Bay, 1702, by the French. From Louisiana, Georgia, Mississippi and Alabama territories.	Montgomery: Pop. 43,464 Corn, oats, wheat, rice, cotton, iron, lumber, manufactures, pot
1867	‡**Alaska** (*Al-ay-eska*, meaning "the great country"). 590,884 sq. miles. Pop. 54,899. No motto.	Three Saints, 1784, by the Russians. Purchased from Russia in 1867 for $7,200,000.	Juneau: Pop. 3,050. Seals, salmon, gold, copper, silver, ber, tin, lead, coal.
1911	**Arizona** (Indian—Sand Hills). 113,956 sq. miles. Pop. 334,162. Motto: *Ditat deus* (Founded by God).	Tucson, 1580, by the Spanish. From New Mexico territory.	Phoenix: Pop. 29,053. Copper, gold, silver, alfalfa, fruit stock, wheat, barley.
1836	**Arkansas** (From a tribe of Indians). 53,335 sq. miles. Pop. 1,752,204 Motto: *Regnat populi* (The people rule).	Arkansas Post, 1685, by the French. From Louisiana, Missouri and Arkansas territories.	Little Rock: Pop. 65,142. Cotton, lumber, corn, oats, wheat, wool, coal, tobacco.
1850	**California** (From an old Spanish romance). 158,297 sq. miles. Pop. 3,426,861. Motto: *Eureka* (I have found it).	San Diego, 1768, by the Spanish. From New Albion, Upper California.	Sacramento: Pop. 65,908. Gold, silver, copper, lead, petr borax, lumber, fruits, wine, beet sugar.
1876	**Colorado** (Spanish—Red, or Ruddy). 103,948 sq. miles. Pop. 939,629. Motto: *Nil sine numine* (Nothing without providence).	Auroria, 1859, by the Americans. From Louisiana and Mexican cession. Colorado territory.	Denver: Pop. 256,491 Gold, silver, coal, copper, veget fruits, live stock, wheat, beet oats, corn.
*1788	**Connecticut** (Indian—Long River). 4,965 sq. miles. Pop. 1,380,631. Motto: *Qui transtulit sustinet* (He who transplanted still sustains).	Windsor, 1636, by the English. From North Virginia, New England.	Hartford: Pop. 138,036. Manufactures, woolen, cotton, n tobacco, iron, granite, cereals.
*1787	**Delaware** (In honor of Lord De La Warr). 2,370 sq. miles. Pop. 223,003. Motto: *Liberty and independence.*	Wilmington, 1637, by the Swedes. From New Sweden, New Netherlands, three lower counties on the Delaware.	Dover: Pop. 4,042. Corn, wheat, tomatoes, fruits, ma tures, leather, iron, steel, mach
1791	**District of Columbia** (In honor of Columbus). 70 sq. miles. Pop. 437,571. Motto: *Justitia omnibus* (Justice to all).	Rome, 1663, by the English. Ceded to government by Maryland and Virginia.	Washington: Pop. 437,571. Flour mills, manufactures.
1845	**Florida** (Spanish—Blooming). 58,666 sq. miles. Pop. 968,470. Motto: *In God is our trust.*	St. Augustine, 1565, by the Spanish. From Florida territory.	Tallahassee: Pop. 5,637. Fruits, vegetables, tobacco, rice, c lumber, turpentine, resin, fish, phate.
*1788	**Georgia** (in honor of George II.). 59,265 sq. miles. Pop. 2,895,832. Motto: Obverse: *Wisdom, justice moderation.* Reverse: *Agriculture and commerce.*	Savannah, 1733, by the English. One of the original thirteen states.	Atlanta: Pop. 200,616. Cotton, corn, rice, oats, tobacco, o peaches, melons, marble, clay; goods, lumber, fertilizers, tar.
....	‡**Hawaii** (From the native Owhyhee). 6,449 sq. miles. Pop. 255,912 No motto.	Honolulu, 1820, by the Americans. From Sandwich Islands.	Honolulu: Pop. 83,327. Sugar, fruits, rice, coffee, hides, honey, aisal.
1890	**Idaho** (Indian—Gem of the Mountains) 84,313 sq. miles. Pop. 431,866. Motto: *Salve* (Hail).	Coeur d'Alene, 1842, by the Americans. From Oregon, Washington and Idaho territories.	Boise City: Pop. 21,393. Gold, silver, copper, lead, lumber, wheat, oats, barley, live stock.
1818	**Illinois** (Indian—The Men). 56,665 sq. miles. Pop. 6,485,280. Motto: *National union, state sovereignty.*	Kaskaskia, 1682, by the French. From Northwest, Indian and Illinois territories.	Springfield: Pop. 59,183. Corn, wheat, oats, potatoes, hay stock, wool, meat, manufactures.
1816	**Indiana** (Indian's Ground). 36,354 sq. miles. Pop. 2,930,390. No motto.	Vincennes, 1702, by the French. From Northwest and Indiana territories.	Indianapolis: Pop. 314,194. Corn, wheat, tobacco, vegetables, wool, coal, clay, flour, machinery
1846	**Iowa** (Indian—Drowsy Ones). 56,147 sq. miles. Pop. 2,404,021. Motto: *Our liberties we prize, and our rights we will maintain.*	Dubuque, 1833, by the Americans. From Louisiana, Missouri, Michigan, Wisconsin and Iowa territories.	Des Moines: Pop. 126,468. Corn, wheat, oats, potatoes, hay stock, butter, coal, lumber, poul
1861	**Kansas** (Indian—Smoky Water). 82,158 sq. miles. Pop. 1,769,257. Motto: *Ad astra per aspera* (To the stars through difficulties).	Leavenworth, 1854, by the Americans. From Louisiana, Kansas territory.	Topeka: Pop. 50,022. Corn, wheat, hay, live stock, fruits petroleum, salt, meats, Kaffir co
1792	**Kentucky** (Indian—Dark and Bloody Ground). 40,598 sq. miles. Pop. 2,416,630. Motto: *United we stand, divided we fall.*	Boonesboro, 1769, by the English. From Virginia.	Frankfort: Pop. 9,805. Tobacco, hemp, wheat, cotton stock, lumber, coal, sorghum, flo
1812	**Louisiana** (In honor of Louis XIV.). 48,506 sq. miles. Pop. 1,798,509. Motto: *Union, justice, and confidence.*	New Orleans, 1718, by the French. From Louisiana, Territory of Orleans.	Baton Rouge: Pop. 21,782. Cotton, corn, rice, sugar, lumber ters, salt, sulphur.
1820	**Maine** (The Main Land). 33,040 sq. miles. Pop. 768,014. Motto: *Dirigo* (I direct).	Saco, 1623, by the English. From New England, Laconia and Massachusetts.	Augusta: Pop. 14,114. Hay, grains, dairying, potatoes, granite, ice, lumber, apples, pap
*1788	**Maryland** (In honor of Queen Henriette Maria). 12,327 sq. miles. Pop. 1,449,661. Motto: *Fatti maschii, parole femine.* (Manly deeds, womanly words).	St. Mary's, 1632, by the English. From one of the original states.	Annapolis: Pop. 11,214. Wheat, hay, corn, vegetables, oysters, coal, wool, canned vegetables.
*1788	**Massachusetts** (The Place of Great Hills). 8,266 sq. miles. Pop. 3,852,356. Motto: *Ense petit placidam sub liberate quietem* (With the sword she seeks calm peace under liberty).	Plymouth, 1620, by the English. From North Virginia, New England, Massachusetts Bay.	Boston: Pop. 748,060. Manufactures (woolen, cotton), shoes, fish, tobacco, granite, ma

E OF SSION TO ION	STATE OR TERRITORY ORIGIN AND MEANING OF NAME AREA AND POPULATION MOTTO AND MEANING	SETTLEMENT WHERE, WHEN, BY WHOM ORIGINAL TERRITORY FROM WHICH DERIVED	CAPITALS AND POPULATIONS CHIEF PRODUCTIONS OF STATE
837	**Michigan** (Indian—Great Lake). 57,980 sq. miles. Pop. 3,668,412. Motto: *Si quaeris peninsulam amoenam, circumspice* (If you seek a beautiful peninsula, behold it here).	Sault Ste. Marie, 1668, by the French. From Northwest, Indiana and Michigan territories.	Lansing: Pop. 57,327. Corn, wheat, oats, hay, fruits, vegetables, iron, copper, clay, lumber, manufactures.
858	**Minnesota** (Indian—Cloudy Water). 84,682 sq. miles. Pop. 2,387,125. Motto: *L'étoile du nord* (The star of the north).	St. Paul, 1838, by the Americans. From Louisiana and Northwest and Minnesota territories.	St. Paul: Pop. 234,698. Corn, wheat, oats, barley, flaxseed, wool, live stock, flour, iron, lumber, dairying.
817	**Mississippi** (Indian—Great River, or Father of Waters). 46,865 sq. miles. Pop. 1,790,618. No motto.	Biloxi, 1699, by the French. From Louisiana and Georgia, Mississippi territory.	Jackson: Pop. 22,817. Cotton, corn, wheat, oats, potatoes, rice, tobacco, oysters, shrimps.
821	**Missouri** (Indian—Great Muddy). 69,420 sq. miles. Pop. 3,404,055. Motto: *Salus populi suprema lex esto* (The welfare of the people is the supreme law).	St. Genevieve, 1755, by the French. From Louisiana and Louisiana and Missouri territories.	Jefferson City: Pop. 14,490. Corn, wheat, oats, rye, cotton, swine, honey, zinc, lead, tobacco, meats.
889	**Montana** (Spanish—A Mountain). 146,572 sq. miles. Pop. 548,889 Motto: *Oro y plata* (Gold and silver).	Yellowstone River, 1809, by the Americans. From Louisiana and Nebraska, Idaho, Dakota and Montana territories.	Helena: Pop. 12,037 Wheat, wool, live stock, fruit, oats, barley, lumber, copper, lead, silver, coal.
867	**Nebraska** (Indian—Shallow Water). 77,520 sq. miles. Pop. 1,296,372. Motto: *Equality before the law.*	Bellevue, 1847, by the Americans. From Louisiana, Nebraska territory.	Lincoln: Pop. 54,948. Corn, wheat, oats, live stock, hay, chicory, sugar beets, fruits, potatoes.
864	**Nevada** (Spanish—Snow-covered). 110,690 sq. miles. Pop. 77,407. Motto: *All for our country.*	Genoa, 1850, by the Americans. From Upper California and Utah and Nevada territories.	Carson City: Pop. 1,685. Gold, silver, copper, zinc, wool, live stock, lumber, borax.
*88	**New Hampshire**(Hampshire,England). 9,341 sq. miles. Pop. 443,083. No motto.	Portsmouth, 1623, by the English. From North Virginia, New England, Laconia.	Concord: Pop. 22,167. Hay, corn, potatoes, oats, apples, granite, mica, manufactures.
*87	**New Jersey** (In honor of governor of Jersey Island). 8,224 sq. miles. Pop. 3,155,900. No motto.	Elizabethtown, 1617, by the Dutch. From New Netherland.	Trenton: Pop. 119,289. Market garden crops, cereals, fruits, fisheries, manufactures, textiles, machinery.
911	**New Mexico** (From Old Mexico). 122,634 sq. miles. Pop. 360,350. Motto: *Crescit eundo* (It increases by going).	Santa Fé, 1585 (?) by the Spaniards.	Santa Fé: Pop. 7,236. Gold, silver, fruits, vegetables, live stock, wool, lumber, copper, coal, turquoise.
*88	**New York** (In honor of Duke of York). 49,204 sq. miles. Pop. 10,385,227. Motto: *Excelsior* (Higher).	New York, 1614, by the Dutch. From New Netherland.	Albany: Pop. 113, 344 Market garden crops, fruits, corn, wheat, dairying, manufactures, clothing, textiles, books, magazines, papers.
*89	**North Carolina** (In honor of Charles II.). 52,426 sq. miles. Pop. 2,559,123. Motto: *Esse quam videri* (To be, rather than to seem).	Albemarle Sound, 1653, by the English. From Albemarle colony.	Raleigh: Pop. 24,418. Cotton, corn, tobacco, wheat, shad, oysters, lumber, mining.
889	**North Dakota** (Indian—Allied). 70,837 sq. miles. Pop. 646,872. Motto: *Liberty and union, now and forever, one and inseparable.*	Pembino, 1859, by the Americans. From Louisiana, Minnesota and Nebraska and Dakota territories.	Bismarck: Pop. 7,122. Wheat, oats, barley, flaxseed, live stock, wool, minerals.
803	**Ohio** (Indian—Beautiful River). 41,040 sq. miles. Pop. 5,759,394. No motto.	Marietta, 1788, by the Americans. From Northwest territory.	Columbus: Pop. 237,031. Corn, wheat, oats, hay, potatoes, fruits, tobacco, live stock, wool, dairying, coal, petroleum, salt, iron, steel, machinery, flour.
907	**Oklahoma** (Indian—Beautiful Land). 70,057 sq. miles. Pop. 2,028,283. Motto: *Labor omnia vincit* (Labor conquers everything).	Guthrie, 1890, by the Americans. From Indian and Oklahoma territories.	Oklahoma City: Pop. 91,295. Corn, wheat, oats, cotton, flax, live stock, petroleum, minerals.
859	**Oregon** (Spanish—Wild Marjoram). 96,699 sq. miles. Pop. 783,389. Motto: *The union.*	Astoria, 1811, by the Americans. From Oregon territory.	Salem: Pop. 17,679 Lumber, live stock, wheat, hay, fruits, hops, wool, salmon, gold, silver, paper making.
*87	**Pennsylvania** (Latin—Penn's Woods). 45,126 sq. miles. Pop. 8,720,017. Motto: *Virtue, liberty and independence.*	Chester, 1638, by the Swedes. From original state.	Harrisburg: Pop. 75,917. Manufactures, steel, machinery, textiles, coal, coke, petroleum, natural gas, iron, grains, wool, leather.
...	‡**Philippines** (In honor of Philip II.). 114,400 sq. miles. Pop. 10,350,730	Cebu, 1565, by the Spanish. From Archipelago de San Lazaro.	Manila: Pop. 283,613. Cocoa, coffee, tobacco, cotton, hemp, cocoanuts, corn, sugar, rice, timber, dyewoods.
...	**Porto Rico** (Spanish—Rich Port). 3,435 sq. miles. Pop. 1,299,809.	San Juan, 1510, by the Spanish. Ceded by Spain.	San Juan: Pop. 70,707. Coffee, sugar, tobacco, cotton, citrus fruits, bananas, pineapples, salt.
790	**Rhode Island** (Rhodes, an island in the Ægean Sea). 1,248 sq. miles. Pop. 604, 397. Motto: *Hope.*	Providence, 1636, by the English. From Providence and Rhode Island plantations.	Providence: Pop. 237,595. Manufactures, worsted, cotton, jewelry, machinery, rubber, minerals.
*88	**South Carolina** (In honor of Charles II.). 30,989 sq. miles. Pop. 1,683,724. Motto: *Dum spiro, spero. Spes* (While I breathe, I hope. Hope).	Ashley River, 1670, by the English. From Carteret colony.	Columbia: Pop. 37,524. Cotton, wheat, corn, oats, tobacco, rice, oysters, turpentine, lumber, phosphates.

*Original Thirteen States. ‡Organized Territories. Census figures for 1920.

1863	**West Virginia** (From Virginia). 24,170 sq. miles. Pop. 1,463,701. Motto: Obverse: *Montani semper liberi* (Mountaineers are always free men). Reverse: *Liberatus et fidelitas* (Liberty and fidelity).	Berkeley County, 1726, by the Americans. From Virginia.	Charleston: Pop. 39,608. Corn, oats, hay, wheat, fruits, cat sheep, lumber, coal, petroleum, na ral gas, mining.
1848	**Wisconsin** (Indian — Wild Rushing Channel). 56,066 sq. miles. Pop. 2,632,067. Motto: *Forward.*	Green Bay, 1745, by the French. From Northwest, Illinois, Michigan and Wisconsin territories.	Madison: Pop. 38,378 Corn, oats, barley, wheat, hay, potat fruits, beet sugar, dairying, iron, l ber.
1890	**Wyoming** (Indian—Extensive Plain). 97,914 sq. miles. Pop. 194,402. Motto: *Equal rights.*	Cheyenne, 1867, by the Americans. From Louisiana (chiefly), Nebraska, Dakota, Idaho, and Wyoming territories.	Cheyenne: Pop. 13,829. Wool, lumber, coal, copper, petrole minerals.

*Original Thirteen States. ‡Organized Territories. Census figures for 1920.

Atlanta (*ăt-lăn'tă*), **Ga.** [The "Gate City"; the name Atlanta was suggested by its geographical position, immediately on the dividing ridge, separating the Gulf and Atlantic waters.]

It is situated at the base of the Blue Ridge, near the Chattahoochee River; has an elevation of over one thousand feet, and a remarkably healthful climate.

Atlanta is laid out in the form of a circle, with the Union Depot as its center. A little to the south of the old Union Station is the State Capitol, which contains a library of about sixty thousand volumes and an interesting geological collection. A little to the northwest is the New Court House; and farther to the north, beyond the railway, are the Custom House and the L. & N. Freight House, an enormous concrete structure. The City Hall, the Chamber of Commerce, the Opera House, the Carnegie Library (of white marble), the Century Building, the Empire Building, the Equitable Building, the Jewish Temple, and the First Methodist Church are notable edifices. Among the chief educational establishments are the Georgia School of Technology, the Atlanta University (for colored students), the Agnes Scott Institute, and the Clark University (colored students). The finest private houses are in Peachtree Street.

Several railroads, converging at Atlanta and leading to other important Southern cities, greatly facilitate the city's extensive and rapidly increasing trade. It has a large export trade in tobacco, cotton, horses, and mules, its mule market being one of the most important in the United States. Its manufactures include implements, fertilizers, cotton goods, other foundry and machine products.

Atlanta was first settled in 1830. In 1843 it was incorporated as a town, and called Marthasville. In 1845 changed its name to Atlanta, and two years later secured a city charter. It was an important city in the Confederacy and the objective point of General Sherman's campaign. The battle of Atlanta (July 22, 1864) was fought southeast of the city. In September the city was made a military camp by Sherman, and in November he left the city in flames, and started on his "march to the sea." The city was almost entirely destroyed, but recovered rapidly after the war, and in 1878 became the capital of Georgia.

Baltimore (*bôl'tĭ-mōr*), **Md.** [The "Monumental City"; named for the proprietor of a large tract of land in Maryland, Cecil Calvert, Lord Baltimore, who settled the province in 1635.]

It is situated on an estuary of the Patapsco River, at the head of navigation, about fourteen miles from Chesapeake Bay, and is on the Baltimore and Ohio, the Philadelphia, Baltimore and Washington, and other railroads. A good harbor and fine geographical situation give Baltimore unusual trade advantages, and it has become one of the great export centers of the United States.

The city is roughly divided into two nearly equal parts by a small stream, Jones Falls, which flows entirely through the city. The portion of the city northeast of the stream is called "Old Town." Baltimore Street is the chief longitudinal thoroughfare.

The natural center for the visitor is Mt. Vernon Place, a small square, prettily laid out and suggesting Paris in its tasteful monuments and surrounding buildings. In the middle rises the Washington Monument, a column one hundred and thirty feet high, surmounted by a colossal statue of George Washington.

At the northeast corner of the square is the handsome Mt. Vernon Methodist Episcopal Church; at the southeast corner, Peabody Institute, for the encouragement of science, art, and general knowledge.

On the south side of the square is the house of Henry Walters, connected by an overhead bridge with a new picture-gallery containing the celebrated Walters Collection, one of the finest private collections of art in America.

Charles Street, one of the chief thoroughfares of the city, leads to the north from the Washington Monument past the Union Station, near which, at the north end of the B. & O. tunnel, is the Mt. Royal Station. Following Charles Street to the south we pass (right) the First Unitarian Church and the back of the Roman Catholic Cathedral, which faces Cathedral Street. The latter is surmounted by a dome one hundred and twenty-five feet high, and contains some interesting paintings. Adjacent is the residence of the Cardinal.

Farther on Charles Street passes the Masonic Temple, intersects Baltimore Street, the chief business street of the city, and is continued to South Baltimore. In East Fayette Street, to the left, is the Court House, a handsome white marble building, and the Post Office, in front of which rises the Battle Monument, erected in 1815 in memory of the struggles of the war of 1812-1814. The interior of the Court House is adorned with admirable mural paintings. To the east of the Post Office is the City Hall, a large and handsome building, with a dome two hundred and sixty feet high.

To the south of the City Hall, in Gay Street, between Water and Lombard Streets, is the imposing new Custom House, which was damaged by the fire of 1904, but has since been repaired and completed.

A little to the west of Mt. Vernon Place, between Howard St. and Eutaw St., are the unpretentious buildings formerly occupied by Johns Hopkins University, one of the foremost institutions of learning in the country. It was endowed with over three million five hundred thousand dollars by Johns Hopkins, a Quaker. In 1902 a suburban site about two miles north of the Washington Monument was secured for this famous university, and the first of a fine group of buildings was occupied by it in 1914.

The Johns Hopkins Hospital, opened in 1889, is also due to the liberality of Mr. Hopkins, who bequeathed over three million dollars for its foundation.

Both as a scientific and charitable institution, this hospital is an important adjunct to the University; and in the completeness of its equipment and excellence of its system, it ranks with the foremost hospitals in the world. The buildings of the Medical School of Johns Hopkins University adjoin the hospital.

Druid Hill Park, a pleasure-ground of about seven hundred acres, owes its beauty in great part to the fact that is has been preserved as a private park for one hundred years before passing into the hands of the city. Its hills afford beautiful views. Druid Lake, one-half mile long, is one of the reservoirs of the city waterworks.

Baltimore is an important center of the traffic in breadstuffs, and is also the seat of extensive and varied industries—cotton and woolen goods, flour, tobacco and cigars, beer, glassware, boots and shoes, iron and steel (including machinery, car-wheels, iron bridges, stoves, furnaces, etc.), clothing, pianos, organs, and the canning of oysters. Shipbuilding has become an important development, and Sparrows Point, with its immense Bessemer steel plant, is a place of great industrial activity.

The construction of the first important line of railway in the United States was begun at Baltimore in 1828 and carried on by private enterprise, and the first telegraph line was constructed to, and the first message received in, Baltimore. In 1904 Baltimore was visited by a fire which consumed fifty million dollars' worth of property.

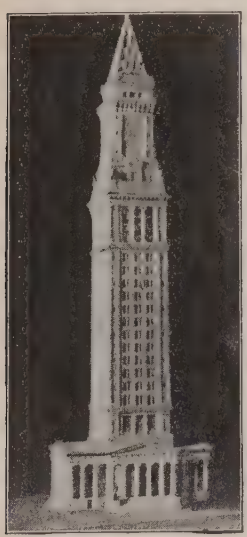
SOME VIEWS IN BOSTON, MASSACHUSETTS:

THE CHARLES RIVER EMBANKMENT

Boston (*bôs'ton*), **Mass.** [Called the "Hub" and "Athens of America"; name is derived from Boston, a seaport in England, originally called Botalf, or Botolph's town.]

The capital of Massachusetts, the chief town of New England, Boston is one of the oldest and most interesting cities of the United States. Whether considered from the point of view of its educational and charitable institutions, its trade, manufactures and public buildings, its influence upon the intellectual life and literary culture of the nation, or its historic part as an inspirational center of political liberty and social reform, its record and position command attention.

In no other American city are the civic and other public buildings more closely associated with events of national importance.



CUSTOM HOUSE

Boston is situated at the head of Massachusetts Bay, about two hundred miles northeast of New York, and occupies a peninsula between the Charles River and the arm of the bay known as Boston Harbor. Originally the town was founded on three hills, Beacon, Copp's and Fort, which, however, have been materially cut down. The metropolitan area now includes also East Boston, on Noddle's or Maverick Island, on the other side of the harbor; South Boston, separated from the old city by an arm of the harbor; Charlestown, on the other side of the river; and the suburban districts of Brighton, Roxbury (or Boston Highlands), West Roxbury (including Jamaica Plain), and Dorchester. Boston is connected with the city of Cambridge by several bridges across the Charles. The old town is cramped and irregular, and its streets are narrow and crooked; but the new parts, especially the so-called Back Bay, formed by filling in the tide-water flats on the Charles, are laid out on a very spacious scale.

The chief retail business streets of Boston are Washington Street and Tremont Street. Among the finest residence streets are Commonwealth Avenue, Beacon Street, Marlborough Street, Mt. Vernon Street, and Bay State Road.

Boston Common, a park of forty-eight acres in the heart of the city, shaded by fine elms and

TRINITY CHURCH

COPLEY-PLAZA HOTEL

RIVER FRONT, PARKS AND NOTABLE BUILDINGS

STATE HOUSE BOSTON COMMON TREMONT STREET

other trees and crossed by many pleasant walks, has been reserved for public use since 1634 and is carefully guarded for this purpose in the charter of 1822. Just across Charles from the Common is the fine Public Garden, reclaimed from what was low-lying waste land.

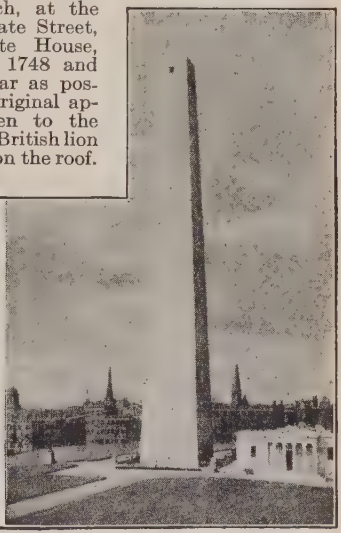
That part of the Common adjoining Tremont Street and known as the Tremont Street Mall is now occupied by eight small buildings, covering the entrances to the stations of the Boston Subway, a wonderful piece of engineering that facilitates traffic by an underground system of electric cars. The subway was, in part, constructed in 1895-1898, at a cost of about four million one hundred and sixty-five thousand dollars, and since greatly extended by the expenditure of many millions more.

Near the northeast angle of the Common, on Beacon Hill, stands the State House, an imposing building surmounted by a huge gilded dome, and preceded by a Corinthian portico and a flight of steps. On the terrace in front are statues of Daniel Webster and Horace Mann. The dome is illuminated at night.

In Beacon Street, opposite the State House, is the beautiful Shaw Monument, by Saint-Gaudens, erected in honor of Colonel Shaw and his regiment, the first colored regiment raised during the Civil war.

In Pemberton Square is the new County Court House, a massive granite building in the German Renaissance style, with an imposing central hall adorned with emblematic figures. In School Street, to the left, is the City Hall, behind which was the Old Court House. In front of the City Hall are statues of Franklin and Josiah Quincy.

School Street ends at the large Old South Building in Washington Street, the most crowded thoroughfare in Boston, with many of the best shops. Following Washington Street ("Newspaper Row") to the left, we soon reach, at the corner of State Street, the Old State House, dating from 1748 and restored as far as possible to its original appearance, even to the figures of the British lion and unicorn on the roof.



PIERCE BUILDING PUBLIC LIBRARY BUNKER HILL MONUMENT

State Street, the center of financial life, leads to the east, past the Exchange Building (with the Stock Exchange) and other large office buildings, to the Custom House, a massive granite building in the shape of a Greek cross, with lofty tower.

Change Alley (now inappropriately styled "Avenue"), diverging to the left from State Street leads to Faneuil Hall, the "cradle of American liberty," originally presented to the city in 1742, by Peter Faneuil, a Huguenot merchant, but rebuilt after a fire in 1761 and reconstructed on the original plan in 1898.

Devonshire Street leads to the right from State Street to the Government Building, a huge edifice occupying the entire block between Milk Street, Devonshire Street, Water Street and Post Office Square. The Post Office occupies the ground floor, the basement, and part of the first floor, while the rest of the building is devoted to the United States Sub-Treasury and the United States Courts.

At the corner of Washington Street stands the Old South Meeting House, built in 1729 on the site of an earlier church of wood, which lay near Governor Winthrop's house.

Boylston Street, another important thoroughfare, diverging from Washington Street to the right, skirts the Common and Public Garden and leads to the Back Bay. At the corner of Berkeley Street (right) stands the Museum of Natural History, with a library of thirty thousand volumes and good zoological, ornithological, entomological and mineralogical collections. Opposite is the Berkeley Building, a structure of a fine commercial type. Adjacent are old buildings of the Massachusetts Institute of Technology, one of the leading institutions of the kind in the world. It now occupies a magnificent group of buildings on the Cambridge side of the Charles River, erected at a cost of ten million dollars.

Boylston Street now reaches Copley Square, which offers perhaps the finest architectural group in Boston, including Trinity Church, the Copley-Plaza Hotel, the Public Library, the New Old South Church, and a number of imposing business structures. (See illustrations.)

Trinity Church, on the east side of the square, the masterpiece of H. H. Richardson and a typical example of "Richardsonian" architecture, is deservedly regarded as one of the finest buildings in America. Its style may be described as a free treatment of the Romanesque of Central France.

The Public Library, on the west side of the square, designed by McKim, Mead & White, and erected in 1888-1895, is a dignified, simple and scholarly edifice which forms a worthy mate to the Trinity Church. Its style is that of the Roman Renaissance.

The New Old South Church, so called as the successor of the Old South Church, is a fine building in the Italian Gothic style, with a tower two hundred and forty-eight feet in height. The marbles and ornamental stone work are very fine.

Huntington Avenue, which diverges to the left from Boylston Street at Copley Square, contains many important buildings. This thoroughfare, and the district known as the Back Bay Fens, is celebrated for its cultural institutions. Among them are Mechanics Hall, Horticultural Hall, the imposing Symphony Hall, the New England Conservatory of Music, and the new Opera House —all in Huntington Avenue. Just beyond this is the New Museum of Fine Arts, a large granite edifice by Guy Lowell, admirably adapted for its ends. Farther out, at the corner of Longwood Avenue, are the extensive new buildings of the Harvard Medical School, erected at a cost of five million dollars, and equipped in the most complete and up-to-date manner.

Commonwealth Avenue, which runs parallel with Boylston Street, is one of the finest residence streets in America, with rows of trees and handsome houses. It is two hundred and forty feet wide and adorned with statues.

Beacon Street, beginning on Beacon Hill, skirting the north side of the Common, and then running parallel with Commonwealth Avenue is the aristocratic street of Boston. Its back-windows command a fine view of the Charles River.

The Back Bay, the fashionable west end district traversed by the above-named streets, was at the beginning of the nineteenth century occupied by dreary mud-flats, salt-marshes and water.

The Back Bay Fens have been skillfully laid out on the site of unsightly swamps and form the first link in the splendid chain of parks and boulevards, of which Franklin Park is the chief ornament. The chief entrances to the Fens are marked by a gateway and a fountain; and at the end of Boylston Street is a fine memorial of John Boyle O'Reilly, by D. C. French.

Fenway Court, the residence of Mrs. John L. Gardner, a building in a Venetian style, enclosing a courtyard and incorporating many original balconies, windows, and other details brought from Italy, contains a choice collection of art, which is open to the public from time to time.

Franklin Park is five hundred and twenty acres in extent and lies in West Roxbury (reached by electric car). It abounds in natural beauty and many of its drives and walks are very attractive.

The Public Park System of Boston, as a whole, is almost unique. The City Park System, with a total area of twenty-four hundred acres, forms an almost unbroken line of parks and parkways from the Public Garden to City Point, in Boston Harbor. The Metropolitan System, forming an outer line of parks, has an area of eleven thousand acres, including two large wooded reservations (Blue Hills, and Middlesex Fells), three beaches (Revere Beach, Nantasket Beach, and Lynn Beach), and the boating section of the Charles River. When completed this system will afford fifty miles of drives.

The North End of Boston, embracing the site of Copp's Hill, now one of the poorer districts and occupied mainly by foreigners, contains some points of considerable historical interest. The Copp's Hill Burial Ground, dating from 1660, contains the graves of Increase, Cotton and Samuel Mather. Adjacent, in Salem Street, is Christ Church, the oldest church now standing in the city (1723), on the steeple of which the signal-lanterns of Paul Revere are said to have been displayed on April 18th, 1775, to warn the country of the march of the British troops to Lexington and Concord. North Square is the center of what is known as "Little Italy." The House of Paul Revere has recently been restored and contains some relics.

Within metropolitan Boston are many famous institutions of learning. At the head of these stand Harvard University, Massachusetts Institute of Technology, and Radcliffe College, the greater part of whose schools are in the adjoining city of Cambridge and the remaining in Boston. Among the institutions of higher education are Boston University, with its affiliated colleges, its schools of law, medicine, and theology, and its post-graduate department in philosophy, science, and language; the medical, dental, and agricultural schools of Harvard University; Boston College; the medical and dental schools of Tufts College; Simmons College for Women; the New England Conservatory of Music; the Massachusetts Normal Art School; the Lowell Institute; and the Massachusetts College of Pharmacy.

Wellesley College is situated in the beautiful village of Wellesley, about fifteen miles from Boston, on Lake Waban.

Besides Trinity Church, already referred to, there are upward of three hundred other edifices. Chief of these are the Cathedral of the Holy

Cross, on the corner of Washington and Malden Streets, the largest and most noteworthy Catholic church in New England; Arlington Street Church, corner of Arlington and Boylston Streets; First Church of Christ, Scientist, on Falmouth Street, corner of Norway; and Tremont Temple, a Free Baptist Church.

The beauty of the parks, squares, and of many public buildings is enhanced by monuments and statues, of which the following are the chief: Bunker Hill Monument in Charlestown, two hundred and twenty feet high, built of granite and commemorative of the resistance and heroism of American patriots at the Battle of Bunker Hill; the equestrian statue of Washington in the Public Garden; the monument to Colonel Shaw; the Soldiers' Monument in the Common; the Crispus Attucks monument, a memorial of the Boston Massacre of 1770; statues to General Joseph Warren, Edward Everett, Charles Sumner, Alexander Hamilton, Governor Winthrop, William Lloyd Garrison, Benjamin Franklin, Josiah Quincy, Beethoven, Daniel Webster, Horace Mann, Phillips Brooks and many other notable men.

The principal industries of Boston are the manufacture of food preparations, clothing, building, printing, publishing, and book-binding, distilled liquors, machinery, metals and metallic goods, and furniture. Other important manufactures include musical instruments, woolen goods, boots and shoes, rubber goods, tobacco, and drugs and medicines. As a commercial port, Boston ranks next to New York, the value of foreign trade amounting to two hundred million dollars annually. After London, the city is the leading wool market of the world.

Boston was settled in 1630 by a party of Puritans from Salem. A memorable massacre occurred here in 1770, and in 1773 several cargoes of English tea were thrown overboard in the harbor by citizens. The battle of Bunker Hill was fought on Breed's Hill, within the present city limits, June 17, 1775. The city charter was granted in 1822.

Cambridge (*kām'brĭj*), **Mass.** [So named for the English university town of that name. The English name is supposed to mean "the bridge over the river Cam," the real name of which is the Granta.]

It is virtually a suburb of Boston, from which it is separated by the Charles River, and with which it is connected by several bridges. The city comprises Old Cambridge, the seat of Harvard University, North Cambridge, East Cambridge, Cambridgeport, and Mount Auburn. The streets are broad and shaded with elms, and there are many places of historical and literary interest, among these the Craigie House and "Elmwood," the homes of Longfellow and Lowell, respectively; and Mount Auburn Cemetery, containing the graves of Longfellow, Lowell, Prescott, Motley, Agassiz, Holmes, and other noted men.

The chief interest of Cambridge, however, lies in its educational institutions, which include Harvard University, Radcliffe College (for women), Massachusetts Institute of Technology, Episcopal Theological School, and Andover Theological Seminary. All these institutions are now in close working alliance with Harvard University.

Harvard University, founded in 1636, is not only the oldest but the richest of American universities, and the roster of graduates contains more than twenty thousand names. Massachusetts Hall is the oldest of the present buildings, being built in 1720. The most notable buildings architecturally (besides the fine Medical School group in Boston) are: Austin Hall and Longdell Hall, devoted to the Law School; Widener Memorial Library, a splendid new building dominating the college yard; Busch Hall, devoted to the art collections of the Germanic Museum; Memorial Hall, containing Sanders Theater; and Sever Hall, containing class-rooms.

The activities of the university require upward of sixty other buildings, including laboratories, lecture halls, museums, residence halls, and a number of fine structures devoted to the social, religious, athletic and art life of the student body.

The Massachusetts Institute of Technology, founded in 1861, is located on the Charles River Parkway, and occupies a newly acquired area of about seventy acres. Here has been erected a magnificent group of buildings, unrivaled, perhaps, in design, adaptation for their respective uses, and general equipment. This institution is devoted to the teaching of science as applied to the various engineering professions—civil, mechanical, mining, electrical, chemical, and sanitary engineering—as well as to architecture, chemistry, metallurgy, physics, and geology.

Among the industrial establishments are foundries, machine shops, and extensive manufactories. The Riverside, Athenæum, and University Presses are well-known printing establishments, and the "Bay Psalm Book," the first book printed in America, was published in Cambridge in 1640.

Cambridge was settled in 1630 by Governor Winthrop under the name of Newtowne. In 1636 Harvard College was founded at Newtowne, and in 1638 Newtowne became Cambridge. The Washington elm, under which Washington received command of the American troops, is still standing.

Under this ancient elm near the Cambridge Common, Washington assumed command of the American Continental army July 3, 1775, by order of the Continental Congress. It is therefore one of the landmarks of the greatest historic interest to every liberty-loving American—man, woman, or child.

MICHIGAN BOULEVARD AND GRANT PARK, CHICAGO

This is one of the most notable skylines among American cities. The Blackstone Hotel, Harvester Building, Congress Hotel, Straus Building, Railway Exchange, Orchestra Hall, Athletic Club, Monroe Building, University Club, Ward Building.

Chicago (*shĭ-kä'gō*), **Ill.** [The "Windy City"], probably received its name from the Indian *Checagua*, meaning "wild onion" and "pole-cat."

It is the second city and largest railway center of the United States, and is situated on the southwest shore of Lake Michigan, at the mouths of the rivers Chicago and Calumet, five hundred and ninety feet above sea level and fifteen to seventy-five feet above the lake. It is eight hundred and fifty miles from Baltimore, the nearest Atlantic port, and two thousand four huudred and fifteen miles from San Francisco.

Chicago is noted for the magnitude of its commercial enterprises; for the greatness of its financial institutions; for the excellence of its parks and public playgrounds—particularly in the number, equipment, and splendid use of its small parks in congested localities; for its universities, its efficient public-school system, and for other educational, artistic, and morally uplifting institutions that give to it an enlightened, a cultured, and a progressive citizenship.

It is estimated that not more than 350,000 of the inhabitants are of native American parentage; about 550,000 are Germans, 250,000 are Irish, 225,000 Scandinavians, 160,000 Poles, 110,000 Bohemians, 40,000 Italians, 60,000 Canadians, and 100,000 English and Scottish. There are some fourteen languages, besides English, each of which is spoken by ten thousand or more persons.

The city has a water-front on the lake of twenty-six miles and is divided by the Chicago River and its branches into three portions, known as the North, South, and West Sides, to which must be added the "Loop," or business part of the city. The site of the city is remarkably level, rising very slightly from the lake; and its streets are usually wide and straight. Among the chief business-thoroughfares are State, Clark, Madison, Randolph, Dearborn, and La Salle Streets, and Wabash Avenue. Perhaps the finest residence streets are Prairie and Michigan Avenues and Drexel and Grand Boulevards, on the South Side, and Lake Shore Drive, on the North Side.

A splendid bird's-eye view of Chicago is obtained by ascending to the top of the tower of the Auditorium on Congress Street and Michigan Boulevard. This huge building, erected in 1887-1889 at a cost of three million five hundred thousand dollars, includes a large hotel and a handsome theater. The Fine Arts or Studebaker Building, adjoining the Auditorium, on Michigan Boulevard, is one of the show buildings of Chicago, and has deservedly been described as the focus of the artistic and intellectual life of Chicago, containing as it does a theater, concert, assembly, and lecture rooms, studios of leading artists, and the meeting-places of several clubs. The beautiful Romanesque building to the north of the Fine Arts Building is the Chicago Club. A little farther to the north, at the corner of Jackson Boulevard, is the tall Railway Exchange Building, erected in 1903-1904, and cased in tiles. Next to this on the north is the new building of the Chicago Orchestra Association, on the roof of which is the house of the "Cliff Dwellers," a literary and artistic club. A little to the south of the Auditorium, at the corner of Harrison Street, is the Harvester Building, erected in 1907, beyond which is the palatial Blackstone Hotel. A little farther to the south is the Illinois Central Station.

Following Michigan Avenue toward the north from the Auditorium, we reach the Art Institute of Chicago, an imposing building in a semi-classical style, containing a valuable collection of paintings, sculptures, and other objects of art. Opposite is the magnificent People's Gas Building, erected at a cost of eight million dollars.

Farther to the north, on the opposite side of Michigan Avenue, are the buildings of the Illinois Athletic Club, the University Club, and the Chicago Athletic Club. At the corner of Madison Street is the Montgomery Ward Building, with its tower, and a little farther up, at the corner of Washington Street, is the Chicago Public Library, an imposing building in a classical style, erected in 1893-1897, at a cost of two million dollars.

This fine edifice is worthy to rank with the Library of Congress and the Boston Public Library. The main entrances are to the north and south, in Randolph Street and Washington Street. The interior is sumptuously adorned with marble, mosaics, frescoes and mottoes. It contains three hundred and fifty thousand volumes. On the first floor is a large Memorial Hall, used by the Grand Army of the Republic and covered by a dome; it contains an interesting collection of Civil War and other historical relics.

On the north, Michigan Avenue ends at the Chicago River. Fort Dearborn stood to the left, on the river, at the end of the avenue.

The business quarters of Chicago occupy

VIEWED FROM THE WEST SHORE OF LAKE MICHIGAN

Chief of the architectural structures, from South to North, are: Auditorium Hotel, Fine Arts Building, Chicago Club, McCormick Pullman Building, Gas Building, Lake View Building, Illinois Wrigley Building and Tribune Building.

chiefly the great central district called the "Loop," which is bounded by the lines of the Elevated Railway. We may follow Randolph Street to the west to the City Hall and County Building, two large adjoining buildings, in a modern classical style with huge Corinthian columns, built at a cost of five million dollars.

La Salle Street, leading to the south from the County Building, contains some of the finest office buildings in the city. Among these are the Chamber of Commerce at the corner of Washington Street; the Tacoma Building at the corner of Madison Street; the Y. M. C. A. Building, a little farther to the south; the New York Life Insurance Building; the low but impressive Northern Trust Co. Building, and the oddly shaped Women's Temperance Temple, all three at the corners of Monroe Street; the new granite building of the Corn Exchange National Bank, the Home Insurance Co. Building, and the Rookery, with a very attractive interior lined with white marble. Farther on in La Salle Street, at the corner of Jackson Boulevard, is the Illinois Trust & Savings Bank, a massive two-storied edifice, with a fine central court. At the end of La Salle Street stands the granite building of the Board of Trade.

Jackson Boulevard leads hence to the east to the Federal Building, containing the Post Office and Custom House and occupying an entire city square. It is in the Corinthian style, with a large central dome two hundred feet in height.

Other notable buildings within the "Loop" district include: the Continental and Commercial Bank, Hotel La Salle, First National Bank, and the great department store, office, newspaper, and hotel buildings.

The park system of Chicago is without a parallel in America; it embraces Lincoln Park, on the lake shore to the north, and six others, and is divided into three sections, all connected or nearly so by magnificent boulevards, which, with the park drives, measure over sixty miles. In all, Chicago has ninety-three parks, covering more than four thousand four hundred acres. A characteristic feature of the system is the large number of small "People's Parks" scattered through the poorer districts and provided with baths, gymnasiums and playgrounds. On the north side is Lincoln Park, reached via Lake Shore Drive, one of the finest residence streets in Chicago, containing some very handsome houses. This passes near the Water Works, at the foot of Chicago Avenue, and ends on the north at Lincoln Park, which is at present three hundred acres in area, but is being extended by filling in the adjacent shallows of Lake Michigan.

Among the attractions of this park are the conservatories, palm-house, lily-ponds, and flower-beds; a small zoological collection; a fountain illuminated at night by electric light; the statues of Lincoln (by Saint-Gaudens), Grant (by Rebisso), Beethoven, Schiller, La Salle, a Mounted Indian, and Linnaeus; and the boating lake. Near the main entrance is the Academy of Sciences, containing admirably arranged and classified collections illustrating the various natural sciences.

Grant Park, consisting of a public pleasure ground of two hundred and ten acres, lies between Michigan Boulevard and Lake Michigan. This park has been improved of late by the depression of the tracks of the Illinois Central Railway and by the construction of massive stone viaducts connecting the park proper with the lake shore. The adjoining part of the lake, between the shore and the breakwater, has been filled in and added to the park. In Grant Park, to the south of the Auditorium and opposite Eldredge Place, is an equestrian statute of General John A. Logan, in bronze, by Saint-Gaudens.

The South Side parks are also fine. They are best reached by Michigan Avenue and Drexel Boulevards, two fine residence streets with tasteful houses and ornamental gardens. Michigan Avenue also contains several churches, the Calumet Club, numerous large hotels and apartment houses, and the First Regiment Armory. In Drexel Boulevard is the handsome Drexel Memorial Fountain.

Washington Park (three hundred and seventy-one acres) and Jackson Park (five hundred and twenty-three acres) are connected by a wide boulevard known as the Midway Plaisance, on which is located the University of Chicago.

The West Side parks, Douglas Park, Garfield Park, and Humboldt Park are little inferior to those of the North and South Sides.

The University of Chicago, between Fifty-sixth and Fifty-ninth Streets, occupies probably the finest group of buildings, architecturally, devoted to higher education in the United States. The total value of buildings and equipment is more

than thirty million dollars, one-fourth of which was contributed by citizens of Chicago and the balance by John D. Rockefeller. The ground has an area of sixty-six acres, and the university includes faculties of Arts, Literature, Science, Commerce and Administration, Education, Medicine, Law, and Divinity.

Above thirty different buildings have already been erected, mainly of limestone and in a Gothic style, from the designs of H. I. Cobb and Mr. Coolidge. Perhaps the most successful group is that at the corner of Fifty-seventh Street and Lexington Avenue, including an Assembly Hall, a Students' Club House, the University Tower, and the University Commons. Other important buildings are the Cobb Lecture Hall, the Kent Chemical Laboratory, the Ryerson Physical Laboratory, the Law School, the Anatomy, Physiology, Zoology, and Botany Buildings, the Walker Museum, the Haskell Oriental Museum, the handsome Bartlett Gymnasium, dormitories for women and dormitories for men. On the south edge of the campus stands the main structure of the Harper Memorial Library, an enormous Gothic building by Shepley, Rutan & Coolidge, erected in memory of President Wm. R. Harper. The Yerkes Observatory, at Williams Bay on Lake Geneva, containing one of the largest refracting telescopes in the world, belongs to the University of Chicago. Connected with the University is the large School of Education, facing the Midway Plaisance, between Monroe and Kimbark Avenues.

Other notable educational institutions include the Lewis Institute, founded and endowed by the late Mr. A. A. Lewis and opened in 1896, comprising a School of Arts and a School of Engineering, tuition in which is furnished at a nominal cost; and the Armour Institute, a well equipped institution for higher technical education, endowed by its founder with three million dollars.

Hull House, at the southwest corner of Polk and South Halsted Streets, is a social settlement of men and women, furnishing a social, intellectual, and charitable center for the surrounding district. It includes a free kindergarten, a coffee-house, a residential boys' club, a theater, a labor-museum, and a free gymnasium, while classes, lectures, and concerts of various kinds are held.

The famous Union Stockyards ("Packingtown") are in South Halsted Street, five and one-half miles to the southwest of the City Hall, and may be reached by the South Halsted Street or Racine Avenue trolley-lines, both running directly to the main entrance at Forty-first Street. The yards proper cover an area of about five hundred acres, have twenty-five miles of feeding-troughs, and twenty-miles of water-troughs, and can accommodate seventy-five thousand cattle, three hundred thousand hogs, fifty thousand sheep, and five thousand horses. From two-thirds to three-fourths of the cattle and hogs are killed in the yards, and sent out in the form of meat. About thirty thousand workers are employed by the packing-houses. Chicago is the greatest live stock and grain market in the world.

Among the more important general manufactures of the city may be mentioned those of railway cars, locomotives, agricultural implements, mining appliances, clothing, electrical apparatus, lumber products, furniture, pianos, organs, leather, cigars, chemicals, beer, spirits, and flour. The steel and iron industry is conducted on a large scale, and the city has some large rolling mills. Chicago is also one of the leading publishing centers of the United States, and is an active jobbing center for the book trade.

As a center of railroad industry Chicago takes precedence over all cities of the world. Twenty-six of the principal trunk-line railroads of the United States run trains into Chicago terminals, and in addition to these there are numerous belt transfer, terminal and industrial lines which have either a part or all of their trackage in the city. Within the corporate limits of the city are eight hundred miles of main line railway and one thousand four hundred miles of auxiliary track. The total mileage of the twenty-six roads entering Chicago approximates ninety-seven thousand miles, or about forty-two per cent of the total mileage of the United States. The land occupied by main line property within Chicago represents nine thousand six hundred acres, or eight per cent of the entire area of the city.

There are six principal passenger terminals in Chicago, located as follows:

Baltimore & Ohio Terminal (Grand Central Station), at Fifth Avenue and Harrison Street. Central Station, at Michigan Avenue and Twelfth Street. Chicago & North Western Passenger Terminal, at North Clinton, West Madison, and North Canal Streets. La Salle Street Station, with entrance on Van Buren Street. Dearborn Station, at Dearborn and Polk Streets. Union Passenger Station, at Adams and Canal Streets.

Present plans are under way, however, to concentrate all roads entering Chicago in three great union stations—the North Western Station (already built, at a cost of $25,000,000), the Illinois Central Station, and the Pennsylvania Station, the two latter involving an expenditure of one hundred and fifty million dollars.

The water carrying trade of Chicago is comparable to that of New York and Boston, and exceeds that of Philadelphia, New Orleans, Baltimore, and San Francisco.

The Chicago Tunnel System involves a labyrinth of small tunnels or subways, six by seven and one-half feet in size, and sixty-two miles long, forty feet under the principal business streets within the Loop district. These tunnels connect with all railway freight depots, passenger stations and, through their sub-basements, with a number of the larger mercantile concerns. They also extend beyond the Loop—north, south, and west—a distance of about two miles. They are not designed for passenger traffic, but are used by cars laden with all sorts of merchandise, coal, ashes, etc.

There are three underground power stations, four universal freight and transfer stations (one of them occupying five floors below the ground), eighty-five ordinary stations, and twelve tunnels, extending sixty feet under the Chicago River or its branches. So far, between thirty million and forty million dollars have been expended on construction and equipment. The bores also contain the cables of the automatic telephone company.

The site of Chicago was first visited by Joliet and Marquette in 1673. The United States Government established there the frontier post of Fort Dearborn in 1804. On October 8 and 9, 1871, occurred the memorable fire which reduced the greater part of the city to ashes. In 1886 occurred the Haymarket riot, in 1893 the World's Columbian Exposition was held in Chicago, and in 1894 the Pullman strike, the greatest in history, centered in Chicago.

Cincinnati (*sin-si-nă'ti*), **Ohio.** [The "Queen City," named in honor of Cincinnatus, the Roman patriot.]

It is the second city of Ohio, on the north bank of the river Ohio, two hundred and seventy miles southeast of Chicago by rail, opposite the cities of Covington and Newport, in Kentucky. Steam ferries and six lofty bridges connect the city with the Kentucky shore; the suspension bridge by Roebling is two thousand two hundred and fifty feet long, and cost one million eight hundred thousand dollars.

Cincinnati occupies an exceedingly broken and irregular site, the more densely built parts being

enclosed between the Ohio River and steep hills. The river front is upwards of fourteen miles in length. A second terrace is fifty or sixty feet higher, and a district between the hills and the Miami Canal, known as "over the Rhine," is occupied by the large German colony.

The main portion of the city is regularly laid out and its streets are well paved. The chief shopping district is bounded by Fourth, Main, Seventh, and Elm Streets. The best residential quarters are on the surrounding highlands, built on a succession of irregular hills, by whose steepness they are broken into a series of some five and twenty villages, interspersed with parks.

Fountain Square, an expansion of Fifth Street, may, perhaps, be called the business center of the city and from it start most of the street railway lines. In the middle of the square stands the Tyler Davidson Fountain, cast at the Royal Bronze Foundry at Munich. To the north, at the corner of Fifth Street and Walnut Street, is the United States Government Building containing the Post Office, Custom House, and United States Law Courts, erected at a cost of five million dollars. It is of sawed freestone in the Corinthian style.

By following Fifth Street to the west and turning to the left down Vine Street, we pass the entrance to the Emery Arcade and reach, at the corner of the busy Fourth Street, the Chamber of Commerce. Opposite, at the northeast corner of Fourth and Vine Streets, stands the Ingalls Building. On the north side of Fourth Street, between Vine and Race Streets, is the fine Third National Bank.

Following Fourth Street towards the west, we soon reach Plum Street, which we may follow to the right to St. Paul's Protestant Cathedral, at the corner of Seventh Street; the Roman Catholic Cathedral of St. Peter, at the corner of Eighth Street, and the Synagogue, opposite the last. In the block bounded by Central Avenue and Eighth, Ninth and Plum Streets is the City Hall, a large red building in a Romanesque style, with a lofty tower, constructed of brown granite and red sandstone at a cost of one million six hundred thousand dollars. A little to the east, in Vine Street, between Sixth and Seventh Streets, is the Public Library. To the north of this point, "over the Rhine," is Washington Park, with the Springer Music Hall and the Exposition Building.

Among other buildings may be mentioned the County Court House, St. Xavier's College, the Oddfellows' Temple and the Cincinnati Hospital. Recent buildings of the modern type include the Traction Building, the Mercantile Library, the Union Trust Building, and the First National Bank.

The chief park of Cincinnati is Eden Park, which lies on the hills to the east and affords fine views of the city and river. It contains the Art Museum, a storage reservoir of the City Water Works, and the Water Tower. The top of the last affords the best view of the city and its environs, the river, and the Kentucky Highlands.

The Art Museum is a handsome group of buildings on a hill-top, some in a Romanesque, others in a Grecian style. Adjacent is the Art Academy. Both are maintained by a private corporation.

There are more than two hundred and fifty churches, including a Roman Catholic cathedral; besides many handsome theaters, hotels, and public halls, hospitals and asylums, and schools.

The educational institutions are of the highest order. They include the University of Cincinnati, which has associated with it the Cincinnati Hospital and the Cincinnati Observatory, the Ohio and Miami Medical Colleges, St. Joseph's and St. Xavier's Jesuit Colleges, the Law Theological Seminary, Cincinnati Conservatory of Music and the Ohio Mechanics' Institute.

Cincinnati is a center of musical and art culture, and its decorative pottery and wood-carving have a national reputation. It has a large river and canal traffic, and many railways converge here.

Among the factories are clothing factories, foundries, machine shops, coach-works, works for the manufacture of furniture, tobacco, shoes, leather, etc. There is some boat-building and printing; and the slaughter-houses, stockyards, and grain elevators are very extensive.

Cincinnati was settled by white men in 1780, was incorporated as a city in 1819, and early attained the name of "the Queen City of the West;" as also that of "Porkopolis," from its great trade in pork. Great riots occurred in 1884, and were with difficulty suppressed by the military.

Cleveland, Ohio. [The "Forest City;" named in honor of General Moses Cleveland of Connecticut, who had charge of the surveying of this region, acting as general agent for the Connecticut Land Company.]

It is the largest city of Ohio, and is situated on the south shore of Lake Erie, three hundred and fifty miles by rail east of Chicago. The city is built mainly upon a plain from sixty to one hundred and fifty feet above the lake, and five hundred and eighty feet above sea-level. It is divided into the East and West Sides by the tortuous valley of the Cuyahoga River, which is crossed by two high-level bridges—one mainly of stone, and one of iron, three thousand nine hundred and thirty-one feet long. The former, one thousand and seventy feet long, was completed in 1878 at a cost of two million two hundred thousand dollars. There are three other similar viaducts in different parts of the city.

The chief business street is Superior Avenue, a really fine and wide thoroughfare, the west end of which is lined with substantial business blocks, such as the Perry-Payne Building. A little farther on the street expands into Monumental Park or the Public Square, containing a Soldiers' Monument and a statue of General Moses Cleveland. The new Federal Building, at the northeast corner of the square, contains the Post Office, the Custom House, and the Court House.

This building is the first of several public buildings comprised in the so-called "Group Plan," the others being the City Hall, County Building, Public Library, and Union Station. A broad mall connects all these buildings.

At the northwest corner is the Old Court House, adjoined by the American Trust Building. On the north side of the square, at the corner of Ontario Street, is the handsome building of the Society for Savings, established in 1849, and now having deposits of upwards of fifty million dollars. Adjacent is the Chamber of Commerce, containing a handsome auditorium, with a library and reading room. In Superior Avenue, beyond the Federal Building, is the massive City Hall, which is adjoined by the temporary building of the Public Library. A little to the north of this point is the huge Central Armory.

Euclid Avenue, which begins at the southeast angle of the Public Square, is, at its east end, also an important artery of business, and farther out becomes one of the most beautiful residence streets in America, with each of its handsome houses surrounded by pleasant grounds and shady trees. At the northeast corner of the Square and Euclid Avenue is the Williamson Building; a little farther on, also on the north side of the Avenue, is the handsome First National Bank; on the right is the tall, narrow building of the Guardian Savings & Trust Co. To the left is the Arcade, four hundred feet long, one hundred and eighty feet wide, and one hundred and forty-four feet high, with a fine five-balconied interior, running through to Superior Avenue; and to the right is the Colonial Arcade, running through to

Prospect Avenue. At the corner of East Sixth Street are the tall Garfield and New England Buildings. Nearly opposite the New England Building is the new Taylor Arcade, just east of which is the Hippodrome Building. Farther on, near east Ninth Street, is the Citizens Building, with the offices of the Citizens Savings & Trust Co., and at the corner is the Schofield Building. Directly opposite the latter, at the southeast corner of East Ninth Street and Euclid Avenue, is the Cleveland Trust Co. At the corner of East Twelfth Street is the handsome Union Club. Farther on are several fine churches. About four and one-half miles from the Public Square Euclid Avenue reaches University Circle, with a statue of Senator M. A. Hanna by Saint-Gaudens, and one of Kossuth, erected by the Hungarians of Cleveland. To the right is the building of the Western Reserve Historical Society, to the left is the Elysium, an artificial ice skating rink. Just beyond the Circle is the entrance to Wade Park, which contains statues of Commodore Perry, and a Goethe-Schiller Monument. Opposite the Park are the buildings of the Western Reserve University (including Adelbert College, Woman's College, Law, Medical, and Dental Schools, and a Library School, in addition to the graduate department) and the Case School of Applied Science. About one mile farther on the avenue passes Lake View Cemetery, containing the Garfield Memorial, the Rockefeller Monolith, the graves of Senator Hanna and John Hay, and the Wade Memorial Chapel.

Prospect Avenue, which runs parallel to Euclid Avenue on the south, is little inferior to it in beauty.

Cleveland's rapid growth is due mainly to the fact that nowhere else can the rich iron ores of Lake Superior, the coal of Northern Ohio, and the limestone of the Lake Erie islands, be brought together so cheaply; its position at the north terminus of the Ohio Canal being very advantageous, and seven railways terminate here.

The chief industries of the city are the various manufactures of iron, including steel rails, forgings, wire, bridges, steel and iron ships, engines, boilers, nails, screws, sewing machines, agricultural implements and machinery of all kinds, the refining of petroleum, wood-work, and other manufactures of endless variety. Cleveland is the greatest iron ore receiving point in America, one of the largest lumber markets and extensively engaged in the automobile industry.

Cleveland was founded in 1796 by General Moses Cleveland, under the direction of the Connecticut Land Company. In 1814 Cleveland was incorporated as a village with less than one hundred inhabitants. The opening of the Ohio land served as an impetus to growth, and in 1836 Cleveland was incorporated as a city. Its great prosperity dates from its connection by rail with the cities of the East and the manufacturing establishments set up during the Civil War.

Des Moines (*dē-moin'*), **Iowa.** [This name was applied by the Indians to a place in the form of Moingona, which the French shortened into Moin, calling the river "riviere des Moins." Finally, the name became associated with the Trappist monks, and the river by a spurious etymology was called "la rivière des moines," "the river of the monks."]

The capital and largest city of Iowa, it is an important manufacturing and commercial city, and noted especially for its extensive insurance interests and exceptional railroad facilities. It has many important buildings, among them the Capitol, built at a cost of three million dollars, the United States Government Building, the State Arsenal, a State Historical Building, completed in 1908 at a cost of five hundred thousand dollars, Drake University, Highland Park College, Des Moines College, and a state library. A new city hall at a cost of four hundred thousand dollars, and a great coliseum to seat ten thousand are recent additions.

The city has nearly one hundred churches of all denominations. Half a dozen bridges over the two rivers connect the different parts of the town, and there is a public park, with fine groves of forest trees.

Vast bituminous coal fields have contributed to the growth of the manufacturing industries. These include typewriters, wagons, sleighs, cotton and woolen goods, pottery, furniture, and electrical appliances. The city was one of the first to adopt the electric car system.

Des Moines was settled in 1846, incorporated as the town of Fort Des Moines, 1851, chartered as a city and became the capital of the State in 1857. In 1907 Des Moines adopted the commission form of government and attained wide celebrity as a leader in progressive municipal government.

Denver, Colo. [The "Queen City of the Plains"; named after James W. Denver, ex-Governor of Kansas, upon the consolidation in 1860 of the towns of St. Charles and Aurora.]

The capital of Colorado, it is situated on the South Platte River, nine hundred and twenty-two miles west of St. Louis. It lies on a level plain, five thousand one hundred and ninety-six feet above the sea, beyond which rise the snow-capped peaks and deep blue shoulders of the Rocky Mountains.

The Union Depot lies at the foot of Seventeenth Street, one of the chief business thoroughfares, and electric cars start from here for all parts of the city. Near the station is a large bronze Arch, bearing the work "Welcome." The route up Seventeenth Street and Seventeenth Avenue by electric car to the City Park and then across to Colfax (or Fifteenth) Avenue and return traverses the chief features of the city. On the way out is passed the Equitable Building, the roof of which affords a superb view.

The Rocky Mountains are seen to the west in an unbroken line of about one hundred and seventy miles, extending from beyond Long's Peak on the north to Pike's Peak on the south. Among the loftiest of the intervening summits are Grey's Peak, Torrey's Peak, and Mount Evans. The bird's-eye view of the city in the immediate foreground includes the State Capitol and the fine residences of Capitol Hill on the east.

At the corner of Seventeenth and Glenarm Streets is the Denver Club, and at the corner of Sherman Avenue are the University Club and the Central Presbyterian Church. In returning through Colfax (or Fifteenth) Avenue the following buildings may be observed: the State Capitol, an imposing structure erected at a cost of two million five hundred thousand dollars; the new Public Library, between Acoma and Bannock Streets; the United States Mint, at the corner of Cherokee street, and the West Side Court House. The County Court House occupies the block bounded by Court Place and Fifteenth, Sixteenth and Tremont Streets. The Custom House and Post Office, on Sixteenth Street, is another imposing building. In Fourteenth Street is a handsome Auditorium used by the Democratic Convention in 1908.

The other important buildings of the city include the Denver High School, Stout Street, between Nineteenth and Twentieth Streets; the City Hall, corner Fourteenth and Larimer Streets; the Mining Exchange; the Chamber of Commerce; Baptist College (Montclair); the Tabor Opera House Block; the Broadway Theater; the Denver Athletic Club; Trinity Church, Broadway and Eighteenth Street; the Church of Christ, Scientist, Fourteenth and Logan Avenues; the Y. M. C. A..

Lincoln and Sixteenth Avenues; Mystic Shrine Temple, Sherman and Eighteenth Avenues; the Westminster University of Colorado, and the Jesuit College of the Sacred Heart (College Avenue, corner of Homer Avenue). On Capitol Hill are the new buildings of St. Mary's Cathedral (Roman Catholic) and St. John's Cathedral (Episcopalian). The Art Museum, in Montclair, contains a collection of paintings and other objects of art. The Museum in the City Park includes an interesting collection of Colorado animals. In University Park, eight miles to the southeast of the Union Depot, is the University of Denver.

The city is the center of a great agricultural and mining district, and has a large trade in cattle, hides, wool, and tallow. It is chiefly, however, to its position as the center of a great mining region that Denver owes its marvelous progress; the discovery, in 1878, of the fabulous wealth of the Leadville Hills attracted capital and emigration from all parts of the continent. It has a United States assaying mint, is an important ore market, and is noted for its smelting and refining works, foundry and machine shops.

Denver has an abundant water supply, and the clear invigorating air and dry climate of Denver are famous. It was founded on a barren waste, dry and treeless, in 1858, and the following year incorporated as a city by the Provisional Legislature.

Detroit (*dē-troit'*), **Mich.** [The "City of the Straits"; named from the river or strait on which the city is built. Derived from two French words, *detroit*, "the narrows."]

It is situated on the Detroit River, eighteen miles from Lake Erie, at an altitude of six hundred feet. The river, sometimes called the "Dardanelles of the New World," is here the boundary between the United States and Canada. It affords a splendid harbor, with a water-front of about nine miles. Ferries connect with the Canadian side. Many beautiful islands, with those of Lake St. Clair, are popular as places of summer residence and resort.

One of these, Belle Isle, is about seven hundred acres in extent and forms a beautiful public park, with fine trees, and still retaining many of its natural features unimpaired. It contains a statute of Schiller, a small zoological collection, a large aquarium and horticultural building, and a casino.

Woodward Avenue, the principal thoroughfare, divides the city into two very nearly equal parts. It is also the main business street, and at its northern end has many of the city's most prominent buildings. Its expansion, about half a mile from the river, is known as the Campus Martius, adorned with a handsome fountain, from which Michigan and Gratiot Avenues diverge to the left and right. To the left stands the City Hall, the tower of which contains a clock with a dial eight and one-half feet in diameter. In front of the City Hall is the Soldiers' Monument.

In Gratiot Avenue, near the Campus Martius, is the Public Library, containing two hundred and twenty thousand volumes and some historical relics. The Chamber of Commerce, at the corner of Griswold and State Streets, is thirteen stories high. The Post Office, in Fort Street, adjoining the site of the old Fort Lernoult, is a handsome building. In the same street, at the southeast corner of Shelby Street, is the State Savings Bank, and adjoining it on the east is the tall Penobscot Building.

Just to the east of the Campus Martius, in Cadillac Square, stands the County Building. It is in a plain renaissance style with a Corinthian portico over the main entrance, sculptures in the pediment, and a tower surrounded by a gilded dome. In front of it is the Cadillac Chair, erected in 1901 to commemorate the two hundredth anniversary of the city's foundation.

A little farther on Woodward Avenue reaches Grand Circus Park, a square with trees, fountains, and a statue of ex-Governor Pingree. To the north, at the corner of Adams Street, is the Central Methodist Church, with a richly decorated interior. One block to the east, between Adams and Elizabeth Streets, is the new building of the Y. M. C. A. At the corner of Edmund Place, one-half mile farther on, are the First Unitarian and First Presbyterian churches, two fine Romanesque buildings of red stone. Between Erskine and Eliot Streets, to the right, is the Temple Bethel, an effective Jewish synagogue. Also to the right, at the head of Martin Place, is the handsome Harper Hospital; and Grace Hospital is also seen to the right (corner of Willis Avenue and John R. Street) a little farther on. To the left, a little higher up, is the Detroit Athletic Club. The north end of Woodward Avenue and the adjoining streets form the principal residence quarter.

Jefferson Avenue, which runs at right angles to Woodward Avenue, crossing it one-fifth mile from the river, contains many of the chief wholesale houses, and toward its northeast end has also many pleasant residences. The site of Fort Pontchartrain was at the corner of Jefferson Avenue and Griswold Street, two squares to the west of Woodward Avenue. To the east, on the left side of the street, are the Roman Catholic Cathedral of Saints Peter and Paul and the Jesuit College, and on the right side the Academy of the Sacred Heart. On the same side, at the corner of Jefferson Avenue and Hastings Street, about one-half mile to the east of Woodward Avenue, stands the Museum of Art, containing paintings, sculptures and oriental curiosities.

The commerce of Detroit is enormous, a number of conditions favoring it as a commercial and industrial center. Its geographical position brings it into relation with an immense lake traffic and with the Canadian trade. About three-fourths of the total trade is with Canada. The principal exports are grain, wool, pork, lard, hides, and copper. It has important lumbering interests and large tanneries.

The manufactures include stoves, freight cars, drugs, varnish, paint, furniture, carriages, cigars, and matches. Other industries are those of iron and steel, foundry and machine shop products, and the manufacture of malt liquors.

The site of Detroit was visited by a party of Frenchmen as early as 1610, and again by La Salle in 1670, but no permanent settlement was made until 1701, when Sieur de la Mothe Cadillac, the first Governor of the French territory in this vicinity, built Fort Pontchartrain and established a small trading village. In 1815 Detroit was incorporated as a village, and in 1824 was chartered as a city by the Legislature of Michigan Territory. It was the capital of the Territory from 1805 to 1837, and of the State from 1837 to 1847.

Hartford, Conn. [Named from Hertford, England.]

It is the capital of Connecticut, on the right bank of the Connecticut River, fifty miles from its mouth, and one hundred and twelve by rail northeast of New York. It is a handsome city, finely situated on the navigable Connecticut River, at its confluence with the Park River. The Union Depot is near the center of the town. To the southwest of it, beyond the Park River, lies Bushnell Park, containing the handsome white marble Capitol, a conspicuous object in most views of the town.

The fine sculptural embellishment of the north facade of the Capitol was done under the supervision of Paul W. Bartlett and partly by his own hand. The Senate Chamber contains a good

portrait of Washington, by Stuart, and an elaborately carved chair, made from the wood of the "Charter Oak." In the Library are the Charter of Connecticut and portraits of Connecticut governors. In the east wing of the ground floor is a statue of Nathan Hale, and in the west wing are the tombstone of General Putnam and a statue of Governor Buckingham.

The gateway to the park was erected as a Soldiers' Memorial.

Following Capitol Avenue to the east and then turning to the left, along Main Street, is the Wadsworth Athenæum, containing a gallery and libraries with one hundred and fifty thousand volumes, and the collections of the Historical Society. Adjacent are the buildings of the Ætna Life Insurance, the Ætna Fire Insurance, and the Travelers Insurance Co. A little farther on is the Post Office, adjoined by the interesting Old State House, erected by Chas. Bulfinch. Opposite is the Connecticut Mutual Life Insurance Co. The State Arsenal is also on Main Street farther along.

Near the State House are the High School, the Hartford Orphan Asylum, and the Hartford Theological Institute. About a mile to the south is Trinity College, with fine buildings and equally fine location. The Colt Firearms factory is in the southeast part of the city, and near it is the handsome Church of the Good Shepherd, erected in memory of Colonel Colt, inventor of the revolver, by his wife.

A tablet at the corner of Charter Oak Place marks the site of the "Charter Oak," where, in 1687, the charter of Connecticut was concealed to save it from Sir Edmund Andros, a tyrannical British governor. Charter Oak Park is famous for its trotting races. Elizabeth Park has a fine show of flowers.

Among other large buildings are the Retreat for the Insane, the Deaf and Dumb Asylum, the Old Folks Home, the City Hospital, and St. Joseph's Roman Catholic Cathedral. The last is in Farmington Avenue, which, with its continuation, Asylum Street, contains many fine private residences.

Hartford is a prominent commercial and manufacturing city, and is particularly noted for the importance of its insurance companies, rating third in this regard among the cities of the United States. It is the farthest point, at present, to which large steamers can ascend the Connecticut River. Among the manufactures are firearms—the celebrated Colt manufactory is here—typewriters, rubber goods, especially tires, electrical supplies, automobiles, bicycles, sewing-machines, hardware, tools, carriages, silver plate, woven wire mattresses, book binding machinery, cash registers, knit goods, etc.

The site of a Dutch fort in 1633, and of a colony of Massachusetts settlers as early as 1635-1636, Hartford was incorporated as a city in 1784. Here (January 14, 1639) was adopted the first constitution in writing ever proclaimed by a people organizing a government, therefore Hartford is called the birthplace of American democracy. In 1687 occurred the famous attempt of Governor Andros to seize the charter of Connecticut. Hartford was the capital of Connecticut until 1701, thenceforth until 1873 it divided the responsibility with New Haven. Since 1875 it has been sole capital. Here in 1814 took place the famous meeting of New England delegates known as the Hartford Convention.

About 1780 the "Hartford wits," of whom Joel Barlow was one, made the city a literary center. Since that time it has been the residence of a large number of literary men and women; among them Harriet Beecher Stowe, Whittier, Trumbull, Charles Dudley Warner, and Samuel L. Clemens. Noah Webster, Henry Barnard, Frederick Law Olmsted, and John Fiske were born here.

Indianapolis (*in-di-a-nap'o-lis*), **Ind.** [Literally, the City of Indiana, from *Indiana* and *polis*, city.]

It is the capital of Indiana, on the west fork of White River, in a level plain one hundred and ninety-five miles southeast of Chicago by rail. It is a regularly built and beautiful city.

The focus of the city is the circular Monument Place, from which four wide avenues run diagonally to the four corners of the city. The other streets, many of them one hundred feet wide, are laid out at right angles to each other. In the center of this place rises the Soldiers and Sailors' Monument, two hundred and eighty-five feet high, by Bruno Schmitz of Berlin. Round the monument are statues of General G. R. Clark, Governor Whitcomb, President W. H. Harrison, and Governor Morton. A little to the west is the State Capitol, a large building with a central tower and dome, erected at a cost of two million dollars. At the east entrance to the Capitol is a statue of Governor Morton and near by is that of Governor Hendricks. The Marion County Court House, also an imposing edifice, lies to the east of Monument Place, while to the north of it is the United States Court House and Post Office, erected in 1902-1904. To the southwest of the former is a statue of General H. W. Lawton, by A. O'Connor. In University Park is a statue of Benjamin Harrison, erected in 1908.

The John Herron Art Institute, at the corner of Pennsylvania Avenue and Sixteenth Street, contains a School of Art and a collection of modern paintings. Other large and important buildings are the Blind Asylum; the Propylæum, owned and controlled by a stock company of women for literary purposes; the Deaf and Dumb Asylum; the Union Railway Station; the City Hall; the Public Library; the Masonic Temple; the Odd-fellows Building; the Deutsche Haus, a German club-house; the Mænnerchor Building, and several churches. The Winona Technical Institute is installed in buildings erected for the United States Arsenal. The Central Hospital for the Insane lies one and one-half miles to the west of the city, beyond the White River. The Riverside, Broad Ripple, Brookside, Fairview, and Garfield Parks deserve mention.

Indianapolis is one of the chief railroad centers of the United States, fifteen main lines converging here. It is also a great center of electric railways, which radiate hence in all directions, two hundred and fifty cars leaving the terminal station daily. The trade in agricultural produce is very considerable. Pork-packing is the leading industry, but there are also large flour and cotton and woolen mills, numerous foundries, and manufactories of furniture, carriages, tiles, etc.

Indianapolis was first settled in 1819, the city founded in 1821, became the seat of the state government in 1825, was incorporated as a town in 1836, and received its city charter in 1847. In the same year the first railroad in the state was opened.

Los Angeles (*los an'je-les*, Sp. pron. *lōs äng'he-lās*), **Cal.** [Named by the Spaniards Pueblo de la Reina de los Angeles, "The Town of the Queen of the Angels," hence Los Angeles, "the angels."]

It is the metropolis of southern California, lies on the Los Angeles River, twenty miles above its mouth and fifteen miles in a direct line from the Pacific Ocean, and four hundred and eighty-three miles southeast of San Francisco by the Southern Pacific Railroad.

It is a splendid city of wide streets and spacious sidewalks, with an extensive residential quarter, one hundred and thirty churches, over sixty public schools, and about one thousand seven hundred manufactories. It publishes newspapers in seven languages

The city, especially the residential quarters, is embowered in plants, among the characteristic

features of which are the swift-growing eucalyptus, the graceful pepper-tree, many palms, Norfolk Island pines, live-oaks, india-rubber trees, orange trees, roses, geraniums, yuccas, century plants, bananas, calla lilies, and pomegranates. A distinguished French traveler pronounces Los Angeles one of the few really beautiful cities in the United States.

Broadway, running parallel to Main Street, is the dividing line for east and west, as First Street is for north and south. Among the many substantial buildings in Main Street are the City Hall, between Second and Third Streets, and the new Chamber of Commerce. The latter contains an interesting collection of California products, the Palmer collection of Indian antiquities, and the Coronel collection, illustrating the Spanish period. Here is also the first cannon brought to California by Padre Junipero Serra in 1769. In Temple Street, near Broadway, stands the County Court House. The Public Library is at the southeast corner of Broadway and Third Street.

Other edifices worthy of mention are the Woman's Club, in the Mission-Renaissance style (940 South Figueroa Street), the State Normal School (corner Grand Avenue and Fifth Street), the Security Savings Bank (corner Spring and Fifth Streets), the Union Trust and Hellman Buildings (opposite corners of Spring and Fourth Streets), the Auditorium (corner Fifth and Olive Streets), the Y. M. C. A. (Hope Street, between Seventh and Eighth Streets), the Y. W. C. A. (corner Hill and Third Streets), the Farmers and Merchants National Bank (corner Fourth and Main Streets), the Grant Building (corner Broadway and Fourth Street), Hamburger's (corner Broadway and Eighth Street), Merchants Trust (207 Broadway), and the International Bank (corner Temple, Spring and Main Streets). The viaduct of the Electric Railway, in San Fernando Street, spanning the railway tracks on the east side of the city, is an interesting piece of engineering.

Los Angeles also contains many parks, including the Griffith Park of three thousand acres, and the Eastlake Park and Westlake Park, each with a small lake. The University of Southern California is situated at Wesley Avenue and Thirty-fifth Street.

The small plaza, with the Old Mission Church, at the north end of the business-town, is interesting as a survival of the ancient settlement. Just beyond is a genuine Chinatown, keeping many of the original adobe structures. An excellent view of the city can be obtained from the tower at "Angel's Flight," corner Hill and Third Streets. Opposite Eastlake Park is an Ostrich Farm, with some two hundred adult birds.

Los Angeles is the center of the orange-growing industry. The residents are principally occupied in the cultivation and export of oranges, grapes, and other fruits, as well as the manufacture of wine. There are rich oil-wells in and near the city and this district now forms part of one of the richest petroleum fields in the world. Many invalids resort to Los Angeles in the winter because of its mild and equable climate. The city has a harbor on the coast, eighteen miles off.

It is one of the oldest towns in the Western states, and was already a thriving place when the Franciscan fathers established a mission there in 1781. Under Mexican rule Los Angeles alternated with Monterey as the capital of California. From 1835 to 1847 it was the capital of the State of California. In 1846 it was occupied by the United States forces. For the first century of its history Los Angeles was only a small pueblo constructed mainly of adobe in the Mexican style, but the advent of the railroad brought a sudden impetus. It was the first city in the United States to be lighted with electricity.

Louisville (*lōō'ĭ-vĭl*, or *lōō'ĭs-vĭl*), **Ky.** [The "Falls City"; named by act of the Virginian Legislature in 1780, in honor of Louis XVI. of France, then assisting the American colonies in their revolutionary struggle.]

It is the largest city of Kentucky, and is situated on the Ohio River, one hundred and thirty miles by water southwest of Cincinnati. The river is here crossed by two railroad bridges, and forms a series of rapids—the "Falls of Ohio"—descending twenty-six feet in two miles.

Louisville covers about forty square miles of a plain, and is nearly enclosed by hills. It is handsomely built and extends for nearly eight miles along the river. Its well-shaded streets are from sixty to one hundred and twenty feet wide, and slope up from the river.

Perhaps the most prominent building in Louisville is the Custom House, in Chestnut Street between Third and Fourth Streets. The Court House is in Jefferson Street between Fifth and Sixth Streets, and is adjoined by the City Hall, with its square clock-tower.

The Louisville Public Library, at the corner of Fourth and York Streets, contains also an art gallery and a small museum, including the Troost Collection of Minerals.

The Farmers' Tobacco Warehouse, in Main Street, is the center of the tobacco trade and has a large storage capacity. The University of Louisville, at corner of Eighth and Chestnut Streets, is housed in a handsome building. The Lincoln Bank, corner of Fourth and Market Streets, is fifteen stories high, with a splendid view from upper windows and roof.

Fourth Avenue, with many pleasant residences, leads south, passing the pretty little Central Park, to the Racecourse. Louisville possesses three fine parks: Iroquois Park, Cherokee Park, and Shawnee Park, to the south, east and west of the city. The First Regiment Armory has an enormous drill-hall and can seat fifteen thousand persons.

The Louisville Bridge, one mile long, crossing to the west end of Jeffersonville, was built in 1868-1872 and has twenty-seven iron spans supported by limestone piers. The Kentucky and Indiana Bridge, leading to New Albany, is one-half mile long. A third bridge, also leading to Jeffersonville, was constructed in 1892.

President Zachary Taylor (1784-1850) is buried near his old home, five miles to the east of Louisville.

Louisville is the greatest market for tobacco in the world, and has large pork-packing establishments, distilleries, and tanneries, with manufactories of plows, furniture, castings, gas and water pipes, machinery, flour, cement, cotton seed oil and cake, steam railroad cars, and carriages and wagons.

It was founded in 1778 and in 1780 named in honor of Louis XVI. of France, whose troops were then assisting the Americans. A great part of the town, including the tobacco-market and the city hall, was destroyed by a cyclone in March, 1890. Since the Civil War, Louisville has rapidly grown in importance as one of the chief gateways to the southwest.

Milwaukee (*mĭl-wau'kē*), **Wis.** [Named from the river, called by the Algonquins Minnwaukee, or Me-ne-wau-kee, "good earth, good country, rich or beautiful country."]

It is the largest city in Wisconsin, and is situated on the west shore of Lake Michigan at the common mouth of three improved and navigable rivers, which, with a canal, supply twenty-four miles of dockage. An excellent harbor has been formed by the erection of huge breakwaters, and the river admits the largest lake-vessels to the doors of the warehouses.

The city is well built, largely of a light-colored

brick, and many of its streets are lined with beautiful shade trees, recalling some of the older eastern cities. Among the finest residence streets are Grand Avenue, Prospect Avenue, Waverly Place, Juneau Avenue, Marshall Street and Astor Street. About two-thirds of the inhabitants are Germans, which may account for its successful cultivation of music and art. There are no fewer than seventy-five musical societies in the city.

Grand Avenue, which runs east and west, contains many of the chief buildings and best shops, while Wisconsin Street and East Water Street are also busy thoroughfares. Among the most prominent buildings is the Federal Building, a handsome structure of granite in a turreted baronial style, occupying the block bounded by Jefferson, Jackson, Michigan and Wisconsin Streets, and containing the Post Office, Custom House and United States Court House. The interior is finely finished in marbles, mosaics, mahogany, and oak. The County Court House, a brown sandstone edifice, is in the square bounded by Jefferson, Jackson, Oneida, and Biddle Streets. The tall Wells Building, at the corner of Milwaukee and Wisconsin Streets; the Chamber of Commerce, Michigan Street; Plymouth Church, a massive building at the corner of Van Buren and Oneida Streets, and St. Paul's Church, Marshall Street, are other important structures. The Auditorium, in Cedar Street, can accommodate ten thousand people.

The Layton Art Gallery, a well-lighted structure at the corner of Jefferson and Mason Streets, has some interesting pictures and statues. The paintings include examples of Rosa Bonheur, Constable, Corot, Millet, Achenbach, Alma-Tadema, Clays, Inness, Kensett, Mauve, Holmberg, Pradilla, Mesdag, Munkácsy, Van Marcke, and other modern masters. In the Sculpture Hall are works by Hiram Powers and Romanelli. The magnificent Public Library in Grand Avenue, between Eighth and Ninth Streets, contains two hundred thousand volumes and a free museum of natural history, palæontology, etc.

The curiously thin looking City Hall, with one of the largest bells in the world and an illuminated clock-dial, visible for two miles at night, occupies a triangular site bounded by East Water, Market and Biddle Streets.

Other notable structures in the business district are the Germania Building, the Evening Wisconsin Building, the Sentinel, the New Insurance Building, the Mitchell Building and the Pabst Building.

Among the public monuments are statues of Washington, near Ninth Street, and the Soldiers' Monument.

Juneau Park, laid out on a bluff overlooking Lake Michigan, contains statues of Solomon Juneau, the earliest white settler, and Leif Ericson; it commands fine views. Lake Park, farther to the north, also overlooks the lake. Near it is the North Point Pumping Station, with a tall and graceful water tower. The Forest Home Cemetery, at the southwest corner of the city, deserves notice. The attractions of Washington Park, on the west limits of the city, include a large herd of deer.

The great breweries, such as Pabst's, which covers thirty-four acres, or Schlitz's, are wonderfully interesting plants, while the grain elevators, the flour mills, the coal docks, the International Harvester Co., and the workshops of the C. M. & St. P. Railway are also great concerns. To the south are the rolling mills of the Illinois Steel Co., covering one hundred and fifty-four acres of ground. To the southwest, chiefly in the valley of the Menomonee, are the large brick yards that produce the light colored bricks which give Milwaukee the name of "Cream City." To the north, along the Milwaukee River, are extensive cement works.

Sheridan Drive, skirting the lake to the south for two miles, is intended to be prolonged so as ultimately to meet the boulevard of that name running from Chicago to Fort Sheridan.

The other industries include manufactories of leather, machinery, iron and steel goods, tobacco, clothing, stoves, tinware, brick, furnaces, cars, steel and malleable iron. Pork packing is also carried on extensively.

Milwaukee became a village in 1835 and received a city charter in 1846. Its growth has been rapid, particularly in the last twenty-five years.

Minneapolis (*min-e-ap'ō-lis*), **Minn.** [The "Flour City"; named from Dakota Indian words, *Minni*, "water," *ha*, "curling," and the Greek word *polis*, "a city," namely "city of the curling water," alluding to the Falls of St. Anthony.]

It is the largest city of Minnesota, adjoins the capital, St. Paul, and is situated on both sides of the Mississippi, which is here crossed by numerous bridges. The Falls of St. Anthony, with a perpendicular descent of sixteen feet, afford a water power which has been a chief source of the city's prosperity.

At the corner of Second Avenue South and Third Street stands the Metropolitan Life Building, erected at a cost of one million six hundred thousand dollars. Adjacent is the Post Office, in a Romanesque style.

On Hennepin Avenue, at the corner of North Fifth Street, is the imposing Lumber Exchange. To the right are the West Hotel and the Masonic Temple. At the corner of Eighth Street is the private art gallery of Mr. T. B. Walker, containing good specimens of British portrait painters and of the Barbison school and also works by or ascribed to Raphael, Michael Angelo, Rubens, Rembrandt, Van Dyck, Holbein, and Murillo.

Farther on, at the corner of Tenth Street, is the Public Library and Art Gallery, an ornate Romanesque structure.

At the corner of Sixteenth Street is the new Roman Catholic Cathedral.

Other prominent churches are the First Unitarian Church, at the corner of Mary's Place and Eighth Street; the Westminster Presbyterian Church, Nicollet Avenue; the Church of the Redeemer; the Fowler Methodist Episcopal Church, on Lowry Hill; the Second Church of Christ, Scientist; Plymouth Church, and St. Mark's Cathedral.

At the other end of Hennepin Avenue is the Union Depot. Among other prominent buildings in the business quarter are the Court House and City Hall, a handsome building in Fourth Street, completed at a cost of three million dollars, with a tower three hundred and forty-five feet high; the New York Life Insurance Building, Fifth Street and Second Avenue, with an elaborate interior; the Northwestern National Bank; the First National Bank; the Andrus Building; Donaldson's Glass Block Store; the Security Bank Building, and the Chamber of Commerce, Fourth Street South and Fourth Avenue.

The University of Minnesota lies on the left bank of the river, between Washington and University Avenues, and occupies various well-equipped buildings.

Other notable institutions are the Augsburg Theological School, Minneapolis Normal School, and a Conservatory of Music.

Within the urban limits of Minneapolis are fourteen wooded lakes, while the gorges of the Mississippi and the Minnehaha Creek are very picturesque. These natural features have been made the basis of a fine system of boulevards. From the southeast side of Lake Harriet the road runs to the east along the Minnehaha Creek, passing Lake Amelia, to Minnehaha Park, containing the graceful Falls of the Minnehaha, fifty feet high and immortalized by Longfellow.

The most delightful resort near Minneapolis or St. Paul is Lake Minnetonka (eight hundred and twenty feet above the sea), which lies fifteen miles to the west. The lake is singularly irregular in outline, and with a total length of twelve to fifteen miles has a shore line of perhaps one hundred and fifty miles.

Minneapolis is the foremost city in the world in flour and lumber products. The flour mills, perhaps its most characteristic sight, are congregated on the banks of the Mississippi, near St. Anthony's Falls. Other important industries are the manufacture of agricultural implements and machinery, bread and baking products, cars and general shop construction, food preparations, foundry products, furniture, fur goods, dressed fur, malt liquors, patent medicines, and printing and publishing.

The Falls of St. Anthony were named in 1680 by Father Hennepin. In 1819 Fort Snelling was built by the United States government. Though a large mill was built as early as 1822, it was not till 1850 that a permanent settlement was made. In 1856 Minneapolis was incorporated as a town on the west bank of the river, and in 1867 it was incorporated as a city. St. Anthony on the east bank was annexed in 1872.

Nashville, Tenn. [The "Rock City"; first named as a settlement, Nashborough, in honor of Francis Nash of North Carolina, a brigadier-general in the Continental Army. In June, 1784, changed to Nashville.]

It is the capital of Tennessee, on the navigable Cumberland River, two hundred miles above the Ohio, and one hundred and eighty-five miles by railroad southwest of Louisville. The city, which is one of the principal railroad centers in the Southern states, is built mainly on the left bank of the river, which is crossed by a suspension bridge and a railroad drawbridge to the suburb of Edgefield. Nashville is a handsome, well-built town, and it is, perhaps, the most important educational center in the South.

The most prominent building in the city is the State Capitol, conspicuously situated on a hill. In its grounds are a bronze equestrian statue of Andrew Jackson, and the tomb of President Polk, whose home stood at the corner of Vine and Union Streets. Among the other chief buildings are the Court House, the Custom House, the Parthenon, used for exhibitions of art, Greek plays by students, etc., the Vendome and Bijou Theaters, the Carnegie Library, the Board of Trade, the First National Bank, and the Stahlman Building.

At the head of the educational institutions stands Vanderbilt University, endowed by Cornelius Vanderbilt with one million dollars. In the campus is a colossal statue of the founder, by Moretti. Other well-known institutions are the Peabody Teachers' College, Boscobel College, Belmont College, the Saint Cecilia Academy, Radnor College, Buford College and Ward's Seminary.

There are also several large colleges for colored students.

Among the places of interest near Nashville are the Hermitage, the home of General Andrew Jackson, eleven miles to the east.

Nashville occupies a foremost place among the manufacturing centers of the country. It is the fifth boot and shoe market in the United States, the largest candy and cracker manufacturing city in the South, and does an enormous wholesale dry goods, grocery, and drug business. It carries on an extensive trade in cotton and tobacco; while its manufactures, which are rapidly extending, include cotton, flour, oil, paper, furniture, timber, leather, iron, and spirits. The iron interests of the South are largely controlled here.

Nashville was settled in 1780, received its charter in 1806, and in 1843 was made the permanent capital.

New Haven, Conn. [The "City of Elms"; named by the original settlers the "new haven." The original Indian name was Quinnippac. The present name substituted "by the court" September 5, 1640.]

It is the chief city and seaport of Connecticut, at the head of New Haven Bay, is situated four miles from Long Island Sound, seventy-three miles by railroad northeast of New York and thirty-five miles southwest of Hartford.

The city is situated on a level plain, with a background of hills. Its broad streets are shaded with elms, and the public squares, parks, and gardens, with its handsome public and private edifices, make it one of the most beautiful of American cities.

From the large Union Station, which adjoins the harbor, Meadow Street leads north to the Public Green, on which are the City Hall, three churches, the Second National Bank, and the Free Public Library, United States Court House and Post Office. At the southeast corner of the Green is the Bennett Fountain, designed by John F. Weir after the monument of Lysicrates at Athens.

In College Street are most of the substantial buildings of Yale University, which, besides the Academic Department, has schools of Science, Theology, Medicine, Law, Forestry, Music, and Fine Arts, and also a Graduate School.

From the Public Green the university "campus" or quadrangle is entered by an imposing tower-gateway known as Phelps Hall. Among the buildings in the campus are the Art School, containing a good collection of Italian, American, and other paintings and sculptures; Connecticut Hall, the oldest Yale building (1750); Osborn Hall; Battell Chapel; Vanderbilt Hall; Alumni Hall; Dwight Hall, and the College Library. At the corner of Elm and High Streets is the Peabody Museum of Natural History, in which the mineralogical collections are especially fine.

Other important buildings of the university are the buildings of the Sheffield Scientific School, the Schools of Law, Medicine, and Divinity, the Chemical and Physical Laboratories, Memorial and other large halls.

Hillhouse Avenue is especially noted for its trees, and Chapel Street, the principal promenade, for the gardens surrounding many of the residences.

The parks have an aggregate area of one thousand two hundred acres. Besides the Green are the parks at East Rock (three hundred and sixty feet high) and West Rock (four hundred feet high), two masses of trap rock near the city which afford fine views. East Rock is surmounted by a soldiers' monument. West Rock is famous for a cave in which the regicides Goffe and Whalley were for a time concealed. Savin Rock, Morris Cove, and Momaugin are shore resorts accessible from the city by electric car lines.

The railway lines from New Haven to New York City are the only ones of consequence that have been completely electrified.

New Haven is an important industrial city and has considerable commerce. The harbor has a jetty and a breakwater surmounted by a light-house, and the port has a large coasting trade. But it is of more consequence as a manufacturing town, employing many thousands of workers producing hardware, wire, locks, clocks, cutlery, firearms, corsets, india-rubber goods, carriages, furniture, paper, matches, musical instruments, etc.

New Haven was settled in 1638 by a company chiefly from London. In 1639 a government was established under a written constitution, and Theophilus Eaton, the pastor of the colony, was chosen and continued in the governorship until

1658. Church membership was a qualification for suffrage and eligibility to office. The New Haven colony was founded in 1643 by the union of Milford, Guilford and Stamford with New Haven. In the same year it became a member of the confederacy of the United Colonies of New England. The charter of Charles II. for Connecticut (1662) included the New Haven colony, but the latter, supported by Massachusetts and Plymouth, stubbornly opposed absorption and was only forced to accede in 1664. Yale College, founded in Saybrook, was removed to New Haven in 1717. The town was captured by the British under Tryon and Garth, July 5, 1779. It was incorporated as a city in 1784. Joint capital with Hartford from 1701; the government was removed from New Haven altogether in 1873.

New Orleans (*nū ôr'lē-ănz*), **La.** [The "Crescent City"; its name is a translation of the French name *Nouvelle Orleans*, given by them in honor of the Duc d'Orleans, then Regent of France.]

It is the chief city of Louisiana, a great port and mart, and is situated on both sides of the Mississippi River—the greater portion on the east bank—one hundred and seven miles from its mouth, and one thousand one hundred and ninety miles southwest of New York. The Mississippi makes two bends here, whence the city was called "The Crescent City," but it is now shaped like the letter S. The river is from six hundred to one thousand yards wide, and sixty to two hundred and forty feet deep. The bar at its mouth was removed in 1874-1879 by the Eads jetties in South Pass, and vessels of thirty feet now easily reach New Orleans.

A great part of the city is below the level of the river during the high flood tides, which last for a few days each year, and is protected by a levee or embankment, fifteen feet wide and fourteen feet high. The city is laid out with considerable regularity, and many of the chief streets are wide and shaded with trees. The most important business thoroughfare is Canal Street, which runs at right angles to the river and divides the French Quarter, or "Vieux Carré" on the northeast, from the New City, or American Quarter, on the southwest. The finest residences are in St. Charles Avenue, and in Esplanada Avenue, where the wealthy Creoles have their homes. Of the total population about one-quarter are negroes, while the remaining three-fourths include large proportions of French, German, Irish, Italian and Spanish blood.

While it possesses few imposing buildings, New Orleans is a picturesque city. There are several parks, little improved, but with handsome monuments or statues of Jackson, Lee, Franklin, and others. The custom house of granite cost four million five hundred thousand dollars, and is the largest and most imposing building in the city. It is a large granite building in Canal Street, near the river, and contains a large Marble Hall.

Just below the Custom House, Canal Street ends at the Levee, which extends along the west bank of the Mississippi for about six miles and presents a very animated and interesting scene. At the left is Jackson Square, the old Place d'Armes, which retains its ancient iron railing, and contains a statue of General Andrew Jackson, by Mills. It is adjoined by the Cathedral of St. Louis, a good specimen of the Spanish-Creole style, built in 1792-1794, on the site of the first church in Louisiana, but altered in 1850. It contains some paintings and interesting tombs.

The buildings to the right and left are Court Houses, that to the south having been built for the Cabildo, or City Council of the Spanish régime. In it and in front of it were held the ceremonies attending the cession of Louisiana by the French Government to the United States in 1803.

In Orleans Street, near the east end of the Cathedral, is a Convent of Colored Nuns, which contains what was formerly the famous Quadroon Ballroom, mentioned by Cable, the scene of many celebrated festivities.

On the Levee, just beyond Jackson Square, is the French Market, which often reveals a scene of the greatest picturesqueness and animation. A little farther on, at the foot of Esplanade Avenue, is the United States Branch Mint, a large building in the Ionic style. In Royal Street, four blocks from Canal Street, is the new Court House, a handsome structure of white marble and terra cotta.

In the fine French Quarter the chief promenades are Esplanade Avenue, Rampart Street and Bourbon, Toulouse, Conti and Royal Streets. At the corner of Chartres and Hospital Streets is the Archbishop's Residence, in the unchanged Ursuline Convent, built in 1730.

Following St. Charles Avenue from Canal Street to the south, is the St. Charles Hotel and the Orpheum and, just beyond, Lafayette Square, around which are grouped the City Hall, the new Post Office, St. Patrick's Church, the First Presbyterian Church, and the Odd Fellows' Hall. In the square are a statue of Franklin, by Hiram Powers, a monument to John McDonough, and a statue of Henry Clay. Farther on is Lee Circle, with a monument to General Robert E. Lee. At the corner of Camp Street and Howard Avenue, adjoining Lee Circle, stands the Howard Library, the last work of H. H. Richardson, who was a native of Louisiana. Adjacent are Memorial Hall, a museum of Confederate relics, and the new building of the Public Library. To the southwest, in Carondelet Street, is the Jewish Temple Sinai. The monument to Margaret Haughery, the "Orphans' Friend," is said to have been the first statue of a woman erected in the United States.

Tulane Avenue, named in honor of the chief benefactor of Tulane University, and its continuation Common Street, contain the Law Department of Tulane University, the House of Detention, the Jesuit Church of the Immaculate Conception in a singular Moorish style, the Parish Prison and Criminal Courts, the Hôtel Dieu, and the large Charity Hospital, originally established in 1784. The large Cotton Exchange is at the corner of Carondelet and Gravier Streets; the Produce Exchange is in Magazine Street, and the Sugar Exchange is at the foot of Bienville Street. The United States Marine Hospital lies near the river.

St. Charles Avenue, extending in a crescent from Lee Circle past Audubon Park to the river, is lined with oaks and magnolias and contains many old and admirable private residences. Among its public buildings are Christ Church, the New Orleans University, the Academy of the Sacred Heart, the Jewish Orphan Home, and the Harmony Club. At the point where the avenue crosses Audubon Park are the newer buildings of the Tulane University, an important and well-equipped institution. A department of Tulane University is the H. Sophie Newcomb Memorial College for Women, founded in 1886. A legacy of John McDonough has built and equipped thirty handsome school houses in different parts of the city.

The City Park, on the Metairie Ridge, is one hundred and fifty acres in extent. The Audubon Park, in which the Great Exhibition of 1884-1885 was held, and which now holds the "Sugar Experimental Station" of the State of Louisiana, is a long segment extending back from the river, being the ground in which the sugar cane was first grown in this state. Both parks contain fine live-oaks.

New Orleans is the largest cotton market in the world except Liverpool, handling annually two

million bales. The manufacturing products include machinery, cotton goods, boots and shoes, and amount in a year to sixty million dollars. As the outlet of the Mississippi Valley it commands a large export trade.

The site of New Orleans was first visited in 1699 by Bienville, who in 1718 laid the foundations of the city, and in 1726 made it the capital. In 1763 it was ceded to Spain by France, with the rest of Louisiana; but when in 1765 the Spanish governor attempted to take possession, he was driven out, and the people established a government of their own till 1769, when the Spaniards occupied it. It was ceded to France in 1802, and transferred to the United States a few days later. Incorporated as a city in 1804, it was divided in 1836-1852 into three separate municipalities, in consequence of the jealousies between the Creoles and the Americans. Other outstanding events have been the defeat of the British by Andrew Jackson in 1815; the capture in 1862 by the Federal fleet; serious political troubles with fighting in 1874 and 1877; and the lynching in 1891 of eleven Italian maffiosi. In 1880 the capital of Louisiana was removed from New Orleans to Baton Rouge.

Newport, R. I. [The "City of Mansions"; named in honor of the English admiral Christopher Newport (under James I.).]

It was, until 1900, one of the capitals of Rhode Island, and lies on the west shore of the island, in Narragansett Bay, five miles from the ocean, and sixty-nine miles by railroad southwest of Boston. It has a deep and excellent harbor, defended by Fort Adams.

The town is noted for fine scenery, and is one of the most fashionable watering-places in America, containing some of the finest mansions in the United States. Bathing facilities are unrivaled, and there are many fashionable promenades.

The chief attractions are Touro Park, and the Old Mill, Cliff Walk, Bailey's Beach, and the Ocean Drive.

The central point of Old Newport is Washington Square, or the Parade, within a few minutes' walk of the railway station and steamboat wharf. Here are the State House, with portrait of Washington, by Stuart; the old City Hall (new one in Broadway, corner of Bull Street); a statue of Commodore O. H. Perry, the hero of Lake Erie; the Perry Mansion, and the Roman Catholic Church, with an Ionic portico.

Following Touro Street, to the southeast, is the Synagogue built in 1762 and the oldest in the United States; the Newport Historical Society; and, a little beyond, the picturesque Hebrew Cemetery. Touro Street ends here and Bellevue Avenue, the fashionable promenade, begins, running to the south.

The fine Fern-leaf Beech is at the corner of Bellevue Avenue and Redwood Street. Nearly opposite this is Touro Park, containing the Round Tower or Old Stone Mill, the origin of which is still somewhat of a mystery. Some authorities believe that it was built by Governor Arnold in the seventeenth century as a wind-mill, while others regard it as very possibly the central part of a church built by the Norsemen in the eleventh century. Longfellow mentions it in his *Skeleton in Armor*. The park also contains statues of M. C. Perry and W. E. Channing; and opposite its south side stands the Channing Memorial Church.

A few hundred paces farther on, Bath Road leads to the left from Bellevue Avenue to the First Beach.

Bellevue Avenue soon passes the Casino, a long, low, many-gabled building, containing a club, a theater, etc. The Lawn Tennis Championship of America is decided in the courts attached to the Casino. Farther on, the avenue passes between a series of magnificent villas, and then turns sharply to the right and ends at Bailey's Beach.

First or Easton's Beach, a strip of smooth hard sand, three-fourths mile long, affords some of the best and safest surf-bathing on the Atlantic coast. From the east end of the beach a road leads round Easton's Point to Purgatory, a curious fissure in the conglomerate rocks, one hundred and fifty feet long, seven to fourteen feet wide, and fifty feet deep.

At the west end of Easton's Beach begins the famous Cliff Walk, which runs along the winding brow of the cliffs for about three miles, with the ocean on one side and the smooth lawns of handsome homes on the other. Here are summer residences, owned by the wealthiest society people of Boston, New York, and other cities.

Across the hill is Bailey's Beach, a small bay with a long row of bathing-houses, which has become the fashionable bathing-resort of the Newport cottagers.

From Bailey's Beach begins the beautiful Ocean or Ten Mile Drive, which skirts the coast of the peninsula to the south of the town for about ten miles, commanding magnificent views.

The locality of Newport has many natural curiosities, including the Hanging Rocks, Spouting Cave, and the Glen, or "Purgatory," already referred to. Newport is the seat of the United States Naval War College, United States Training Station, Torpedo Station, Naval Hospital, Newport Hospital, and Hazard Memorial School.

The manufactures are flour, cotton goods, copper, brass, oil, etc.

Newport was settled in 1638 by eighteen adherents of Roger Williams, and was an important commercial town prior to the Revolutionary war, which effected its ruin and transferred its trade to New York. During the war it was occupied for three years by the British, and for a while by the French under Rochambeau. It was the birthplace of Commodore Perry and William Ellery Channing, and for a while the place of residence of Bishop Berkeley, the English philosopher.

New York City, N. Y. [The "Empire City"; also "Gotham"; named from the State which was named in honor of James, Duke of York, afterwards James II.]

It is now (1918) the largest city in the world, and, next to London, the wealthiest. The population of Metropolitan New York, including suburbs, is approximately 7,500,000.* Situated on New York Bay at the confluence of the Hudson and East Rivers, about twelve miles from the Atlantic Ocean, it consists of the boroughs of Manhattan, The Bronx, Brooklyn, Queens, and Richmond, which have a joint area of three hundred and twenty-six square miles. Its extreme length, north and south, is thirty-five miles, its extreme width nineteen miles.

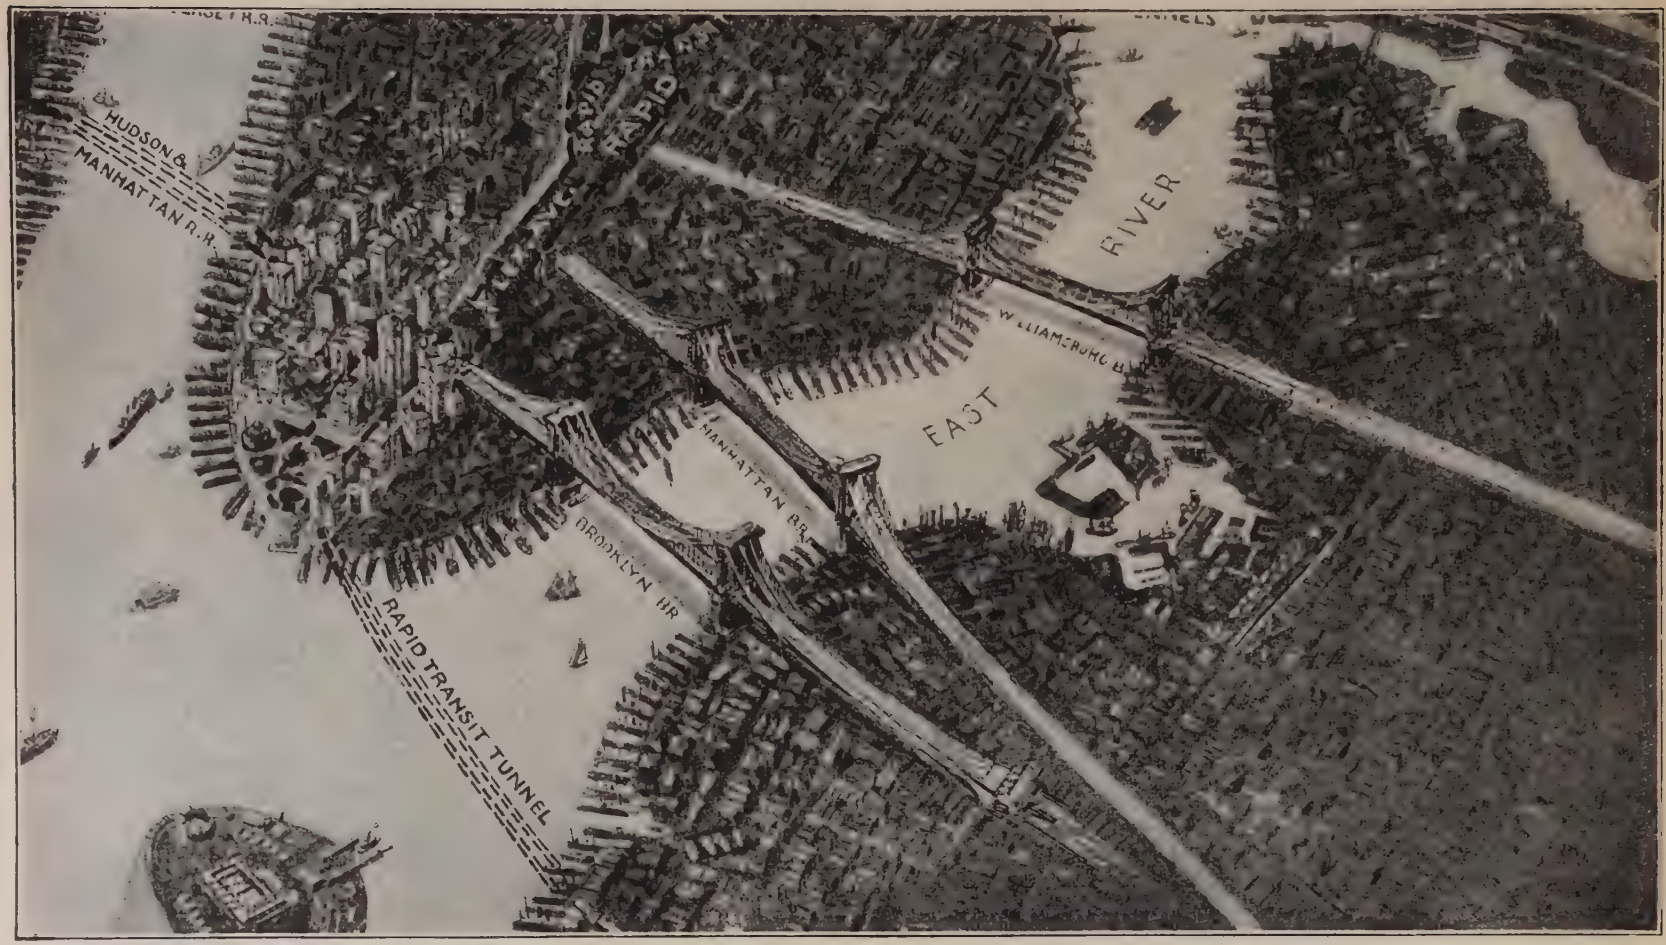
Manhattan, or New York proper, consists mainly of Manhattan Island, a long and narrow tongue of land bounded by the Hudson or North River on the west and the East River (part of Long Island Sound) on the east and separated from the mainland on the north and northeast by the narrow Harlem River and Spuyten Duyvil Creek; but also includes several small islands in New York Bay and the East River.

Manhattan Island is thirteen and one-half miles long, with an average breadth of one and three-fifths miles, and with the exception of a small, wild, and rocky portion, which is utilized for ornamental purposes, the entire island is laid out in avenues and streets. It includes several greens and parks, and its area has been considerably extended by filling in on the two river-sides.

The strikingly beautiful landlocked harbor of New York includes the lower bay, the upper bay, the East River, and the North, or Hudson River. Ocean steamships enter it from the sea by Sandy

*The population of Greater London, including an area of 692¾ sq. mi., was, in 1911, 7,252,963. The modern administrative County of London, including the city, had in the same year a population of 4,522,961. New York City is increasing at the rate of about 1,000,000 in every seven years. The census figures of corporate New York, in 1916, was 5,602,84[illegible].

AEROPLANE VIEW OF MANHATTAN ISLAND AND ITS SURROUNDINGS SHOWING NEW YORK'S ELABORATE SYSTEM OF BRIDGES AND TUNNELS



The problem of transporation in the city of New York is rendered extremely difficult and costly by the fact that two million of the people live upon, and as many more daily enter or leave a long, narrow island, which is separated from the mainland by broad and deep rivers. To overcome this isolation public and private enterprise has built, during the past decade, no less than fourteen tunnels and three of the greatest long-span bridges of the world.

Hook through the Narrows, and coasting ships from the north through Long Island Sound. The North River averages a mile wide; the East River is not so wide, but both are deep enough for the largest ships, and furnish many miles of wharfage. The Harlem River, at the north end of Manhattan Island, connects the two great rivers.

The bar at Sandy Hook, eighteen miles south of the city, which divides the Atlantic Ocean from the outer or lower bay, is crossed by two ship-channels, from twenty-one to thirty-two feet deep at ebb-tide. The lower bay covers eighty-eight square miles. The Narrows, through which all large ships pass on their way to the inner harbor, is a strait between Long Island and Staten Island, about a mile in width, and like other approaches is defended by forts. New York's harbor or inner bay covers about fourteen square miles; it is one of the amplest, safest, and most picturesque on the globe, open all the year round.

Liberty Island, for a long time known as Bedloe's Island, is situated in the harbor, about one and three-fourths miles from the lower end of the city. In 1886 the famous Bartholdi statue was erected on this spot, and occupies its central surface. It is a colossal bronze female figure one hundred and fifty-one feet in height, on a pedestal one hundred and fifty-five feet high, and holding aloft a torch which is lit by electricity at night.

Immense bridges span the East River and Harlem River, and there are some thirty steam-ferries.

The New York and Brooklyn Suspension Bridge, opened in 1883, which cost twenty million dollars, was soon found inadequate for the enormous traffic, and a second bridge from Canal Street to Brooklyn was opened in 1909.

The Williamsburg Suspension Bridge, between Manhattan and Williamsburg, was opened in 1903. It cost twelve million dollars.

The Queensboro Bridge, of cantilever type, between Long Island and Fifty-ninth Street, was opened in 1909. Its cost was twenty million dollars.

In 1909 another bridge from Manhattan to Brooklyn, built at a cost of twenty-six million dollars, was completed.

The Harlem River is crossed by several bridges, of which the Washington is noteworthy as being one of the finest in America.

Hell Gate Arch Bridge spans the East River at Hell Gate, between Ward's Island and Astoria, Long Island. It was designed and built by Gustav Lindenthal for the New York Connecting Railroad to connect the Pennsylvania and New York, New Haven systems, at a cost, including approaches, of twenty-five million dollars. It is the longest arch in the world. The span is one thousand and sixteen feet ten inches between tower faces. The upper chord of the arch is three hundred feet above mean high water at the center and one hundred and eighty feet at the ends of the span; the lower chord is two hundred and sixty feet above mean high water at the center and forty feet at the ends; the roadway is one hundred and forty feet above mean high water.

Old New York is laid out very irregularly. Here the money interests and wholesale traffic are centered; Wall, New, and Broad Streets being the great centers of banking and speculative enterprises.

The newer part of the city, from Fourteenth Street to the end of the island, northward, is divided into twelve great avenues and several smaller ones, from seventy-five to one hundred and fifty feet in width, running north and south. These are crossed at right angles by streets, mostly sixty feet in width, running from river to river.

Fifth Avenue, the great modern central thoroughfare, divides the city into eastside and westside. Here or hereabout are the largest banks, churches, museums, libraries, shops, palaces, and tenements in America.

Fifth Avenue below Fifty-ninth Street is now largely occupied by store and office buildings where once were palatial private houses; and between Madison Square and Fifty-ninth Street contains many hotels and clubs, and the New York Public Library.

The original great thoroughfare, Broadway, runs a northwesterly course through the regular cross street arrangement, making some slight deflections, quite through the middle of the island.

For a distance of two and one-half miles from Fifty-ninth to One Hundred and Tenth Street, Central Park divides the city into two parts.

Other parks are Van Cortlandt, one thousand and sixty-nine acres; Pelham Bay, one thousand seven hundred acres; and Bronx Park, six hundred and sixty-one and sixty-one hundredths acres, containing the Botanical and Zoological Gardens. Prospect Park, Brooklyn, contains five hundred and sixteen and one-quarter acres. A recreation course, skirting the Harlem River, and reserved for fast driving, is the "Speedway," and extending along the Hudson for three miles is Riverside Drive, with its striking views of the Palisades. On an abrupt elevation is Morningside Park, on which are located the new buildings of Columbia University, St. Luke's Hospital, and the Cathedral of St. John the Divine. Beyond Morningside Park is a rocky ridge known as Washington Heights.

The most thickly settled part of Brooklyn borough is in the north, and the business portion is that part fronting on East River and the upper harbor. The southern part is largely marshland. At the southwestern extremity of Long Island, in this borough, stretches a sandbar known as Coney Island, on which are the widely-known popular summer resorts. Queensboro has several large population centers, among them Long Island City and Flushing. Richmond borough (Staten Island) contains numerous villages.

Communication throughout the city is afforded by an extensive system of electric surface, electric elevated roads, the great subway railroad system, and by ferries plying between the boroughs.

The subway has, for part of its course, four tracks, two of which are for express trains. It begins at the City Hall and traverses the whole length of Manhattan Island. The first length of eight miles to Washington Heights was opened in 1904. The following year the line was extended to the Battery, and also under the Harlem River into Bronx. In 1908 a further extension was opened between the Battery and Brooklyn by way of a tunnel. In 1909, a double-tube tunnel, the McAdoo, connected the city at Sixth Avenue and Twenty-third Street with Hoboken, N. J.

In 1910 several tunnels under the Hudson and East Rivers were opened. In 1913, the Dual system was created, comprising the transportation lines of four of the five boroughs; and the years 1917-1919 added numerous other subways, tunnels and terminals. A recent gigantic railway enterprise is the construction of the Pennsylvania tunnel under the Hudson River.

Some of the larger features of New York call for more detailed notice.

The architecture of New York exhibits great contrasts, including styles as diverse as the quaint old Dutch houses, and skyscrapers of twenty-five and thirty stories.

At the extreme south end of the island is the Custom House, a large quadrangular granite building, in the French Renaissance style, which occupies the site of Fort Amsterdam. The facade toward Bowling Green is adorned with colossal groups of Europe, Asia, Africa, and

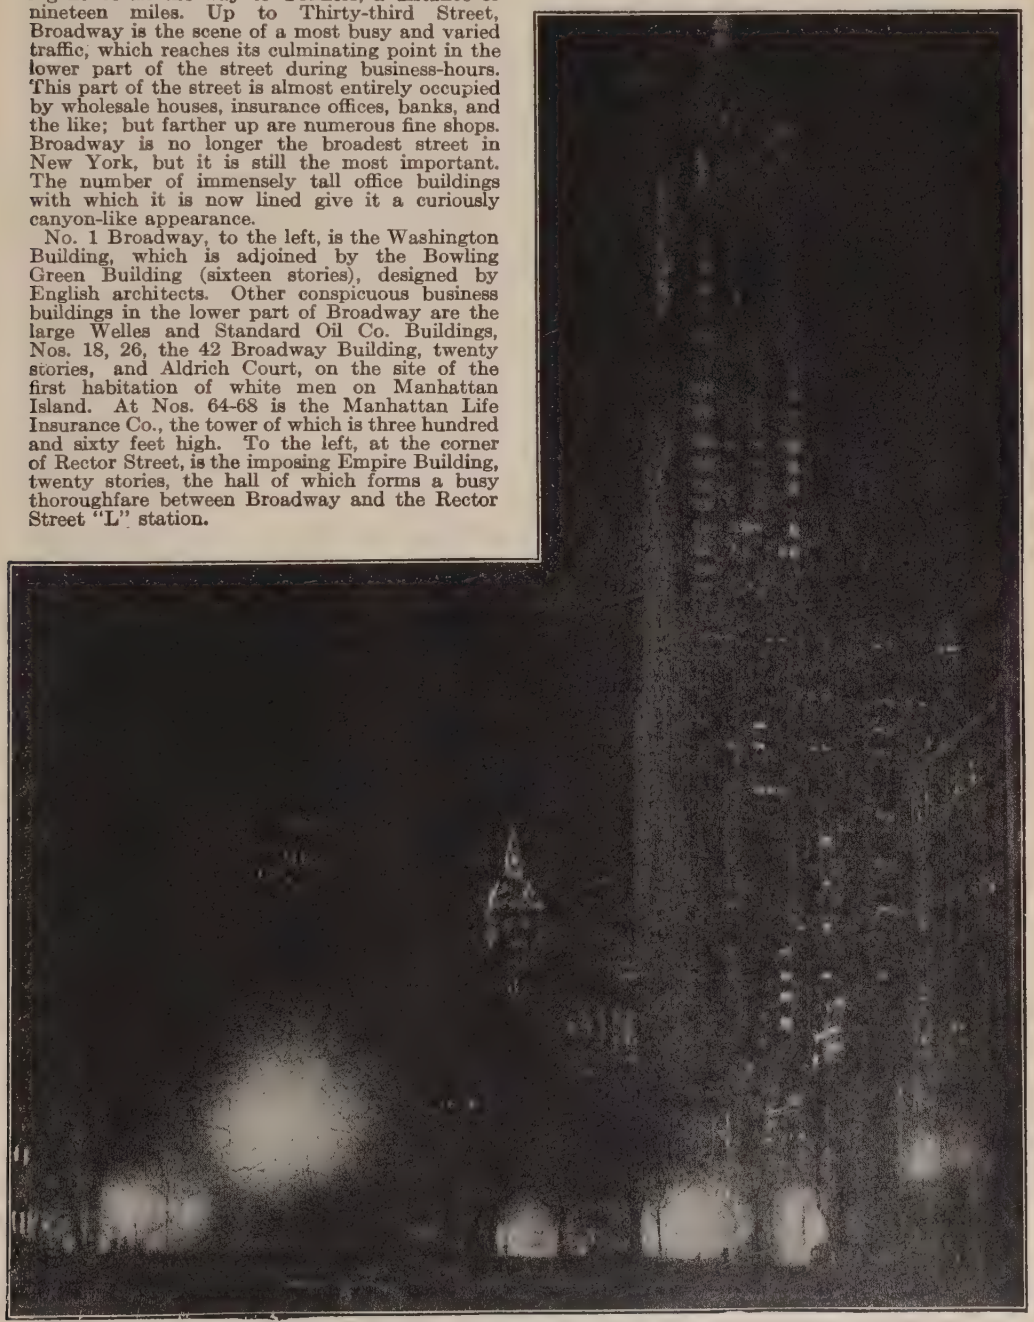
America, and with twelve heroic figures representing the great sea-powers.

In Whitehall Street, opposite the Custom House, is the Produce Exchange, a huge brick and terra cotta structure in the Italian Renaissance style, containing numerous offices and a large hall. The tower, two hundred and twenty-five feet high, commands a fine view of the city and harbor.

Broadway begins at the Bowling Green, extending hence all the way to Yonkers, a distance of nineteen miles. Up to Thirty-third Street, Broadway is the scene of a most busy and varied traffic, which reaches its culminating point in the lower part of the street during business-hours. This part of the street is almost entirely occupied by wholesale houses, insurance offices, banks, and the like; but farther up are numerous fine shops. Broadway is no longer the broadest street in New York, but it is still the most important. The number of immensely tall office buildings with which it is now lined give it a curiously canyon-like appearance.

No. 1 Broadway, to the left, is the Washington Building, which is adjoined by the Bowling Green Building (sixteen stories), designed by English architects. Other conspicuous business buildings in the lower part of Broadway are the large Welles and Standard Oil Co. Buildings, Nos. 18, 26, the 42 Broadway Building, twenty stories, and Aldrich Court, on the site of the first habitation of white men on Manhattan Island. At Nos. 64-68 is the Manhattan Life Insurance Co., the tower of which is three hundred and sixty feet high. To the left, at the corner of Rector Street, is the imposing Empire Building, twenty stories, the hall of which forms a busy thoroughfare between Broadway and the Rector Street "L" station.

Wall Street diverging from Broadway to the right, at this point, is the great financial street of New York, the financial barometer of the country. On this street stands the United States Sub-Treasury, a marble structure with a Doric portico, occupying the site of the old Federal Hall, in which the first United States Congress assembled, and Washington was inaugurated as President; the Drexel Building, a white marble structure in the Renaissance style, occupied by J. Pierpont



FAR-FAMED BROADWAY AT NIGHT

Morgan & Co.; the National City Bank, largest in the country, occupying the old Custom House.

Trinity Church, on the west side of Broadway, is a handsome Gothic edifice of brown stone, with a spire two hundred and eighty-five feet high. The present building dates from 1839-1846, but occupies the site of a church of 1696. The church owns property to the value of at least twenty million dollars used in the support of several subsidiary churches and numerous charities.

Just above Trinity Church are the enormous Trinity and United States Realty buildings, two dignified structures, the former with an admirable facade in a modified Gothic style, and nearly opposite are the Union Trust Co. and the twenty-three story building of the American Surety Co., the latter containing the United States Weather Bureau ("Old Probabilities"). On the same side, between Pine Street and Cedar Street, is the office of the Equitable Life Insurance Co.

The block to the left, between Liberty Street and Cortland Street, is occupied by the buildings of the Singer Manufacturing Co., the City Realty Co., and the City Investing Co. The tower of the Singer Building, with its forty-one stories, rises to a height of six hundred and twelve feet. Between Broadway and Park Row is the Post Office, a large Renaissance building.

City Hall, containing the headquarters of the Mayor of Greater New York and other municipal authorities, is a well-proportioned building of marble in the Italian style, with a central portico, two projecting wings, and a cupola clock tower.

To the north of the City Hall is the Court House, a large building of white marble, with its principal entrance, garnished with lofty Corinthian columns, facing Chambers Street. The interior, which contains the State Courts and several municipal offices, is well fitted up. This building, one of the "Tweed ring" structures, is said to have cost twelve million dollars. Opposite the Court House, in Chambers Street, are various City Offices. These include the new Register Office or Hall of Records, a handsome building in the French Renaissance style, erected at a cost of six million dollars and faced with granite. The facade is adorned with sculptures, and the interior is also elaborately decorated. To the southwest of the City Hall, facing Broadway, is a statue of Nathan Hale.

Park Row, bounding the southeast side of the City Hall Park, contains the offices of many of the principal New York newspapers, the Pulitzer Building, with the World office, Tribune Building, New York Press, and Park Row Building with its lofty towers. Opposite the newspaper offices, in Printing House Square, is a bronze statue of Benjamin Franklin, and in front of the Tribune Building is a seated bronze figure of its famous founder, Horace Greeley.

Beyond Astor Place, Broadway passes the large building occupied by John Wanamaker, but originally erected for A. T. Stewart & Co. With its new annexes, it is heralded as the largest department store in the world.

Broadway now inclines to the left. At the bend rises Grace Church, which, with the adjoining rectory, chantry, and church-house, forms one of the most attractive ecclesiastical groups in New York. The church is of white limestone and has a lofty marble spire. The interior is well-proportioned, and all the windows contain stained glass.

At Fourteenth Street Broadway reaches Union Square, which is beautified with pleasure grounds, statues, and an ornamental fountain. At the corner of East Sixteenth Street is the massive office building of the Bank of Metropolis. Near the southeast corner is a good equestrian statue of Washington, in the center of the south side is a bronze statue of Lafayette, in the southwest corner is a statue of Abraham Lincoln, and on the west side is the James Fountain.

Broadway, between Union Square and Madison Square, is one of the chief shopping-resorts of New York, containing many fine stores for the sale of furniture, dry goods, etc. At Twenty-third Street it intersects Fifth Avenue and at the point of intersection stands the daring Fuller Building, generally known as the "Flat-iron Building" on account of its strange triangular shape. It is two hundred and ninety feet high, has twenty stories, and cost four million dollars.

Broadway now skirts the west side of Madison Square, a prettily laid out public garden, containing a bronze statue of Admiral Farragut, an obelisk to the memory of General Worth, a statue of Roscoe Conkling, a statue of President Arthur, and a statue of William H. Seward. The statue of Farragut is among the finest in New York, and the imaginative treatment of the pedestal is very beautiful. On the west side of the square is the new Fifth Avenue Building.

On the east side is the new Appellate Court House, a handsome building, perhaps somewhat overloaded with ornamentation.

On the east side of the square, between Twenty-third and Twenty-fourth Streets, is the enormous building of the Metropolitan Life Insurance Co., the tower of which has fifty stories and reaches a height of six hundred and ninety-three feet. Two elevators run to a height of five hundred and forty-four feet. Adjacent is the Madison Square Presbyterian Church, with its massive dome. At the southeast corner of Twenty-sixth Street stands the Manhattan Club, and at the northeast corner is the huge Madison Square Garden, with its Moorish tower capped by a fine statue of Diana.

The Herald Office, a Venetian palace, stands at Broadway and Thirty-fifth Street, in Herald Square.

West of Herald Square, at Seventh Avenue and Thirty-third Street, is the magnificent station of the Pennsylvania Railroad Company, covering an area four hundred and fifty by one thousand eight hundred feet, the largest structure of the kind in the world, connected by tunnels under the Hudson River with New Jersey, and under the East River with Long Island. The tracks are forty feet below the level of the city streets.

The Metropolitan Opera House, opened in 1883 and rebuilt ten years later, after a fire, stands between Thirty-ninth and Fortieth Streets.

At Forty-second Street and Broadway is the Times Building, an ornamental structure sixteen stories high, upon a triangle of ground.

To the east of Madison Avenue is the Grand Central Station, the terminus of the New York Central, the New York, New Haven and Hartford, and the Harlem Railways. Opposite the station is the Belmont Hotel, twenty-two stories high.

The corner at Broadway and Forty-second Street is the recent heart of the theatrical and hotel district, for clustered there are a dozen hotels, the immense Astor and Knickerbocker among them, and there are twenty theaters within half a mile, six of them almost side by side on Forty-second Street.

Beyond Times Square, Broadway is rather uninteresting, but there are some lofty specimens of apartment houses or French flats farther up. From Forty-fifth Street on, Broadway is largely occupied by automobile stores and garages. At the corner of Fifty-sixth Street is the new Broadway Tabernacle and at Fifty-ninth Street Broadway reaches the southwest corner of Central Park and intersects Eighth Avenue.

At the intersection, the so-called Circle, stands the Columbus Monument by Gaetano Russo,

THE NEW YORK SKY-LINE AT NIGHT

Even more wonderful than the dizzy heights of the buildings is the blaze of electricity radiating from them. People now living remember the time when there was no gas and candles were universal.

erected in 1892, and consisting of a tall shaft surmounted by a marble statue, in all seventy-seven feet high. Beyond Seventy-eighth Street, Broadway, now a wide street with rows of trees, is usually known as the Boulevard. From One Hundred and Eighth Street to One Hundred and Sixty-second Street is coincides with Eleventh Avenue, at One Hundred and Sixteenth Street it passes Columbia University, and from One Hundred and Sixty-second Street it, as Kingsbridge Road, runs on to Yonkers.

Fifth Avenue, the chief street in New York from the standpoint of wealth and fashion, begins at Washington Square to the north of West Fourth Street and a little to the west of Broadway, and runs north to the Harlem River, a distance of six miles. Below Forty-seventh Street the Avenue has now been largely invaded by shops, tall office buildings, and hotels. The avenue has been kept sacred from the marring touch of the street railway or the elevated railroad, and is traversed by a line of motor omnibuses. The avenue is wide and well-paved, and many of the buildings are of brown sandstone. On a fine afternoon Fifth Avenue is alive with carriages and horsemen on their way to and from Central Park and it is, perhaps, seen at its best on a fine Sunday.

At Twenty-third Street the Avenue intersects Broadway and skirts Madison Square. To the right is the Flat-iron Building. At Twenty-sixth Street is the Cafe Martin.

The whole block between Thirty-third and Thirty-fourth Streets, to the left, is occupied by the Waldorf-Astoria Hotel, a huge double building of red brick and sandstone in a German Renaissance style. The restaurants and other large halls in the interior are freely adorned with mural paintings by American artists.

The Union League Club, the chief Republican club of New York, is a handsome and substantial building at the corner of Thirty-ninth Street.

Between Fortieth Street and Forty-second Street, to the left, on the site of the old reservoir of the Croton Aqueduct, stands the New York Public Library, a very dignified and imposing structure of white marble, built at a cost of ten million dollars.

A little to the east of this point, in Forty-second Street, is the Grand Central Station already referred to. At the southeast corner of Forty-second Street rises the tasteful Columbia Bank. The Temple Emanu-El, or chief synagogue of New York, at the corner of Forty-third Street, is a fine specimen of Moorish architecture with a richly decorated interior.

At the northeast corner of Forty-fourth Street is Delmonico's Restaurant, a substantial building with elaborate ornamentation; and at the southwest corner is Sherry's, a rival establishment, equally patronized by the fashionable world.

The Collegiate Church of St. Nicholas (Dutch Reformed), at the corner of Forty-eighth Street, is one of the handsomest and most elaborately adorned ecclesiastical edifices in the city. It is decorated in Gothic style and has a spire two hundred and seventy feet high. Just below Fiftieth Street, on the right, is the Democratic Club, the stronghold of Tammany and popularly known as "Tamany Hall" or the "Wigwam."

Between Fiftieth and Fifty-first Streets, to the right, stands St. Patrick's Cathedral, an extensive building of white marble in the decorated Gothic style, and the most important ecclesiastical edifice in the United States. It is four hundred feet long, one hundred and twenty-five feet wide and one hundred and twelve feet high, and the two beautiful spires are three hundred and thirty-two feet high. The building, which was designed by James Renwick, was erected in 1850-1879, at a cost of three million five hundred thousand dollars.

Adjoining the cathedral, to the right, is the handsome Union Club, and at the corner of Fifty-fourth Street is the University Club, adorned with carvings of the seals of eighteen American colleges. The library contains admirable mural paintings, adapted from Pinturicchio's work in the Borgia apartments of the Vatican. At the corner of Fifty-fifth Street are the St. Regis Hotel and the Gotham Hotel. The Fifth

MADISON SQUARE, NEW YORK

Avenue Presbyterian Church has one of the loftiest spires in the city.

Between Fifty-ninth and One Hundred and Tenth Streets Fifth Avenue skirts the east side of Central Park, having buildings on one side only. Among these, many of which are very handsome, is the Metropolitan Club.

the park is afforded by the Belvedere, which occupied the highest point of the Ramble, to the north of the Lake.

The North Park, beyond the Croton Reservoir, has fewer artificial features than the South Park, but its natural beauties are greater, and the Harlem Mere, of twelve acres, is very picturesque.

CENTRAL PARK TERRACE, NEW YORK

At Fifty-ninth Street, where Fifth Avenue reaches Central Park, are three huge hotels: the New Plaza, the Savoy, and the Netherland. In the middle of the Plaza rises a bronze-gilt equestrian statue of General Sherman, of fine artistic merit.

Mt. Sinai Hospital is between One Hundredth and One Hundred and First Streets.

In Central Park, close to Fifth Avenue at Eighty-second Street, is the Metropolitan Museum of Art.

At One Hundred and Twentieth Street Fifth Avenue reaches Mount Morris Square, the mound in the center of which commands good views. Beyond Mt. Morris Square the Avenue is lined with handsome villas, some of them surrounded by gardens. It ends in a district of tenements and small shops at the Harlem River.

New York has many public parks, the finest of which is the Central Park. The district in which it is located was once a wilderness of rocks and swamps. Plans by Frederick Law Olmsted and Calvert Vaux were so admirably carried out as to make the Central Park in ten years one of the most beautiful pleasure-grounds in the world.

Of its eight hundred and forty acres, four hundred are wooded. There are nine miles of drives, with thirty miles of paths, several lakes used for boats in summer and for skating in winter, immense lawns for baseball, tennis, etc., a zoological garden, and conservatories.

The chief promenade is the Mall, near the Fifth Avenue entrance, which is lined with fine elms and contains several statues and groups of sculpture, including Shakespeare, Scott, Burns, Halleck, Columbus, and the Indian Hunter. From the Terrace, at the north end of the Mall, flights of steps descend to the Bethesda Fountain and to the Lake, used for boating in summer and skating in winter. The most extensive view in

Near the southeast corner of the park (nearest entrance in Sixty-fourth Street) are the Old State Arsenal and a small Zoological Garden. On the west side of the park is the American Museum of Natural History, and on the east side is the Metropolitan Museum of Art. To the west of the latter museum rises Cleopatra's Needle, an Egyptian obelisk from Alexandria, presented by Khedive Ismail Pasha to the City of New York in 1877. The obelisk is of red syenite, is sixty-nine feet high and weighs two hundred tons. Among the other monuments in the park are statues of Webster, Bolivar, Hamilton and Morse, allegorical figures of Commerce and the Pilgrim, and several busts and animal groups. Just outside the park, beside the Sixth Avenue entrance, is a statue of Thorwaldsen.

In Manhattan Square, on the west side of Central Park, between Seventy-seventh and Eighty-first Streets, stands the American Museum of Natural History, which contains collections of natural history, paleontology and ethnology.

The Metropolitan Museum contains paintings, statuary, ivories, tapestries, porcelains, Greek, Roman, and Egyptian antiquities. Beginning with one structure erected by the city at a cost of five hundred thousand dollars in 1880, it now comprises a series of buildings which cost several million dollars. The collections of paintings, sculpture, antiquities, porcelains, jades, armor, etc., are valued at ten million dollars, most of which has been contributed by art lovers of the city. In 1903 the institution received a bequest of six million dollars from the well-known locomotive builder John T. Rogers, which has enabled it to compete with other great museums.

At the corner of Morningside Avenue and One Hundred and Twelfth Street is the new Episcopal Cathedral of St. John the Divine, designed by

Heins and La Farge, the corner-stone of which was laid in 1892, but the building of which has not progressed very far. The Crypt, including

GRANT'S TOMB, RIVERSIDE DRIVE, NEW YORK

the curious Tiffany Chapel of mosaic glass, and the Belmont or St. Savior's Chapel are the only portions completed. To the north of this, in the block bounded by Morningside Avenue, Tenth Avenue, One Hundred and Thirteenth Street, and One Hundred and Fourteenth Street, is the large building of St. Luke's Hospital, constructed of white marble and white pressed brick, with a tower and clock over the main entrance.

To the northwest of this point, on a magnificent site extending from One Hundred and Fourteenth Street to One Hundred and Twenty-first Street, one hundred and ten to one hundred and fifty feet above the Hudson River, are the new buildings of Columbia University, the oldest, largest, and most important educational institution in New York. The finest building in the center of the group is the Low Memorial Library, built at a cost of one million dollars.

On a commanding site bounded by One Hundred and Thirty-eighth Street, Amsterdam Avenue, One Hundred and Fortieth Street, and St. Nicholas Terrace, are the imposing new buildings of the College of the City of New York, erected in 1903-1908 by Mr. George B. Post, in the low-arch Gothic style, at a cost of nearly five million dollars, and notable for their uniformity of design and symmetry of grouping.

Among other educational institutions are the Normal College, at Sixty-ninth Street and Park Avenue; the College of Physicians and Surgeons; the New York University; Cooper Union, in which nearly all the courses are free; St. John's (Fordham), Manhattan, and St. Francis Xavier, Roman Catholic colleges; the National Academy of Design; Society of American Artists; the Art Students' League; Chase Art School; New York Institute of Music, and various theological schools.

Riverside Drive or Park, skirting the hills fronting on the Hudson from Seventy-second Street to One Hundred and Twenty-seventh Street, affords beautiful views of the river and is one of the most striking roads of which any city can boast. It has become, perhaps, the most attractive residential quarter of New York, though a great architectural opportunity has been lost in the buildings that border it, these consisting largely of apartment hotels, remarkable mainly for their size.

Near the north end of the drive, on Claremont Heights (West One Hundred and Twenty-second Street), is the Tomb of General Ulysses S. Grant, a huge and solid mausoleum of white granite, erected in 1891-1897 at a cost of six hundred thousand dollars, from a design by J. H. Duncan. The monument consists of a lower story in the Doric style, ninety feet square, surmounted by a cupola borne by Ionic columns. The total height is one hundred and fifty feet.

John Verrazani, a Florentine navigator, was the first European who entered New York Bay (1525). In 1614 the Dutch built a fort on Manhattan Island, and in 1623 a permanent settlement was made, named Nieuw Amsterdam. In 1674 Manhattan Island came into the possession of Great Britain. At the Revolution the population was less than that of Philadelphia or Boston. It was evacuated by the forces of Great Britain, in 1783, and from 1785 to 1789 was the seat of government of the United States. The opening of the Erie Canal in 1825 gave a vast impetus to New York City's growth. The city by 1874 had extended beyond the Harlem River and a part of Westchester County was incorporated in it. In 1896 a law was passed consolidating with New York City, Brooklyn (Kings County), Long Island City, Staten Island, Westchester, Flushing, Newtown, Jamaica, and parts of Eastchester, Pelham, and Hempstead. By the charter adopted in 1897 this territory was divided into the boroughs of Manhattan, Brooklyn, Bronx, Richmond, and Queens. A new charter was secured in 1907 under which the mayor presides over the entire city, with absolute power of appointment and removal of the heads of all city departments. In 1911 a new charter was drawn up which evoked considerable opposition, as it seemed to place still greater powers in the hands of the mayor.

Philadelphia (*fil-ȧ-del'fi-ȧ*), [The "Quaker City;" named from two Greek words meaning "loved or friendly," and "brother," applied as "brotherly love." The Indian name of the locality was *Coaquannok*, "grove of tall pine trees."]

The chief city of Pennsylvania and the third city in population and importance of the United States, it is situated on the Delaware River, about one hundred miles by ship-channel (via Delaware Bay) from the Atlantic Ocean, ninety miles by railroad southwest of New York City, and one hundred and thirty-six miles northeast of Washington.

The city occupies mainly a broad plain between the Delaware and the Schuykill Rivers. It is twenty-two miles long from north to south and five to ten miles wide, covering one hundred and thirty square miles, and is laid out with chessboard regularity. The characteristic Philadelphia house is a two-storied or three-storied structure of red pressed brick, with white marble steps.

INDEPENDENCE HALL

The two rivers give it about thirty miles of water front for docks and wharfage, and it is the headquarters of two of the greatest American railways —the Pennsylvania and the Reading.

The great wholesale business thoroughfare is Market Street, running east and west between the two rivers, while Chestnut Street, parallel with it on the south, contains the finest shops, many of the newspaper offices, etc. Broad Street is the chief street running north and south. Among the most fashionable residence quarters are Rittenhouse Square and the west parts of Walnut, Locust, Spruce, and Pine Streets. Eighth Street is the great district for shops and amusements.

The City Hall or (Public Buildings) is in the center of the city at the intersection of Broad and Market Streets. The structure is the largest exclusively municipal building in the world. It is built of white marble upon a granite base, in French Renaissance style, and covers an area of four hundred and eighty-six by four hundred and seventy feet. The height of the tower and dome is five hundred and thirty-seven feet four and one-half inches; or five hundred and seventy-three feet four and one-half inches with the colossal figure of Penn (thirty-six feet), to surmount the whole. The entire cost, when completely furnished for occupancy, was estimated at twenty-five million dollars.

The broad pavement round the City Hall is adorned with statues of General Reynolds, General McClellan, Stephen Girard, John C. Bullitt, President McKinley, and Joseph Leidy, the naturalist, and with the "Pilgrim" by Saint-Gaudens.

On the west side of City Hall Square, opposite the City Hall, is the enormous Broad Street Station of the Pennsylvania Railroad. The waiting-room contains a large allegorical relief, while one wall is covered with a mammoth railway map of the United States. On the north side of the square, at the corner of Broad Street and Filbert Street, is the Masonic Temple, a huge granite structure with a tower two hundred and fifty feet high and an elaborately carved Norman porch.

On the east side of the square, occupying the block bounded by the square, Market Street, Thirteenth Street, and Chestnut Street, is Wanamaker's Store, one of the largest in the United States. On the south side of the square is the Betz Building, with heads of the Presidents of the United States in the bronze cornice above the third-story windows.

Chestnut Street is the chief street of Philadelphia, containing many of the handsomest and most interesting buildings. To the left, at the corner of Broad Street and adjoining the Betz Building, is the Franklin National Bank, while to the right rises the fine office of the Real Estate Trust Co. At the corner of Twelfth Street is the tall Commonwealth Trust Building, and at the corner of Tenth Street, on the same side, is the New York Mutual Life Insurance Co.

Between Tenth and Ninth Streets, to the left, are the Mortgage Trust Co., the Penn Mutual Life Building, with an elaborate facade, and the office of the *Philadelphia Record*. At the corner of Ninth Street, extending on the north to Market Street, is the Post Office, a large granite building in the Renaissance style, erected at a cost of five million dollars. It also contains the United States Courts and the offices of various Federal officials. In front of the Post Office is a colossal seated figure of Benjamin Franklin. Between Eighth and Seventh Streets is the orna-

mented front of the Union Trust Co. This neighborhood contains several newspaper offices. At the corner of Sixth Street, on the Public Ledger Building, is another statue of Franklin.

In Seventh Street, a little to the north of Chestnut Street, is the Franklin Institute with a library, museum and lecture-hall.

Between Fifth and Sixth Streets is Independence Hall, or the old State House, a modest brick edifice (1732-1735), which is in some respects the most interesting building in the United States. Here the Continental Congress met during the American Revolution (1775-1781), and here, on July 4th, 1776, the Declaration of Independence was adopted. In 1897-1898 the whole building was restored as far as possible to its original condition.

The Custom House, with a Doric portico, was originally erected in 1819-1824 for the United States Bank. It is copied from the Parthenon, and considered one of the best examples of Doric architecture in the world.

A lane diverging to the right between Fourth and Third Streets, opposite the Fidelity Trust Co., leads to Carpenters' Hall, where the First Colonial Congress assembled in 1774. It contains the chairs used at the Congress, various historical relics, and the inscription: "Within these walls Henry, Hancock, and Adams inspired the delegates of the colonies with nerve and sinew for the toils of war." Chestnut Street ends at the Delaware River.

Walnut Street runs parallel to Chestnut Street, one block to the south. In this street, at the intersection of Dock Street and Third Street, is the Stock Exchange, formerly the Merchants Exchange, with a semi-circular portico facing the river. Near it, in Third Street, is the Girard Bank, built for the first United States Bank and long owned by Stephen Girard. At Fourth Street is the building of the Manhattan Insurance Co.

Walnut Street now crosses Broad Street, to the west of which it consists mainly of private residences. Between Eighteenth and Nineteenth Streets we pass Rittenhouse Square, a fashionable residence quarter.

At the corner of Broad and Chestnut Streets are the white marble building of the Girard Trust Co., with a rotunda, and the tall Land Title Building.

North Broad Street, beginning on the north side of the City Hall Square, a handsome street one hundred and thirteen feet wide, contains in its upper portion many of the finest private residences in Philadelphia. To the right, at the corner of Filbert Street, is the Masonic Temple, which is adjoined by the Arch Street Methodist Episcopal Church. On the opposite side of the street are the tall buildings of the United Gas Improvement Co. and the Fidelity Mutual Life Association. To the right is the Odd Fellows' Temple.

To the left, at the corner of Cherry Street, is the Pennsylvania Academy of the Fine Arts, a building in the Venetian style of architecture. The Academy was founded in 1805. Besides its collections it supports an important art-school, the lecture hall of which is adorned with effective decorations by the pupils. Its collections include five hundred paintings, numerous sculptures, several hundred casts, and fifty thousand engravings. The early American school is especially well represented.

On the west side of Broad Street, between Race and Vine Streets, are the Hahnemann College and Hospital, one of the chief homœopathic institutions of the kind. To the right, at the corner of Spring Garden Street, is the Spring Garden Institute for instruction in drawing, painting, and the mechanic arts. Opposite are the Baldwin Locomotive Works, a highly interesting industrial establishment.

A little farther on is the Boys' Central High School, an unusually large and handsome structure, and the Synagogue Rodef Shalom, in a Moorish style.

Farther up Broad Street are numerous handsome private houses, churches, and other edifices. At the northwest corner of Broad Street and Girard Avenue is the handsome Widener Mansion, presented to the city and used as a branch of the Free Library. Beyond Master Street, to the left, is the elaborate home of the Mercantile Club. Beyond this Broad Street runs out to Germantown, six miles from the City Hall.

Girard Avenue runs west from North Broad Street to Girard College, one of the richest and most notable philanthropic institutions in the United States. It was founded by Stephen Girard, a native of France, for the education of male orphans. The original bequest of over five million dollars has increased to about thirty-five million dollars.

The main building is a dignified marble structure in the Corinthian style, resembling the Madeleine at Paris. In the vestibule are a statute of Stephen Girard, and his sarcophagus. A room on the ground floor contains several relics of him.

Market Street is the chief wholesale business thoroughfare of the city. A little to the east of City Hall Square it passes the Philadelphia & Reading Railway Station, a tall Renaissance building with a train shed little smaller than that of the Pennsylvania Railroad. The department store of Gimbel Brothers, on the south side of the street, between Eighth and Ninth Streets, is one of the largest in the world. The Penn National Bank, at the corner of South Seventh Street, occupies the site of the house in which Jefferson wrote the Declaration of Independence.

South Broad Street leads to the south from City Hall Square. Its intersection with Chestnut Street, just to the south of the City Hall, is environed with tall office buildings. To the right is the annex of the Land Title Building, extending to Sansom Street. Opposite, adjoining the Real Estate Trust Co., is the North American Building, named after the newspaper which occupies it. Below is the Union League Club, the chief Republican club of Pennsylvania. On the same side is the large Bellevue-Stratford Hotel, the leading hotel of Philadelphia, and one of the great hostelries of the country. Farther on, to the right, is the Art Club, in the Renaissance style, in which exhibitions of paintings, concerts, and public lectures are held. At Locust Street, to the right, is the Academy of Music, while to the left is the Pennsylvania School of Industrial Art, incorporated in 1876, with a special view to the development of the art industries of Pennsylvania. A characteristic feature is the department of weaving and textile design. The Industrial Museum Hall is connected with this excellent institution.

Below Pine Street, Broad Street contains few important buildings. Of special note, however, is the Ridgway Library, which stands to the left, between Christian and Carpenter Streets, nearly one mile from the City Hall. This handsome building was erected with a legacy of one million five hundred thousand dollars left by Dr. Rush in 1869, as a branch of the Philadelphia Library. Adjoining the main hall is the tomb of the founder.

Broad Street ends, four miles from the City Hall, at League Island Park, three hundred acres in extent. League Island itself, in the Delaware, contains a United States Navy Yard.

WEST PHILADELPHIA, the extension of the city beyond the Schuylkill, contains many of the chief residence streets and several public buildings and charitable institutions.

The University of Pennsylvania, founded in 1740, and removed to West Philadelphia in 1872, occupies a group of more than thirty buildings scattered over an area of sixty acres bounded by Woodland and Cleveland Avenues and Pine and Thirty-second Streets.

The College, the Medical School, Dental School, and Law School, are all provided with spacious and well-equipped buildings. Houston Hall, behind College Hall, is the social center of the University student life. The Wistar Institute of Anatomy and Biology is recognized as the headquarters of anatomical research in the United States and contains the first museum of human anatomy founded in America. The Morgan Laboratory of Physics, the Harrison Laboratory of Chemistry, the Gymnasium, and the Dormitories are all notable structures. Franklin Field, adjoining Thirty-third Street, is the athletic ground of the University and contains a large stadium.

The Museum of Science and Art occupies a tasteful building in South Street, owing part of its inspiration to the Certosa at Pavia, and is divided into five sections. Its value is largely due to the fact that many of its contents were found by expeditions organized by the University itself.

A little to the northeast, at the corner of Chestnut Street and Thirty-second Street, is the Drexel Institute, founded by A. J. Drexel, and opened in 1892. The total cost of buildings and equipment was four million five hundred thousand dollars.

Fairmount Park, the chief park of Philadelphia, is one of the largest in the world, and covers an area of three thousand three hundred and forty acres. The park proper extends along both banks of the Schuykill for about four miles, and the narrow strip along the Wissahickon, six miles, and one of the noted drives of the world, is also included in the park limits. The principal entrances are at the end of Green Street, which is connected with the City Hall by the wide Park Boulevard, and at Girard Avenue.

In this park, in 1876 was held the Centennial Exhibition; and in its environs are the Zoological Garden, the Fairmount Waterworks, which supply to the city one hundred million gallons of water daily, the beautiful Horticultural Hall and Memorial Hall, built as part of the Centennial Exhibition of 1876 at a cost of one million five hundred thousand dollars, and now containing a permanent collection of art and industry known as Pennsylvania Museum of Industrial Art.

At Sackamaxon, in Beach Street, is the small Penn Treaty Park, supposed to occupy the spot where Penn made his treaty with the Indians in 1682, under an elm that has long since vanished, a treaty, in the words of Voltaire, "never sworn to and never broken."

In its manufacturing products Philadelphia ranks next to New York. There are upward of twenty thousand manufacturing establishments, the combined output of which amounts to more than eight hundred million dollars. The chief products are locomotives, sugar and molasses, men's clothing, foundry and machine-shop products, carpets and rugs, hosiery and knit goods, woolen and cotton goods, malt liquors, morocco, chemicals, packed meat, refined petroleum and silk, and silk goods. The great Cramp shipbuilding yards are on the Delaware River. The Baldwin Locomotive Works are the largest in the world.

Philadelphia was founded by William Penn in 1682, the year after was made the capital of Pennsylvania, and soon became a place of importance. It was the central point in the War of Independence, where the first Continental Congress met, September 4, 1774, and where the Declaration of Independence was adopted in 1776. At Philadelphia, also, the Federal Union was signed, in 1778; and here, too, the Constitution of the United States was framed, in 1787. An interest of another kind attaches to the fact that the Protestant Episcopal Church of North America was organized here in 1786. From 1790 to 1800 Philadelphia was the Federal Capital; and the first mint was established here in 1792. Later events have been the holding of the Centennial Exhibition, in 1876, and the commemoration of Penn's landing in 1882.

Pittsburgh, Pa. [The "Smoky City," "Iron City"; named in 1758, when the French had been driven out by Washington; Fort Pitt, after William Pitt, Earl of Chatham, the name Pittsburgh being adopted in 1769.]

It is the second city of Pennsylvania and one of the chief industrial centers of the United States, and occupies the tongue of land between the Monongahela and the Allegheny, which here unite to form the Ohio, and also a strip of land on the south side of the Monongahela. The sister city, Allegheny, situated on the north bank of the Allegheny and extending down to the Ohio, was incorporated with Pittsburgh in 1907 and is now known as the North Side. The rivers are crossed by numerous bridges.

Smithfield Street, diverging from Liberty Avenue, not far from the Union Station, leads to the river Monongahela, on the other side of which, from Washington Heights, may be obtained a fine view of the city. On Liberty Avenue, to the right, is the City Hall a fine structure of white sandstone. A little farther on, to the left, is the Post Office. At the bridge are the Monongahela Hotel and the Baltimore & Ohio Station.

Crossing the Smithfield Street Bridge, Mt. Washington (three hundred and seventy feet) may be ascended by one of the three inclined railways on this side. These interesting, but at first somewhat startling, pieces of apparatus are worked by cables and transport horses and carriages as well as persons.

The finest building in Pittsburgh is the Allegheny County Court House, in Grant Street, a splendid example of H. H. Richardson's treatment of Romanesque, erected in 1888 at a cost of two million five hundred thousand dollars. The massive Prison is connected with the Court House by a finely handled stone bridge. The main tower is three hundred and twenty feet high. The government building cost one million five hundred thousand dollars.

Other buildings of importance are the Frick Building, a granite office structure of twenty stories at the corner of Fifth Avenue and Grant Street; the Carnegie Building and the Farmers' Bank Building (these two also in Fifth Avenue); the Union National Bank Building and the Commonwealth Trust Co. Building, in Fourth Avenue; the First Presbyterian Church, in Sixth Avenue; the Fulton Building, and the Bessemer Building (the last two at the corner of Sixth Street and Duquesne Way).

More to the east are the Academy of Our Lady of Mercy and the new Calvary Episcopal Church (at the corner of Shady Avenue and Walnut Street), a beautiful example of thirteenth century Gothic. The Roman Catholic Cathedral of St. Paul stands in Fifth Avenue, at the corner of Craig Street.

To the east of the city lies Schenley Park, containing the fine Phipps Conservatory and the Hall of Botany. Near the Forbes Street entrance to the Park is the great central building of the Carnegie Library of Pittsburgh, in which are housed not only the main collection of the library, but also two of the three departments of the Carnegie Institute. The structure, originally built in the Italian Renaissance style at a cost of eight hundred thousand dollars, was remodeled

and enlarged in 1904-1907 at an additional cost of five million dollars. The city is also the seat of Pittsburgh University, Holy Ghost College, and Penn's College for Women. The great iron and steel works have made the prosperity and reputation of Pittsburgh. Among these are the Edgar Thomson Steel Works, the Homestead Steel Works, the Duquesne Steel Works, the American Bridge Co., the Jones & Laughlin Works, the Oliver Iron & Steel Co., the Crescent Steel Works, and the Pressed Steel Car Co.

Its manufactures include everything, indeed, which can be made of iron, from a fifty-eight-ton gun to nails and tacks; steel in its various applications; electrical machinery and appliances; all descriptions of glass and glassware; silver and nickel-plated ware; Japan and Britannia ware; pressed tin, brass, copper, bronzes; Portland cement, earthenware, crucibles, fire-pots, bricks; furniture, wagons and carriages; brushes, bellows, mechanical supplies of all kinds; natural-gas fittings, and tools for oil and gas wells. Pittsburgh has, also, the largest manufactory of cork, and the largest pickling and preserving establishment in the world.

In 1754 a few English traders built a stockade here, but were driven away by the French. The latter replaced the stockade by a fort, which, in honor of the Governor of Canada, they called Duquesne. In 1758 it was taken by the English, who next year commenced a large and strong fortification, which, in honor of the elder Pitt, then Prime Minister, they called Fort Pitt. The settlement became a borough in 1804, and in 1816 was incorporated as the city of Pittsburgh. In 1872 the limits of the city were extended across the Monongahela, and by 1906 it extended over twenty-eight square miles. In 1907 Allegheny City (in spite of the opposition of a large majority of its inhabitants) was annexed; the Supreme Court of the United States declared the act valid, and thus Allegheny became the North Side of the present Pittsburgh.

Richmond, Va. [Named from Richmond-on-the-Thames, a suburb of London; the name suggested owing to analogy in situation.]

It is the capital of Virginia, on the left bank of the James River, at the head of tide water, one hundred and fifty miles from its mouth, and one hundred and sixteen miles by rail south of Washington. It is a port of entry, and vessels drawing sixteen feet of water can come up to the lower end of the city, where there are large docks. Richmond is picturesquely situated on a group of hills, and fine water power is afforded by the James River, which descends one hundred and sixteen feet in nine miles.

Near the center of the city, on Shockoe Hill, is Capitol Square, a tree-shaded area of twelve acres. The Capitol, or State House, partly designed after the Maison Carrée at Nîmes, France, occupies the highest point of the square and dates from 1785. The wings were added in 1906.

In the Central Hall, surmounted by a dome, are Houdon's statue of Washington (which Washington himself is said to have seen in its present position) and a bust of Lafayette by the same artist. The Senate Chamber, to the right, was used as the Confederate House of Representatives during the Civil War. The House of Delegates, to the left, contains portraits of Chatham and Jefferson, and was the scene of Aaron Burr's trial for high treason in 1807, and of the State Secession Convention in 1861.

Capitol Square also contains a fine equestrian statue of Washington, with figures of Patrick Henry, George Mason, Thomas Jefferson, Thomas Nelson, Andrew Lewis, and Chief Justice Marshall round the pedestal; a statue of Stonewall Jackson; a statue of Hunter Holmes McGuire, the most noted surgeon of the South; and a statue of Henry Clay. At the northeast corner of the square stands the Governor's Mansion.

On the north side, in Broad Street, is the City Hall, a handsome Gothic structure with a clock-tower. To the east of the Capitol is the State Library. In Twelfth Street, at the corner of Clay Street, a little to the north of Capitol Square, is the Jefferson Davis Mansion, or "White House of the Confederacy," occupied by Mr. Davis as President of the Southern Confederacy. It is now fitted up as a Museum of Confederate Relics.

St. John's Church, erected in 1740, but since much enlarged, is at the corner of Broad and Twenty-fourth Streets. The Virginia Convention was held in this church in 1775, and it was here that Patrick Henry made his famous "give me liberty or give me death" speech.

On Monument Avenue (a prolongation of Franklin Street) is the equestrian statue of General Lee. Adjacent is an equestrian statue of General J. E. B. Stuart, and a half mile farther on, at the west end of the avenue, is the Jefferson Davis Monument, consisting of a semi-circular colonnade with a pillar supporting an allegorical female figure and inscribed "Deo Vindice," with a heroic statue of the ex-president in front. A little to the east of the Lee Statue is Richmond College, a leading educational institution of Virginia.

Among other points of interest in Richmond are the Westmoreland Club, at the corner of Grace and Sixth Streets; the Commonwealth Club, at the corner of Franklin and Madison Streets; the Virginia Club, 2311 East Grace Street; Chief Justice Marshall's House; the Tobacco Exchange, Shockoe Slip; the University College of Medicine; the Medical College of Virginia; the National Cemetery, two miles to the northeast of the city; the Sheltering Arms Hospital, and Idlewood Park, a favorite summer-resort, close to the city on the west.

Hollywood Cemetery is the most interesting of the cemeteries. Near the west gate of the cemetery is the Confederate Monument, a rude pyramid of stone ninety feet high, erected as a memorial to the sixteen thousand Confederate soldiers buried here. On President's Hill, in the southwest corner of the cemetery, overlooking the river, are the graves of Monroe and Tyler, two of the seven presidents born in Virginia. John Randolph, Jefferson Davis, General Pickett, General J. E. B. Stuart and Commodore Maury are also buried here. Patrick Henry is buried in St. John's Churchyard.

During the last three years of the Civil War (1862-1865) battles raged all round Richmond, and remains of the fortified lines constructed to protect the city are visible in various parts of the environs.

The leading industry is the manufacture of tobacco. Other important products are lumber and planing-mill supplies, foundry and machine-shop products (including locomotives), fancy and paper boxes, packing boxes, saddlery and harness, carriages and wagons, confectionery, flavoring extracts, patent medicines and compounds, etc. There are also large railroad repair shops, establishments for grinding and roasting coffee, etc. Richmond was formerly noted as a center of the flour-milling industry.

Richmond was settled in 1733 and incorporated in 1742. Captain John Smith's settlement of "None Such" in 1609 and Fort Charles, erected in 1645, were both near the site of the present city. In 1779 it became the capital of the state. During the American Revolution the place was taken by a British force under Benedict Arnold, January 5, 1781, and the warehouses and public buildings were burned. The following year the city was chartered. Richmond, as the capital of the Confederacy, was the main objective of Federal

operations during the Civil War. It was evacuated April 2, 1865. The warehouses and a considerable part of the business section of the city were burned by the Confederates.

Salt Lake City, Utah. [The "City of the Saints;" named for the famous lake of that state.]

It is the chief town and ecclesiastical capital of the State of Utah, and is situated on the river Jordan, eleven miles from Great Salt Lake. It is built at the base of the Wasatch Mountains, four thousand three hundred and thirty-four feet above sea-level. The valley is world-famed for its beauty, resources, climate, and health-giving properties. By rail it is thirty-six miles south of Ogden, on the Union Pacific Railroad; eight hundred and thirty-three miles from San Francisco, and one thousand and thirty-one miles from Omaha.

The city is regularly laid out and the streets are wide and shaded with trees. Each house in the residence quarters stands in its own garden.

Temple Block, "the sacred square of the Mormons," covering ten acres, is the center of the city. Here are the Great Temple, and the Tabernacle, the latter one hundred and fifty by two hundred and fifty feet, with a self-supporting roof shaped like a tortoise shell, supported by forty-four sandstone pillars, and having a seating capacity of eight thousand, accommodations for twelve thousand, and one of the finest pipe organs in America.

A little to the east of the Tabernacle is the Temple, a large and handsome building of granite, erected at a cost of over four million dollars. At each end are three pointed towers, the loftiest of which, in the center of the east or principal facade, is two hundred and ten feet high and is surmounted by a colossal gilded figure (twelve and one-half feet high) of the Angel Moroni, by C. E. Dallin. The interior is elaborately fitted up and artistically adorned.

The Assembly Hall, to the south of the Tabernacle, is a granite building with accommodation for three thousand people, intended for divine service.

At the corner of North Temple and Main Streets stands the Latter-Day Saints University. At the southeast corner of Temple Square is the Pioneer Monument, surmounted by a copper statue of Brigham Young, which was unveiled in 1897.

On South Temple Street towards the east is the Deseret News Block, a large brown-stone building where the oldest newspaper to the west of the Missouri is published. To the left are the Tithing Office and Tithing Storehouse where the Mormons pay their tithes in kind. A little farther on, also to the left, are the Lion House, one of the residences of Brigham Young; the office of the president of the Mormon Church; and the Beehive House, another of Brigham Young's houses. On the opposite side of the street are the huge shoe-factory and warehouse of Zion's Coöperative Mercantile Institution; the office of the Juvenile Instructor; the office of the Historian of the Mormon Church; and the Gardo House, or Amelia Palace, opposite the Beehive House.

A little farther to the northeast, through the Eagle Gate, is Brigham Young's grave, surrounded by an ornamental iron railing.

The imposing City and County Building is in Washington Square, and the Federal Building is in Main Street, between Third and Fourth South Streets. A new Capitol is in contemplation in Capitol grounds, near Prospect Hill. Among the educational establishments are the Utah State University, to the east of the city, near Fort Douglas, and the High School, in Union Square. The Roman Catholic Cathedral and several other religious edifices also are represented, including Presbyterian, Congregationalist, and Methodist churches. St. Mark's Cathedral is a handsome building. Other noteworthy edifices are those of the museum, the Mining Institute, St. Mary's Hospital, the University of Utah, and the theaters and opera house.

The city is more important as a trading center than for manufactures. The leading industries are beet-sugar refining, smelting, salt making, and the manufacture of boots and shoes, glass, woolens, paper, cutlery, pottery, etc. A large business is done in bullion and mining stocks. The city has a large jobbing trade, being the distributing center for an immense mining agricultural and stock raising region in Utah. West Wyoming, South Idaho, and East Nevada

Salt Lake City was founded in 1847 by Brigham Young and incorporated in 1851. Until 1870 it was almost wholly a Mormon city.

San Antonio (*săn ăn-to'nĭ-ō*), **Texas.** [Named for the Roman Catholic mission, San Antonio de Valero, otherwise the Alamo.]

After Dallas it is the largest city in the state, and is located on the San Antonio River, two hundred and ten miles by railroad west of Houston, one hundred and eighty-eight miles west of Galveston, on both banks of the San Antonio Creek, at the mouth of San Pedro River. Built on a level plateau, with an elevation of six hundred and sixty feet above the sea, it includes the old Mexican town of San Fernando, west of San Pedro Creek, inhabited chiefly by Americans and largely rebuilt since 1860. The San Antonio River winds for thirteen miles through the city, and San Pedro Creek for ten miles. These are spanned by numerous little bridges. It is one of the most interesting in the United States.

The first object of interest in San Antonio is the Church of the Mission del Alamo, situated in the Alamo Plaza, in the quarter to the east of the San Antonio River. The church, which seems to have derived its name from being built in a grove of alamo or cottonwood trees, is a low and strong structure of adobe, with very thick walls. It was built in 1744, but has lost many of its original features. It is now preserved as a national monument for its historical interests.

At the north end of the Alamo Plaza, in Houston Street, is the handsome Federal Building. On the west side of the plaza is the building containing the San Antonio Club and the Grand Opera House.

Houston Street towards the west crosses the San Antonio and reaches Soledad Street, which leads to the left to the Main Plaza (Plaza de Las Yslas), pleasantly laid out with gardens. On its south side rises the imposing Court House and on its west side stands the Cathedral of San Fernando, dating in its present form mainly from 1868 to 1873, but incorporating parts of the earlier building, where Santa Ana had his headquarters in 1836. To the west of the Cathedral is the Military Plaza (Plaza de Armas), with the City Hall.

The Military Post (Fort Sam Houston), on Government Hill, one mile to the north of the city, costing over two million dollars, is one of the largest in the United States and deserves a visit. The tower (eighty-eight feet high), in the center of the quadrangle, commands a splendid view of the city and its environs.

The old Spanish Missions near the city most often visited are the First and Second Missions, but, the Third and Fourth Missions have much interest also.

The Mission of the Conception, or First Mission, lies about two and a quarter miles to the south of the city (reached via Garden Street), dates from 1731 to 1752, and is well preserved. The church has two towers and a central dome. The Mission San Jose de Aguayo, or Second Mission, four miles to the south of the city, dates from 1720 to 1731 and is the most beautiful of all.

OLD SPANISH CHURCH OF THE ALAMO, SAN ANTONIO, TEXAS

During the war of Texan independence, the Alamo, then converted into a fort, was the scene of an extraordinary conflict, the fort being held by Colonel David Crockett and Colonel James Bowie. Though almost continually assailed from February 23 to March 6, 1836, it only yielded when the defenders were all slain but five; these were captured by the Mexicans and cruelly slain. "Remember the Alamo," thereafter became a war cry, and the place itself has been called the "Thermopylæ of America."

Among the educational institutions are St. Louis College (Roman Catholic), St. Mary's Hall, St. Mary's College, Wolfe Memorial School, and the Ursuline Convent and School.

San Antonio is the natural trading center for an immense area, its jobbing houses have an extensive trade in Mexico as well as in Texas. The industrial establishments are machine shops, foundries, breweries, flour mills, binderies, cotton presses, ice plants, tanneries, marble works, cement works, and manufactories of brooms, carriages and wagons, candy, soda and mineral waters, mattresses, bricks and tiles. It is a leading cattle, horse, and mule market, ships large quantities of cotton, wool, and hides; and is the financial center of the largest stock raising interests of the Southwest. The surrounding district, irrigated by water, obtained from deep artesian wells, is extensively engaged in truck farming for Northern markets.

Although the Spaniards built a fort at San Antonio in 1689, its real settlement began in 1714. In 1718 the Franciscan mission of San Antonio de Valero was founded, and, about 1722, on another site was built the Alamo, the "cradle of Texans' liberty," in which in 1836 a garrison of about one hundred and eighty men, among them Davy Crockett and James Bowie, for eleven days resisted General Santa Ana's Mexican army, numbering thousands of men. Eight battles for independence were fought in or near San Antonio between 1776 and 1836, successively under Spanish, French, Mexican, and Texan flags. It received a city charter in 1873.

San Francisco, Cal. [The "City of the Golden Gate"; said by some to have been named for the old Spanish mission of San Francisco de Assisi, by others to have been named for the founder of the order to which Father Junipero, the discoveror of the bay, belonged.]

It is grandly situated at the north end of a peninsula thirty miles long, separating the Pacific Ocean from San Francisco Bay, two thousand four hundred and thirty-four miles west of St. Louis, and three thousand four hundred and fifty-two miles from New York. The city lies mainly on the shore of the bay and on the steep hills rising from it, but is gradually extending across the peninsula (here six miles wide) to the ocean. On the north it is bounded by the famous Golden Gate, the narrow entrance (one mile across and about five miles long) to San Francisco Bay. The commercial part of the town is fairly level and lies along the bay. The chief business thoroughfare is Market Street, three and one-half miles long, with which the streets from the north and west hills intersect. This feature gives the city a striking skyline.

San Francisco Bay, a noble sheet of water, gives San Francisco one of the finest harbors in the world and affords numerous charming excursions. It gives the city much of its commercial importance, also, and extends from Fort Point past the city in a southerly direction for about fifty miles, varying in width from six to twelve miles. Northward this bay connects by a strait with San Pablo Bay, ten miles in length, having at its northerly end Mare Island and the United States Navy Yard.

Across the bay are Oakland, Alameda, and Berkeley.

In 1906 a large part of the city was destroyed by earthquake and fire, the estimated loss reaching over three hundred million dollars. The business district has since been largely rebuilt, and many costly buildings of marble, granite, and

NIGHT VIEW, SHOWING ILLUMINATION OF SOUTH GARDENS AND MAIN ENTRANCE, PANAMA-PACIFIC INTERNATIONAL EXPOSITION, SAN FRANCISCO, 1915

The Panama-Pacific International Exposition at San Francisco was open from February 20 to December 4, 1915. The total attendance was 18,871,957. The last day made the record, 458,558 persons having passed through the turnstiles. The Fine Arts Palace remained open until May 1, 1916.

terra cotta, and iron and steel-framed "sky-scrapers" have been constructed. Before the earthquake of 1906 the most conspicuous public buildings were the City Hall, erected at a cost of six million dollars, and which occupied twenty-five years in building; the Post Office, completed at a total cost of five million dollars; the Hall of Justice, the Custom House, a Mint and a Sub-treasury; the building of the Society of California Pioneers, and stock and merchants' exchanges; and the Ferry Building containing a display of the mineral resources of California.

Market Street, the chief business thoroughfare, extends to the southwest from the Union Ferry Depot, a handsome structure, with a tower two hundred and fifty feet high, to a point near the twin Mission Peaks, a distance of about three and one-half miles.

Following Market Street towards the southwest, at the intersection with Battery Street is the Labor Monument, a vigorous bronze group dedicated to the memory of Peter Donahue of the Union Iron Works. At the southwest corner of Market and Montgomery Streets stands the Palace Hotel, opposite which is the Union Trust Building, the first of the buildings whose steel and concrete frame withstood the fire. Close by, at the corner of Montgomery and Post Streets, are the Crocker Building, another survivor, and the new stone structure of the First National Bank.

At the corners of Kearney and Third Streets rise the Chronicle Building and the tall Spreckels or Call Building, the top of either of which affords a good bird's-eye view of the city.

Market Street, towards the southwest from the Chronicle Building, contains many large office buildings, including the tall Humboldt Savings Building. At the corner of Fourth Street is the Pacific Building, a huge structure of re-enforced concrete, with a facade of green and brown tiles. In the same block is the Emporium, which has been rehabilitated since the disaster of 1906. On the right, at the corner of Powell Street, is the large Flood Building, another survivor of the fire. It is chiefly occupied by railway offices.

Powell Street leads to Union Square, with the St. Francis Hotel and a Naval Monument commemorating the exploits of the United States fleet in the Philippines during the war with Spain (1898).

At the junction of Market Street with Mason Street is a monument commemorating the admission of California to the Union (1850). To the left, at the corner of Seventh Street, we catch a glimpse of the long frontage of the Post Office with its fine granite carvings. Just beyond this corner, in a small triangular park, is the large Californian Monument, presented to the city by James Lick. The stately monument erected in honor of the achievements of the navy in the Spanish-American war remains uninjured.

The district containing the United States Appraisers Stores and the large new Custom House was spared by the great fire.

The United States Branch Mint, in Fifth Street, at the corner of Mission Street, contains interesting machinery and a collection of coins and relics. The effect of the fire may be clearly seen on the granite at the north end of the building.

Montgomery Street and the southern part of Sansome Street, form the center of the banking district. On the former is the Union Trust Building, and a series of large office buildings, of which the most important are the Mills Building, corner of Montgomery and Bush Streets; the Merchants Exchange, California Street, near Montgomery Street; Kohl Building, corner Montgomery and California Streets; Italian-American Bank, a one-story building with Doric columns, corner Montgomery and Sacramento Streets; and the Bank of Italy, corner Montgomery and Clay Streets. At the northeast corner of Sansome and California Streets rises the tall Alaska Commercial Building, with the handsome Bank of California opposite.

Nob Hill was the name given about 1870 to that section of California Street, between Powell Street and Leavenworth Street, containing many of the largest private residences in San Francisco. Most of these were of wood, and no expense was spared to make them luxurious dwellings, but with unfortunate architectural results. Few relics of these are now extant. The hill is crowned by the huge Fairmont Hotel, opposite which is the Hopkins Institute of Art.

The present fashionable residential quarter is on

Pacific Heights, including the western parts of Jackson Street, Washington Street, Pacific Avenue, and Central Avenue.

The educational institutions of San Francisco, include the Academy of Sciences, endowed by James Lick; the Hopkins Art Academy, situated on Nob Hill; Memorial Museum, in Golden Gate Park; Mechanics' Institute, which contains property valued at two million dollars, and a library of seventy thousand volumes. Other fine libraries are the Sutro library of two hundred thousand volumes, the public library of one hundred thousand volumes, while the California Historical Society, San Francisco Medical Society, the San Francisco Law Library; the French and Mercantile libraries all have collections of more than thirty thousand volumes. The California School of Mechanical Arts, Cooper Medical College, Cogswell Polytechnic School, College of Notre Dame, Sacred Heart Academy, Irving Institute, the medical and law faculties of the University of California, are also located here.

The city was always conspicuous for its fine churches. The most prominent of these were the Roman Catholic Cathedral, the Jesuit Church of St. Ignatius, and the Mission Dolores, a survival of Spanish occupation.

The largest of the city parks is Golden Gate Park, covering more than one thousand acres and redeemed from a waste of sand-dunes, now one of the most beautiful in the country. It extends from Stanryan Street to the Pacific Ocean, a distance of three miles. Its fine trees and shrubbery, semi-tropical plants and flowers, artificial lakes and Japanese tea gardens combine to make it a veritable wonderland. Through the park a broad, smooth, and well-kept speedway runs out to the ocean beach, and the famous old Cliff House, the Sutro Heights, on the hills of the west or ocean side, from which is a magnificent view of the Seal Rocks and Pacific Ocean.

To the north of the park, beyond the intervening Richmond district, lies the Presidio, the United States military reservation. Here are the harbor fortifications with their big and powerful rapid fire machine guns, the officers' quarters with picturesque gardens and hedgerows, and the hospital and barracks for the soldiers, while down at the water's edge is old Fort Mason, a circular brick structure now used as a storehouse.

The population is very heterogeneous, every European nationality being represented here, to say nothing of the Mexicans, Chinese, Japanese, Negroes (relatively few), Filipinos, Hawaiians, and other non-European races.

The Chinese Quarter, rebuilt since the fire, is still one of the most interesting and characteristic features of San Francisco. It lies, roughly defined, between Stockton, Sacramento, Kearney, and Pacific Streets, and now consists mainly of large modern store buildings in a modified Oriental style, and of tall tenements, swarming with Chinese occupants. Chinatown contains about ten thousand inhabitants.

To the north of Chinatown, spreading about the base of Telegraph Hill, is the so-named Latin Quarter, peopled by Italians, Greeks and Mexicans. Their houses, shops, and restaurants are most characteristic. The Japanese Quarter is bounded by Van Ness, Fillmore, Geary, and Pine Streets.

In the pretty park that separates busy Kearney Street from Chinatown, the beautiful golden galleon monument to Robert Louis Stevenson still stands.

San Francisco as the western terminus of the great continental railroads and of many short lines, has important steamship communication with the ports of the world. The bay is accessible to the largest vessels. It is one of the most important grain ports in the United States; and gold and silver, wine, fruit, and wool are exported. There are large sugar refineries, foundries, shipyards, cordage works, wood factories, woolen mills, and many others.

A Spanish post and mission station were established on the site of San Francisco in 1776. The mission was secularized in 1834, and a town was laid out in 1835. A United States man-of-war took possession of it in 1846, and it became an important place in 1849 on account of the discovery of gold (1848). It was devastated by fires, 1849-1851. In 1850 it was incorporated as a city. The original name of the place was Yerba Buena (Spanish, "good herb"). It was changed to San Francisco in 1847. In 1869 railway connection was established with the eastern United States. In 1877 Denis Kearney began a violent agitation against the competition of Chinese labor. This was known as the "sand lots" movement, from the name of the place where the meetings were held. On April 18, 1906, the city was visited with a severe shock of earthquake, and the resultant fires destroyed much of the business section and one-third of the residence portion of the city.

Berkeley, across the Bay from San Francisco, is the seat of the Colleges of Letters and Science of the University of California. The University, founded in 1868, has played a very important part in the educational development of California and of the Pacific Slope. Its other departments are at San Francisco and the Lick Observatory, with the great telescope, is at Mt. Hamilton.

A number of the buildings at Berkeley are handsome, and the picturesque grounds, two hundred and fifty acres in extent, command a splendid view of the Golden Gate and San Francisco. The very interesting open-air Greek Theater, built in 1903 on the general type of the theater at Epidaurus, accommodates twelve thousand spectators and is used for university meetings, commencement exercises, and concerts. The museums, the library, and the laboratories are admirably adapted to their uses.

At Palo Alto, thirty-four miles south of San Francisco, one mile from the station is the Leland Stanford, Jr., University, founded by Mr. and Mrs. Leland Stanford in memory of their only son and endowed by them with upwards of thirty million dollars. The buildings were mainly designed by H. H. Richardson, who took the motif of their architecture from the cloisters of the San Antonio Mission. The material is buff, rough-faced sandstone, surmounted by red-tiled roofs, producing brilliant effects of color in conjunction with the live oak, white oak, and eucalyptus trees outside, and tropical plants in the quadrangle, and the blue sky overhead. In the earthquake of 1906 the buildings suffered severely, the damage done being estimated at nearly two million dollars. Much, however, has been restored or rebuilt. The buildings include a low quadrangle, enclosing a court five hundred and eighty-six feet long and two hundred and forty-six feet wide, with a beautiful colonnade on the inner side; an outer, two-storied quadrangle, with cloisters on the outside; a Chapel; various dormitories; an Art Museum; a mechanical department; and a village of professors' houses.

Mount Tamalpais and Muir Woods. Across the bay from San Francisco, a distance of twelve miles north, stands Mount Tamalpais, the monarch and sentinel that guards the entrance to the greatest harbor in the world, San Francisco and the far-famed Golden Gate. The view from its summit is one of unsurpassed grandeur, the mighty Pacific on the west, while to the north, Mt. St. Helena, and even the great Shasta, 237 miles away, are visible on clear days.

One of the many objects of interest to the tourist and traveler lies in the deep canyon, known as Muir Woods, a National Park, maintained and cared for by the Government. This trip may be made by the celebrated gravity train.

A REMARKABLE SEATTLE VIEW

Probably no large city of the United States can boast a more remarkable scenic environment than Seattle. Here are skyscrapers against a background formed by Puget Sound and the Olympic Mountains.

Seattle (*sē-ăt't'l*), **Wash.** [Named for the chief of the Duwamish tribe of Indians, *See-aa-thl.*]

It is finely situated on Elliot Bay, an arm of Puget Sound, one thousand eight hundred and twenty-eight miles from St. Paul. It occupies a series of terraces rising from the shore of the Sound, with steep hills rising from the water, the heights commanding superb views of the snow-crowned Olympic Mountains and the Cascades, including Mounts Rainier and Baker.

The residence streets run up thes lope of a hill, with the business portion built on the level ground at the foot, stretching along the excellent harbor, with its many wharves.

Among the finest edifices are the Roman Catholic Cathedral, the Union or King Street Passenger Station, with Carnegie Library, the American Bank, and the Alaska, Lowman, White, Central, and Empire Buildings.

Its notable buildings include, also, the County Court House, County Almshouse, Opera House, High School, and Hospital. The city is beautified with monuments and statues, unique among which is the Totem Pole, in Pioneer Square, near the Union Station, which was brought from Alaska and is one of the best examples of its kind. There is a good statue of Wm. H. Seward, by Richard Brooks, and in the Campus of the University of Washington is a colossal statue of Washington, by Lorado Taft.

The University has grounds three hundred and fifty-five acres in extent, and furnished the site for the Alaska-Yukon-Pacific Exposition of 1909.

Other leading educational institutions are Seattle Seminary (Methodist), Seattle Female College, College of the Immaculate Conception and Academy of the Holy Name (both Roman Catholic).

Seventy-two per cent of Seattle's population is native white and twenty-three per cent foreign born white. Only 1.5% of the population are illiterate.

ON THE SEATTLE BOULEVARD

A section of the great boulevard system beside Lake Washington. There are thirty miles of this sort of roads within the city limits.

There are several fine parks connected, together with the lakes, by a system of boulevards. Fort Lawton, a military post, is within the city limits.

The harbor, which is in Elliot Bay and is twenty miles long and two miles wide, admits the largest vessels at all times. As the terminal of two transcontinental railroads and as an oceanic seaport, Seattle has extraordinary commercial advantages. It has direct steamship lines to Japan, China, the Philippines, and to Honolulu, and is also connected with European and South American ports. It is the chief outfitting port for the Yukon and Alaskan gold fields, and the chief trading center for the numerous ports on the extensive coast-line of Puget Sound. It has abundant electric power generated by falls in the rivers of the Cascades at a very low cost. Snoqualnite Falls, nineteen miles distant, are one hundred and twenty-six feet higher than Niagara, and supply an immense power.

Seattle largely owes its phenomenal growth to the lumber trade. The manufactures include beside, flour, iron and steel products, boots and shoes, beer, etc. Other industries are bridgeworks, shipyards, meat-packing, and fish-canning. The city has also smelting and refining works, and a United States assay office. The chief exports are lumber, coal, meats, fruits, wheat, and hops.

Seattle was first settled in 1852. The place was laid out in 1853 and was incorporated in 1865 as a town and in 1880 as a city. In 1889 it was almost wiped out by fire, but one business building escaping destruction. From June 1 to November 30, 1909, the Alaska-Yukon-Pacific Exposition was held here, the average daily attendance being twenty-eight thousand. In the spring of 1910 a Municipal Plans Commission of twenty-one members was created by an amendment to the city charter of Seattle, and in 1911 their report was issued containing sketches and plans illustrating their proposals for the beautification and future growth of the city.

St. Louis (*sānt loo'is* or *loo'i*), Mo. [Named in honor of Louis XV. of France; the name originally applied to a depot established at this point February 15, 1764, by Pierre Láclede Liguest.]

It is the principal city of Missouri and is located on the west bank of the Mississippi River, twenty-one miles south of the mouth of the Missouri River, and by rail one thousand one hundred and eight miles southwest of New York, two thousand four hundred and thirty-four miles east of San Francisco, and six hundred and ninety-six miles north of New Orleans. It has a frontage of nearly twenty miles on the river and rises from it in three terraces, the third of which is about two hundred feet above the river level.

The city is regularly laid out, on the Philadelphia plan, Market Street running east and west, being the dividing line between north and south. The streets running north and south are numbered, though many of them are also known by names. Broadway or Fifth Street is the chief shopping thoroughfare, while other important business streets are Fourth Street, Olive Street, Washington Avenue, Third Street, and First Street (or Main) and Second Streets. The city is also divided into a north and south section by the valley of Mill Creek (now filled in), which is spanned by seven bridges. The city has recently extended greatly to the west, and commerce is steadily encroaching on the residential quarters.

The Court House, in Broadway, between Market and Chestnut Streets, is a substantial building in the form of a Greek Cross. It is surmounted by a dome, one hundred and seventy-five feet high, the gallery of which commands an excellent view of the city and river. A little to the east, in Third Street, corner of Chestnut Street, is the Merchants' Exchange, the main hall of which, with a painted ceiling, is two hundred and twenty feet long. The grand ball of the Veiled Prophet is held here. The Cotton Exchange is at the corner of Main and Walnut Streets.

By following Market Street to the west from the Court House, the square, named Washington Park, is reached, and also the City Hall. A little to the south, in the square enclosed by Clark Avenue and Spruce, Eleventh and Twelfth Streets, are the so-called Four Courts, built on the model of the Louvre, in Paris, with a large semi-circular jail at the back. A little to the north of the City Hall runs the busy Olive Street, which toward Broadway, passes the Post Office on the left. Among the numerous substantial business buildings in this part of Olive Street are the Star, Century, Frisco, Chemical, Missouri Trust, Commercial, Laclede, Commonwealth Trust, National Bank of Commerce, and Third National Bank, a large and very fine structure. In Broadway, at the corner of Locust Street, is the Mercantile Library, which contains one hundred and fifty thousand volumes, statues by Harriet Hosmer, and others.

Other important buildings in this business section of the city are the Security Building (at the southwest corner of Fourth and Locust Streets); the Mercantile Trust Co., at the northeast corner of Eighth and Locust Streets (with vaults closed by a circular steel door of marvelous mechanism weighing four and one-half tons); the St. Louis Union Trust Co., at the northwest corner of Fourth and Locust Streets; the Mercantile Club, southeast corner of Seventh and Locust Streets; the Public Library, Locust Street, corner of Ninth Street; the Lincoln Trust and Wainwright Buildings, corner of Seventh and Chestnut Streets; and the Missouri Pacific Building, northwest corner of Market and Seventh Streets.

On the block between Thirteenth, Fourteenth, Olive and St. Charles Streets is the new Carnegie Central Library, erected at a cost of one million dollars.

At the corner of Locust and Nineteenth Streets is the handsome School of Fine Arts, which is connected with Washington University.

The Episcopal Cathedral, the Roman Catholic Cathedral, old and new, and many of the new Protestant churches in the West End are architecturally striking.

The parks of St. Louis are among the most notable in the United States, and their area (two thousand three hundred acres) is exceeded by those of Philadelphia alone. The finest are Forest Park (one thousand three hundred and seventy acres); Tower Grove Park (two hundred and sixty-six acres); Carondelet Park, O'Fallon Park, and the Missouri Botanical Garden, which is one of the foremost in North America.

To the west of Forest Park is the new home of Washington University, forming one of the most

successful and appropriate groups of collegiate buildings in the New World. They were designed by Messrs. Cope & Stewardson in a Tudor-Gothic style and enclose several quadrangles. The material is red Missouri granite. Among the buildings already completed are University Hall, the Chemical and Physical Laboratories, the Architectural and Engineering Buildings, the Chapel (resembling King's College Chapel at Cambridge, England), the library (with a fine reading room), various dormitories, and the gymnasium. The university grounds are one hundred and ten acres in extent.

The other institutions of higher education are St. Louis University, the College of the Christian Brothers, Maria Consilia Convent, training school for nurses, several medical colleges, dental college, the theological seminaries, manual training school, the State School for the Blind, and the St. Louis Day School for Deaf Mutes.

In Forest Park, not far from the University, is the handsome Museum of Fine Arts, originally erected as the Fine Arts Building of the Louisiana Purchase Exposition. In front of the entrance is a colossal equestrian bronze statue of St. Louis.

The great St. Louis or Eads Bridge, across the Mississippi, is deservedly one of the monuments of the city. It was designed by Capt. James B. Eads and was constructed in 1869-1874 at a cost of ten million dollars. It consists of three steel spans (center five hundred and twenty feet, others five hundred and two feet each) resting on massive limestone piers. The total length is two thousand and seventy yards. The bridge is built in two stories, the lower for the railway, the upper for the roadway and foot passengers. Trains enter the lower track by a tunnel, one thousand six hundred and thirty yards long, beginning near the corner of Twelfth and Cerre Streets. The highest part of the arches is fifty-five feet above the water.

The Merchants' Bridge, three miles farther up the river, is a steel truss bridge, and was built in 1889-1890, at a cost of three million dollars. It is used by railways only. It has three spans, each five hundred feet long and seventy feet high.

St. Louis ranks fourth among the manufacturing cities of the United States. It is the largest tobacco manufacturing city in the world, and also has a large production of malt liquors, flour, boots and shoes, hardware, stoves, railways and electric cars, woodenware, brick, biscuit, crackers, etc. The city is also the largest mule mart in the world, and noted as a drug market.

Founded from New Orleans in 1764, by Pierre Làclede-Liguest and Auguste Chouteau, St. Louis remained a fur-trading post until the Louisiana Purchase of 1803. Its first era of marked development began with the arrival of the first steamboat, 1817. Steam navigation of its river connection made it the most important point in the settlement of the trans-Mississippi West. It had repeatedly doubled its population before the first period of German immigration, following the German revolution of 1848. In 1875 St. Louis was separated from the County of St. Louis and given an independent government of its own. In 1896 the city was swept by a destructive tornado. In 1903 an exposition was held in St. Louis to celebrate the Louisiana Purchase.

Its population of American birth heavily predominates, but its German population is large and every element of European population is represented, with a recent increase from Southern Europe and Russia in excess of all other elements.

St. Paul, Minn. [Named from the Chapel of St. Paul, a log chapel erected here by Roman Catholics. Indian name, *imnijaska*, "white rock," a reference to the sandstone bluff on which the city stands.]

It is the capital of Minnesota, and located on both banks of the Mississippi River, immediately below Minneapolis, the suburbs of the "Twin Cities" being contiguous.

It has a picturesque site at an elevation of six hundred and seventy to eight hundred and eighty feet above sea level on a series of terraces, the highest of which is two hundred and sixty-six feet above the river. The two divisions of the city are connected by three municipal bridges. In addition to these there are a number of railway bridges and scores of smaller bridges over ravines, valleys, railway crossings, etc. The municipal limits include the suburbs of Merriam, St. Anthony, Union, Groveland, Macalester, and Desnoyer Parks, Arlington Hills, and others.

Of the three plateaus, the first contains the railway yards, Union Station, wholesale houses and factories. Above the flats are the business section and part of the residential district; still higher are the bluffs, the most fashionable residential quarter, with extensive views of the river and the lower terraces.

The business part of the town is well built and regularly laid out, and the suburban quarters contain many fine streets and handsome residences.

The new State Capitol, erected in 1898-1906, at a cost of four million five hundred thousand dollars, is a large and handsome edifice of granite and Georgia marble, with an unusually successful central dome.

The most impressive parts of the interior are the central rotunda, the two great staircases, the Supreme Court, and the Senate Chamber. The dominant note in the color scheme is furnished by Minnesota yellow limestone. The mural paintings are by La Farge, Simmons, Blashfield, Garnsey, Kenyon Cox, and H. O. Walker. In the Governor's reception room are paintings by F. P. Millet, Howard Pyle, Douglas Volk, and others. The State Law Library and that of the State Historical Society are both housed in the Capitol.

Four blocks to the south of the Old Capitol are the Custom House and the City Hall, the latter a handsome building erected at a cost of one million dollars. Among other important buildings in the business quarter are the Public Library; the Auditorium, a hall for meetings and theatrical performances; the new Y. M. C. A. Building; the New York Life Insurance Building, corner Sixth and Minnesota Streets; the Roman Catholic Cathedral of St. Paul, Sixth Street, corner of St. Peter Street; the High School, corner Tenth and Minnesota Streets; the Globe Building, Fourth Street, corner Cedar Street; the Germania Life Insurance Office; the former Bank of Minnesota, now used for various offices; the Manhattan Building, corner of Fifth and Robert Streets; the Gilfillan Building; the Endicott Arcade; the Central Presbyterian Church; the Bethel Hotel, resembling the Mills House of New York; the Minnesota Club House; the People's Church; the Field, Mahler & Co. Building, Fourth Street; and the Great Northern and the Northern Pacific Railway Offices.

The finest residence street is Summit Avenue. It begins at Wabasha Street and runs from Summit Park along a high ridge. The most prominent dwelling is the large brown stone mansion of the late James J. Hill, containing a good collection of paintings by Corot, Delacroix, Courbet, Troyon, Decamps, etc.

A Roman Catholic Cathedral is being erected at Summit Park; and to the west of the town, near the west end of Summit Avenue, by the river, is the extensive Roman Catholic Seminary of St. Thomas Aquinas. On the bluff above, at the end of Grand Avenue (parallel to Summit Avenue) are the various buildings of the Hill Seminary.

It is also the seat of Hamline University (Methodist Episcopal), Concordia College (Lutheran), Macalester College (Presbyterian), several medical colleges, a State Reform School, and an Academy of Natural Sciences.

WASHINGTON, AMERICA'S CITY BEAUTIFUL

1. THE CAPITOL
2. MEMORIAL TO LINCOLN
3. THE WHITE HOUSE (SOUTH FRONT)
4. LIBRARY OF CONGRESS

St. Paul has a park system of remarkable beauty. Como and Phalen Parks have picturesque lakes, and Indian Mound Park is said to have views unsurpassed anywhere else on the Mississippi River. Harriet Island, in the river opposite the business district, is provided with public baths. There are twenty-two miles of park and boulevard driveways, not including the River Boulevard. The total park area is one thousand two hundred and four acres. Fort Snelling, attractively located at the mouth of the Minnesota River, occupies a large tract adjacent to the city on the southwest.

The manufactures of St. Paul include machinery, farming implements, furniture, carriages, boots and shoes, and malt liquors. Here also are located the extensive meat packing plants of Swift & Co., and quarries of fine limestone. It is the center of the wholesale grocery and dry-goods business in Minnesota. It is also an important printing and publishing center, and has large car shops, lumber and planing mills, and breweries.

In 1841 Father Galtier, a French Canadian, induced the settlers, chiefly French Catholic hunters and traders in furs and whiskey, to build a log church which was dedicated to St. Paul. In 1849 the town became the capital of the newly organized territory of Minnesota, and was incorporated. It received its city charter in 1854.

Washington, D. C. [The "City of Magnificent Distances," from its being laid out on a large and regular scale; originally named Georgetown, but when selected in 1790 as the Federal Capital was re-named Washington in honor of the first President of the United States.]

The City of Washington, the Capital of the United States, lies on the left bank of the Potomac River, in the District of Columbia, one hundred and fifty-six miles from Chesapeake Bay, one hundred and eighty-five miles from the Atlantic Ocean, two hundred and twenty-six miles southwest of New York, one hundred and thirty-six miles of Philadelphia, and forty miles of Baltimore.

The city lies on a plain with slight elevations and surrounded by hills, and is generally accepted as the most beautiful in the United States, being finely laid out, with wide asphalted streets, opening up vistas of handsome public buildings, monuments, or leafy squares, with the Capitol and the Washington Monument dominating the entire view.

The original plan of Washington City was made by L'Enfant, a French engineer, who had adopted America as his residence. Based largely upon the topography of Versailles, its characteristic features are the crossing of the rectangular streets by frequent broad transverse avenues, one hundred and twenty to one hundred and sixty feet wide, lined with trees and named for various States of the Union. The streets running north and south are numbered, those running east and west are named by the letters of the alphabet. The circles formed by the intersection of the streets and avenues are one of the most charming features of the city.

Pennsylvania Avenue, between the Capitol and the White House (a distance of one and one-third miles), is the chief thoroughfare, and other important business streets are Seventh Street, Fourteenth Street, Ninth Street, and F Street. Among the finest residence streets are New Hampshire Avenue, Massachusetts Avenue, Vermont Avenue, Connecticut Avenue, and Sixteenth Street.

The new Union Railway Station, completed in 1908 at a cost of fifteen million dollars, including grounds and tunnels, is undoubtedly one of the most successful buildings in the country. It is situated at the junction of Massachusetts and Delaware Avenues, about one-third of a mile, and in full view of the Capitol. In front is a large plaza, embellished with shrubbery, fountains, and the finely sculptured Columbus monument.

The Capitol, splendidly situated on a hill ninety feet above the level of the Potomac, dominates the entire city with its soaring dome and ranks among the most beautiful buildings in the world. It stands in a park of about fifty acres, is seven hundred and fifty-one feet in length and one hundred and twenty-one to three hundred and twenty-four feet wide, and consists of a main edifice of sandstone, painted white, and of two wings of white marble. The building covers an area of three and one-half acres.

The cornerstone was laid by Washington in 1793. The main building, with its original low-crowned dome, was completed in 1827; the wings and the new iron dome were added in 1851-1865. The general style is classic, with Corinthian details. The principal facade looks towards the east, as the city was expected to spread in that direction, and the Capitol thus turns its back upon the main part of the city and on the other government buildings.

A fine marble terrace, eight hundred and eighty-four feet long, approached by two broad flights of steps, has been constructed on the west side of the Capitol and adds great dignity to this view of the building. The dome, which is two hundred and sixty-eight and one-half feet high, is surmounted by a figure of Liberty, nineteen and one-half feet high. The total cost of the building has been sixteen million dollars.

The front or east facade is preceded by three porticos, the main entrance being in the center. To the right of the central portico is the Settlement of America, a marble group by Greenough; to the left is the Discovery of America, a figure of Columbus by Persico. In the pediment above the portico is a relief of the Genius of America, by Persico; and in the pediment above the north portico is a group representing the Civilization of the United States, by Crawford.

The inauguration of the Presidents of the United States takes place on the broad steps in front of the main doorway.

In the interior beside the rotunda with its historical paintings, are the Senate Chamber in the north wing; the House of Representatives in the south wing, the Supreme Court in the central building, and the old Hall of Representatives, now used for historical statues.

To the north and south of the Capitol and connected with it by subways are the Senate and House of Representatives office buildings, two white marble edifices in a classic style, containing offices for senators and representatives.

To the southeast of the Capitol stands the Library of Congress, an enormous structure in the Italian renaissance style, four hundred and seventy feet long and three hundred and forty feet wide, erected in 1888-1897, at a cost of six million one hundred and eighty thousand dollars. It is in the form of a quadrangle, enclosing four courts and a central rotunda surmounted by a flat gilded dome and lantern. The main entrance, on the west side, is preceded by a broad flight of steps and a granite terrace, against the retaining wall of which is an effective fountain.

The interior of the Congressional Library is sumptuously adorned with paintings, sculptures, colored marbles, and gilding. To the right and left are massive marble staircases, richly adorned with sculptures and with bronze figures as lamp-bearers. The ceiling of the hall, seventy-two feet above the marble flooring, is resplendent in blue, green, and yellow.

The reading room rotunda is perhaps the finest and most thoroughly satisfactory part of the whole building. The chamber, which is one hundred feet in diameter and one hundred and twenty-five feet in height, accommodates about three hundred readers, is richly adorned

with dark marble from Tennessee, red marble from Numidia, and yellow marble from Siena. The eight massive piers are surmounted by symbolical female figures.

At the foot of the flights of steps descending from the terrace on the west side of the Capitol is an heroic statue of Chief Justice Marshall, by Story. The broad walk to the north leads to the Naval or Peace Monument, by Simmons. The walk to the south leads to the statue of President Garfield, by J. Q. A. Ward.

Diagonally to the southwest and northwest extend two grand avenues as far as eye can see—Maryland Avenue to the left leading down to the Potomac and carrying the line of the Pennsylvania Railroad to the river, where it crosses over the Long Bridge into Virginia; and Pennsylvania Avenue to the right stretching to the distant colonnade of the Treasury Building and the tree covered park south of the Executive Mansion. Between these diverging avenues and extending to the Potomac, more than a mile away, is the Mall, a broad inclosure of lawns and gardens. Upon it in the foreground is the government Botanical Garden, and behind this the spacious grounds surrounding the Smithsonian Institution; and the National Museum; while beyond, near the river bank, rises the tall, white shaft of the Washington Monument with its pointed apex; on either side spreads out the city, the houses bordering the foliage lined streets and

CORCORAN ART GALLERY, WASHINGTON

having at frequent intervals the tall spires of churches and the massive marble, granite, and brick edifices that are used for government buildings.

The Smithsonian Institution is a red stone building in the late Norman style, erected in 1847-1856 at a cost of four hundred and fifty thousand dollars. The loftiest of the nine towers is one hundred and forty-five feet high. In front of it is a statue of Prof. Joseph Henry, the first secretary of the Institution, by Story.

New buildings for the National Museum, on the Mall between Ninth and Twelfth Streets, and the new one million five hundred thousand dollar marble building of the Department of Agriculture, west of the Smithsonian grounds, are notable. The former, originally established to exhibit the rich contributions given to the government by various countries from the Centennial at Philadelphia in 1876, has become a most extensive and instructive collection of antiquities, ethnology, geology, and natural history generally; and there are many museums, libraries and art galleries.

The Bureau of Engraving and Printing, where the paper money, bonds and stamps of the United States are printed, is at the corner of B Street and the Mall, southwest.

The national monument to Washington, popularly known as the "Washington Monument," is a towering obelisk of white marble, on the bank of the Potomac, erected at a cost of one million two hundred and thirty thousand dollars. It has a total height of five hundred and fifty-five feet, an area at the foundation of sixteen thousand feet, and a weight of thirty-six thousand nine hundred and twelve gross tons. The apex has an aluminum point, and there is an elevator and an iron stairway of nine hundred steps in the interior of the shaft.

From the Washington Monument the Treasury Department at Pennsylvania Avenue and Fifteenth Street comes into full view. It is an immense edifice, five hundred and ten feet long and two hundred and eighty feet wide, with an Ionic colonnade on the east front and porticos on the other three sides. The materials are freestone and granite, and it cost seven million dollars to erect the edifice. Among the chief objects of interest are the United States Cash Room, in the north corridor; the Redemption Division, in the basement; the Silver Vaults, containing bullion and coin to the value of hundreds of millions of dollars; and the Secret Service Division, with its collection of forged money and portraits of forgers.

On the south, opposite the Treasury, is the fine equestrian monument of General Sherman, by Rohl-Smith, erected in 1903. The pedestal is embellished with bronze reliefs, medallions, and figures of Indian women, and at the corners are four sentinels.

Following Pennsylvania Avenue towards the west, Lafayette Square, is approached. Here are bronze statues of General Andrew Jackson, by Clark Mills; the Rochambeau Monument, by F.

Hamar; and the Lafayette Monument, by Falguiére and Mercié. On the east side of the square is the Belasco Theater, occupying the site of the house in which an attempt was made to assassinate Secretary Seward in 1865.

Opposite Lafayette Square is the entrance to the White House or Executive Mansion of the President of the United States. The White House is a two-story stone building, painted white, one hundred and seventy feet long and eighty-six feet deep, with an Ionic portico. It was first built in 1792, occupied by President Adams in 1800, burned by the British in 1814, and rebuilt in 1818. In 1902-1903 the whole building was admirably restored, within and without. The esplanade or terrace on the west side connects the house with the new Executive Offices and Cabinet Room. The large East Room (eighty by forty by twenty-two feet) is open to the public from ten to two. The Reception Rooms, which contain portraits of Presidents and valuable gifts, and the handsome Dining Room are shown by special order only. The rest of the house is private. The grounds surrounding the house are seventy-five acres in extent.

To the west of the White House is the huge building of the State, War, and Navy Departments, enclosing two courts and measuring five hundred and sixty-seven feet in length by three hundred and forty-two feet in breadth. It is a granite building, in Renaissance style, the largest public edifice in Washington, covering four and one-half acres, has five hundred and sixty-six rooms, and cost eleven million dollars. The north and west wings are occupied by the war Department. The Navy Department is in the eastern part of the building.

ST. JOHN'S CHURCH, WASHINGTON

The Department of State occupies the southern part of the building. Among the finest rooms are the Diplomatic Reception Rooms, containing portraits of the Secretaries of State from 1789 to the present day, and the Library, with Jefferson's original draft of the Declaration of Independence and other relics.

In Seventeenth Street, to the southwest of the State Building, between New York Avenue and E Street, is the Corcoran Gallery of Art, built and endowed by the late W. W. Corcoran. The present building, erected in 1894-1897, is a handsome white marble structure in a Neo-Grecian style, by Ernest Flagg. The semicircular hall at the north end is used for occasional exhibitions, while the rest of this part of the building is occupied by a School of Art. The steps to the main entrance are flanked by colossal bronze lions, modeled after those by Canova at the tomb of Pope Clement XIII. The Gallery contains more than two hundred paintings, the finest collection of Baryé bronzes, Power's Greek Slave, and Vela's Dying Napoleon in marble.

Also in Seventeenth Street, south of the Corcoran Gallery, are the new Continental Hall, built by the Daughters of the American Revolution, and the new building of the International Bureau of the American Republics, erected at a cost of one million dollars by Andrew Carnegie.

The Interior Department occupies an entire square in the heart of the city, and is constructed of white marble in pure Doric, costing three million dollars. The General Land Office opposite is a Corinthian marble edifice.

In Judiciary Square on the north side stands the Pension Office, an enormous structure of brick, four hundred feet long and two hundred feet wide. It is surrounded by a terra cotta frieze illustrating military and naval operations. The interior, with its mammoth columns (seventy-five feet high), can accommodate about twenty thousand people at an inauguration ball, or other occasions.

Nearby, in B Street, is the large Census Bureau, in which a large staff is constantly at work. The enumerating machines are especially interesting.

To the northeast of this point, at the corner of North Capitol and H Streets, is the Government Printing Office, a twelve-story building erected at a cost of two million dollars.

Ford Theater, in which President Lincoln was assassinated by Booth on April 14, 1865, is in Tenth Street. A house opposite bears a tablet stating that Lincoln died there, and contains a collection of Lincoln relics.

On the south side of Pennsylvania Avenue, between Eleventh and Twelfth Streets, is the Post Office Department, with a tower three hundred feet high. At the corner of Pennsylvania Avenue and Fourteenth Streets is the new District or Municipal Building, a fine marble structure completed in 1908, and occupied by the District Commissioners and other officials of the local government.

At the intersection of Massachusetts Avenue and New York Avenue is Mt. Vernon Square, containing the Public Library, a white marble building, presented by Mr. Andrew Carnegie.

Beyond the Capitol to the southeast are the Washington Barracks, at the junction of the Potomac and its Eastern Branch, an artillery post, and the War College, a fine brick building, erected 1903-1908. In front of the latter is a statue of Frederick the Great by T. Uphues, presented to the United States by Emperor William II.

About one mile to the northeast, on the Anacostia River, is the Washington Navy Yard, with a museum, an important gun foundry, and manufactories of naval stores.

There are more than two hundred and fifty churches in Washington, of which the more important are St. John's (the "President's

Church"), and St. Thomas' Episcopal; the New York Avenue, and Church of the Covenant, Presbyterian; the Metropolitan and Foundry, Methodist; St. Matthew's and St. Aloysius', Roman Catholic; Calvary, Baptist; Garfield Memorial, Christian; and Mount St. Sepulchre, with its reproduction of the sacred places of the Holy Land.

The National Soldiers' Home, two miles above the city, founded in 1851, has six hundred acres of park and forest, which serve as a public driving park and rural resort. To the north lies the National Military Cemetery, with the graves of General Logan, General Kearney, and seven thousand soldiers. On the west this is adjoined by Rock Creek Cemetery, containing Saint-Gauden's beautiful monument to Mrs. Henry Adams. To the east of the Soldiers' Home Park is the important Catholic University of America, around which has grown up a somewhat remarkable group of ecclesiastical establishments, including a Franciscan Convent, houses of the Dominicans, Paulists and Marists, and Trinity College for young women. The university has a number of fine stone buildings of striking architectural effect. The other colleges of note are: George Washington University, with academic, scientific, graduate, medical, and technological departments, and a famous law school; Georgetown University, a Jesuit institution with academic and professional schools; American University, for graduate instruction only; and the National Deaf-Mute College, founded in 1864, a government institution for the education of deaf and dumb pupils from the army, the navy, and the District of Columbia. Its fine stone buildings lie just north of the city.

ARLINGTON HOUSE, HOME OF GENERAL ROBERT E. LEE

Among the more important private buildings may be mentioned those of the Washington Post and Evening Star, and the Munsey buildings, all on Pennsylvania Avenue; the Riggs National Bank, American Security and Trust Company, Washington Loan and Trust, Union Trust and Storage Company, and the National Metropolitan Bank. The larger office buildings are the Bond, the Colorado, the Ouray, the Southern, and Woodward buildings. The Masonic Temple, the Scottish Rite Temple, and the Y. M. C. A. buildings, are important structures.

More and more Washington is becoming the home of a class of wealthy Americans, many of whom have erected beautiful residences, and among those of conspicuous architectural value are the Leiter, Townsend, Walsh, McLean, Belmont, Hale, Anderson, Boardman, Patterson, Thomas Nelson Page, Wayne McVeagh, Henderson, and Gale houses. Of similar interest are the embassy buildings of the British, Chinese, French, Russian, and other nations. The Metropolitan, the Cosmos, the Army and Navy, University, National Press, and the Washington (for women) are the principal clubs, and have homes of their own.

An elaborate park system is in course of development, which will ultimately surround the city with parks and connecting boulevards. The principal park is Rock Creek Park, to the north of the city, containing two thousand acres extending along both sides of Rock Creek. Its natural beauties are very great. On Mt. St. Alban, near Woodley, to the northwest of Georgetown, is the Peace Cross, a large Celtic cross erected at the close of the war with Spain (1898) on the grounds of the new Episcopal Cathedral, of which the cornerstone was laid in 1907. It affords a fine view of Washington. On the Chevy Chase Road, to the northwest of the Zoölogical Park, are the National Bureau of Standards and the Geophysical Laboratory of the Carnegie Institution, the administration building of which latter is in Sixteenth Street.

South of Rock Creek Park, on Rock Creek, lies the National Zoölogical Park of one hundred and seventy acres, reached from Washington in a half hour.

On a commanding site overlooking Rock Creek, north of Georgetown, in handsome grounds, is the United States Naval Observatory, of white marble, with its twenty-six-inch equatorial telescope.

Scattered throughout the city are numerous squares, circles, and small parks, nearly all of which contain statues.

Of bronze statues erected in honor of famous men, Washington has an abundance—mainly to military characters. Equestrian statues of Washington, Jackson, Greene, Scott, Thomas, and McPherson are erected, besides full-length statues of Lafayette, Luther, Franklin, Chief Justice Marshall, Lincoln, Garfield, Professor Henry. Farragut, General Rawlins, and Admiral Dupont.

At Arlington, across the river from Washington, on commanding heights, is the National Cemetery containing the graves of about sixteen thousand soldiers. Arlington House, in the middle of the grounds, two hundred feet above the river, was once the residence of George Washington Parke Custis (step-grandson of Washington) and afterwards of General Robert Lee, who married Miss Custis. Near the house are the graves of General Sheridan, Admiral Porter, General Lawton, General Wheeler, and other distinguished officers.

To the south is a tomb containing the remains of two thousand one hundred and eleven unknown soldiers. The sailors destroyed by the blowing up of the "Maine" in 1898 and other victims

of the war with Spain are buried in the southern part of the cemetery.

The cornerstone of a splendid military memorial or Hall of Fame was laid here in 1916, to be

MOUNT VERNON

erected in classic style, of marble, and to cost several millions of dollars.

MOUNT VERNON, Washington's home and burial place, is in Fairfax County, Va., about fifteen miles below the city. It is in full view, standing among the trees on the top of a bluff rising about two hundred feet above the river. As the steamboat approaches, its bell is tolled, this being the universal custom on nearing or passing Washington's tomb. The estate was originally a domain of about eight thousand acres, and Augustine Washington, dying in 1743, bequeathed it to Lawrence Washington, who, having served in the Spanish wars under Admiral Vernon, named it Mount Vernon in his honor. General Washington, in 1752, inherited Mount Vernon from Lawrence. After his death the estate passed to his nephew, Bushrod Washington, subsequently descending to other members of the family.

Congress repeatedly endeavored to have Washington's remains removed to the crypt under the rotunda of the Capitol, originally constructed for their reception, but the family always refused, knowing it was his desire to rest at Mount Vernon.

In 1856 the mansion and surrounding property were saved from the auctioneer's hammer, and secured as a national possession by the Ladies' Mount Vernon Association, assisted principally by Edward Everett, at a cost of two hundred thousand dollars.

Washington, originally called Federal City, was named after Washington in 1791, and became the capital in 1800. In 1814 the Capitol, White House, and other public buildings, were burned by the British.

WASHINGTON'S TOMB, MT. VERNON

LEADING EVENTS IN THE COLONIAL HISTORY OF TH

I. PERIOD OF AUTHENTIC DISCOVER

Preceding this Period there are some legendary accounts of discoveries by Norsemen, Iri coverers, chief of which was Lief Ericsson and his brother Thorwald who came upon the mainla a new era, during which the Spaniards explored and settled the West Indies, Mexico, and the southe unsuccessful attempts at settlement in the North.

Dates	Spanish Explorers and Rulers	Portuguese Explorers and Rulers
	Ferdinand and Isabella, 1474-1516.	**Emanuel I., the Great, 1469-1521.**
1492	1492. CHRISTOPHER COLUMBUS, an Italian, supported by Ferdinand and Isabella, set sail from Palos, Spain (August 3), and discovered America (October 12), landing at one of the Bahamas, which he named San Salvador. During the following three months he visited the islands of Cuba and Hayti.	
	1498. Columbus made a THIRD voyage, discovering the island of Trinidad and the mainland of South America, near the mouth of the Orinoco River.	
	1499-1507. Amerigo Vespucci wrote a letter to a friend claiming to have discovered a part of the South American coast in 1499, and an account of this voyage was published. The new continent,	1499. VASCO DA GAMA DOUBLED THE CA OF GOOD HOPE AND REACHED IND Another route to India was thus reveale
1500	therefore, was named after him by the German geographer Waldseemüller, who had read the account.	1500. Cortereal, a Portuguese, explored t coast from Labrador to Nova Scotia.
	1502. Columbus made a FOURTH voyage. He explored the coast of Central America and Panama, returned to Spain discouraged and died four years later in the belief that he had discovered	
1510	India by sailing west.	**French Explorers and Rulers**
	1512. PONCE DE LEON, seeking a legendary fountain of youth, DISCOVERED FLORIDA, so named because he landed on Easter Sunday, the Spanish "Feast of Flowers."	**Francis I, 1515-1547.**
	1513. BALBOA crossed the Isthmus of Panama and DISCOVERED THE PACIFIC, which he took possession of, with its coast and islands, for Spain.	
	Charles I. of Spain and Charles V. of Germany, Emperor. 1516-1556.	
	1519-1521. CORTEZ CONQUERED MEXICO for Spain. This conquest led to the establishment of Spain's Empire in the new world. The mines brought great wealth to Spain and formed the basis of Spanish prosperity in the following years.	
1520	1520. MAGELLAN, a Portuguese in Spain's service, discovered the strait named after him. He reached and named the PACIFIC OCEAN.	
	1521. Magellan discovered the PHILIPPINE ISLANDS. His followers, after his death, continued westward and completed the first	
1530	circumnavigation of the globe in 1522.	1524. VERRAZANO, sailing in the service France, traced the American coast nor ward from Cape Fear, and discove New York harbor.
	1539. CORONADO and a force of Spaniards marched northward	1535. Cartier, in search of a northwest p sage, ascended the St. Lawrence to Lach
1540	from Mexico to Colorado and Kansas and discovered the GRAND CANON OF THE COLORADO RIVER.	Rapids and Mont Réal (Montreal). **Charles IX., 1560-1574.**
	DE SOTO, at the same time, led an army of about a thousand	1541. Roberval and Cartier made an uns
1550	into northwest Florida. HE REACHED THE MISSISSIPPI in 1541.	successful attempt to establish a Fre colony on the St. Lawrence.
	Philip II., 1556-1598.	1562. Jean Ribault establishes a Hugue settlement at Port Royal.
1560	1565. The Spaniards, under MENENDEZ, founded ST. AUGUSTINE, Florida.	1565. The Huguenot settlement destro by Menendez.
		Henry IV., 1589-1610.
1570		
1580	1582. Spanish monks planted missions in New Mexico and Arizona.	
1590		
1600	1598. A Spanish settlement was planted by OÑATE near SANTE FE, New Mexico.	1603. CHAMPLAIN entered the St. Lawre THE FRENCH OCCUPATION OF CANADA gan with Champlain. His maps, repo and settlements stimulated French en prise.
		1605. Champlain founded PORT RO (Annapolis, N. S.), and sailed in an exp ing expedition as far south as Cape Cod

AND EXPLORATION, FROM 1492 TO 1607

missionaries and even Asiatics. Little importance attaches to any except those of the Norse dis- of North America about 1000 to 1004. The discoveries of Columbus and Vasco da Gama opened part of the present United States; while the English and French explored, claimed, and made

English Explorers and Rulers	European Events	Dates
Henry VII., 1485-1509.	1492. End of the Moorish dominion in Spain. Death of Lorenzo de Medici, the "Magnificent" at Florence.	**1492**
1497. JOHN CABOT, an Italian in the service of Henry VII. of England discovered the coast of NORTH AMERICA, probably at Labrador. He was accompanied by his son, Sebastian. 1498. Sebastian Cabot, on a SECOND voyage, probably explored the Atlantic coast from Labrador to Carolina. These voyages were not followed by any attempt at colonization.	1494. Beginning of a series of Italian wars, lasting till 1559. 1499. The Swiss gain their independence from the Emperor Maximilian.	
		1500
	1502. Outbreak of war between France and Spain in Italy.	
	1511. Pope Julius II. forms the Holy League against France and Spain.	**1510**
	1513. James IV. of Scotland invades England, and is killed at battle of Flodden Field. 1515. Wolsey appointed Chancellor by Henry VIII. of England. 1519. The German Empire, Spain, Netherlands, Two Sicilies and the Spanish Indies united under Charles V.	
		1520
Henry VIII., 1509-1547.	1521. Beginning of the wars between Charles V. of Germany and Francis I. of France.	
		1530
1527. Captain John Rut explores the coast of North America.	1527. Expulsion of the Medici from Florence. 1535. Henry VIII. of England assumes the title of supreme head of the Church in England.	**1540**
	1543. England enters into an alliance with Charles V. against France.	**1550**
	1562. Beginning of the Huguenot wars.	
Elizabeth 1558-1603.		**1560**
1576-1578. FROBISHER, in the interest of England, made three attempts to find a northwest passage to Asia. 1578. DRAKE explored the Pacific coast as far north as the state of Washington. He had previously doubled Cape Horn. He claimed the land for England. 1583. HUMPHREY GILBERT landed at St. John's, Newfoundland, and took possession of the country for England. 1584. SIR WALTER RALEIGH sent out an expedition under Captain Arthur Barlow. The expedition landed at Pamlico Sound and the region was named VIRGINIA in honor of Elizabeth. 1587. Raleigh despatched another expedition, consisting of two ships with one hundred and fifty men and women, to Roanoke Island. John White was the Governor. Virginia Dare, the first white child born in America, was born here. 1602. GOSNOLD, an English merchant, made a settlement at Buzzard's Bay, R. I.		**1570**
	1581. Declaration of independence by the Dutch. Queen Elizabeth was financially interested in many of the expeditions which followed, and she knighted most of the men who commanded expeditions.	**1580**
	1587. Execution of Mary, Queen of Scots. 1588. Battle of the Spanish Armada. 1595. France declares war against Spain.	**1590**
		1600
James I., 1603-1625. 1603. Martin Pring enters the present harbor of Plymouth.	1604. Charles IX. ascends throne of Sweden. 1606. In England there was organized the VIRGINIA COMPANY for the purpose of establishing trading colonies in America.	

II. THE COLONIAL PERIOD OF UNITED STATES HISTORY, INCLUDING

The real history of the United States begins with this period. Within it the original Thirteen power in the East was subdued; the Colonies increased in strength and self-reliance, and the struggle

THE SOUTHERN COLONIES

Virginia

1607. The London Company made THE FIRST PERMANENT ENGLISH SETTLEMENT IN AMERICA, AT JAMESTOWN, VIRGINIA (May 13). Jamestown was named after the English King, James I.

1619. Virginia settlers establish the *FIRST REPRESENTATIVE ASSEMBLY IN AMERICA*, called *The House of Burgesses*.

The FIRST SLAVES were sold in Virginia.

1622. An Indian attack was made on Jamestown.

1624. Virginia was made into a *royal colony*.

1642-1652. William Berkeley governor of Virginia, which became a refuge for Cavaliers from England.

1652. Puritan Commissioners with an army compelled Virginia to accept the rule of the Puritan Commonwealth.

1660. The restoration of Charles II. in England brought about the return of Berkeley in Virginia.

The restoration was welcomed by the Cavaliers of Virginia, but the Massachusetts Puritans delayed a year before proclaiming Charles king. A SECOND INFLUX OF PURITAN IMMIGRANTS FOLLOWED THE RESTORATION.

Maryland

1632. Lord Baltimore obtained a charter to Maryland.

1634. First permanent settlement made at St. Mary's by Calvert.

1645. Maryland Catholics and Virginia Puritans engaged in rebellion.

1649. The Maryland Assembly passed a TOLERATION Act.

1661. Charles Calvert appointed governor.

Carolinas

1653. Settlement of Albemarle, North Carolina, by Virginia pioneers.

1663. Carolina granted to a company of proprietors.

1669. John Locke drafts a constitution for Carolina.

1670. Charleston, S. C., settled and territory divided into North and South Carolina.

NEW ENGLAND COLONIES

Massachusetts

1607. The Plymouth Company established a colony on the Kennebec River, in Maine under Sir Ferdinando Gorges. The colony failed.

1620. The Pilgrim Fathers landed at Cape Cod November 11, and formed the FIRST SETTLEMENT IN NEW ENGLAND AT PLYMOUTH (December 22), under the FIRST REPUBLICAN FORM OF GOVERNMENT IN AMERICA.

1628. The permanent settlement of Massachusetts Bay Colony began by the settlement of Salem under John Endicott.

1629-1640. The "Great Migration" of Puritans to Massachusetts.

1630. BOSTON WAS FOUNDED by the English Puritans. The first general court in New England met there October 19.

1641. Massachusetts Bay Colony adopted laws known as the *Body of Liberties*.

1643. THE FIRST INTER-COLONIAL UNION IN New England. It was formed for protection.

1658. Massachusetts made it a capital offense for Quakers to return to the colony after expulsion.

1675. KING PHILIP'S WAR broke out in New England.

New Hampshire

1623. First settlement on Piscataqua River, by John Mason.

1640. Provisional government established at Dover.

Rhode Island

1636. Roger Williams settles at Providence.

1638. Ann Hutchinson settled in Rhode Island.

1639. Newport founded.

1663. Charter granted to Rhode Island.

Connecticut

1633. Settled at Windsor by Pilgrims.

1633-1636. Colonization of Connecticut River valley.

1637. **Pequot Indian war.**

1662. Charter granted to Connecticut.

ITS SETTLEMENT (1607 TO 1689); AND ITS CONSOLIDATION (1689 TO 1763)

Colonies were established; New England and Virginia grew in influence and population; the Indian between England and France for control of the New World was settled in favor of the English.

THE MIDDLE COLONIES

New York

1609. HENRY HUDSON, employed by the Dutch East India Company, SAILED UP THE HUDSON RIVER searching for a passage to the Indies.
1614. The DUTCH established trading stations on Manhattan Island and at Fort Orange (Albany) on the Hudson. They called their possessions NEW NETHERLAND.

1623. The Dutch founded a settlement on Manhattan Island which they called NEW AMSTERDAM (later New York City).
1626. Peter Minuit, director-general of New Netherland, purchased Manhattan Island from the Indians for $24.
1629. Establishment of the patroon system to encourage settlement in New Netherland.

1636. Wealthy colonists from Holland settle at Ft. Orange.

1647-1664. Peter Stuyvesant governor of New Netherland.

1657. Proclamation issued against the Quakers.

1670. Staten Island purchased from the Indians.

Delaware

1627. Swaanendael (now Lewis, Del.) founded.

1638. A Swedish settlement was made near Wilmington, on the Delaware.

1655. The Swedish settlements on the Delaware conquered by the Dutch.

1664. Delaware passes under English rule.

New Jersey

1623. Ft. Nassau (now Gloucester, N. J.) established by the Dutch.

1640. English settlements begun on Salem creek.

1664. New Jersey granted to Berkeley and Carteret.

Progress and Population

1616. Tobacco first cultivated by the English in Virginia.

1636. First college in America founded by Massachusetts. Two years later it is named HARVARD in honor of John Harvard.

1639. First press in America set up at Cambridge. Stephen Daye was the printer, and THE FIRST AMERICAN BOOK was *The Bay Psalm Book.*

1640. **Whole number of emigrants to New England previous to this time about 21,200.**

1645. Massachusetts established free schools supported by the State.

1661. Eliot's "Indian Testament" printed at Cambridge.

1664. Eliot's "Indian Bible" printed at Cambridge.

ENGLISH RULERS AND EVENTS

1603-1625. **James I.**
1603. Union of England and Scotland.

1625-1649. **Charles I.**
1627. War with France, over the Huguenots.

1640. Meeting of the Long Parliament.
1642. Civil war begins.

1649. Execution of Charles I.
1649-1660. The Commonwealth under Cromwell.

1660. Restoration of the Stuarts.
1660-1685. **Charles II.**

1668. Triple alliance of England, Sweden and Holland against France.

II. THE COLONIAL PERIOD OF UNITED STATES HISTORY, INCLUDING ITS SET

THE SOUTHERN COLONIES			NEW ENGLAND COLONIES			
Virginia	**Carolinas**	**Maryland**	**Mssachusetts**	**Rhode Island**	**Connecticut**	**New Hampshire**
1676. BACON'S REBELLION broke out in Virginia.			1677. Maine became part of Massachusetts by purchase.			1680. New Hampshire declared a royal province.
			1684. Massachusetts becomes a royal colony. 1686-1689. Andros governor of all New England by royal appointment.			
1689-1697. KING WILLIAM'S WAR. The FIRST INTER-COLONIAL WAR. This marked the beginning of a contest which in America.			1691-1693. Salem witchcraft.			
1702-1714. QUEEN ANNE'S WAR. The SECOND INTER-COLONIAL WAR began between France and England. This war was the New Englanders retaliating.			1702. Joseph Dudley appointed governor.			
	1721-1729. The Carolinas are royal colonies.					
1728. Boundary established between Virginia and North Carolina.	1729. North and South Carolina permanently divided into two provinces.	1729. BALTIMORE founded.			1728-1731. Final boundaries established with New York and Rhode Island.	
	Georgia					
	1733. Last of the thirteen original colonies settled by Oglethrope at SAVANNAH.			1734. Assembly meets for first time at Greenwich.		
						1740. Boundaries of New Hampshire determined.
	1742. Spaniards attacked Georgia; defeated by Oglethrope.		1742. Peter Faneuil builds "Faneuil Hall."			
1744-1748. KING GEORGE'S WAR. The THIRD INTER-COLONIAL WAR broke out between England and France. New England colonists.		1744. Treaty with the "Six Nations."			1745. One thousand men sent against Louisburg.	1744. George Whitefield preaches in New Hampshire.
	1749. First English ship reaches Georgia.		1749. Famous Indian treaty renewed at Falmouth.			
1753. GEORGE WASHINGTON was sent by Governor Dinwiddie to order the French out of the Ohio valley.		1753. The Potomac River explored to its source.		1754. Providence library chartered.		
1754-1763. THE FRENCH AND INDIAN WAR. The FOURTH and LAST INTER-COLONIAL WAR broke out between the in 1763.						

TLEMENT (1607 TO 1689); AND ITS CONSOLIDATION (1689 TO 1763) — Continued

THE MIDDLE COLONIES				Progress and Population	English Rulers and Events
New York	**Pennsylvania**	**Delaware**	**New Jersey**		
				1676. **Population of New England estimated at 60,000.**	
				1680. John Buckner brings a printing press to Virginia and prints the session laws.	
	1681. Grant of Pennsylvania to William Penn.				
1683. First Assembly in New York under English rule.	1682. Philadelphia laid out by Penn, and Quaker emigration encouraged. Penn's treaty with the Indians.	1682. Delaware becomes part of Pennsylvania.			1685-1689. **James II.**
1689-1690. Leisler's rebellion in New York.				1689. First American newspaper published in Boston; suppressed by Massachuetts government.	1688-1689. The "Glorious Revolution." 1689-1702. **William III. and Mary.**
continued with little intermission until the downfall of French power					
				1692. The College of William and Mary was established in Virginia.	
				1700. **Population of colonies about 260,000.**	
	1701. Penn granted a Charter of Privileges to Pennsylvania which remained in force until 1776.			1701. Yale College was established in Connecticut.	1701. War of the Spanish succession.
confined mainly to the east; the French attacking New England, and					
			1702. New Jersey becomes a royal province under the governor of New York.		1702-1714. **Queen Anne.**
		1703. Delaware is made a separate colony.		1704. Appearance of "The Boston News Letter," the the first newspaper in America.	1702. Queen Anne war against France and Spain.
				1710. First post office in America at New York.	
					1714-1727. **George II.**

				1729. "Pennsylvania Gazette" started by Franklin.	
	1733. Treaty with the "Six Nations."	1733. Delaware boundaries defined after twenty years' litigation.			
1735. Zenger's trial and acquittal in New York, establishes freedom of the press.				1736. Appearance of "The Virginia Gazette," first newspaper in the South.	
			1738. Separate charter granted to New Jersey.		1739. War with Spain.
				1740. University of Pennsylvania founded.	
				1741. Moravians first settle in United States at Bethlehem.	
1743. Sir George Clinton, governor.					
Louisburg was restored to France, much to the dissatisfaction of the					1744. War between England, France and Austria.
	1746. Thomas and Richard Penn sole proprietors of Pennsylvania.			1746. New Jersey College, afterwards Princeton.	
				1749. **White population of the colonies 1,046,000.**	
			1750. Trenton public library founded.	1752. *English Bible* first printed in America. Franklin experiments in electricity.	
1754. Convention at Albany to consider a colonial confederacy.					
				1754. King's College (now Columbia,) New York City, founded.	
French and English, which was ended by THE TREATY OF PARIS					1756-1763 Seven Years' war.

HISTORY OF THE UNITED STATES

When first visited by Europeans, the country now comprised within the United States was exclusively inhabited by the race commonly called American Indians.

Copyrighted by A. S. Burbank.

FOREFATHERS' ROCK, PLYMOUTH, MASS.

Plymouth is of abiding interest as the landing place of the Pilgrim Fathers (December 21st, 1620) and the site of the first settlement in New England. Pilgrim Hall contains numerous interesting relics of the Pilgrims, paintings of their embarkation and landing, old portraits, etc. North Street leads to the so-called Plymouth Rock, a granite boulder enclosed by columns and covered with a canopy. This, however, is only a fragment (broken off in 1774) of the flat rock where the Pilgrims landed, which lies nearer the sea and is now covered by a wharf. Cole's Hill, opposite the rock, was the burial-place of the early settlers (1620-1621). Leyden Street was the site of the first house. From the Town Square a path ascends to the right to the ancient Burial Hill, with the graves of many of the early settlers, including Governor Bradford. A fortified church was erected here in 1622. To the south is Watson's Hill, where the Pilgrims made a treaty with Massasoit in 1621. The National Monument to the Pilgrims, consisting of a granite pedestal forty-five feet high, surmounted by a figure of Faith, thirty-six feet high, and surrounded by seated figures twenty feet high, representing Law, Morality, Freedom and Education is about one-fourth mile from the railway station, on Allerton Street. The three hundredth anniversary of the landing of the Pilgrims was elaborately celebrated here in 1920.

Period of Discovery.—According to the Scandinavian sagas, Leif, a Norwegian, sailed about 1001 from Iceland for Greenland, but was driven southward by storms till he reached a country called Vinland, which is supposed to have been Rhode Island or some other part of the coast of New England.

It is possible that some vague rumors of the Norse journeys had come to Christopher Columbus when he set out on Friday, August 3, 1492, to discover the western route to India. He sighted one of the Bahama Islands on October 12, and landed the following day. After cruising about for some time, he returned to Spain. He made in all four voyages to the New World for Treasure-getting and discovery. His discoveries, it should be remembered, did not extend to the territory now occupied by the United States, but were confined to certain of the West India Islands, and parts of Central, and possibly, South America. (See further, under Outlines of American History.)

Among the earliest of his followers was Amerigo Vespucci, who in 1497-1498 explored the coasts of the Gulf of Mexico, and who has given his name to the whole continent.

In 1497, about five years after the discovery of America by Columbus, John Cabot sailed westward from Bristol, England, and on June 24 discovered land (Labrador), along which he coasted to the southwest nearly one thousand miles. In 1498 his son, Sebastian Cabot, sailed from the same port in search of a northwest passage to China, but finding the ice impenetrable, he turned to the south and coasted as far as Chesapeake Bay.

In 1513 the Spaniard Ponce de Leon discovered Florida. In 1539 took place the expedition of the Spaniard De Soto, who in the course of two years penetrated overland from Tampa Bay on the west coast of Florida to a point two hundred miles beyond the Mississippi.

Period of Settlement.—In 1565 the Spaniards founded St. Augustine, the first permanent settlement in the United States. In 1585 an expedition sent by Sir Walter Raleigh made a settlement on Roanoke Island, N. C., which failed. In 1607 the English founded Jamestown on James River, Virginia, their first permanent settlement.* The master spirit of this enterprise was Captain John Smith. Plymouth, Mass., was founded in 1620 by the "Pilgrim Fathers," a body of Puritans led by John Carver and others, who sailed from England in the Mayflower. Salem was settled by John Endicott in 1628. In 1630 John Winthrop settled Boston. In 1692 Plymouth colony was united to Massachusetts. Portsmouth and Dover, in New Hampshire, were settled in 1623. The first permanent English settlements in Maine were made about the same time. These settlements ultimately fell under the jurisdiction of Massachusetts. Connecticut was colonized in 1635-1636 by emigrants from Massachusetts, who settled at Hartford, Windsor, and Wethersfield. Rhode Island was first settled at Providence in 1636 by Roger Williams. In 1623 permanent settlements were made by the Dutch at Fort

*Jamestown is seven miles from Williamsburg, formerly the ancient capital of Virginia and seat of the colonial governor. The only remains of the ancient town are the tower of the church (in which Pocahontas was married in 1614; church itself rebuilt in 1907) and a few tombstones

Orange (now Albany) and at New Amsterdam on the present site of New York. The Swedes settled on the Delaware in 1638, and were expelled in 1655 by the Dutch army. The English seized New Amsterdam in 1664, and with it the whole of New Netherland, which they named New York from the Duke of York, to whom it had been granted by Charles II. New Jersey at this time acquired its distinctive name. In 1681 the territory west of the Delaware was granted to William Penn, who colonized it chiefly with Friends or Quakers, and founded Philadelphia in 1682. Maryland was settled in 1634 by Roman Catholics sent out by Lord Baltimore. The first permanent settlement in North Carolina appears to have been made about 1663, on Albemarle Sound, by emigrants from Virginia. The first permanent settlement in South Carolina was made in 1670 by colonists from England on the Ashley River, near the site of Charleston, which began to be settled about the same time. Georgia was settled by General James Oglethorpe, who in 1733 founded Savannah.

How Europe First Divided the American Colonies.—It will thus be seen that what is now the territory of the United States has been derived from six European nations. Resting on the discovery by Columbus and the bulls of the popes, Spain claimed the whole continent, but has been in actual possession only of the Gulf coast from Florida to Texas, and of the interior from the Mississippi to the Pacific. The Swedes once had settlements on the Delaware. The Dutch, following up the voyage of Hudson to the river bearing his name, claimed and held the country from the Delaware to the Connecticut. The French discovered the St. Lawrence and explored and held military possession of the valleys of the Mississippi and Ohio and the Great Lakes. The English, by virtue of the voyages of the Cabots, claimed the Atlantic coast, and there founded the colonies which grew into the thirteen United States.

In the course of the struggle, sometimes peaceful, often bloody, by which the rule of these nations has been thrown off, the Dutch conquered the Swedes; the English conquered the Dutch and the French; the United States expelled the English, and in time, by purchase or conquest, drove out the Spaniards and the Mexicans.

Struggle of England and France for America.—The first serious struggle for possession occurred in the middle of the eighteenth century, when the English, moving westward, met the French moving eastward at the source of the river Ohio. In that struggle, which has come down to us as the "French and Indian war," France was worsted, and, retiring from this continent, divided her possessions between England and Spain. To England she gave Canada and the islands and shores of the Gulf of St. Lawrence, and, entering what is now the United States, drew a line down the middle of the Mississippi River, and gave all to the east of that line (save the island on which is the city of New Orleans) to Great Britain, and all to the west of it to Spain; Spain at the same time gave Florida to England as the price of Cuba.

Oppression of the Colonies under British Rule.—Having thus come into possession of all the country to the east of the Great River, King George determined to send out an army of ten thousand men to defend the colonies, and have the latter bear a part of the expense. This part he attempted to collect by duties on goods imported, and by a Stamp Tax (1765) on legal documents and printed matter. No tax for revenue had before been laid on America by act of Parliament. The colonists, therefore, resisted this first attempt, and raising the cry, "No taxation without representation," they forced Parliament to repeal the Stamp Tax in 1766. The right to tax was at the same time distinctly asserted, and in 1767 was again used, and duties laid on paints, oils, lead, glass, and tea. Once more the colonists resisted, and, by refusing to import any goods, wares, or merchandise of English make, so distressed the manufacturers of England that Parliament repealed every tax save that on tea. All the tea needed in America was now smuggled in from Holland. The East India Company, deprived of the American market, became embarrassed, and, calling on Parliament for aid, was suffered to export tea, a privilege never before enjoyed.

Selecting commissioners in Boston, New York, Philadelphia, and Charleston, cargoes of tea were duly consigned to them by the East India Company; but the people agreed not to buy any of this tea or allow it to be sold. At Boston men disguised as Indians boarded the tea ships, overcame the guards, and destroyed the tea by throwing the boxes into the harbor. This has gone down in history as the "Boston Tea Party."

The Continental Congress and the Revolution.—As a punishment for this, Parliament shut the port of Boston and deprived the people of Massachusetts of many functions of local government. The Assembly of Massachusetts thereupon called for a General Congress to meet at Philadelphia on September 5, 1774. The colonies gladly responded and this congress, having issued a Declaration of Rights and Addresses to the king, to Parliament, and to the people of England, adjourned to await the result.

The day for the reassembling of Congress was May 10, 1775; but, before that day came, the attempt of General Gage to seize military stores brought on a fight at Lexington, April 19, 1775. The fight at Lexington was followed by the siege of the British in Boston, by the formation of the "Continental Army," by the appointment of George Washington to command it, by the battle of Bunker Hill, June 17, 1775, and by an expedition against Quebec, which came to naught, on the last day of the year.

General William Howe meantime had succeeded Gage in command of the British at Boston, and, finding himself hard pressed by Washington, evacuated the city and sailed for Halifax. Believing New York was to be attacked, Washington now hurried to Long Island, where, August 27, 1776, Howe defeated him, took possession of New York, and drove him first up the Hudson and then southward across New Jersey.

American Independence Declared.—Congress, which, July 4, 1776, at Philadelphia, had declared the colonies to be free and independent states, now fled from that city to Baltimore. But Washington, turning in his retreat, surprised and captured the British outpost at Trenton. Cornwallis instantly hurried toward that town, but Washington, passing around the British rear, attacked and captured at Princeton, January 3, 1777, a detachment on its march to Trenton, and then went into winter quarters at Morristown.

With the return of spring Howe, finding that he could not reach Philadelphia by land without passing in front of the Continental army stretched out on a strongly intrenched line across New Jersey, went by sea. Washington met him at Chadd's Ford on the Brandywine, was defeated, and on September 25, 1777, Howe entered Philadelphia. In the attempt to dislodge him Washington fought and lost the battle of Germantown, October 4, 1777; the loss of Philadelphia was more than made good by the capture of Burgoyne and his army at Saratoga, October 17, 1777, while on his way from Canada to New York City.

The fruits of this victory were the recognition of the independence of the United States by France, the treaty of alliance with France, February 8, 1778, and the evacuation of Philadelphia by General Clinton, who had succeeded Howe. Washington, who had spent the winter at Valley Forge, instantly followed, and overtaking Clinton at Monmouth fought and won

PRINCIPAL CAMPAIGNS AND BATTLES OF THE AMERICAN REVOLUTION

The leading battles are indicated in **bold-face;** successful commanders in *italics*

Names, Dates and Places of Campaigns and Battles	Commanders		Engaged	
	American	British	Amer.	British
1775-1776				
Campaign in New England				
Lexington, Concord (April 19, 1775)	Barret and Butterick...	*Smith* and *Lord Percy*...	.....	1,700
Ticonderoga (May 10, 1775).....	*Ethan Allen* and *Eaton*.	Delaplace.....	83	48

Yorktown, Va. (Oct. 17-19, 1781)..	*Washington*.....	Cornwallis.....	16,000	7,500

the battle at that place, June 29, 1778. Clinton escaped to New York, and Washington, drawing his army in a circle about the city from Morristown on the south to West Point on the north, awaited further movements.

Treason of Arnold and Execution of André.—Turning towards the Southern states, the British commander now dispatched an expedition which took Savannah and overran the State of Georgia. The year which followed (1779) is memorable for the capture of Stony Point by Anthony Wayne; for the treason of Benedict Arnold; for the execution of Major John André; for the capture of the "Serapis" by Paul Jones after one of the most desperate naval battles on record, and by the failure of an attempt by the Americans to retake Savannah. In 1780 Clinton led an expedition from New York to Charleston, took the city, swept over South Carolina, and, leaving Cornwallis in command, hurried back to New York. Gates, who now attempted to dislodge the British, was beaten. Greene now succeeded Gates, and Morgan, the commander of his light troops, won the battle of the Cowpens, January 17, 1781. This victory brought up Cornwallis, who chased Greene across the State of North Carolina to Guilford Court House, where Greene was beaten and Cornwallis forced to retreat to Wilmington. Moving southward, Greene was again beaten in two pitched battles, but forced the British to withdraw within their lines at Charleston and Savannah.

Cornwallis meantime moved from Wilmington into Virginia and took possession of Yorktown. And now Washington, who had long been watching New York, again took the offensive, hurried across New Jersey and Pennsylvania, and, while a French fleet closed the Chesapeake Bay, he besieged Cornwallis by land, till, October 19, 1781, the British general surrendered. This practically ended the war.

The treaty of peace, at Paris, in 1783, actually ended it, secured the independence of the United States, and fixed her boundaries, roughly speaking, as the Atlantic Ocean on the east, the Mississippi on the west, New Brunswick, the St. Lawrence, and the Great Lakes on the north, and the parallel of thirty-one degrees on the south.

Articles of Confederation and their Weakness.—While the war was still raging Congress had framed an instrument of government, which the states ratified and put in force on March 1, 1781. This instrument of government which bound the thirteen states in perpetual union was known as the Articles of Confederation, and established a government as bad as any yet devised by man. There was no executive, no judiciary, and only the semblance of a legislature. The Congress consisted of not more than seven nor less than two delegates from each state; sat in secret session; was presided over by a president elected from its own members; and could not pass any law unless the delegates of nine states assented. It could wage war, make treaties, and borrow money; but it could not lay a tax of any kind whatsoever; nor regulate commerce between the states, or with foreign powers; and was dependent entirely on the liberality of the states for revenues. This defect proved fatal. Inability to regulate foreign commerce by duties stripped the country of its specie. Lack of specie forced the states to issue paper money. Paper money was followed by tender acts and force acts, and in some places by a violent stoppage of justice to the debtor class. A commercial and financial crisis followed and the people of the states, reduced to desperation, gladly acceded to a call for a national trade convention, which met in Philadelphia in May, 1787. The instructions of the delegates bade them suggest amendments to the Articles of Confederation. But the convention, considering the Articles too bad to be mended, framed the Constitution, which the people, acting through conventions in the various states, ratified during 1787 and 1788.

Adoption of the Constitution and Organization of Parties.—On March 4, 1789, the Constitution became the supreme law of the land. In the first Congress no trace of party lines is visible. But the work of establishing government had not gone far when differences of opinion sprang up; when the cry of partial legislation was raised, and the people all over the country began to divide into two great parties—those who favored and those who opposed a liberal construction of the language of the Constitution and the establishment of a strong national government.

The friends of national government took the name of Federalists, and under the lead of Alexander Hamilton, who as Secretary of the Treasury marked out the financial policy of the administration, they funded the foreign and domestic debt occasioned by the war for independence, assumed the debts incurred by the states in that struggle, set up a national bank with branches, and laid a tax on distilled liquors.

Each one of these acts was met with violent opposition, as designed to benefit a class, as unconstitutional, and as highly detrimental to the interests of the South. Against the Federalists were now brought charges of a leaning towards monarchy and aristocracy. Great Britain, it was said, has a funded debt, a bank, and an excise. These things are, therefore, monarchial institutions. But the Federalists have introduced them into the United States. The Federalists, therefore, are aristocrats, monarchists, and monopolists.

Of all who believed these charges, none believed them more sincerely than Thomas Jefferson, Secretary of State. Seeing in these acts a wide departure from the true principles of democracy, he set himself to work to organize a party of opposition, and was soon looked up to as the recognized leader of the Federal Republicans.

Hardly had the two parties thus been called into existence by difference of opinion on questions of home affairs, when they were parted yet more widely, and the dispute between them intensely embittered by questions of foreign affairs.

Effect of the French and English Affairs Upon the New Nation.—In 1793 the French Republic declared war against England, and sent a minister to the United States. As the

United States was bound to France by the treaty of alliance and by a treaty of amity and commerce, and was not bound to Great Britain by any commercial treaty whatever, it seemed not unlikely that she would be dragged unwillingly into the war. But Washington, with the advice of his secretaries, proclaimed neutrality, and from that time every Republican was the firm friend of France and every Federalist the ally of England. Then began a seven years' struggle for neutrality. France threw open her colonial ports to neutral commerce; Great Britain asserting the "Rule of the War of 1756," a rule prescribing that no neutral should have in time of war a trade it did not have in peace, declared this trade was contraband, and seized the ships of the United States engaged in it. The Republicans denounced neutrality and attempted to force a war. The Federalists in alarm dispatched John Jay, the Chief Justice, to London, with offers of a commercial treaty. England responded and on February 29, 1796, the first treaty of amity and commerce between her and the United States became law. At this France took offense, rejected the new minister (C. C. Pinckney) from the United States, and drove him from her soil, suspended the treaties, insulted a special commission (sent out in the interest of peace), with demands for bribes and tribute, and almost brought on war.

Never since the days of Bunker Hill had the country been so stirred as this act of the French Directory stirred it in the summer of 1798. Then was written our national song, "Hail Columbia." Then was established the department of the navy. Then, under the cry, "Millions for defense; not a cent for tribute," went forth that gallant little fleet which humbled the tri-color in the West Indies and brought France to her senses.

Causes and Events of the War of 1812.—With the elevation of Napoleon to the First Consulship came peace in 1800. In that same year the Federalists fell from power, never to return. Once in power, the Republicans began to carry out the principles they had so long preached. They reduced the national debt; they repealed the internal taxes. They sold the navy; boldly assaulted the Supreme Court; and in 1811, when the charter of the National Bank expired, refused to renew it. Their doctrine of strict construction, however, was ruined, when, in 1803, they bought the Province of Louisiana from France and added to the public domain that splendid region which lies between the Mississippi and the Rocky Mountains.

At that moment it seemed as if the people were about to enter on a career of unwonted prosperity. But Napoleon suddenly made war on England, and by 1806 the United States was involved in a desperate struggle of nine years, both with France and England, for commercial independence. Great Britain searched our ships, impressed our sailors, violated the neutrality of our ports, and by the decisions of her admiralty courts and by orders in council sought to ruin our neutral commerce with Europe, unless carried on through her ports and under her license. Napoleon attacked us with his decrees of Berlin and Milan, and sought to ruin our neutral commerce with England. The United States retaliated by means of the embargo and non-intercourse, and, in 1812, declared war

CAMPAIGNS AND BATTLES OF THE WAR OF 1812-1815

Principal Land Battles

1812.—August 16, the surrender of Detroit by Hull to Brock.

October 13, defeat of Van Rensselaer by Brock at Queenstown.

1813.—January 18-22, the Americans were defeated at Frenchtown by General Proctor, whose Indians massacred the wounded Americans.

April 27, York (Toronto) was captured by the Americans under General Pike.

October 5, General Harrison forced General Proctor to retreat into Canada, and October 5 at the battle of the Thames routed the British and their Indian allies. Tecumseh was killed, the territory lost by Hull regained, and Upper Canada was retained to the end of the war.

November 11, the Americans moved on Montreal, but were defeated at Chryslers Field, and retreated.

1814.—July 25, Winfield Scott again invaded Canada and gained victories at Chippewa (July 5) and at Lundy's Lane.

August 24, capture of Washington and burning of the Capitol, the White House, and other buildings.

1815.—January 8, a large body of English veterans were landed in Louisiana, and attacked New Orleans; in this battle, which took place before the news of the treaty of peace reached the combatants, Jackson won a decisive victory.

Principal Naval Battles

1812.—August 19, the *Constitution* destroys the British *Guerriere*, in the Gulf of St. Lawrence.

October 18, the American *Wasp* captures the *Frolic*.

October 25, Captain Decatur in the *United States* took the *Macedonian*.

December 29, the *Constitution* captures the *Java*.

1813.—February 24, the American *Hornet* captures the *Peacock*.

June 1, the *Chesapeake* is captured by the British *Shannon*.

September 10, Commodore Perry with a fleet of nine vessels destroys the British squadron of six vessels on Lake Erie.

1814.—September 3, naval attack on Fort McHenry by the British fails.

September 11, Captain Macdonough, on Lake Champlain, completely defeated a British fleet stronger than his own; this checked a serious invasion of the enemy.

Treaty and Results of the War

December 24, 1814, a treaty of peace was made at Ghent, the end of the Napoleonic wars having removed the cause for England's offensive policy at sea.

The provisions included:

(1) A return of captured territory.

(2) Nothing was said about impressment.

(3) No compensation was secured by the Americans for ships captured previous to 1812.

The results of the war were:

(1) An increase of debt.

(2) An outburst of national patriotism.

(3) The removal of America from participation in European politics.

(4) The development of manufacturing.

(5) The establishment of the protective tariff policy.

With the Cessation of Hostilities Another Epoch in Our History Begins.—From the day when Washington proclaimed neutrality in 1793, to the day when the people celebrated, with bonfires and with fireworks, and with public dinners, the return of peace in 1815, the political and industrial history of the United States is deeply affected by the political history of Europe. It was questions of foreign policy, not of domestic policy, that divided the two parties, that took up the time of Congress, that raised up and pulled down politicians. But after 1815 foreign affairs sank into insignificance, and for the next thirty years the history of the United States is the history of political and economic development of the country to the east of the Mississippi River.

Fall of the Federalists, or Pro-British Party.—The opposition which the Federalists made to the war completed their ruin. In 1816 for the last time they put forward a presidential candidate, carried three states out of nineteen, and expired in the effort. During the eight years of Monroe's administration (1817-1825) but one great and harmonious party ruled the political destinies of the country. This remarkable period has come down to us in history as the "era of good feelings." It was indeed such an era, and so good were the feelings that in 1820 when Monroe was re-elected no competitor was named to run against him. Every state, every electoral vote save one was his. Even that one was his. But the elector who controlled it threw it away on John Quincy Adams lest Monroe should have the unanimous vote of the presidential electors, an honor which has been bestowed on no man save Washington.

Rise of the Protective Tariff Policy.—In the midst of this harmony, however, events were fast ripening for a great schism. Under the protection offered by the commercial restrictions which began with the embargo and ended with the peace, manufactures had sprung up and flourished. If they were to continue to flourish they must continue to be protected, and the question of free trade and protection rose for the first time into really national importance.

The rush of population into the West led to the admission of Indiana (1816), Mississippi (1817), Illinois (1818), Alabama (1819), and Missouri (1820) into the Union, and brought up for serious discussion the uses to be made of public lands lying within them.

The steamboat, which had been adopted far and wide, had produced a demand for some improved means of communication by land to join the greater water highways of the country and opened the era of internal improvements.

The application of Missouri for admission into the Union brought up the question of the admission of slavery to the west of the Mississippi. A series of decisions of the Supreme Court, setting aside acts of the state legislatures, gave new prominence to the question of state rights.

A Decade of Great Political Contests.—The Missouri question was settled by the famous Compromise of 1820 (the first great political compromise), which drew the line thirty-six degrees thirty minutes from the Mississippi to the hundredth meridian, and pledged all to the north of it, save Missouri, to freedom. But the others were not to be settled by compromise, and in the campaign of 1824 the once harmonious Republican party was rent in pieces. Each of the four quarters of the Republic put a candidate in the field and "the scrub-race for the presidency" began.

The new manufacturing interests of the East put forward John Quincy Adams. The West, demanding internal improvements at public expense, had for its candidate Henry Clay. William H. Crawford of Georgia (nominated by a caucus of Congressmen) represented the old Republican party of the South. Andrew Jackson of Tennessee stood for the new Democracy, for the people, with all their hatred of monopolies and class control, their prejudices, their half formed notions, their violent outbursts of feeling.

Behind none of them was there an organized party. But taking the name of "Adams men" and "Clay men," "Crawford men" and "Jackson men," the friends of each entered the campaign and lost it. No candidate secured a majority of the electoral college, and the House of Representatives chose John Quincy Adams.

The Triumph of Democracy and Industrial Expansion.—Under the administration of Adams (1825-1829) the men who wished for protection and the men who wished for internal improvements at government expense united, took the name first of National Republicans, and then of Whigs, and, led on by Henry Clay and Daniel Webster, carried through the high protection tariffs of 1828 and 1832. The friends of Jackson and Crawford took the name of Democrats, won the election of 1829, and during twelve years governed the country.

In the course of these years the population of the United States rose to seventeen million, and the number of states to twenty-six. Steam navigation began on the ocean; two thousand miles of railroad were built in the land; new inventions came into use; and the social and industrial life of the people was completely revolutionized. The national debt was paid; a surplus accumulated in the Treasury; the sale of public lands rose from three million dollars in 1831 to twenty-five million dollars in 1836; and the rage for internal improvements burned more fiercely than ever. A great financial panic spread over the country; the charter of the National Bank expired, a hundred "wild-cat banks" sprang up to take its place, and the question of the abolition of slavery became troublesome.

Early Troubles in Our System of Public Finance.—On the great questions which grew out of this condition of affairs the position of the two parties was well defined. The Democrats demanded a strict construction of the Constitution; no internal improvements at public expense; a surrender of the public lands to the state in which they lay; no tariff for protection; no National Bank; no agitation of the question of the abolition of slavery; the establishment of subtreasuries for the safe

keeping of the public funds, and the distribution of the surplus revenue. The Whigs demanded a recharter of the National Bank; a tariff for protection; the expenditure of the surplus on internal improvements; the distribution of the money derived from the sale of public lands; a limitation of the veto power of the President; and no removals from office for political reasons.

The Democrats, true to their principles, and having the power, carried them out. They destroyed the Bank; they defeated bill after bill for the construction of roads and canals; they distributed thirty-eight million dollars of the surplus revenue among the states, and by the cartage of immense sums of money from the East to the far distant West, hastened that inevitable financial crisis known as the "panic of 1837."

Andrew Jackson had just been succeeded in the presidency by Martin Van Buren (1837-1841) and on him the storm burst in all its fury. But he stood it bravely, held to a strict construction of the Constitution, insisted that the panic would right itself without interference by the Government, and stoutly refused to meddle. Since the refusal of Congress to recharter the Bank of the United States, whose charter expired in 1836, the revenue of the Government had been deposited in certain "pet banks" designated by the Secretary of the Treasury. Every one of them failed in the panic of 1837. Van Buren therefore recommended "the divorce of Bank and State," and after a struggle of three years his friends carried the "subtreasury" scheme in 1840. This law cast off all connection between the state banks and the Government, put the collectors of the revenue under heavy bonds to keep the money safely till called for by the Secretary of the Treasury, and limited payments to or by the United States to specie.

National Conventions and Rise of Slavery Issue.—The year 1840 was presidential year, and is memorable for the introduction of new political methods; for the rise of a new and vigorous party; and for the appearance of a new political issue. The new machinery consisted in the permanent introduction of the national convention for the nomination of a president, now used by the Democrats for the second time, and by the Whigs for the first; in the promulgation of a party platform by the convention, now used by the Democrats for the first time; and in the use of mass meetings, processions, songs, and all the paraphernalia of a modern campaign by the Whigs.

The new party was the Liberty Party, and the new issue the "absolute and unqualified divorce of the general Government from slavery, and the restoration of equality of rights among men." The principles of that party were: slavery is against natural right, is strictly local, is a state institution, and derives no support from the authority of Congress, which has no power to set up or continue slavery anywhere; every treaty, every act, establishing, favoring, or continuing slavery in the District of Columbia, in the territories, on the high seas, is, therefore, unconstitutional.

The Short-lived Era of the Whigs.—The candidate of this party was James Gillespie Birney. The Democrats nominated Martin Van Buren. The Whigs put forward William Henry Harrison and elected him. Harrison died one month after his inauguration, and John Tyler, the Vice-President and a Democrat of the Calhoun wing, became President.

The Whig policy as sketched by Clay was the repeal of the Subtreasury Act; the charter of a National Bank; tariff for protection; and the distribution of the sales of public lands. To the repeal of the Subtreasury Act Tyler gladly assented. To the establishment of a bank even when called "Fiscal Corporation," he would not assent, and, having twice vetoed such bills, was read out of the party by a formal manifesto issued by Whig congressmen.

It mattered little, however, for the question of the hour was not the bank, nor the tariff, nor the distribution of the sales of lands, but the annexation of the republic Texas. Joined to the demand for the reoccupation of Oregon, it became the chief plank in the Democratic platform of 1844. The Whig platform said not a word on the subject, and the Liberty Party, turning with loathing from the cowardice of Clay, voted again for Birney, gave the State of New York to the Democrats, and with it the presidency.

The Annexation of Texas, and Wilmot Proviso.—Accepting the result of the election as "instruction from the people," Congress passed the needed act and Tyler in the last hours of his administration declared Texas annexed.

The boundary of the new state was ill defined. Texas claimed to the Rio Grande. Mexico would probably have acknowledged the Nueces River. The United States attempted to enforce the claim of Texas, sent troops to the Rio Grande, and so brought on the Mexican war.

At the close of the Mexican war the boundary of the United States was carried south from forty-two degrees to the Gila River, and what is now California, Nevada, Arizona, New Mexico, Utah, and more than half of Wyoming and Colorado were added to the public domain. While the war was still raging, Polk, who had succeeded Tyler, asked for two million dollars to aid him in negotiating peace. Well knowing that the money was to be used to buy land from Mexico, David Wilmot moved in the House of Representatives that from all territory bought with the money slavery should be excluded. This was the famous Wilmot proviso. It failed of adoption and the territory was acquired in 1848, with its character as to slavery or freedom wholly undetermined.

The Preliminary Struggle over the Slave Problem.—And now the old parties began to break up. Democrats who believed in the Wilmot proviso, and Whigs who detested the annexation of Texas, the war with Mexico, and the extension of slavery went over in a body to the Liberty Party, formed with it the Freesoil Party, nominated Martin Van Buren, and gave him three hundred thousand votes. In their platform they declared that Congress had no more power to make a slave than to make a king; that they accepted the issue thrust on them by the South; that to

THE MEXICAN WAR, 1846-1848

Causes of the War

(1) Long-standing irritation over claims of American citizens upon Mexico, which the latter refused to pay.

(2) The annexation by the United States of Texas, which Mexico claimed as still a part of her territory.

(3) Disputes as to whether the Rio Grande or Nueces River was the boundary of Texas.

Results of the War

The Treaty of Guadalupe Hidalgo, in 1848, closed the war. Its chief provisions were:

(1) The Rio Grande was made the boundary between Texas and Mexico.

(2) California and New Mexico were ceded to the United States.

(3) The United States paid Mexico $15,000,000, and assumed $3,500,000 due American citizens.

The slavery question was intensified in American politics.

PRINCIPAL BATTLES

NOTE: The Americans were victorious in every conflict.

Place of Battle	Dates	Commanders		Engaged	
		American	Mexican	American	Mexican
Bracite	Dec. 25, 1846	Doniphan	Ponce de Leon	500	1,200
Buena Vista	Feb. 23, 1847	Taylor	Santa Anna	4,700	17,000
Cerro Gordo	April 18, 1847	Scott	Santa Anna	8,500	12,000
Chapultepec	Sept. 13, 1847	Scott	Santa Anna	7,200	25,000
Contreras	Aug. 20, 1847	Scott	Valencia	4,000	7,000
Churubusco	Aug. 20, 1847	Scott	Santa Anna	8,000	25,000
Huamantla	Oct. 9, 1847	Lane	Santa Anna	500	1,000
Mexico	Sept. 14, 1847	Scott	Santa Anna	6,000	.....
Molino del Rey	Sept. 8, 1847	Worth	Alverez	3,500	14,000
Monterey	Sept. 24, 1846	Taylor	Ampudia	6,600	10,000
Palo Alto	May 8, 1846	Taylor	Arista	2,300	6,000
Resaca de la Palma	May 9, 1846	Taylor	Arista	2,000	5,000
Sacramento	Feb. 28, 1847	Doniphan	Trias	900	4,000
Vera Cruz	Mar. 27, 1847	Scott	Landero	12,000	6,000

The only naval engagements of importance during the war with Mexico were the bombardment of Vera Cruz, by Commodore Conner, which lasted four days, and the bombardment of Monterey, Commodore Sloat, both cities being forced to surrender.

the demand for more slave states and more slave territories they answered, no more slave states, no more slave territories; and that on their banner was inscribed "Free Soil, Free Speech, Free Labor, and Free Men." As the defection of Whigs to the Liberty Party in 1844 gave New York state to the Democrats and elected Polk, so the defection of Democrats to the Free Soilers in 1848 gave New York to the Whigs and elected Taylor. As Harrison, the first Whig president, died one month after taking office, so Taylor, the second Whig president, died suddenly when a little over one year in office, just as the great Whig compromise of 1850 was closing. The imperative need of civil government in the new territory, the discovery of gold in California, the rush of men from all parts of the earth to the Pacific Coast forced Congress to establish organized territories. The question was: shall they be opened or closed to slavery? But, as the soil had been free when acquired from Mexico, the question really was: shall the United States establish slavery?

The Democrats, holding that slaves were property, claimed the right to take them into any territory, and asserting the principle of "squatter sovereignty," claimed the right of the people living in any territory to settle for themselves whether it should be slave or free. The Free Soilers demanded that the soil having been free when a part of Mexico, should be free as a part of the United States. Between these two Clay now stepped in to act as pacificator. Taking up the grievances of each side, he framed and carried through the measure known as the Compromise of 1850, the third great political compromise in our history. The fruit of this was the admission of California as a free state; the passage of a more stringent law for the recovery of fugitive slaves; the abolition of the slave trade in the District of Columbia; and the organization of Utah and New Mexico on the basis of "squatter sovereignty."

This done, senators and representatives of all parties joined in a manifesto declaring that the issues resting on slavery were dead issues, and that they would neither vote for, nor work for any man who thought otherwise. But thousand did think otherwise. The action of Clay pleased none. Anti-slavery men deserted him in the North; pro-slavery men deserted him in the South; and in 1852 the Whig party carried but four states out of thirty-one and perished. Even its two great leaders, Clay and Webster, were, by that time, in their graves.

Excited by such success, the Democrats, led on by Stephen A. Douglas, now broke through the compromise of 1820 and in 1854 applied "squatter sovereignty" to the organization of the territories of Kansas and Nebraska. Against this violation state legislatures, the people, the pulpit, and the press protested vigorously, for every acre of Kansas and Nebraska lay to the north of 36° 30′ and was solemnly pledged to freedom. But the Democratic leaders would not listen and drove from their ranks another detachment of voters. The effect was soon manifest. The little parties began to unite and when, in 1856, the time came to elect another president, the Republican Party of to-day was fully organized and ready. Once more and for the last time for twenty-eight years the Democrats won.

Buchanan's Administration the Prelude to the Civil War.—The administration of James Buchanan (1857-1861) marks an epoch. The question before the country was that of the extention of slavery into the new territories. Hardly had he been inaugurated when the Supreme Court handed down a decision on the case of Dred Scott, which denied the right of Congress to legislate on slavery, set aside the compromises of 1820 and 1850 as unconstitutional, and opened all the territories to slavery.

Rise of the Republican Party and Election of Lincoln.—From that moment the Whig and Democratic parties began to break up rapidly till, when 1860 came, four parties and four presidential candidates were in the field. The Democratic party, having finally split at the national convention for nominating a president and vice-president, the southern wing put forward Breckenridge and Lane and demanded that Congress should protect slavery in the territories. The northern wing nominated Stephen A. Douglas and declared for squatter sovereignty and the compromise of 1850. A third party, taking the name of "Constitutional Union," declared for the Constitution and the Union at any price and no agitation of slavery, nominated Bell and Everett, and drew the support of the old Whigs of the Clay and Webster school. The Republicans, declaring that Congress should prohibit slavery in the territories, nominated Abraham Lincoln and Hannibal Hamlin and won the election.

Secession, and the Formation of the Confederacy.—The State of South Carolina immediately seceded and before the end of February, 1861, was followed by Georgia, Florida, Alabama, Mississippi, Louisiana, and Texas. Taking the name of the Confederate States of America, they formed first a temporary and then a permanent government, elected Jefferson Davis president, raised an army, and besieged Fort Sumter in Charleston Harbor. The attempt to relieve the fort brought on the bombardment and surrender (April 19, 1861). The Confederate States were now joined by Virginia, North Carolina, Arkansas, and Tennessee. Richmond was made the capital, and the Civil war opened.

Civil War between the Union and the Confederacy.—The line of separation between the states then became the Potomac River, the Ohio River, and a line across southern Missouri and Indian Territory to New Mexico. Along this line the troops of the Union were drawn up in many places under many commanders. Yet there were in the main but three great armies. That of the East or Potomac under General McClellan, that of the Center or the Ohio under General Buell, that of the West or Missouri under General Halleck. In command of all as Lieutenant-General was Winfield Scott. Confronting them were the troops of the Confederacy, drawn up in three corresponding armies: that of North Virginia under Johnston and Lee, that of the Cumberland under Albert Sidney Johnston, and that of the trans-Mississippi under McCulloch and Price.

Yielding to the demand of the North for the capture of Richmond before the Confederate Congress could meet there (July 20, 1861), McDowell went forth with thirty-eight thousand three-months volunteers to the ever memorable field of Bull Run.

The Union Successes in the Southwest.—But the serious campaigning did not begin until January, 1862. Then the whole line west of the Alleghanies (made up of the armies of Ohio and Missouri), turning or Pittsburgh as a center, swept southward, captured Forts Henry and Donelson, defeated the Confederates at Shiloh, captured Corinth, took Island Number 10, and drove them from Fort Pillow. Meantime Farragut entered the Mississippi from the Gulf, passed Forts Jackson and St. Philip, captured New Orleans, and sent Commodore Davis up the river to take Memphis. Memphis fell June 6, 1862, and, save for Vicksburg, the Mississippi was open for navigation. When the year closed the Confederates had been driven to the east into the mountains of Tennessee, where, December 31, 1862 to January 2, 1863, was fought the desperate and bloody battle of Murfreesboro. The Union troops won, and the Confederate army fell back to Chattanooga.

The Peninsular Campaign Favors Confederate Arms.—With the Army of the Potomac meantime all had gone ill. The affair at Bull Run in July, 1861, had been followed by the transfer of the army to McClellan. But McClellan wasted time, wore out the patience of the North, and forced Lincoln to issue General Order Number One for the forward movement of all armies on February 22, 1862. Obedient to this McClellan began his Peninsular Campaign against Richmond, was out-generaled by Lee, and in the second battle of Bull Run suffered so crushing a defeat that Lee ventured to cross the Potomac and enter Maryland, and encountered McClellan, on the field of Antietam. In that battle Lee was beaten and fled across the Potomac. But McClellan failed to follow up the victory and was removed, the command of the Army of the Potomac passing to Burnside. Burnside led it across the Potomac and the Rappahannock and on December 13, 1862, lost the battle of Fredericksburg. For this he was replaced by Hooker, who, May 1-4, 1863, fought and lost the battle of Chancellorsville.

The Turning Point of the War.—Lee now again took the offensive, crossed the Potomac, entered Pennsylvania, and at Gettysburg met the Army of the Potomac under Meade. On that field was fought the decisive battle of the war. Then (July 1-4, 1863) the backbone of the Confederacy was broken, and the two armies returned to their old positions in Virginia.

While Meade was beating Lee at Gettysburg, Grant captured Vicksburg, July 1-3, 1863. For this he was sent to command the army of Rosecrans, then besieged by Bragg at Chattanooga. Again success attended him, and in November he stormed Lookout Mountain, defeated Bragg in the famous "Battle above the Clouds," and drove him in disorder through the mountains. For these signal victories he was raised to the rank of Lieutenant General in 1864, and placed in command of the armies of the United States.

That year is memorable for the great march

of Sherman to the east from Chattanooga to the sea, for the victories of Sheridan in the valley of the Shenandoah, for the Wilderness Campaign of Grant, the shutting up of Lee in Richmond, and by the re-election of Lincoln. His competitor was General McClellan, whom the northern Democrats put forward on the platform that the war was a failure, and that peace should be made with the South. In the spring of 1865 came the retreat of Lee from Richmond, and, on April 9, his surrender at Appomattox Court House.

THE AMERICAN CIVIL WAR, 1861-1865

Causes of the War	Influencing Events	Results of the War
Real, but remote:	The invention of the cotton gin, 1793.	
(1) The doctrine of popular sovereignty. Different constructions of the Constitution.	Fugitive slave laws, 1793 and 1850. Protective tariff laws. Missouri compromise, 1820. Nullification act in South Carolina, 1832.	The Union was preserved. Slavery was abolished.
(2) Slavery. Different systems of labor in the North and the South.	Annexation of Texas, 1845. Omnibus bill, 1850. Kansas-Nebraska bill, 1854. Dred Scott decision, 1857.	Secession as a working program was shown to be impracticable.
(3) Lack of intercourse between the North and the South.	Personal liberty bills, 1857. John Brown raid, 1859. Anti-slavery papers, books, and speeches.	The war cost the lives of nearly one million able-bodied men.
(4) The increase of territory.	New England Anti-Slavery Society was organized, 1832.	The national debt was increased to $2,750,000,000.
Immediate:	Anti-slavery parties:	
The secession of the states.	Liberty party, 1840-1848. Free-Soil party, 1848-1856. Republican party, 1854.	An incalculable amount of property was destroyed.

CAMPAIGNS AND BATTLES

Lincoln Assassinated, and Beginning of Reconstruction.—On April 14, 1865, Lincoln was assassinated and Andrew Johnson became president. With the succession of Johnson the era of reconstruction, political and social, begins. The outcome of political reconstruction was the thirteenth, fourteenth, and fifteenth amendments to the Constitution of the United States, the impeachment of Andrew Johnson, and a long list of acts to protect and assist the freedmen of the South. The outcome of social reconstruction was the rise of the Ku Klux Klan, the passage and use of the Force Act, and the dreadful condition of affairs which ruined the South for a decade.

In the North the effect of such measures was to split the Republican party and put seven presidential candidates in the field in 1872. One represented the Temperance party; another the Labor party, denouncing Chinese labor and the non-taxation of Government land; a third was the Liberal Republican, demanding union, amnesty, and civil rights, accusing Grant of packing the Supreme Court in the interests of corporations, and calling for a repeal of the Ku Klux laws. The Liberal

Republicans having chosen Horace Greeley as their candidate, the Democrats accepted and indorsed him. But he pleased neither party, and the discontented Liberals and the discontented Democrats each chose a candidate of their own. The Republicans nominated Grant and elected him.

Election of Hayes Decided by an Electoral Commission.—His second term (1873-1877) was the nadir of our politics, both state and national, and ended with the disputed election and the rise of the Independent or "Greenback party," demanding the repeal of the act for the resumption of specie payments and the issue of the United States "greenback" notes, convertible into bonds, as the currency of the country. Double returns and doubtful returns from the Southern states put the votes of thirteen electors in dispute. As the House was Democratic and the Senate Republican, the joint rule under which the electoral votes had been counted since 1865 could not be adopted. A compromise was necessary, and on January 29, 1877, the Electoral Commission of five Senators, five Representatives, and five judges of the Supreme Court was created to decide on the doubtful returns. Of the fifteen, eight were Republicans and seven Democrats, and by a strict party vote the thirteen electoral votes were given to the Republicans and Rutherford B. Hayes declared elected.

Resumption of Specie Payments by the Government.—The memorable events of his term (1877-1881) were the resumption of specie payments on January 1, 1879; the passage of the Bland Silver Bill, restoring the silver dollar to the list of coins, making it legal tender, and providing for the coinage of not less than two million nor more than four million each month; and the rapid growth of the National or Greenback Labor party. Hayes was followed in 1881 by James A. Garfield, whose contest with the Senators from New York over the distribution of patronage led to his assassination by the hand of a crazy applicant for office. Chester A. Arthur then became President, was followed in 1885 by Grover Cleveland, who was succeeded in 1889 by Benjamin Harrison, who was in turn succeeded in 1893 by Grover Cleveland.

The presidential campaign of 1896 was one of the most exciting and important that has ever taken place. It was a contest respecting principles, and party platforms never received more attention. The amount of financial and political literature distributed and read was enormous, and political speeches, almost without number, were delivered. The coöperation of very many gold standard Democrats greatly increased the Republican strength and McKinley and Hobart were elected by a large majority of the electoral votes and by a plurality of over six hundred thousand of the popular vote.

McKinley and the Spanish-American War.—The administration of President McKinley was notable in many respects, and marked a new era in the foreign policy of the United States. Chief of the events was the Spanish-American war, which was precipitated in 1898, largely through the cruel treatment of the Cuban people by the mother country, Spain. Public opinion in the United States had been much divided in regard to the Cuban difficulties, but the division was in no sense sectional and a majority believed that war was not only justifiable but inevitable.

On February 15, 1898, the United States battleship *Maine* was destroyed in Havana harbor, and many believed this to have been the work of the Spaniards. Thereupon a congress was held, and a resolution passed demanding the withdrawal of Spain from Cuba. But before the message could be delivered, the American minister in Madrid received his passports and the Spanish government declared war. On April 22, Rear-Admiral Sampson began the blockade of Havana and the northern coast of Cuba with his North Atlantic squadron.

Meanwhile Dewey, who had been stationed at Hong-Kong with the American squadron, was ordered to begin operations, and sailed to Manila Bay in the Philippines. He entered Manila Bay early Sunday morning, May 1, 1898. The Spanish fleet lying in the harbor was protected by the guns of the batteries at Cavité, a few miles from Manila.

The Spaniards knew that he had left Hong-Kong, but he came sooner than he was expected and caught them unawares. He had planned to do this so that he might choose his own time for attack. As soon as he reached Manila Bay he opened upon the Spanish fleet a terrible fire of shot and shell. His fire was answered vigorously from the war vessels and the shore batteries, but the guns of the enemy were not well aimed and their shot did little damage. After a sharp fight of about two hours Dewey withdrew his fleet, in order, it is said, to give his men time for breakfast, but more likely to see how his ammunition was holding out.

After three hours he returned to the attack. By this time most of the Spanish vessels were in flames. An hour later the Spanish batteries "were silenced and the ships sunk or burned and deserted." In the conflict the Spaniards lost every vessel and hundreds of men were killed, wounded, and missing. No American was killed and but seven wounded; while no American vessel was seriously damaged.

The battle of Manila is one of the great naval actions of history; never before had so much been won with so little loss of life and ships. Congress made Dewey a Rear Admiral, gave him a vote of thanks, and voted him a sword. Soon after the war he was made Admiral, the highest rank in the navy.

About the same time the Spanish Admiral, Cervera, had left the Cape Verde Islands en route for Santiago, where he arrived on May 19. Strict watch was kept by Sampson to prevent the escape of the enemy, and the *Merrimac* was sunk at night to block the Spanish squadron in the harbor, but the ship drifted too far to prevent Cervera's exit. This difficult feat was intrusted to Ensign Richmond P. Hobson and six men. They performed their dangerous task, notwithstanding a severe fire from the Spanish land batteries. They were captured, but Admiral Cervera was so moved by their bravery that he sent word to the Americans that they were safe and would be well treated.

SUMMARY OF SPANISH-AMERICAN WAR, 1898

Causes

Underlying:

Sympathy for the oppressed Cubans. The "reconcentrados," people driven into the towns by Weyler, died by thousands, and Americans who aided them are arrested and their property destroyed.

The proximity of Cuba and its geographical position make its situation of great importance to the United States.

Destruction of American property.

Publication of a letter of the Spanish Minister, in which he speaks slightingly of President McKinley.

Immediate:

The blowing up of the battleship *Maine*.

Treaty and Results

The Treaty of Paris, December 10, 1898, stipulated as follows:

Spain gives up title to Cuba.

Spain cedes Porto Rico, Guam and the Philippines to the United States.

The United States gives Spain $20,000,000.

The direct cost of the war to the United States is about $130,000,000.

Soldiers killed, 430. A large number die of disease.

The United States becomes the guardian of Cuba.

An increase in our navy and standing army.

The war in the Philippines.

The question of territorial expansion in our politics.

LAND AND SEA ENGAGEMENTS

THE NAVY					
Manila Bay, Philippine Islands (May 1, 1898). American Vessels: *Olympia, Baltimore, Raleigh, Boston, Concord, Petrel.* Spanish Vessels: *Reina Cristina, Castella, Don Antonio de Ulloa, Isla de Luzon, Isla de Cuba, General Lezo, Marquis de Duero, Cano Velasco, Isla de Mindanao, Sandoval, José Garcia, Leyte* and torpedo boat *Barcelona.*	American Commander: **Geo. Dewey.** Spanish Commander: Admiral Montijo.	American Casualties: Seven men slightly injured. No damage to ships. Spanish Casualties: All ships destroyed, 450 men killed and wounded.			
Bombardment of Cienfuegos, Cuba (May 11, 1898).	By torpedo boat *Winslow.*	1	11	....	....
Bombardment of San Juan (May 12, 1898)	**Admiral Sampson.**	1	7	....	....
Before Santiago (July 3, 1898) American Vessels: *Brooklyn, Texas, Oregon, Iowa, Gloucester.* Spanish Vessels: *Almirante, Oquendo, Christobal Colon, Vizcaya, Infanta Maria Teresa,* and torpedo boats *Pluton* and *Furor.*	American Commander: **Winfield Schley.** Spanish Commander: Admiral Cervera.	American Casualties: One man killed. *Brooklyn* struck thirteen times, *Texas* once, but neither badly damaged. Spanish: All ships destroyed, more than 600 men killed and wounded, and rest surrendered.			

The total number of vessels captured from Spain during the war of 1898 was 58.

On June 21, Major-General Shafter arrived off Santiago and successfully landed his troops at Baiquiri, and three days later the Spaniards were driven back from Sevilla. General Shafter then began his attack on Santiago, whither the Spaniards had retreated. Operations began on July 1. The severest fighting took place at San Juan Hill and El Caney, a garrisoned post, where a body of five hundred Spaniards offered a desperate resistance for some hours. By sundown the hills on which the enemy were posted, including San Juan, were occupied by the Americans. The attacking force consisted of regular infantry and dismounted cavalry, with an irregular corps of mounted men known as the Rough Riders. The latter, under the command of Colonels Leonard Wood and Roosevelt, took a prominent part in the fight. On July 4 the city was summoned to surrender, but without success. In the meanwhile Admiral Cervera's squadron had been ordered to sea by the Madrid government. He accordingly left Santiago harbor the same day at nine a. m. with the object of

effecting its escape by keeping close to the western shore. The American fleet, temporarily under Schley's command, at once engaged the Spaniards, and by two o'clock succeeded in burning, beaching, or capturing all the enemy's vessels. After this Santiago surrendered, July 17, and Spain sued for peace. It was arranged that Spain should evacuate Cuba, should cede Porto Rico to the United States, as well as her islands in the Antilles, and one of the Ladrones, and should leave the United States in the possession of Manila. In 1899 a treaty was signed, and Spain evacuated Cuba, the Philippines, and other islands for an indemnity of twenty million dollars.

Insurrection in the Philippine Islands.—A day or two after the final vote on the treaty a body of Philippines under Amilio Aguinaldo, a native of great ability, attacked the American defenses at Manila. The next day the Americans returned the attack, and for nearly a year there was a resistance to the American rule on the part of the tribes which Aguinaldo represented. These tribes belonged to the Tagals, a Malay race. They are in a minority as regards the whole population, but are among the most intelligent. By the close of the year 1899 the organized resistance on the part of the Tagals appeared to be nearly ended, and the army of Aguinaldo reduced to marauders and bandits, and the insurrection against the authority and sovereignty of the United States was ended in July, 1902, after the capture and surrender of the insurgent leader.

Assassination of McKinley and Succession of Roosevelt.—Shortly after his re-election to a second term, on September 6, 1901, the country was shocked by the assassination of President McKinley by an anarchist named Czolgosz. This was the third time in the history of the country that the chief executive was stricken down by the hand of an assassin. The Vice-President, Theodore Roosevelt, then succeeded to the presidency and continued, in all essential details, the policy of his lamented predecessor.

Under President Roosevelt, a champion of administrative reform and the regulation of commercial trusts, the status of Cuba was settled; progress was made in the Philippines; the navy was very greatly strengthened; the Isthmian Canal question was solved in favor of the Panama route, and the Republic of Panama recognized; and the President reasserted with emphasis the Monroe Doctrine as the key to foreign policy. The Alaska boundary was fixed by a mixed commission. The United States took part with the European powers in armed intervention at Peking in 1899; and an arbitration treaty with Great Britain and other countries was arranged for.

In a second term (1905-1909) President Roosevelt maintained his popularity by the same policy. In 1906 an insurrection broke out in Cuba, and in October American troops again took possession of the island. When confidence had been restored the United States authorities withdrew.

President Taft and the Rise of the Progressives.—In 1908 the Republican, Taft, defeated Bryan, the Democratic candidate. Mr. Roosevelt had refused to be a candidate again and was instrumental in securing Mr. Taft's nomination. President Taft was elected on a Rooseveltian programme of anti-trust legislation and promises of a reduced tariff. In 1910-1911 attempts were made at a Reciprocity of Duties Treaty with Canada, so as to establish freer trade between the two countries. The Canadian general election of 1911 gave an emphatic negative to the proposal.

During the latter part of 1912 a renewed insurrection in Mexico brought about strained diplomatic relations with that country.

In Ohio, Minnesota, and Indiana, however, Democratic governors were elected, and these results pointed to a political reaction in the West, largely owing to supposed inequities in the tariff and to the dominance of trusts.

In 1910 an "insurgent" or progressive section, to which Mr. Roosevelt adhered, formed itself within the Republican party; and the state elections in November resulted in a Democratic triumph without a parallel since that of the year 1890.

Democrats Restored to Power under Leadership of Woodrow Wilson.—In 1912 Woodrow Wilson won the presidency on a Democratic programme, having a clear majority over the two Republican ex-presidents (Roosevelt and Taft) opposed to him. His election was fought chiefly on the tariff question, his main argument being that some industries were receiving unfair protection at the expense of others.

On May 31, 1913, shortly after the inauguration of President Wilson the Seventeenth Amendment to the Constitution of the United States, providing for the direct election of Senators by the people of the states, instead of by their respective legislatures, became effective. On October 3, of the same year, the Underwood Tariff Act became a law. Following this, on December 23, the Currency and Banking Bill, providing regional reserve banks throughout the country, was signed.

In 1914 the continued insurrectionary conditions in Mexico led to the seizure of the custom house at Vera Cruz by a United States fleet, resulting in an American loss of eighteen marines killed and seventy wounded. Subsequently diplomatic representatives of the republics of Argentina, Brazil, and Chile (popularly known as the "A B C powers") offered their services as mediators, were accepted by the United States and the troops withdrawn. The temporary lull, however, thus brought about was soon succeeded by a series of struggles between the provisional Mexican government and the insurrectionists, led by Francisco Villa, which have ever since continued with little abatement. In 1916 the border raids of the Mexican bandits resulted in so many outrages upon American lives and property that the President was compelled to order United States troops to the Rio Grande for the protection of our citizens, and finally a detachment under General Pershing was sent into Mexican territory.

The important La Follette Seaman's bill, to promote the welfare of American seamen and provide for their safety at sea, was approved

PRESIDENT WILSON LEAVING THE EXECUTIVE OFFICES

March 4, 1915; and, in the same year (February 20), the Panama-Pacific Exposition was opened at San Francisco. On November 12, the United States assumed a protectorate of the Republic of Hayti.

During 1916 the Republic of Santo Domingo likewise passed under an American protectorate and the Rural Credits Bill became a law, whereby a system of Farm Loan Banks was created.

From the very beginning of the European war the administration of President Wilson was brought face to face with numerous intricate and several critical diplomatic situations growing out of that titanic conflict. The relationship of the United States, as a neutral nation, to the belligerent countries engaged in this war gave rise to more difficult and significant issues than any other president was compelled to meet since the time of Lincoln, if indeed, it has not been unprecedented in our entire history.

President Wilson Re-elected and His Policies Approved.—At the national election, in November, 1916, President Wilson was re-elected over his opponent, Charles E. Hughes. Following his re-election (December, 1916) the President proffered the services of this government to the belligerent powers of Europe in an effort to re-establish peace between these great contending coalitions. In spite of foreign complications, the year 1916 closed a period of unparalleled industrial and commercial prosperity for the United States, and more than ever confirmed its position as a great world power, with an immense field of new possibilities and corresponding duties.

On January 2, 1917, Congress re-assembled and began the consideration of important questions of national defense, railroads, and foreign policy growing out of the European war. In February, diplomatic relations were severed by the United States with Germany, and was succeeded in March by a declaration of armed neutrality on the part of our government.

Meanwhile great activity characterized all departments of the national government along lines of military preparedness, supported by unprecedented appropriations by Congress.*

The supreme national industrial event of the Wilson administration, however, was the opening of the Panama Canal for navigation on August 14, 1914, and its use since that time as an instrumentality of world traffic.

PANAMA CANAL.—The Canal is about fifty miles in length from deep water in the Caribbean Sea to deep water in the Pacific Ocean. The channel ranges in width from three hundred to one thousand feet. The average bottom width of the channel in this project is six hundred and forty-nine feet, and the minimum width is three hundred feet. The Canal has a minimum depth of forty-one feet.

Harding Elected President.—The presidential and congressional elections in November, 1920, turned very largely on policies and issues growing out of the World war. The results were overwhelmingly Republican. Warren G. Harding, Republican, was elected President over James M. Cox, Democrat, and both branches of Congress returned large Republican majorities. Harding and Coolidge became President and Vice-President, March 4, 1921.

Election of 1924—At the regular presidential election in November, 1924, President Coolidge was opposed by John W. Davis, Democrat, but was swept into office by a tremendous majority. He was inaugurated, with simple ceremonies, March 4, 1925.

* See under Great Foreign Wars, page 698, for additional details concerning the entrance of the United States into the European War, the chief events of that war, its conclusion and the peace conference immediately following.

The outstanding accomplishments of the Coolidge administration thus far (March, 1926) have been the revision of the Federal Incom-Tax law, and our declaration of policy in favor of a Permanent Court of International Justice. The latter was first drafted by the Advisory Committee of Jurists at The Hague, Holland, in 1920, and subsequently adopted, with some modifications, by the Assembly of the League of Nations in Geneva, Switzerland.

A vigorous opposition to the Court was developed in the United States Senate based chiefly on the so-called "Monroe Doctrine," which has brought this famous political creed again to the fore in all discussions of the international relations of the United States.

Stated briefly, the Monroe Doctrine has never been sanctioned by an act of Congress, and therefore forms no part of the municipal law of the United States, nor of international law. However, the Doctrine has been frequently cited by several Presidents as an ex pression of our foreign policy and been sup ported through the approval of the people. It was first officially propounded by President Monroe in his annual message to Congress on December 2, 1823; and is set forth in two paragraphs of this message:

Paragraph 7.—Referring to a claim of Russia to territory along the northwest coast of North America, President Monroe declared:

"In the discussions to which this interest has given rise, and in the arrangements by which they may terminate, the occasion has been judged proper for asserting as a principle, in which the rights and interests of the United States are involved, that the American continents, by the free and independent condition which they have assumed and maintained are henceforth not to be considered as subjects for future colonization by any European powers."

Paragraphs 48 and 49.—Aimed at the "Holy Alliance":

"In the wars of the European powers in matters relating to themselves we have never taken any part, nor does it comport with our policy so to do. It is only when our rights are involved or seriously menaced that we resent injuries or make preparation for our defense. With the movements in this hemisphere we are, of necessity, more intimately connected, and by causes which must be obvious to all enlightened and impartial observers. The political system of the allied powers is essentially different in this respect from that of America.
* * *

"We owe it, therefore, to candor and to the amicable relations existing between the United States and those powers to declare that we should consider any attempt on their part to extend their system to any portion of this hemisphere as dangerous to our peace and safety. With the existing Colonies or dependencies of any European power we have not interfered and shall not interfere. But with the governments who have declared their independence and have maintained it and whose independence we have, on great consideration and on just principles, acknowledged, we could not view any interposition for the purpose of oppressing them or controlling in any other manner their destiny, by any European power, in any other light than as the manifestation of an unfriendly disposition toward the United States."

The "Doctrine's" principle was not original with Monroe, it was enunciated by John Quincy Adams to the British Minister at Washington, on the occasion of Russia's suggestion that the United States should join the "Holy Alliance".

The "Holy Alliance," a league of the sovereigns of Europe, proposed by the Emperor of Russia, September 26, 1815, founded upon the idea that religion should be made the basis of politics, the affairs of Europe to be regulated by the principles of Christian charity. Alexander of Russia, Francis of Austria, Frederick William of Prussia promulgated the treaty in the *Frankfort Journal*, February 2, 1816; the kings of England and France acceding in 1818.

Ex-President Jefferson, also, under date of October 24, 1823, advises Monroe:

"Our *first* maxim should be never to entangle ourselves in the broils of Europe; our *second*, never to suffer Europe to intermeddle with Cis-Atlantic affairs."

The principle is clearly foreshadowed by Washington in his farewell address to the people of the United States, September 19, 1796.—

Paragraph 36. "The great rule of conduct for us, in regard to foreign Nations is, in extending our commercial relations, to have with them as little *Political* connection as possible. . . ."

Paragraph 37. "Europe has a set of primary interests, which to us have none, or a very remote relation. Hence she must be engaged in frequent controversies, the causes of which are essentially foreign to our concerns. . . ."

Paragraph 40. "'*Tis our true policy to steer clear of permanent alliances, with any portion of the foreign world;* . . ."

The World War Foreign Debt Commission, in 1925, developed the following facts and figures relative to the international finances of the United States growing out of the war:

During the war Great Britain borrowed just under £900,000,000 from the United States. Since the war this sum, which meanwhile had increased, by the addition of the interest, to approximately £1,000,000,000, has been funded, and is now being repaid at the rate of £30,000,000 per year.

The United States also made advances to the amount of £1,891,000,000, to the Allies, as follows:

To Great Britain	£863,000,000
To France	570,000,000
To Italy	318,000,000
To Russia	37,000,000
To Belgium	68,000,000
To Serbia	5,000,000
To Czecho-Slovakia	6,000,000
To Others	24,000,000

(1) *Loans to Allies.* In addition to the net expenditure of the war, shown above, Great Britain also advanced a *further sum* of £1,739,000,000 to various Allied Powers as follows:

To France	£434,000,000
To Italy	413,000,000
To Russia	568,000,000
To Belgium	87,000,000
To Dominions	171,000,000
To Other Allies	66,000,000

France during the war, borrowed £1,000,000,000 from Great Britain and the United States of America, and loaned £309,440,000 to other Allies.

(2) *National debts.* Great Britain's pre-war debt (1914) stood at £700,000,000; by 1919 it had risen to £6,750,000,000, an increase of £6,050,000,000. France's pre-war debt was £132,000,000, and had risen in 1919 to £5,400,000,000, an increase of £5,268,000,000. The United States' pre-war debt was £260,000,000, post-war (1919), £5,750,000,000, an increase of £5,490,000,000. Italy's pre-war debt was £580,000,000, post-war (1919) £2,200,000,000, an increase of £1,620,000,000.

GOVERNMENTS OF THE UNITED STATES, BRITISH EMPIRE,

UNITED STATES

Form of Government: Republic. The general plan of the government of the United States is determined by the Constitution. The central government is limited to the exercise of the powers specifically enumerated in the Constitution, or implied therein, while the remaining governmental powers, not denied to the states by the Constitution, are reserved to the states. The general government is in three fairly well defined parts, the legislative, executive, and judicial.

I. Constitution.—The present Constitution was adopted September 17, 1787.

Ratification of the Constitution.—The Constitution was ratified by the thirteen original States in the following order:

Delaware, Dec. 7, 1787, unanimously.
Pennsylvania, Dec. 12, 1787, vote 46 to 23.
New Jersey, Dec. 18, 1787, unanimously.
Georgia, Jan. 2, 1788, unanimously.
Connecticut, Jan. 9, 1788, vote 128 to 40.
Massachusetts, Feb. 6, 1788, vote 187 to 168.
Maryland, April 28, 1788, vote 63 to 12.
South Carolina, May 23, 1788, vote 149 to 73.
New Hampshire, June 21, 1788, vote 57 to 46.
Virginia, June 25, 1788, vote 89 to 79.
New York, July 26, 1788, vote 30 to 28.
North Carolina, Nov. 21, 1789, vote 193 to 75.
Rhode Island, May 29, 1790, vote 34 to 32.

Amendments.—Congress may, by two-thirds vote of both Houses, propose amendments to the Constitution, or upon application of the Legislatures of two-thirds of the several States, shall call a convention for proposing amendments, which, in either case, must be ratified by the Legislatures of three-fourths of the several States, or by conventions in three-fourths thereof.

II. The President.

How Elected.—The several steps in the election of the President are:

State Electors are chosen at a General Election held on the *Tuesday following the first Monday of November* of every fourth year; the number of Electors of each State being equal to the number of Senators and Representatives to which the State is entitled in Congress.

The Electors meet in their respective States on the *second Monday in January* following their election, and vote by ballot for President and Vice-President; and at the same time make certificates of their vote and transmit the same to the President of the Senate.

The Senate and House of Representatives meet together on the *second Wednesday of February* next ensuing, and count the votes of the State Electors, when, if there is an election, the President of the Senate declares who is elected President and Vice-President.

In case there is no choice by the State Electors, the President is elected by the House of Representatives from the three candidates who received the most electoral votes for President; in which election the vote is taken by States, each State having but one vote, and a majority of all the States being necessary to a choice.

Term of Office.—Four years.

Eligibility.—A natural born citizen; resident of the United States fourteen years; minimum age thirty-five years.

BRITISH EMPIRE

Form of Government.—Monarchy in form, but republic in practice. The monarchy is constitutional and limited.

The British Empire consists of the United Kingdom of Great Britain and Ireland, the Empire of India, and the British Dominions beyond the Seas, including the self-governing Dominions, and the Crown Colonies, Protectorates, and other Dependencies, the whole forming one Empire.

I. Constitution.—The British Constitution is mainly unwritten and customary, but its development is marked by certain outstanding and fundamental laws, of which the principal are: Magna Charta, 1215; the Habeas Corpus Act, 1679; the Act of Settlement, 1701; the Act of Union with Scotland, 1707; the Act of Union with Ireland, 1800: and the Parliament Act, 1911. The first secured annual parliaments and the equal administration of justice; the second established the liberty of the person; the third provided for the Protestant succession to the throne; the fourth and fifth created the United Kingdom; and the last enabled the Commons to pass certain Acts without the adherence of the other Chamber.

II.. The Sovereign.

How Designated.—The King's legal title rests upon the Act of Settlement, in 1701, under William III., by which the succession to the Crown of Great Britain and Ireland was settled on the Princess Sophia of Hanover and the "heirs of her body, being Protestants." The throne is hereditary in the English house of Saxe-Coburg-Gotha with mixed succession, the sons of the Sovereign and their descendants having precedence of daughters, but daughters and their descendants preference over lateral lines. The Sovereign is designated King (or Queen) of Great Britain and Ireland, and Emperor (or Empress) of India.

Term of Office.—Holds office for life, by hereditary title, and cannot be removed.

GERMANY, AND FRANCE ARRANGED IN PARALLEL COLUMNS

GERMANY

Form of Government. — Germany, according to the Constitution of July 31, 1919, is a Federated Republic, bearing the name German Republic, under the elective presidentship of the whole German people.

I. Constitution.

Adoption. — Present Constitution adopted July 31, 1919. The Constitution was adopted by the National Assembly at Weimar, and became the basic law of the German Republic on August 13, 1919.

Amendments. — Amendments to the Constitution can be proposed by either of the legislative bodies, and be passed by ordinary legislative process, requiring for their passage a two-thirds majority of the votes of the Reichstag and National Council; or, may be determined by a majority vote of qualified voters through a referendum.

II. Chief Magistrate, styled the National President.

Term of Office. — Holds office for seven years, and may be re-elected.

Qualifications. — Every German who has completed his thirty-fifth year. Other details may be enacted by national legislation.

FRANCE

Form of Government. — France, since the overthrow of Napoleon III., in 1870, has been a republic governed by a President and two Chambers under the Constitution.

I. Constitution.

Adoption. — Present Constitution adopted February 25, 1875. It has undergone but slight modifications. The present French Constitution remains a mixture of monarchical and republican institutions, and it has fully maintained its strong and old-established centralization. The Constitution of 1875 is based on universal suffrage. It was revised in 1875, 1884, 1885 and 1889.

Amendments. — Whenever the two Houses agree that revision is necessary, and also agree upon particular points that should be revised, the National Assembly, composed of the Senate and the Chamber of Deputies, sitting as one body, convenes at Versailles, and acts upon the amendments proposed, the vote of an absolute majority being decisive. The National Assembly also elects the President of the republic.

II. Chief Magistrate or President of the Republic.

Term of Office. — Elected for seven years by the National Assembly, and is re-eligible.

The National Assembly meets for the purposes of this election, as for the revision of the Constitution, at Versailles. The revision of the Constitution and the election of President are its only functions.

Qualifications. — Must be a citizen, not a member of any family which has occupied the throne of France.

GOVERNMENTS OF THE UNITED STATES, BRITISH EMPIRE,

UNITED STATES

Salary.—Fixed by law at $75,000 per year.

Powers and Duties of the President.—Commander-in-Chief of the Army and Navy. Communicates with Congress by message. Approves or disapproves Acts of Congress. Makes treaties with advice and consent of the Senate. Appoints Public Officers with the advice and consent of the Senate. Commissions Public Officers of the United States. Grants reprieves and pardons for offenses against the United States.

The Vice-President.—Elected by State Electors the same as the President; or by the Senate, in case there is no choice by the State Electors. Term of office same as for the President. Eligibility same as required of the President. Salary fixed by law (1925) at fifteen thousand dollars per year.

The Presidential Succession.—In case of the removal, death, resignation, or inability of the President, the Vice-President takes the President's place.

In case of the removal, death, resignation, or inability of both President and Vice-President the heads of the Executive Departments succeed to the Presidency in the order in which the Executive Departments are named below; but such officer must be constitutionally eligible to the Presidency, must have been appointed to the cabinet by the advice and with the consent of the Senate, and be not under impeachment. The Secretary of Agriculture and the Secretary of Commerce and Labor are ineligible to the presidency by reason of the fact that these two cabinet offices were created subsequent to the passage of the act of the forty-ninth Congress in which provision was made for the presidential succession.

The Executive Departments

Acts of Congress become laws:—When signed (approved) by the President; or, by his failure to make objection in writing (veto) within ten days after any act is submitted to him, unless Congress by adjournment within that time prevents its return; but Congress has power to pass a law over the President's veto by a vote of two-thirds of each House.

The Cabinet

Composed of the heads of the executive departments.

Appointed by the President with the advice and consent of the Senate.

BRITISH EMPIRE

Salary or Civil List.—The Civil List Act, 1910, gave the King $2,350,000. Provision for other members of the Royal Family, $730,000. The Prince of Wales, as the income of the Duchy of Cornwall, $435,000. The King in addition to his Civil List receives the revenues of the Duchy of Lancaster amounting to $320,000.

Powers and Duties.—Has command of the army and navy.

Parliament cannot be assembled, prorogued, or dissolved except by the express command of the Sovereign.

At the commencement of a new Parliament must deliver, either in person or by a commission authorized for that purpose, a speech declaring the cause of the summons.

Bills passed by Parliament must receive the assent of the Sovereign in order to become law.

Has legally a veto power; but, because the influence of the Executive over legislation has passed into the hands of the Ministers, the veto of the Crown has been disused since 1707.

Has power to appoint all officers in the army and navy, judges, ambassadors, colonial governors, bishops and archbishops of the Established Church, and grants all degrees of nobility.

May make treaties of any kind.

May grant pardon to any particular offender.

The Privy Council.—The King in Council is the supreme executive authority in the realm. The Privy Council meets as a whole at the beginning of a new reign and on other occasions of state and ceremony, possesses certain administrative powers, and is the Supreme Court of the Empire. Its personnel includes the royal princes and the archbishops, Members of the Cabinet and of the royal household, the Speaker of the House of Commons, the ambassadors, the principal colonial governors, colonial statesmen, certain judges, and members of both political parties who have never been in office.

The important functions of the Council are the bringing into operation by means of orders in council of the provisions of many statutes which Parliament leaves to the executive to enforce, temporarily or permanently, at such time or times as it may deem necessary and desirable. These orders have all the force and validity of law.

The Executive Departments

The Ministry

The Cabinet, or Inner Council, under the presidency of the Prime Minister, consists of Ministers, drawn from the ranks of the party in power and appointed by the Sovereign on the advice of the Prime Minister.

Members (As reconstituted in June, 1915) and their salaries.

Prime Minister and First Lord of the Treasury.....$25,000
Lord High Chancellor (and $20,000 as Speaker of the House of Lords)..... 50,000
Minister without Portfolio..... unpaid

GERMANY, AND FRANCE ARRANGED IN PARALLEL COLUMNS—Cont'd

GERMANY

Salary. — $80,000.

Responsibility. — Not subject to prosecution without the sanction of the Reichstag.

Powers and Duties. — Represents the nation in matters of international law and accredits and receives Ambassadors.

Concludes alliances and other treaties with foreign powers, with the approval of the Reichstag.

Appoints and dismisses Government officials and military officers directly and indirectly.

Has supreme command of all military forces of the nation.

May compel any constituent state to fulfill its duties to the constitution or Government.

May use armed power to maintain public security and order.

Possesses the right of pardon.

All acts of the President must be countersigned by the Prime Minister or duly qualified Government Ministers.

In case of impediment the President shall be represented by the National Chancellor. Likewise the chancellor succeeds to the duties of the President in case of a premature vacancy.

FRANCE

Salary. —$140,000.

Responsibility. — May be impeached by the Chamber of Deputies, and tried by the Senate, in case of high treason.

Powers and Duties. — Has command of the army and navy.

May convene the Chambers on extraordinary occasions.

May adjourn the Chambers at any time for a period not exceeding one month. Can close a regular session of the Chambers at his discretion after it has continued five months; an extra session when he pleases. Can with the consent of the Senate dissolve the Chamber of Deputies even before the expiration of five months. This puts an end to the session of the Senate also, but not to its life. The President must order a new election in case of dissolution.

At the commencement of a new session of the Chambers the President of the republic sends a message, which is read by one of the Ministers.

Bills passed by the Chambers must be signed by the President, and countersigned by one of his Ministers.

Has no veto power, but is authorized to demand a reconsideration of any measure by the Chambers.

Has power to appoint and remove all officers of the public service, subject to the countersignature of the Minister whose department is affected in each case.

May make treaties of peace, alliance and commerce, but cannot declare war without the advice of the Chambers.

Has power to grant pardons.

Succession. — In case of his death, resignation, or removal, the Council of Ministers act until the National Assembly can meet and elect a new President.

The Executive Departments

The administration of the Government consists of the National Chancellor and the Cabinet Ministers.

Imperial Chancellor. — He has no counterpart in any other constitutional government. He is the President's responsible proxy, controlling the politics of the Republic.

Appointment and Tenure of Office. — Both Chancellor and Ministers must have the confidence of the Reichstag; but are appointed and dismissed by the President.

The Executive Departments

Powers and Duties. — As a Cabinet, the Ministers represent the administration in the Chambers; as a Council, they exercise a general oversight of the administration of the laws, with a view of giving unity of direction to the affairs of the State. The President may be present at all Council meetings.

Cabinet and Council of Ministers. — Both the Cabinet and the Council consist of the same persons. The Cabinet is a political body; the Council, an administrative body.

Appointment. — Chosen by the President, generally from among the members of the Chambers.

GOVERNMENTS OF THE UNITED STATES, BRITISH EMPIRE,

UNITED STATES

Salary.—Secretary of State, $15,000; all other cabinet members (1925), fifteen thousand dollars annually.

HEADS OF DEPARTMENTS

Department of State.—Has charge of foreign affairs.

Treasury Department.—Has charge of fiscal affairs.

Department of War.—Has charge of the Army and military affairs.

Department of Justice.—Has charge of the legal affairs of the Government.

Post-office Department.—Has charge of postal affairs.

Navy Department.—Has charge of the Navy and naval affairs.

Department of the Interior.—Has charge of domestic affairs, including public lands, pensions, patents, Bureau of Education, etc.

Department of Agriculture.—Has charge of agricultural affairs, including Weather Bureau, etc.

Department of Commerce.—Has charge of domestic and foreign affairs, relating to commerce, transportation, etc.

Department of Labor.—Has charge of labor welfare, immigration, naturalization, wages, etc.

Tenure of Office.—Dependent upon the will or favor of the President.

Powers and Duties.—As stated above, but under the direction of the President.

III. Congress.—Consisting of both the Senate and the House of Representatives as co-ordinate bodies.

Duration.—The term of each Congress is for two years, commencing March 4th of the odd years.

Regular Sessions.—Annual, beginning the first Monday in December.

Special Sessions.—At the call of the President.

Membership.—Each House is the judge of the elections and qualifications of its own members.

Congress has General Powers of Legislation.—To provide for the raising and disbursement of revenue. To borrow money; to coin money and to regulate its value; and to fix the standard of weights and measures. To regulate foreign and interstate commerce. To declare war, and to maintain an army and navy. To establish post-offices and post roads. To enact

BRITISH EMPIRE

Lord President of the Council	$10,000
Lord Privy Seal	unpaid
First Lord of the Admiralty	22,500
Secretaries of State:	
Home Affairs	25,000
Foreign Affairs	25,000
Colonies	25,000
War	25,000
India	25,000
Chancellor of the Exchequer	25,000
Minister of Munitions	25,000
Secretary for Scotland	10,000
Chief Secretary to the Lord Lieutenant of Ireland	21,125
Presidents of Committees of the Council:	
Board of Trade	25,000
Local Government Board	25,000
Board of Education	10,000
First Commissioner of Works	10,000
Attorney-General	35,000
Board of Agriculture	10,000

Relations to Parliament.—The Chief of the Cabinet and of the Ministry is called the Prime Minister or Premier. He is the leader of the House of Parliament of which he is a member. He dispenses the greater portion of the patronage of the Crown. Other members of the Cabinet are the leaders of Parliament, shaping and directing the business of the Houses.

Tenure of Office.—Dependent upon the favor of the House of Commons; for if not sustained, they must all resign. When a Ministry resigns it is the function of the sovereign to call upon some statesman to form another administration. There is no restriction upon the Royal choice, but the statesman usually selected is the leader of the opposing party in one of the two Houses.

Powers and Duties.—All real authority is with the Cabinet. The executive government is nominally in the Crown, but practically in the Cabinet. The Ministers are at the heads of the administrative departments. The Sovereign does not sit with the Cabinet.

Other Ministers.—The Ministry includes a number of minor posts whose occupants have no seat in the Cabinet.

III. Parliament.—Parliament consists of two Houses, the House of Lords and the House of Commons. The Sovereign alone has the power of summoning or proroguing or dissolving Parliament, and gives the Royal Assent to measures which have passed both Houses. Unless it be dissolved by the Crown, Parliament exists five years from the date on which it was first to meet. The demise of the Crown does not dissolve Parliament, but, on the contrary, renders an immediate assembling of the two Houses necessary; and if there be no Parliament in existence, the old Parliament must reassemble, and may sit again for six months, if it be not within that time dissolved by the new Sovereign.

All British dominions are subject (except as regards taxation) to the legislation of the British Parliament; but no Act of Parliament

GERMANY, AND FRANCE ARRANGED IN PARALLEL COLUMNS — Cont'd

GERMANY

Powers and Duties. — The Chancellor presides in the Government administration, and conducts its affairs with the approval of the President.

The following are the Ministers of Government. The Prime Minister determines the line of policy and assumes responsibility therefor to the Reichstag. Otherwise, they act independently of each other, under the general supervision of the Chancellor.

Chancellor of the Empire.
Secretary for Foreign Affairs.
Imperial Home Office and *Representative of the Chancellor.*
Imperial Admiralty.
Imperial Secretary of Justice.
Imperial Treasury.
Imperial Post-Office.
Secretary for the Colonies.

And, in addition, the following presidents of bureaus:

Railways.
Imperial Exchequer.
Imperial Bank.
Imperial Debt Commission.
Administration of Imperial Railways.
Imperial Court Martial.

The Ministers must lay before the Government administration for discussion and judgment all drafts of law, all matters prescribed by the constitution, or law, and conflicting opinions concerning the functions of several Government ministers.

FRANCE

Members of the Cabinet. — Membership may vary somewhat:

Premier and Foreign Minister.
Ministers of State.
Minister of Justice and Vice-President of the Council.
Minister of War.
Minister of Marine.
Minister of the Interior.
Minister of Finance.
Minister of Agriculture.
Minister of Public Works.
Minister of Commerce.
Minister of Colonies.
Minister of Instruction and Minister of Inventions affecting National Defense.

Council of State. — Gives advice on all projects of law which the Chambers or the Government wish to submit to it, and on administrative regulations and by-laws. Its decision is final in all disputes arising in matters of administration.

Is presided over by the Minister of Justice, and is composed of Councillors, Masters of Requests, and Auditors, all appointed by the President of the republic.

Relations to the Chambers. — Are the leaders of the Chambers.

Whether members of the Chambers or not, they have as Ministers the right to attend all sessions of the Chambers and take a specially privileged part in debate.

Tenure of Office. — Dependent upon the favor of the Chambers; for, if not sustained, they must all resign.

III. The National Assembly.

The legislative functions of the Republic are vested in the National Council, which represents the several states ,and by the Reichstag or Diet which represents the German nation. The President has no veto on laws passed by these bodies. All laws for the nation must receive the votes of an absolute majority. The National Council and Reichstag must be summoned to meet every year.

Projects of legislation must be introduced by the Government or the Reichstag. The laws of the nation must be determined by the Reichstag.

III. The Chambers. — Consist of the Senate and House of Deputies.

GOVERNMENTS OF THE UNITED STATES, BRITISH EMPIRE,

UNITED STATES	BRITISH EMPIRE
patent and copyright laws. To enact uniform naturalization and bankruptcy laws. To provide for the punishment of crimes against the United States. To establish courts inferior to the Supreme Court. To provide for organizing and calling out the militia. To admit new States into the Union. To provide for the government of the Territories. To exercise exclusive jurisdiction over the District of Columbia, public lands, public buildings, forts, and navy yards. To enact all laws necessary and proper for carrying into execution all the powers vested by the Constitution in the government of the United States.	affects a colony unless that colony is specially mentioned. If the legislature of a colony enacts a law which is repugnant to an imperial law affecting the colony, it is to the extent to which it is repugnant absolutely void.
THE SENATE.—Composed of two Senators from each State (ninety-six in 1917), chosen by popular vote for six years, one-third retiring every two years.	*THE HOUSE OF LORDS.*—The House at present consists of three Princes of the Blood, two Archbishops, twenty-one Dukes, twenty-six Marquesses, one hundred and twenty-one Earls, forty-six Viscounts, twenty-four Bishops, three hundred and fifty-six Barons, sixteen Scottish Representative Peers elected for each Parliament, and twenty-seven Irish Representative Peers elected for life. The members hold their seats by virtue of hereditary title; by creation of the Sovereign; by virtue of office (English bishops); by election for life (Irish peers); by election for duration of Parliament (Scottish peers).
Qualifications.—Must be at least thirty years of age, must have been a citizen of the United States for nine years, and must be an inhabitant of the State which he represents.	*Qualifications.*—Must be at least twenty-one years of age.
Remuneration.—Members receive (1925) ten thousand dollars, with mileage.	*Remuneration.*—Receive no pay.
Organization.—The Vice-President of the United States is the President of the Senate. Is elected by the Electoral College. Votes only in case of a tie.	*Organization—Quorum.*—Three, including the Lord Chancellor; thirty for final vote on a bill. The Lord Chancellor, who is a member of the Cabinet, presides. He is appointed by mere delivery of the Great Seal to him by the Sovereign and is principal legal adviser of the Crown. His patronage is very extensive. He nominates the puisne judges and county court judges; the holder of the office may not be a Roman Catholic.
Quorum.—A majority of members.	
Committees.—Members are divided into standing committees, chosen by the Senate itself, which act in the preliminary examination, and shaping of measures to be voted on.	*Committees.*—Special committees are appointed to make investigations, and report on matters which could not be undertaken by the whole House.
Powers and Duties.—In concurrence with the House of Representatives, it makes the laws. It also has power to confirm or reject all appointments to office by the President of the United States, and all treaties. The members constitute a high court for the trial of impeachments. Elects Vice-President of the United States if regular election fails.	*Powers and Duties.*—In concurrence with the House of Commons, makes the laws, having a revising power over all bills proposed by the House of Commons, except those relating to public revenue and expenditure, which it must pass or reject without amendment. It is the highest appellate court of the United Kingdom. It may in certain cases try members of its own body; it tries any person who may be impeached by the House of Commons, and it also decides claims to the peerage.

GERMANY, AND FRANCE ARRANGED IN PARALLEL COLUMNS — Cont'd

GERMANY	FRANCE
REICHSRAT, or National Council, represents the German states in national legislation and administration. In the Council every state has at least one vote — the larger states having one vote for each million inhabitants.	*THE SENATE* is composed of three hundred members chosen by the Departments and Colonies for nine years, one-third of the members retiring every three years. Until 1884 the Senate contained seventy-five life members, the life list having been originally made up by election by the National Assembly of 1875, and vacancies being filled by the Senate itself. In 1884 this arrangement was abolished, and since that year vacancies in the life roll have been filled by ordinary nine-year Senators.
	Qualifications. — Must be a Frenchman, and at least forty years of age.
Remuneration. — Receive no pay.	*Remuneration.* — 15,000 francs ($3,000).
Organization. — The president of the Council and of its committees must be a member of the Government Administration, and may participate in their activities. A majority vote is decisive.	*Organization — Quorum.* — A majority of members. Elects its own President and Vice-Presidents.
Committees. — No state has more than one voice in committees of the Council.	*Committees.* — Each month the members are divided by lots into "Bureaux." These select all the special committees to which bills are referred, except when the House chooses itself to elect a committee.
Powers and Duties. — May advise with the Government respecting, and cooperate with the Government in preparing bills to be sent to the Reichstag. Its consent is indispensable to the validity of all legislation. Acting with the Government, it is the supreme administrative board.	*Powers and Duties.* — In concurrence with the Chamber of Deputies, makes the laws, and has in law-making the same prerogatives as the Chamber, except that bills relating to revenue originate with the Chamber. It is a court of justice for trying the President of the republic and the Ministers. It may originate, and, in concurrence with the Senate, pass resolutions and bills; but bills relating to finance must be originated by the Chamber of Deputies. Has power to bring accusations against the President of the republic and the Ministers.

GOVERNMENTS OF THE UNITED STATES, BRITISH EMPIRE,

UNITED STATES

HOUSE OF REPRESENTATIVES.—Composed (in 1917) of four hundred and thirty-five members elected every second year for two years by the people of the States in the proportion of one Representative for every 211,877 inhabitants. Each State, however, is entitled to at least one member, whatever its population.

Qualifications.—Must be at least twenty-five years of age, must have been seven years a citizen of the United States, and must be an inhabitant of the State from which he is chosen.

Organization—Quorum. A majority of members. Elects its own presiding officer, who is called the Speaker, salary fifteen thousand dollars per year.

Remuneration.—Members receive (1925) ten thousand dollars and mileage.

Powers of the House of Representatives.—Elects its Speaker (presiding officer) and its other officers. Elects President of the United States if the regular election fails. Prosecutes impeachments before the Senate. Originates all bills for raising revenue.

Committees.—Almost all the acts of the House are under the control of Standing Committees, appointed by the Speaker.

IV. The Judicial Department.

JUDGES OF THE UNITED STATES COURTS

Appointed by the President with the advice and consent of the Senate.

Tenure of Office.—During life or good behavior; but may retire on full salary after reaching the age of seventy years, and after ten years' service on the bench.

THE SUPREME COURT OF THE UNITED STATES

Members.—A Chief Justice and Eight Associate Justices.

Salaries.—Chief Justice, twenty thousand five hundred dollars; Associate Justices, each twenty thousand dollars.

Terms of Court.—One each year, beginning on the second Monday in October.

Original Jurisdiction.—In all cases affecting Ambassadors, Ministers, and Consuls. In all cases in which a State is a party.

Appellate Jurisdiction.—In cases of law and equity where the Inferior Courts have original jurisdiction, with such exceptions and regulations as Congress has made.

The Chief Justice.—Presides over the Senate when it sits as a Court of Impeachment for the trial of the President.

BRITISH EMPIRE

HOUSE OF COMMONS.—This body consists of six hundred and seventy elected members representing county, borough, and university constituencies. Roughly speaking, about one-sixth of the population are electors.

Qualifications.—Must be at least twenty-one years of age. Clergymen are disqualified from sitting as members, also English and Scottish peers, government contractors, and sheriffs and returning officers for the localities for which they act.

Organization—Quorum.—Forty members, including the Speaker. Elects its own presiding officer, who is called the Speaker, who has a residence in the Palace of Westminster, and receives a salary of $25,000 per annum.

Remuneration.—$2,000 per year (since 1911).

Powers and Duties.—May originate and, in concurrence with the House of Lords, pass resolutions and bills; but bills relating to the imposition of taxes and the granting of supplies for the service of the State must be originated in the House of Commons.

Committees.—The business of the House is almost entirely under the direction of the Ministry; however, commissions and select committees are from time to time appointed to make investigations and report on matters which could not be undertaken by the House.

IV. Judicial Departments, or Courts of Law.

Privy Council.—The Judicial Committee of the Privy Council (which hears appeals from Colonial and Indian Courts, and also from Ecclesiastical Courts) consists of the Lord Chancellor, Lord President, ex-Lords President, the Lords of Appeal in Ordinary, and such other members of the Privy Council as shall from time to time hold or have held "high judicial office." No dissenting judgments are allowed, but the Judicial Committee can grant special leave to appeal.

The English courts of law having jurisdiction in actions between parties are:

HOUSE OF LORDS

Lord High Chancellor and such peers of Parliament as are holding or have held high judicial office. This is the ultimate Court of Appeal from all the courts in the United Kingdom.

GERMANY, AND FRANCE ARRANGED IN PARALLEL COLUMNS—Cont'd

GERMANY

REICHSTAG, or National Diet, consists of the deputies of the German people, are bound only to their own conscience, and not by any orders. They are chosen on the basis of equal, direct and secret vote by all men and women over the age of twenty.

They are elected for four years.

Organization — Quorum. — A majority of members. Elects its own presiding officer, who is called the President.

Remuneration. — 3,000 marks ($750) per session, with deduction of twenty marks ($5.00) for each day's absence; they have free passes over German railways during session.

Powers and Duties. — Has power to originate and the exclusive right to determine the laws of the nation. It also exerts a controlling influence through its power to give or withhold its sanction to certain ordinances to whose validity the Constitution makes its concurrence necessary, through its right to inquire into the conduct of affairs; and in many other ways not susceptible of enumeration.

Committees. — The Reichstag and its committees may demand the presence of the National Chancellor and of any other Government minister.

FRANCE

THE CHAMBER OF DEPUTIES is composed (in 1917) of five hundred and eighty-four Deputies, distributed among the Departments and certain colonies in the proportion of one Deputy to seventy thousand inhabitants. The Deputies are chosen for a term of four years by universal suffrage, the Arrondissements serving as electoral districts.

Qualifications. — Must be a citizen of France and at least twenty-five years of age.

Organization — Quorum. — A majority of members. Chooses its own President, Vice-President and other officers.

Remuneration. — 15,000 francs ($3,000).

Powers and Duties. — May originate, and, in concurrence with the Senate, pass resolutions and bills; but bills relating to finance must be originated by the Chamber of Deputies. Has power to bring accusations against the President of the republic and Ministers.

Committees. — Each month the members are divided by lot into eleven "Bureaux," which select all the special committees to which bills are referred, except when the Chamber chooses to appoint a committee directly.

IV. Judicial Department.

The laws of the Republic take precedence of the Federated States within the scope of the Constitution of the Republic; they are compulsory on all Governments of the Republic.

A uniform system of law courts exists throughout the Republic, though, with the exception of the Reichsgericht, all courts are directly subject to the Government of the special State in which they exercise jurisdiction, and not to the National Government. The appointment of the judges is also a State and not a National function. The Republic enjoys uniform codes of commercial and criminal law.

National Supreme Court.

Reichsgericht (National Supreme Court), to which there is a right of appeal from all inferior courts, sits at Leipzig, and consists of one hundred judges, appointed by the President.

IV. Judicial Department.

The judicial system is under direct control of the government. All Judges are nominated by the President of the republic. They can be removed only by a decision of the Court of Cassation constituted as the *Conseil Supérieur* of the magistracy.

The Court of Cassation.

The Court of Cassation, which sits at Paris, is the highest court for all criminal cases tried by jury, so far as regards matters of law.

Courts of Appeal. — The highest courts are the twenty-six Courts of Appeal, composed each of one president and a variable number of members, for all criminal cases which have been tried without a jury.

GOVERNMENTS OF THE UNITED STATES, BRITISH EMPIRE,

UNITED STATES

INFERIOR COURTS

Jurisdiction.—In cases between citizens of different States. In cases in which the United States is a party. In cases of admiralty and maritime jurisdiction. In trials for crimes against the United States; but the trial of crimes must be by jury, and must be held in the State where the crime was committed.

Appeals to the Supreme Court may be had in all cases of law and equity, with such exceptions and regulations as Congress has made.

KINDS OF INFERIOR COURTS

United States Circuit Courts of Appeals.—Organized in 1891 to relieve the United States Supreme Court in Appellate Cases. Number: One in each Judicial Circuit. Members: Three judges selected from the District Courts.

Number.—One in each Judicial Circuit.

Members.—Three judges selected from the District Courts.

United States Circuit Courts.—

Number of Circuits.—Nine.

Number of Judges.—Each Circuit has two, three, or four Circuit Judges, and a Justice of the Supreme Court is assigned to each Circuit. The District Judge also may sit in a Circuit Court.

Salary of Circuit Judges.—Fixed by law at twelve thousand five hundred.

United States District Courts.—

Number of Districts.—One or more in each State. At present there are seventy-three Judicial Districts.

Salary of District Judge.—Fixed by law at ten thousand.

United States Court of Claims.—

Jurisdiction.—Claims against the United States, including all claims which may be referred to it by Congress.

Members.—One Chief Justice and four Associate Justices.

Salaries.—Chief Justice and Associate Justices, each twelve thousand five hundred dollars.

In addition to the above named courts, Congress has established courts of local jurisdiction in the District of Columbia and in the Territories.

BRITISH EMPIRE

There are two Courts of Appeal below these divisions:

Lords of Appeal in Ordinary.—Consisting of six Justices.

Court of Appeal.—Ex-Officio Judges, the Lord High Chancellor, the Lord Chief Justice of England, the Master of the Rolls, and the President of the Probate, Divorce and Admiralty Division.

The High Court comprises the King's Bench, Chancery, and Probate, Divorce and Admiralty Divisions.

High Court of Justice, Chancery Division.—(Administration of trusts, company cases, mortgages, patents, etc.). Consists of the Lord High Chancellor and six other Justices.

High Court of Justice, King's Bench Division.—(Contracts, torts, bankruptcy, etc.). Consists of the Lord Chief Justice of England and fifteen other Justices.

High Court of Justice, Probate, Divorce and Admiralty Division.—(Wills, matrimonial cases, and maritime cases). Consists of two Justices.

Court of Criminal Appeal.—All the Judges of King's Bench Division.

Court of Arches.—An ecclesiastical court unites the powers of the *jus canonicum* with new powers conceded by the Church Discipline Act, 1841, and the similar statute of 1874, exercising authority in both provinces. The Judicial Committee of Privy Council is the Court of Final Appeal in ecclesiastical causes.

Bankruptcy Court.—Consisting of one Justice.

GERMANY, AND FRANCE ARRANGED IN PARALLEL COLUMNS—Continued

GERMANY

The Oberlandesgerichte (Supreme Court), which are the first courts of the second instance, have original jurisdiction in serious offenses, and are presided over by seven judges.

The Landgericht (County Courts) have a fairly extensive jurisdiction in civil and criminal cases and in divorce proceedings. There are five judges in the criminal chamber of a Landgericht, four votes being required to make a conviction valid. Three judges from such a court preside at intervals over jury courts (Schwurgerichte), and juries do not, therefore, form a permanent part of the system.

Not the least important work of the Landgerichte is to revise the decisions of the Amtsgerichte, which are the lowest courts of the first instance, being controlled by single judges, who are competent to hear only petty civil and criminal cases.

The Amtsgerichte (Police or District Courts) are the lowest courts, each with a single judge competent to try petty civil and criminal cases, divorce cases, etc.

FRANCE

Court of Assizes.—In all cases of a *délit* or a crime the preliminary inquiry is made in secrecy by an examining magistrate (*juge d'instruction*), who may either dismiss the case or send it for trial before a court where a public prosecutor (procureur) endeavors to prove the charge. The Court of Assizes is assisted by twelve jurors, who decide by simple majority on the fact with respect to offenses amounting to crimes.

Justices of the Peace (*juges de paix*) are the courts of lowest jurisdiction in France. They try small civil cases and act also as judges of Police Courts, where all petty offenses (contraventions) are disposed of. The Correctional Courts pronounce upon all graver offenses (*délits*), including cases involving imprisonment up to five years. They have no jury, and consist of three judges belonging to the civil tribunals of first instance.

For commercial cases there are, in two hundred and twenty-six towns, Tribunals of Commerce and Councils of Experts (prud' hommes). In the towns are police courts.

TABLE V. LATER CAREER, WRITINGS AND SOBRIQUETS

Name	Career After Leaving the Presidency	Writings of the Presidents	Presidential Sobriquets
Washington	Agricultural pursuits; appointed commander-in-chief (1798) because of threatened war with France.	*Maxims; Transcripts of Revolutionary Correspondence.*	"Father of his Country;" "American Fabius."
Adams	Member of the Massachusetts Constitutional Convention of 1820.	*Essay on Canon and Feudal Law; Defense of the American Constitution.*	"Colossus of Independence;" "Son of Liberty."
Jefferson	Retired to his plantation at Monticello, Va.; devoted much time to the University of Virginia.	*A Summary View of the Rights of America; The Declaration of Independence; Act for Freedom of Religion.*	"Sage of Monticello," "Long Tom."
Madison	Retired to Montpelier, Va.; contributed large service to University of Virginia; served in the Virginia Constitutional Convention, 1829.	*Reports of Debates During the Congress, of the Confederation and Federal Congress; Essays.*	"Father of the Constitution."
Monroe	Retired to private life in Virginia; served as a member of the Virginia Constitutional Convention in 1830.	*A View of the Conduct of the Executive; The People; The Sovereign.*	"Last Cocked Hat."
Adams, J.Q.	Was returned to Washington as a member of the House of Representatives; served from 1830 to his death.	*Poems of Religion and Society; Lectures on Rhetoric and Oratory; Criticisms of Paine's "Rights of Man;" Defense of Washington's Policy of Neutrality.*	"Old Man Eloquent."
Jackson	Retired to the "Hermitage," near Nashville, Tenn.; always took a deep interest in public affairs.		"Old Hickory;" "Cæsar of the White House."
Van Buren	Was renominated in 1840, 1844, and 1848 for the presidency.	*Inquiry Into the Origin and Causes of Political Parties in the United States.*	"Little Magician;" "Wizard of Kinderhook."
Harrison	Died in office.	*A Discourse on the Aborigines of the Valley of the Ohio.*	"Tippecanoe."
Tyler	Retired to his estate in Virginia; presided at the peace convention held in Washington in 1861.		"Young Hickory."
Polk	Died in office.		Also "Young Hickory."
Taylor			"Rough and Ready;" "Old Buena Vista."
Fillmore	Was candidate for president in 1852 and in 1856; spent his remaining years at Buffalo, N. Y.		"The American Louis Philippe."
Pierce	Traveled in Europe; retired to Concord, N. H.		"Purse."

TABLE V. LATER CAREER, WRITINGS AND SOBRIQUETS—Continued

Name	Career After Leaving the Presidency	Writings of the Presidents	Presidential Sobriquets
Buchanan	Retired to Lancaster, Pa.; devoted himself to writing defense of his administration.	*Résumé of My Administration.*	"Old Public Functionary;" "Bachelor President."
Lincoln	Died in office.	*Orations.*	"Honest Old Abe;" "Rail-splitter;" "Great Emancipator."
Johnson	Retired to home in Greeneville, Tenn.; chosen United States Senator in 1875.	*Speeches.*	"Sir Veto."
Grant	Made tour of the world and retired to private life in New York.	*Shiloh; Vicksburg; Chattanooga; The Wilderness; The Personal Memoirs of U. S. Grant.*	"Unconditional Surrender;" "Old Three Stars."
Hayes	Was president of the Board of Freedmen, and president of the National Prison association.		"President de Facto."
Garfield	Died in office.	*Discovery and Ownership of the Northwestern Territory; Garfield's Words.*	"The Martyr President;" "The Dark Horse."
Arthur	Died the year following his retirement.		"Our Chet;" "America's First Gentleman."
Cleveland	Retired to New York to practice law; at the end of second term, retired to Princeton, N. J.	*Writings and Speeches.*	"Man of Destiny;" "The Claimant."
Harrison	Professor of International law at Leland Stanford University, California; afterward practiced law.	*Speeches; This Country of Ours; Views of an Ex-President.*	"Son of His Grandfather;" "Hoosier President."
McKinley	Died in office.	*Speeches.*	"Prosperity's Advance Agent;" "Bonaparte of Politics."
Roosevelt	In March, 1909, headed a scientific expedition to Africa, organized in the interest of the Smithsonian Institution; resumed literary work and politics.	*The Naval War of 1812; Essays on Practical Politics; The Winning of the West; Hero Tales From American History; American Ideals; Life of Oliver Cromwell; African Game Trails.*	"Teddy;" "The Rough Rider;" "T. R.;" "Our Strenuous President."
Taft	Kent Professor of Law at Yale University; Chief Justice, U. S.		"The Globe Trotter;" "The Judicial President."
Wilson	.....	*Congressional Government; The State; An Old Master, and Other Political Essays; Mere Literature and Other Essays; George Washington; A History of the American People.*	"The Scholar in Politics."

Territorial Expansion and Dependencies of the United States

The area of the original thirteen States (1790) was 892,135 square miles

Division	Year	Added Square Miles
Louisiana purchase	1803	827,987
Gained through treaty with Spain	1819	13,435
Florida	1819	58,666
Texas	1845	389,166
Oregon	1846	286,541
Mexican cession	1848	529,189
Gadsden purchase	1853	29,670
Alaska	1867	590,884
Hawaiian Islands	1898	6,449
Porto Rico	1899	3,435
Guam	1899	210
Philippine Islands	1899	115,026
American Samoa	1900	77
Panama Canal Zone	1904	527
Danish West Indies (now Virgin Isl.)	1917	132
Total added area	.....	2,851,375
Total United States including original 13 States		3,743,529

Payments for above were made by the United States as follows: Louisiana purchase, $15,000,000; Gadsden purchase, $10,000,000; Alaska, $7,200,000; Florida, $5,000,000; Hawaiian Islands, public debt assumed to the amount of $4,000,000; Mexican cession, $15,000,000.

The Treaty of Paris, of December 10, 1898, terminating the Spanish-American War, provided for a money payment to Spain (for relinquishing claim to Porto Rico, Guam, and Philippine Islands) of $20,000,000, and a subsequent treaty of November 7, 1900, provided for a further payment of $100,000 for other Philippine Islands.

By the first treaty the Philippine Islands were ceded to the United States, and the later treaty of November 7, 1900, ceded certain outlying islands of the Philippines not included in the first cession.

The United States did not acquire, by the Isthmian Canal Convention of November 18, 1903, any title to territory in the Republic of Panama, but merely a perpetual right of occupation, use, and control of and over a zone of land ten miles in width. For this privilege it paid to the Republic of Panama the sum of $10,000,000, and undertook to pay the sum of $250,000 annually so long as such occupancy continued, such payments beginning on February 26, 1913.

For the Danish West Indies, consisting of the Islands of St. Croix, St. Thomas and St. John, the United States paid $25,000,000, and took possession on March 31, 1917. They then had 32,000 population.

No money payments were made upon the acquisition of the other Territories mentioned in the list.

Descriptions. Alaska occupies the northwestern part of the North American Continent. It is bounded on the north by the Arctic Ocean, on the west by the Arctic and Bering Sea, on the South by the North Pacific Ocean and on the east by Canada. From the southwestern corner the Aleutian Islands stretch out westward 1,200 miles to Cape Wrangell, facing Siberia, Bering Strait, 54 miles wide, separates the mainland of Alaska from Asia. The "Panhandle" runs southeast 600 miles along the Pacific to Dixon Inlet and includes all the islands, the boundary with Canada along the mountain crests being fixed by arbitration in 1903, international survey completed, 1913. Lower Alaska has a population of 12,000 whites and 5,000 natives.

Alaska is mountainous with high plateaus; the coast range extends through the southern part, the chief peaks being Mt. St. Elias, Mt. Wrangell and further inland Mt. McKinley, the highest peak on the North American Continent. There are more than twenty active volcanoes, notably Mt. Katmai now with the "valley of 10,000 smokes" a national monument. The mountains and the Sitka district are densely timbered, mainly coniferous, but the islands are treeless. The most notable glaciers are the Muir, Malaspina and Seward. The Yukon is the chief river, 3,000 miles long, navigable for about 2,400 miles. There are many excellent harbors, one, Dutch harbor, Unalaska Island, being of great naval importance.

Attu, the last of Aleutians, the volcanic, mountainous, treeless islands that stretch in a 1,200-mile arc to the Asiatic coast, is the westernmost point of the American Continent, in the same longitude as New Zealand, and 2,700 miles from Washington State. In summer the sun is just setting in Attu when it is rising in Maine.

Away from the south coast the country back of the barrier of mountain ranges is a great inland plateau rolling gently north. It is inhabited chiefly by huge herds of reindeer guarded by their native owners. Fairbanks, in the same latitude as Iceland, is, with Torana, the centre of a growing agricultural region.

Hawaii, a small archipelago in the North Pacific, named Sandwich Islands by Captain Cook after Lord Sandwich, First Lord of the Admiralty. The islands, twelve in number, form a rich, beautiful, and interesting chain, which runs from south-east to north-west. Their total area is 6564 sq. m., or rather smaller than Wales.

The names and areas of the eight principal islands are: Hawaii (the 'Owhyhee' of Captain Cook), 4210 sq. mi., Maui, 760; Oahu, 600; Kauai, 590; Molokai (the 'Lepers' Island'), 270; Lanai, 150; Kahulaui, 63; Niihau, 97. The Hawaiian Islands lie in mid-ocean, but nearer America (2100 miles) than Asia; they consequently form a convenient station for the coaling and repairing of vessels on their way across the Pacific. The Islands are of volcanic origin, with coral-reefs partly encircling most of them; the only well-protected harbor being that of Honolulu, on Oahu. The larger islands are mountainous, and contain some of the principal volcanoes, both active and extinct, in the world.

The two highest mountains, Mauna-Kea and Mauna-Loa, are in the island of Hawaii, and are 13,805 and 13,675 feet high respectively. On the eastern slope of Mauna-Loa, in Hawaii, is the far-famed Kilauea, the largest active volcano in the world. It is over 4000 feet above sea-level. Its oval crater, 9 miles in circumference, is bounded by a range of cliffs, and contains a fiery lake of molten lava rising and falling like the waves of the sea. Mauna-Loa itself is an active volcano. On Maui is the crater of Haleakala, by far the largest known in the world. It is from 25 to 30 miles in circumference, from 2000 to 3000 feet deep, and is 10,032 feet above sea-level.

The Hawaiian Islands, though within the tropics, enjoy a fairly temperate climate. Rains, brought by the north-east trade-wind, are frequent on the side of the mountains which faces that quarter, but on the other parts of the islands little rain falls, and the sky is generally cloudless.

In Hawaii alone, on the Waimea plains, thousands of sheep of the merino breed find grazing ground; and on most of the islands, while the upland slopes of the mountains are clothed with dense forests, the lower levels spread into grassy plains rich with sugar and rice plantations. The staple food of the natives consists of *poi*, a thick paste made from the root of the *taro* plant (*Arum*

esculentum) and raw or dried fish. The only indigenous animals are rats, mice, bats, dogs, and hogs, but others have been added by the white men. There are large numbers of semi-wild horses, and some wild dogs.

The islands are said to have been discovered by Gaetano in 1542, and rediscovered in 1778 by Captain Cook, who met his death at the hands of the natives in Kealakekua (Karakakoa) Bay, 1779. Kamehameha I. formed the islands into one kingdom. Missionaries came from America in 1820, and in less than forty years they taught the whole Hawaiian people to read and write, to cipher and sew. In 1843 the independence of the kingdom was guaranteed by the French and English governments. Kalakaua, elected king in 1874, died in 1891, and was succeeded by his eldest sister, Liliuokalani, who was dethroned in January 1893, and the islands were finally annexed by the United States in 1898, and in 1900 were organized as one of the territories of the republic.

The Hawaiians belong to the brown Polynesian stock, and are a remarkably handsome race; in character indolent, joyous, and contented. Foreign diseases have tended to reduce the population, but leprosy is now the most dreaded. In 1865 the island of Molokai was set apart for lepers among whom Father Damien labored and died (1889).

The school plants, both public and private, are of very high order. The University of Hawaii is State supported. The Bishop Museum at Honolulu is a scientific institution of the first order devoted especially to the preservation of the life of the native Hawaiians and to the study of the ethnology of Polynesia.

Porto Rico (Rich Harbor) an island of the Greater Antilles group in the West Indies, is about 100 miles from west to east, and 40 miles from north to south at the western end, narrowing towards the eastern extremity. The capital is 1,400 miles distant from New York, and 982 miles from Key West. Sugar is grown in the low-lying districts, and tobacco and coffee on the slopes of the hills; fruits, cotton, maize, sweet potatoes, rice, and yams are also grown. The trade is principally with the United States. About 460 miles of railroad were in operation in June, 1922, and there are good harbors at San Juan and Ponce. The capital, San Juan, had 71,443 inhabitants in 1920, other towns being Ponce (41,912), Mayaguez (19,124), Arecibo (10,039), Bayamon (10,411), and Caguas (12,149).

Philippine Islands, the largest island group in the Malay Archipelago, were discovered by Magellan in 1521 and conquered by Spain in 1542; they were ceded to the United States by the Treaty of Paris (Dec. 10, 1898), following the Spanish-American War. Admiral Dewey had destroyed the Spanish fleet in Manila Bay, May 1, 1898, and Major Gen. Wesley Merritt had captured the City of Manila on Aug. 13, 1898.

There are 7,083 islands extending 1,152 statute miles from north to south and 682 miles from east to west. Of this number 462 have an area of 1 square mile or over; 2,441 are named and 4,642 unnamed. The largest, Luzon, contains 40,814 square miles, and Mindanao, the next, 36,906. Panay has 4,448; Cebu, 1,695; Palawan, 4,500; Mindoro, 3,794; Bohol, 1,534; Masbate, 1,255. Between and about lie the other groups, including the Sulu or Jolo Islands in the south, the Babuyanes and Batanes in the north, the Catanduanes in the east, Culion in the west.

The extensive mountain system of the Philippines belongs to the succession of volcanic ranges of the Pacific system of the world's surface. There are 20 more or less active volcanoes. Mount Apo (Apo means master), 9,610 feet, in Mindanao; Mayan Volcano, 7,943 feet, in Albay; Taal, 984 feet, in Batangas; Canlaon, 7,995 feet, in Negros; Banajao, or Majayjay, 7,144 feet, are the most famous of these.

Nearly all the principal islands have important river systems. In Luzon are the Rio Grande de Cagayan, 220 miles long, which drains 16,000 square miles of territory; the Rio Grande de Pampanga, emptying into Manila Bay through a dozen mouths; the Agno, the Abra, Bued, and the more familiar Pasig. The Rio Grande de Mindanao, 330 miles long, is the largest in the islands, and the Agusan, also in Mindanao, the third in size. Mindoro has 60 rivers and Samar 26.

November, December, January and February are the temperate months. The mean average temperature at this season is about 77° to 79° Fahrenheit. In April, May and June, the hot months, the mean average is between 83° and 84°. In the other months it is about 80°.

Towns—Capital, Manila, in the island of Luzon; population (1918), 283,613. The next largest towns are Cebú (63,500), Albany (53,105), and Iloilo (49,808); there are several others with populations from 25,000 to 40,000.

Guam, the largest of the Ladrone or Marianne Islands in the North Pacific Ocean, lies at a distance of about 1,506 miles east of Manila, the capital of the Philippine Islands, and forms a naval station between that dependency and the United States. The area of the island is estimated at 225 square miles, with a population, 1923, of 16,224, of whom 14,911 are classed as native. The natives are of Chamorro stock, mingled with Filipino and Spanish blood. The language is a Malay dialect containing many Spanish words, but English is fast becoming the language of the Island.

Capital, Agaña. Port of entry, Apra.

Tutuila, American Samoa. Under an agreement between Great Britain, the United States and Germany* (proclaimed Feb. 19, 1900), the first-named Power abandoned all claims to the islands of the Samoan Archipelago, which were then divided between the United States and Germany, the islands east of 171° W. long. being taken over by the United States. The territory thus acquired consists of the island of Tutuila, Aunuu, Ofu, Olosega, Tau, and Rose Islands, with a total area of about 56 square miles and a population of 8,058 in 1920.

Tutuila, the largest of the group, has an area of about 40 square miles and a population of 6,185, and contains a magnificent harbor at Pago, Pago the capital and seat of government. The remaining islands have an area of about 16 square miles and a population of about 2,000, Rose Island being uninhabited. Copra is the only export of importance.

The flag of the United States was hoisted on Wake Island in 1899, and three other islands in the Pacific have been annexed (Johnston, Palmyra and Medway).

Virgin Islands. The three islands, St. Thomas, St. John, and St. Croix, in the Virgin Island group, West Indies, formerly the possessions of Denmark, were purchased by the United States from Denmark for the sum of $25,000,000, and proclaimed, January 25, 1917. *St. Thomas* (28 sq. miles) has a population of 10,191; *St. Croix* (84 sq. miles) has a population of 14,901, the capital being Christianstäd (or Bassin); *St. John* (20 sq. miles) has a population of 960, the capital being Cruz Bay. St. Croix exports sugar and cotton.

Capital, St. Thomas, contains one of the finest harbors in the West Indies, accommodating vessels of large draught, and has a large coaling and oil refueling station.

CACHE LAKE, IN THE ALGONQUIN NATIONAL PARK

The great tract of wild land where this lake lies is situated between the Ottawa River and Georgian Bay, in the most beautiful part of the Highlands of Ontario. The whole region is famous as a pleasure resort.

DOMINION OF CANADA. — What is known as the Dominion of Canada is a confederation of the colonies of British North America, constituted in 1867 by the British North America Act of that year. Upper and Lower Canada, Nova Scotia, and New Brunswick were the first to unite under the provisions of that statute, and the Dominion of Canada now includes the whole of the British North American possessions excepting Newfoundland.

Canada is bounded by three oceans, and has 13,000 miles of coast line; it is 3,500 miles by 1,400 in area, and is almost as large as Europe, and about 750,000 square miles larger than the United States without Alaska. The census figures for 1921 were:

AREA AND POPULATION

Province	Area Sq. Miles	1921 Census [1] Population	Capital
Alberta	255,285	588,454	Edmonton
British Columbia	355,855	524,582	Victoria
Manitoba	251,832	610,118	Winnipeg
New Brunswick	27,985	387,876	Fredericton
Nova Scotia	21,428	523,837	Halifax
Ontario	407,262	2,933,662	Toronto
Prince Edward Isl.	2,184	88,615	Charlottetown
Quebec	706,834	2,361,199	Quebec
Saskatchewan	251,700	757,510	Regina
Northwest Ter.	1,242,224	7,988	
Yukon	207,076	4,157	
Totals	3,729,665	8,787,998	

Physical Features. — Both the Atlantic and Pacific shores of Canada abound in deep indentations, forming magnificent harbors and sheltered bays. On the Atlantic the principal bay is the Bay of Fundy, remarkable for its high and rushing tide, the water rising from twelve to seventy feet. There is also the Hudson Bay, connected with the Atlantic by Hudson Straits, really an inland sea with an area of three hundred and fifty thousand square miles, and the Gulf of St. Lawrence, eighty thousand square miles in extent.

Canada may be conveniently divided into five sections: (1) the peninsula which in Canada forms the Gaspé and the three Maritime provinces; (2) the lowlands of southern Ontario and southern Quebec, with the Great Lakes and the Ottawa and St. Lawrence Rivers draining the interior into the Atlantic Ocean; (3) the Central plain; (4) the Laurentian highland; (5) the western Cordillera.

The most striking physical features of Canada are the Rocky Mountains, the Laurentian Range, and the chain of immense freshwater lakes forming part of the boundary with the United States.

The Laurentian Range extends along the north side of the St. Lawrence, the Ottawa River, and then stretches away to Lake Superior and the north, the length of the range being about three thousand five hundred miles. It forms the watershed between Hudson Bay and the St. Lawrence, and varies in height from one to three thousand feet.

The eastern portions of Canada are generally well timbered, and the same is true of British Columbia, and the region north of the Saskatchewan. Westward of the Red River, between the forty-ninth and fifty-fifth parallels, there is an immense fertile plain, suitable for general agriculture and grazing, extending nearly to the Rocky Mountains. This interior continental plain or Red River Valley was once part of the bed of a great lake which reached southward into the United States and northward 100 miles beyond Lake Winnipeg; it is the great grain-producing part of Canada, and owes its fertility in part to the mineral constituents of the soil, and in part to the great

[1] The estimated total population in 1924 was 9,226,740. In 1912 parts of the Northwest Territories were transferred to Manitoba, Ontario, and Quebec.

accumulation of nitrogenous organic matter, the remains of ages of vegetable growth.

The Rocky Mountain range consists of triple chains with valleys between; the most easterly has the greatest elevation near the fifty-second parallel, the highest peaks being Mounts Brown, Murchison, Hooker, Columbia, Forbes, Bryce, Alberta, and Freshfield. The average height of the chain is from seven thousand to eight thousand feet.

In the western Cordillera are found the highest mountain ranges and peaks in Canada. In the Yukon is Mount Logan, 19,539 feet, the highest known point in Canada, and on the dividing line, Mt. St. Elias. In the Rocky Mountains are many high peaks, Mount Robson, in the Yellowhead Pass, being the highest, 13,700 feet.

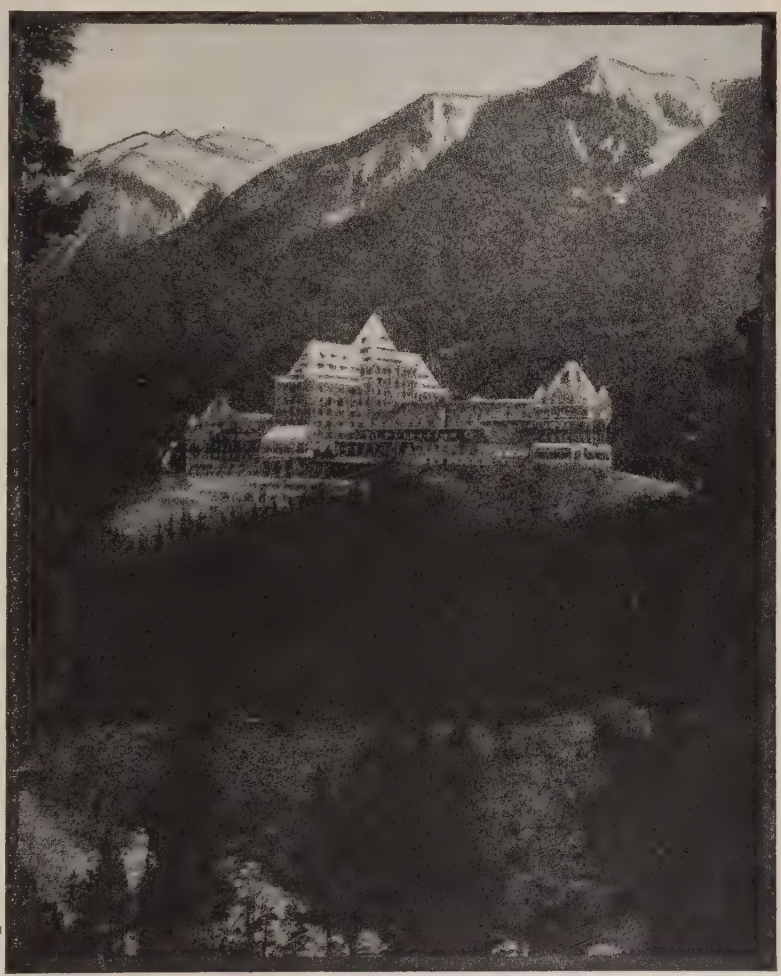
Lakes and Rivers. — Canada is well watered, the country presenting a network of lakes and rivers. The system of the St. Lawrence alone, with the great lakes Superior, Huron, Michigan, Erie, and Ontario (between the last are the celebrated falls of Niagara), drains an area in Canada of three hundred and thirty thousand square miles. (See North America and United States.)

Other important lakes are Winnipeg, Winnipegosis, Manitoba, Lake of the Woods, Great Slave, Great Bear, and Athabasca.

Next to the St. Lawrence the chief rivers are the Saskatchewan and the Winnipeg, flowing into Lake Winnipeg, and the Nelson, flowing from it into Hudson Bay; the Assiniboine and the Red River, which join their waters to flow into Lake Winnipeg; the Albany and the Churchill, emptying into Hudson Bay; the Athabasca and the Peace Rivers, flowing into Lake Athabasca, and the Slave River, from it into Great Slave Lake; the Mackenzie, fed from both the Great Slave and the Great Bear lakes, and emptying into the Arctic Ocean; the Fraser and Thompson, in British Columbia, emptying into the Pacific; and in the eastern provinces, the Ottawa, chief tributary of the St. Lawrence, itself fed by the Gatineau and Matawan; the Saguenay, emptying Lake St. John into the St. Lawrence; and the St. John, which flows into the Bay of Fundy, in New Brunswick, which it partly separates from the State of Maine.

The principal islands of the Dominion are: on the east, Cape Breton, Prince Edward and Magdalen Islands, and Anticosti, in the Gulf of St. Lawrence; and on the west coast, Vancouver Island and Queen Charlotte Island. Lying along the north in the great Arctic Archipelago are immense islands, all of which, excepting Greenland, belong to Canada.

Climate. — The cold winter and the heat in summer are frequently extreme, but the climate is a healthful one. The winter may be said to continue from the middle of November to the end of March, or about four and a half months.



HOTEL AT BANFF SPRINGS, CANADA

The hot sulphur springs have drawn many visitors to Banff and made practicable the erection of a large modern hotel in the heart of the mountains, 4,500 feet above sea level.

British Columbia probably possesses the finest climate in North America.

In some inland parts of Canada the maximum temperature may be from ninety to ninety-six degrees, and the minimum from twenty to twenty-six degrees below zero. But although there are these extremes, the air is always dry, bracing, and exhilarating. The Chinook, or westerly wind, is a characteristic of the Alberta climate, and it keeps the prairies usually bare of snow in the winter.

REAPING WHEAT ON THE PLAINS OF ALBERTA, CANADA; THESE GREAT PLAINS ARE A CONTINUATION OF THE IMMENSE ROLLING PRAIRIES OF THE UNITED STATES

Products and Industries. — The chief industries of Canada are those of agriculture, stock-raising, dairy-farming, "lumbering" or timber trade and forestry, shipbuilding, fisheries, and mining. An extensive trade is maintained with the United States and England, the exports being timber, fish, and furs, with dairy produce and live stock; wheat and wheat flour, barley, and other agricultural products, cod and other fish, coal, and minerals.

The minerals are chiefly coal, silver, nickel, gold, copper, iron, asbestos, lead, salt, mineral oils and gypsum. Gold is or has been worked in Nova Scotia, Quebec, and Ontario, and largely in Yukon (Klondike) and British Columbia, where there are yet immense fields to open up. Silver mines are worked in Ontario; those at Cobalt (producing also cobalt, nickel and arsenic) have been the richest yet discovered in Canada. Iron ore is found all over the Dominion. Copper has been mined to a considerable extent both in Quebec and Ontario, and the deposits of the ore are of great extent. There are very large coal deposits in Nova Scotia. The coast of British Columbia is rich in coal of a good quality. Coal is known to exist over a vast region, stretching from one hundred and fifty to two hundred miles east of the Rocky Mountains, and north from the frontier for about one thousand miles.

The forest products of Canada constitute one of her most important sources of wealth. They find their way to all parts of the world — to the United States, to the United Kingdom, and to the Australian Commonwealth.

The fisheries of Canada are the largest in the world, and there are annually sold in the Dominion markets over $20,000,000 of fish. Both the sea fishing and the fresh-water fishing are of great importance, the lakes and rivers supplying abundance of fish for commercial purposes in addition to giving to sportsmen some of the finest salmon and trout fishing in the world. The principal fish are cod, herring, lobsters, salmon, mackerel, haddock, trout and sardines.

Great progress has recently been made in the development of manufactures. The "national policy" comprises a high protective system, but since 1901 gives a preference to Great Britain.

Quebec has tanning industries and boot and shoe factories. The manufactures of woolen and cotton goods are increasing, and there are sugar refineries in Halifax and Montreal. Such wooden articles as doors, window sashes, etc., are manufactured in large quantities.

Communications. *Railways.* — There were on Jan. 1, 1924, 40,094 miles of railway; there were also 1,736 miles of electric railway. The Canadian National Railway System has the greatest mileage (20,574), the Canadian Pacific coming next with 13,564 miles; other lines total 5,956 miles. The Government has been carrying out a scheme of railway nationalization connecting the various provinces, and providing a shorter route from British ports to Japan and China.

Canals and waterways. — The canals of

Canada are only about 270 miles in length, but by their aid over 3,000 miles of inland navigation is opened up. The St. Lawrence River and the Great Lakes, supplemented by a number of short canals, together form a system of inland navigation which is not equalled in any other continent.

The Lachine Canal above Montreal was the first to be constructed; it was opened in 1825, and other canals between Montreal and Lake Ontario were completed by 1843. The Welland Canal runs parallel with the Niagara River, avoiding the falls; it has a total rise of 326 feet, obtained by twenty-six locks. The Sault Ste. Marie, or "Soo" Canal, between Lakes Superior and Huron, was constructed between 1889 and 1895. It is not much more than a mile in length, and has one lock only, which measures 900 feet by 60 feet. The canal on the United States side at the same place, which has been there since 1855, has been fitted with two locks since 1896, the larger of which is 800 feet by 100 feet. The traffic through these canals is now the largest in the world, much exceeding that on the Suez Canal.

Sea-going ships may be carried from the Strait of Belle Isle in the North of Newfoundland to Port Arthur on Lake Superior, a distance of over 2,200 miles.

Shipping. — The number of vessels on the Registry of Shipping, Canada, in 1922 was 14,929 (which included 4,388 steamers and 3,253 schooners), with a tonnage of 1,236,226.

Provinces. — The Provinces of Canada comprise Alberta, British Columbia, Manitoba, New Brunswick, Nova Scotia, Ontario, Prince Edward Island, Quebec, Saskatchewan, Northwest Territories, and Yukon. Newfoundland is also within the general geographical boundaries, but not a part of the Dominion government.

PROVINCES OF WESTERN CANADA

ALBERTA (*al-bĕr'tă*), a province proclaimed Sept. 1, 1905, was carved out of the Northwest Territories. It includes the former district of Alberta, the southern half of Athabasca, and a strip off the western side of Assiniboia and Saskatchewan districts. The total *area* is about 255,285 square miles, with a population (census of 1921) of 588,454.

Physical Characteristics. — The northern region of Alberta is heavily timbered, broken by patches of prairie. The southern portions are open, rolling country, not timbered except along the foothills of the Rocky Mountains. The drainage is about equally northward and eastward through the Athabasca and Saskatchewan Rivers. Some rivers on the south belong to the Missouri system. The Province has 11,881,280 acres of forest reserves.

Climate. — The winters are cold, but the warm west wind, called the chinook, tempers the climate. Summers are hot; rainfall small, but the melting snow in the mountains affords an abundance of water for irrigation.

Soil and Agriculture. — The soil is alluvial loam, but irrigation is necessary for grain and fodder crops. Central Alberta is an immense area of most fertile land. The soil consists of from one to three feet of black vegetable mold, with little or no mixture of sand or gravel. While it has been preëminently a ranching country, ranching is rapidly giving way to model farming, with an extending system of irrigation. More than half the area is susceptible of agriculture, but only a small part is under cultivation. Central Alberta, the most fertile portion, includes about 70,000 square miles, which is rapidly increasing its farm population. Within this territory in 1923 nearly 12,000,000 acres of land were under crop. The principal field crops are wheat, oats, and barley.

Although grain is the most profitable crop and the easiest of cultivation, potatoes, turnips, carrots, cabbages, hay, and alfalfa grow as abundantly as wheat and oats. The beet-sugar industry is rapidly becoming prominent.

Next to ranching, the most important branch of agriculture is the raising of sheep, hogs, and poultry.

Manufactures. — Alberta is steadily increasing its list of manufactures. Flour mills, beet-sugar factories, breweries, oatmeal mills, and meat-packing plants have been established within the last few years. There are numerous creameries in operation.

Cities and Towns. — EDMONTON (58,821), the capital, is the principal railway centre between Winnipeg and the Pacific Coast; Calgary (63,300); Medicine Hat (9,272), with a large supply of natural gas, 16 wells drilled by city; Lethbridge (9,436), under commission government; Wetaskiwin (2,048); and Red Deer (2,203).

BRITISH COLUMBIA. — Canada's maritime province on the Pacific extends from the United States boundary to 60° North latitude, and is bounded on the East by the province of Alberta. It has an *area* of 355,855 square miles with a population (1921) of 524,582.

Physical Characteristics. — British Columbia occupies the whole of the mountain region from the international boundary to latitude 60°. West of the chain of Rocky Mountains, which forms part of the eastern boundary, three ranges of mountains run approximately north and south. Near and parallel to the Pacific coast extends part of another mountain system, the Coast Range, extending northward to the Yukon Territory and Alaska.

The rivers and lakes occur in deep valleys between the ranges. The northern half of the Province is imperfectly explored. What British Columbia lacks in navigable inland waterways is made up by a deeply indented coast with many magnificent harbors.

Climate. — Various climate conditions prevail in British Columbia. The climate of Vancouver Island and the coast generally corresponds to the climate of England — the summer warm, with much sunshine; the winters mild with few severe frosts. On the mainland somewhat similar conditions exist; but in the higher levels winters become cooler.

Soil, Agriculture, and Natural Products. — The whole of British Columbia south of 52° and east of the Coast Range is a grazing country up to 3,500 feet altitude, and a farming country up to 2,500 altitude where irrigation is possible. West of the Coast Range are several extensive tracts of arable land of richest quality, notably in the Lower Fraser Valley, Westminster region, and Vancouver Island.

Wheat and barley of excellent quality are grown in many parts of the Province. Oats, the principal crop, rye, potatoes, turnips, beets, mangolds, and all other root crops grow well wherever their cultivation has been attempted. Red clover, alfalfa, sainfoin, alsike, timothy, and brome grass yield large returns — three crops in the season in some districts under irrigation.

A considerable percentage of the agricultural lands in the southern districts require irrigation. Generally speaking there is abundant water within

bays, and inlets, exceeds 7,000 miles in length and includes thousands of islands. The waters are alive with many kinds of fish, but the prin-

Copyright by Underwood and Underwood

PARLIAMENT BUILDING, VICTORIA, BRITISH COLUMBIA

North front facing the harbor.

reach. There are sections where the height of the land above water level or distance from the source of supply stand in the way of individual attempts at irrigation.

The fruit-growing industry is well established, and produces apples, plums, prunes, peaches, cherries, apricots, pears, and small fruits.

Mineral Resources. — This Province continues to maintain its average proportion of the mineral production of the whole Dominion, which in 1912 amounted to 22.2 per cent of the total. Gold, copper, silver, lead and iron ores abound, but on account of the heavy growth of timber and the obstacles to road making, prospecting is exceedingly difficult. Iron ore is found both on the mainland and on Vancouver Island, but mined principally on Texada Island in the Strait of Georgia. The bituminous coal fields of Vancouver Island are the largest on the Pacific coast.

Deposits of manganese, platinum, asbestos, mica, cinnabar, graphite, and petroleum have been found.

Other mineral products are zinc, mineral waters, clay products, lime, and stone.

Live Stock. — Cattle raising on a large scale was one of the chief industries of the Province. The tendency of late, however, has been toward small herds and improvement of stock. At present southern Vancouver Island and the Gulf Islands are the chief areas of sheep ranching, but nearly all the interior is suitable for sheep raising. Hogs are also raised, but not extensively.

Fisheries. — The coast of British Columbia, on account of its indentations by numerous sounds, cipal commercial fishing has been confined to salmon catching. Other British Columbia food fish are herring, sturgeon, bass, oulachans, smelts, perch, trout, shad, oysters, and clams. Dogfish are valuable for their oil and manufacture of guano.

Forestry. — Next to its mineral resources in value, British Columbia places its great natural timber reserves, and stands second only to Ontario in lumber production of the Dominion. The Province is said to possess the greatest compact area of merchantable timber in America. Of the total forest area of Canada, which is estimated at 535,000,000 acres, 182,000,000 lie within the Province of British Columbia. As far north as Alaska the country is heavily timbered, the forest line following the indentations of the shore and river valleys. The principal trees indigenous throughout the Province are white pine, larch, spruce, Douglas fir, cedar, hemlock, and some varieties of hardwood.

Cities and Towns. — Victoria, the capital; Vancouver on the mainland; New Westminster (14,495) on the Fraser River, an important freshwater port, has a million-dollar bridge, and great lumber mills, one of them the largest in the world; Nanaimo (9,088); North Vancouver (8,000); Nelson (7,000); Prince Rupert (6,000); Kamloope (6,000).

VANCOUVER is situated on Burrard Inlet, an arm of the Gulf of Georgia, opposite Nanaimo, on Vancouver Island. It has a fine harbor, with extensive wharves and warehouses, from which mail steamers run regularly to Japan,

China, Australia, Hawaii, New Zealand, Alaska, Seattle, San Francisco, Victoria, B. C., etc. Vancouver College is affiliated with M'Gill University, Montreal. There are a normal school, Carnegie Library, City Hospital, Isolation Hospital, St. Paul's Hospital (R. C.), St. Luke's Home, and several orphanages.

Among the principal buildings are the opera house, court house, Bank of Montreal, Bank of British North America, post office and custom house. There are several fine parks, of which the most remarkable is the large Stanley Park, on a promontory at the harbor entrance, surrounded by an eight mile drive.

The leading industries are the manufacture of lumber, salmon and halibut fishing, and gold, silver, copper, lead and coal mining. There are railroad shops, sugar refineries, canneries, fish-packing establishments, iron works, breweries, distilleries, and manufactories of jute, cooperage, candy, furniture, wagons, machinery, glass, soda, soap, etc. The site was a forest until 1886, when the Canadian Pacific Railroad chose this harbor for its terminus and the city was laid out, being once totally destroyed by fire while in course of construction. Population, 117,217.

CAMERON LAKE, VANCOUVER

Vancouver has a rugged, natural beauty, both grand and alluring, that compels the motorist onward, mile after mile.

VICTORIA, capital of British Columbia, 70 miles northwest of Seattle, Wash., on Fuca Str., near the southeast extremity of Vancouver I., and on the Victoria and Sidney and the Esquimalt and Nanaimo railroads. It is also connected by ferries with the Canadian Pacific Railroad and the Great Northern Railroad. It is the most important Canadian city on the Pacific. Three miles distant, at Esquimalt, is the fortified naval station. Victoria is beautifully situated, and has fine drives and pleasing residences. Beacon Hill Park and North Park are within the city limits. The City Park is on Victoria Arm just outside the city. Its climate is delightful and equable all the year.

The noteworthy buildings and institutions include the government buildings, containing the parliament house, government offices, and provincial museum and library, the post office and custom house, city hall, supreme court house, Canadian Pacific Empress Hotel, the Anglican and the Roman Catholic cathedrals, the Metropolitan Methodist church, St. Andrew's Presbyterian church, and the exhibition buildings. Other features of interest are the Provincial Royal Jubilee Hospital, St. Joseph's Hospital, the Protestant Orphans' Home, the Home for the Aged and Infirm, the Samaritan Home, and Refuge Home, the Victoria City Free Library, a public library, and the city and provincial jails.

The city's leading industries are sealing, shipbuilding, fishing, salmon canning, lumbering, and the manufacture of fertilizers, cement, paint, soap, chemicals, naval supplies, beer, leather, powder, pottery, sashes, and foundry products. The largest vessels put in at Esquimalt, and there is regular steamship service to Vancouver, San Francisco, Seattle, Alaska, New Westminster, B. C., and Oriental ports.

Victoria was originally a trading post of the Hudson's Bay Company, was laid out as a town in 1852, and was incorporated as a city in 1862. Population, 38,727.

MANITOBA (*man'i-tō-bä*), formerly known as the Red River Settlement, bounded on the north by the 60th parallel of latitude, is situated in the centre of the Dominion, of which it became a province in 1870. It has an *area* of 251,832 square miles, its boundaries being extended in 1912 to the shores of Hudson's Bay. Its population (1921 census) was 610,118.

Physical Characteristics. — The southern portion is a perfectly level plain, the bed of a former lake, through which flows the Red River. It is bounded on the east by the Laurentian Plateau, which covers the eastern portion of Manitoba beyond Lake Winnipeg. Westward arises another prairie steppe, never more than 500 feet above the southern plain, and running in a northwesterly direction. To the north is a small belt of forest. Manitoba is more than two-thirds prairie land. The water area includes Lake Winnipeg (260 miles long by 60 miles wide), and Lakes Manitoba, Winnipegosis, and several others. The chief river is the Red River, which enters Manitoba from the south and empties into Lake Winnipeg; it is navigable as far north as the city of Winnipeg, and was in former days the only means of communication between the Province and the outer world. The Winnipeg River discharges the waters of Lake of the Woods into Lake Winnipeg, but is not navigable on account of rapids. The Nelson River empties into Hudson Bay.

Climate. — The extreme range is from 40° below zero to 95° above. Average annual rainfall over 17 inches, and snowfall (from November to March) 53 inches. The mean temperature for July in Winnipeg is 66°. Spring comes early and sudden. The summers are warm and long; the winters cold; the air dry, and the days are bright.

Soil and Agriculture. — Manitoba is preëminently an agricultural Province. Its soil is a rich, black loam. The surface deposits show a high percentage of nitrogen, phosphoric acid, and potash. To a great extent farming is done by machinery. The soil is peculiarly adapted to the growth of cereal grains, especially wheat. "Manitoba No. 1 Hard" wheat, because of its superior milling qualities, has made the Province famous as a wheat producer. Other prominent crops are oats, barley, and potatoes. The raising of flax

is new, but is rapidly extending. Stock raising and dairying have become important industries.

Mineral Resources. — Some coal of a lignite variety is found in the Souris Valley, but is commercially unimportant. Clays for the manufacture of brick and cement are found. The chief mineral products are gypsum, clay products, lime, cement and sand-lime.

Manufactures. — The value of Manitoba's manufactures in 1922 was $94,417,608; there is now developed on the Winnipeg River electric power for transmission to and use in Winnipeg 60,000 h.p.; there is possible of development within easy transmission distance of Winnipeg 500,000 24-hour h.p.

Cities and Towns. — WINNIPEG, the third city in Canada; Brandon, 15,397; St. Boniface, 12,821; Portage la Prairie, 6,766; Selkirk, 2,977.

WINNIPEG, capital of the province of Manitoba, stands at the confluence of the Assiniboine with the Red River, 1,300 miles west of Ottawa and 1,500 east of Vancouver. It is the commercial capital of central Canada and the greatest grain market of the American continent, and has government offices, city hall, a fine hospital, the University of Manitoba, great flour-mills and grain-elevators, the shops of the two Canadian Pacific railways and of the Canadian Northern.

The University of Manitoba, situated here, is a provincial institution, granting degrees in law, medicine, surveying, and engineering. Four classical colleges, Saint John's (Epis.), Manitoba (Presb.), Wesley (Meth.), and Saint Boniface (R. C.), are affiliated with the university. Winnipeg is also the seat of the provincial normal school, of Havergal College (Epis.), and of Saint Mary's Academy (R. C.), for girls.

The leading manufactures are lumber, flour, foundry and machine-shop products, awnings, tents, mattresses, clothing, leather, beer, linseed oil, boots and shoes, soap, confectionery, harness, saddlery, carriages, etc.

Winnipeg is the great fur market for western Canada. Millions of dollars' worth of furs are brought down each spring from the Northland, and the dealers in Winnipeg, representing the great fur trade of the world, bid upon the packs offered.

The city commands the trade of a vast region to the north, east, and west. The construction of locks will open navigation via the Red River to Lake Winnipeg, and thence up the Saskatchewan River for 1,000 miles.

Winnipeg took its origin from the Hudson's Bay Company's trading post, known as Fort Garry. It was built in 1822, and was situated about 400 yards from the mouth of the Assiniboine. There were earlier forts, and Fort Garry was replaced by a more pretentious structure in 1835, but it was the first nucleus of a colony. Population (1921), 179,087.

SASKATCHEWAN became a province in 1905, and comprises the greater portion of the territorial divisions formerly known as Assiniboia, Saskatchewan, and Athabasca. It has an *area* of 251,700 square miles and a population (1921) of 757,910. It is bounded on the north by the Northwest Territories, east by Manitoba, south by the United States, and west by Alberta.

Physical Characteristics. — Most of Saskatchewan is wooded country, broken by prairie openings, and with abundant streams and small lakes.

There are many large lakes. Reindeer Lake has an area of 2,436 square miles and is 1,150 feet above sea level. Lake Athabasca, part of which is in Alberta Province, 690 feet above sea level, with an area of 2,842 square miles, is the largest. The principal rivers are the Saskatchewan, about 900 miles long, and the Churchill River, in the northern part, 900 miles long.

Soil and Minerals. — The region is drift-covered, the soils being drift and alluvial. Coal in abundance is found in the south, in districts by the Souris River.

Agriculture and Live-stock. — The agricultural capabilities of Saskatchewan are similar to those of Manitoba. It stands first among the wheat-producing provinces of Canada. The crop productions include wheat, oats, barley, flax, potatoes, turnips and mangolds, and hay and clover. The *live-stock* consists of horses, milch cows and other cattle, sheep, swine, and poultry.

The province has 6,101 miles of railway. In 1915 an Act came into force absolutely abolishing all public-houses and hotel-bars in the province.

Cities and Towns. — Regina (34,430) is the capital of the Province, on the main line of the Canadian Pacific, and the terminus of the Arcola branch from the southwest; Moosejaw (19,300), situated in one of the best wheat sections; Saskatoon (25,740), at the junction point of the line running from Regina to Prince Albert: Prince Albert (7,558), on the Saskatchewan River, near the center of the Province; Yorkton (3,100); Indian Head (2,000); Moosomin (1,730).

NORTHWEST TERRITORIES. — These comprise those territories formerly known as Rupert's Land and the Northwestern Territory (except the provinces of Manitoba, Saskatchewan, and Alberta and the Yukon Territory), together with all British territories and possessions in North America and all islands adjacent to any such territories or possessions, except Newfoundland and its dependencies. They have an *area* of 1,242,224 square miles and a population of 7,988 (1921). These immense territories are bounded on the north by the Arctic Ocean; on the east by Baffin Bay, Davis Strait, and Hudson Bay; on the south by the Provinces of Ontario, Manitoba, Saskatchewan, Alberta, and part of British Columbia; on the west by Yukon Territory and the Arctic Ocean.

They are governed by a commissioner who is assisted by a council of four members. The administration is carried on by the officers of the Royal Northwest Mounted Police, the head of the force being the commissioner, whose headquarters are in Ottawa.

Physical Characteristics. — It is a vast region whose only inhabitants are Indians and trappers. Posts of the Hudson's Bay Company located at far intervals, are the only signs of civilization in this frozen wilderness. The chief river is the Mackenzie, flowing into the Arctic Ocean. The principal lakes are the Great Bear and Great Slave. These territories, formerly under control of the Hudson's Bay Company, were the chief sources of the supply for the fur trade. Game of many kinds is still to be found within its borders, especially caribou and musk ox.

YUKON (*yō'kon*) **TERRITORY.** — The most northwesterly Territory in the Dominion of Canada, is bounded on the north by the Arctic Ocean; on the east by the Northwest Territories; on the south by British Columbia and Alaska, and on the west by Alaska. In 1898 it was constituted a separate Territory, and is administered by a commissioner. It has an *area* of 207,076 square miles and a population of 4,157. There is a Legislative Council composed of ten elected members. The *Klondyke* district, which is only a small section of Yukon, is the scene of the rich placer gold discoveries. Promising finds of quartz have also been made, and much copper and quartz development is in progress around Whitehorse. Valuable copper properties have been located at the head of White River. An excellent system of roads has been made, and there is a railway (102 miles), and steamboat service from Dawson (3,013), which is situated at the junction of the Klondyke and Yukon Rivers, to the Pacific coast.

CANADIAN EASTERN PROVINCES

NEW BRUNSWICK. — Is bounded on the north by the Province of Quebec and the Bay of Chaleur; on the east by the Gulf of St. Lawrence, Nova Scotia, and the Bay of Fundy; on the south by the Bay of Fundy, the State of Maine; and on the west by the State of Maine and the Province of Quebec. It forms an irregular square of about 200 miles in extreme length and breadth, and has a total area of 27,985 square miles, of which 74 are water.

New Brunswick was part of the old French province of Acadia, and was ceded to England in 1713, but full possession was not gained of it until 1759. It was first colonized by British subjects from New England in 1762, and in 1783, at the close of the Revolutionary War, it received a large body of loyalists from the Thirteen Colonies.

Physical Characteristics. — Two lines of hills traverse the Province, one following the coast line of the Bay of Fundy, the other starting from the same southwestern angle, and running diagonally across the Province to the northeast. Between the two lies a low plain, sloping down to the east coast. The northwest region of the Province is a rolling country, fertile, and suited for agriculture. There are many fine rivers in the Province. The principal ones are the St. John River, which flows south from the extreme northwest corner and enters the Bay of Fundy near the boundary line of the United States; the St. Croix, which forms part of the boundary, falling into the Bay of Fundy; the Restigouche, flowing into the Bay of Chaleur; the Miramichi, into Miramichi Bay in the Gulf of St. Lawrence; and the Richibucto, into Northumberland Strait.

A dense forest, principally of spruce, still covers the major part of the Province, although the land is rapidly being brought under cultivation.

Climate. — The climate of New Brunswick is healthy and the extremes of temperature are not so great as in the interior of Canada, the mean summer temperature being 60° and in winter 19°.

Soil and Agriculture. — The soil, especially in the valleys, is fertile, and at the head of the Bay of Fundy the fertility is of a high grade. As lumbering has proved more remunerative than farming, the agricultural interests have been slower to develop.

The principal crops are wheat, oats, and barley.

Forestry. — The chief industries are lumbering and the manufacture of wood pulp, New Brunswick holding fourth place of the Dominion.

Fisheries. — The fisheries, both sea and river, are extensive. Some of the finest salmon fishing in the world is to be had in the Province; the fishing on the Restigouche River being especially celebrated. Cod, lobster, herring, and sardines are abundant. Smelt fishing and fish packing are extensive industries.

Manufactures and Mining. — Though the manufacture of wood pulp is a leading industry, there are also in New Brunswick manufactures of cotton and woolen goods, and paper.

Copper, coal (especially in the Grand Lake region — 125,000 tons in 1917), and iron are abundant, and antimony, lead, manganese, gypsum, petroleum, natural gas, oil shales, and other valuable minerals exist in large quantities.

Cities and Towns. — FREDERICTON (8,114) is the capital; St. John (47,166) is the winter port of Canada; a new harbor, at a cost of some $25,000,000, was constructed at Courtenay Bay, now known as East St. John. St. John is the commercial centre of the Province, and was the first city in Canada to adopt a town-planning law; Moncton (17,488); Chatham (6,000).

NOVA SCOTIA (including Cape Breton Island). — Nova Scotia is a peninsula connected with New Brunswick by an isthmus about 14 miles wide. The colony was originally French and called Acadia. It was ceded to the British Crown in 1714. It has an *area* of 21,428 square miles and a population, at the last census, of 523,837.

It is bounded on the north by Northumberland Strait and the Gulf of St. Lawrence, on the east and south by the Atlantic Ocean, on the west by New Brunswick, the Gulf of St. Lawrence, and the Bay of Fundy. Length about 300 miles; breadth about 100 miles, with much variation. The island of Cape Breton, separated from Nova Scotia by the Gut of Canso, forms part of the Province.

Physical Characteristics. — The southern side of the Province is wild and rocky, covered with forests and dotted with small lakes. The cities and villages are situated on the coast at the heads of numerous bays indenting it. The surface of the peninsula is undulating, and though there are no mountains, there are several ridges of hills which traverse the country in an easterly and westerly direction. The plateau along the east coast rises from 600 to 1,000 feet high. The Cobequid Hills and a trap range are the chief elevations. Short, small streams are numerous and there are over 400 lakes. In Minas Basin, which penetrates the coast for 60 miles, the flow of the tide from the Bay of Fundy is very strong, and during the equinoxes the rise is often 50 feet. On the opposite shore at Halifax Harbor, it does not exceed 8 feet.

Climate. — On account of ocean influences there are no great extremes. The average temperature in summer is 45.6°, in winter 25°, and rarely reaches zero. Average rainfall is 38.1 inches, and snowfall 75.4. Fogs prevail along the coasts. The climate is remarkably healthful and is the most temperate of all the provinces of Canada.

Soil and Agriculture. — The Province is well adapted to agriculture and especially to growth of fruit. The soils, with the exception of hilly districts, are alluvial and fertile. In the valleys fruit and cereals are cultivated, oats, hay, barley, buckwheat, wheat, and rye being the principal cereals, and apples the principal fruit. The apple crop, especially that grown in the Annapolis Valley, is celebrated. This amounts to about a million barrels a year. Diking has reclaimed much of the marsh land from the sea, and this land produces a large output of hay.

There has been in late years a decrease in the number of cattle, sheep, and swine, and an increase in the number of milch cows and horses. The sheep industry in Nova Scotia is not encouraging and statistics show little increase, if any, in the past several years.

Forestry. — Nova Scotia holds fifth place in the Dominion's lumber production. Spruce and pine are the principal timber found in the Province, and their shipments to Europe and the United States form a considerable trade. The principal kinds of timber cut are: Spruce, white pine, hemlock, red pine, balsam.

Minerals. — The principal mineral is coal, of which the supply may be said to be practically inexhaustible, the output being over 50 per cent of the total production of the Dominion. The coal-mines of Nova Scotia are the only ones situated on the Atlantic coast of the North American continent. Gold, iron, copper ore, etc., are also found; there are practically inexhaustible deposits of gypsum, and tungsten has lately been discovered.

Fisheries. — The fisheries of the province are the most extensive in Canada. Some $6,000,000 are invested in the industry, and 40,000 persons employed.

Cities and Towns.— HALIFAX (58,372), the capital, has one of the finest, best buoyed, and

lighted harbors in the world — it is open for navigation all the year round, and the slight rise and fall of the tide, 5 to 6 feet, enable the largest ships to enter at all times. Its distance of only 2,422 miles from Liverpool (as compared with New York's 3,100) makes it an important trade route to Europe. It is the terminus of the Canadian Government railway and the contemplated Atlantic terminus of the other important Canadian lines. The new docks, recently constructed and now in use, are inferior to none in the world with a quay frontage of 6,650 feet, and a depth of water alongside of 45 feet. A steel shipbuilding plant of modern construction and equipment is capable of constructing ships of 18,000 tons.

On December 6, 1917, an ammunition-ship containing 1,000 tons of high explosive exploded in Halifax harbor, causing widespread devastation. The death-roll totaled 1,200, while 3,000 were injured, and 6,000 rendered homeless. That portion of the city adjacent to the explosion was practically destroyed.

Sydney (22,545) and New Glasgow (8,974) are important towns with extensive steel, iron, and coal plants, and have been designated the "Pittsburghs" of Canada; Amherst (9,998), a large manufacturing centre; Truro (7,562); Yarmouth (7,093); Glace Bay (17,007).

ONTARIO, formerly called Upper Canada, has a total *area* of 407,262 square miles, with a population (1921) of 2,933,662. It extends along the north shores of the River St. Lawrence and the Great Lakes and northward to Hudson's Bay. The district of Patricia, added in 1912, has an area of 157,400 square miles.

This Province, the most populous and wealthy section of Canada, is bounded on the north by Manitoba and Hudson Bay; on the east by Hudson Bay, James Bay, and the Province of Quebec; on the south by Lakes Superior, Huron, Erie, and Ontario; and on the west by the Province of Manitoba.

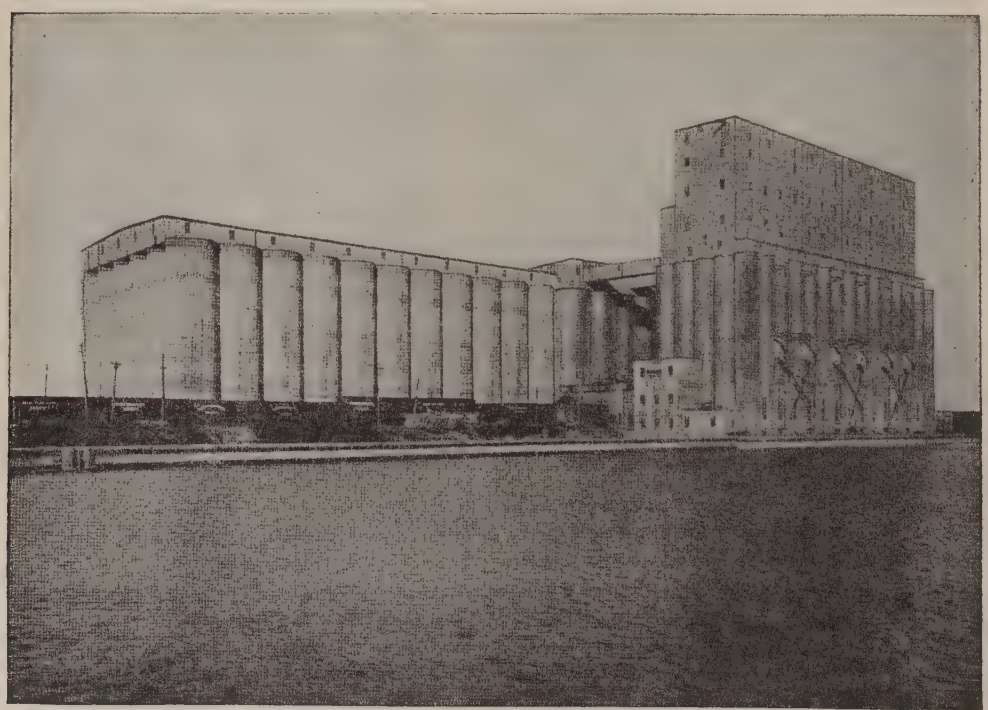
Physical Characteristics. — There are no ranges of mountains in Ontario, and the surface is undulating. The Laurentian hills, including the Laurentian Plateau, are to the north of the Province. The plateau, sometimes called the Laurentian Highlands, rises to a height of 1,200 feet. The southern half of the Province is part of the St. Lawrence lowlands. These lowlands, especially the western portion, the peninsula between Lakes Huron, Erie, and Ontario, form the chief agricultural district.

The principal rivers are the Ottawa, which forms the boundary between Ontario and Quebec, and empties into the St. Lawrence, and in the northwest, the Moose and the Albany, emptying into James Bay, and the Severn and Winisk emptying into Hudson Bay.

In the southern half of the Province there are no large lakes, but in the western part there are several — the largest being Lakes Nipigon, Nipissing, Simcoe, and Lake of the Woods.

Climate. — The range of temperature is very great, from 12° below to 90° above zero. The average temperature for January is 21°, minimum 10° below zero, the average for July is 68°, maximum 90°, but rare (the ordinary maximum is 80°). The mean temperature at Toronto is 45°, and the annual rainfall 26 inches. Owing to the dryness of the atmosphere, the climate is always healthful and bracing.

Agriculture and Live-stock. — Ontario is the leading agricultural province in the Dominion. The land is very fertile and produces cereals and mixed crops in abundance. There are over 14,500,000 acres of cleared farm land, the farms averaging 115 acres in extent, of which 81 per



FORT WILLIAM, ONTARIO, HAS THE LARGEST GRAIN ELEVATOR IN THE WORLD

Built by the Grand Trunk Pacific, Canada's newest transcontinental line, to facilitate transfer of western grain from rail to inland boat. Its capacity is 7,500,000 bushels, and it was planned so that its storage space can be trebled as the grain trade expands.

cent are owned by the occupants. The average value of farm products per acre is greater than in any other province.

The richest and most cultivated portion of the Province is the peninsula between the Ottawa River and Lakes Ontario, Erie and Huron.

The principal crops are wheat, barley, oats, Indian corn, potatoes, and some tobacco which is particularly well adapted to the growing of barley. Ontario can grow the garden vegetables similar to those raised in the United States. Fruits are abundant, especially apples, pears, peaches, plums, and grapes.

There are on farms in the Province, unusually large numbers of horses, milch cows, and other cattle, sheep, and hogs.

Forestry. — Ontario has always been and still is Canada's greatest lumber producer, the lumber cut being over one-third of the value of the total quantity cut in the Dominion. While its diversified forests give a small annual cut of almost every wood grown in the country, white pine constitutes over 50 per cent of the Province's output. Over one-half of the Dominion's cut of hemlock was produced by Ontario.

Immense quantities of pulp are produced, the basis being principally spruce and balsam fir. The pulp is largely exported to England and the United States. Ontario held first place in the output of red pine.

The forests area of Ontario are abundantly watered. Lumber on unlicensed territory includes the following forest reserves: Temagami, 5,900 square miles; Misissaga, 3,000 square miles; Nipigon, 7,300 square miles; Thunder Cape, 80 square miles; a total of 16,280 square miles.

Fisheries. — Ontario shares with the United States in the fishing advantages of four of the Great Lakes, and the smaller lakes are well stocked with fish. The fisheries comprise chiefly, trout, whitefish, pickerel, herring, and eels.

Mineral Resources. — The mineral regions of Ontario are well supplied with water power, which is an important factor in handling the products of the mines.

The Province is especially rich in iron, gold, silver, nickel, manganese ore, and copper. The most important mining centers are Sudbury, Michipicoten, Temiskaming, Cobalt, Porcupine, and Gowganda. Silver and nickel lead in point of production. Since the inception of the camp in 1904 the silver mines of the Cobalt district have in ten years shipped ore containing approximately 150,000,000 ounces of silver, valued at $100,000,000. The gold yield is steadily increasing. The petroleum fields of Lambton have produced as high as 30,000,000 gallons of crude oil a year. In the gas-producing region, which lies on the north shore of Lake Erie, the productive area has been steadily expanding.

Manufactures. — This is the chief manufacturing Province of Canada. The principal articles produced are iron and steel, railway cars, cotton and woolen goods, flour, lumber, doors, sashes, window frames. There is a considerable meat-packing industry. The amount of capital invested is over half a billion dollars, and the value of the finished products one third greater in value.

Cities and Towns. — The chief cities, with populations in 1921, are Ottawa, the federal capital (107,843); Toronto (521,893), the second city in Canada in wealth and population; Hamilton (114,151), with 415 manufacturing industries; London (60,959), through which pass 4 trunk and 7 branch railways; Brantford (29,440), with 73 industrial establishments, and a cost of living the lowest of any city in Canada; Fort William (20,541), almost as old as Quebec; Kingston (21,753), with municipally controlled water, light, and power plants; Peterborough (20,094); Windsor (38,591); Port Arthur (15,224), a great grain shipping and grain storage port — has an elevator with a capacity of 9,500,000 bush.; Kitchener (21,763); Guelph (18,128); and Sault Ste. Marie, (21,092).

Ottawa (*ot'a-wä*), the capital of the Dominion of Canada, is situated upon the south bank of the Ottawa River, one hundred and twenty miles from its junction with the St. Lawrence at Montreal. The river here forms the splendid Chaudière Falls (two hundred yards wide and forty feet high), above which a suspension bridge spans the river, and which supply the motive-power for the numerous lumber mills, flour mills and factories.

East of the city the River Rideau forms a second fall. The Rideau Canal passes through the center of the city, and connects with the Rideau Lakes, and so with the great lakes beyond. Opposite the city, to the northeast, the Gatineau River joins the Ottawa. There are thirty miles of driveways, well laid out and 2,000 acres of beautiful port lands.

It is a city of stately public buildings, of turfed drives and wooded pleasure grounds, and there is a constant round of social and official events con-

nected with the meetings of Parliament and other public functions. The Grand Trunk system has added to the attractions of the city by building the Chateau Laurier, which enjoys a continent-wide reputation as being in the first rank of famous hotels.

The parliamentary buildings, constructed in the Italian Gothic style after 1860, are on a bluff on the river bank. The central structure of Parliament destroyed by fire in February, 1915, was reconstructed with an additional story, at an approximate cost of $5,000,000. They include the handsome library building and the Victoria Tower (one hundred and eighty feet). Adjoining buildings on Parliament Hill are devoted to departments of the Dominion government. The residence of the Governor-General — an old-fashioned building, called Rideau Hall — is about a mile from the city. The post-office, city hall, banks and telegraph offices are handsomely built of stone.

Ottawa is the place of residence of the bishop of Ontario (Church of England), and of the Roman Catholic bishop of Ottawa, who has a cathedral here. Higher education is represented by the Ottawa University, Ashbury College for boys, Ottawa Ladies' College, La Salle Academy for boys, Provincial Normal School, Collegiate Technical, and an excellent public school system. There are also a musical academy, an art school, a well-equipped geological museum, and the parliamentary library, with three hundred thousand volumes.

The industries of Ottawa, mostly connected with lumber, represent an invested capital of over $50,000,000. In the winter thousands of men are engaged in cutting timber and drawing it to the streams, and in the spring the freshets carry the rafts down to the mills. The industries include about 180 factories, embracing wood products, paper mills, match factories, foundries, cement, carbide, marine gas buoys (only factory in the world), iron works and foundries, mica, clothing, etc.

The city was begun in the last years of the eighteenth century by a settler named Wright, of Boston, Massachusetts, who built a residence near the Chaudière, and called the village which he founded Hull. The construction of the Rideau Canal stimulated the settlement, which was called Bytown. In 1854 its name was changed to Ottawa, and the town was created a city. In 1858 Ottawa was chosen as the administrative capital of Canada. The first parliament met here in 1865.

TORONTO (*tō-ron'tō*) [From an Indian word. "place of meeting"], the capital of the province of Ontario, is situated on the north shore of Lake Ontario, between the Don and the Humber, 310 miles WSW. of Montreal. In population and as a commercial centre Toronto is the second city of Canada, and is connected with all parts of the U.S.A. and Canada by fast steamers and by the Grand Trunk, Canadian Northern, and Canadian Pacific railroads. The Bay of Toronto, an arm of Lake Ontario, on the south of the city, affords a harbor capable of receiving the largest lake vessels.

The new Union Station is estimated at about $5,000,000.

All the departments of the provincial government are centered in Toronto. The Dominion government has also great establishments in Toronto in the custom-house, post-office, internal revenue offices, and a meteorological observatory. The law-courts are centered in Osgoode Hall, a very stately and roomy building.

There are many handsome public buildings including the residence of the lieutenant-governor the imposing new Parliament buildings. Osgoode Hall (law courts), the University of Toronto Trinity College (Anglican), Upper Canada College, the Government School of Practical Science, Knox College, Wycliffe College, McMaster University, a Presbyterian theological institution, the Provincial Normal and Model School, two schools of medicine, a veterinary college, two colleges of music, etc. There are also many beautiful churches, including the Anglican and Roman Catholic cathedrals, the Metropolitan Church, and St Andrew's Church. Toronto has a Public Library, the Law Library, the library of the Canadian Institute, and the Legislature Library. Each of the colleges has a select library for its own purposes.

Toronto is the publishing center of Canada, and is also an important center of finance and commerce.

The lake commerce in lumber, fruit, grain, coal, and cattle is large, but the shipping on the lakes is laid up in winter. The manufactories of Toronto comprise iron-foundries, engineer-shops, railroad works, rolling-mills, breweries and a distillery, cabinet works and carriage factories, tanneries, soap-works, bootmaking establishments, sash and door factories, and pork-packing houses.

Electrical energy, generated at Niagara Falls, 80 miles distant, was delivered for the first time in 1906.

In 1749 the French established two forts, one at Kingston, Fort Frontenac, and one at Toronto, called Fort Rouillé. In 1756 this fort, on the west side of the present city, was destroyed to prevent its falling into the hands of the English. In 1812 Toronto, called York by Governor Simcoe, was captured and burned and looted twice in the same year by the American army and navy. In 1834 it was incorporated as a city with its present name Toronto. In 1837 it was the scene of a brief and ineffectual rebellion under Lyon Mackenzie. Since that time its history has been purely civic.

PRINCE EDWARD ISLAND. — This is the smallest and most densely populated of all the Provinces of Canada. It lies in the Gulf of St. Lawrence, and is separated from Nova Scotia and New Brunswick by Northumberland Strait. Area, 2,184 square miles; length, about 130 miles; greatest breadth, 34 miles; population, 88,615.

Physical Characteristics. — The coast line presents a succession of large bays and projecting headlands. The surface is undulating, nowhere over 400 feet high. There are numerous streams and springs, affording abundant supply of water.

Climate. — Much milder than on adjoining continent. During summer the temperature seldom varies from 75° to 88°. Rainfall averages 31.7 inches; snowfall 92.7 inches. Fogs, prevalent on the mainland, are not frequent on the island.

Soil and Agriculture. — The country is well adapted to agriculture. The land is generally level, the soil rich, of good depth, and kept manured at slight cost by mussel mud, being decayed remnants of oyster and clam shells, found in the bays indenting the shores.

About 85 per cent of the people of this island are engaged in farming.

The farm products consist of wheat, barley, oats and potatoes. Dairying and cream exports is one of the leading branches of farming. The live stock are horses, cattle, sheep, swine. The value of farm and animal products continues to rise.

Black fox and silver fox breeding has become an important industry; according to information published by the Government, at the end of November, 1923, there were about 360 fox ranches.

Fisheries. — The fisheries are valuable, the principal items being canned lobsters, salt herring, oysters, mackerel, and dried codfish.

Manufactures. — The manufactures are confined to supplying a few of the local wants and are restricted chiefly to linen and flannels. There are

Copyright by Underwood and Underwood

THE BASILICA, QUEBEC'S HISTORIC CATHEDRAL IN THE UPPER TOWN, AND GUARDIAN OF FAMOUS RELICS

also flour mills, tanneries, porkpacking establishments, shipbuilding, and ship-repairing yards.

Cities and Towns. — CHARLOTTETOWN (12,347), the capital, on the shore of Hillsborough Bay. Other towns are Georgetown, Summerside, Souris, Kensington, Alberton, and Montague.

QUEBEC (formerly called Lower Canada) lies eastward of Ontario, occupying both banks of the St. Lawrence. This is the oldest Province and the largest one of the Dominion. Bounded on the north by Hudson Strait; on the east by Labrador and the Gulf of St. Lawrence; on the south by the Bay of Chaleur, the Province of New Brunswick, the States of Maine, New Hampshire, Vermont, and New York, and the Province of Ontario; on the west by the Province of Ontario, Hudson Bay, and James Bay. The area of Quebec is 706,834 square miles, with a population of 2,361,199 in 1921. The Island of Anticosti and the Magdalen group in the Gulf of St. Lawrence belong to Quebec. The principal islands of the St. Lawrence are: Island of Montreal and Island of Orleans

In 1912 the boundaries were extended northwards to Hudson's Bay and Straits, so as to embrace the whole of the peninsula except the coast-strip of Labrador which belongs to Newfoundland; the name of "New Quebec" being substituted for that of "Ungava" which the said territory bore until then.

Physical Characteristics. — The Notre Dame Mountains, a continuation of the Appalachian Range, extend along the whole south side of the St. Lawrence River. The Laurentian Mountains skirt the northern bank of the same river, finally running westward to the shores of Lakes Huron and Superior.

The Province abounds in rivers, bays, and lakes. The St. Lawrence, the principal river, is navigable as far as Montreal. Above Montreal the St. Lawrence receives the waters of the Ottawa River, whose length is over 600 miles. The St. Maurice, which rises in Lake Oskelaneo and flows into the St. Lawrence, is over 350 miles in length and remarkable for its flow of water and its falls. The Saguenay, rising in Lake St. John, flowing into the St. Lawrence at Tadousac, is one of the most noted streams in the world, and varies in depth from 100 to 1,000 feet. The largest lake in the Province is Lake Mistassinni, area 975 square miles.

Climate. — The cold in winter is generally steady, the thermometer often registering 20° below zero; the snow lies on the ground from November to April. The mean temperature at Montreal is 42°, and the extreme range is from 20° below zero to 91° above.

Soil and Agriculture. — The soil is rich and loamy. Farming is the chief industry, especially in the large valleys of the St. Lawrence, the Ottawa, Matapedia, and Richelieu Rivers, and in the whole region of Lake St. John. The lands adjoining the north of Vermont are given to stock raising. Dairying and live-stock have become an important branch of agriculture.

The principal crops are wheat, oats, rye, barley, peas, buckwheat, clover, hay, corn, fruit, and vegetables.

Forestry. — Quebec stands third in importance of lumber production in the Dominion.

The area of land on which lumber of merchantable value is to be found is about 116,521 square miles, of which 43,168 are covered with red and white pine.

Mineral Resources. — There are thick beds of limestone and iron ore, phosphate, mica, and large deposits of graphite. Farther west Potsdam and other forms of limestone are found, affording the best building stone in the Province. The principal mineral products are asbestos, copper and sulphur ore, cement, marble, granite, lime, limestone and brick.

Manufactures. — Quebec has an abundance of water-power. The Lachine Rapids above Montreal supply power for large electrical works. Power is also supplied from the Richelieu River at Chambly. From these sources the power is derived for the operation of street railways, and also for the lighting of the city of Montreal. Shawenegan Falls, on the river St. Maurice, supplies like service to the city of Quebec.

The chief manufactures are wood pulp, paper, woolen and cotton goods, leather, dairy products, boots and shoes. The manufacture and export of cheese has increased rapidly.

Fisheries. — The fisheries of Quebec are important, the principal fish caught being the salmon and cod, although herring, lobsters, trout, halibut, mackerel, and smelts are also taken.

Cities and Towns. — The principal cities are QUEBEC (95,193), the capital Montreal (618,506), on the St. Lawrence; Trois Rivières (22,367); Hull (24,117); Sherbrooke (23,515); Verdun (25,001); and Westmount (18,500).

QUEBEC (*kwe-bek'*; F. pron. *ke-bek'*), the capital, is situated on a steep promontory, on the north-west ban.. of the St. Lawrence, 300 miles from the Gulf of St. Lawrence and 180 below Montreal (172 by rail). The highest part of the headland is Cape Diamond, 333 feet above the river. Quebec is the most important military position in Canada; its citadel occupies an area of 40 acres, and commands a magnificent view. The harbor is spacious, and the docks and tidal basin are perfect specimens of engineering skill; on the Levis side of the river is the extensive graving-dock.

The city is divided into an Upper and Lower Town, while westward are the thriving suburbs of St. John, St. Louis, and St. Roch's. The latter, the French quarter, has immense warehouses and stores.

The Lower Town, built round the foot of Cape Diamond, is the commercial section. Warehouses and wharves line the banks of both rivers. The leading business street is St. Peter Street, toward the end of which is the Louis Basin with wet and tidal docks.

Southwest of St. John the Plains of Abraham, the historic battlefield, with a column 40 feet high to the memory of Wolfe, were set apart as a national park in 1908, and a monument erected. Another, 65 feet high, dedicated to Wolfe and Montcalm, overlooks the St. Lawrence. On the Ste. Foye Road is an iron pillar crowned by a bronze statue, commemorating the deeds of the British and French under Murray and Levis in 1760. There is a shaft also to the memory of Jacques Cartier and Brébeuf.

The Quebec bridge across the St. Lawrence was completed in September, 1917. Dufferin Terrace, 200 feet above the river, commands a noble view. It has a statue of Champlain, unveiled in 1898 by Lord Aberdeen, then Gov.-Gen. of Canada. The Grand Battery is picturesquely situated. Three handsome modern gates have replaced the old ones. The principal edifices are the parliamentary and departmental buildings, court-house, post-office, custom-house, city hall, masonic hall, basilica, the archiepiscopal palace, the Anglican Cathedral, Church Hall, and Young Men's Christian Association building.

Laval University, named after the first Roman Catholic bishop of Quebec, who in 1663 founded the seminary, has a library of 150,000 volumes, a museum and art gallery, laboratory, etc.

PARTIAL VIEW OF BUILDING AND CAMPUS, M'GILL UNIVERSITY

LOOKING ACROSS DOMINION SQUARE, MONTREAL

A view over Montreal's finest square. The statue at the left is that of Bourget, second Bishop of Montreal.

Morrin College (Presbyterian) is affiliated with M'Gill University.

The water supply is from Lake St. Charles. The city is lighted with gas and electricity, the power for the latter being afforded by the Falls of Montmorency, 9 miles distant. Quebec is connected with all parts of America by rail. The manufactures, besides rifles for the Canadian government, are worsted goods, iron-castings machinery, cartridges, cutlery, nails, leather, musical instruments, boots and shoes, paper, tobacco, steel, etc. The chief exports are timber and lumber.

Cartier visited the site, Stadaconé, in 1535; and in 1608 Champlain founded and named the town, which was the center of French trade, civilization and missions till 1759, when it was captured by Wolfe. In 1763 it was ceded to Great Britain.

Montreal (*Montreawl'*), "Mt. Royal," Fr. pron. *Mong-ray-ahl'*), the largest city of the Dominion of Canada, is built on the southeast side of an island formed by the junction of the Ottawa River with the St. Lawrence, and may be said to be situated on the northern bank of the St. Lawrence, spanned by the tubular Victoria Railway Bridge, the rails being 60 feet above the river's level. The city is about 4 miles long and 2 wide, the Central Mountain in the rear narrowing the city at its base.

It is not the official capital of the province of Quebec, but it exerts an immense political and commercial influence, and shares with Toronto as the possessor of the greatest universities, hospitals, convents, and seminaries in Canada. During the season of navigation — i.e., from May to November — it is the great maritime port of the Dominion, headquarters of several transatlantic shipping companies, irrespective of active lake and river and coast navigation. It is nearly 1,000 miles from Montreal to the ocean proper, and 250 to the first salt water.

Montreal contains many imposing edifices, among which may be noted the Roman Catholic church of Notre Dame, Christ Church Cathedral, and the M'Gill University. Christ Church Cathedral has a tower 224 feet in height, and St. George's of 230 feet. St. Peter's Church is a repetition on a small scale of the church at Rome; Notre Dame is said to hold 10,000 people; St. Patrick's is the church of the Irish Catholics. M'Gill University (1821) has been active since 1852. Laval University of Quebec has a branch at Montreal; the seminary of St. Suplice (1657) is a theological institution; the Presbyterian College was chartered in 1865; and others in the long list are the Wesleyan Theological College (1873), the Congregational College, the Anglican Diocesan College, St. Mary's Jesuit College (1848), the Jacques Cartier Normal School, etc. There are several fine libraries, and musical, art, and historical associations also, which give a strong impulse to art, literature, and science. Founded as Ville-Marie de Montreal in 1642, the town was in 1760 surrendered by the French to the British; in 1776–77 it was occupied by troops from the American colonies. It was formerly the seat of the Canadian government, but in 1847 the capital was removed to Quebec and later to Ottawa.

The growth of the commerce of Montreal is very remarkable, having more than doubled since 1870, though a great fire in 1901 caused damage to the amount of $4,000,000. The 1,500 miles of the St. Lawrence River contribute to growth of exports, and distribute largely the growth of import. The canal system which finds its outlet at Montreal is remarkable, the canals affording a continuous course of water-com-

This is one of the city's most imposing edifices, and suggests, on a reduced scale, St. Peter's at Rome.

THE MEDICAL SCHOOL AND LABORATORIES, M'GILL UNIVERSITY

munication extending from the Straits of Belle Isle to Port Arthur at the head of Lake Superior.

Montreal is the headquarters of the Grand Trunk Railway, the Canadian Pacific Railway (to Vancouver City, 2,906 miles), the South-Eastern Railway, the Central Vermont Railway.

People. — The principal nationalities represented in the Dominion of Canada are English, Irish, Scotch, French, German and Indian, though there are also some few Dutch, Russian, Chinese, Welsh, Italians, Jews, half-breeds, etc. The census of 1921 gave the following distribution:

ORIGINS AND RELIGIONS

Origins	1921	Religions	1921
English	2,545,496	Roman Catholics	3,383,663
Scottish	1,173,637	Presbyterians	1,408,812
Irish	1,107,817	Anglicans	1,407,959
French	2,452,751	Methodists	1,158,744
German	294,636	Baptists	421,730
Hebrew	126,196	Lutherans	281,484
Dutch	117,506	Greek Church	169,822
Indian	110,814	Jews	125,190
Austrian	107,671	Mennonites	58,797
Ukranian	106,721	Congregationalists	30,574
Russian	100,064	Confucians	27,319
Norwegian	68,856	Salvation Army	24,763
Italian	66,769	Evangelical Associations	13,908
Swedish	61,503	Christian Science	13,826
Chinese	39,587	Doukhobors	12,658
Japanese	15,868	Brethren	11,626
Other	292,591	Buddhists	11,288
Total	8,788,483		

The province of Ontario is thickly settled on the south, along the river and the lake shores, by a population which is mainly of British descent, with a considerable infusion of Germans. The province of Quebec is peopled in great part by descendants of the original French settlers; they are called *habitans;* many of them speak an archaic French dialect and keep up peculiar manners and customs, and they are Roman Catholic in religion.

Religion and Education. — There is no state religion in Canada, and absolute toleration is there an accomplished fact. Roman Catholics, Methodists, Presbyterians, the Church of England, Baptists, Lutherans, and Congregationalists are all represented. (See foregoing table.)

Canada has long been in the enjoyment of free education, and the control of the system is in the hands of the provinces, except where the Act of Confederation secures the permanence of the denominational schools which existed at the time of confederation. Teachers are trained at provincial normal schools.

In Ontario and Quebec there are separate schools for Protestants and Roman Catholics.

The principal universities of Canada with the dates of their foundation are as in foregoing table.

Government. — Canada is a self-governing dominion created by an Act of the British

Parliament in March, 1867, known as the British North America Act. The Act provides that the Constitution of the Dominion shall be similar in principal to that of the United Kingdom; that the executive authority shall be vested in the Sovereign of Great Britain and Ireland, and carried on in his name by a Governor-General and Privy Council; and that the legislative power shall be exercised by a Parliament of two Houses, called the "Senate" and the "House of Commons." (See also section on Comparative Government.)

Therefore, the executive government of Canada is vested in the king, who is represented by a Governor-General appointed by him for a term of five years. The emoluments of the Governor-General are, however, paid out of Canadian revenues.

The Governor-General has a right, which is, of course, very seldom exercised, to disallow or reserve bills for imperial consent. The Constitution of Canada cannot be altered save by the Imperial Parliament, but to all intents and purposes Canada has complete autonomy.

The Legislature. — The legislative power is a Parliament, consisting of an Upper House, styled the Senate, and a House of Commons.

The Senate consists at present of eighty-seven members, distributed between the various provinces thus: twenty-four for Ontario, twenty-four for Quebec, ten for Nova Scotia, ten for New Brunswick, four for Prince Edward Island, three for British Columbia, four for Manitoba, four for Alberta, and four for Saskatchewan. The members of the Senate are appointed for life by the Crown on the nomination of the Ministry for the time being; each nominee must be thirty years old, a resident in the province for which he is appointed, a natural born or naturalized subject of the king, and the owner of property amounting to four thousand dollars.

The House of Commons is chosen every five years at longest, and consists of two hundred and thirty-one members, elected as follows: eighty-two being elected for Ontario, sixty-five for Quebec, sixteen for Nova Scotia, eleven for New Brunswick, fifteen for Manitoba, eleven for British Columbia, three for Prince Edward Island, twelve for Alberta, fifteen for Saskatchewan, and one for Yukon. The House of Commons is also composed of natural born or naturalized subjects of the king; no property qualification is necessary, and its members are elected upon a very wide suffrage. The members of the House themselves elect their Speaker, and twenty, including the Speaker, form a quorum.

Each province has also a separate Legislature and administration, with a Lieutenant-Governor, appointed by the Governor-General, at the head of the Executive.

The Judicature. — Justice is administered, as in England, by judges, police magistrates, and justices of the peace, of whom the first named are appointed by the Governor-General for life, from among the foremost men at the Bar in the several provinces. The highest court is the Supreme Court of Canada, composed of a Chief Justice and five associate judges, and holding three sessions in the year at Ottawa. The only other Dominion Court, viz., the Exchequer Court of Canada, is presided over by a separate judge, and its sittings may be held anywhere in Canada. The Provincial Courts include the Court of Chancery, Court of King's Bench, Court of Error and Appeal, Superior Courts, County Courts, General Sessions, and Division Courts. The duties of coroners are generally analogous to those in force in England, as are also methods of civil and criminal procedure, while trial by jury prevails.

Cities. — The capital and seat of government of the Canadian Dominion is at Ottawa. (For description of chief cities see under the respective Provinces.)

The following table shows the population of the larger Canadian cities, with their increase at various censuses, together with the latest available figures for 1921:

Cities	Census Population			
	1871	1901	1911	1921
Montreal, *Que*	115,000	267,730	470,480	618,506

History. — Canada was first discovered by John Cabot on June 24, 1497, and in 1534 a French expedition under Jacques Cartier ascended the St. Lawrence as far as Hochelaga (Montreal). Subsequently it was visited by Samuel de Champlain, who founded Quebec, and spent many years of his life in developing the colony. In 1713, Acadia (Nova Scotia), Hudson Bay Territory, and Newfoundland were ceded to England by the Treaty of Utrecht. From this time till 1763 Canada, from Acadia

(Nova Scotia) to Lake Superior and down the Mississippi to the Gulf of Mexico, was held to be French territory.

In 1756 began the Seven Years War between England and France, and 1759 (Sept. 18) saw the capture of Quebec by General Wolfe. The struggle between Great Britain and France for supremacy was long and bitter, but ended in 1763 with the treaty of Paris, by which all the French dominions in Canada were ceded to Great Britain, save the small islands of St. Pierre and Miquelon, retained by France as fishing stations.

Through the American War of Independence, what is now Minnesota, Wisconsin, Michigan, Ohio, Indiana, and Ill nois was lost in 1783 to the United States, no longer British colonies. Quebec was in 1791 divided into Lower and Upper Canada. A rebellion took place in 1837–1838, and the provinces were reunited in 1840. Prince Edward Island and New Brunswick were separated from Nova Scotia in 1770 and 1784. British Columbia was made a crown colony in 1858, and Vancouver Island joined to it in 1866.

The confederation of all the British North American provinces — except Newfoundland — took place in 1867–1871, and the prosperity of the Dominion was only temporarily disturbed by the Red River rebellion of 1869. In 1870 Manitoba and the North-West Territories were added to the Dominion, the latter by purchase from the Hudson's Bay Company for $1,500,000. British Columbia joined in 1871 and Prince Edward Island in 1873. In 1880 an Order in Council annexed to the Dominion such British possessions in North America, other than Newfoundland, as were not previously in the Dominion. The North-West Rebellion and execution of Louis Riel occurred in 1885.

The fishery rights have repeatedly been a source of controversy between Canada and Great Britain on the one hand and the United States on the other, and the dispute about sealing in Behring Sea and off the Alaskan coasts was only settled by arbitration in 1893.

The unnamed portions of the North-West Territories were named Ungava, Franklin, Mackenzie, and Yukon Districts in 1895. In 1898 the Canadian preferential tariff in favor of Great Britain came into force. 1903 saw the settlement of the Alaskan Boundary. In 1905 new provinces of Saskatchewan and Alberta were created.

A proposed reciprocity agreement with the United States in the year 1911 saw the decisive defeat at the polls of the Laurier policy and the Liberal party. In October Robert L. Borden took over the reins of government, as Premier, and Earl Grey was succeeded as Governor-General by the Duke of Connaught. In 1912 the boundaries of Quebec, Ontario, and Manitoba were extended. In 1916 the Duke of Devonshire succeeded as Governor-General.

The great European war of 1914–1918 brought Canada to the vigorous support of Great Britain and the Entente Allies, and did much toward the political, military and economic solidarity of the Dominion. During 1915, the first Canadian contingent of nearly 33,000 men, 7,500 horses, and 70 pieces of artillery, crossed the Atlantic to aid Great Britain. In April and May of that year they saw active service, and in the second battle of Ypres, at Langemarck and St. Julien, the First Division won great honor, being the first to be assailed by poison gas. Later this Division served in the Ypres salient.

In 1916 the Canadian Corps were heavily engaged at St. Eloi (3rd to 19th April), at Sanctuary Wood and Hill 62 (2nd and 3rd June), and at Hooges (5th, 6th, 13th and 14th June). At the battle of the Somme (Sept., Oct., Nov.) Canadians captured Courcelette.

In 1917 the Canadian Corps won fame at the storming of Vimy Ridge (9th to 13th April), at Arleux and Fresnoy (28th and 29th April and 3rd May), around Lens in June, at Hill 70 on 15th August, and at Passchendaele in the third battle of Ypres (25th Oct. to 20th Nov.).

In 1918, they won distinction in the 2nd battle of Somme (March and April), battle of Amiens (Aug. 12), capture of Monchy Le-Preux (Aug. 26–28), capture of Boiry and Cherisy (Aug. 30, Sept. 2), breaking of Queant-Drocourt line (Sept. 3 and 4), crossing of Canal du Nord and Bourlon Wood (Sept. 27–29), capture of Cambrai (Aug. 1–9), capture of Douai (Oct. 19), capture of Denain (Oct. 20), capture of Valenciennes (Oct. 25, Nov. 2), and capture of Mons (Nov. 7–11).

In the naval branch of the service, the *Niobe*, a cruiser of 11,000 tons, with 16 six-inch guns, patrolled the Atlantic; the *Rainbow*, a small cruiser of 3,600 tons, with two 6-inch, six 4.7-inch and four 12-pdr. guns, patrolled the Pacific. Two submarines helped to keep the German squadrons from B. C. ports. The Royal Naval Canadian Volunteer Reserve supplied men to the British Admiralty for coastal patrol service, 1,715 men serving with the Imperial Naval Forces, 73 surgeon probationers serving with the Royal Navy, while about 500 Canadians were employed in the British Auxiliary Patrol Service.

Since the close of the European War, Canada has given vigorous and intelligent effort to post-war reconstruction, and the business of both internal and external nation-building has received a new and powerful impulse.

NEWFOUNDLAND. — The island of Newfoundland lies directly northeast of the Gulf of St. Lawrence, and has as a dependency Labrador, from which it is separated by the Strait of Belle Isle on the northwest. The length of Newfoundland from north to south is about 350 miles, and the average breadth is 130 miles. It is generally rugged. Labrador along the coast line, some 600 miles long, is barren.

On the southwest the coast range reaches an elevation of nearly 2,000 feet. The hills attain their summit within a few miles of the salt water, and then spread out into an undulating country, consisting largely of barrens and marshes, and intersected by numerous small rivers and lakes.

The area of Newfoundland is 42,734 square miles, and that of Labrador 120,000, making a total of 162,734 square miles. The population of Newfoundland (1911) was 238,053, and of Labrador 3,947, totaling 242,000. The Eskimo population numbers about 1,300.

Agriculture. — Farming has been pursued only to a limited extent in the past, but there is considerably good farming land where hay, oats, alfalfa, barley, and certain vegetables such as potatoes and turnips can be grown.

Forestry. — Newfoundland's wealth of timber resources contributes largely to the volume of the colony's exports. The lumbering industry, together with that of the pulp and paper industries, are worth to the colony about $2,000,000 per annum. Some fine pine forests exist to the north and large sawmills have been established, as well as two pulp and paper mills. The forests have spruce, pine, birch, fir, tamaracks, and other useful trees. Lumber, pulp, and paper are exported to Great Britain.

Manufactures. — Local manufactures include fish products, foods and drinks, clothing, tobacco, lumber, and house furnishings. At Grand Falls and Bishop's Falls there are extensive paper mills in operation, and another has been erected at Deer Lake. Most of the paper is exported to England.

Fisheries. — The principal occupation of the people is fishing. The cod fishery is the chief industry, and next in rank are the seal, lobster, herring, salmon, haddock, trout, and mackerel. The whaling industry is also important.

Mineral Resources. — The mineral resources of Newfoundland are considerable. Large beds of iron ore have been found. Copper ore and pyrites are worked successfully. Coal is found in several places. In the eastern part of the island gold-bearing quartz rock, and extensive deposits of silver and lead ore are being worked. Talc, granite, limestone, flint, pebbles, and slate are distinctive mineral products and petroleum is also found.

Cities and Towns. — St. John's (33,779), the capital, the most easterly city of America, 1,700 miles from Queenstown and 2,030 miles from Liverpool, has a well-equipped dry dock and two fine cathedrals, Anglican and Roman Catholic — through it passes practically all the commerce of the island. Other towns are Harbour Grace (4,279); Carbonera (3,540); Twillingate (3,348) and Bonavista (3,911).

History and Government. — Newfoundland was discovered by John Cabot in 1497, and a few years later the French, Spanish, and Portuguese were attracted by its fisheries.

In August, 1583, Sir Humphrey Gilbert took possession of it in the name of Queen Elizabeth, but the effort to colonize it was not successful. In 1634, and subsequently, parties of English colonists settled in the island, while the French had established a station at Placentia in 1620. At the Peace of Utrecht, 1713, the exclusive sovereignty of Great Britain over the island was acknowledged, certain rights being granted to French fishermen, the extent of which being long a matter of dispute between the two countries. The dispute was finally settled by the Anglo-French Convention of 1904.

The *government* is administered by a Governor, with a *Legislative Council* of 24 members appointed by the British Crown, and a *House of Assembly* of 36 members elected for four years, from 18 districts, by manhood, suffrage, and the ballot. A branch of the *Royal Naval Reserve* has existed in the island since 1900.

Mexico (or *Méjico;* Span. pron. *Meh'hĕ-co,* from a native word), a federal republic of North America, embraces twenty-seven states, a federal district, and four territories. It extends between the United States and Guatemala, with an extreme length of nearly two thousand miles; its breadth varies between one thousand and (in the Isthmus of Tehuantepec) one hundred and thirty miles. It has a coast-line of almost six thousand miles, but with scarcely a safe harbor beyond the noble haven of Acapulco. On the Atlantic side, with its sand banks and lagoons, there are only open roadsteads, or river-mouths generally closed to ocean vessels by bars and shallows; harbor works, however, have been constructed at Vera Cruz and Tampico.

From the southeast and northwest extremities of the republic there extend the peninsulas of Yucatan and Lower California, enclosing the Gulfs of Campeche and California, respectively. In area (751,300 square miles) Mexico almost equals Great Britain and Ireland, France, Germany and Austria-Hungary together.

Surface. — For the most part Mexico consists of an immense tableland, which commences in the United States, and rises to over eight thousand one hundred feet at Marquez, seventy-six miles north by west of Mexico City; at El Paso, on the northern frontier, the elevation is only three thousand seven hundred and seventeen feet. The most important mountain range is the Sierra Madre (over ten thousand feet, and extending from Tehuantepec into the United States); parallel with this run the Sierras of the east coast and of Lower California.

The surface of the country is also much broken up by short cross-ridges and detached peaks. There are numerous volcanoes, but only a few of them are more or less active. The more prominent are Orizaba (Citlaltepetl, "star mountain"); Popocatepetl ("smoking mountain"); Ixtaccihuatl ("white woman"); Nevada de Toluca, and Malinche.

On the Atlantic side the plateau descends abruptly to the narrow strip (about sixty miles) of gently sloping coast land; toward the Pacific, where the coast lands vary in width from forty to seventy miles, the descent is more gradual.

Rivers and Lakes. — From their rapid fall the rivers of such a mountainous region could never be of value for transport or communication. The Rio Grande del Norte, the boundary river, is only navigable for sixty miles up from the Gulf of Mexico, and the largest interior river — the Rio Grande de Santiago, flowing west to the Pacific — is barred across by many waterfalls, though its upper course expands to form Lake Chapála, the largest sheet of water in Mexico, fully fifty miles in length.

Climate and Landscape. — Though Mexico lies just on the border of the torrid zone, the climate is governed to a far greater extent by elevation than by position in latitude, and distinct climates are recognized at different stages just as in the plateau of Abyssinia.

The low coast land and the maritime region below an elevation of two thousand feet, called the Tierra Caliente, presents all the characteristics of tropical lands.

Above an elevation of two thousand feet, and up the slopes of the mountains to a height of about five thousand feet, a climate is found in which the landscape takes the aspect of that of the temperate zone.

This stage is known as the Tierra Templada.

NATIONAL PALACE, CITY OF MEXICO

Still higher, above five thousand feet, a cool region is reached, which is known as the Tierra Fria. This includes the summit of the tableland and the pine covered slopes of the mountains up to the height at which some of the peaks are capped with perennial snows. Much of this high tableland is valuable only for pasture; towards the north and northeast, where the plateau is wider, the landscape becomes bare and dry, and salt lakes like those of the plateau region of the western United States appear. Deeply cut "cañons" or "barrancas," gorges with steep walls furrowed out by the mountain torrents, are characteristic of the plateau.

Production and Industry.—The vegetation of Mexico has the same wide range as the climate. In the lowlands dye woods and valuable timbers abound in the virgin forests, as well as medicinal plants, india rubber, palms, etc.; and oranges and bananas, many varieties of cactus, agave, sisal, olives, sugar, coffee, cocoa, rice, indigo, cotton and tobacco, besides the omnipresent maize, all thrive. The vine flourishes in some districts, especially near El Paso, Durango, and Parras, in Coahuila, where a good wine is made; and mulberry plants have been imported from Europe to develop the silk industry. In Lower California a good deal of archil is collected, and chicle gum is extracted and prepared in the forests along the coast.

Agriculture in Mexico is steadily developing. Silver mining has been an important industry ever since the conquest. Gold is also produced. Copper is largely mined in some sections, being found in a pure state in Chiapas and Guanajuato, and elsewhere associated with gold. Other important minerals are iron, including enormous masses of meteoric iron ore, and the mountain a mile from Durango, the Cerro de Mercado, a solid mass of magnetic iron ore; lead, found associated with silver; and sulpher, zinc, quicksilver, platinum, cinnabar, asphalt and petroleum, besides salt, marble, alabaster, gypsum, and rock salt in great quantities. There are also said to be large deposits of coal, some of excellent quality.

Mexico is the original home of the "cattle range" business, and there vast herds of horses, cattle, and sheep form the principal wealth of the people.

Woolen and cotton spinning and weaving, and other branches of industry are encouraged by high protective duties.

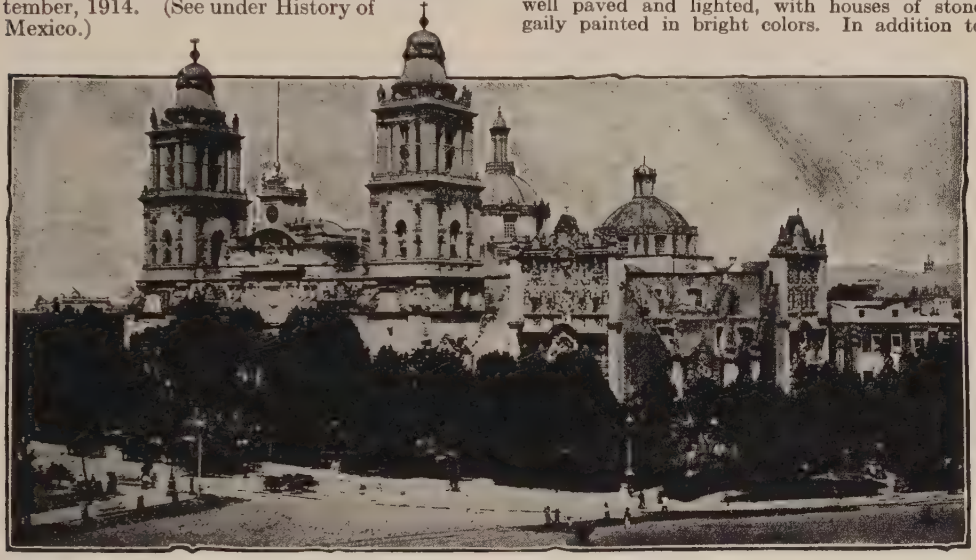
People.—The population of Mexico consists mainly of the indigenous Indian race, and of the dominant Spaniards or their descendants. Spaniards born in Europe are now very few in number, but the government of the country is in the hands of the "Creoles," or people of Spanish descent born in Mexico. They number about twenty per cent, mixed Hispano-Americans, or mestizos, forty-three per cent, and full blood Indians thirty-five per cent of the whole population. The mestizos are the farmers and rancheros, the muleteers and servants. Whites and mestizos speak Spanish.

The Roman Catholic is the religion of the country, but all beliefs are tolerated, and education, now free and compulsory, is making steady progress.

Government.—The Mexican constitution is closely modeled upon that of the United States. The president, who is assisted by secretaries of state, is elected for four years, and can be re-elected for a second term. The

legislative power is vested in a Congress, consisting of a Senate of fifty-six members, and a Chamber of Deputies of two hundred and thirty-three members. The judicial system occupies the same position as that of the United States; and the several states have elective governors and legislatures.

Owing to revolutionary conditions the civil government was practically suspended in September, 1914. (See under History of Mexico.)



THE CATHEDRAL, CITY OF MEXICO

Cities.—The principal cities are Mexico City, the capital, population 470,000. Puébla, east of the capital, among the mountains, is the second town and the most industrious place in Mexico. Guadalajara, northwest, is also a city of magnificent palaces and churches. Vera Cruz, founded by Cortez, is the only port on the Atlantic. On the Pacific side the chief seaports are Mazatlan and Acapulco, with a fine harbor. Other important towns are Oaxaca, Puebla, and Durango.

The railway system joins that of the United States at El Paso on the Rio Grande.

Mexico City is situated seven thousand four hundred and ten feet above the sea at the lowest level of the great basin (fourteen hundred square miles) of the Anahuac plateau.

All the main streets converge on the Plaza Mayor, where the site of the old teocalli is occupied by the no less famous Cathedral. The walls of this imposing building, forming a cross four hunderd and twenty-six by two hundred and three feet, alone cost nearly two million dollars, and the interior with its twenty chapels and elaborate ornamentation, much more. Built into the foot of one of the two open towers (two hundred and eighteen feet) is the famous "Aztec" (Toltec) calendar stone.

Facing the cathedral is the Municipal Palace, and on the sides of the plaza are the National Palace (the old vice-regal residence), the national Monte de Piedad, the postoffice, and the national museum.

Other noteworthy buildings are the national picture gallery and library (two hundred and fifty thousand volumes), the national observatory, the school of mines, the mint, the Iturbide hotel, and the former palace of the Inquisition, now a medical college; and, mostly in secularized ecclesiastical edifices, there are also schools of law and engineering, a conservatory of music, and an academy of fine arts.

Among the monuments of the city are the noble Columbus monument, the statue of Cuauhtemotzin, the last of the Aztec emperors, and that of the engineer Martinez.

The principal streets are broad, clean, and well paved and lighted, with houses of stone gaily painted in bright colors. In addition to the alameda, with its stately beaches, Mexico is remarkable for the extent and beauty of its paseos, or raised paved roads, planted with double rows of trees, which diverge far into the country from every quarter; and there are still on Lakes Chalco and Xochimilco, where a line of steamers runs, a few of the floating gardens for which the ancient city was so celebrated.

Attempts had long been made to drain the valley of Mexico. The federal government finally undertook the work, and operations begun in 1890 were completed in 1898 at a cost of about sixteen million dollars. Extensive drainage and sanitation works have since been carried out at a cost of five million seven hundred and fourteen thousand nine hundred and eighty-two dollars.

In 1905 a sumptuous legislative palace, a national Pantheon for the ashes of the great men of Mexico, and a monument to perpetuate the heroes of the independence were under construction, at a cost of thirty million dollars.

The trade of Mexico is chiefly a transit trade, but it has now extensive cotton and linen factories, paper mills, tobacco and cigars, gold and silver work, pottery, silverware, cork, bricks, and soap—many of them due to foreign enterprise.

History of Mexico.—The history of ancient Mexico exhibits two distinct and widely differing periods—that of the Toltecs and that of the Aztecs. Both were Nahua nations, speaking a language which survives in Mexico to this day.

The eighth century is the traditional date when the Toltecs are related to have come from the north, from some undefined locality, bringing to Anahuac, or Mexico, its oldest and its highest native civilization, about 1325. A

hundred years later, under the reign of Montezuma II., they had attained a suzerainty over all the tribes from the Atlantic to the Pacific.

On the coming of the Spaniards under Cortez in 1519, Aztec rule was finally overthrown, chiefly by means of the assistance the Spaniards received from those peoples whom the Aztecs had held in cruel bondage.

In 1540 Mexico was united with other American territories—at one time all the country from Panama to Vancouver's Island—under the name of New Spain, and governed by viceroys (fifty-seven in all) appointed by the mother country, Spain. For nearly three centuries it may be said to have lain in sullen submission beneath its cruel conqueror's heel, till in 1810 the discontent, which had been gaining ground against the vice-regal power during the war of Spain with Napoleon, broke into open rebellion under the leadership of a country priest named Hidalgo.

In 1822 General Iturbide had himself proclaimed emperor; but the guerilla leader Guerrero, his former ally, and General Santa Anna raised the republican standard, and in 1823 he was banished to Italy with a pension. Returning the following year he was taken and shot, and the federal republic of Mexico was finally established.

For more than half a century after this (till 1876) the history of Mexico is a record of chronic disorder and civil war. In 1836 Texas secured its independence, for which it had struggled for several years, and which Mexico was compelled to recognize in 1845. In that year Texas was incorporated with the United States, and after the Mexican war of 1848 Mexico ceded half a million square miles to the United States.

The Emperor Napoleon III. declared war against the president, Juarez, in 1862; the Austrian Emperor of Mexico, Maximilian, imposed by the French, was executed in 1867, and the republic re-established. Diaz was re-elected president for the eighth time in 1910, but, being too autocratic, had to resign under pressure of revolution in 1911. In the ensuing welter of revolts and conspiracies President Madero was set aside and killed, and the United States applied pressure to eliminate President Huerta. From this time on the relations of the United States with Mexico became more strained. During 1915-1916, following repeated attacks made by bands of Mexican bandits upon American border towns and assaults by Mexicans upon Americans and other foreigners in Mexico, the relations between the two countries approached a crisis. Early in 1916 nineteen men, nearly all of them Americans, were taken from a train near Chihuahua and killed by a band of bandits.

Conditions became still more tense when, on March 9, several hundred bandits led by Villa raided and burned the town of Columbus, N. M., killing nine American civilians and eight United States soldiers. On March 10 President Wilson ordered five thousand United States troops into Mexico to catch Villa, and two days later the first troops crossed the border. On March 16 the first clash occurred between Villa outposts and the American expeditionary force. On June 18 the war department ordered all the state militia mobilized, and within the next two weeks fifty thousand of the state soldiers had been rushed to the border.

President Wilson later in the year named an American commission at the suggestion of General Carranza, which, jointly with a Mexican commission, began its sessions at New London, Conn. The sessions continued until November 24, when a protocol was signed providing for the withdrawal of the United States troops from Mexico in forty days, conditioned upon the Carranza Government showing within that time that it could protect the border and prevent raids by bandits upon American territory.

Two days before the signing of this protocol Villa, at the head of a strong force, attacked Chihuahua City, and after a battle lasting several days captured the city.

Carranza forces regained control of Chihuahua City December 3, and Villa's forces fled to the mountains west of the city, where they were later reported to be gathering new recruits in preparation for more extensive operations.

The year 1917 was ushered in with the struggle between the Carranza and Villa factions still in progress.

LEADING COUNTRIES OF SOUTH AMERICA

ARGENTINA, or ARGENTINE REPUBLIC, takes its name from the river La Plata ("River of Silver"). After Brazil, it is the largest state of South America. Its territory reaches from the Pilcomayo River, on the borders of Bolivia, southward for two thousand four hundred miles to Staten Island, off the southeastern extremity of Tierra del Fuego; and from the slope of the Andes on the west to the Uruguay River and the Atlantic in the east.

Physical Features.—Excepting on the northwest, where the spurs of the Andes reach down into the state, the surface of Argentina presents vast monotonous and level plains, broken only by the detached ridges of Córdova and San Luis, in the western interior. In the north the portion of the region called the Gran Chaco, within the frontier, is partly forest covered, but all the central and southern region presents only vast treeless plains or "pampas," covered at most seasons with coarse grass, which is green in the winter months, but which dries up in summer so as to give an aspect of aridity to the plains. Some portions of the interior, called "Salinas," are barren and white throughout the year.

Rivers.—The great watercourse of the country is the Paraná, formed by the union of the Upper Paraná and Paraguay rivers near the northeastern corner of the state. This is a noble river, in all parts of its course through Argentine territory scarcely ever less than a mile in width, and in some places spreading out in lateral channels, or "riachos," to a breadth of ten miles.

The Pilcomayo, which forms part of the northern boundary, has now been explored throughout its length, and is navigable at

high water; the Vermejo, the next river southward, has of late years become a regularly navigated highway from the Paraguay up to the northeastern provinces; the Salado, farther south, flowing directly to the Paraná, is also an important river; but the remaining streams which tend eastward to the Paraná have not strength of water sufficient to resist evaporation in crossing the dry plains, and terminate for the most part in marshes and salt lakes.

Climate.—The climate in the extreme north is very hot, for it lies north of the tropic of Capricorn. The more remote southern territories have an extremely disagreeable climate, but are not really so cold as might be expected from their relatively high latitude. But the country in general enjoys an equable, temperate, and healthful climate. Stormy southwest winds, called "pamperos," sweep over the plains at times, and raise great clouds of dust, which fly across the plains.

Production and Industry.—The principal productions are wheat, maize, oats, linseed, sugar, wool, hides, cattle, sheep, and horses.

The great wealth of the state, however, lies in its countless herds of cattle and horses and flocks of sheep, which are pastured on the "pampas," and which multiply there very rapidly. The rearing and tending of these herds is the great and characteristic industry of the country; these also yield enormous quantities of hides, horns, and salted beef.

The northwestern provinces of the Argentine Republic, crossed by the lower ramifications of the Andes, are rich in metals, including gold, silver, nickel, copper, tin, lead, and iron, as well as in several kinds of marble, jasper, and precious stones. On the Rio Vermejo petroleum wells have recently been discovered.

The export of frozen beef and mutton is an important industry. The exports are made up entirely of pastoral and agricultural products, with the exception of quebracho, copper, manganese, and wolfram.

People.—The people of the country are mostly Spanish in their language and descent, although there are many Italians, French, Americans, Swiss, and Germans. The Gauchos, or herdsmen of the plains, are a hardy and spirited, but ignorant race, often of partial Indian descent. Some of the Indians of the remote districts have become skilled in the rearing of flocks and herds.

The religion is Roman Catholic. The government is closely modeled upon that of the United States.

Education.—Primary education is secular, free and nominally compulsory from the ages of six to fourteen. Schools are maintained by provincial taxation, and controlled by provincial boards (except in the capital, where there is a National Council), with grants from the Federal Government. Secondary education is controlled by the Federal Government in lyceums and normal schools. There are also Special Government Schools—one naval, one military, one mining, and one agriculture. There are National Universities at Cordoba and Buenos Aires, and Provincial Universities at La Plata, Santa Fé, and Paraná.

Government.—The Constitution vests the executive power in the hands of a President, who is also Commander-in-chief of the troops, elected by representatives of the provinces for six years, not being immediately re-eligible; and the legislative authority in that of a Senate of thirty members, two chosen by the capital and two by the legislature of each province, and a House of Deputies of one hundred and twenty members elected for four years by the people, one-third of the Senate retiring every three years, and one-half of the House retiring every two years.

The Judicial system consists, like that of the United States, of a Federal Supreme Court and Courts of Appeal, with Provincial Courts in each state for non-national or single state cases.

Cities.—The chief seaport is Buenos Aires, the capital and largest city, with a population of 1,315,000 in 1911. La Plata lies twenty-five miles to the southeast of the Federal capital, and, although founded in only 1882, already numbers 80,000 inhabitants. A canal joins it to the vast docks of Ensenada.

Córdova (53,000), nearly in the center of the state, is the seat of the chief observatory of the Republic.

Rosario (135,000), on the right bank of the Paraná, more than two hundred miles up from the La Plata inlet, is a substantially built town, and a great outlet of the animal produce of the interior plains.

Tucuman (55,000) and Salta in the northwestern mountain region, and Mendoza (32,000) at the eastern base of the Andes, where they are crossed to enter Chile, with Corrientes (18,000) on the Paraná, are other important places.

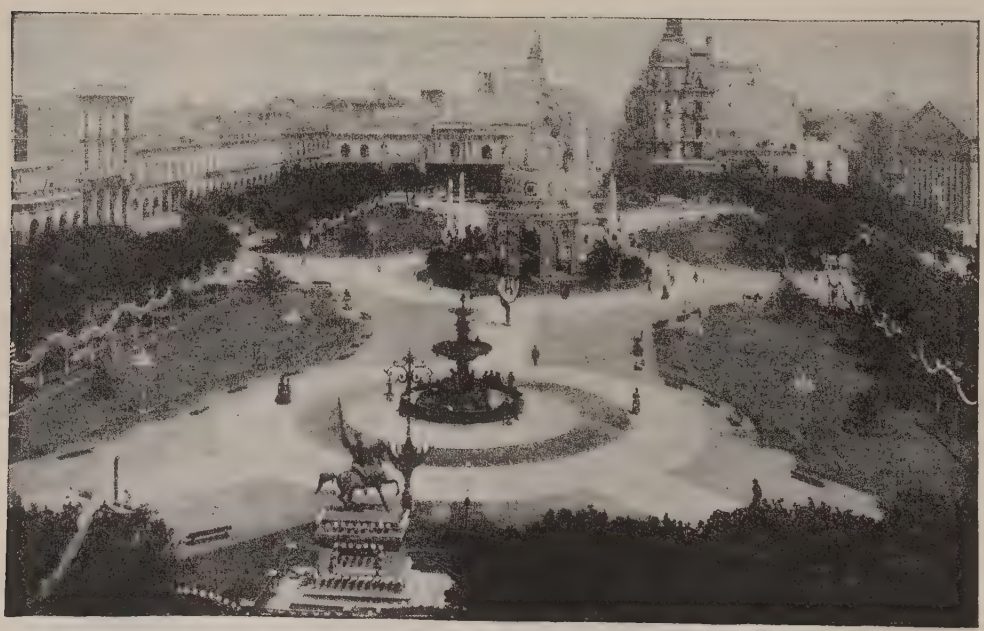
Buenos Aires (*bwā'nōs ī'rez;* Sp. pron. *bwā'nōs ī'res;* Eng. pron. usually *Bonos Ai'rez*) stands on the right bank of the Plata, which here, at a distance of one hundred and fifty miles from the open sea, is twenty-eight miles across.

The city is partitioned into blocks of about one hundred and fifty yards square. The streets are regularly laid out at right angles to each other and well lighted. Many are planted with trees, and there are numerous open squares and several fine parks, the most famous being Palermo Park (eight hundred and forty acres). The main buildings are the Roman Catholic Cathedral, the chapel of Santa Felicitas, the Casa Rosada, or Government House, the university, the Opera House, and various government and municipal buildings. Much of the town has lately been rebuilt on European lines. It is the terminus of six railway lines, and has excellent street car, cable, and telephone services. There are manufactories of furniture, machinery, carriages, leather, hats, textiles, boots, tobacco, liquors, etc., and the trade is very large.

An elaborate system of harbor works was carried out between the years 1887 and 1895 at a cost of twenty million dollars; it includes an advanced river wall, a north and south basin, and a series of four docks, which connects two channels of the Rio de La Plata, and so brings large vessels up to the wharfs. About half of the inhabitants are of European birth or descent. Among the Europeans the vast majority are Italian; the rest are principally Spanish, French and British. Newspapers are published in French, English, Italian, and German, as well as in Spanish.

History.—The river La Plata was visited by the Spaniards in 1516, and the country was

THE AVENIDA DE MAYO, BUENOS AIRES



PLAZA DE MAYO: BUENOS AIRES, ARGENTINA

Buenos Aires is the most populous and the richest city in the southern half of the globe. Fifty years ago the Argentine was what Illinois and Iowa and Kansas were a hundred years ago—it had millions of undeveloped acres of the best black soil the earth has to offer. But they were scores and even hundreds of miles from a railroad. Then came the railroads, opening up the country and making a thousand millionaires almost over night. It has a population of about one and a quarter millions; its post-office handles forty million pieces of mail, and one hundred and twenty-five thousand parcels-post packages a month; it has twelve hundred and nine automobiles, twenty-seven theaters, forty-eight moving-picture shows, and nearly all the other features of a great metropolis.

THE COLON THEATER, THE HOME OF GRAND OPERA, BUENOS AIRES, ARGENTINA

THE NEW HOUSE OF CONGRESS, BUENOS AIRES, ARGENTINA

colonized in 1535, when Buenos Aires was founded. For many years the country was regarded as a part of Peru. The progress of the colony was not more hindered by the bloody wars which prevailed with the natives for a hundred years than by unwise legislation at Madrid.

In 1776 Buenos Aires became the capital of a new viceroyalty. In 1806 that capital was occupied by a British force under General Beresford, but the town was soon besieged and compelled to surrender. In 1808 the British forces under Whitlock assaulted the town, but after very severe loss were themselves compelled to capitulate.

In 1810 the colonists founded a local provisional government. A sanguinary war for independence followed, which did not cease till 1824. Spain acknowledged the independence of the country in 1842. The first half-century of Argentine autonomy was much disturbed by revolutions.

THE SPANISH MONUMENT AT PALERMO PARK, BUENOS AIRES, ARGENTINA

The Brazilian-Argentine war against Paraguay (1865-1870) was interrupted and followed by renewed revolts at home. For a time the great material progress of the country was accompanied by an equally remarkable movement in favor of stability of government and the repression of factions. But once more dissensions and an insurrection in Buenos Aires led to civil war (1890), which again was followed by a disastrous financial panic (1891); and political and commercial crises, with riots and risings in various parts of the country, continued to succeed one another and to prevent progress. In May, 1910, the Argentine celebrated its centenary of independence.

BRAZIL (*bra-zil'*; Portuguese pron. *bra-zēl'*), a republic of South America, of which it covers nearly half, is little less in area than the whole of Europe, its area being 3,300,000 square miles, including the Acrá territory brought from Bolivia in 1902. It has a length of 2,660 miles, and a breadth of 2,705 miles between extreme points. It borders on every state in South America except Chile. The name was given by early explorers from thinking that the red dyewood (brazil-wood) found here was identical with the East Indian dyewood known to them as Brasil.

Surface.—This vast territory presents two contrasted regions. First, the wide, low lying, and humid forest plain of the Amazon River in the north; second, the uplands in the south, which are traversed by radiating hills and mountain ridges, and which present wide grass plains between woods and bush-covered country.

The northern coast is bordered by low, alluvial bottom lands and sandy plains, full of lakes, and in places very sterile; while the southern angle of the country is rolling campo land, bordered by a low sandy coast. Above its eastern angle a large area of coastlands and neighboring plateau is subject to periodical devastating drought.

The highest mountain ranges of Brazil rise in the center of the southeastern uplands, where the Montes Pyrenéos rise to nine thousand five hundred feet, but the coast range, or Serra do Mar, to the south of the beautiful Gulf of Rio de Janeiro, hardly yield to these, for within it the Itatiaiossu is scarcely six hundred feet lower, while the Organ Mountains, at the back of Rio, have summits which reach up to seven thousand five hundred feet.

Rivers.—Brazil possesses three great river-systems—the Amazon, La Plata, and San Francisco.

The Amazon and its tributaries drain fully a half of the country. To the east of the Madeira these tributaries are tableland rivers, broken by rapids and freely navigable for comparatively short distances. West of the Madeira they are lowland rivers, sluggish, bordered by extensive flood plains, and afford free navigation for long distances. The La Plata system drains nearly one-fifth of the country through its three branches—the Paraguay, Paraná, and Uruguay.

The first of these is a lowland river, freely navigable for a long distance, while the other two are tableland rivers, full of obstructions, and without free outlets for their upper level navigation.

The San Francisco is a tableland river, flowing northeast between the Goyaz and maritime mountains, and then, breaking through the latter, southeast to the Atlantic. It is not freely navigable because of the Paulo Affonso Falls. The other coast rivers are generally short.

Climate.—Brazil lies almost wholly within the tropics, and is still in great part unexplored and unsettled. The climate of Brazil varies greatly—the lowlands of the Amazon and a great part of the coast being hot, humid, and unhealthy, while the tablelands and some districts of the coast swept by the trade winds are temperate and healthy.

Production and Industry.—The minerals are very considerable and valuable, comprising gold, silver, iron, diamonds, topazes, and other precious stones. Its forests are immense, abounding in the greatest variety of useful and beautiful woods adapted for dyeing, cabinet work, or ship-building; among these are mahogany, logwood, rosewood, brazil-wood, etc.

Its agricultural produce is abundant; maize, beans, cassava root, and nuts are very generally cultivated; also in some parts, wheat and other European cereals.

Cattle raising is an important industry, the number being computed at eighteen million. Cotton is being largely cultivated for export, and is being used for home manufactures. Sugar cane is grown in large and increasing quantities in the northern provinces, Pernam-

THE HARBOR, RIO DE JANEIRO

Brazil possesses one of the most unique natural harbors in the world. Although the entrance to the bay of Rio is only one mile wide, it is deep enough for the passage of the largest vessels, and can be easily defended.

buco being the center of the sugar-producing zone.

India rubber comes from the more northern provinces, especially the valley of the Amazon, and is shipped from Pará and Manáos; and coffee, though also grown in the north, comes chiefly from Rio de Janeiro, Minas, São Paulo, and Esperito Santo. Tobacco and cocoa are grown largely, especially in Bahia. The exports consist solely of the raw produce of the soil.

People.—The inhabitants of Brazil, as of other parts of South America, present three great elements—that of the aboriginal Indians, that of the European conquerors and colonists and their descendants, and that of the Africans introduced as slaves. The most important section of the Brazilians are the descendants of the Portuguese settlers. There are, however, several flourishing German and Italian colonies in the southern states.

The number of pure white people is very small in proportion to those who have some mixture of Indian or African blood, and the Brazilians themselves have developed into a number of more or less distinct physical types in the widely separated provinces of the republic. Formerly about one-half of the entire population of Brazil was formed of negro slaves.

The Roman Catholic is the established religion, and is supported by the state; but all other sects are tolerated. There are, however, very few Brazilians who are not Roman Catholics.

Education is still in a very backward condition. The language is Portuguese, with dialectal varieties.

Government.—According to the new Constitution of 1890, the empire was abolished and the Brazilian nations is constituted a Federal Republic under the title of the United States of Brazil, each of the twenty provinces forming a separate state with local self-government. At the head of the federation is a president with executive authority, elected by the people for six years. The National Congress with legislative functions comprises a Senate and Chamber of Deputies, the senators being chosen three for each state, for nine years, the deputies for three years in the proportion of one to every seventy thousand of the population. The franchise extends to all citizens not under twenty-one years of age.

Cities.—The capital city is Rio de Janeiro, the second largest in South America. Next in importance is the city and seaport of Bahia (230,000), finely placed on an inlet of the Atlantic, the oldest city of Brazil. Pernambuco, also called Recife from a reef of rock which forms the natural breakwater of its harbor, is the fourth in population, being now surpassed by São Paulo, which ranks next to the capital (332,000). Maranhão, on an island of the north coast; Pará, in the Tocantins estuary; Rio Grande, and Santos are the other notable places along the Atlantic. In the interior the principal towns are Ouro Preto, in the gold mining region, and Diamantina, the center of the diamond fields. Cuyabá, in the interior, is important as being at the head of the regular navigation into Brazil by way of the Paraná and Paraguay rivers.

Rio de Janeiro (*Ree'o deh Zha-nay'e-ro*) stands on the west side of one of the most magnificent natural harbors in the world. An inlet of the Atlantic, the bay of Rio de Janeiro runs fifteen miles northwards, varying in width from two miles to seven; it is girdled on all sides by picturesque mountains (one thousand five hundred to three thousand feet), covered with tropical vegetation. The entrance, less than a mile wide, passes between two bold headlands, one of them called the Sugar-loaf (one thousand two hundred and seventy feet).

The city and its suburbs stretch nearly ten miles along the shore. About three miles southwest of the city stands the precipitous cone of Corcovado (two thousand three hundred and thirty-six feet), with a cog-railway up to the top. Public institutions are the vast hospital of La Misericordia; the national library with three hundred thousand volumes; the national museum; the large lunatic asylum; the botanical gardens, with a celebrated avenue of palms; the observatory; the Geographical and Historical institute; the former royal palace at São Christovão, the arsenal, the naval dockyards, the academy of fine arts, a cadet-school, a school of medicine, a conservatory of music, a polytechnic school, etc. A good water supply, chiefly by an aqueduct twelve miles long, and a new system of sewage draining, much improved the city health: but

SÃO PAULO, BRAZIL

São Paulo, Brazil, stands on a wide plain bounded by low hills, four miles from the Rio Tiete and three hundred and ten miles by railroad from Rio de Janeiro. The principal buildings are the old Jesuit college, now the government palace, the bishop's palace, and a celebrated law-school. São Paulo is the headquarters of the coffee trade. There are cotton-weaving and printing works, and manufactories of tobacco, cigars, spirits, matches, gloves, and hats. In 1910 a splendid municipal theater was erected at a cost of $7,500,000. Over $400,000,000 is invested in its industrial establishments.

surrounding hills shut out the breezes, and the heat grows intense in summer.

The population includes many foreigners: Portuguese, British, French, and Germans.

Rio de Janiero is also the commercial capital, sending out one-sixth of the total exports of Brazil, and bringing in forty-five per cent of the imports. The chief export is coffee.

The whole sea frontage of the city is lined with quays, and has been improved by extensive new harbor works, embracing a dock of seventy-five acres, a breakwater three thousand two hundred yards long, an elevated railway, hydraulic cranes, warehouses, etc.

The city possesses cotton, jute, and silk mills, tobacco and hat factories, machine shops and tanneries.

History of Brazil.—As early as 1480, expeditions sailed from Europe in search of the island of Brasil, rumored to exist in the western seas. Brazil was discovered on January 26, 1500, by Vincent Yañaz Pinzon, who landed at Cape St. Augustine, near Pernambuco, and then followed the coast north to the Orinoco. In the same year a Portuguese expedition to the East Indies, under Pedro Alvarez Cabral, discovered the Brazilian coast near Porto Seguro on April 25 (April 22, Cazal). Cabral took formal possession, and named his new discovery "Terra de Vera Cruz." Two Portuguese expeditions were sent out in 1501 and 1503, the first exploring the coast, and the second planting a colony and bringing back a rich cargo of brazil-wood, which gave a name to Portugal's new possession.

In 1530 the Portuguese government resolved upon the definite settlement of Brazil. Many of the earliest colonies failed through lack of means, and from inability to hold their ground against the natives. In 1567 a Huguenot colony, established on the bay of Rio de Janeiro twelve years before, was overthrown by the Portuguese, who then founded the present capital of Brazil.

The discovery of gold in Minas Geraes in 1693, and of diamonds in 1729, gave a new impetus to the growth of the country, one result of which was the removal of the colonial capital from Bahia to Rio de Janeiro. The cultivation of cotton, tobacco, and sugar cane had already attained great prominence and prosperity.

In 1808 the royal family of Portugal was expelled by the French and took refuge in Brazil, and of the very first act of Dom João VI. was to open Brazilian ports to foreign commerce. He then removed various restrictions on domestic industries, founded a printing office and library, created new courts, and opened various school and public institutions. All these acts greatly stimulated the growth of the country.

In 1821 he returned to Portugal, leaving his eldest son in Brazil as prince regent. Personal ambition, and the advice of men opposed to government from Lisbon, led the young prince to declare for Brazilian independence, September 7, 1822. He was proclaimed and crowned emperor as Dom Pedro I. before the end of the year, the small Portuguese force in the country being quickly and easily expelled. The constitution was ratified and sworn to early in 1825, and some amendments were added in 1835.

The new empire, however, did not start smoothly, nor was the reign of Dom Pedro I. a fortunate one. Vexed with the opposition encountered, he in 1831 voluntarily abdicated in favor of his eldest son, and withdrew to Portugal. During the next nine years Brazil was governed by regencies, but in 1840 a popular agitation led to the declaration of the young prince's majority, at fifteen years of age,

THE HOUSE OF CONGRESS, SANTIAGO, CHILE

and to his coronation the following year as Dom Pedro II. The reign was one of almost unbroken peace, interrupted by two wars—one with Buenos Aires in 1852, and the other with Paraguay in 1865-1870.

At the revolution of November, 1889, the empire became a republic, and Dom Pedro and his family were exiled. Under the new and enlightened constitution and a succession of patriotic presidents, Brazil has enjoyed a season of peace and prosperity such as it has not experienced since its colonial times. In 1904 the third Pan-American congress was held in Brazil, and did much to bind closer the bonds existing between her and the other American republics.

CHILE (*Tchee'lee;* Span. *Chile,* pron. *Tschee'lay*), is one of the republics of South America, on the west coast, and borders on Peru, Bolivia, and Argentina. It reaches from the southern boundary of the coast line of Peru to the southern extremity of Tierra del Fuego, through a distance of about two thousand eight hundred miles, rising inland to the summits of the Andes, which here form a single chain at a distance of about one hundred miles from the ocean. The Strait of Magellan is by treaty considered neutral as between Chile and Argentina. Its breadth varies from forty to two hundred miles.

Physical Features.—The range of the Andes, visible from the sea all along the coast of Chile, towers up in a series of volcanic cones and snowclad peaks; the loftiest summit, that of Aconcagua, being probably the highest point of all the South American continent.

Numbers of streams descend from the range, and have furrowed deep valleys across the width of the country. The most considerable of these are the Maypú near the center of Chile, and the Maule and Biobio in the south, both of which are to some extent navigable.

In the south are also many deep lakes. Mineral waters, chiefly saline and sulphureous, are abundant. The most important islands are those constituting the southern province of Chiloé; Juan Fernandez also belongs to Chile.

Climate.—This long strip of maritime country presents remarkable gradations of climate from north to south. Nearest the Peruvian frontier the coast-land of Tacna, Tarapacá, and Atacama is a hot, rainless, sandy desert without sign of vegetation. Southward is found a temperate climate which enjoys a moderate rainfall. This central belt is the most valuable and the most productive agricultural region of Chile. Farther south the westerly winds blow toward the mountains from over the wide Pacific and bring with them such quantities of moisture that the rainfall is excessive; here, in southern Chile, in consequence of the abundant moisture, the mountain slopes are densely covered with evergreen forest.

Production and Industry.—Agriculture and mining are the principal occupations. Wheat, maize, barley, oats, beans, peas, lentils, wines, tobacco, flax, hemp, Chile pepper, and potatoes are grown extensively; the vine and all fruit trees flourish. The live stock includes cattle, sheep, horses, goats, and pigs. The mineral

wealth is considerable, the country being extremely rich in copper ore, and some rich gold mines have been discovered. The rainless north yields more especially nitrate of soda, iodine, borate of soda, gold and silver, a large number of mines yielding both being in actual work in Tarapacá, Guanaco, and Cachinal in Atacama, and Caracoles in Antofagasta; the center, copper and silver; and the south, iron and coal. The nitrate exports are extremely valuable. There are smelting works for copper and silver, tanneries, corn and saw mills, starch, soap, biscuit, rope, cloth, cheese, furniture, candle, and paper factories, breweries and distilleries; and the domestic industry furnishes cloth, embroideries, baskets, and pottery. The many ports favor commerce, and six lines of steamers connect the country with Panama and the Magellan Strait. The staple articles of export are nitrate of soda, iodine, copper bars and ores, silver ores, corn, flour, hides, and guano.

People.—The inhabitants of northern and central Chile are, for the most part, descendants of the intermixed Spaniards and native Indians. In the upper classes the race has been kept more purely Spanish than in any other South American country.

Chile is a Roman Catholic country, but other religions are tolerated. Education receives much attention. There is a first class university at Santiago, and a lyceum in every provincial capital. The language spoken in Chile is Spanish, but with many local words of Indian origin.

Government.—Under the constitution voted in 1833, Chile is governed by a president who is elected for five years by delegates nominated by ballot, who is not re-eligible. A Senate and Chamber of Deputies from the legislature. The Senate, of thirty-two members, is elected by the provinces for six years; the Chamber, of ninety-four members, by the departments for three years, by electors over twenty-one, and able to read and write.

Cities.—Santiago, the capital, has 350,000 inhabitants; Valparaiso, 180,000; Concepcion, Iquique, Talca, Chillan, Antofagasta, over 30,000.

Santiago (*San-tee-âh'go*) stands near the western base of the Andes, one thousand seven hundred feet above sea-level, and one hundred and fifteen miles by rail east by southeast of Valparaiso. The snow-capped mountains seem to enclose it on the north and east; while in the east of the city rises the picturesque park, Cerro de Santa Lucia (eight hundred feet above the plain), dotted with grottoes, statues, kiosks, restaurants, an historical museum, and an observatory. The small but turbulent stream, the Mapocho, is crossed by five bridges.

The city is regularly laid out, lighted with gas and electric light, and has electric railways in all directions. Most of the houses are of one story only, owing to the earthquakes (the most serious occured in 1575, 1647, 1730, 1822, 1835, 1906).

On the great Plaza Independencia are the government palaces, the Grand English Hotel, the cathedral, and the archbishop's palace. On the site of the Jesuit church, burned down in 1863, a monument was erected in memory of the two thousand worshipers who perished in the fire.

Santiago boasts a noble Alameda, or boulevard, adorned with four rows of poplars and statues. Facing it are the University and the National Institute. The city has also a military school, schools of arts and agriculture, a conservatory, a national library with one hundred and two thousand volumes; botanical and zoölogical gardens, etc.

The manufactures include cloth, ship's biscuits, beer, brandy, etc., and it has also an ice factory, a fruit-conserving establishment, and copper-smelting works.

Santiago was founded by Pedro de Valdivia in 1541.

History of Chile.—The name Chile is supposed to be derived from an ancient Peruvian word signifying "snow." The first European to land in Chile was the Portuguese discoverer Magellan, after his famous voyage through the strait which now bears his name. He landed at Chiloé in 1520.

After the conquest of Peru by Pizarro, an expedition was made to Chile from that country overland under the leadership of Diego de Almagro in 1535. This expedition penetrated as far as the Rio Clano, but returned unsuccessful. Another was sent under command of Pedro Valdivia in 1540, which succeeded in annexing the territory as far as the River Maipu. Santiago, the capital, was founded by Valdivia in 1542. During the colonial period the governors of Chile were appointed by the viceroys of Peru.

In 1810 a revolt against the Spanish power broke out, in which Don Bernardo O'Higgins, son of one of the last viceroys of Peru, but a native of Chile, played a conspicuous part, and finally became the first dictator of the new republic. The first constitutional president was General Blanco Encalada. The government was unsettled until 1847. A revolution broke out in 1851, but since then there has been no serious attempt to overturn the government by force of arms.

In 1864 Chile gave Peru very valuable support in her war with Spain. Valparaiso was bombarded by the Spaniards in 1866. In 1879 Chile declared war against Bolivia, and immediately thereafter against Peru, with which Bolivia was allied. For a time the Peruvian fleet kept the Chileans in check, but in August, 1879, the Peruvian ironclad *Huascar* was captured by the Chilean men-of-war *Cochrane* and *Blanco Encalada*, both armor plated. After this event the success of the Chileans was uninterrupted—Peruvian towns were bombarded, warships captured, and Lima taken by storm June 21, 1881. The Chileans occupied Lima and Callao until 1883, when a treaty of peace was signed.

President Balmaceda's unconstitutional government led to civil war in 1891, when the congressionalists were victorious. The decisive battle was fought near Valparaiso on August 28, and Balmaceda committed suicide.

In September, 1910, the centennial celebration of the first declaration of independence from the Spanish crown took place.

Chile was neutral during the World War, but on specific invitation joined the League of Nations in 1919. During the latter part of 1924 the Government was in the hands of a military directorate.

LESSER NATIONS OF LATIN AMERICA

BOLIVIA (*bo-liv'i-a;* Sp. pron. *bo-le've-a*), [named for *Bolivar*].—The third largest political division of the continent of South America, is bounded by Brazil on the north and east, Peru and Chile on the west and Argentina and Paraguay on the south. Area, 514,155 square miles, population (estimated 1915), 2,889,970.

Physical Features.—In Bolivia the Andes approach closely the Brazilian uplands. In the western district there are two main ranges, the Western Cordilleras, which are now in Chilian territory, and the Cordillera Real, which is the name given to the section of the Andes on the east side of Titicaca. In this group are found the Sorata (23,000 feet) and the Illimani (22,500 feet).

BY THE SHORE OF LAKE TITICACA

Indian traders on the largest lake in South America. The boats, perhaps as curious craft as are found anywhere in the world, are termed "balsas," and are made of coarse reeds bound together. Titicaca is more than twelve thousand feet above the sea and has a length of one hundred and sixteen miles.

A remarkable feature of Bolivia is the great table-land lying between the Andes and the Cordillera Real, which has an elevation of over 12,000 feet, and which contains the Lake Titicaca.

The lake is about 120 miles long, and has a depth of about 120 fathoms.

Although Bolivia is usually taken to be a very mountainous country, in reality at least three-fifths of it is made up of low-lying and swampy territory. In the northeast there is an extensive plain, which is both well watered and well wooded, and is valuable for its supply of timber trees.

The principal rivers are the Paraguay, the Pilcomayo, and, belonging to the basin of the Amazon, the Mamore, the Rio Beni, the Guapore, and the Mochupa.

Bolivia lies in the torrid zone, and its climate depends upon the elevation, and not upon the latitude. In the mountain heights perpetual winter reigns, some of its heights being absolutely uninhabitable; between an elevation of 11,000 to 9,000 feet the climate is of the temperate zone; while in the Yungas Zone the climate is tropical, producing all tropical fruits and vegetation. The plains are hot and moist, and covered with dense forests.

The indigenous plants comprise the palm, the cinchona, the bamboo, mate, and coca. Other productions are balsam, bananas, caoutchouc, vanilla, copal, coffee, cotton, sugar, potatoes, and tobacco.

Among its indigenous animals are the llama, alpaca, vicuña, guanaco, chinchilla, viscacha. All forms of South American bird life are found here, and an indigenous species of stork called the bata is peculiar to this part of the continent.

Mineral and Vegetable Products.—Bolivia is still famous for its silver mines. 1,500,000 pounds weight of silver being exported annually. Other metals found in large quantities are tin, copper, and gold; lead, mercury, and iron are also found in fair quantities. In the southern provinces salt is found in large quantities, but coal appears to be rare.

Among the other products of the country may be mentioned wheat, barley, and other cereals, the production of which is, however, retarded, as is agriculture generally, by the lack of a good system of communications. The lower zone is remarkably adapted for the production of maize, cotton, and tobacco, but these industries are not developed. The forest products are cinchona and rubber.

Cities.—The seat of the executive government, formerly La Paz, was transferred in 1869 to Oruro, and is now at Sucre. The chief towns are La Paz (80,000), Cochabamba (25,000), Chuquisaca or Sucre (24,000), and Potosi (24,000).

History.—Bolivia declared its independence August 6th, 1825. Its history has been largely a series of restless and purposeless revolutions. Slavery was abolished in 1836. In 1879 a war broke out between Chili and Bolivia allied with Peru, of which the issue was disastrous to the allies. The terms of peace were severe, and stripped Bolivia of her seaboard district, with its stores of niter and guano, besides demanding a heavy war indemnity. The boundary disputes with Brazil and Chile were settled in 1903—1904, Bolivia acquiring territory on the frontier of Matto Grasso and the river Madeira, besides monetary compensation and commercial facilities.

COLOMBIA [formerly *United States of Colombia,* Sp. *Estados Unidos de Colombia;* named after Columbus], is a republic of South America, lying between the Caribbean Sea on the north, Venezuela and Brazil on the east, Ecuador on the south, and the Pacific Ocean and Panama on the west.

The population is estimated (in 1914) at 5,280,700, exclusive of about 30,000 uncivilized Indians. The white population is of Spanish descent, and there are besides these the Mestizos, of mixed Spanish and Indian blood, and the Indians. Slavery was finally abolished in 1852. Primary instruction is free, but not compulsory; there are several normal schools and a few institutions for professional education. There are about 3000 public schools with 240,000 pupils. The state religion is Roman Catholic.

Physical Features.—The surface of Colombia is exceedingly varied. In the west there are lofty mountains; in the east there are vast llanos and forest plains, watered by tributaries of the Amazon and Orinoco. The mountain system consists of three spurs of the Andes, which spring out fan-like from the Plateau of Pasto in the southwest; these are the Western, Central, and Eastern Cordilleras. Besides these chief ranges there are, in the north, the Sierra Nevada de Santa Marta and the low Bando range along the northwest coast and extending into Panama.

The principal rivers are the Magdalena and its tributary the Cauca, rising in the Central Cordillera and flowing into the Caribbean Sea; several tributaries of the Amazon in the east; and the Patía, flowing into the Pacific, after making its way through a gorge 10,000 to 12,000 feet high in the cliffs.

The climate is determined by the double influences of latitude and altitude. Situated entirely in the tropical zone, its days and nights are of equal length, and it has the two seasons —the wet and the dry. The country includes every altitude, from the sea-level to upwards of 18,000 feet in the region of perpetual snow; it has therefore every temperature, from that of the torrid zone to that of the frigid. The lowland portions, covered with dense forest, have an intensely hot climate; the inland mountain region is comparatively cool. The wide-stretching plateaus of the Eastern Cordilleras have a cool and healthful climate. This region is the most thickly populated of the republic; in it is Bogotá, the capital, 8694 feet above the sea.

Products and Industries.—The chief industries of Colombia are agriculture and mining. The principal productions are bananas, coffee, cacao, sugar-cane, cotton, corn, rubber, wheat, and barley; banana culture is on the increase. The mineral wealth is great, especially in Antioquia. There is an enormous annual output of gold and silver, and rich deposits of copper, lead, zinc, mercury, iron, platinum, and salt are found. The famous emerald mines of Muzo and Cosquez are leased by the government to an English syndicate.

Manufacturing is relatively unimportant, but in the larger towns many articles in common use are produced; among these are cotton textiles, shoes, hosiery, matches, sugar, liquors, flour, and bricks.

Imports and Exports.—The chief imports are flour, lard, petroleum, and cotton goods from the United States; sugar, rice, and potatoes from Germany; and cotton goods from Great Britain. The exports consist of gold, silver platinum, coffee, bananas, tobacco, and cattle. Of the coffee exported 67 per cent goes to the United States, and nearly all the tobacco goes to Germany.

Cities.—The most important towns with their populations are : Bogota (150,000), Medellin (60,000), Barranquilla (42,000), Bucaramanza (30,000), Cartagena (27,000), and Cucuta (10,000).

History.—The Spanish power was established here in the first half of the sixteenth century, and independence was proclaimed in 1811. In 1819 this territory, with Venezuela and Ecuador, formed the Republic of Colombia, from which Venezuela withdrew in 1829 and Ecuador in 1830. In 1832 the Republic of New Granada was founded, in 1863 the name "United States of Colombia" was adopted, and in 1886 the present constitution was formed. Panama seceded in 1856, rejoined the republic again, and again seceded in 1903. In April, 1914, a treaty was signed between Colombia and the United States for the settlement of their differences arising out of the proclamation of independence by Panama in November, 1903.

COSTA RICA (*kos'ta re'ka*), [Sp., "the rich coast"], the most southerly republic of Central America, except Panama, occupies the entire breadth from sea to sea between Nicaragua on one side and Panama on the other. Area, 23,000 miles; population, 400,000. The whites are mostly of pure Spanish descent and their religion Roman Catholic.

Except on the coast, the country is generally mountainous, with many volcanoes, all under 11,500 feet; on the Atlantic slope dense forests prevail, but wide savannahs are more frequent on the Pacific side. Although rich in gold, silver, copper, and other metals, its chief industry is agriculture; but the population is very scanty, and only a twentieth part of the land is under cultivation. Besides valuable timber and dye-woods, it yields coffee, tobacco, sugar, cacao, caoutchouc, sarsaparilla, and vanilla, which, with hides, tortoise-shell, and

mother-of-pearl, are largely exported. But to bananas, even more than coffee, is principally due the reviving prosperity of "the Coffee Republic."

There are about 500 miles of railway. The chief ports are Punta Arenas and Limon; the other towns are San Jose, the capital, Cartago, Alajuela, and Heredia.

Discovered by Columbus in 1493, and probably first settled on his fourth voyage, in 1502, Costa Rica has had much the same history, punctuated with frequent revolutions, as its neighbors; it declared its independence in 1821. For the ten years preceding 1883 the constitution was practically suspended. The government is now, however, among the most liberal in Central America. A boundary dispute with Colombia was adjusted in 1900 in favor of Costa Rica.

CUBA (*ku'bä;* Sp. pron. *kö'bä*).—The largest island in the West Indies and since 1902, an independent republic, stretches in the form of a long narrow crescent, convex on the north side, at the entrance of the Gulf of Mexico, which it divides into two channels—the northwest, 124 miles wide, and the southwest, 98 miles at its narrowest part. Cuba is 759 miles long from east to west, with a breadth varying from 27 miles to 90 miles, a coast-line of 1976 miles, and an area of 44,210 square miles. Population (1914), 2,469,125.

Physical Features.—The shores are low and in many parts beset by reefs and banks, but there are numerous excellent havens. A watershed running lengthwise through the island, rises into mountainous heights only in the southeast, where the Sierra de Maestra in the Pico de Tarquino attains 8,400 feet. The mountains, containing minerals, especially copper and iron, are wooded to the summits. The limestone rocks abound in caverns, with magnificent stalactites. Mineral waters are plentiful. The rivers, running north and south, are navigable for only a few miles by small boats, but are very serviceable for irrigation.

Climate and Production.—The climate, more temperate than in the other West Indian Islands, is healthy in the elevated interior, but the coasts are the haunt of fever and ague. No month of the year is free from rain, the greatest rainfall being in May, June, and July. Earthquakes are frequent in the east. The soil is extremely fertile, a large part still covered with virgin forest containing magnificent mahogany, cedar, etc.

Among the cultivated products are sugar, tobacco, coffee, cacao, rice, maize, cotton, esculent roots, and tropical fruits. The rivers and seas are well stocked with fish, and turtles abound in the shallows and sandy places of the beach. Sugar has long been the chief product; and there are numerous sugar plantations, tobacco plantations, and coffee plantations.

Cities.—Capital is Havana (359,259). Other towns are Santiago (63,041), Matanazas (56,468), and Cienfuegos (82,092).

History.—Cuba, spoken of as the "Queen of the Antilles," was discovered in 1492 by Columbus, and first settled by Spaniards at Baracoa in 1511. Havana, founded in 1519, was reduced to ashes by the French in 1538, and again in 1554. In 1762 the English took and held Havana for a year. In 1818 the trade of Cuba was opened to the world, and for some years the island enjoyed unexampled prosperity. During the American civil war Cuba developed its sugar industry.

An insurrection against the Spanish authorities went on from 1868 to 1878, a new one broke out in 1895, and the Spanish severities in suppressing it 1898, after a war with the United States, it was relinquished by Spain and became an independent state under American suzerainty. (See Spanish-American War.)

The constitution of 1901 provides for a republican form of government, with a President, Vice-President, Senate, and House of Representatives. In 1906 an insurrection broke out in consequence of alleged frauds on the part of Palma at his reelection that year, and by August the government forces were compelled to seek aid from the United States. After Palma's resignation in September, President Roosevelt appointed Mr. Charles E. Magoon, American minister at Panama, provisional governor of the island. A new election took place in November, 1908, when the Liberal party chose General Gomez president. After handing over the administration to the new government Governor Magoon and the American troops finally withdrew on January 28, 1909.

Education, neglected for years, was reorganized under the American administration, and is now compulsory.

ECUADOR (*ek'wa-dor;* Sp. pron. *ak-wa-dor'*), [Sp. *Republica del Ecuador*, "Republic of the Equator"], a republic of South America, lying between Colombia on the north, Peru on the south, and the Pacific Ocean on the west. But its only certain limits are those defined by the ocean, where it has a seaboard of some 400 miles; most of the frontier east of the Andes has never been determined. The area is 116,000 square miles, including the Galapagos Islands. The total population is stated (1915) to be 1,680,000 (estimated).

Physical Features.—Ecuador consists of three divisions—the lowlands west of the Andes, the mountainous plateau of the interior, and the less elevated forest-country to the east. Besides the main range of the Andes forming the backbone of the country, there is an outer range, with peaks rising to 15,000 feet; from the cordillera proper numerous long spurs, attaining a height of 14,000 feet, are thrown out towards the east, between which rise great affluents of the Amazon, while the coast-range possesses only short and very precipitous spurs.

The principal peaks of the Andes which are situated in Ecuador are Chimborazo (20,498 feet), Cotocachi (16,301 feet), Cayambe (19,186 feet), Antisana (19,335 feet), Cotopaxi (19,613 feet), etc.

Of the coast-streams the principal are the Guayaquil River, and the Rio Esmeraldas; east of the Andes the chief rivers are the Napo and its affluents, flowing into the Marañon. In mineral wealth Ecuador has been ranked among the poorest states of South America; but gold is found, and silver, quicksilver, iron, copper, zinc, asphalt, and petroleum occur, as well as graphite and anthracite.

Climate and Products.—Ecuador is an agricultural country. The eastern winds become saturated as they pass over the Atlantic and up the Amazons; and their moisture is almost ceaselessly precipitated as they approach the snowy peaks of the Andes, producing a dense growth of vegetation on the eastern foothills. On the other side also, where the rainclouds of the Pacific are caught, the gorges of the western spurs become very hothouses. Natural *sabanas* or open plains are, however, found on the western lowlands.

Sarsaparilla, balsams, caoutchouc, vegetable ivory, and wax are collected, and coffee, rice, cotton, tobacco, etc., are grown, but in smaller quantities; while the trade in cinchona promises soon to be a thing of the past, owing to the reckless destruction of the trees. The plateau region and large tracts to the east are comparatively healthful; the valleys on the Pacific side are commonly full of disease. In the interior there is very small climatic range, and perpetual spring reigns in the uplands.

The animals include the jaguar, puma, ounce, ocelot, deer, tapir, peccary, capybara, and several species of monkeys and bats; fish abound, both in the rivers and along the coast; and among reptiles are the boa constrictor, turtles, and alligators. Chiefly, however, is Ecuador the paradise of birds (ranging from the condor to the humming-bird) and insects. The live-stock includes cattle, sheep, horses, mules, donkeys, and llamas.

The foreign commerce centers in Guayaquil. The chief products are cocoa, india rubber, hides, coffee, sugar, and cotton. Ecuador is the largest cocoa-producing country. Panama hats are now made almost exclusively in Ecuador. Gold, copper, iron, lead and coal exist in considerable quantities, but the country badly needs development. Total length of railways, 365 miles.

Cities.—The principal cities are Quito, the capital (80,000), Guayaquil, the chief port (80,000), Cuenca (30,000), Riobamba (18,000), Loja (10,000), Latacunga (10,000), and Ambato (10,000). Quito possesses a university and an institute of sciences. The State Church is Roman Catholic, but by a law of 1904 the Church and its property are under the control of the State. Civil marriage is obligatory. Primary education is free and obligatory.

History.—The Inca Huayna Capac defeated the last Shiri of Quito in the year 1475, and annexed the kingdom. The Spanish conquerors (1534) of the country were Diego d'Almagro and Sebastian de Benalcazar. In 1820 Guayaquil won its independence from the Spanish yoke, and in 1822 the decisive battle of Pichincha was gained by the Venezuelan General Sucre. Through the influence of Simon Bolivar, Ecuador was incorporated with Colombia, and was first formed into a separate state in 1830.

In 1832, however, Colombia's claims to the plateau of Pasto were recognized, and since 1876 the same state has held the river Putumayo. Ecuador and Colombia, under treaty of November 5, 1904, agreed to submit their boundary dispute to the German emperor as arbiter. A dispute with Peru as to the boundary was referred to the king of Spain, the question at issue concerned the possession of nearly 100,000 square miles of land rich in rubber, timber, and probably gold. The king, on the evident unwilliness of Ecuador to decide the dispute by arbitration, declined the office (November, 1910). The United States, Argentina, and Brazil then intervened, and through their mediation warfare was averted.

DOMINICAN REPUBLIC, often, but incorrectly called **Santo Domingo** or **San Domingo** [Sp. *Republica Dominicana*], a state formed of the eastern portion of Haiti. Area, 19,325 square miles, or over two-thirds of the whole island; population, 700,000, mostly negroes or mulattoes. The state religion is Roman Catholic; the prevailing dialect is Spanish.

Civilization has not reached a high level; but of late years the country has made considerable progress under the impulse of American enterprise. Large sugar plantations and factories have been developed in the south and west; tobacco, coffee, bananas, and cocoa are grown; and the export of mahogany, dyewoods, and guano has been revived. Copper is worked. Gold, silver, quicksilver, iron and coal have been found; and there are 150 miles of railway.

The president is chosen for six years, and the legislative power is a senate and chamber of deputies.

The capital is San Domingo.

This portion of the island remained Spanish when the western part was ceded to France in 1697, and was united with the neighboring state in 1795-1808 and 1822-1843. In 1843 it assumed a separate standing as the Dominican Republic, reconstituted in 1865, after having reverted to Spain (1861-1863). The customs were submitted to the charge of the United States in 1905-1907. The years 1912-1914 and 1915-1916 were marked by revolution and chaotic conditions generally. In May, 1916, a recurrence of disturbances caused the intervention of the United States. The country was placed under the control of a Military Government on November 29, 1916, all the principal executive posts being occupied by United States naval and marine officers. Under their control order has been reestablished throughout the Republic and trade is flourishing except in so far as it is hampered by restrictions arising out of the European war.

GUATEMALA (*ga-tē-ma'la;* Sp. pron. *gwa-tā-ma'la*), [the name is probably of Aztec origin, and is said to mean "land of the eagle"], is a republic of Central America, bounded by Mexico, Belize, the Gulf of Honduras, Honduras, San Salvador, and the Pacific. Area, 48,290 square miles; population (estimated, 1915), 2,145,000. The greater part of Guatemala is mountainous, the highlands having a mean elevation of 7,000 feet above the sea; but the surface presents great variety, with extensive plateaus, terraces, and upland valleys—the last notable for their beauty, fertility, and favorable climate. Of the volcanoes, several are active; the most noted is Fuego (12,075 feet). Earthquakes are frequent; sulphur and other hot springs are numerous.

Climate and Productions.—The climate, except in the low-lying districts (where the temperature ranges from 70 to 90 degrees), may

be described as perpetual spring, and is generally healthy, but the hot coast-lands on the Pacific are conducive to yellow fever.

Gold and silver mines are worked, as also salt and saltpetre. Other minerals are lead, iron, copper, coal, quick-silver, marble, porphyry, sulphur, zinc, gypsum, etc. But the wealth of the country consists in its rich soil, which according to the altitude, yields the products of every zone. The forests contain over a hundred kinds of timber trees. Maize, haricot beans, peas, potatoes, wheat, rice grow well in various districts. Other products are coffee (the chief export), sugar, cacao, india rubber, tobacco, cotton, hemp, sarsaparilla, and many medicinal plants, bananas, and other fruits. The animals include the jaguar, puma, ocelot, coyote, red-deer, tapir, peccary, armadillo, several monkeys, iguanas, turtles, and snakes. The birds are of great variety and beauty; the national emblem is the superbly colored quetzal.

Industries and People.—The industries are chiefly confined to the manufacture of woven fabrics, pottery, saddlery, chocolate, and the fiery *aguardiente*, the sale of which is a government monopoly. The imports, of which the United States supplies about one-half and Great Britain one-fourth, are chiefly specie, cotton, woolen, and silk goods, wines and spirits, railway plant, and flour; the principal exports are coffee, rubber, sugar, fruits, and hides.

About a third of the people are said to be of European descent, and the rest aborigines (Maya-Quiches) and mixed races.

Cities.—The capital, Guatemala is the largest town and suffered badly from earthquakes in January of 1918. The *trans-continental railway* from Puerto Barrios on the Atlantic to San Jose on the Pacific, was opened in 1908, and there are in all over 480 miles of line open. The state religion is the Roman Catholic.

History.—Guatemala was conquered by Pedro de Alvarado, the lieutenant of Cortes, in 1524-1526. It declared its independence in 1821, joining Iturbide, and formed part of the Central American Confederation from 1823 to 1847, when it was established as an independent republic. It has had several wars with Salvador and Honduras. A rising in 1906 led to treaties of arbitration between the Central American republics.

HAITI, or **Hayti** (*hā'ti;* F. pron. *a-e-te'*), Sp. **Santo Domingo** (*san'to do-mēng'go*), a small Negro republic occupying the western portion of the island of Haiti in the West Indies, lying in the center of the chain, and second in size to Cuba.

Since the discovery of the island by Columbus in 1492 there has been no generally accepted designation for it. Columbus called it Española (Hispaniola), "Little Spain," whereas the native name for it was Hayti (Haiti), "Highlands," and after the first settlement the island received the name of San Domingo. In 1677, when Spain ceded the western section to France, the name Haiti was reserved for the western part of the island, San Domingo for the eastern, and the whole land was known as Hispaniola.

The island has a length of 400 miles, with an extreme breadth of 162 miles, and a total area of 28,000 square miles. Area of the republic, 10,204 square miles; population, (1915), 2,114,600 (estimated).

Physical Features.—It is essentially a mountainous region, and the steep escarpments run right down to the shores. The highest point is Mount Loma, 10,300 feet, which is situated northwest of the city of San Domingo. It has a coast line of 1,250 miles, which has some good harbors, the Samana inlet containing one 30 miles in length. There are four large rivers, the Yaqui, the Neyba, the Yuna, the Artibonite, as well as smaller ones, but the mouths of all are obstructed by shallows, so that they are only navigable for light river craft.

Climate and Productions.—Haiti has a wider range of climate than any other part of the Antilles, owing to the great diversity of its relief. The yearly rainfall is abundant, but is badly distributed, the uplands are constantly bathed in dense mists or heavy dews, while other districts have hardly any rain.

The mountains are densely wooded, and such valuable species as rosewood, mahogany, satinwood, pines, cedars, oaks, and ironwood are found. All tropical fruits, too, arrive at perfection, the coffee shrub yielding heavy crops, and no other region is better suited for tobacco and sugar culture.

Several ores exist in abundance, gold, silver, copper, tin, etc., but the mines are no longer worked.

People and Cities.—The population is almost entirely composed of negroes who speak a *patois* of French origin known as Creole; but French is the official language. The chief towns are Port-au-Prince (capital), Haitien, Les Cayes, Gonaive, Port de Paix; and Plaisance, Gros Morne, and La Croix des Bouquets in the interior.

History.—Haiti was discovered by Columbus in 1492, and in 1493 he established on it the first Spanish colony in the New World. Subsequently it was neglected, and became the prey of freebooters and bucaneers. About 1632 French bucaneers settled in the western part, which was definitely ceded to France in 1697. Bloody revolutionary and slave revolts in the French colony (1790-1793) ended in the supremacy of the b'acks. Their leader, Toussaint L'Ouverture, governed the whole island from 1795, and proclaimed its independence in 1801. Temporarily reduced by Leclerc's expedition (1802-1803), the blacks, aided by the English, recovered the western part, where Dessalines was emperor, 1804-1806.

Struggles between the blacks and mulattoes and between rival leaders led to the division of this part of the island; but it was reunited under Boyer, who in 1822 conquered the Spanish or eastern end. In 1844 the Spanish part became independent, and since then the island has been divided politically into Haiti and the Dominican Republic. It has suffered continually from revolutions, but is now governed under a constitution drawn up in 1889. In February, 1916, the United States Senate ratified a treaty with Haiti, under which the United States took over the control of the finances and police, guaranteeing Haiti's territorial integrity, and undertaking to develop its resources; it came into effect in May, 1916.

HONDURAS (*hon-do'ras*), [Sp. *Honduras*, "depths."], a republic of Central America, lies between Nicaragua and San Salvador and Guatemala, and is bounded on the north and northeast by the Bay of Honduras and the Caribbean Sea, having here a coast-line of some 400 miles; while on the south the Bay of Fonseca, over 50 miles long and about 30 miles wide, opens to the Pacific. The area is calculated at 46,250 square miles; population (estimated, 1915), 562,000.

Physical Features.—Except for a narrow strip of swamp land along either coast, the country is a tableland, its series of elevated plateaus broken by broad and fertile plains and valleys, or rising to mountain-ridges that culminate in the Montana de Selaque (10,120 feet). The Cordilleras proper traverse the country irregularly in a northwest and southeast direction.

Honduras is watered by numerous (seldom navigable) streams; the Wanks or Segovia, part the boundary with Nicaragua, has a length of 350 miles. Roatan and the other fertile Bay Islands off the north coast, belong to Honduras.

The climate is hot on the coast, where also fever prevails; but the highlands are cool, and frost is not unknown. The vegetation and animals are like those of Guatemala.

Cattle raising is an important industry. Honduras is the richest of the Central American republics in minerals—silver, gold, iron, copper, antimony, platinum, zinc, tin, lignite, and opals. The exports, mostly to the United States, include cattle, fruits and cocoa-nuts, india rubber, sarsaparilla, timber, and indigo.

People and Cities.—The whites are very few in number, the Indians (including Caribs), negroes, and mixed races including all but some 6,000 or 7,000 of the population.

The capital is Tegucigalpa, with 35,000 inhabitants. The ports are Amapala, Puerto Cortez or Puerto Caballos, Omoa, and Truxillo.

History.—Honduras was discovered by Columbus on his fourth voyage, in 1502, and named from the difficulty of anchorage. There are numerous pyramids and other remains of the ancient inhabitants. Honduras threw off the yoke of Spain, with the rest of Central America, in 1821, and became independent on the dissolution of the confederation in 1839. Revolutions and wars with Guatemala and San Salvador have been almost constant. It has suffered from internal strife, also, particularly during the civil wars of 1883 and 1903. In 1907 war was declared against Nicaragua in which Bonilla, the Honduran president, was defeated. In 1911 that general was re-elected president. A treaty of commerce and navigation between England and Honduras was signed on June 21, 1915.

NICARAGUA (*nik-a-ra'gwa* or *ne-ka-ra'gwa*), one of the five republics of Central America, is bounded by Honduras on the northwest and north, the Caribbean Sea on the east, Costa Rica on the south, and the Pacific on the west. Area 49,200 square miles; population (estimated 1915), 635,000.

Physical Features.—There are lagoons, estuaries, and swamp lands along the Caribbean Sea, but rocky coast on the Pacific Ocean. Chief harbors are Cornito, Brito, and St. Juan. In 1894 the Mosquito coast was annexed. The Cordillera de los Andes, a volcanic range, crosses north, Coseguina (3,835 feet) and El Viejo (6,267 feet) are the highest summits. The Pis-Pis mining district is on the Segovia River. Two large lakes, the Managua and Nicaragua, are situated in Central North, the latter is 100 miles long, area 2,900 square miles. It is the largest sheet of water between Lake Michigan and Lake Titicaca on the Peruvian border.

Productions.—Coffee, bananas, rubber, and hides are the chief products. There are rich undeveloped mineral resources, but gold is mined on the Caribbean coast. The climate is tropical except on the highlands.

The inhabitants are Spanish creoles, Indians, a few negroes, and mixed races. Spanish is the common language, and the state religion is Roman Catholic.

History.—Columbus coasted the eastern side of Nicaragua in 1502, but it was first explored from the Pacific side by Gil Gonzalez Davila in 1521-1522. It was settled, 1524-1525, by Francisco Hernandez de Cordoba, acting for Pedrarias. During the colonial period it was a province of Guatemala. In 1821 it asserted its independence, and its history down to 1865 is a record of war and dissension; there were revolutions in 1893, and an insurrection in 1912.

The Nicaraguan Canal treaty was ratified by the senates of the United States and Nicaragua in 1916 whereby the United States have the right to build a canal through Nicaragua, obtain possession of Corn Island on the Atlantic and a certain part of land on the Gulf of Fonseca on the Pacific, for establishing naval stations, in consideration of the sum of $3,000,000.

The capital is Managua (population, 1917, 48,367). Leon has a population of 63,000, and Granada of 17,000.

PANAMA (*pa-nama'*), a republic of America, occupying the isthmian territory lying between Costa Rica and Colombia, has the Caribbean Sea on the north and the Pacific Ocean on the south. The total length of the region is nearly five hundred miles; its width varies from 37 to 110. The total area is 32,380 square miles; population, including the Canal Zone (1912), 426,928.

The Republic of Panama was constituted on November 3, 1903, having been previously a department of the Republic of Colombia. The inhabitants of the Isthmus of Panama being strongly in favor of the acquisition of the Panama Canal concession by the United States and the construction by them of the canal, declared their independence. The United States Government at once recognized the new republic.

Physical Features.—The greater part of the area is unoccupied, consisting of rugged hills and mountains, overgrown with dense tropical vegetation, and of coastal swamps. In the western provinces there are plains of considerable extent, where grazing is successfully carried on. Near the Costa Rica frontier valuable banana and coffee plantations are found. Other important products of the soil are caoutchouc and mahogany and other tropical woods. This region enjoys a fertile soil and

CONTOUR MAP OF THE PANAMA CANAL AND CONNECTIONS

This map shows the general direction of the canal to be north and south; how it is brought into direct communication with the ports of the United States; and how it facilitates shipping to all parts of the world.

a comparatively salubrious climate, and is being developed by American capital.

Natural Resources.—The mineral resources of the republic are known to be of importance, but they are as yet almost wholly undeveloped. Gold, copper, manganese, and coal have been found in various parts of the isthmus. The coal deposits are said to be extensive, and comparatively easy of exploitation.

People.—The population consists mainly of a mixed race containing Indian, Spanish, and negro elements. The upper classes are composed largely of persons of pure Spanish blood. In some parts of the republic, notably in the province of Darien, the population consists of Indians who have been slightly influenced by civilization. In the cities of Panama and Colon, and other places adjacent to the canal, large numbers of pure-blooded negroes from Jamaica are found, as well as a considerable number of Chinese.

Products.—Bananas, rubber, wild and cultivated; coffee, cocoa, sugar, cocoanuts, mahogany, etc., copaiba, sarsaparilla, ipecacuanha. Pearl from the Pearl Islands and Coiba Islands; turtle shell is also exported.

Cities.—Panama, the capital, population 63,397; Colon, 32,613. American ports; from Colon to United States and Europe. Pacific ports, Puerto Mudis, Pedregal, Dulce, Montijo; Atlantic ports: Porto Bello, Bocas del Toro.

History.—Panama is said to have been discovered by Roderigo de Bastida about 1500, but the first exploration was made in 1502 by Columbus, who entered what is now Porto Bello and planted a colony, which was soon afterward destroyed by the native Indians. Other settlements were attempted, but none succeeded until 1510 when the Spanish, under Diego de Nicuesa, established a permanent colony. The Isthmus was first crossed in 1513 by Balboa, who discovered the Pacific Ocean there on September 26 of that year.

Until November 4, 1903, when it asserted its independence, it was a part of the United States of Colombia; recognized, November 13, by United States as an independent republic. A treaty was signed between Panama and United States, November 18, in which a five-mile zone on each side of the canal was granted to the latter on a perpetual lease, and facilities for construction and maintenance provided with exclusive control for police, judicial, sanitary, and other purposes. The Coastline and Panama Bay Islands for defense were also leased. The cities of Panama and Colon are not included in the zone, except for quarantine and sanitation provision. (See also under Panama Canal).

PARAGUAY (*par'a-gwī*), Sp. and Pg. Paraguaya (*par-a-gwī'a*), an inland republic of South America, divided into two distinct portions by the river so named, into Eastern Paraguay, or Paraguay proper, and Western Paraguay, or the Chaco. On the west the only definition of a boundary line is a line of separation between the Chaco and Bolivia, which has never yet been geographically determined. The total area of Paraguay is estimated at about 171,815 square miles; population (estimated, 1916), 807,000.

Physical Features.—The northern portion of Paraguay is in general undulating, covered by low, gently-swelling ridges, separated by large grass plains, dotted with palms. There are mountains in the northeast and northwest corners. The southern portion is one of the most fertile districts of South America, consisting of hills and gentle slopes richly wooded, of wide savannahs, which afford excellent pasture-ground, and of rich alluvial plains, some of which are marshy, but a large proportion are of extraordinary fertility and highly cultivated. The banks of the rivers Parana and Paraguay are occasionally belted with forest; but in general the lowlands are destitute of trees.

The temperature occasionally rises to one hundred degrees in summer, but in winter is usually about forty-five degrees.

Products.—The natural productions are very varied, although such minerals as exist are not worked. Much valuable timber is found in the forests, also dye-woods, india rubber, orange trees, gum yielding trees, the mate, or Paraguay tea shrub which yields one of the chief articles of commerce. Wax and honey are collected, as is also cochineal, and the medicinal plants are very numerous.

The chief cultivated crops are maize, rice, coffee, cocoa, indigo, manioc, tobacco, mate, cotton, fruits, and sugar cane.

Animal Life.—Tapirs, jaguars, pumas, ant-eaters, wild boars, peccaries, and deer abound; the rivers teem with fish, and their banks are the resort of alligators and coypus. Snakes, including enormous boas, are numerous, but very few of them are venomous.

Exports and Imports.—The chief exports are yerba-mate, tobacco, hides, oranges, timber, bark for tanning, and lace; the imports, cotton goods, hardware, wine, grain, rice, linen, silk, petroleum, etc. Trade in towns is almost wholly in the hands of Italians, French, and Germans.

People.—The population of Paraguay is composed of whites of Spanish descent, Indians, a few negroes, and a mixture of these several races. The established religion is the Roman Catholic. Education is free and compulsory; but of the adult Paraguayans only one in five can read and write.

History.—Paraguay was discovered by Juan Diaz de Solis in 1515, and settled as a province of the viceroyalty of Peru in 1535. The warlike Guaranis long successfully resisted the Spanish arms. In the seventeenth century the home government placed in the Jesuits' hands the entire administration, civil as well as religious. From this time forward the progress of civilization as well as of Christianity was rapid. On the expulsion of the Jesuits from Paraguay in 1768, the province was again made subject to the Spanish viceroys. In 1810 Paraguay joined with the other states in declaring its independence. In 1814 Dr. Francia was proclaimed dictator, and exercised absolute power till his death in 1840. In 1865-1870 the Paraguayans made a heroic but unavailing fight against the combined forces of Brazil, the Argentine Confederation, and Uruguay, closed by the defeat and death of the president Lopez at the battle of Aquidaban, March 1, 1870. In 1870 a new constitution was adopted, modeled on that of the Argentine Confederation.

Cities.—The capital, Asuncion, has population estimated at 80,000. A railway, 232 miles in length, runs from Asuncion to Encarnacion in the extreme south of the country. It is joined on the opposite side of the River Alto Parana, at Posadas, by the Argentine Northeast Railway, and a through train service from Asuncion to Buenos Aires (985 miles) is in operation. A train ferry, opened in 1913.

PERU (*pe-ro'*), Sp. Peru (*pa-ro'*), a republic of South America, is bounded by Ecuador on the north, Brazil and Bolivia on the east, Chile on the south, and the Pacific Ocean on the southwest and west. Its area is estimated at 722,461 square miles; population (estimated, 1916), 4,703,000.

Physical Features.—The Andes run through the country, presenting a bare wall of rock to the sea, and on the western side only possessing vegetation along the course of scanty rivers. Among the lofty peaks is the almost extinct volcano of Arequipa. The two ranges of the Andes enclose the Sierra plateau, which is the most populous part of the country, and has a diversified surface culminating in the heights of Pasco (14,000 feet), and Cuzco, the city Cuzco being over 11,000 feet above sea-level.

The Peruvian Andes contain peaks attaining heights of 21,000 and 22,000 feet. The highest summits are Huascan (22,050 feet), Huandoy (21,085 feet), Hualcan (19,945 feet), Tocora (19,740 feet), and Lirima (19,125 feet).

Beyond the Sierra is a forest region in which dwell many tribes of wild Indians. The chief river is the Maranon, with its tributaries the Huallaja and Ucayale, with a course of 400 miles, 100 miles of which is through a narrow defile, and 200 miles through a fertile upland valley, till it quits Peru. On it are rapids seven miles long.

The lakes are unimportant. The largest, Titicaca, is partly in Peru, partly in Bolivia, and on the plateau of Pasco are two lakes, in one of which the Maranon rises.

Titicaca is 80 miles long, and 12,545 feet above the level of the sea. A number of rivers, which are of considerable volume during the rainy season, fall into it, and it is drained by the Desaguadero flowing out of the southwestern angle.

Animal Life.—The animals which specially belong to the Peruvian Sierra are the domestic llamas and alpacas, and the wild vicunas. Other animals are the *taruco* or deer, two rodents called *viscacha* and *chinchilla*, a native dog, and a fox. The largest bird is the condor.

The *fauna* of the forests include the silver-gray monkey, the largest in South America, and other species, bats of several kinds, the Andean bear, the pumas, jaguars, several kinds of wild cats, squirrels and other rodents, the heavy tapir, deer, and peccaries. Birds include the black curassow, spoonbills, ibis, cranes, snipe, curlew, parrots, toucans, and others of bright plumage. Snakes and frogs abound among the dense underwood.

Climate and Productions.—The climate of Peru has a great range. On the coast there is neither rain nor cloud, but the wet seasons send down much water from the uplands, and from this arises thick mists, while the cool currents from the sea and from the Andes temper the atmosphere, the temperature at Lima ranging from sixty degrees to eighty-two degrees.

The chief crops of the fertile valleys on the coast of Peru are sugar, cotton, cocoa, and grapes. Other products are cinchona and other medicinal plants, dyes, rice, olives, and rubber.

The staple exports of the Sierra of Peru are silver, gold, copper, and wool. The silver-mines extend along the whole length of the cordilleras, the great center of mining industry being at Cerro Pasco.

Mollendo is the principal port for the export of wool; but wool is also shipped from Salaverry, Pacasmayo, and Chala. From the Montana the exported products are cinchona bark, coca, coffee of the finest quality, cacao, tobacco, india rubber, sarsaparilla, and some other medicinal roots. Maize is also exported to Chile, and large quantities of wheat are imported from Chile and the United States.

People.—The bulk of the Peruvian population is composed of the aboriginal Inca Indians, and Peruvians of Spanish descent. The prevailing language is Spanish; the prevailing religion, Roman Catholic. Civilization was highly developed under the empire of the Incas and their predecessors.

The population was in 1900 estimated to be about 4,600,000, the aboriginal Inca Indians forming 57 per cent, the *Mestizos* or half-castes 23 per cent., and the rest being of pure Spanish descent, negroes and Chinese.

Negro slaves were introduced by the Spaniards to cultivate the estates in the coast-valleys, and this system continued until 1855, when slavery was abolished. Chinese coolies were imported to the number of nearly 60,000 but they are decreasing, and the immigration has ceased.

Llamas, the traditional beasts of burden of the high Andes, and two Indian girl drivers.

Cities.—Lima, the capital of Peru, is nearly in the center of the coast region, and has a population of almost 150,000. Trujillo is the chief coast town to the north, and Arequipa to the south; there are many ports, including Callao and Mollendo.

The system of railroads consists of a dozen short lines in the coast-valleys, and of two long lines across the Andes. In 1910 the total working length of railroads was 1,480 miles.

History.—The Ancient Incas: Rude stone circles are found by Lake Titicaca, and buildings at Tiahuanaco supposed to have been built by the Aymaras. These date before the Inca empire. There are evidences of an earlier civilization among the Chimus of Chan Chan, speaking the Yunca language, in the district of Trujillo. The pre-Inca civilization must evidently have been in progress contemporaneously with the early emperors of the East; the problem of its origin and the advent of the people, whether by Behring Strait, an old Pacific continent, or chain of islands, awaits further evidence.

The Inca empire flourished from the first Inca, Manco Capac, about 1000 A. D., till Pizarro's arrival and the conquest at Atahualpa, 1532. Their civilization was probably acquired from the Aymares, whom they probably overthrew. The empire extended over Peru, Bolivia, and Equador, and its influence extended even to the Gran Chaco. The capital was established at Cuzco in the twelfth century, and another main center was at Quito. A complete system of roads was established. The best ruins are at Cuzco and around Lake Titicaca and are built of great stones, some nearly 20 feet high, weighing many tons, and without mortar. Here are remains of the palace of Huayna Capac, the Temple of the Sun.

At Nitihualana and Pisac other ruins are found, the latter contain the famous astronomical pillar for determining the solstices. At Huaraz, Huanaco Viejo, and along the coast district other remains exist; those of the coast showing many evidences of adobe pre-Inca building.

The architecture is distinct, and shows a characteristic trapezoidal niche feature. The arch and the column were unknown, but the Incahuasi contains a row of columns. Bronze and copper cutting tools were used, but iron was unknown. Skilled and beautiful metal work in gold and silver, pottery, and textile fabrics has been preserved.

The country was conquered by the Spaniards under Pizarro in 1533-1534. Independence was proclaimed in 1821; and the Spanish viceroy was finally defeated at the battle of Ayacucho December 9, 1824. Peru has suffered from frequent revolutions; was at war with Spain in 1865-1866; and has several times been subject to earthquakes.

A war with Chile began in 1879; Lima was entered by the Chileans in 1881, and by the treaty of 1883 Peru ceded Tarapacato Chile, Tacna and Arica to be occupied by Chile until 1893 when, in 1894-1895, another insurrection broke out, and a new government was established. A boundary dispute with Bolivia was settled in 1912.

Religion.—The Incas erected temples to the sun and moon; their "unknown God," a supreme spirit all pervading, was worshiped without idols or human sacrifice. The sacred fire of the sun was attended by vestal virgins. Manco Capac, the first Inca, set out from the island in Titicaca on his civilizing mission, and his "virgin birth as a redeemer of man," is part of Inca mythology, traces of which still persist.

The Roman Catholic is the religion of the modern state, but practically (not legally) there is tolerance for dissent.

Besides the university of Lima, there are lesser universities at Cuzco, Arequipa, and Trujillo, besides several state-supported high schools, and numerous primary schools.

SALVADOR (*sal-va-dor'*), [Sp. *Republica del Salvador*, often called *San Salvador* from its capital], the smallest but by far the most thickly populated of the Central American republics, consists of a strip of territory stretching between Honduras and the Pacific. It is 140 miles in length by about 60 in average breadth, and has an area estimated at 7,225 square miles, with a population of about 1,225,000.

Physical Features.—Except for a narrow seaboard of low alluvial plains, Salvador consists of a plateau, some 2,000 feet above the sea, furrowed by river valleys and broken by numerous volcanic cones, and bounded on the north by the Central American Cordillera. of the volcanoes (4,900 to 6,900 feet), many are extinct; earthquakes are frequent.

The Lempa (140 miles) receives the surplus waters of the Laguna de Cuija, and the San Miquel drains the southeast portion of the republic.

The climate is equable, very healthy in the interior, and even along the coast less unwholesome than on the Atlantic side of Central America. The land is well watered, and the soil exceedingly fertile.

The principal products are coffee, indigo, and balsam (on the Balsam Coast); also tobacco, sugar, maize, rice, beans, india-rubber, vanilla, and ornamental woods. Gold and silver are mined, and coal and iron worked. The exports are coffee, sugar, indigo, etc.

The population consists mostly of (Aztec) Indians and mixed races; the whites number 60,000. The Indians almost all speak Spanish and profess the Roman Catholic religion.

History.—Salvador, originally called *Cuscatlan*, was conquered after a long and obstinate contest by Pedro de Alvarado in 1525-1526. In 1821 it threw off the Spanish yoke, and from 1823 to 1839 it belonged to the Central American confederacy. Since 1853 it has been an independent republic, and from 1864 till 1890 it had freedom from foreign wars. In December, 1907, the Central American States agreed to maintain the neutrality of Honduras, and to establish a High Court in Costa Rica for the settlement of disputes. Its capital, San Salvador, has a population of 65,600.

URUGUAY (*o-ro-gwī'*; or, Eng., *u'ro-gwa*), known locally as the Banda Oriental del Uruguay (*ban'da o-rē-en-tal' del o-ro-gwī*), a republic in South America, is situated between Brazil and the Argentine, on the Atlantic coast. The surface consists of a level plain

traversed in the south by low ranges of hills and bounded on the north by mountain ranges, including the Cuchilla de Haeda and the Cuchilla Grande.

The chief rivers are the Uruguay and the Negro. It has a delightful climate, and therefore the vegetation is very rich. Wheat, oats, barley, maize, linseed, and tobacco are cultivated. Cattle and sheep husbandry is, however, the principal occupation, vast herds being reared, and live stock, meat, and wool exported to Brazil, United States, France and Great Britain.

Lead, copper, manganese, and a little gold and silver are mined. The imports include cotton and woolen goods and machinery. The chief towns are Montevideo (the capital), Paysandu, Salto and Mercedes.

People.—Indian, Spanish and Italian. *Religion.*—Roman Catholic. Area, 72,153 square miles; population (1914), 1,315,714.

History.—Uruguay was long a bone of contention between the Portuguese and Spaniards, and, after it became independent (1814), between Brazil and Argentina. In 1828 Brazil and Argentina guaranteed its independence; but a new series of wars began in 1839, and Montevideo sustained an eight years' siege by Rosas, dictator of Buenos Aires. It joined Brazil and Argentina against Paraguay in 1868. A High Court of Justice was established in December, 1907, and the judicial system was reorganized.

VENEZUELA (*ven-e-zwe'la*); Sp., in full, **Estados Unidos de Venezuela** (*as-ta' dos o-ne'dos da va-nath-wa'la*).—A federal republic in the northern part of South America, bounded by the Caribbean Sea, British Guiana, Brazil, and Colombia. Area, 398,504 square miles; population (estimated, 1915), 2,978,000.

Physical Features.—Venezuela is a land of mountains and valleys in the west and north,

A HANDSOME PLAZA IN CARACAS, VENEZUELA

The Plaza Bolivar is the center of Caracas, and contains the cathedral, the archbishop's palace, and the national library. The streets cross each other at right angles, are all numbered, lighted by electricity, and generally well paved. The city was founded in 1550 and was almost entirely destroyed by a great earthquake in 1812.

of lower mountains and wooded hills in the south, of llanos between the Orinoco and the northern ranges, and of lake and swamp and forest in the northwest. The Andes enter the country south of Lake Maracaibo, and push northeastward as the Cordillera de Merida (15,500 feet). In Mount Roraima the frontiers of Guiana, Brazil, and Venezuela meet.

Numerous streams find a way over waterfalls and rapids to the Orinoco, chief of the eight river systems of the country. The climate is moist; the temperature varies from freezing-point above the snowline to great heat in the coast-towns, valleys, and llanos. There are no active volcanoes, but earthquakes have done great damage—as in 1893 at Merida. Almost everywhere the country is abundantly watered.

Products and Trade.—Vegetation in the hotter region is luxuriant beyond description. In the temperate region coffee is produced.

Venezuela contains rich mineral deposits, as yet scarcely tapped, except for the Yuruari gold mines, the Aroa copper mine, the government salt mines, and coal near Barcelona. Near Lake Maracaibo there are great supplies of petroleum and coal. There are about 530 miles of railway, besides telegraph and several telephone systems. Most of the over-sea trade is in the hands of Germans and others.

The chief exports are coffee, cacao, hides, balata, egret feathers, gold and rubber. The country suffers much from locusts.

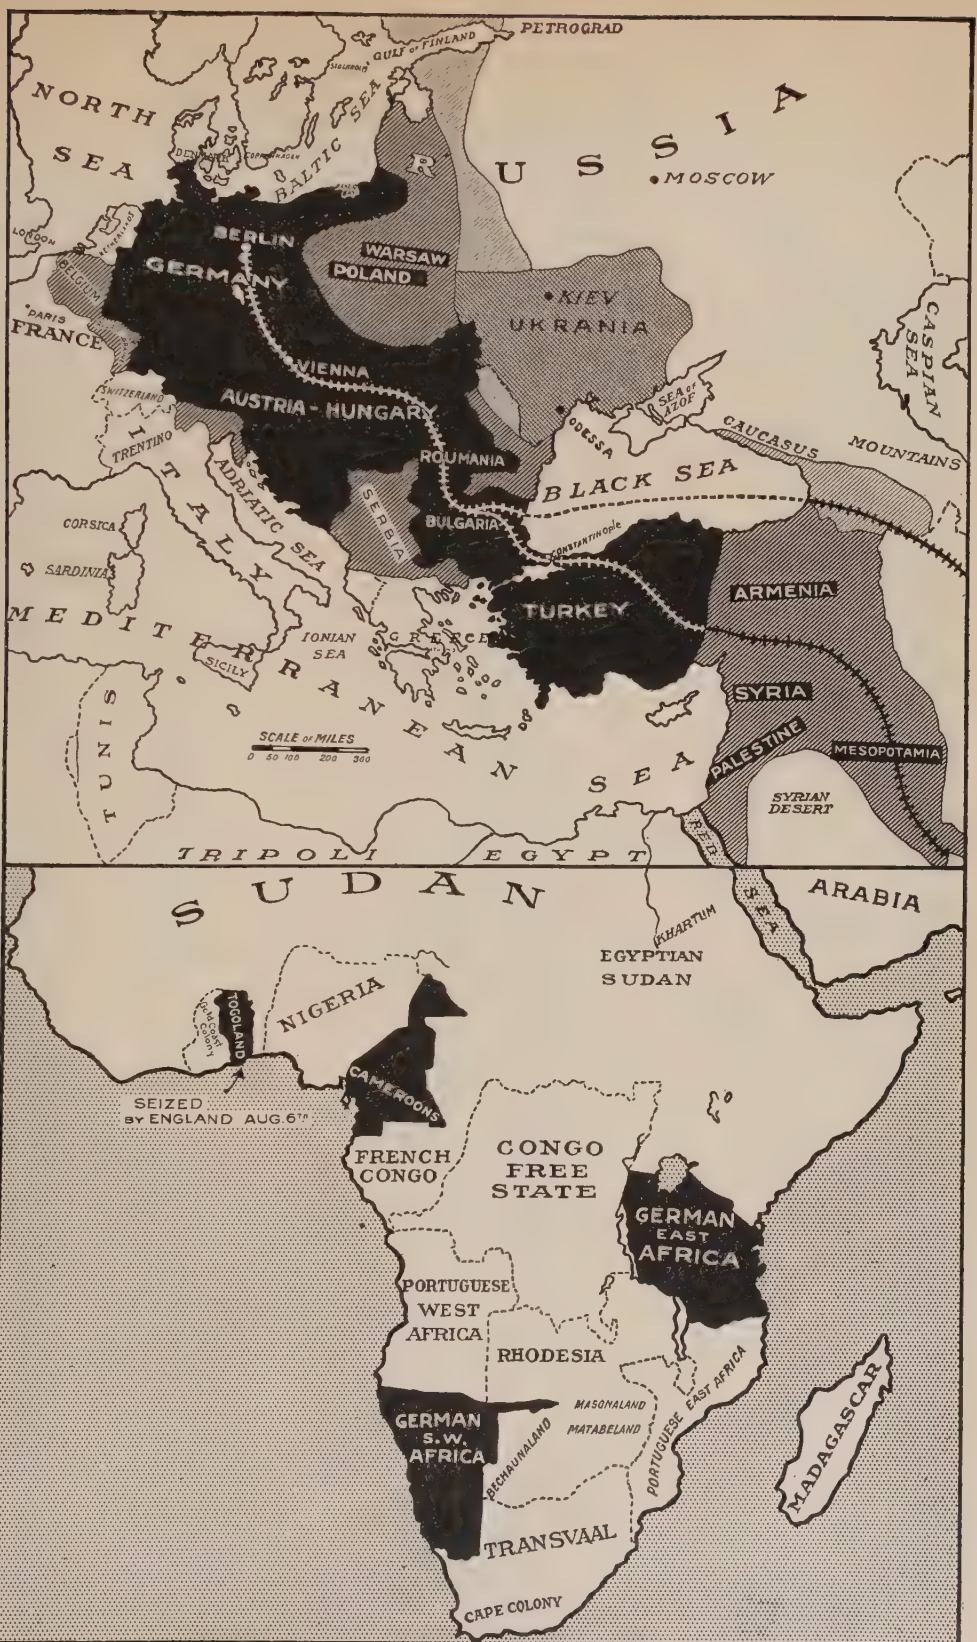
Cities.—The principal cities are Caracas (population 75,000); Maracaibo (40,000), La Guayra, Puerto Cabello, and Maracaibo are the chief ports of the Republic.

People.—The people are mostly half-breeds—mulattoes or mestizoes (i. e., of crossed white and Indian blood), pure negroes (mainly on the coast) or whites; the latter form perhaps 1 per cent of the population.

Roman Catholicism is the state religion, but private exercise of all others is permitted. Education is in a backward state, but is compulsory and free.

History.—The coast was visited by Columbus in 1498, and next year the name Venezuela ("Little Venice") was given to an Indian village built on piles seen by Ojeda and Amerigo Vespucci. Settlements were made in the sixteenth and seventeenth centuries, and the country was plundered by Spanish governors till 1810, when the revolt began which under Bolivar's guidance ended in 1821 in independence of Colombia, Ecuador, and Venezuela. In May, 1830, a convention recreated the Republic of Venezuela and adopted a constitution. Separation from Columbia was amicable, but the boundary separating the two republics has never been determined. Both agreed in 1881 to submit the question to the arbitration of the King of Spain. His award, made in 1891, did not satisfy, and on one occasion the two countries were on the verge of war. The dispute was submitted to the arbitration of Switzerland in 1915 and Swiss engineers surveyed the territory, May 26-June 11, 1923, by airplane and camera. The 2,500,000 acres were accurately mapped and the award of the King of Spain practically upheld. The territory in dispute is an almost uninhabited tract of the head waters of the Orinoco.

Venezuela has had many revolutions and many revisions of its Constitution since the first was adopted in 1819. That now in force was adopted June 24, 1925. It provides for a President, elected by Congress for seven years, a Senate of 40 members, elected for three years, and a House of Deputies of about 77 members, elected for three years. There are twenty autonomous states, a federal district and two territories. The Roman Catholic is the state religion, but religious liberty is guaranteed. Primary education is free and nominally compulsory. Higher education has been much improved under recent administrations. Venezuela is a member of the League of Nations.



1. The upper map shows the consolidated position of the Central Powers, constituting the geographical area known as "Mitteleuropa." The shaded parts indicate the territory conquered by those powers and under Teutonic control, in 1918, before the armistice. The general course of the "Berlin to Bagdad" railway, and the alternative route to India across the Black Sea, are also shown.

2. The lower map shows the German African colonies lost by Germany to the Entente Allies during the war.

THE COLONIAL DIVISIONS OF THE WORLD

The following tables show how the colonies of the world have been divided among the various nations:

COLONIES IN AFRICA

Colony	Governing Country and Form of Government	Area Sq. M.	Population
Algeria	French Colony	184,474	4,739,300
Algerian Sahara	French Possession	123,500	50,000
Angola	Portuguese Possession	484,800	4,119,000
Ascension	British Crown Colony	35	430
Azores and Madeira Islands	Portuguese Province	1,510	407,002
Basutoland	British Crown Colony	10,293	264,100
Bechuanaland	British Protectorate	286,200	100,500
British East Africa	British Protectorate	1,000,000	2,500,000
British Central Africa	British Protectorate	42,217	900,615
British South Africa (Rhodesia)	British Protectorate	425,728	1,075,000
Canary Islands	Spanish Province	2,808	334,521
Cape Colony	British Protectorate	276,775	2,433,000
Cape Verde Islands	Portuguese Province	1,480	147,424
Ceuta	Spanish Province	13	5,090
Comoro Islands	French Protectorate	620	47,000
Congo Inland Straits	Belgian Protectorate	900,000	30,000,000
Dahomey	French Possession	60,000	1,000,000
Egypt	Turkish Tributary	400,000	9,734,405
Eritrea, etc.	Italian Possession	42,000	329,516
Fernando Po, etc.	Spanish Possession	850	23,709
French Congo	French Possession	1,160,000	10,000,000
Gambia	British Crown Colony	69	13,500
German East Africa	Under League of Nations	384,180	8,000,000
German Southwest Africa	Under League of Nations	322,450	200,000
Gold Coast	British Crown Colony	40,000	1,500,000
Guinea, French	French Possession	95,000	2,200,000
Guinea, Portuguese	Portuguese Possession	4,440	820,000
Ivory Coast	French Possession	116,000	2,000,000
Kamerun	Under League of Nations	191,130	3,500,000
Lagos	British Crown Colony	3,460	85,600
Madagascar	French Possession	227,950	2,505,240
Mauritius, etc.	British Crown Colony	729	378,040
Mayotte	French Possession	140	11,640
Military Ter's	French Possession	700,000	4,000,000
Portuguese East Africa	Portuguese Possession	301,000	3,120,000
Natal and Zululand	British Institutions	34,019	902,365
Nigeria	British Protectorate	400,000	25,000,000
Nossi-Be	French Possession	130	9,500
Orange River	British Possession	48,330	207,500
Princes and St. Thomas Islands	Portuguese Possession	360	42,103
Reunion	French Possession	966	173,200
Rio de Oro and Adrar	Spanish Possession	243,000	100,000
Sahara	French Possession	1,544,000	2,550,000
St. Helena	British Crown Colony	47	3,342
St. Marie	French Possession	64	7,670
Senegal	French Possession	80,000	1,800,000
Seychelles	British Crown Colony	148	19,343
Sierra Leone	British Crown Colony	4,000	77,000
Somali Coast, British	British Protectorate	75,000	.....
Somali Coast, French	French Possession	45,000	200,000
Somali Coast, Italian	Italian Possession	100,000	400,000
Togoland	Under League of Nations	33,700	900,000
Transvaal Colony	British Possession	119,140	1,094,100
Tripoli	Turkish Tributary	398,000	800,000
Tristanda Cuhna	British Crown Colony	45	100
Tunis	French Protectorate	51,000	1,900,000
Uganda	British Protectorate	140,000	3,000,000
Zanzibar and Pemba	British Protectorate	1,020	200,000

COLONIES IN ASIA

Colony	Governing Country and Form of Government	Area Sq. M.	Population
Aden and Perim	British Crown Colony	80	41,222
Anam	French Protectorate	52,100	6,124,000
Bahrein Islands	British Protectorate	273	68,000
Baluchistan	British Protectorate	130,000	500,000
Bokhara	Russian Dependency	92,000	1,250,000
Cambodia	French Protectorate	37,400	1,500,000

THE COLONIAL DIVISIONS OF THE WORLD—Continued

COLONIES IN ASIA—Continued

Colony	Governing Country and Form of Government	Area Sq. M.	Population
Ceylon	British Institutions	25,365	3,578,333
Cochin China	French Possession	22,000	2,968,600
Cypress	British Administration	3,584	227,900
East Turkestan	Chinese Dependency	550,340	1,200,000
Formosa	Japanese Dependency	13,455	2,745,000
Goa	Portuguese Possession	1,390	494,836
Hong Kong	British Crown Colony	407	386,159
India, British	British Crown Colony	1,087,404	231,898,807
India, French	French Possession	196	273,000
India, Portuguese	Portuguese Possession	1,558	572,290
Jungaria	Chinese Dependency	147,950	600,000
Kiauchau Bay	Japanese Possession	200	60,000
Khiva	Russian Possession	22,320	800,000
Kwang Tung	Russian Possession	.....	.....
Macao	Portuguese Possession	4	78,627
Malay Federated States	British Protectorate	27,500	512,342
Manchuria	Chinese Dependency	363,610	8,500,000
Mongolia	Chinese Dependency	1,367,600	2,580,000
Pescadores Islands	Japanese Dependency	85	52,400
Samos	Turkish Tributary	180	54,830
Sikkim	British Protectorate	2,818	30,458
Straits Settlements	British Crown Colony	1,472	572,249
Tibet	Chinese Dependency	463,200	6,430,000
Tonquin and Laos	French Possession	144,400	7,641,900

COLONIES IN EUROPE

Colony	Governing Country and Form of Government	Area Sq. M.	Population
Bosnia and Herzegovina	Jugo-Slavia	23,262	1,568,092
Crete	Greece	3,326	303,543
Faroe Islands	Danish Colony	512	15,230
Gibraltar	British Crown Colony	2	27,460
Iceland	Danish Province	39,756	78,470
Malta and Gozo	British Institutions	117	188,141

COLONIES IN NORTH AMERICA

Colony	Governing Country and Form of Government	Area Sq. M.	Population
Alaska	United States Territory	599,446	63,592
Bahamas	British Institutions	4,470	54,358
Barbadoes	British Institutions	166	195,600
Bermudas	British Institutions	20	17,535
Canada	British Dependency	3,729,665	7,204,838
Curacao, etc	Dutch Possession	403	52,301
Danish West Indies*	United States Possession	138	32,786
Greenland	Danish Possession	46,740	10,516
Guadeloupe, etc	French Possession	688	182,110
Honduras, British	British Crown Colony	7,560	37,650
Leeward Islands	British Institutions	700	127,440
Jamaica and Turks Islands	British Crown Colony	4,370	771,900
Martinique	French Possession	380	203,780
Newfoundland and Labrador	British Dependency	162,200	217,100
Porto Rico	United States Possession	3,606	953,243
St. Pierre and Miquelon	French Possession	92	6,250
Trinidad and Tobago	British Crown Colony	1,868	279,700
Windward Islands	British Institutions	500	162,800

COLONIES IN SOUTH AMERICA

Colony	Governing Country and Form of Government	Area Sq. M.	Population
Falkland Islands	British Crown Colony	7,500	2,076
Guiana, British	British Institutions	104,000	294,000
Guiana, French	French Colony	30,500	32,910
Guiana, Dutch	Dutch Possession	46,060	68,968

* These islands came into possession of the United States in 1917, by purchase for $25,000,000, and have been renamed the Virgin Islands.

THE COLONIAL DIVISIONS OF THE WORLD—Concluded

COLONIES IN OCEANIA

Colony	Governing Country and Form of Government	Area Sq. M.	Population
Bismarck Archipelago	Under League of Nations	20,000	188,000
Borneo, British N.	British Protectorate	31,106	175,000
Borneo, Dutch	Dutch Possession	212,737	1,180,578
Caroline Islands and Palaos	Under League of Nations	810	42,000
Celebes Islands	Dutch Possession	71,470	1,197,860
Fiji and Rotumah Islands	British Crown Colony	7,740	120,950
Guam	United States Possession	150	9,000
Hawaii	United States Territory	6,449	154,000
Java and Madura	Dutch Possession	50,554	28,745,698
Kaiser Wilhelm Land	Under League of Nations	70,000	110,000
Marianne Islands	Under League of Nations	250	2,000
Marquesas Islands	French Possession	480	4,280
Marshall Islands	Under League of Nations	150	13,000
New Caledonia	French Possession	7,650	51,415
New Guinea, British	British Crown Colony	90,540	350,000
New South Wales	British Dependency	310,370	1,397,700
New Guinea, Dutch	Dutch Possession	195,653	599,208
New Zealand	British Dependency	104,470	787,660
Philippine Islands	United States Possession	119,542	8,000,000
Queensland	British Dependency	668,500	510,520
Samoan Islands (Savaii and Upolu)	Under League of Nations	1,000	29,100
Samoan Islands (Tutuila and Manua)	United States Possession	79	5,800
Society Islands, etc.	French Possession	1,520	29,000
Solomon Islands	Under League of Nations	4,200	45,000
South Australia	British Dependency	903,700	364,800
Sumatra	Dutch Possession	161,612	3,209,067
Tasmania	British Dependency	26,215	174,230
Timor, Dutch	Dutch Possession	44,374	978,267
Timor, Portuguese	Portuguese Possession	7,458	300,000
Victoria	British Dependency	87,890	1,208,710
West Australia	British Dependency	975,920	194,800

THE GREAT FOREIGN WARS OF UNIVERSAL HISTORY

In the various wars the victorious contestants are indicated in **bold face** type, as are also the victorious leaders and the battles won by them. The figures prefixed show with which of the warring parties the leaders are identified, and who were the victors in the battles named. Naval battles are shown in *italics*. Consult the Table of Foreign Battles for details concerning the more important military actions.

TROJAN WAR (Partly mythical).—1193-1184 B. C.
(1) **Greeks** vs. (2) Trojans.
CAUSE: Greeks avenge the abduction of Helen of Troy by Paris.
LEADERS: (1) **Agamemnon, Achilles, Ulysses;** (2) Hector.
CHIEF ACTION: (1) **Siege of Troy.**
RESULTS: Capture and destruction of Troy, or Ilium.

FIRST MESSENIAN WAR.—743-724 B. C.
(1) **Spartans** vs. (2) Messenians.
CAUSE: Spartans covet Messenian land.
LEADER: (2) Aristodemus.
CHIEF ACTION: (1) **Siege of Mount Ithome.**
RESULTS: Messenians become tributary of Sparta and their land is, in part confiscated.

SECOND MESSENIAN WAR.—645-628 B. C.
(1) **Spartans** vs. (2) Messenians.
CAUSE: Spartan oppression causes Messenian revolt.
LEADERS: (1) **Tyrtaeus** (poet); (2) Aristomenes.
CHIEF ACTION: (1) **Eira.**
RESULTS: Greater part of Messenians flee to Sicily. Those remaining become helots (Spartan serfs).

FIRST SACRED WAR.—600-590 B. C.
(1) **Amphictyonic League** vs. (2) Crisæans.
CAUSE: People of the city of Crisa (port of Delphi) oppress pilgrims to the oracle.
LEADER: (1) **Cleisthenes of Sicyon.**
CHIEF ACTION: (1) **Siege of Crisa.**
RESULTS: For the first time Greek cities join in an effective league. Crisa destroyed.

PERSIAN WARS.—500-479 B. C.
(1) **Persians** vs. (2) Greeks.
CAUSE: Aid given by Athens and Eretria to revolting Ionic Greek cities, leading to burning of Sardis, 497 B. C.
a. First Persian Expedition—493 B. C.
LEADER: (1) **Mardonius.**
CHIEF ACTION: (1) **Three hundred ships lost by storm off Mt. Athos.**
RESULTS: Partial success against Macedonians and Thracians. Continued plans of Darius for subjugating Greece.
b. Second Persian Expedition—490 B. C.
LEADERS: **Datis,** (1) **Artaphernes;** (2) Miltiades.
CHIEF ACTIONS: (1) **Naxos, Eretria;** (2) Marathon (490 B. C.)
RESULTS: The Athenians are victorious and the Persians retreat to Asia Minor.
c. Third Persian Expedition—481-480 B. C.
Xerxes desires to avenge his father's defeat.
LEADERS: (1) **Xerxes;** (2) Leonidas, Eurybiades, Themistocles.
CHIEF ACTIONS: (1) **Thermopylæ,** *Salamis,* **Artemisium, Athens burned.**
RESULTS: Xerxes retreats to Persian after his defeat at Salamis.
d. Fourth Persian Expedition—479 B. C.
War continued by troops which Xerxes left behind.
LEADERS (1) **Mardonius;** (2) Pausanias, Aristides.
CHIEF ACTIONS: (1) Athens laid waste; (2) **Platæa, Mycale.**
RESULTS: All Persian invasions and attempts to subjugate Greece cease.

THIRD MESSENIAN WAR.—464-456 B. C.
(1) **Helots of Messenian descent** vs. (2) Spartans.
CAUSE: Confusion following earthquake gives Helots courage to revolt.
CHIEF ACTION: (2) Mt. Ithome besieged. Sparta sent home her Athenian allies.
RESULTS: Messenians capitulate and are allowed to leave the Peloponnesus never to return. Athens retaliates by settling them at Naupactus.

PELOPONNESIAN WAR.—431-404 B. C.
(1) **Sparta and Allies** vs. (2) Athens and Allies.
a. First Period—431-421 B. C.
CAUSE: Envy of Sparta and her allies at Athens' growing power and influence. Discontent among some of the Athenian subject states.

THE GREAT FOREIGN WARS OF UNIVERSAL HISTORY—Continued

LEADERS: (1) **Archidamus, Agis, Brasidas;** (2) Demosthenes, Cleon, Nicias.

CHIEF ACTIONS: (1) **Invasion of Attica, Plague in Attica, Siege of Platæa, Delium, Amphipolis.** (2) Mitylene, Sphacteria.

RESULTS: By the peace of Nicias (421 B. C.) both sides are to restore conquests and prisoners but terms are imperfectly carried out.

b. Second Period or Decelean War—413-404 B. C.

CAUSE: Sparta takes advantage of Athens' weakness, resulting from the failure of the expedition to Syracuse, to renew the war.

LEADERS: Alcibiades serves Athens, Sparta and Athens in turn. (1) **Lysander;** (2) Conon.

CHIEF ACTIONS: (1) **Decclea occupied. Attica ravaged. Many subject states of Athens revolt. Notium, Ægospotami, Surrender of Athens;** (2) Abydos, Cyzicus, Arginusæ.

RESULTS: The Spartans tear down the walls of Piræus and Athens. Athens loses her foreign possessions and fleet but becomes an independent ally of Sparta. Sparta is now supreme in Greece.

GAULS' INVASION OF ITALY.—390 B. C.

(1) **Gauls** vs. (2) Romans.

CAUSE: Roman people refuse to surrender Roman ambassadors who had aided the Etruscans against the Gauls.

LEADERS: (2) M. Manlius, Capitolinus, Camillus.

CHIEF ACTIONS: (1) **Battle of the Allia. Sack of Rome.**

RESULTS: Gauls retire on payment of ransom. The overthrow of Rome had no permanent effect on her fortunes.

SECOND SACRED WAR.—c. 355-346 B. C.

(1) **Phocians** vs. (2) Amphictyons.

CAUSE: Phocians seize and plunder Delphi because of fine imposed by Amphictyonic Council.

LEADERS: (1) **Onomarchus;** (2) Philip of Macedon.

RESULTS: Thebans and Thessalians invite aid of Philip against Phocians and he takes their place in the Amphictyonic Council.

THIRD SACRED WAR.—339-338 B. C.

(1) **Macedonians** vs. (2) Athenians, Thebans.

CAUSE: Amphictyons call in Philip to punish Amphissa, whereupon he seizes Elatea, thereby threatening Athens. Athenians aroused by Demosthenes.

LEADERS: (1) **Philip of Macedon.**

CHIEF ACTIONS: **Chæronea.**

RESULTS: Philip gains leadership of Greece. Henceforth Greece is under the control of Macedonia.

SAMNITE WARS.—343-290 B. C.

(1) **Romans** vs. (2) Samnites.

a. First Samnite War—343-341 B. C.

CAUSE: A duel between two rival races for supremacy in Italy. Campanians implore aid of Romans against Samnites who are laying waste their territories in revenge for aid given the Sidicini of Teanum.

LEADERS: (1) **Marcus Valerius Corvus, P. Decius Mus.**

RESULTS: Capua is retained by the Romans and Teanum surrendered to Samnites.

b. Second or Great Samnite War—326-304 B. C.

CAUSE: The occupation of Palaeopolis by the Samnites. In 311 B. C. the Etruscan cities joined in the war against Rome.

LEADERS: (1) **Papirius Cursor;** (2) Fabius Rullianus Gavius Pontius.

CHIEF ACTIONS: (1) **Fregellæ, Sutrium, Lake Vadimonis, Bovianum;** (2) Caudine Forks.

RESULTS: Samnites sue for peace. They resign all their conquests but retain their independence within their native mountains.

c. Third Samnite War—298-290 B. C.

CAUSE: While Romans are engaged with the Gauls the Samnites enter Lucania and refuse to withdraw.

LEADERS: (1) **Q. Fabius Rullianus, P. Decius Mus (son);** (2) Gellius Egnatius, Gavius Pontius.

CHIEF ACTION: (1) **Sentinum.**

RESULT: Samnites defeated but not crushed.

WARS OF ALEXANDER THE GREAT IN ASIA—334-328 B. C.

(1) **Greeks** vs. (2) Persians, Egyptians, Bactrians, Indians (Hindus).

CAUSE: A war of conquest, a scientific expedition and a journey of discovery.

LEADERS: (1) **Alexander the Great, Nearchus;** (2) Darius III., Memnon.

CHIEF ACTIONS: (1) **Granicus, Issus, Siege of Tyre, Arbela.**

RESULTS: Alexander conquers Asia from the Mediterranean Sea to the Indus River and from the Arabian Sea to the Jaxartes River and begins the Hellenizing of the East. Founds Alexandria in Egypt. The empire breaks up after Alexander's death 323 B. C.

ROMAN WAR WITH TARENTUM AND EPIRUS.—282-272 B. C.

(1) **Romans** vs. (2) Tarentum and King Pyrrhus.

CAUSE: The people of Tarentum capture Roman ships and insult Roman embassy. They call in King Pyrrhus of Epirus.

LEADERS: (1) **Manius Curius;** (2) Pyrrhus.

CHIEF ACTIONS: (1) **Beneventum, Tarentum;** (2) Heraclea, Asculum.

RESULTS: Pyrrhus returns to Epirus and his allies one by one submit to Rome, which is left supreme from Straits of Messina to the River Arno and the headland of Ancona.

FIRST PUNIC WAR.—264-241 B. C.

(1) **Romans** vs. (2) Carthaginians.

CAUSES: A struggle for supremacy in Sicily. Pretext, Campanian mercenaries, having seized Messina, appeal to Rome for aid.

LEADERS: (1) **C. Duilius, M. Atilius Regulus, P. Claudius Pulcher, C. Lutatius Catulus;** (2) Hamilcar Barca, Himilco, Hanno.

CHIEF ACTIONS: (1) **Agrigentum, Mylæ, Ecnomus, Panormus, Ægadian Islands;** (2) Siege of Lilybæum, Drepana.

RESULTS: Carthaginians surrender Sicily and pay a war indemnity. Carthage retains the Western Mediterranean and Rome is launched on her career of conquest.

SECOND PUNIC WAR.—218-201 B. C.

(1) **Romans** vs. (2) Carthaginians.

CAUSES: A duel to the death between East and West. Pretext, Hannibal's attacks on Saguntum in Spain.

LEADERS: (1) **Q. Fabius Maximus, Publius Scipio, P. Cornelius Scipio Africanus;** (2) Hannibal, Hasdrubal.

CHIEF ACTIONS: (1) **Syracuse, Capua, Metaurus, Zama;** (2) Ticinus, Trebia, Trasimene, Cannæ.

RESULTS: Hannibal succumbs as a result of the loyalty of Italy. Carthage forced to give up Spain, to pay an annual tribute, to surrender her fleet, and to agree not to go to war without the permission of Rome.

FOUR MACEDONIAN WARS.—214-146 B. C.

(1) **Romans** vs. (2) Greeks.

CAUSE: Alliance of Philip, King of Macedon with Carthage.

LEADERS: (1) **T. Quinctius Flaminius, L. Aemilius Paulus;** (2) Philip of Macedon, Perseus.

CHIEF ACTIONS: (1) **Cynoscephalæ, Pydna.**

RESULT: Macedonia becomes a Roman province.

THIRD PUNIC WAR—149-146 B. C.

(1) **Romans** vs. (2) Carthaginians.

CAUSE: War of Carthage with Massinissa gives Rome the pretext for completing the destruction of Carthage.

LEADERS: (1) **Scipio, Æmilianus, Africanus.**

CHIEF ACTIONS: (1) **Siege of Carthage.**

RESULT: Carthage destroyed. Most of her territory becomes a Roman province of Africa.

JUGURTHINE WAR.—111-105 B. C.

(1) **Romans** vs. (2) Jugurtha of Numidia.

CAUSE: Jugurtha, disregarding intervention of Rome, captures Citra and massacres male population.

LEADERS: (1) **C. Marius;** (2) Jugurtha.

CHIEF ACTIONS: (1) **Muthul, Citra.**

RESULTS: Numidia divided. The war reveals the corruption and incapacity of the Senatorial government of Rome.

MARSIAN OR SOCIAL WAR.—90-88 B. C.

(1) **Romans** vs. (2) Italian Allies.

CAUSE: Italian socii (allies) are denied the right of Roman citizenship.

LEADER: (1) **C. Marius, Sulla.**

CHIEF ACTION: (1) **Asculum.**

RESULT: Italians form a Federal republic, Italia, with capital at Corfinium. Roman citizenship granted to all Italian residents.

FIRST ROMAN CIVIL WAR—88-82 B. C.

(1) **Optimates** vs. (2) Democrats.

CAUSE: Reform measures of Sulpicius are carried by means of violence. Command of army of Asia is transferred from Sulla to Marius.

LEADERS: (1) **Sulla, Pompey;** (2) Marius, Cinna, Sertorius, Carbo.

CHIEF ACTIONS: **Sacriportis, Colline, Gate, Sulla's proscriptions;** (2) Marius's Reign of Terror.

RESULT: Sulla is appointed dictator.

THREE MITHRIDATIC WARS—88-63 B. C.

(1) **Romans** vs. (2) Pontines and Armenians.

CAUSES: Ambition of Mithridates VI. and Roman interference.

LEADERS: (1) **Sulla, Lucullus, Pompey;** (2) Mithridates (Pontus), Tigranus (Armenia).

CHIEF ACTIONS: (1) **Chæronea, Orchomenus,**

THE GREAT FOREIGN WARS OF UNIVERSAL HISTORY—Continued

Cabira, Tigranocerta; (2) Massacre of Italians in Asia.
RESULTS: Reorganization of the East; Pontus, Syria and Cilicia become Roman provinces.

GLADIATORIAL AND THIRD SERVILE WAR.—73-71 B. C.
(1) **Romans** vs. Revolted Gladiators and Slaves.
CAUSE: Uprising of a band of gladiators, escaped from Capua and joined by many slaves of southern Italy.
LEADERS: (1) **Crassus, Pompey;** (2) Spartacus.
CHIEF ACTIONS: (1) **Silarus;** (2) Mt. Vesuvius.
RESULTS: Revolt put down with cruelty, six thousand crucified.

GALLIC WAR—58-51 B. C.
(1) **Romans** vs. (2) Tribes of Gaul.
CAUSE: Desire to extend the Roman empire.
LEADERS: (1) **Julius Cæsar;** (2) Vercingetorix, Ariovistus.
CHIEF ACTION: (1) **Siege of Alesia.**
RESULTS: Conquest and organization of Gaul by Cæsar. Gauls Romanized; boundaries of the old world enlarged (Cæsar's expedition to Britain 55-54 B. C.); means acquired for changing Rome into a monarchy.

SECOND ROMAN CIVIL WAR.—49-31 B. C.
First period, 49-45 B. C.
(1) **Followers of Cæsar (democrats)** vs. (2) Followers of Pompey (republican aristocrats).
CAUSE: Struggle for mastery between Cæsar, conqueror of Gaul, and Pompey, conqueror of the East.
LEADERS: (1) **Cæsar;** (2) Pompey and his sons.
CHIEF ACTIONS: (1) **"Crossing the Rubicon," Pharsalus, Thapsus, Munda.**
RESULT: Cæsar is appointed dictator for life. He is the founder of the new monarchy at Rome.
Second period—43-42 B. C.
(1) **Friends of Cæsar (Second Triumvirate)** vs. (2) Cæsar's Assassins.
CAUSE: Assassination of Cæsar, 44 B. C.
LEADERS: (1) **Antony, Octavius, Lepidus;** (2) Brutus, Cassius, Sextus Pompey.
CHIEF ACTIONS: (1) **New proscription (Murder of Cicero), Philippi.**
RESULT: Brutus and Cassius, defeated, commit suicide.
Third period—31-30 B. C.
(1) **Octavius** vs. (2) Antony.
CAUSE: A continued struggle for supreme power.
LEADERS: (1) **Octavius;** (2) Antony, Cleopatra.
CHIEF ACTIONS: (1) **Actium.**
RESULTS: Triumph of Octavius, grand nephew of Julius Cæsar. End of the republic and beginning of the empire.

JEWISH WAR—A. D. 66-70.
(1) **Romans** vs. (2) Jews.
CAUSE: Revolt of the Jews against Rome.
LEADER: (1) **Titus, son of Emperor Vespasian.**
CHIEF ACTION: (1) **Siege of Jerusalem.**
RESULT: Destruction of Jerusalem and the temple.

DACIAN WARS.—86-90, 101-102, 105-107.
(1) **Romans** vs. (2) Dacians.
CAUSE: Rome desires to extend her conquests.
LEADERS: (1) **Domitian, Trajan;** (2) Decebalus.
RESULTS: Dacia is made a Roman province. Roman conquest and empire reaches its highest point.

CIVIL WARS OF THE ROMAN EMPIRE.—193-284.
CAUSES: Contests for the throne among rival generals (barrack emperors).
RESULT: Reorganization of empire by Diocletian (284-305).

WARS OF CONSTANTINE THE GREAT FOR THE EMPIRE.—310-323.
(1) **Constantine** vs. (2) Others, Augusti.
CAUSES: Confusion following abdication of Diocletian.
LEADERS: (1) **Constantine;** (2) Maxentius, Maximinus, Licinius.
CHIEF ACTION: (1) **Turin.**
RESULTS: Constantine becomes sole ruler of Roman empire. He redistricts the empire, moves the capital to Constantinople and recognizes Christianity.

INVASION OF ROMAN EMPIRE BY NORTHERN BARBARIANS—375-493.
(1) **Romans** vs. (2) Teutons and (Huns), Teutonic Tribes; Visigoths, Vandals, Suevi, Franks, Burgundians, Ostrogoths, Alemanni, Jutes, Saxons, Angles, Lombards.
CAUSES: The Huns (Mongolians) press upon the Teutons, who are forced to seek new lands within the boundaries of the Roman empire.
LEADERS: (1) **Valens, Stilicho Ætius, Leo (bishop of Rome);** (2) Alaric; Walja (Visigoth); Genseric (Vandal); Hengist and Horsa (Saxons) Attila; (Hun); Theodoric the Great (Ostrogoth).
CHIEF ACTIONS: (1) **Battle near Chalons (451);** (2) Adrianople, Sack of Rome.
RESULTS: Visigothic kingdom of Tolosa (Toulouse) (415-507). Vandals settle in Africa (429-534). Carthage (439).
Burgundians occupy Rhone Valley (443).
Angles, Saxons and Jutes invade England (449), Huns and Ostrogoths ravage Gaul.
Huns destroy Aquiliea and Venice founded (452).
Vandals plunder Rome (455).
Odoacer gains ascendency in Rome. The fall of the Roman empire (476).
Ostrogothic kingdom in Italy (493-555).
Overthrow of the Roman empire in the West, though it continued in the East until 1453. This blending of Roman and Teutonic elements under the influence of the Christian religion and what remained of classic civilization formed the civilization of the middle ages.

WARS OF JUSTINIAN—533-534.
(1) **Eastern Empire** vs. (2) Vandals in Africa and (3) Ostrogoths in Italy—535-555.
CAUSE: Desire to restore West to Eastern empire.
LEADERS: (1) **Belisarius, Narses;** (3) Vitiges Totila.
CHIEF ACTION: (1) **Battle of Taginae (552).**
RESULTS: Destruction of Vandal power in Africa and of the Ostrogothic kingdom in Italy. Exarchate established at Ravenna.

WARS OF THE FRANKS—486-814.
(1) **Franks** vs. (2) Neighboring Peoples.
CAUSES: Desire to extend the limits of Frankish territory and to ward off attacks from without.
LEADERS: (1) **Clovis (486-511), Charles Martel (814-741), Pepin the Short (751-768), Charlemagne (768-814).**
CHIEF ACTIONS: (1) **Soissons (486), Clovis conquers Alemanni and becomes a Catholic Christian (496), Battle of Tours (732), Conquest of Burgundy (534), Charlemagne conquers Lombards (774-776), Saxons (772-804), Bavarians (788), Avars (791), Northern Spain (778).**
RESULTS: Franks become leading power in the West and revive the Western Empire. (Christmas day, 800).

HEPTARCHIC WARS IN ENGLAND—588-828.
CAUSES: Struggle for supremacy among the seven Teutonic kingdoms.
LEADERS: Ethelbert (Kent), Edwin (Northumbria), Offa (Mercia), Egbert (Wessex).
CHIEF EVENTS: The supremacy was successively held by kings of Kent, Northumbria, Mercia, and Wessex, Maserfield (642), Ellandun (825).
RESULT: All England at last united under Egbert, king of Wessex (802-837).

SARACEN OR MOHAMMEDAN WARS—632-1492.
CAUSE: Saracens are ambitious to found a world wide Mohammedan empire.
LEADERS: (1) **Omar, Amru, Hassan, Mousa, Tarik, Abderrahman, Mohammed II., Abdallah;** (2) Yezdegerd (Persia), Leo the Isaurian, Charles Martel, Constantine, Palæologus, Ferdinand of Aragon.
CHIEF ACTIONS: (1) **Yarmouk (Syria), Damascus Jerusalem Cadesia(Persia), Alexandria, Carthage(697), Xeres (Spain), Granada, Toledo;** (2) Constantinople (716), Tours, Jerusalem, Las Navas de Tolosa (1212).
(1) **Constantinople** (1453).
(2) Granada (1492).
RESULTS: The Saracens attempted to conquer and convert Europe at three different times between 710 and 1492. Their power began to wane from the latter date.

NORTHMEN INVASIONS—Ninth and Tenth Centuries.
(1) **Northmen** vs. (2) People of Western and Southern Europe.
CAUSES: Opportunity for plunder and conquest and later the driving out of adventurous spirits by the organization of settled kingdoms in the north.
LEADERS: (1) **Hastings, Rolf, Sweyn, Canute;** (2) Alfred (England), Odo (France).
CHIEF EVENTS: In England—Treaty of Wedmore, Massacre of Danes (1002).
In France: Siege of Paris. Grant of Normandy to Rolf (977).
RESULTS: The Northmen are the last swarm of Teutonic conquerors. They readily assimilate civilization and infuse new energy into western Europe.

NORMAN CONQUEST—1066.
(1) **Normans** vs. (2) English.
CAUSE: William, duke of Normandy wishes to increase his territory and his power.
LEADERS: (1) **William the Conqueror;** (2) Harold, king of England.
CHIEF ACTION: (1) **Hastings.**

THE GREAT FOREIGN WARS OF UNIVERSAL HISTORY—Continued

RESULTS: The king received added power and a modified feudalism introduced into England. Southern Italy and Sicily were also conquered by bands of Normans in the eleventh century and the kingdom of Naples founded.

CRUSADES—1096-1270.

(1) **European Christians** vs. (2) Turks and Moslems.

First Crusade—1096-1099.

CAUSES: The appeal of the eastern emperor for aid, the desire to recover the Holy Sepulcher from the infidels, the love of adventure, and hope of gain.

LEADERS: (1) **Peter the Hermit, Godfrey of Bouillon, Bohemond of Tarentum, Robert of Normandy.**

CHIEF ACTIONS: (1) **Nicæa, Antioch, Jerusalem.**

RESULTS: Jerusalem is subdued and a transient kingdom is founded at Jerusalem.

Second Crusade—1147-1149.

CAUSE: The conquest of Edessa by the Moslems threatens Jerusalem. Preaching of Saint Bernard.

LEADERS: (1) **Conrad III. of Germany, Louis VII. of France.**

CHIEF ACTION: Unsuccessful attack on Damascus.

RESULTS: Armies almost annihilated by hunger, disease and the enemy.

Third Crusade—1189-1192.

CAUSE: Capture of Jerusalem by Saladin.

LEADERS: **Richard I. of England, Philip Augustus of France, Frederick Barbarossa of Germany;** (2) Saladin.

CHIEF ACTIONS: (1) **Acre.**

RESULTS: The Latin Christians secure by treaty the privilege of visiting the tomb of Christ for three years without molestation.

Fourth Crusade—1201-1204.

(1) **Crusaders** vs. (2) Eastern Empire.

CAUSES: Appeals of Innocent III. Through influence of the Venetians the Crusaders turn aside to attack Constantinople.

LEADERS: (1) **Dandolo, Doge of Venice, Baldwin of Flanders.**

CHIEF ACTION: (1) **Sack of Constantinople.**

RESULTS: Division of eastern empire. The Venetians get the monoply of trade and most of the islands and coast lands of the Ægean and Ionian seas. The remainder is erected into a feudal state, the Latin empire.

Children's Crusade (legendary)—1212.

CAUSES: Ignorant enthusiasm aroused by visions and miraculous tales.

LEADER: A shepherd lad, Stephen of Vendome.

CHIEF EVENTS: Thousands of children, women and peasants march from France and Germany to the Mediterranean.

RESULTS: Only a small number return home; the others perish on the way or are sold into slavery by French merchants.

Fifth Crusade—1228-1229.

CAUSE: Vow of Frederick II. of Germany. He goes under pope's excommunication.

LEADER: (1) **Frederick II.**

RESULTS: Frederick, by treaty with the sultan, secures a truce for ten years and the restoration of Bethlehem, Nazareth and Jerusalem to the Christians; Jerusalem is finally lost in 1244.

Sixth Crusade—1248-1254.

CAUSE: Louis IX. of France starts on a crusade via Egypt.

LEADERS: (1) **Louis IX., later St. Louis.**

CHIEF ACTIONS: (1) **Damietta;** (2) Expedition to Cairo.

RESULT: Louis is captured in battle and released on payment of heavy ransom and evacuation of Damietta.

Last, Seventh Crusade—1270-1291.

CAUSES: Louis IX. goes against Mohammedans of Tunis, Prince Edward of England to Syria.

LEADER: (1) **Louis IX., Prince Edward.**

CHIEF EVENTS: Death of Louis by the plague; (2) Acre, last Christian stronghold in Syria, falls (1291).

RESULTS: The results of the crusades were development of commerce, introduction of new customs, products and manufactures, increase in freedom of lower classes, especially townsmen, and the power of the crown.

WAR OF THE EMPIRE—1158-1183.

(1) **Empire** vs. (2) Italian Communes.

CAUSE: Frederick Barbarossa's attempt to restore imperial rights over the cities of northern Italy.

LEADERS: (1) **Frederick I. Barbarossa;** (2) Pope Alexander III.

CHIEF ACTIONS: (1) **Milan** (1162); (2) Legnano (1176).

RESULTS: By treaty of Constance (1183) the cities of Lombardy are recognized as practically self-governing republics, the barest overlordship remaining to the emperor.

WARS OF THE BARONS IN ENGLAND—1215-1265.

(1) **Barons** vs. (2) Kings John and Henry III.

CAUSES: Misgovernment of John and Henry III.

LEADERS: (1) **Stephen Langton, Simon de Montfort;** (2) King John, Prince Edward, later Edward I.

CHIEF EVENTS: (1) **Signing of Magna Charta, Lewes, Simon de Montfort's Parliament;** (2) Evesham.

RESULTS: The beginning of constitutional monarchy —henceforth the king is below the law, not above it.

HUNDRED YEARS' WAR—1337-1453.

(1) **English** vs. (2) French.

CAUSES: The conflict of interests of the French and English kings in Guienne, Flanders and Scotland. Edward III. advances claim by descent to the throne of France.

LEADERS: (1) **Edward III., Edward the Black Prince, Prince Henry V., Duke of Bedford;** (2) Du Guesclin, Charles V., Joan of Arc.

CHIEF ACTIONS: (1) **Crécy, Calais, Poitiers, Peace of Bretigny, Agincourt, Treaty of Troyes;** (2) Orleans (1429), Castillon (1453).

RESULTS: England loses all her land in France except Calais. During the earlier stage of this war about one-third of the population of western Europe perished from the Black Death.

AUSTRO-SWISS WAR—1315-1388.

(1) **House of Hapsburg** vs. (2) Swiss Confederation.

CAUSES: Hapsburgs assert feudal rights over the peasants of the Swiss cantons.

LEADERS: (1) **Leopold III. of Austria;** (2) Arnold von Winkelried.

CHIEF ACTIONS: (2) Morgarten, Sempach, Näfels.

RESULT: Independence of Swiss secured.

HUSSITE WAR—1419-1436.

(1) **Bohemian Followers of John Huss** vs. (2) Catholic Europe.

CAUSES: Execution of John Huss, the Bohemian religious reformer, by the council of Constance.

LEADERS: (1) **Ziska, Procopius the Great;** (2) Emperor Sigismund, Cardinal Cesarini, Frederick of Brandenburg.

CHIEF EVENTS: Revolt of Prague. Four crusades repulsed.

RESULTS: After the overthrow of the radical Hussites (Taborites) by the conservative Hussites (Calixtines) in the battle of Lipan a Catholic reaction set in which culminated in 1462 with the revocation of the compacts made by the Council of Basel with the Hussites.

WARS OF THE ROSES—1455-1485.

(1) **Yorkists (White Rose);** vs (2) Lancastrians (Red Rose).

CAUSES: Misgovernment under Henry VI. encourages Richard, duke of York, representing the second line of descent from Edward III., to claim the throne against Henry VII. (third line).

LEADERS: (1) **Richard, duke of York, Edward IV., Richard III.;** (2) Duke of Somerset, Queen Margaret, Earl of Warwick ("King-maker"), first a Yorkish and then a Lancastrian, Henry VII.

CHIEF ACTIONS: (1) **St. Albans, Northampton, Mortimer's Cross, Towton, Barnet, Tewkesbury;** (2) Wakefield, Bosworth Field.

RESULTS: Henry Tudor (Lancastrian in the female line) secures throne as Henry VII. By his marriage with Elizabeth of York he unites the warring factions and establishes an almost despotic rule in England.

WARS FOR CONTROL OF ITALY—1494-1529.

(1) **French** vs. (2) Spanish.

CAUSES: Conflicting claims to the throne of Naples and to the duchy of Milan.

LEADERS: (1) **Charles VIII., Louis XII., Bayard, Francis I.;** (2) Ferdinand of Aragon, Charles V., duke of Bourbon, Fürstenburg.

CHIEF ACTIONS: Invasion of Italy by Charles VIII. (1494), League Cambray (1508), Holy League (1511).

(1) **Marignano;** (2) Pavia.

RESULTS: All the leading powers of western Europe were drawn into this struggle. By the peace of Cambraes (1529), France renounced her claims to Italy. One effect of these wars was to tie the hands of Charles V. so as to prevent his putting down Lutheranism in Germany.

SCHMALKALDIC WAR—1546-1547.

(1) **Charles V.** vs. (2) League of Schmalkalden.

CAUSES: Charles V. attempts to crush Protestantism in Germany.

LEADERS: (1) **Emperor Charles V., Duke Maurice of Saxony;** (2) John Frederic, Elector of Saxony, Philip, Landgrave of Hesse.

CHIEF ACTION: (1) **Mühlberg.**

RESULTS: Protestantism temporarily crushed. Its recovery in 1552 was followed by the religious peace of Augsburg 1555.

THE GREAT FOREIGN WARS OF UNIVERSAL HISTORY—Continued

RELIGIOUS WARS IN FRANCE—1562-1598.

(1) **Catholics** vs. (2) Huguenots (Protestants).

CAUSE: Massacre of Huguenots at Vassy is a signal for uprising.

LEADERS: (1) **Duke of Guise, Henry III.;** (2) Catherine de Medici, Conde, Coligny, Henry of Navarre (Henry IV.)

CHIEF EVENTS: (1) **Massacre of St. Bartholomew** (1572); (2) Siege of Paris, Ivry (1590), Henry of Navarre becomes a Catholic (1593). Riots of Image Breakers. Council of Blood.

RESULTS: By the edict of Nantes (1598) the Huguenots are given equal political rights with Catholics, limited freedom of worship, the possession of La Rochelle and other strong places as cities of refuge.

WAR OF LIBERATION IN THE NETHERLANDS—1568-1648.

(1) **Spain** vs. (2) Revolted provinces in the Netherlands.

CAUSES: Political and religious tyranny of Spain. Duke of Alva enforces the Inquisition.

LEADERS: (1) **Duke of Alva, Alexander of Parma;** (2) William of Orange, Jan van Olden, Barneveldt, Maurice of Nassau.

CHIEF ACTIONS: (1) **Mechlin, Haarlem;** (2) Brill, Siege of Leyden, "Spanish Fury" at Antwerp, Pacification of Ghent (1576), Union of Utrecht (1579), Declaration of Independence (1581).

RESULTS: By the Peace of Westphalia (1648) the independence of the seven northern provinces, the United Netherlands, is recognized. The ten southern provinces continue under Spanish rule until 1713.

THIRTY YEARS' WAR—1618-1648.

(1) **German Protestants and their Allies, England, Holland, Sweden and France** vs. (2) Imperial German Catholics and their Allies, Spain, Italy.

CAUSES: Disputes over interpretation of peace of Augsburg (religious and political disputes leading to the revolt of Bohemia). The war passes through four phases: (1) Bohemian-Palatinate, (2) Danish, (3) Swedish, (4) Swedish-French.

LEADERS: (1) **Frederick, Elector Palatine, Mansfield, Gustavus Adolphus (Sweden), Turenne and Conde (France);** (2) Emperor Ferdinand II., Maximilian of Bavaria, Tilly, Wallenstein.

CHIEF ACTIONS: (1) **Stralsund, Edict of Restitution, Breitenfeld, Lützen;** (2) White Hill, Magdeburg, Nördlingen.

RESULTS: This war is closed by the peace of Westphalia. Alsace thereby goes to France, Switzerland is separated from the empire and the Palatinate is divided. The secularized lands of northern Germany are secured to Protestanism, while leaving to Catholicism Austria, Bohemia and Bavaria. Germany is left desolate.

CIVIL WAR IN ENGLAND—1642-1649.

(1) **Royalists (Cavaliers)** vs. (2) Parliamentarians (Roundheads) allied with Scots (to 1647).

CAUSES: Charles I. attempts to force a personal government on England. His disputes with Parliament covered (1) taxation, (2) privileges of Parliament, (3) religion, (4) control of the militia.

LEADERS: (1) **Charles I., Prince Rupert, Montrose;** (2) Cromwell, Essex, Fairfax, Leslie.

CHIEF ACTIONS: (2) Marston Moor, Naseby, Preston.

RESULTS: The second civil war (1648) determines the army leaders to bring Charles I. to trial and execution (1649). A Commonwealth was then established without King or House of Lords but with Oliver Cromwell as Protector (1653 to 1659). The son of Charles I. restored in 1660 as Charles II.

FIRST THREE WARS OF LOUIS XIV.—1667-1697.

(1) **France** vs. a. Spanish Netherlands; b. Dutch republic; c. Grand Alliance (German States, England, Holland).

CAUSES: Louis XIV.'s passion for fame and desire to increase French territory in Europe.

LEADERS: (1) **Turenne, Conde, Luxembourg;** (2) William III., De Ruyter.

CHIEF ACTIONS: (1) **Ravaging of Palatinate, Steenkirke, Neerwinden;** (2) Sasbach, La Hogue, Namur.

RESULT: Extension of boundaries of France to the northeast.

SPANISH SUCCESSION (in America), QUEEN ANNE'S WAR—1701-1714.

(1) **France, Spain and Bavaria** vs. (2) Austria, England, Holland, Portugal, Savoy.

CAUSES: Acceptance by Louis XIV. of the bequest of the Spanish dominion to his grandson, Philip of Anjou, in violation of the partition treaty to which he had consented.

LEADERS: (1) **Vendome Villars, Leopold of Dessau;** (2) Duke of Marlborough, Eugene of Savoy, Heinsius.

CHIEF ACTIONS: (2) Gibraltar, Blenheim, Ramillies, Turin, Oudenarde, Malplaquet.

RESULTS: By the peace of Utrecht in 1713 and that of Rastadt in 1714 Spain and the Indies go to Philip of Anjou; Naples, Milan, Sardinia and former Spanish Netherlands to the Austrians. England receives Newfoundland, Acadia and Hudson Bay Territory from France and Gibraltar from Spain.

NORTHERN WAR—1700-1721.

(1) **Sweden** vs. (2) Russia, Poland, Denmark, Saxony.

CAUSES: Peter the Great joins Poland, Denmark and Saxony for the purpose of despoiling Sweden, the first power of the north, of her Baltic ports.

LEADERS: (1) **Charles XII.;** (2) Peter the Great (Russia), Augustus II. of Saxony.

CHIEF ACTIONS: (1) **Invasion of Denmark, Narva, Invasion of Saxony;** (2) Pultava.

RESULTS: By the peace of Nystadt (1721) Sweden cedes large territories to Russia. Russia takes the place of Sweden as the foremost power of the north.

WAR OF THE AUSTRIAN SUCCESSION—1740-1748.

(1) **Austria, supported by Hungary, Bohemia, England, Holland and Saxony** vs. (2) Prussia, France, Spain, Bavaria.

CAUSES: When Maria Theresa succeeded her father, Charles IV. of Austria, Frederick the Great of Prussia seized Silesia. This precipitated a struggle for Austrian territories. At the death of Charles VI. of Austria the right of Maria Theresa to the throne is contested chiefly by Frederick the Great of Prussia, who seizes Silesia.

LEADERS: (1) **Maria Theresa, George II. of England, Charles of Lorraine;** (2) Frederick the Great of Prussia, Emperor Charles VII., Schwerin.

CHIEF ACTIONS: (1) **Dettingen;** (2) Mollwitz, Chotusitz, Prague, Fontenoy, Hohenfriedburg, Soor.

RESULTS: By the treaty of Aix-la-Chapelle Silesia is secured to Prussia, which state now becomes a great European power. This war is one phase of the long rivalry between France and Great Britain for sea power and dominion in America and India.

SEVEN YEARS' WAR, OR THIRD SILESIAN WAR; In America: FRENCH AND INDIAN WAR—1756-1763.

(1) **England, Prussia** vs. (2) France, Austria, Russia and Spain, Sweden.

CAUSES: Maria Theresa wishes to regain Silesia. Hostilities between French and English in America and India. George II.'s concern for his ancestral territory of Hanover.

LEADERS: (1) **Frederick the Great, Duke of Cumberland, Wolfe (America), Robert Clive (India);** (2) Daun (Austria), Charles of Lorraine, Montcalm (America).

CHIEF ACTIONS: (1) **Dresden, Rossbach, Leuthen, Zorndorf, Minden;** (2) Kolin, Hohkirchen, Kunersdorf.
In America: (1) **Louisburg, Fort Duquesne, Quebec.**
In India: (1) **Plassey, Wandewash.**

RESULTS: The peace of Paris (1763) gives England Canada, the supremacy in India and certain islands, especially in the West Indies. Prussia retains Silesia. This war really founded the British empire which is based on sea power and colonial dominion.

WARS OF THE FRENCH REVOLUTION—1792-1802.

(1) **Revolutionary France** vs. (2) Coalitions of England, Austria, Prussia, Holland and Spain. The Empire, Russia.

a. First Coalition—1792-1797.

CAUSES: Intrigues of emigrés; horror of Europe at the execution of the king; French offer of aid to revolutionists in other countries.

LEADERS: (1) **Dumouriez, Kellermann, Jourdan, Hoche, Pichegru, Napoleon Bonaparte, Moreau;** (2) Duke of Brunswick, Coburg, Charles of Austria.

CHIEF ACTIONS: (1) **Valmy, Occupation of Nice and Savoy, Jemmapes, Execution of king (1793), Annexation of Belgium, Fleurus, Lodi, Siege of Mantua;** (2) Mainz, Neerwinden, Kaiserslautern, Wurzburg.

RESULTS: By peace of Campo Formio (1797) the French frontier is advanced to the Rhine, Venice is given to Austria and the Cisalpine and Ligurian republics founded in Italy under French control.

b. Bonaparte's Egyptian Expedition—1798-1799.

CAUSES: Bonaparte aims to prepare the way to attack Great Britain's power in India and dreams of rivaling early conquerors of the east.

LEADERS: (1) **Napoleon Bonaparte;** (2) Nelson (England).

CHIEF ACTIONS: (1) **Battle of the Pyramids;** (2) Battle of the Nile at Aboukir, Acre.

RESULTS: Nelson's victory removes a serious menace to British power in India, cuts off the French in Egypt and deprives France of communication with its best troops and ablest general.

c. Second Coalition—1799-1802.

CAUSES: The mistakes of the government of the

THE GREAT FOREIGN WARS OF UNIVERSAL HISTORY—Continued

Directory and the prestige of Nelson's victory enable Great Britain to form the Second Coalition.

LEADERS: (1) **Napoleon, Joubert, Moreau;** (2) Suvaroff, Melas, Archduke John.

CHIEF ACTIONS: (1) **Marengo, Hohenlinden;** Napoleon's passage of the Alps (Great St. Bernard); (2) Novi.

RESULTS: The Peace of Presburg ends the contest between France and Austria. Much harsher terms are imposed on Austria. Peace of Luneville with Austria (1801); Peace of Amiens with England (1802); Surrender of England's conquests except Trinidad and Ceylon; Malta to be restored to Knights of Malta.

NAPOLEONIC WARS—1802-1815.

(1) **France under Napoleon** vs. (2) European Powers led by England.

a. Third Coalition—1805.

CAUSES: Neither England nor France regarded the peace of Amiens as more than a truce. Among the many causes of friction leading to renewal of war, chief place was given to England's refusal to restore Malta.

LEADERS: (1) **Napoleon;** (2) Nelson, Mack, Alexander I. (Russia), Kutusoff.

CHIEF ACTIONS: (1) **Ulm, Austerlitz;** (2) Trafalgar.

RESULTS: As a result of his brilliant successes, Napoleon, in 1802 becomes consul for life and in 1804 took the title emperor of the French. Confirmation of treaty of Campo Formio, with the recognition of Batavian, Helvetian, Cisalpine and Ligurian republics.

b. (Fourth) War with Prussia and Russia—1806-1807.

CHIEF ACTIONS (1) **Double battle of Jena and Auerstadt, Berlin decree, Eylau (indecisive), Friedland.**

RESULTS: By the treaties of Tilsit (1807) Russia recognizes Napoleon's relatives as kings of Naples, Holland and Westphalia and consents to the creation of the Confederation of the Rhine and the grand duchy of Warsaw under Napoleon's control. Alexander and Napoleon combine to dominate Europe. Prussia cedes territories containing half her population.

c. Peninsular War—1808-1814.

CAUSES: Rebellion of Spain against Joseph Bonaparte, whom Napoleon had placed on the throne.

LEADERS: (1) **Soult, Massena;** (2) Duke of Wellington.

CHIEF ACTIONS: (1) **Corunna;** (2) Talavera, Lines of Torres Vedras, Albuera, Salamanca, Vittoria, Toulouse.

RESULTS: French expelled from the peninsula.

d. Fifth War with Austria—1809.

LEADERS: (1) **Napoleon;** (2) Archduke Charles.

CHIEF ACTIONS: (1) **Aspern, Wagram.**

RESULTS: Austria cedes thirty-two thousand square miles of territory, containing three and one-half million inhabitants.

e. Invasion of Russia—1812.

CAUSE: Alexander's refusal to enforce Napoleon's continental system, and other causes of dispute.

LEADERS: (1) **Napoleon, Marshal Ney;** (2) Kutusoff, Barclay de Tolly.

CHIEF ACTIONS: (1) **Smolensk, Borodino.** Burning of Moscow, Retreat from Moscow, Passage of the Beresina.

RESULT: Less than twenty thousand of the half million men in Napoleon's army recrossed the Russian frontier.

f. War of Liberation—1813-1814.

CAUSES: The disastrous Russian campaign, together with the steady progress of the British in the peninsular war encouraged the oppressed states of Germany to rise against Napoleon's tyranny, Prussia taking the lead.

LEADERS: (1) **Napoleon, Ney, Macdonald;** (2) Frederick, William III., Francis I., Alexander I., Schwarzenberg, Blücher, Bernadotte.

CHIEF ACTIONS: (1) **Lützen, Bautzen, Dresden;** (2) Dennewitz, Leipzig, (Battle of the Nations). Allies enter Paris.

RESULTS: Driven from Russia in 1812, from Germany in 1813, Napoleon in 1814 was forced to surrender France itself. By the treaty of Fontainebleau he was given the Island of Elba and an annual revenue of two million francs.

g. Waterloo Campaign—1815.

CAUSES: Quarrels among the allies and dissatisfaction of French with Louis XVIII. tempt Napoleon to return from Elba.

LEADERS: (1) **Napoleon, Ney;** (2) Wellington, Blücher.

CHIEF ACTIONS: Napoleon lands at Cannes (March 1); enters Paris March 20.

(1) **Ligny;** (2) Quatre Bras, Waterloo (June 18).

RESULTS: Waterloo marks the final downfall of Napoleon. He is transported to the island of St. Helena, where he died in 1821. In the Congress of Vienna the allies reconstructed Europe, restoring in general the legitimate rulers and erecting barriers against democratic movements and liberal ideas.

WAR OF GRECIAN INDEPENDENCE—1821-1829.

(1) **Greeks, aided by England, Russia and France** vs. (2) Turks.

CAUSES: Revived feeling of Greek nationality, stimulated by a widespread secret society working for a restoration of a Greek empire at Constantinople.

LEADERS: (1) **Ypsilanti, Diebitsch** (Russia), **Codrington** (England), **Byron** (England); (2) Ibrahim, Pasha.

CHIEF ACTIONS: Massacre of Greeks at Chios. (1) **Navarino, Adrianople;** (2) Missolonghi.

RESULTS: The treaty of Adrianople, 1829, compelled Turkey to acknowledge the independence of Greece, which chose as king the Bavarian prince Otto I.

CRIMEAN WAR—1854-1856.

(1) **Russia** vs. (2) Turkey aided by Great Britain, France and Sardinia.

CAUSES: The question of the political status and future of the lands of the Turkish empire. Immediate cause, the claim of Russia to a protectorate over all Greek Christians living under the sultan's rule.

LEADERS: (1) **Mentchikoff, Gortchakoff;** (2) Canrobert, Pelissier (France), Raglan, Simpson (England).

CHIEF ACTIONS: (1) **Balaclava;** (2) Alma, Siege of Sebastopol, Inkermann.

RESULTS: In the peace of Paris (1856) Russia's claim to a protectorate is disallowed, the Danube is opened to navigation and the Black Sea is closed to war vessels of all powers.

SEPOY MUTINY—1857-1858.

(1) **Sepoys** vs. (2) English.

CAUSES: Uneasiness created by the rapid progress of British ways and rule causes a revolt of native Sepoy troops of India. Immediate cause the rumor that cartridges furnished troops were greased with a mixture of hog and beef fat—the one animal an object of loathing to Mohammedans, the other of religious worship to the Hindu.

LEADERS: (1) **Nana Sahib;** (2) Nicholson, Havelock, Campbell.

CHIEF ACTIONS: Mutiny of Sepoys at Meerut. (1) **Massacre at Cawnpore;** (2) Delhi, Relief of Lucknow.

RESULTS: Following the supression of the mutiny the charter of the East India company is revoked and India passes directly under the crown, a secretary of state for India being added to the British ministry.

WAR OF ITALIAN LIBERATION—1859.

(1) **Sardinia-Piedmont and France** vs. (2) Austria.

CAUSES: Since 1848 Sardinia-Piedmont had been the center of the movement for Italian unity. Following promises of aid from Napoleon III. Cavour traps Austria into declaring war over the question of disarmament.

LEADERS: (1) **Victor Emmanuel, Napoleon III., Garibaldi;** (2) Francis Joseph II., Gyulay.

CHIEF ACTIONS: (1) **Montebello, Magenta, Solferino.** Peace signed at Zurich, November 10, 1859.

RESULTS: By this war Victor Emmanuel gained Lombardy. In 1860 Tuscany, Parma, Modena and the papal legations were added. In 1861 he gained Sicily and Naples, together with the title King of Italy. Venetia followed as a result of alliance with Prussia in 1866 and the addition of Rome in 1871 completed the unification of Italy.

DANISH WAR—1864.

(1) **Austria and Prussia** vs. (2) Denmark.

CAUSES: Incorporation of the duchy of Schleswig with Denmark in violation of treaty of 1852.

LEADERS: (1) **Gablenz (Austria), Prince Frederick, Charles (Prussia);** (2) Dermeza, Gerlach.

CHIEF ACTIONS: (1) **Invasion of Jutland, Storming of Düppel.**

RESULTS: Denmark gives up Schleswig-Holstein, which is jointly administered by Austria and Prussia.

AUSTRO-PRUSSIAN WAR—1866.

(1) **Prussia with smaller North German States and Italy** vs. (2) Austria, Hanover, Saxony, and South German States.

CAUSES: Friction over Schleswig-Holstein enables Bismarck to force Austria into a war for supremacy in Germany.

LEADERS: (1) **William I., Prince Frederick, Charles, Moltke, Victor Emmanuel;** (2) Benedek, Archduke Albert, Gablenz, Prince Charles of Bavaria.

CHIEF ACTIONS: In Bohemia: (1) **Soor, Koniggrätz or Sadowa;** (2) Trautenau. *In the West:* (1) **Aschaffenburg;** (2) Langensala. *In Italy:* (2) Custozza, Lissa.

RESULTS: Closed with the peace of Prague, August 23, 1866, which authorized the re-establishment of the

GREAT FOREIGN WARS OF UNIVERSAL HISTORY—Continued

federated German states, excluding Austria; Austria ceded Venetia to Italy, and her rights in Schleswig-Holstein to Prussia. Hanover, Hesse, Nassau are also annexed to Prussia.

FRANCO-PRUSSIAN WAR—1870-1871.

(1) France vs. (2) **Prussia** supported by all German States.

CAUSES: Jealousy of France at Prussian gains and friction over Hohenzollern candidacy for the throne of Spain. Bismarck's falsification of the "Ems dispatch" tricked France into a declaration of war.

LEADERS: Napoleon III., MacMahon, Bazaine; (2) **William I., Moltke, Prince Frederick Charles, Crown Prince Frederic William.**

CHIEF ACTIONS: (1) **Saarbrucken;** (2) Weissenberg, Wörth, Vionville, Gravelotte, Sedan, Capitulation of Metz, Orleans, Capitulation of Paris.

RESULTS: Closed in 1871 with the treaty of Versailles with the following results: (1) The French military power was destroyed; (2) the western frontier of Germany was rendered secure; (3) The German empire was established; (4) Germany acquired Alsace and Lorraine. In France Napoleon III. is deposed and the Third Republic established, 1870.

RUSSO-TURKISH WAR—1877-1878.

(1) **Russia** vs. (2) Turkey.

CAUSES: Turkish misgovernment and revolts in her Christian subject provinces, which were barbarously put down ("Bulgarian atrocities") arouse all Europe but Russia alone declares war.

LEADERS: (1) **Grand Duke Nicholas, Gurka, Grand Duke Michael, Alexander II.;** (2) Suleiman Pasha, Osman Pasha, Mukhitar Pasha.

CHIEF ACTIONS: (1) **Passages of the Danube at Shitova, Shipka Pass, Plevna, Storm of Kars.**

RESULTS: By the peace of San Stefano as revised in the congress of the powers at Berlin, Montenegro, Servia and Roumania become independent; Bulgaria remains tributary but receives a Christian prince; Russia obtains large indemnity and part of Armenia and also Bessarabia.

CHINESE-JAPANESE WAR—1894-1895.

(1) **Japan** vs. (2) China.

CAUSES: Rival claims to suzerainty over Korea.

LEADERS: (1) **Ito, Yamagata, Oyama, Nogi;** (2) Tso, Yeh, Wei.

CHIEF ACTIONS: **Yalu River, Port Arthur, Weihai-wei, Niuchwang.**

RESULTS: Treaty of Shimonoseki, signed April 17, 1895, removed Korea from Chinese influence; ceded Formosa and the Pescadores to Japan, and awarded to the latter an indemnity of $180,000,000.

SOUTH AFRICAN OR BOER WAR—1899-1902.

(1) **Great Britain** vs. (2) Transvaal, Orange Free State.

CAUSES: Resistance by the Boers to the British form of government in the Transvaal.

LEADERS: (1) **Sir George White Buller, Methuen, Roberts, Kitchener, French;** (2) Cronje, Botha, De Wet, Delarey.

CHIEF ACTIONS: (1) **Siege of Ladysmith, Paardeberg;** (2) Colenso, Spion Kop, Vaal Krantz, Magersfontein.

RESULT: Boers surrendered May 31, 1902; are granted the right of self-government under British sovereignty, and united with other self-governing British colonies in South Africa, in 1910, to form the Union of South Africa.

RUSSO-JAPANESE WAR—1904-1905.

(1) **Japan** vs. (2) Russia.

CAUSES: Russian encroachments in Manchuria, and their fortification of Port Arthur.

LEADERS: (1) **Togo, Kuroki, Oku, Nodzu, Oyama, Nogi;** (2) Kuropatkin, Alexieff, Makaroff, Stoessel, Stakelberg, Linievitch.

CHIEF ACTIONS: (1) **Port Arthur and Chemulpo, Vladivostok, Yalu River, Dalny, Siege of Port Arthur, Mukden, Sea of Japan.**

RESULTS: Closed September 5, 1905, by treaty of Portsmouth by which Korea passes under control of Japan, China regains Manchuria, and Japan is granted important railroad rights.

BALKAN WAR—1912-1913.

(1) **Montenegro, Bulgaria, Servia and Greece** vs. (2) Turkey.

CAUSES: Discontent with Turkish rule in Macedonia.

LEADERS: (1) **Savoff, Dimitrieff, Putnik, Constantine;** (2) Nazim Pasha, Mukhtar Pasha, Abdullah Pasha.

CHIEF ACTIONS: (1) **Kirk Kilisseh, Lule Burgas, Monastir.**

RESULTS: Turkey appealed to the powers, November 3, 1912, for intervention, and an armistice was signed December 3, 1912, ending one of the shortest and most sanguinary wars in history. The treaty of peace was signed May 30, 1913.

(2) **Servia, Greece, Roumania, Turkey** vs. **Bulgaria.**

CAUSES: Disputes over the division of Macedonia.

CHIEF ACTIONS: Mainly astounding atrocities and the re-occupation of Adrianople by Turkey.

RESULTS: Reorganization of the Balkan states. Albania was made independent under an international commission of control; Crete was ceded to Greece; Macedonia was divided among Greece, Servia, and Bulgaria; and Roumania gained a strip from the northwest of Bulgaria. On September 17, 1913, an agreement between Bulgaria and Turkey provided that the latter retain Adrianople, Kirk Kilisseh, and Dimotika. September 28 the treaty between **Bulgaria and Turkey was signed at Constantinople.**

EUROPEAN WAR—1914-1918.

No war in the history of the world has equalled conflict in mere stupendousness. In number of nation actually engaged; in its reckless abandon of human lives, destruction of wealth and the treasured creations of the ages; in titanic battles and sieges; fury of martial combat; prostitution of every known achievement of science to death-dealing devices and instrumentalities; in its subversion of the civilizing processes of morals and mind to justify the extremities and perversions of racial and human passions; in the overturning of law and order; and in the undermining of human confidence in the higher institutions of society, it stands naked and alone in its saturnalia of destruction.

THE BELLIGERENT NATIONS: This great epic destruction engulfed twenty-three nations—all driving their energies of life and economic resources toward the highest possible point of efficiency—*now* to *destroy*, but finally, let us hope, to *found* a super-civilization. The group of so-called Central Powers embraces Germany, Austria-Hungary, Turkey and Bulgaria. The opposing group of the Entente Allies—originally headed by Russia, France and Great Britain, include the following, twenty-two in all:

Serbia, Russia, France, Great Britain, Montenegro, Japan, Belgium, Italy, San Marino, Portugal, Roumania, Greece, Cuba, Panama, Siam, Liberia, China, the United States, Brazil, Hayti, Guatemala, and Honduras.

Declarations of war were made as follows:

Austria vs. Belgium, August 28, 1914; Austria vs, Montenegro, August 9, 1914; Austria vs. Russia, August 6, 1914; Austria vs. Serbia, July 28, 1914.

Bulgaria vs. Serbia, October 14, 1915; China vs. Austria, August 14, 1917; China vs. Germany, August 14, 1917; Cuba vs. Germany, April 7, 1917.

France vs. Austria, August 12, 1914; France vs. Bulgaria, October 18, 1915; France vs. Germany, August 3, 1914.

Germany vs. France, August 3, 1914; Germany vs. Portugal, March 9, 1916; Germany vs. Russia, August 1, 1914.

Great Britain vs. Bulgaria, October 16, 1915; Great Britain vs. Austria, August 12, 1914; Great Britain vs. Germany, August 5, 1914; Great Britain vs. Turkey, November 5, 1914.

Greece (Provisional Government) vs. Bulgaria, November 28, 1916; Greece (Provisional Government) vs. Germany, November 28, 1916; Greece vs. Bulgaria, July 2, 1917; Greece vs. Germany, July 2, 1917.

Italy vs. Austria, August 21, 1915; Italy vs. Bulgaria, October 19, 1914; Italy vs. Germany, August 28, 1916.

Japan vs. Germany, August 23, 1914; Liberia vs. Germany, August 4, 1917; Montenegro vs. Austria, August 10, 1914; Panama vs. Germany, April 7, 1917; Roumania vs. Austria, August 27, 1916.

Serbia vs. Turkey, December 2, 1914; Siam vs. Austria, July 21, 1917; Siam vs. Germany, July 21, 1917; Turkey vs. Allies, November 23, 1914; Turkey vs. Roumania, August 29, 1916; United States vs. Germany, April 6, 1917. Brazil vs. Germany, October 26, 1917; United States vs. Austria-Hungary, December 7, 1917.

CAUSES, REAL AND CONJECTURAL: The causes and justifications of the war have been variously set out and just as variously defended with conspicuous vigor and characteristic prejudice. Undoubtedly, opportunists have arisen in all countries to becloud the basic truths; and the ultimate responsibility must necessarily involve long periods of investigation, reflection and clarification by mighty and rare minds. This is all too close to our imperfect senses at the present moment. More calm, more justice, more honesty is required. All that we can now do is to set out the apparent reasons and the record of actual events as they have reached us up to the present time from various credited sources.

From the voluminous diplomatic "papers" given out from time to time by the belligerents, **the nations themselves assign the following reasons:**

GREAT FOREIGN WARS OF UNIVERSAL HISTORY — Continued

Austria: Because Serbia would not permit Austrian officials to take part in investigations in Serbia into the responsibility of Serbians for the murder of the Austrian Crown Prince and Princess.

Serbia: Because upon her refusal to accede to this demand of Austria on the ground that she would be sacrificing her own sovereignty, and in spite of her proposal to leave the matter to arbitration, Austria attacked her.

Russia: Because Austria was making war upon Serbia.

Germany: Because Russia declined to cease mobilizing her army — a mobilization which Germany believed was directed at herself as well as at her ally Austria.

France: Because her ally Russia was attacked by Germany.

Belgium: Because her neutral territory, whose neutrality was guaranteed by a treaty signed by Germany, was invaded by German arms.

England: Because Germany had violated the treaty guaranteeing the neutrality of Belgium, of which both Germany and England were signers.

Japan: Because her treaty with England bound her to join with England when the peace of the Far East was threatened.

United States: Because "the world should be made safe for democracy," and the dictates of humanity prevail over selfish national ambitions.

The more closely reasoned causes might be classified thus:

(1) The immediate occasion of this great conflict was the murder of the Crown Prince and Crown Princess of the Austro-Hungarian empire, on June 28, 1914, at Sarajevo, Bosnia, through the alleged instigation of a Serbian revolutionary society, called the Narodna Odbrana, which had for its purpose the disrupting of the Austro-Hungarian empire, particularly those parts inhabited largely by Serbians and other Slavic races. A peremptory demand followed on the part of the Austro-Hungarian government that Serbia suppress the criminal organization and permit the former to cooperate in the inquiry as to the accomplices on Serbian territory in the murders of the Prince and Princess. This demand was refused by Serbia, which immediately received the support of Russia, France and Great Britain, while Austro-Hungary received the support of Germany, and, later, of Turkey.

(2) The underlying causes were the following:

(a) The policy of Russia (popularly known as Pan-Slavism), an age-long political creed of Russian ambition, to dominate the Balkan countries and extend her dominions to the Bosphorus, the Ægean and the Adriatic.

(b) The ambitions of France to regain Alsace-Lorraine, lost to her by the Franco-Prussian war.

(c) Violation of Belgian neutrality by German military forces in their attempt to invade France.

(d) The political, industrial and commercial rivalry of Germany and Great Britain, involving the mastery of the "high seas," and problems of colonization.

(e) The projected "Berlin to Bagdad" railway, paralleling the "Suez route" to the Far East.

(3) More remote, but equally potent, causes are:

(a) The European political doctrine of the "Balance of Power," which was the outgrowth of the Napoleonic wars, and received its first stamp of approval at the Congress of Vienna in 1815, which settled the important boundaries of the map of Europe for more than half a century afterward. Subsequently, the "great powers" of Europe assumed the point of view that any acquisition of power, territory or population by any one of them entitled all the others to compensation; so that the relative strength and importance might not be disturbed. This rule has been applied to every important war since Napoleon's time, and any threatened disturbance of this "balance" has always had in it the germ of a general conflict. Hence arose the historic "alliances," known as the Triple Alliance, embracing Germany, Austro-Hungary and Italy, on the one hand, and the Triple Entente, comprising France, Russia and Great Britain, on the other.

(b) Prussian "Militarism," so-called, with its autocratic doctrine of force, and attendant jealousies and obstacles to social and economic reforms, which might be said to be the direct fruits of the "balance of power" doctrine, as is also the doctrine of the "guaranteed neutrality" of certain small countries of Europe, which astute European diplomacy created as "buffer" states in the event of armed or other conflicts among the "great powers."

MILITARY LEADERS: (1) *Entente Allies*, Kitchener, French, Haig, Byng, Joffre, Petain, Foch, Grand Duke Nicholas of Russia, Kouropatkin, Brusiloff, Admirals Fisher and Jellicoe, Cardona, Diaz, Pershing; (2) *Central Powers*, Emperor William II., Ludendorff, Emperor Karl of Austria, Hindenburg, Mackensen, Kluck, Falkenhayn, Archduke Frederick, Hoetzendorf, Crown Prince Frederick William, Admiral Tirpitz, Crown Prince Rupprecht, Enver Pasha.

CHIEF THEATERS OF ACTION: (1) Belgium; (2) Northern France; (3) Poland; (4) Dardanelles; (5) Serbia and Balkans; (6) Roumania; (7) Austro-Italian Front; (8) Courland and Lithuania; (9) North Sea and Inlets; (10) Mediterranean; (11) German Colonial Possessions throughout the world; (12) High Seas; (13) Italy.

RESULTS: Except for the loss of Germany's colonial possessions, the military results of the war to July, 1918 preponderated in favor of the Central Powers — the land campaigns being strikingly in their favor; while the mastery of the seas and economic resources remained with Great Britain and the other allies.

About the middle of July, 1918, with over a million American troops in France, General Foch made his great counter-offensive, supported by French, British and American forces. From this time forward until the signing of the armistice, on Nov. 11, the tide of war was steadily against the Central Powers.

The following events mark the breaking down of the Central Powers and the consequent triumph of the Entente Allies:

Sept. 25–29. Bulgaria proposed an armistice, and failing that, surrendered. On Oct. 4, King Ferdinand abdicated.

Oct. 27–31. Austria sued for peace and asked for armistice. On Nov. 4, Austria agreed to armistice terms amounting to unconditional surrender.

Oct. 30–31. Turkey is granted an armistice, and surrendered unconditionally on Oct. 31.

Nov. 7. Germany sent to Gen. Foch for armistice terms, and the same were signed on Nov. 11. The Emperor of Germany abdicated on Nov. 9, and fled to Holland.

Nov. 12. Emperor Charles of Austria-Hungary abdicated the throne.

Nov. 17. The Allied Armies of occupation began their march for the German frontier. Marshal Foch occupied Strasbourg, Nov. 25; the American Army entered Germany, Dec. 1; British troops crossed the German frontier from Belgium, Dec. 3. The American Army reached its final objective at Coblenz, on the Rhine, and the British formally occupied Cologne, on Dec. 16.

Nov. 29. Representatives of the United States to the Peace conference at Paris are announced by President Wilson.

Nov. 30. Lithuania was proclaimed a republic.

Dec. 2. King Nicholas of Montenegro was deposed, and his country united with Serbia.

Dec. 4. President Wilson and the other representatives of the United States peace delegation take passage on the *George Washington* from New York for Brest, France, and arrived Dec. 13.

Dec. 6. The Crown Prince of Germany renounced his right to the throne, and took refuge in Holland.

Jan. 12. The Supreme Council of the Peace Congress consisting of President Wilson and the Premiers and Foreign Ministers of Great Britain, France, United States, and Italy, met in Paris for the first formal exchange of views.

Jan. 17. Delegations to the Peace Congress are announced completed, the representatives being as follows: *France* — Premier Clemenceau, Foreign Minister Pichon, Finance Minister Klotz, Andre Tardieu, and Jules Cambon. *Great Britain* — Premier Lloyd George, Foreign Secretary Balfour, Andrew Bonar Law, George Nicoll Barnes, labor leader, and one alternate. *United States* — President Wilson, Secretary Lansing, Henry White, Colonel House and General Bliss. *Italy* — Premier Orlando, Foreign Minister Sonnino, ex-Premier Salandra, Marquis Riggi, and Signor Stringher, Minister of Finance. *Japan* — Ex-Premier Saionji, Baron Makino, Baron Chinda, Baron Matsui, and Count Hayashi. *Brazil* — Senator Possoa, Dr. Calogeras, and Raoul Fernandez. *Belgium* — Paul Hymans, Minister of Foreign Affairs; Emile Vandervelde, and M. Vandenheuvel. *Serbia* — Ex-Premier Pashitch and M. Trumbitch; alternates, Dr. Vesnitch and M. Reber. *Greece* — Premier Venizelos and former Minister Politis. *Roumania* — Premier Bratiano and M. Mishr. *Czecho-Slovakia* — Premier Kramarz and Foreign Secretary Benes. *Poland* — M. Dmowski and General Pilsudski. *China* — Lu Cheng Hsiang, Premier, and one other. *Canada* — Premier Borden and Sir George Foster. *Australia* — Premier Hughes and one other. *South African Republic* — General Botha and General Jan C. Smuts. *India* — The Maharajah of Bikaner and Sir S. P. Sinha. *Siam* — M. Charoon, Minister to France, and one other. *New Zealand* — Premier W. F. Massey. *Portugal* — Ejas Moniz. *Hejaz*, Arabia, two representatives.

Jan. 18. The Peace Congress at Paris, the most significant in the history of the world, began its first session in the great hall of the French Ministry of Foreign Affairs.

The Treaty of Peace, closing the war, was presented to the German delegates May 7, 1919, and its terms were strenuously protested. These protests were generally ignored by the Allies and resulted in very few modifications. Germany and all the Allies except China attached their signatures on June 28, 1919. The Treaty provided as follows:

(1) *League of Nations:* composed of signatures to treaty and any other states admitted by a two-thirds vote of the Assembly; withdrawal possible by giving two years' notice and fulfilling international obligations; permanent *Secretariat* to be established at Geneva; *General Assembly* of member states, each having one vote; *Council* of representatives of the five Great Allied Powers together with representatives of four other members selected by the Assembly, each state having one vote and one representative; decision of Assembly and Council must be unanimous except in certain specified cases; mutual protection of members against external aggression; matters in dispute between members to be submitted to arbitration or inquiry with no resort to war until three months after the award; treaties between League members inconsistent with the Covenant abrogated, and subsequent treaties to be filed with the Secretariat; Council to take steps towards reduction of armaments; League to administer internationalized areas, to execute agreements for the suppression of traffic in women and children, for regulation of opium trade and for prevention of disease; League to receive periodical reports on man-dated territories. (2) *Labor Convention:* creation of annual International Labor Conference and International Labor Office; principles to guide labor legislation in all countries agreed upon. (3) *German territorial cessions:* Alsace-Lorraine to France; Prussian Moresnet, Eupen and Malmédy to Belgium with provision for plebiscite after cession in the case of Malmédy; Memel to the Allies; parts of Posen and West Prussia to Poland; Upper Silesia and part of East Prussia to Poland if the population so decided by plebiscite; Danzig internationalized; North and Central Schleswig to Denmark where the population decided so by plebiscite; Saar basin to be exploited for fifteen years by France under the political control of an international commission and with a plebiscite at the end of fifteen years to decide the ultimate fate of the district; all oversea colonies and protectorates (these were received by Great Britain, France, Japan, New Zealand, Australia, South Africa, and Belgium —generally to be administered under the mandate system); all special rights and privileges in China, Siam, Liberia, Morocco, Egypt, and Turkey. (4) *Political provisions:* recognition of the complete independence of Belgium, Poland, Czecho-Slovakia, and German Austria; treaties of Brest-Litovsk and Bucharest denounced. (5) *Military provisions:* German army to be reduced to 100,000 men and officers by Mar., 1920; General Staff to be abolished; conscription to be abolished in Germany; belt thirty miles wide, east of Rhine, to be demilitarized; Germany not to have large guns, and small guns strictly limited; Germany to limit the production and end the importation and exportation of war material; German navy limited to six battleships, six light cruisers, twelve destroyers and twelve torpedo boats; no submarines or military service to be built or retained by Germany; fortifications of Heligoland to be dismantled; no German fortifications to be built in Baltic; ex-Kaiser to be surrendered to the Allies for trial. (6) *Reparations:* Germany to reimburse all civilian damages total sum to be fixed by May 1, 1921, but Germany to make initial payment of five billion dollars; Germany to surrender most of her merchant marine, to deliver large quantities of coal to France, Belgium, and Italy, and to return, or compensate for, works of art, etc., removed from France and Belgium. *Allied occupation* of left bank of Rhine and bridgeheads at Cologne, Coblenz, and Mainz; all occupation to end within fifteen years if Germany was meeting her international obligations. *Kiel canal* to be open on equal terms to ships of all nations. *Kehl* to be placed under French control.

WORLD WAR CASUALTIES, 1914-1919

British Empire

	Deaths	Wounded

I. Total direct cost of the war.[1]

1914-1915	$ 18,500,000,000
1915-1916	33,000,000,000
1916-1917	39,000,000,000
1917-1918	90,000,000,000
Total	$180,500,000,000

(This figure has also been placed at $197,000,000,000.)

Estimated loss of life

Known deaf	9,998,000
Seriously wounded	6,295,000
Otherwise wounded	14,002,000
Missing or prisoners	5,983,000
Total causalties estimated at	36,278,000

II. Indirect cost of the war.

Capitalized value of life lost (soldiers and civilians)	$ 67,102,552,000
Property losses due to war—on land.	29,960,000,000
Property losses due to war—shipping and cargo	6,800,000,000
Loss of production	45,000,000,000
Cost of war relief	1,000,000,000
Losses to neutrals	1,750,000,000
Total	$151,612,552,000

III. Total cost of the war

(Direct and indirect) $331,612,552,000

"The figures presented in this summary are both incomprehensible and appalling, yet even these do not take into account the effect of the war on life, human vitality, economic well being, ethics, morality, or other phases of human relationships and activities which have been disorganized and injured. It is evident from the present disturbances in Europe that the real costs of the war can not be measured by the direct money outlays of the belligerents during the five years of its duration, but that the very breakdown of modern economic society might be the price exacted."

Relative Cost of The Great War

In an "Analysis of War and Post-War Finance," issued by the Bankers' Trust Company of New York and Paris, a table is published showing the relative cost of the Great War to certain of the Nations which took part therein.

The table shows in each case the gross cost per head of population and per cent. of national wealth in U. S. dollars at pre-war rates of exchange:—

Nation	Per Capita $	National Wealth Per cent
Great Britain	524.85	34.49
France	280.20	19.36
Italy	124.59	20.59
Russia	44.01	13.11
U.S.A.	176.91	8.67
Austria-Hungary	108.76	18.13
Germany	292.57	24.71

[1]Bogart, in *Carnegie Preliminary Economic Studies of the War.*

A view of Tsing-tao, overlooking the harbor from the powerful wireless station. Tsing-tao was wrested from China by Germany in 1897. Captured by the Anglo-Japanese forces on Nov. 10, 1914, it became nominally Japanese, but formed an important subject for discussion at the peace conference in which China had the keenest interest.

GREAT AMERICAN AND FOREIGN BATTLES.

This table includes those battles of decisive or far-reaching importance upon the destinies of the contestants. The dates are according to the Old Style, or Julian, calendar down to 1582; after that date, according to the New Style, or Gregorian, calendar. The victors in the various battles are printed in **bold-face** type. Details of minor American battles will be found in connection with the Outline Tables of American History. †Naval battles; *Indecisive results.

Name of Battle; Approximate Location; Date	Contesting Nations or Parties	Results and Marked Features of the Contest
Abensberg (*ä'bens-berg*), Bavaria, April 20, 1809	**French and Bavarians** vs. Austrians	About 90,000 engaged on each side.
Aboukir (*ä-bōō-kēr'*), **Battle of the Nile,** Egypt, August 1, 1798	**English** vs. French	Nelson cut off Napoleon's return to Europe.
Aboukir, Egypt, July 25, 1799	**French** vs. Turks	Two-thirds of Turkish troops killed.
†**Abydos** (*ä-bī'dos*), Hellespont, B. C. 411	**Athenians** vs. Peloponnesians	
Acragas (*ak'ra-gas*), **Siege of,** Sicily, B. C. 406	**Carthaginians** vs. Greeks	The citizens evacuated the fortress.
Acre (*ä'ker* or *ä'ker*), **Siege of,** Syria, 1189-1191	**Christians** vs. Saracens	Richard the Lion Hearted won renown by this siege.
Acre, Siege of, Syria, March 17, 1799	**Turks** vs. French	
†**Actium** (*ak'shi-um*), Greece, September 2, B. C. 31	**Augustus** vs. Antony	At the critical moment Antony and Cleopatra sail away.
Adowa (*ä'dō-wä*), Northeast Africa, March 1, 1896	**Ethiopians** vs. Italians	Italians routed with enormous loss.
Adrianople (*ad-ri-an-ō'pl*), Thrace, July 3, 323	**Constantine** vs. Licinius	Constantine gained empire.
Adrianople, Thrace, 378	**Visigoths** vs. Romans	Emperor Valens defeated and slain.
Adwalton (*ad'wal-ton*) **Moor,** England, January 30, 1643	**Royalists** vs. Parliamentarians	
Ægadian Islands (*ē-gā'di-an*), Sicily, B. C. 241	**Romans** vs. Carthaginians	This victory put an end to the first Punic war.
†**Ægospotami** (*ē-gos-pot'a-mī*), Thrace, B. C. 405	**Spartans** vs. Athenians	Virtually ended Peloponnesian war.
Aghrim (*ō'grim*), Ireland, July 12, 1691	**William III.** vs. James II	Irish savagely slaughtered.
Agincourt (*ä-zhan-kōōr*; E. *aj'in-kōrt*), France, October 25, 1415	**English** vs. French	Great victory for Henry V.
Agnadello (*ä-nyä-del'lō*), Italy, May 14, 1509	**French** vs. Venetians	One of the most disastrous battles in the history of Venice.
Agrigentum (*ag-ri-jen'tum*), **Siege of,** Sicily, B. C. 262	**Romans** vs. Carthaginians	
Alamo (*ä'lä-mō*), **Storming of the,** Texas, U. S., February 22, 1836	**Mexicans** vs. Texans	Survivors put to the sword.
Albuera (*äl-bwā'rä*), Spain, May 16, 1811	**British** vs. French	Heavy losses on both sides.
Aleppo (*ä-lep'ō*), Syria, 638	**Moslems** vs. Syrians	Last serious resistance in Syria to the invading Moslems.
Alexandria (*ä-leks-än'dri-ä*), **Siege of,** Egypt, 638	**Moslems** vs. Egyptians	Left Moslems masters of Egypt.
Alexandria, Bombardment of, Egypt, July 11-12, 1882	**English** vs. Arabi Pasha	Forts totally destroyed. English occupy Egypt.
Algiers (*al-jērz'*), **Bombardment of,** Algeria, 1816	**English and Dutch** vs. Dey of Algeria	Dey agreed to total abolition of Christian slavery in his dominion.
Allia (*al'i-ä*), Italy, B. C. 390	**Brennus and his Gauls** vs. Romans	Rome left defenseless.
Alma (*äl'ma*), Crimea, September 20, 1854	**English and French** vs. Russians	British carried heights at the point of the bayonet.
Almansa (*äl-män'sä*), Spain, April 25, 1707	**French** vs. British and Portuguese	Spain lost to the allies.
Amphipolis (*am-fip'ō-lis*), **Siege of,** Thrace, B. C. 422	**Spartans** vs. Athenians	Both Brasidas and Cleon fell.
Anaquito (*ä-nä-kē'tō*), Peru, 1546	**Pizarro** vs. Viceroy Menez	Government of Peru fell into Pizarro's hands.
Angora (*an-gō'rä*), Asia Minor, 1402	**Tartars** vs. Turks	Tamerlane said to have had eight hundred thousand men.
Antietam (*an-tē'tam*), Maryland, U. S., September 17, 1862	***Confederates** vs. U. S	Heavy losses on both sides. Lee's army greatly outnumbered.
Antioch, Siege of, Syria, 1097-1098	**Crusaders** vs. Saracens	Defenders massacred.
Antwerp (*ant'wirp*), Belgium, 1576	**Spaniards** vs. Walloons	Massacre of inhabitants known as the "Spanish Fury."

Mohacs (*mō'hăch*), Hungary, August 29, 1526	**Turks** vs. Hungarians	"Never was a single battle so disastrous to a people."
Mollwitz (*mōl'vitz*), Germany, April 10, 1741	**Prussians** vs. Austrians	Frederick's victory forces Europe to recognize in Prussia a new power.
Montaperti (*mon-tä-per'tē*), Italy, September 4, 1260	**Florentine Ghibellines, Siennese** vs. Guelphs of Florence.	Secured the triumph of the Ghibellines over all Tuscany.
Monterey (*mon-te-rā'*), Mexico, September 21-23, 1846	**Americans** vs. Mexicans	Followed by the occupation of the whole of northern Mexico.
Montreal (*mont-ri-ōl'*), Canada, September 8, 1760	**British** vs. French	Completes the British conquest of Canada from France.
Mook (*mōk*), Holland, April 14, 1574.	**Spaniards** vs. Dutch	The battle terminated in a horrible butchery of the patriot army.
Morgarten (*mōr'gär-ten*), Switzerland, November 15, 1315	**Swiss** vs. Austrians	The first battle fought for Swiss independence.
Mortimer's (*môr'ti-mer*) **Cross,** England, February 2, 1461	**Yorkists** vs. Lancastrians	The Yorkist prince advanced to London and was proclaimed king as Edward IV.
Mukden (*mōōk-den'*), Manchuria, February 24 to March 10, 1905	**Japanese** vs. Russians	Release of Japanese from before Port Arthur enables Oyama to crush Kuropatkin.
Mühlberg (*mül'berg*), Saxony, April 24, 1547	**Charles V. and Prince Maurice** vs. Saxony and Hesse	Maurice in 1552 retrieves his treason to Protestantism by driving Charles V. from Germany.
Muhldorf (*mül'dorf*), Bavaria, September 28, 1322	**Louis of Bavaria** vs. Frederick of Austria	The disputed imperial election, over which this battle was fought, began a new struggle between empire and papacy.
Munda (*mun'dă*), Spain, B. C. 45	**Julius Cæsar** vs. Pompeians	Cæsar's last battle; it put an end to armed resistance.
Muret (*mū-rā'*), France, September 12, 1213	**Crusaders** vs. Albigenses and Aragonese	Practically ends the Albigensian crusade; Toulousean territories pass ultimately to the French crown.
Mycale (*mik'ä-lē*), Asia Minor, B. C. 479	**Greeks** vs. Persians	This battle and that of Platæa end the Persian wars against Greece.
†**Mylæ** (*mi'lē*), Sicily, B. C. 260	**Romans** vs. Carthaginians	First naval victory of Romans; due to boarding bridges.
Näfels (*nā'fels*), Switzerland, April 9, 1388	**Swiss** vs. Austrians	Hapsburgs renounced all feudal claims over the Swiss cantons (1389).
Nancy (*năn-sē'*), Lorraine, January 5, 1477	**Swiss** vs. Charles the Bold	Charles was slain, leaving his motley territories a prey to neighboring princes.
Narva (*när'vä*), Russia, November 30, 1700	**Swedes** vs. Russians	Charles XII. won a brilliant victory over the much larger army of Peter the Great.
Naseby (*nāz'bi*), England, June 14, 1645	**Parliamentarians** vs. Royalists.	Complete defeat of Charles I., followed by the general ruin of his cause.
†**Naupactus** (*nô-pak'tus*), Gulf of Corinth, B. C. 429	**Athenians** vs. Peloponnesians	Victory wrested from defeat by the genius of Phormio, the Athenian commander.
†**Navarino** (*nä-vä-rē'nō*), Greece, October 20, 1827	**English, French and Russians** vs. Turks	Destruction of Turkish naval power; Ibrahim retreats from Morea.
Navas de Tolosa (*nä'väs dä-tō-lō'sä*), Spain, July 16, 1212	**Spaniards** vs. Moors	Secured forever the preponderance of Christianity in Spain.
Neerwinden (*nār'vin-den*), Belgium, July 24, 1693	**French** vs. English	The French won a brilliant but barren victory over William III.
Neville's (*nev'ilz*) **Cross,** England, October 17, 1346	**English** vs. Scots	Scots crushed at home, while Edward III. was winning Crécy.
New Orleans (*ôr'li-anz*), Louisiana, U. S. A., January 8, 1815	**Americans** vs. British	Owing to slowness of communication, Jackson fought this battle after peace had been made.
Nicæa (*nī-sē'ä*), **Siege of,** Asia Minor, 1097	**Crusaders** vs. Turks	First conquest of crusaders in the East.
Nicopolis (*ni-kop'ō-lis*), Asia Minor, B. C. 66	**Pompey** vs. Mithradates	Mithridates' last fight against the legions of Rome.
Nördlingen (*nerd'ling-en*), Bavaria, September 6, 1634	**Catholics and Imperialists** vs. Swedes and German Protestants	One of the most bloody and decisive battles of the war; followed by the peace of Prague.
Northampton (*nôrth-amp'tn*), England, July 10, 1460	**Yorkists** vs. Lancastrians	Capture of Henry VI.; flight of Queen Margaret and her son to Scotland.
Numantia (*nū-man'shi-ä*), **Siege of,** Spain, B. C. 142-133	**Romans** vs. Celtiberian tribes	City razed by Scipio Æmilianus and its inhabitants sold as slaves.
Obligado (*ôb-lē-gä'thō*), **Bombardment of,** Argentina, Nov. 28,1845.	**British and French** vs. Argentines	Over the opening the waters of the Parana to the shipping of all nations.
Olmutz (*ol'müts*), **Siege of,** Moravia, May 27 to July 1, 1758	**Austrians** vs. Prussians	General Daun forced Frederick the Great to raise the siege and retire.
Orleans (*or-lä-än'*; Eng. *ôr'li-anz*), **Siege of,** France, October 13, 1428, to May 8, 1429	**French** vs. English	Joan of Arc saves France by driving back English and crowns Charles VII. at Rheims.
Ostend (*ost-end'*), **Siege of,** Belgium, July, 1601 to September, 1604	**Spaniards** vs. Dutch garrison and inhabitants	Scarcely a house in the town left standing; Spaniards lost 70,000.
Ostrolenka (*os-tro-leng'kä*), Poland, May 26, 1831	**Russians** vs. Poles	Poland becomes a province of the Russian Empire (1832).
Otterburn (*ot'er-bûrn*), England, August 10, 1388	**Scots** vs. English	The ballad of Chevy Chase deals with this battle.
Otumba (*ō-tōm'bä*), Mexico, July 8, 1520	**Cortez** vs. Aztecs	Two hundred Spanish horsemen rout an immense army and make good their retreat.
Oudenarde (*ou-de-närd'de*), Belgium, July 11, 1708	**English and Imperialists** vs. French	One of the great victories of Marlborough and Prince Eugene over Louis XIV.
Palmyra (*pal-mī'rä*), **Siege of,** Syria, 272-273	**Romans** vs. Queen Zenobia	Palmyra destroyed and Zenobia taken captive to Rome.

GREAT AMERICAN AND FOREIGN BATTLES—Continued

Name of Battle, Approximate Location, Date	Contesting Nations or Parties	Results and Marked Features of the Contest
Palo Alto (*pä'lō-äl'tō*), Mexico, May 8, 1846	**Americans** vs. Mexicans	Mexicans completely routed at small cost to the victors.
Panormus (*pa-nôr'mus*), Sicily, B.C. 251	**Romans** vs. Carthaginians	Brilliant victory restored confidence to Romans; demonstrated value of elephants in warfare.
Paris (*par'is*), **Siege of,** France, Sept. 19, 1870 to Jan. 28, 1871	**Prussians** vs. French	City reduced to desperate conditions through bombardment, famine and disease.
Pavia (*pä-vē'ä*), Italy, 1525	**Emperor Charles V.** vs. Francis I. of France	The capture of Francis was followed by the peace of Madrid, which, however, was soon repudiated.
Pharsalus (*fär-sā'lus*), Greece, B. C. 48	**Cæsar** vs. Pompey	The West and the new monarchy completely triumphed over the East and the old republic.
Philippi (*fi-lip'ī*), Thrace, B. C. 42.	**Antony and Octavius** vs. Brutus and Cassius	Cassius and Brutus committed suicide following their defeat.
Pinkie (*ping'ki*), Scotland, September 10, 1547	**English** vs. Scots	Scots thrown into the arms of France and the little queen, Mary, married to the dauphin.
Plassey (*plās'ē*), India, June 23, 1757	**English** vs. Bengalese	Established English control in Bengal and ultimately in all India.
Platæa (*pla-tē'ä*), Greece, B. C. 479.	**Greeks** vs. Persians	Won by the discipline and prowess of the Spartan hoplites.
Plevna (*plev'nä*), **Siege of,** Bulgaria, July 16 to December 10, 1877	**Russians** vs. Turks	Brilliant defense by Osman Pasha, who surrendered only after four desperate battles.
Poitiers (*pwä-tyā'*), France, September 19, 1356	**English** vs. French	Brilliant victory by the Black Prince over five times his numbers.
Pollentia (*po-len'shi-ä*), Italy, April 6, 402	**Romans** vs. Visigoths	Alaric, attacked by Stilicho on Easter Sunday, was driven out of Italy.
Pondicherry (*pon-di-sher'i*). **Siege of,** India, Aug., 1760 to Jan., 18, 1761.	**English** vs. French	Destroyed French power in India.

†**Portland,** English Channel, February 18-20, 1653	**English** vs. Dutch	This battle completely restored to England the lordship of the seas.
Potidæa (*pot-i-dē'ä*), **Siege of,** Thrace, B. C. 432, September 430.	**Athenians** vs. Potidæans and Corinthians	Inhabitants and foreign soldiers were allowed to leave the city, which Athens then colonized.
Prague (*prāg*), (**White Hill**), Bohemia, November 8, 1620	**Catholic League** vs. Frederick V. and Bohemian rebels	Frederick proved but a "Winter King" of Bohemia.
Preston (*pres'tun*), England, August 17-19, 1648	**Cromwellians** vs. Scottish Royalists	This second civil war determined the army to put Charles I. to death.
Pultava (*pōl'tä-vä*), Russia, July 8, 1709	**Russians** vs. Swedes	Russia takes the place of Sweden as the leading power of the North.
Pydna (*pid'nä*), Macedonia, B.C.168.	**Romans** vs. Macedonians	Brilliant triumphs of Paulus Æmilius over the phalanxes of King Perseus.
Pyramids, Egypt, July 21, 1798	**French** vs. Mamelukes	The crowning victory of Napoleon in Egypt.
Pyrenees (*pir'a-nēz*), **Battles of,** Spain, July 25 to August 1, 1813	**British and Spaniards** vs. French	Followed by the fall of San Sebastian and Pampeluna, and expulsion of French from Spain.
Quatre Bras (*kätr-brä'*), Belgium, June 16, 1815	**British and Allies** vs. French	The allied success here was rendered fruitless by the Prussian reverse at Ligny.
Quebec (*kwē-bek'*; locally often *ki-bek'*), **Siege of,** Canada, June to September 18, 1759	**British** vs. French	Wolfe was slain and Montcalm mortally wounded in the battle of the Plains of Abraham (September 13).
†**Quiberon** (*kē-brôn*) **Bay,** France, November 20, 1759	**British** vs. French	Hawke, with a loss of forty men, captured, burned, or drove on shore most of the French vessels.
Ramillies (*rä-mē-yē'*), Belgium, May 23, 1706	**English and Allies** vs. French	Followed by French evacuation of the chief towns of the Netherlands.
Rhe (*rā*), **Siege of,** France, July 20 to November 8, 1627	**French** vs. English	An attempt of Buckingham to prevent the reduction of the Huguenot stronghold of La Rochelle.
Rhodes (*rōdz*), or **Rhodos** (*rō'dos*), **Siege of,** Mediterranean, July 28-December 26, 1522	**Turks** vs. Knights of Rhodes	Following the loss of Rhodes the Knights (Hospitallers) retired to Malta.
Rieti (*ri-ä'tē*), Italy, March 7, 1821	**Austrians** vs. Neopolitan rebels	The defeat of General Pepe enabled Austria to restore the absolute monarchy.
Rivoli (*rē'vō-lē*), Italy, January 14-15, 1797	**French** vs. Austrians	Napoleon's victory, followed by surrender of Mantua, completed the conquest of Lombardy.
Rocroi (*rō-krwä'*), France, May 19 1643	**French** vs. Spaniards	This victory, won by Condé, made France the first military power of Europe.
Rome, Sack of, Italy, B. C. 390	**Gauls**	Following the battle of the Allia, the Gauls plundered and destroyed city.
Rome, Sieges of, Italy, 408, 409, 410.	**Visigoths** vs. Romans	Following the third siege, Alaric sacked city.
Rome, Sack of, Italy, 455	**Vandals**	For fourteen days Genseric's Vandals plundered Rome.
Rome, Storm of, Italy, May 6, 1527.	**Mutinous Army of Charles V.** vs. Papal troops	Marks the end of the artistic, pleasure-loving Rome of the Renaissance.
Rome, Siege of, Italy, June 4 to July 3, 1849	**French and Papalists** vs. Roman Republicans	The republic, founded by Mazzini, overthrown and Pope Pius IX. restored.
Roncesvalles (*rōn-thes-väl'yes*), Spain, 778	**Basques** vs. Franks	Death of Charlemagne's paladin, Roland (Chanson de Roland).

GREAT AMERICAN AND FOREIGN BATTLES—Continued

Name of Battle, Approximate Location, Date	Contesting Nations or Parties	Results and Marked Features of the Contest
Roosebek (*rōs'bek*), Flanders, November 27, 1382	**French** vs. Flemings	A great triumph for the nobles against the cities.
Rossbach (*ros'bak*), Saxony, November 5, 1757	**Prussians** vs. French and Austrians	Makes Frederick the Great a national hero of Germany.
Rouen (*rōō-ān'*), **Siege of,** France, June, 1418 to Jan, 1419	**English** vs. French	Because of its desperate resistance, Henry V. granted the city honorable capitulation.
Sacriportis (*sak-ri-pōr'tus*), Italy, B. C. 82	**Optimates** vs. Democrates	Followed by Sulla's reign of terror.
Saguntum (*sa-gun'tum*), **Siege of,** Spain, B. C. 219	**Carthaginians** vs. Inhabitants.	Capture of this city by Hannibal the chief cause of the second Punic war.
St. Albans (*sānt ôl'banz*), England, May 22, 1455	**Yorkists** vs. Lancastrians	The first battle of the wars of the Roses; Yorkists defeated here in a second battle (1460).
Salamanca (*sal-à-mang'kà*), Spain, July 22, 1812	**British** vs. French	This rout of the French lost them all southern Spain.
†**Salamis** (*sal'à-mis*), Greece, September 20, B. C. 480	**Greeks** vs. Persians	Themistocles' great victory followed by Xerxes' withdrawal to Asia.
San Jacinto (*san jà-sin'tō*), Texas, U. S. A., April 2, 1836	**Texan Rebels** vs. Mexicans	Santa Anna captured by General Houston.
†**Santiago** (*sān-tē-ā'gō*), Cuba, July 3, 1898	**Americans** vs. Spaniards	Fleet of Admiral Cervera totally destroyed.
Saragossa (*sā-rā-gos'à*), **Siege of,** Spain, Dec., 1808 to Feb. 21, 1809.	**British** vs. French	An important success which broke the spell of French invincibility.
Saratoga (*sar-a-tō'gà*), New York, U. S. A., October 7, 1777	**Americans** vs. British	Followed (October 17) by the surrender of Burgoyne, which was the turning point of the war.
†**Sea of Japan,** Sea of Japan, May 27-29, 1905	**Japanese** vs. Russians	Russia's naval power destroyed.
Sebastopol (*se-bàs'tō-pōl*), **Siege of,** Crimea, September 26, 1854, to September 9, 1855	**French, British and Sardinians** vs. Russians	Brought to a close the active operations of Crimean war.
Sedan (*sē-dan'*), France, September 1, 1870	**Prussians** vs. French	Followed by the surrender of Napoleon III. with an army of 84,000 men.
Shipka (*ship'kà*) **Pass,** Bulgaria, August 20-23, 1877	**Russians** vs. Turks	Russians hold this strategic position against blindfold violence of the Turks.
Sempach (*zem'pāĸ*), Switzerland July 9, 1386	**Swiss** vs. Austrians	Celebrated for the heroic devotion of Arnold von Winkelried.
Sentinum (*sen-tī'num*), Italy, B. C. 295	**Romans** vs. Samnites and Gauls.	Failure of the coalition to crush Rome from the north.
Seringapatam (*ser-ing'ga-pa-tam'*), **Siege of,** India, April 24, to May 4, 1799	**British** vs. Tippoo Sahib	With Bonaparte's failure in Egypt, this battle foils French designs on India.
Shiloh (*shī'lō*), Tennessee, U. S. A., April 6 and 7, 1862	**Federals** vs. Confederates	Defeated in the first day's fighting, Grant turned the tables the next day.
Shrewsbury (*shrōōz'ber-i*), England, July 21, 1403	**Henry IV.** vs. Percies	Hotspur defeated and slain.
Silistria (*si-lis'tri-à*), **Siege of,** Bulgaria, March 28 to June 22, 1854	**Turks** vs. Russians	A brilliant defense conducted by the Turks under three English officers.
†**Sinope** (*si-nō'pē*), Black Sea, November 30, 1853	**Russians** vs. Turks	Turkish fleet destroyed and crews massacred.
Slivnitza (*slēv-nēt'sà*), Bulgaria, November 17, 18, 19, 1885	**Bulgarians** vs. Servians	The decisive action in the Servo-Bulgarian war.
†**Sluys** (*slois*), Flanders, June 22, 1340	**English** vs. French	Gave English control of the sea for thirty years, enabling them to land troops in France at will.
Smolensk (*smol-yensk'*), Russia, August 17-18, 1812	**French** vs. Russians	First stand of the retreating Russians before Napoleon's advance on Moscow.
Soissons (*swà-sôn'*), France, 486	**Franks** vs. Romans under Syagrius	The first military exploit of Clovis.
Solferino (*sōl-fā-rē'nō*), Italy, June 24, 1859	**French and Piedmontese** vs. Austrians	The horrors of this battle and Prussia's threatening attitude caused Napoleon III. to make peace.
Somme (*som*), a river in northern France, July 1 to Sept. 15, 1916	*__Germans__ vs. Allies	During this period the Germans were enduring terrific attacks from the Allies, but lost little ground.
†**Southwold** (*south'wōld*) **Bay,** North Sea, May 28, 1672	**English and French** vs. Dutch.	A victory gained by the duke of York over De Ruyter's superior numbers.
Sphacteria (*sfak-tē'ri-à*), Greece, B. C. 425	**Athenians** vs. Spartans	To the amazement of the Greek world, 292 Spartan hoplites surrendered.
Spicheren (*spich'er-en*), Palatinate, August 6, 1870	**Prussians** vs. French	Reveals great superiority of Prussians from the outset of the war.
Stamford (*stam'ferd*) **Bridge,** England, September 25, 1066	**English** vs. Danes	This diversion of Harold to the North left William to land in England undisturbed.
Standard, Battle of the (or Northallerton), England, August 22, 1138	**English** vs. Scots	For 200 years saved Yorkshire from Scottish invasion.
Steenkerke (*stān'kerk'e*), Netherlands, July 24, 1692	**French** vs. English and Allies	Five English regiments utterly cut to pieces.
Stirling, Scotland, 1297	**Scots** vs. English	Before the end of the year all Scotland threw off the English yoke.
Stralsund (*shtrāl'zōōnt*), **Siege of,** Germany, March, August 3, 1628.	**Protestant Inhabitants** vs. Catholic Imperialists	Wallenstein fails to secure this important Baltic port.
Syracuse (*sir'a-kūs*), **Siege of,** Sicily, B. C. 415-413	**Syracusans and Spartans** vs. Athenians	The weakening of Athenian resources in this siege was the final cause of their failure in the Peloponnesian war.

GREAT AMERICAN AND FOREIGN BATTLES—Continued

Name of Battle, Approximate Location, Date	Contesting Nations or Parties	Results and Marked Features of the Contest
Syracuse, Siege of, Sicily, B. C. 387.	**Greeks** vs. Carthaginians	The Syracusan tyrant, Dionysius, connives at the escape of the Carthaginian Himilco.
Syracuse, Siege of, Sicily, B. C. 214-212	**Romans** vs. Carthaginians and Syracusans	Syracuse captured and plundered by the Romans.
Talavera (*tä-lä-vä'rä*), Spain, July 28, 1809	**British and Spaniards** vs. French	After this first great pitched battle in the Peninsular campaign Wellesley became commander-in-chief of all the English troops.
Tanagra (*tan'ä-grä*), Greece, B. C. 457	**Spartans and Bœotians** vs. Athenians	The Spartans failing to follow up their victory, Athens conquered Bœotia the following year.
Tarentum (*tä-ren'tum*), **Siege of,** Italy, B. C. 274-272	**Romans** vs. Tarentines and Epirots	Tarentum, deprived of her army, her ships and her walls, retained the right of local self-government.
Tauss (*tous*), Bohemia, August 14, 1431	**Bohemian Hussites** vs. Catholic Imperialists	At Procop's approach the Imperialists fled in confusion; this was the last effort to crush the Hussites by force of arms.
Telamon (*tel'ä-mon*), Italy, B.C. 225.	**Romans** vs. Gauls	The annihilation of the Gallic army was followed by the Roman invasion and conquest of Cisalpine Gaul.
Tel-el-Kebir (*tel'el-kä-bēr'*), Egypt, September 13, 1882	**British** vs. Egyptian Rebels	Arabi Pasha's army completely broken up; the British entered Cairo the next day.
Temesvar (*tem'esh-vär*), Hungary, August 9, 1849	**Austrians** vs. Hungarians	The last stand made by the Hungarians in the war; their army was totally routed and dispersed.
Testry (*tes-trē'*), France, 687	**Austrasians** vs. Neustrians	Pippin of Heristal, mayor of the palace, unites the Frankish territories under one rule.
Tewkesbury (*tūks'ber-i*), England, May 4, 1471	**Yorkists** vs. Lancastrians	Ends armed opposition to Edward IV.; Margaret of Anjou was captured and her son slain.
Texel (*tek'sel*), North Sea, June 2, 3, 1653	**British** vs. Dutch	The command of the sea fell into the hands of the English fleet.
Thapsus (*thap'sus*), North Africa, February 6, B. C. 46	**Cæsar** vs. Followers of Pompey	The battle of Thapsus was the death-knell of the Pompeian cause.
Thermopylæ (*ther-mop'i-lē*), Greece, B. C. 480	**Persians** vs. Spartans and Thespians	Leonidas, with 300 Spartans and 700 Thespians, defended the pass to the last man against overwhelming forces.
Tiberias (*tī-bē'ri-ăs*), Palestine, 1187.	**Saracens** vs. Crusaders	Followed by the conquest of Jerusalem by Saladin, which led to the third crusade.
Ticinus (*ti-sī'nus*), Italy, B. C. 218.	**Carthaginians** vs. Romans	Hannibal's success brought in numerous adhesions from Gallic tribes; followed by the battle on the Trebia.
Ticonderoga (*tī-kon-de-rō'gä*), New York, U. S. A., July 8, 1758	**French** vs. British and Americans	British and Americans displayed in vain prodigies of valor in the rush on Montcalm's almost impregnable position.
Tigranocerta (*tig-rā-no-cer'tä*), Armenia, October 6, B. C. 69	**Romans** vs. Armenians	Lucullus cut to pieces the huge army of Tigranes and secured immense booty.
Tinchebrai (*tansh-brā*), France, 1106.	**English** vs. Normans	Henry I. defeated and captured his brother Robert and annexed Normandy to the crown of England.
Tolbiac (*tol-bī'ak*), Germany, 496	**Franks** vs. Alemanni	Clovis wins lands of the Alemanni; he and his followers become Roman Christians in fulfillment of a vow taken on the battlefield.
Torgau (*tôr'gou*), Saxony, November 3, 1760	**Prussians** vs. Austrians	The last pitched battle of the Seven Years' war, in which the Austrians are said to have lost 20,000 men.
Torres Vedras (*tor'resh vā'drāsh*), **Lines of,** Portugal, October 12, 1810 to March 5, 1811	**British and Portuguese** vs. French	Wellington's defense permanently arrested Napoleon's march of conquest and was thus the turning point of the Peninsular campaign.
Toulon (*tōō-lôn'*), **Siege of,** France, Sept. 18 to Dec. 17, 1793	**French** vs. Garrison of British, Spaniards, Italians and French Royalists	This siege is memorable as the first important appearance of Napoleon, who commanded the artillery.
Tours (*tōr*), France, 732	**Franks** vs. Saracens	Here Charles Martel saved western Christendom from the Moslem invader.
Towton (*tou'ton*), England, March 28 and 29, 1461	**Yorkists** vs. Lancastrians	This battle, the most obstinate and bloody of the war, secured Edward IV. in his possession of the crown.
†**Trafalgar** (*traf-al-gär*), Spain, October 21, 1805	**British** vs. French	Nelson's last and greatest victory destroyed all possibility of Napoleon's invading England.
Trebia (*trē'bi-ä*), Italy, December, B. C. 218	**Carthaginians** vs. Romans	By this splendid victory Hannibal justified his march into Italy; the way into Etruria was now open to him.
Tunis (*tū'nis*), **Siege of,** North Africa, 1270	**Moslems** vs. French Crusaders	This crusade, in which Louis IX. lost his life, was the last.
Turin (*tū'rin*), Italy, September 7, 1706	**Prince Eugene** vs. French	The French were permanently excluded from Italy.
Tyre (*tīr*), **Siege of,** Phenicia, January to August, B. C. 332	**Macedonians** vs. Tyrians	The greatest of Alexander's triumphs; Alexandria in Egypt takes the place of Tyre as a commercial metropolis.
†**Ushant** (*ush'ant*), North Atlantic, June 1. 1794	**British** vs. French	A brilliant victory won by Lord Howe.

GREAT AMERICAN AND FOREIGN BATTLES—Concluded

Name of Battle, Approximate Location, Date	Contesting Nations or Parties	Results and Marked Features of the Contest
Valmy (*vál-mē'*), France, September 2, 1792	**French** vs. Prussians	Goethe said that from Valmy dates a new era. It showed that revolutionary France would and could resist Europe.
Varna (*vär'nä*), Bulgaria, November 10, 1444	**Turks** vs. Hungarians	King Ladilas lost his life and his army was scattered to the winds.
Vercellae (*ver-sel'ē*), Italy, July 30, B. C. 101	**Romans** vs. Cimbri	Marius and Catulus utterly destroyed the vast barbarian horde which had been threatening Italy with invasion.
Verdun (*ver-dun'*), **Siege of,** France, from February, 1916, on	*Germans vs. French	The powerful attacks of the Germans for almost a year against the fortress of Verdun were without success.
Vicksburg, Siege of, Mississippi, U. S. A., May 19 to July 4, 1863	**Federals** vs. Confederates	Grant's success at Vicksburg, together with the battle of Gettysburg, were the turning points of the war.
Vienna (*vē-en'ȧ*), **Siege of,** Austria, July 14 to September 12, 1683	**Austrians** vs. Turks	The besieged were reduced to the last extremity when Sobieski intervened and put the invading Turks to flight.
†**Vigo** (*vē'gō*) **Bay,** Spain, October 12, 1702	**English and Dutch** vs. French and Spaniards	The destruction of the Spanish galleons and the protecting **French** fleet gave a blow to the finances and prestige of the two crowns.
Vimiero (*vē-mā'rō*), Spain, August 21, 1813	**British** vs. French	Wellesley inflicted a signal defeat on the French, but his senior officer made no use of the victory.
Vittoria (*vē-tō'rē-ä*), Spain, June 21, 1813	**British** vs. French	This, the crowning victory of Wellington's peninsular campaign, won Spain from Napoleon.
Wagram (*vä'gräm*), Austria, July 6, 1809	**French** vs. Austrians	One of the most terrible and least decisive battles of all time.
Wakefield, England, December 30, 1460	**Lancastrians** vs. Yorkists	Queen Margaret's army completely defeated that of the duke of York, who was slain on the battlefield.
Wandewash (*wän-de-wäsh'*), India, January 22, 1760	**British** vs. French	Coote's victory was the death-blow to French power in India.
Warsaw (*wôr'sô*), **Siege of,** Poland, August 19 to September 7, 1831	**Russians** vs. Poles	The fall of Warsaw ends the Polish insurrection and Poland becomes a province of the Russian empire.
Waterloo (*wô-ter-lōō'*), Belgium, June 18, 1815	**British and Prussians** vs. French	The final overthrow of Napoleon by Wellington and Blücher. Napoleon was transported to St. Helena, where he died in 1821.
Wavre (*vä'vr*), Belgium, June 18, 1815	**French** vs. Prussians	Grouchy's victory was useless, while he might have saved the day for Napoleon had he arrived at Waterloo when expected.
Wei-hai-wei (*wā'hī'wā'*), China, January 30 to February 12, 1894	**Japanese** vs. Chinese	The Chinese admiral gave up the remnant of his fleet and killed himself; followed by negotiations for peace.
Worcester (*wŏŏs'ter*), England, September 3, 1651	**Cromwellians** vs. Scottish Royalists	Followed by the submission of Scotland and Charles II.'s adventurous escape to France.
Wörth (*virt*), Bavaria, August 6, 1870	**Prussians** vs. French	A bloody contest and a decisive victory, followed by the retreat of the French.
Xeres (*hä-räs'*), Spain, July 19, 711	**Moors** vs. Visigoths	Without having to fight any second battle, the Moors under Tarik mastered Spain.
Yalu (*yä'lōō*) **River,** Manchuria, September 17, 1894	**Japanese** vs. Chinese	This action conferred upon the Japanese the full command of the sea and greatly aided the land power.
Yorktown, Siege of, Virginia, U. S. A., Sept. 30 to Oct. 19, 1781	**Americans** vs. British	The surrender of Cornwallis at Yorktown practically brought to an end the war of the American Revolution.
Ypres (*ē'pr*), Belgium, October 21-31, 1914 and November 10-12, 1914	**Allies** vs. Germans	A series of the most desperate struggles of the war. The German attempt to break through to Calais, France, failed.
Zama (*zā'mä*), North Africa, B. C. 202	**Romans** vs. Carthaginians	Scipio defeated Hannibal and annihilated his army, thus ending the second Punic war.
Zorndorf (*tsôrn'dorf*), Prussia, Aug. 25, 1758	**Prussians** vs. Russians	A desperate and bloody struggle, after which the Russians retired into Poland.
Zurawno (*tsu-raw'no*), **Siege of,** Austria, 1676	**Poles** vs. Turks	John Sobieski made an heroic defense against numbers and won an honorable peace.

HOW TO SPEAK CORRECT ENGLISH

Correctly spoken English is quite as important as correctly written English. Errors in pronunciation, modulation and general expression are of frequent occurrence, and it sometimes seems that the erroneous utterance of whole classes of words league the tongue and ear against their right use. An improved standard of pronunciation, therefore, is the safest bulwark against a permanent deterioration of our language, as well as a positive influence in advancing individual culture of speech.

Five Fundamental Rules.—The essential steps toward securing the unconscious ability to speak correctly may be set down as follows:

1. Early instruction in the elementary sounds, and their mode of representation.

2. To observe the current usage of the best speakers with regard to such words as are most liable to be mispronounced.

3. To note the standard of pronunciation and expression of the best dramatic theaters.

4. By forming the habit of frequent reference to the dictionary and learning to interpret at sight the authorized pronunciation.

5. Ample practice in the reading and application of the leading principles of pronunciation that give words their true spoken values.

The Organ of Speech.—The mouth is the organ of speech; and the manner of production of the various sounds is of the first importance in the cultivation of correct pronunciation.

The sound uttered depends upon the form of the mouth. Change the form and you change the sound. Each particular sound is produced from a particular position.

Not more than one sound can be produced from one position of the mouth.

To produce a different sound you must change the position.

Each sound should be clear and precise. There should be no slurring.

The muscles must be under perfect control so that the mouth (lips and tongue included) may readily assume the position necessary for the emission of the required sound.

The proper use of the lips is the great factor in fluent speech.

It is from inability to use or negligence in using the muscles of the organ of speech that Americans are such indifferent linguists and frequently even incapable of distinct utterance of their own language.

The manner of production of the various sounds is of the first importance in the cultivation of correct pronunciation.

Vowels.—Pronounce the following words: moor; meer; merry; marry; mar; more. The whole compass of the mouth is brought into exercise by these words.

The first sound is produced from the lips. The second comes from a point just inside the mouth. The third sound point is farther back still. The last vowel is uttered from the throat.

If the sound *a* (long) as in bare, fair, is included, we have a scale of seven sounds produced by a gradual opening of the mouth, the sound point receding note by note from the front of the lips to the back of the throat, thus: moor, meer, merry, Mary, marry, mar, more.

In cultured English centers and in some parts of New England, the long sound of *ä*, No. 4, appears in such words as dance, France, glass, castle, cast, past, grasp, grant, etc.

In pronouncing the four words—meer merry, marry, mar—the mouth is gradually opened. The four separate "sound points" may be clearly recognized.

Repeat slowly:

1	2	3	4
meer	merry	marry	mar
mee	mé	mâ	mä
ee	é	â	ä

O is a single sound. In conversation, however, it usually becomes double, being combined with the sound—oo (as in too, tooth, woo)—thus:

so is pronounced so-oo
no is pronounced no-oo
go is pronounced go-oo

The short *o* sound is pronounced as in hot, pot, nod, God.

O followed by a double consonant is short:

off not awf
office not awfice
coffee not cawfee
cross, dross, loss, toss

The sound *oo* unites with the open sound *ä* to form the double sound in such words as—cow, how, now:

cä-oo	cow
nä-oo	now
dä-oo-n	down
ä-oo-t	out

The sound *u* is a peculiar combination of at least three sounds. It is really a continued flow from *ee* to *oo*.

The letter is pronounced exactly as the word *you*. Speak the vowel very slowly.

The intermediate sound of û may be represented thus:

u is ee-û-oo
duke is dee-û-oo-k
tube is tee-û-oo-b
mute is mee-û-oo-t

The same sounds occur in such words as few, new, mew.

The middle sound is the most important, and the first and last must be cut very short for a good style.

Ru and *lu*. When *u* is preceded by *r* or *l*, the first portion of the triple sound is omitted and a double vowel sound is heard—the last part also being cut very short.

Consonants.—Speak slowly and pronounce every letter.

Initial Consonants.—Of these only two require special attention:

th and *sh* followed by *r*.

Children frequently say:—one, two, *free;* and grown-up people will speak of—shrimps as *srimps*.

Examples: three, shrimp; thread, shrill; throat, shrink; thrush, shroud; through, shrew.

Final Consonants.—The slurring or omission of final consonants is a greater fault than the mispronunciation of vowels, for it points directly to carelessness and indolence on the part of the speaker.

R. It is sometimes stated that there is no *r* sound in English.

In singing the *r* is always made distinct.

It should also be apparent in conversation. Thus: *father* and *farther* are quite distinct. So, too, *ma* and *mar*.

The *t* belongs to the preceding syllable and the words should be pronounced thus: nat-ure, feat-ure, pict-ure, premat-ure, creat-ure, fut-ure, indent-ure, nurt-ure.

The consonant values of *w* and *y* are never terminal in a syllable, but are followed in the same syllable by a vowel. In attempting, for phonic practice, to sound either of these consonants apart from its vowel, make it continuous, not abrupt.

H cannot be separated from its accompanying vowel. Pronounce *ha, he, hi, ho, hu, hy*. Notice that the office of *h* is *to cover the following vowel with breath*. It will be seen, on careful examination, that any attempt to sound *h* alone will result in whispering a vowel with it.

Wh has for its initial sound simply unvocalized breath, poured through the lips placed in position for *w*. As a whole the digraph is sounded as it would naturally be if the order of the letters were reversed, thus, *hw;* as, *when, while, whip,* pronounced *hwen, hwile, hwip*.

Lisping children and Germans need to carefully observe the sounds of *s* and *th*.

The sound of *s* is formed by forcing unvocal breath between the tip of the tongue and the upper gum.

Th is produced by placing the tip of the tongue between the teeth or against the upper front teeth, and forcing vocal or unvocal breath between the tongue and the teeth. If vocal breath is used, sonant *th* is heard, as in *this;* if unvocal breath, then non-sonant *th* is produced, as in *thin*—this last is the sound made for *s* by those who lisp (lithp).

*Some of the *Breathings* are often called *Aspirates*.

ACCENT OF WORDS

One syllable of every word with two or more syllables receives, in pronouncing, *more force* than another. This stronger force is called Accent, and the syllable which receives this force is said to be *accent'ed*.

Marks of Accent.—The primary accent is marked with a firm oblique stroke, thus: *ob'ject, object', discov'er*. The secondary accent is marked by a similar but lighter stroke, or sometimes by two light strokes, thus: *lem'on-ade'* (or *lem''on-ade'*).

Unaccented Vowels.—Every vowel, when under either the primary or the secondary accent, is distinct; that is, the exact sound of the vowel is evident, as short *a*, long *i*, broad *o*, etc. In an unaccented syllable, the vowel sound is sometimes doubtful; in most instances, however, it is not. For instance, a correct speaker says: ăttĕn'tĭve, ăn'ĕcdōte, cōmprĕhĕnd', ăllĕgā'tiŏn, chăp'ĕl, prĕs'ent, ĕm'ĭnĕnt, prāi'rĭe, ąu'dĭĕnce, căl'loŭs.

RULES OF PRONUNCIATION

Rule 1.—The letter *u* should not be sounded as *o͞o*, except when immediately preceded by the sound of *r*.

Exceptions: sure and its derivatives, also sumac, tulle, hurrah, pugh.

Pronounce rule, fruit, garrulous, ruin, sure, tūne, mūle, institūte, constitūtion, sūture, dūty, lūcid.

Rule II.—*A* constituting or ending an unaccented syllable is short Italian *a*.

Examples: cȧnine', lȧpel', ȧgain', ȧlas', fȧtal'ity, al'kȧli, or'nȧment, pal'ȧtȧble.

When the *a* of terminal *ary* or *any* is immediately preceded by an accented syllable, it has the sound of short Italian *a;* thus, pri'mȧry, epiph'ȧny.

Rule III.—*E* or *o* constituting or ending a syllable is long.

Examples: ēvent, mēmentō, lōcōmōtion, sōciety, nōtōriety, sōbriety, supērior, infērior, thēōries, cōteriē, lōcō-fōcō.

Rule IV.—*I* constituting or ending an unaccented syllable not initial, is always short, and is usually short even in initial syllables, if unaccented.

Examples: Dĭvide, dĭrect, fĭnance, phĭlosophy, imĭtate, pĭazza, tĭrade, intĭmate, indĭvisĭble, nobĭlity.

In the *initial* syllables *i, bi, chi, cli, cri, pri, tri*, however, *i* is generally *long*.

Examples: īdea, īdle, īsothermal, bīology, Chīnese chīrurgery, clīmatic, crīterion, prīmeval, trīangular, trīpod.

Rule V.—*E* before terminal *n* should always be silent in participles, and also in most other words.

Examples: given (giv n), taken (tak n), bitten (bit n), broken, spoken, riven, fallen.

But in the following words *e* must be sounded:

Aspĕn, chickĕn, glutĕn, kitchĕn, lichĕn, lindĕn, martĕn, mittĕn, suddĕn.

It must also be sounded in any word (not a participle) in which terminal *en* is immediately preceded by *l, m, n*, or *r*.

Examples: womĕn, linĕn, omĕn, barrĕn, Helĕn, Allĕn, Ellĕn, woolĕn, pollĕn.

Rule VI.—*E* before terminal *l* should usually be sounded.

Examples: levĕl, bevĕl, novĕl, nickĕl, cancĕl, vessĕl, chapĕl, gravĕl, hovĕl, camĕl, channĕl, kernĕl, Abĕl, Mabĕl, panĕl, modĕl, funnĕl, flannĕl.

But in the following words the *e* before terminal *l* must not be sounded:

Betel (bē'tl), chattel (chat'tl), drivel, easel, grovel, hazel, mantel, mussel, navel, ravel, shekel, shovel, shrivel, snivel, swivel, teasel, weasel, and their derivatives.

Rule VII.—In all but the following words, *i* before terminal *l* or *n* must be sounded: devil, evil, weevil, basin, cousin, raisin.

Pronounce Latĭn, satĭn, matĭn, spavĭn, anvĭl, civĭl, cavĭl, councĭl, perĭl, javelĭn, lentĭl, pistĭl, resĭn, fusĭl, coffĭn, codicĭl, axĭl.

Rule VIII.—The eight words, bath, cloth, lath, moth, mouth, oath, path, wreath, and these only, require sonant *ths* in the plural.

Pronounce m*o*ths, p*a*ths, truths, *oa*ths, heaths, cl*o*ths, b*a*ths, l*a*ths, deaths, wr*ea*ths, m*ou*ths, Sabbaths, sheaths, piths, plinths, lengths, widths, depths, breadths, earths, myths, Goths, fourths, breaths.

Rule IX.—*O* in a final unaccented syllable ending in a consonant, frequently verges toward the sound of short *u;* as in custom, felon, bigot, bishop, method, carol, Briton. But it has its regular short sound in pentagon, hexagon, octagon, etc.

When, however, the termination *on* is immediately preceded by *c, ck, s* or *t*, the *o* is commonly suppressed.

Examples: bacon, beacon, beckon, benison, button, cotton, crimson, damson, deacon, garrison, glutton, lesson, mason, mutton, parson, person, poison, prison, reason, reckon, season.

Rule X.—*I* accented in most words from the French has the sound of long *e*.

Examples: pīque, caprīce, guillotīne, quarantīne, routīne, suīte, fatīgue, valīse, antīque, Bastīle, critīque, palanquīn, tambourīne, regīme (rā-zheem'), cuīsine (kwe-zeen'), unīque, intrīgue, magazīne.

Rule XI.—*Ou* in most words from the French has the value of *o͞o*, but in Anglo-Saxon words it has the sound of *ow*, as in *cow*.

Examples: bouquet, contour, croup; out, bound, sound.

Note.—*Ou* has also other values, as in soul, rough, adjourn, could, ought, hough (hŏk), trough.

Rule XII.—*X* followed by an accented vowel, or by an accented syllable beginning with a silent *h*, has the sound of *gz*.

Examples: luxu'rious, exam'ple, exhaust', exhale', exhib'it, exam'ine, exalt', exec'utive.

Rule XIII.—The termination *tion* is always *shun*, except when it follows the letter *s* or *x*, as in question (kwestyun), bastion, combustion.

Examples: notation, completion, equation, relation, suggestion, transition (tranzish'un).

Rule XIV.—The termination *sion* immediately preceded by an accented vowel is *zhun;* when not so preceded it is *shun*.

Examples: expulsion, immersion, mansion, excursion, diversion, explosion, adhesion, delusion.

Rule XV.—*C* is soft (*s*) before *e, i* and *y*, and hard (*k*) in other positions.

Examples: *ca, ce, ci, co, cu, cy*.

Exceptions: *c* is hard (*k*) in sceptic and scirrhus; and in the following words it has the sound of *z:* sacrifice (fĭz), sice, suffice, discern, and their derivatives. It is silent in czar, victuals, indict, and their derivatives, and also in the termination *scle*, as in *muscle, corpuscle*.

Rule XVI.—*G* is generally soft (*j*) before *e, i* and *y*, and always hard (*g*) before other vowels.

Examples: *ga, ge, gi, go, gu, gy*.

Note.—The exceptions to the rule that *g* is usually soft before *e, i* and *y* are many; but they are nearly all common Anglo-Saxon words, such as get, give, gild, girl, girdle, giddy, foggy, gimlet, geese, gig, giggle, gift, gills, begin, gimp, beget, gird, gear, gizzard.

RULE XVII.—In an accented syllable of any primitive word, a vowel before *r* followed by a syllable beginning with a vowel or another *r* has its short sound.

Examples: Ărab, ărabesque, ărid, Aristotle, Săracen, bĕryl, pĕril, delĭrious, irritate, mĭracle, delĭrium, abhŏrrence, flŏrid, cŏroner, fŏreign, tŭrret, bŭrrow, cŭrry, coŭrage, fŭrrow, pyrrhic, empyreal.

RULE XVIII.—*N* ending an accented syllable has the sound of *ng*, if immediately followed by hard *g* or *k*, or any equivalent of *k* (*c*, *q*, or *x*).

Examples: con'gress, gan'grene, con'cord, tran'quil, un'cle, an'ger, hun'ger, mon'key, san'guine, sin'gle, clan'gor, extin'guish, blan'ket, twin'kle, con'course, Lin'coln.

Exceptions: concrete, penguin, mangrove, Mongol, pancreas, and some others.

RULE XIX.—*C*, *s*, or *t*, when immediately preceded by an accented syllable and followed by *e*, *i* or *u*, has usually the force of *sh*, and is said to be "aspirated," as in ocean, nauseate, Asiatic, negotiation.

RULE XX.—In pronouncing the terminal syllables, *ble*, *cle*, *dle*, *fle*, *gle*, *kle*, *ple*, *stle*, *tle*, and *zle*, no vowel sound is heard. Terminal *cre*, however, is pronounced *kēr*. The combination of any of these terminations with *ing* forms but one syllable.

Examples: quibbling, doubling, circling, meddling, huddling, ruffling, shuffling, giggling, struggling, pickling, trickling, coupling, rippling, battling, whittling, whistling, jostling, puzzling, muzzling, massacring.

COMMON ERRORS IN PRONUNCIATION

1. Do not pronounce *ing* like *in;* as *eve'nin* for *eve'ning*, *writ'in* for *writ'ing*.

Pronounce the following: Speak'ing, read'ing, talk'ing, walk'ing, stop'ping, smok'ing, suppos'ing, expect'ing, cel'ebrating.

2. Do not pronounce *ow* like *ur* or *uh;* as *hol'lur* or *hol'luh* for *hol'low*, *shad'ur* or *shad'uh* for *shad'ow*.

Pronounce the following: Bor'row, to-mor'row, nar'row, yel'low, fel'low, wid'ow, pil'low, mel'lowing, swal'lowing.

3. Do not pronounce *ed* like *id* or *ud;* as *unit'id* or *unit'ud* for *unit'ed*, *provid'id* or *provid'ud* for *provid'ed*.

Pronounce the following: Rest'ed, resid'ed, decid'ed, regard'ed, exhib'ited, cel'ebrated, excit'ed, delight'ed, support'ed.

4. Do not pronounce *ess* like *iss;* as *good'niss* for *good'ness*, *bold'niss* for *bold'ness*.

Pronounce the following: Hard'ness, bad'ness, harm'less, care'less, clear'ness, ful'ness, seam'stress, host'ess, em'press.

5. Do not pronounce *el* like *il*, nor *et* like *it*, nor *est* like *ist;* as *cru'il* for *cru'el*, *bask'it* for *bask'et*, *for'ist* for *for'est*.

Pronounce the following: Fu'el, du'el, bush'el, yet, get, mark'et, hatch'et, rock'et, rack'et, riv'ulet, hon'est, bold'est, larg'est, small'est, young'est, strong'est.

6. Do not pronounce *ent* like *unt*, nor *ence* like *unce;* as *si'lunt* for *si'lent*, *sen'tunce* for *sen'tence*.

Pronounce the following: Pru'dent, de'cent, mo'ment, gar'ment, mon'ument, gov'ernment, superintend'ent, par'liament (par'li-ment), pa'tience, expe'rience, superintend'ence.

7. Do not insert the sound of short *u* before a final *m;* as *hel'um* for *helm*, *chas'um* for *chasm*.

Pronounce the following: Spasm, rhythm, phan'tasm, bap'tism, pa'triotism, elm, film, overwhelm', worm.

8. Do not give the drawling sound *ă͝o͞o* for *ou* (i. e. *ā͝o͞*); as *că͝o͞* for *cow*, *hă͝o͞s* for *house*.

Pronounce the following: How, now, ground, sound, bound, found, town, gown, pound, confound', around', astound'.

9. Do not sound *sh* before *r* like *s;* as *srub* for *shrub*, *srink* for *shrink*.

Pronounce the following: Shred, shrine, shriek, shroud, shriv'el, shrunk'en.

10. Do not sound *wh* like *w;* as *wen* for *when*, *wat* for *what*.

Pronounce the following: Where, wheat, wharf, whale, whine, white, whim'per, whis'per, whip'ping, whit'tle.

11. Do not omit to give the sound of *r* after a vowel in the same syllable, as in *arm*, *form*, etc., not *ahm*, *fawum*, etc.

Pronounce the following: Dark, hark, start, chart, are, tar, remark', course, for, nor, door, floor, lord, hon'or, do'nor, short, support', report', pa'per, or'der, horse, purse, warm, alarm'ing, return'ing, reform'ing.

12. Do not add the sound of *r* to a final vowel or dipthong; as *lawr* for *law*, *ide'ar* for *ide'a*.

Pronounce the following: saw, draw, paw, claw, pota'to, toma'to, com'ma, Em'ma.

13. Do not shorten the sound of long *o* in certain words by leaving off its vanishing element *o͞o*.

Pronounce the following: Boat, bone, broke, choke, cloak, colt, comb, dolt, hole, home, home'ly, hope, jolt, load, on'ly, road, rogue, smoke, spoke, spok'en, stone, throat, toad, whole, wrote, yoke, bolster.

14. Do not omit the sound of *d* when preceded by *n;* as *stan* for *stand*, *frenz* for *friends*.

Pronounce the following: Stands, bands, winds, winds, depends', defends', demands', blind'ness, grand'mother, grand'father, hand'ful.

15. Do not omit the sound of *d* in the terminal letters *lds;* as *wīlz* for *wilds*, *fēlz* for *fields*.

Pronounce the following: Folds, holds, scolds, builds, scalds, unfolds', child's.

16. Do not omit the sound of *t* when preceded by *c hard* in the same syllable; as *aks* for *acts*, *exak'ly* for *exact'ly*.

Pronounce the following: Facts, tracts, com'pacts, inspects', respects', inducts', instructs', correct'ly, direct'ly, ab'stractly, per'fectly.

17. Do not omit the sound of *t* in the terminal letters *sts;* as *fis's* for *fists*, *pes's* for *pests*.

Pronounce the following: Posts, boasts, coasts, hosts, ghosts, accosts'.

18. Do not improperly suppress the vowel sounds in unaccented syllables; as *ev'ry* for *ev'er-y*, *his'try* for *his'to-ry*.

Pronounce the following: Belief', crock'ery, fam'ily, fa'vorite, des'perate, des'olate, nom'inative, mis'ery, li'brary, sal'ary, com'pany, com'fortable, perfum'ery, mem'ory, vic'tory, slip'pery, part'iciple, sev'eral, bois'terous.

19. Do not suppress the sound of *e* or of *i* before *l* or *n* in those words in which it should be articulated; as *lev'l* for *lev'el*, *civ'l* for *civ'il*, *kitch'n* for *kitch'en*, *Lat'n* for *Lat'in*.

Pronounce the following: Trav'el, nov'el, barrel, par'cel, hov'el, chap'el, quar'rel, sor'rel, pen'cil, chick'en, lin'en, sud'den, mit'ten, sat'in.

20. Do not sound *e* or *i* before *n* or *l* in those words in which it is properly silent; *e'ven* for *e'vn*, *heav'en* for *heav'n*, *ba'sin* for *ba'sn*, *haz'el* for *ha'zl*, *e'vil* for *e'vl*.

Pronounce the following: Ha'ven, sev'en, gold'en, o'pen, short'en, wood'en, wak'en, wid'en, fro'zen.

21. After *r*, *ch*, or *sh* do not give the sound of long *u* when the simple sound of *oo* (long or short) should be heard; as *rule* for *rool*, *fruit*, for *froot*.

Pronounce the following: True, truth, grew, chew, sure, sug'ar, tru'ly, crew, brute, bru'tal, rude, through, cru'el, ru'by, ru'bicund.

22. Do not substitute the sound *oo* for that of long *u;* as *toon* for *tune*, *doo'ty* for *du'ty*.

Pronounce the following; Tube, duke, mute, nude, mu'sic, Tues'day, du'bious, lute, blue, illume', illude', in'stitute.

23. The vowel *a*, when unaccented, at the end of a word has the sound of *ä* (as in *far*) somewhat shortened; as *com'ma* not *com'mȧ* nor *commä*.

Pronounce the following: Dra'ma, da'ta, pi'ca, so'fa, al'gebra, Chi'na, Amer'ica, dilem'ma, mi'ca, alpac'a, a'rea, neb'ula.

24. Give to the vowel *a* in the unaccented terminal syllables *al, ant, ance*, its short sound, but do not make it prominent.

Pronounce the following: Na'tional, par'tial, fi'nal, eter'nal, ig'norant, ty'rant, in'stant, fla'grant, vig'ilance, ig'norance, in'stance, fra'grance.

25. Do not give to the vowel *a* (as in *far*), when unaccented and made brief, the sound of short *u;* as *ŭbase'* for *abase'*, *ŭrouse* for *arouse'*.

Pronounce the following: Abound', abate', above', about', abridge', amuse', fanat'ic, ag'gravate, traduce'.

26. Do not give to long *e*, when unaccented and slightly abridged, the sound of short *u;* as *ŭvent'* for *event'*, *soci'ŭty* for *soci'ety*.

Pronounce the following: Emo'tion, vari'ety, sobri'ety, sati'ety, anxi'ety, impi'ety.

27. Do not give to long *o*, when unaccented and slightly abridged, the sound of short *u;* as *ŭbey'* for *obey'*, *prŭpose'* for *propose'*.

Pronounce the following: Opin'ion, obe'dience, provide', promote', provoke', pota'to, tobac'co, posi'tion, soci'ety, el'oquence, disposi'tion, mel'ody, composi'tion.

28. Do not sound short *o*, when unaccented, as short *u;* as *ŭbscure'* for *obscure'*, *cŭmmit'tee* for *commit'tee*.

Pronounce the following: Observe', oppose', command', conceal', condi'tion, contain', content', possess'.

29. Do not lay too much stress on an unaccented syllable or a syllable having a secondary accent; as *pri'ma'ry* for *pri'mary*, *ex'act'ly* for *exact'ly*.

Pronounce the following: Gigan'tic, precise'ly, salva'tion, loca'tion, vaca'tion, ter'ritory, sec'ondary, mat'rimony, prom'issory, vac'cinated.

30. In unaccented syllables do not bring out the quality of the vowel too distinctly.

In many words, "there would be pedantry in scrupulously avoiding the short and easier sounds which the organs are inclined to adopt." For instance, *cab'bage* in common conversation might be *cab'bij*, *pal'ace*, *pal'ȧs*, etc.

a. When *a* at the end of an unaccented syllable is followed in the next syllable by *n* or *r*, it has nearly the sound of short *e*, as in *mis'cel-la-ny*, *cus'tom-a-ry*.

b. In the unaccented final syllable *ate*, of adjectives and nouns, the vowel *a* generally has a sound verging toward short *e*, as in *del'i-cate*, *con-sum'-mate* (*adj.*).

EXPRESSION

Speak firmly; take time. Articulate clearly; do not slur.

Correct pronunciation: requires—1. Exact vowel sounds. 2. Distinct terminal consonants.

Read just as you would speak under the same circumstances, so that if you could be heard without being seen, it would be impossible to tell whether you were reading or talking.

Avoid a monotone. Dull repetition of words in the same pitch is disagreeable. Enter into the spirit of what you read, and give expression to your natural feeling.

The simplest way to emphasize a word is to pause after it. The word may be spoken a little louder or may be pronounced more slowly than the other words in the sentence.

When speaking in public, address the person standing just behind the back row.

INFLECTION OF THE VOICE

Rising inflection is used in incomplete thought, or thought carried through consecutive phrases. It is used to express emotion, surprise, prayer.

Falling inflection denotes complete thought. It expresses command, authority.

The voice has three pitches:—upper, middle, lower.

The upper register is the medium for the expression of excitement and earnestness. It must be used with care and artistic moderation, otherwise it is unpleasant.

Use it rarely. Be careful of straining the voice.

The middle register is used in familiar speaking, and general conversation. It is the most durable, and is the vehicle for everyday use.

The lower register is suited to grave, solemn, impassioned utterances. It should be used cautiously. Practice will mellow the voice.

WRITTEN ENGLISH.

Written English is the art of putting words together in order to convey our thoughts to others. Good composition conveys our thoughts correctly, clearly, and pleasantly, so as to make them readily understood and easily remembered.

To express ourselves well we must first have something to say. If we have not been able to come to any definite conclusion about a subject, we should be silent.

We must next choose the right names for the things or actions of which we are going to speak. This is not always easy, for we are apt to talk loosely of quantities and qualities; to say there are "thousands" when there are only hundreds, to call an event "marvelous" when it is only unusual, or to refer to "ages" when there are only years.

Again, we must arrange our words in the right way, so that they shall fit one another and combine to make good sense, just as we must put bricks or stones together properly to make a building stand. All language is a construction; it is the building or binding of words.

There are many forms of written English, or composition—from a simple letter to the most elaborate treatise—but all are made up of the same elements, namely: words, sentences and paragraphs. It is essential, therefore, that these elements be thoroughly mastered at the outset. Beyond this comes the matter of style, the essentials of which may be summed up in four words: *Accuracy*, *Clearness*, *Strength* and *Grace*.

Accuracy and *Clearness* are requisite in all kinds of writing to insure the faithful presentation of thought.

Strength and *Grace* are more especially applicable to the higher branches of prose composition and to poetry.

Grammatical Connections.—No expression can form part of a good composition unless it be constructed in accordance with correct grammar. Every sentence is inaccurate which gives wrong forms of the parts of speech, or violates the rules of syntax. The most common errors are of two kinds:

(1) Errors in the use of single words or forms.

(2) False concords, that is, wrong genders, numbers, cases and tenses. (See Right and Wrong Use of Words.)

RULES RELATING TO STYLE

	GOOD STYLE	POOR STYLE
PURITY prescribes the use of	Correct forms and concords.	Wrong forms. Solecisms.
	Classic or good English words.	Barbarisms.
	Proper words, *i.e.*, words fit for the occasion.	Improprieties.
PERSPICUITY prescribes	Simplicity.	Roundabout, inflated or pedantic words or phrases.
	Brevity.	Tautology. Pleonasm. Verbosity.
	Precision.	Ambiguity or Obscurity. *a.* In words. *b.* In sentences from bad arrangement.

CHOICE AND USE OF WORDS.—Good usage—the usage of the best writers and speakers—sanctions only words that are in reputable, national, and present usage.

The term *Barbarism* is applied to unauthorized language. Some offenses against good usage are the following:

1. *Obsolete* words, words gone out of use.
2. *Provincialisms*, words peculiar to some locality.
3. *Colloquialisms*, words peculiar to familiar conversation.
4. *Solecisms*, ungrammatical expressions.
5. *Archaisms*, expressions which would be obsolete except for their occasional use in poetry.

The term *Impropriety* is used to designate reputable words misapplied.

Slang is a general name for current, vulgar, unauthorized language. It may take the form of barbarism or impropriety.

Use the fewest and simplest words that the subject will bear.

Specific words are usually more forcible than general terms.

Foreign and technical terms should be used with care.

Use idioms wherever it is possible.

Coherence demands that the parts shall be so connected that the thought will be clear and compact.

The length of sentences is governed by the effect to be produced. Short sentences give vigor, emphasis, and rapidity. Long sentences give weight and rhythm.

A well-constructed sentence keeps the same subject as long as possible.

All modifying elements should be placed as near as possible to the words they modify.

A *Dangling Element*—one that modifies nothing—must be avoided. Example: *Looking into the water*, a fish was seen.

A "*Squinting Construction*" is one that is so poorly placed in the sentence as to modify equally well the part preceding and the part following. Example: Will you say to Mr. Brown, *when he comes*, I will be ready.

Redundancy—A weak repetition of an idea—must be avoided.

Pleonasm consists in the addition of words which can be omitted without affecting the construction or the meaning of the sentence.

Tautology, or repeating a thought that has just been stated.

Verbosity or *Prolixity* is the fault in sentence-making caused by using needless words.

Don't begin a sentence with—and, but, also, so, then, next, however, after this, of course, in consequence, as a matter of fact.

THE PARAGRAPH.—A *Paragraph* is a division in composition treating only one part of the subject. A paragraph must conform to the same rules that should govern the whole composition; that is, it must show unity, massing, and coherence.

Unity demands that all the thoughts in a sentence, in a paragraph, or in the whole theme shall cluster about one main idea.

Massing demands that the important thoughts shall be placed in prominent places.

Coherence demands that thoughts shall be closely connected.

The length of paragraphs is not to be regulated absolutely: the subject-matter to be treated, the appearance of the page, and the comfort of the reader must all be considered. In a dialogue a new paragraph is begun with each change of speaker.

THE SENTENCE.—Rhetorically, sentences may be classified as periodic, loose, and balanced.

A *Periodic* sentence is one that holds the thought in suspense until the end. Example: In all his long life, from the time when, as a twelve-year-old boy, he was roaming in the fields and fishing the streams, to the days of his manhood, when he was upholding the honor of his state in the Senate, he showed the same simple, democratic nature.

A *Loose* sentence is one in which there is no attempt to show suspense; the different parts may come in where natural ease of expression suggests.

A *Balanced* sentence is one in which contrasting thoughts are stated in similar forms. Example: God made the country and man made the town.

The periodic and the balanced sentence are likely to result in artificiality of expression unless used with care. The loose sentence gives ease and naturalness, but these desirable qualities may easily change to slovenliness of expression in the hands of a careless writer.

Sentences, like paragraphs, should show unity, massing, and coherence.

Unity demands that the sentence shall have one main idea. The unity of a sentence is destroyed by putting together ideas that should be separated, by making the wrong idea subordinate, or by making ideas coördinate that are not of equal importance.

Examples of lack of unity:—

1. The words are very simple and I think it very strange that a tinker could write such a good book.

2. We went up the main road about half a mile, when we came to a pasture.

Massing in the sentence demands that the main thought shall be placed where it will "readily catch the eye."

RIGHT AND WRONG USE OF WORDS IN SPEAKING AND WRITING

A and An.—*a* is used before a consonant sound; *an*, before a vowel sound; as, "*a* boy;" "*an* eye;" when a vowel has a consonant sound, as in the word *eulogy*, *a*, and not *an*, is required. In the case of words beginning with *h*, *an* is always required when *h* is silent; as, "*an* heir;" when *h* is aspirated, *a* is required, unless the accent is on the second syllable, when *an* is used; as, "*a* history;" "*an* historian."

Abbreviations.—Such abbreviations or contractions as *e'er*, *ne'er*, *o'er*, *e'en*, *'tis*, *'mid*, and *'neath*, are legitimate in verse, but should not be used in prose.

Ability for capacity.—*Ability* is the power of doing; *capacity* the faculty of receiving. "The *ability* is in me to do him good." "Man's *capacities* have never been measured."

Abortive.—That is *abortive* which is premature, not brought to completion. A plan may be *abortive* but not an act. We may speak of an *abortive* effort.

About.—Not to be used as *almost*. "The day is *almost* gone," not "The day is *about* gone."

Above is an adverb, not an adjective. Say "The address given *above*," not "The *above* address;" the "foregoing section," not the "*above* section."

Accept of.—Never use the preposition after this verb. We *accept* invitations, presents, hospitality, and the like.

Accept and Except.—*Accept* means to take when offered; *except* means to leave out, to exclude. I *accepted* the gift. All *except* two will go.

Accord.—To *accord* means to render or bestow upon another, as honor: therefore one should never say, "The information he desired was *accorded* him."

Administer.—The man died from blows *administered* by the policeman. Oaths, medicine, affairs of state are *administered*. Blows are *dealt*.

Affect, Effect.—To *affect* means to influence or to pretend. To *effect* means to bring about. "He *affected* intoxication." "He *affected* the audience strongly." "I shall *effect* a reform."

Afraid.—The adjective *afraid* should not be used for the verb *fear;* thus: we say, "I am *afraid* of fire," but "I *fear* I cannot go," not "I am *afraid* I cannot go."

Aggravate means to heighten, intensify, or make worse. Do not use it for *annoy* or *provoke*.

Ain't.—This is illiterately employed as a contraction for *are not*, *am not*, *is not*. Even as a contraction of *am not* it is censured by many critics, the form *I'm not* being universally preferred. "Am I not?" is required in interrogative sentences.

Allow.—This word is frequently misused for *think*, as "I *allow* that I shall go to town." Say, I *think* that," etc.

Allude means to refer to indirectly, and not the same as *mention*. "By *mentioning* his lifelong companion he *alluded* to his wife."

Almost.—Careless speakers sometimes err in saying *most* for *almost*, as, for example, "I have read *most* all the books in the library," for "*almost* all."

Among and Between.—*Among* is distributive, and may apply to any number more than two; *between* is used of only two persons or things; as, "They discussed this *among* themselves;" "This is *between* us two."

Among One Another.—"*Among one another*" is censured by critics, "*with* one another," or "among themselves" being suggested as preferable.

And should not be used instead of *to* in such sentences as "I'm going to go and get it," for "I'm going to get it"; "Try and do it," for "Try to do it."

Angry At and Angry With.—"Angry *at*" is used when expressing anger for an animal or an inanimate object; "Angry *with*," for a human being; as, "He is *angry at* his dog;" "He is *angry with* his brother."

Anybody else's, Anybody's else.—The predominance of usage seems to be in favor of the first form, which is correct according to analogy of similar cases, which "throw" the apostrophe and s to the last word of the unified expression, generally nouns in apposition.

Any One, One, *anybody, each, any one, everybody, either, neither, one, some one, somebody,* should be followed by singular pronouns, or verbs.

Any one, anybody, each, every one, everybody, either, neither, nobody, some one, somebody, may be followed by *he* or *his*.

"*Any one* of these patterns *is* suitable." "*Every one* of the ladies *is* here." "*Each one* of the soldiers *has* a new uniform." *If any one wishes* to make a suggestion, I wish *he* (or she, or he or she) would make it." "*Anybody* in *his* senses would have done it."

One should be followed, by *one* or *one's*." "*One* dislikes to be told of *one's* errors."

Appreciate means to estimate justly. "I appreciate his ill-will." means "I am fully aware of the extent and intensity of his ill-will."

Apt, Likely, Liable.—*Apt* means *quick* or *skillful*. "He is apt to learn," means that he learns readily. "He is likely to learn," means that he will probably learn. "He is liable to learn," is incorrect. *Liable for* means responsible for; *liable to* means subject to. "He is liable for the entire sum, and liable to imprisonment if he does not pay."

Apprehend and Comprehend.—*Apprehend* means to *perceive;* as, "I *apprehend* danger." *Comprehend* means to *understand;* as, "I *comprehend* your meaning."

As should not be used for *that* in such constructions as, "I do not know *that* I do."

As—As, So—As.—Use the former in affirmative and the latter in negative propositions. "We are *as* wise *as* our teachers." "I am not *so* young *as* I used to be."

As If It Was.—*Were*, and not *was*, is required after *as if*, for the reason that the supposition is not known; thus: "It looks *as if it were* all right," not "it looks *as if it was* all right."

As though is often used for *as if*. In the sentence "He walked *as though* he were lame," if the ellipsis is supplied the error will be evident. "He walked *as* (he would walk) *though* he were lame." *As though* is seldom correct.

At, At and To, At All.—The presence of *at* improves such constructions as "He is *at* home," instead of "He is home" *At* and *to* are superfluous in such sentences as, "Where is he?" and "Where has he gone?" hence, their use should be avoided. *At all* is superfluous in such sentences as, "There is no use in your going;" "I do not know him."

Authoress, Actress.—The terms "author*ess*," "doctr*ess*," editr*ess*," poet*ess*," "lecture*ss*," are no longer used, *author*, *doctor*, etc., being correct for both sexes. Act*ress*, not *actor*, however, is the required form for the feminine gender.

Avocation, Vocation.—*Avocation* should not be used for *vocation*. *Vocation* is one's employment; *avocation*, one's diversion from that employment.

Awful, Awfully.—Do not use these words as intensives or for supposed force. *Awful* should mean that which inspires awe. "The *awful* mysteries of the world unseen."

Bad, Badly.—*Bad* is not to be used for severe, as "I have a *bad* headache." *Badly* is also inelegantly used for very much, as "I need money *badly*."

Character.—It is in general wrong to speak of a person as a *character*. *Character* is justly applied to the ideal personages delineated by novelists. Possessing no real personality, they are *characters* and nothing more.

Character, Reputation.—One's *character* is what one really is; one's *reputation* is what people think of one. We may have a good *character* and a poor *reputation*, and *vice versa*.

Choose, Chosen.—"She has chose the blue silk." Say "has chosen." But say, in the imperfect, "she chose him in preference to the others."

Combine together.—"He combined them together." Omit *together*.

Commence, Begin.—*Begin*, when followed by a verb, takes *to* and the infinitive after it. *Commence* should take the present participle. We "begin to do," we "commence working." *Begin* may take the participle, but *commence* should take the infinitive.

Consonant.—"It is *consonant to* our nature," is a more usual expression than "it is *consonant with*." But *consonant with* is not improper.

Contractions, while not permissible in dignified utterance or in formal writing, are in accordance with the conversational employment of the language. The following is the list:

I'm not, you're not, he's not, we're not, they're not are used in the declarative form, and *isn't he* (*she*, or *it*), *aren't you* (*we, they*) in the interrogative. In the declarative form, *You're not, he's not*, etc., are preferable to *you aren't, he isn't*, etc. *Am I not* is not contracted, *ain't* being regarded as objectionable for *am I not*, and as a vulgarism for *isn't*. [See *ain't*.]

"He (she or it) *don't*" for He (she or it) *doesn't* is always incorrect. *I don't, you don't, he doesn't, we don't, you don't, they don't*, are in accordance with the conversational employment of the language.

Mayn't I (or *may I not*) is correct in the interrogative form; *you can't* (or *you can not*) in the declarative form. In this connection note that *may* is used when asking and granting permission, and that *can*, which ordinarily expresses ability, is used in the declarative form when denying permission; thus: "*May* I go." "No, you *can not*."

The contractions *shan't* and *won't* are in accordance with conversational usage.

Conversant.—We are conversant *with* men and *in* things. *Conversant about things* is improper.

Converse together.—"They conversed together for more than an hour." Omit *together*.

Copy.—We copy *after* a person; we copy *after* actions. We copy *from* things, as from a picture, or from a statue. In such case, a copy *from* the work is also said to be a copy *after* the artist.

Correspond.—*Correspond*, meaning to hold intercourse by means of letters, is followed by *with*. "I have corresponded with him for several years." *With* is also used with *correspond*, to signify *consistent with*. *Correspond* is frequently followed by *to*, when it expresses adaptability or appropriateness. "His style of living corresponded to his means."

Cover over.—"He covered it over." Say "he covered it."

Dead corpses.—"Evil spirits are not occupied about the dead corpses of bad men." Omit *dead;* it is implied in *corpses*.

Dependent.—"He is dependent *of* his father." Say "dependent *on*." But with independent say *of*.

Derogate.—Say derogate *from*, derogatory *to*, "derogation *from*," or *to*.

Depot, Station.—A *depot* is properly a place where goods or stores are kept. The place where a railway train stops for passengers may better be called a *station*.

Did, Done.—"Who done it?" Say "who did it?" "who has done it?"

Differ.—We differ *with* a person in opinion. One differs *from* another in other respects. The English barbarism of *differ to, different to*, is intolerable, and reverses the meaning of the word *to*.

Direct, Address.—We *address* a letter to a person. We *direct* it to his post office, to the point at which, or to the person through whom, he will receive it. A letter *addressed* to the president may be *directed* to his secretary.

Disappointed, Agreeably Disappointed.—It is better to say *agreeably surprised*. The meaning most closely associated with *disappointment* is that it is not agreeable.

Dissent.—We dissent *from*, not *with*.

Distinct, Distinctly.—"The girl speaks distinct." Say "speaks distinctly."

Divide.—We divide things *between* two, *among* many.

Drank, Drunk.—"He was very thirsty, and drunk eagerly." Say "drank." "He has drank three glasses of soda water." Say "has drunk." "Drunken," the ancient form of the participle, is not now used.

Drove, Driven.—"They have drove very fast." Say "they have driven." But, using the imperfect, say "They drove the people out, and locked the gates."

Dry.—"I am dry, let me have a glass of water." Say "I am thirsty." Using *dry* in this sense suggests the dramshop.

Each, Either.—"A row of trees stood on either side of the river." The use of *either* in such cases is disapproved by some writers, but it is sanctioned by long and unexceptional usage, and by the deliberate judgment of well-informed critics. The use of *each*—"a row of trees stood on each side of the river" is indisputably correct.

Each, Every, Either are singular, and take the verb in the singular number. Such errors as the following should be guarded against: "Each of the daughters take an equal share." Say "takes." "Every leaf, every twig, every blade, every drop of water, teem with life." Say "teems." Also, instead of "one of those houses have been sold," say "has been sold."

Eat, Ate, Eaten.—Say "I ate my breakfast at five o'clock this morning," not "I eat it," or "I et it." "I have eaten my dinner," not "I have ate it," or "I have et it."

Either is followed by *or*. "I shall either send it or bring it myself."

Either and Neither are used when two objects are mentioned, or two assertions are made; when there are more than two objects or assertions, they need not be employed. In such case, instead of *either*, no pronoun or conjunction need be used; instead of *neither*, *no* or *not* may be employed. When two persons are mentioned, "Either you or I must go." In case of three persons, "You or I or John must go." With two assertions, negative, "He will neither do it himself nor let any one else do it." With three negative assertions, "He will not publish the accounts of his office, or allow the public access to them, or permit them to be examined by competent, impartial parties." Usage on the last point is not uniform. Very many good writers use *neither, nor, nor*, with three or more negative assertions.

Emigrant, Immigrant.—An *emigrant* is a person who goes out from a country or a state to reside in another; an *immigrant* is one who comes into the state to live, from abroad.

Equally as.—*As* should not be used after *equally*. Say *equally high, equally dear, equally handsome*, etc.; not *equally as high, equally as dear, equally as handsome*.

Equally as well as.—"I can do it equally as well as he." Omit *equally;* it is implied in the words *as well as*.

Equally the same.—"It is equally the same." Say "it is the same."

Everybody, Anybody.—Refers to male and female.

For want of a pronoun of common gender, use the masculine—he, his, him—unless the other sex is specified. "They" is plural and must not be used.

Anybody can do what they like. (wrong.)
Anybody can do what he likes.
Everybody will have to make up their minds. (wrong.)
Everybody will have to make up his mind.
Everybody has their faults. (wrong.)
Everybody has his faults.
If anybody calls, let them wait. (wrong.)
If anybody calls, let him wait.

Exceeding, Exceedingly.—"He was exceeding kind to me." Say *exceedingly kind.* "She was exceeding careful." Say *exceedingly careful.*

Except, Unless, are often used confusedly. "I shall go except I am ill." Say "unless I am ill." "I saw them all unless two or three." Say "except two or three." The correct usage is easily learned by observing that *except* should be used as a preposition, *unless* as a conjunction.

Fall.—We fall *under* reproach, notice, censure, etc. We fall *from* our friends, *from* virtue; we fall *upon* our enemies, *among* evil associations, *into* bad habits.

Farther, Further. — *Farther* refers to space; *further* to time, degree, and extensions of thought. The distinction is not a necessary one, but it is now very generally observed.

Fewer, Less.—*Fewer* relates to numbers, *less* to quantities. "No man had less friends," should be fewer friends. But say *less* money, *less* strength, etc.

Few, Little, Many, Much.—*Few* and *many* refer to number; *little* and *much* to quantity. In speaking of articles that are rated by counting, use *few* and *many;* in speaking of articles which are rated by measure, use *little* and *much.* "A few potatoes," "so many days."

First.—"The *two first*" should be "the *first two.*" There can be only one first.

Fluent, Fluently.—"He speaks very fluent." Say *very fluently.*

Forward, *backward, toward, upward, onward, downward, hitherward, thitherward, afterward, heavenward, earthward,* etc., should be written without the final *s* which is often added to them.

Funeral obsequies.—Say *obsequies.* The sense of *funeral* is contained in this word. It would be as proper to speak of a "wedding marriage-ceremony" as of "funeral obsequies."

Generally, *always, never, often, rarely, seldom, sometimes,* are adverbs which generally come before the verb.

Gentleman friend, Lady friend.—Instead of "my gentleman friend," say "my friend Mr. ——." Instead of "my lady friend," say "my friend Miss ——," or Mrs. ——.

Gentleman, Lady.—These titles have been applied without discrimination till they have lost almost all the meaning they once had. Many persons have ceased to use them entirely, and employ *man* and *woman* as good enough titles for anybody. There are no nobler titles than *man, woman;* no higher expressions for qualities of grace or virtue than *manly, womanly.*

Get.—"I am afraid Mary is getting crazy." Say "is growing," or "is becoming crazy." "John got left by the train." Say "was left." We *get* anything that we come in possession of. We may also *get* a disease. But *get* must be followed by a noun as its object.

Good for Well.—"He can do it as good as any one else can." Say *as well.*

Got.—I have a pen. Not I have *got* a pen.

Gratuitous.—"That is a gratuitous assumption." It is better to say "unfounded," "unreasonable," or "unwarranted."

Guess.—*Guess* is commonly used in the United States to mean *think,* as in "I *guess* you are right" for "I *think,*" etc.

Had ought.—Provincial and incorrect. *Had* or any form of the verb *to have* cannot correctly be used as an auxiliary with *ought.* Use *should* or *ought not.* Not "He *hadn't ought* to have gone," but "He *should not* have gone."

Hain't.—A vulgarism. There is no such contraction for *have not* or *has not.*

Hang, Hanged.—The verb *hang* has two forms for the past participle, *hanged* and *hung. Hanged* is used for persons; *hung* for other objects. "The man was *hanged.*" "The coat was *hung* on the rack."

He, Him.—It is him whom.—"It is him whom you said it was." Say "it is he."

Healthy, Healthful.—That is *healthy* which is in good health; that is *healthful* which promotes health. "Bread and milk is a healthful food which makes healthy children."

I and Me. — "They went with James and I." Say "with James and me."

If I was.—Use the subjunctive in all cases where the conditions are contrary to fact. "If I *were* you, I should go." "If I *were* a man, I should practice law." I am not you, and I am not a man. Use the indicative in cases of uncertainty. "If I *was* in town that day, I did not see you." I am uncertain as to whether I was or not.

In, Into.—Use *in* to signify rest in a place; use *into* to signify motion toward a place. "He was standing with his hands *in* his pockets." "I put my hands *into* my pockets." "I came *in* an automobile." "The stranger walked *into* the room."

Indeterminate possessive.—"Every child should obey their parents." Say "his parents." "No one should incur censure for being careful of their good character." Say *his,* or *her* if talking more particularly of women. "Let each of us mind their own business." Say "his own business." *Their* is frequently used improperly, as a substitute. In such cases, *his* or *her* should be used, according as the object most prominent in the expression, or in the speaker's thought, is masculine or feminine. In cases of doubt or indifference, use *his* In the nominative we may say *one.* But in the possessive and objective we must say *his, him* or *her.*

Indifferent, Indifferently.—"He was indifferent honest." Say *indifferently honest.*"

Infinitive.—See Split Infinitive.

Ingenuous, Ingenious.—*Ingenuous* is simple, honest, open, unaffected. *Ingenious* is skillful, versatile, ready in contriving.

Jew, Hebrew, Israelite.—A *Jew* is a member of the Hebraic division of the Semitic race; in consequence *Hebrew* is the linguistic name of the *Jews.* Historically, under the theocracy, they were known as *Hebrews;* under the monarchy, as *Israelites;* and during foreign domination, as *Jews.* The modern representatives of this stock call themselves *Hebrews* in race and language, and *Israelites* in religion, but *Jews* in both senses.

Jewelry, Jewels.—*Jewelry* is a collective noun, and *jewels* is a plural noun. In nice usage the term *jewelry* designates the stock of a jeweler; *jewels,* the articles of adornment worn by a lady.

Join issue and Take issue.—In nice usage, "*join* issue" means *to admit the right of the denial of a statement.* "*Take* issue" means merely *to deny.*

Kind of should not be used for *somewhat.* Instead of "I am *kind of* tired," one properly says, "I am *somewhat* tired."

Kind of a.—A is superfluous in such constructions as, "What *kind* of man is he?" (not "kind of *a*"). The same rule applies to *sort.*

Kind and Kinds.—See *These* and *This.*

Know, Knew, Known.—"I knowed it." Say "I knew it." "I have knowed it all along." Say "I have known it."

Latter end.—"I expect to get through by the latter end of the week." Say "by the end of the

week." "The latter end of that man shall be peace." Say "the end of that man."

Learn, Teach. — These words are often confounded. The pupil *learns*, the instructor *teaches*. One person cannot *learn* another, but must *teach* him.

Leave, Lief.—Say "give me leave to tell you," not *lief*. But "I would as lief do it as not," not *leave*.

Leisure upon one's hands.—"If you have any leisure upon your hands." Say "if you are at leisure."

Lend, Loan.—"Loan me five dollars." Say "lend me five dollars." The money having been lent him, the borrower has obtained a *loan* of that sum, or has borrowed it.

Lengthways, Sideways, Otherways. — These forms are erroneous. Say, and write, *lengthwise, sidewise, otherwise*.

Lie, Lay.—Distinguish between the verbs:—

lie—to tell lies

Present Tense—He lies like truth.
He is lying.

Past Tense—But he lied unto him.
Wherefore have ye lied to me?
Why have you been lying to me?

lie—to lie down

Present—The dog lies under the table.
The dog is lying under the table.

Past—He lay upon the bed.
He has lain there for hours.
He has been lying there for hours.

lay—to put a thing down

Present—The boy lays his books on the table.
The boy is laying his books on the table.

Past—He laid his head upon the block.
The hen has laid an egg.
The hen has been laying all the winter.

Liable, Apt.—*Apt* means fit, ready, quick to do a thing, or to be subjected to certain conditions. It generally implies willingness. *Liable* signifies bound to duties, subject or exposed to inconveniences or dangers, and implies no regard to the will of its subject. "John will be apt to catch the fever if he goes into that house," should be "John will be liable," etc. A person who is studious may be spoken of as *apt* to learn, and *liable* to become dyspeptic.

Like.—"We don't do that like you do." Say "as you do." This misuse of *like* is common with English women novelists. *As* should be used when a verb follows, or is understood to follow. Where no verb is implied, *like* may be employed.

Like for As.—Like should not be used as a conjunction. Say: "Do as I do," not, "do like I do," or, "do like me."

Like, Love.—*Love* is often used instead of *like*, and is thereby made to lose all its force. We *love* what the heart goes out to, that for which we entertain a fond and lasting affection. We *love* wives, husbands, parents, children, near friends. We *like* what we have a taste for, what pleases us in passing, or what is generally agreeable to us, as acquaintances, sweetmeats, pleasant weather, music, painting, reading. We regret for a long time the loss of what we *love*, we soon cease to be troubled at missing what we *like*.

Limb.—"She fell, and bruised her limb." Say what limb. The arm is a limb, as well as the leg. The foolish shame which avoids mentioning the leg by name, is not modesty, but prudery.

Lit.—Not to be used for *lighted*. Instead of saying "He *lit* the gas," say "he *lighted* the gas." Do not say "He *lit* on his feet," but "he *lighted* on his feet."

Locate.—"I shall locate in Iowa." Say *settle*. *Locate* has acquired a certain technical currency. The purchaser of land warrants *locates* by selecting a particular tract to claim under it. *Place, settle, fix, establish*, can be substituted for it in most cases, and are better.

Mad.—Should not be used for *angry*.

Mail man.—An inelegant form for *postman*.

Me being.—"Me being absent, the young folks lived high." Say "I being absent," or "while I was absent," or "during my absence."

Me, I.—"Is it me you mean?" Say "is it I?" or "do you mean me?"

Me, My.—"In consequence of me neglecting."—"The horse got away in consequence of me neglecting to fasten the gate." Say "in consequence of my neglecting," etc.

Monstrous.—*Monstrous* does not mean large. It means *ill-formed, misshapen*, deviating from the course of nature, of a character to inspire unpleasant feelings. But an object so unusually large as to appear terrible may be figuratively styled *monstrous*.

More—than, not *more—as*. "He was *more* beloved but not so much admired *as* his brother." This sentence must be recast.

"He was *more* beloved *than* his brother, but not so much admired." Or,

"Though not so much admired as his brother, he was more beloved."

Mortgagor, Mortgagee.—The *mortgagor* is the debtor, who pledges the property which is in mortgage. The *mortgagee* is the creditor, to whom the mortgage is made.

Most.—Not to be used for *almost;* as "He is here *most* every day."

Mutual.—Does not mean *common*, but *reciprocal*. "We may have a *common* friend, but a *mutual* dislike"; that is, a dislike for each other.

Myself.—Not to be used for *I*. Do not say "John and *myself* are friends"; but "John and *I*," etc.

Near, Nearly.—"I lost near twenty pounds." Say "nearly twenty pounds."

Neither for Either.—"That is not the case, neither." Say "either." The double negative is wrong.

Neither, Nor.—Negatives other than neither may take *or* or *nor* as their correlative. With subjects connected by "either—or," "neither—nor," the verb must be singular:—

Neither he nor his brother *were* trained for the ministry.

should be

Neither he nor his brother *was* trained for the ministry.

Either the master or his servant was responsible.

Neither ignorance nor negligence has been the cause of his ruin.

New beginner.—Say *beginner*. When one begins anything, he is new at it of course.

Nice.—A very generally misused word. Properly *nice* means *delicate, discriminating, fastidious*. The works of a watch show *nice* construction; a man may be *nice* in his manners. The word should not be used to mean *agreeable* or *charming* as "I had a *nice* time."

Nicely.—Do not use *nicely* for *well*, as "The sick man is doing *nicely*."

Nobody else.—"There was nobody else but him." Omit *else*.

No for Not.—"I cannot tell whether this is correct of *no*," is wrong. Say, "I cannot tell whether this is correct or *not*."

None, is the same as no one, and is properly singular. It is, however, used in both numbers, according as the context seems to make appropriate.

Not as I know of.—Incorrectly used for *not that I know of*.

Not me.—"Who made that noise?" "Not me." Say "not I." "It wasn't me." Say "it wasn't I." The use of *me* is defended by some writers.

Not only—but also.—Correlatives must be placed immediately before the words connected.

"He *not only* lent me his horse *but also* sent his carriage."

"He lent me *not only* his horse *but also* his carriage."

Number, Quantity.—*Number* should be used in

speaking of objects that are counted, *quantity* with those that are measured. *Much*, *little*, and *less*, answer to quantity, and *many*, *few*, and *fewer*, to numbers; *more* answers to both.

Of.—"A child of four years old." Say "a child four years old," or "a child of four years."

Off of.—"There were ten yards of the cloth before I cut this piece off of it." Say "before I cut this piece off it," or "from it."

One.—*One* is the only singular personal pronoun of common gender.

"*One* must not forget *one's* duty to *one's* country." This frequent repetition is disagreeable.

"No man must forget his duty to his country."

"A man must not forget his duty to his country."

Only is best placed immediately before the word it modifies. In case there can be no ambiguity it may be placed immediately after the word it modifies.

Only I wrote to him to-day. (No one else wrote.)

I *only* wrote to him yesterday. (I did not telephone.)

I wrote *only* to him to-day. (I wrote to no one else.)

I wrote to him *only* to-day. (No longer ago than to-day.)

I wrote him to-day *only*. (I had not written before.)

This car for members *only*. (For none but members.)

Only, Alone.—"He alone can do it," implies that he can do it without help. It would be better, "He can do it alone." "He only can do it," signifies that he, and no other person, can do it. Using *alone* in the sense of *only* may lead to ambiguity.

Onto.—We get *on* a horse and *on* a chair, not *onto*.

Orate.—An unauthorized form commonly used to mean *to give an oration*.

Over.—Do not use *over* in the sense of *more than;* as, "I have *over* a hundred dollars"; "The stick is *over* a yard long."

Over a bridge.—"He went over the bridge." It is more exact to say, "he went across the bridge." A bird may fly *over* a bridge, if it does not touch the bridge.

Overhead and ears.—"We went in overhead and ears." Say *overhead*. The head carries the ears. But "overhead and ears in debt" is a phrase which it will be hard to abolish.

Partial, Partially.—"This view is partially correct." "Partly correct," or "in part correct," is better. *Partially* means, properly, one sided, with bias.

Persuasion, in the sense of religious denomination or belief, is objectional. *Sect*, *denomination*, *belief*, or "school of belief," are proper substitutes.

Plunge down.—"He plunged down into the stream." Omit *down*.

Possessives.—

Rule.—Use the apostrophe and the letter *s* (or change the form) only when the noun (or pronoun) itself represents the possessor.

This is a photograph *of* my uncle.

She is a servant of my *aunt's*.

This is a criticism *of John*. (Some one else wrote it about John.)

This is an opinion *of John's*. (John's opinion; that is, John uttered it.)

This is an opinion *of John*. (Some one else uttered it.)

Plural and Singular Words.—*Molasses* is singular. The habit of giving it a plural construction is an error. Say "that molasses is souring," not "them molasses are souring."

Words like *scissors*, *snuffers*, *tongs*, *trousers*, etc., denoting articles which are paired or coupled, are plural, and take a plural verb. "The scissors are dull," not "is dull."

This is the birthplace of the President. (Not President's.)

This is the private office of the Secretary. (Not Secretary's.)

He is a friend *of the Bank's*. (One of several friends.)

He is an enemy *of mine*. (One or more possessed by me.)

He is a brother *of mine*. (One or more possessed by me.)

He is a friend *of hers*. (One or more possessed by her.)

I cannot endure that rasping voice *of Bridget's*. (One voice.)

Prepositions.—Never use a preposition to end a sentence:

For whom is that? To whom are you writing? The matter to which I am referring.

Two prepositions should not come together, as: "That is the man I went *to for* advice." But, "That is the man to whom I went for advice."

Previous, Previously.—"He wrote me previous to his coming." Say "previously to his coming."

Quantity, Number.—*Quantity* is used of that which can be measured; *number*, of that which can be counted; as, "There is a large *quantity* of sugar on hand"; "There are a large *number* of eggs in the basket."

In connection with the use of the singular or the plural verb with the word *number*, note that the plural verb is used when *number* means *several;* the singular, when *number* is used to stand for a unit; as, "A *number* of persons *are* going" (several); "The *number is* limited to five."

Quite.—"There are quite a number of Americans here." Say "there are several." One is *quite* a number. It is correct to say "there are quite twenty" to express that the number is completely made up—which is the meaning of *quite*.

Raised.—"I was raised in the South." Say "brought up." "I was raised in Mr. Stephens' family." Say "taken care of," "brought up," "instructed," or "trained." We "raise" horses, cattle, sheep, swine, poultry and crops, but apply a more refining process to human beings.

Ran, Run.—Say "this horse has often run a mile in two minutes and a half; yesterday he ran a mile in two minutes and three-quarters."

Rang, Rung.—"I have rang the bell half a dozen times." Say "have rung." But say in the imperfect, "they rang the bells merrily for Christmas day."

Rather—than, Prefer—to.—"He *preferred* doing nothing *rather than* run the risk of doing wrong," should be "He preferred doing nothing rather than running the risk of doing wrong"; or "He preferred to do nothing rather than to run the risk of doing wrong."

Receipt and Recipe.— One properly says, "The *receipt* calls for three cupfuls of flour," *recipe* being restricted in its use as a medical term. Century gives the following: "*Receipt* is distinguished from *recipe* by the common restriction of that word [*recipe*] to medical and relative uses; as, "A *receipt* for a pudding."

Reckon.—Provincial for *think*. "I *reckon* he will come soon." Say "I *think*" or "I *believe*."

Reference, Recommendation.—A person seeking employment or position, names certain persons who know him as his *references*. They may, if they are so disposed, and can do so with truth, give him their *recommendation*.

Regard.—"In regard *of* this matter." Say "in regard *to*," or "with regard *to*."

Regarded *from* that standpoint, but looked at *in* that light.

Relations, Relatives, Kin, Kindred.—It is better to speak of ones *relatives* than of his *relations*. *Relations* has other meanings. *Kin* and *kindred* are old English words, which deserve to be more in fashion than they are.

Relative Pronouns.—*Who* is used exclusively with persons, *which* exclusively with things, and *that*

with persons and things. In common conversation *that* is more frequently used with persons than *who*. But *who* is considered more elegant.

Examples of the correct use of the relative pronouns, *who, which, that,* and *what:*

I gave the money to the driver, *who* will give it to his employer.

I brought her a book, from the library, *which* she enjoyed very much.

This is the house *that* she bought.

I do not want you to repeat *what* I have told you.

(1) In the last sentence *what* is equivalent to *that which* or the *thing which*. It differs from the other relative pronouns in that *its antecedent is never expressed,* it being implied in the word itself (that which).

(2) *What* is always of the neuter gender, and is used in only the nominative and the objective case. *Who, whose,* and *whom* are either masculine and feminine (common gender) and are used, respectively, in the nominative, the possessive, and the objective case.

(3) *Which* is neuter and may be used in either the nominative or the objective case.

(4) *Whose* is the form of the possessive for either *who* or *which*.

Remarkable, Remarkably.—"She is a remarkable pretty girl." Say *remarkably pretty.*

Reside and Live.—The simple word *live* is preferable to *reside* when referring to one's place of residence, *reside* being reserved for more stately occasions.

Respect.—Instead of "in respect of," say "in respect *to*," or "with respect *to*."

Respectfully and Respectively.—*Respectfully* mean in a respectful manner; *respectively* refers to persons or things thought of singly; as, "He behaved *respectfully* toward his parents"; "The names of the boys are, *respectively,* John, Henry, and James.

Rise up.—"He rose up and left the room." Say "he rose"; say also, *raise, lift, hoist;* not *raise up lift up, hoist up.*

Saw, Seen, See.—"I see him last Monday." Say "I saw him." "I seen him yesterday." Say "I saw him." "I haven't saw him for a long time." Say "I haven't seen him." *See* is present, *saw* imperfect, *seen* the participle. The habit of confusing them prevails widely.

Section.—"Mr. —— does not live in this section." Say "in this neighborhood," "vicinity," or "part of the country." A *section,* in geography, is one square mile, or six hundred and forty acres of land, which has been laid out by the government.

Shall and Will.—*Shall* in the first person and *will* in the second and third persons denote mere futurity.

Will in the first person and *shall* in the second and third denote volition.

In asking questions *shall* must always be used with a subject in the first person. In the second and third persons we use *shall* and *will* according to the answers that we expect. When we expect the answer *shall,* we use *shall* in asking the question. When we expect the answer *will,* we use *will* in asking the question.

Similar statements are true of *should* and *would.*

The proper use of *shall, will, should,* and *would* in indirect discourse may be determined by turning the sentence into the direct discourse and choosing the proper word according to the rule.

With all three persons, we may use *would* to express a wish. Also we may use *would* without regard to future time, to denote that an action is customary; as, "He would often fish for days in succession."

Should is sometimes used in its original sense of *ought;* as, "You should not do that."

The forms given below are examples of the simple future statement.

Examples:

I shall be happy.	We shall be happy.
You will be happy.	You will be happy.
He will be happy.	They will be happy.

If we wish to add the idea of a compelling force, or of determination or obligation, the proper auxiliary for the first person is *will;* for the second and third persons, *shall.*

Examples:

I will go	means I am determined to go.
You shall go	means You must go.
He shall go	means He must go.
We will go	means We are determined to go.
You shall go	means You must go.
They shall go	means They must go.

I shall have satisfaction means that the satisfaction will come in the course of time.

I will have satisfaction means *I am determined to have it.*

Sink down.—"The stone sunk down in the water." Omit *down.*

Some for Somewhat.—"He is some better today." It is better to say "he is somewhat better."

Split Infinitive.—To explain, to thank (infinitive). These words should not be separated (split). "Have the goodness to clearly explain," should be "Have the goodness to explain clearly."

"I want to personally thank you," should be "I want to thank you personally."

Tenses.—In subordinate clauses the tense of the verb is relative to the tense of the principal verb.

"He intended to have done so," should be "He intended to do so."

The imperfect tense, *I did* is used in speaking of events which took place before a time that is past.

The perfect tense, *I have done,* is used in speaking of events which have been completed before the present time.

Than me.—"He is taller than me." The word after *than* should be in the same case with the word before it.

Than him.—"You are stronger than him." Say "than he."

That.—See Relative Pronouns.

Thee and You.—"I owe thee a heavy debt of gratitude, and you will not permit me to pay it." Avoid such confusion of numbers. Use the same word—either *thee* or *you*—in both clauses.

Them, They.—"It was *them.*" Say "it was they."

These, This.—I don't like *these sort* of folks (this sort).

Those kind of boots—that kind (those kinds).

These kind, Those sort.—*Kind* and *sort* are singular nouns, and should be modified by singular adjectives. Say "*this kind,*" "*that sort.*"

They, Everyone.—Do not use *they* indefinitely instead of *everyone,* as, "They are always in a hurry in the city"; better say "Everyone is in a hurry in the city."

Though is followed by *yet.* "Though he was rich, yet for our sakes he became poor."

Through.—Often misused in the sense of *finished.* "I am *through* with my breakfast," instead of "I have *finished* my breakfast."

To be.—The verb "to be" takes the same case after it as before it. Example: "Who is there?" "It is I." Say "It was I who rang the bell."

Trousers, Waistcoat, Gown, Petticoat, are good old respectable English words, which point out particular garments without possibility of mistake. They are better than the new ones, *pantaloons, vest, dress, skirt.*

Try and.—"I will try and do it." Say "I will try to do it."

Unique is not properly modified by *very, unique* meaning the only one of its kind.

Use to.—*Used to,* not *use to,* is the correct form; as, "*I used to go* there very often." In negative constructions "didn't used to" is always incorrect.

View to and View of.—One properly says, "With *a view to* finding out." or "With *the view of* finding out."

Visit with.—*Visit* is improperly followed by *with* in such constructions as, "I am *visiting with* friends in New York," "I am visiting friends," etc., being the correct form.

Vocation.—A man's *vocation* is his calling, his regular business. His *avocation* is something outside of his business with which he occupies himself incidentally. My friend's *vocation* is the practice of law; his *avocation* is photography. Still, while *avocation*, in the sense of *vocation*, is usually avoided by good writers, such use has some sanction of authority.

Want.—Avoid *want* in the sense of "ought" or "had better," as, "You want to hurry if you are going to catch the car"; better say "You had better hurry if you expect to catch the car."

Was, Were.—"Was you?" "You was." Say "were you?" "You were."

Way, Away.—*Way* should not be used for away. "I saw him away (not way) down the road."

What for Who, Which, and That.—See Relative Pronouns.

Where for In which.—"It is a cause where justice is particularly concerned." Say *in which*. "We persented a paper where his case was fully explained." Say "a paper in which." But *where* may be used instead of *which* and a preposition when place is the predominant idea. "The old house where I was born."

Whether is followed by *or*. "Whether he will go or not, I cannot tell."

Which.—See Relative Pronouns.

Who.—See Relative Pronouns.

Without, Unless.—*Without* must not be used for *unless*. "You won't catch the train *without* you run," should be, "You won't catch the train *unless* you run."

"My uncle would not take me *without* my mother wished it," should be "My uncle would not take me *unless* my mother wished it."

Wrong and Wrongly.—*Wrong* is an adverb as well as an adjective. For this reason, *wrong* is often interchangeably used with *wrongly;* as, "The mail was sent off *wrong*" (or *wrongly*). When preceding the verb, *wrongly* is required; as "The letter was *wrongly* addressed."

USE OF CAPITAL LETTERS

The following are the general rules for the use of capitals, together with the abbreviations most commonly used. Many special uses of capital letters are also insisted upon by writers which cannot be reduced to general rules.

Rule I.—The first word of every sentence should begin with a capital letter.

A sentence preceded by an introductory word or clause such as Resolved, Be it enacted, etc., begins with a capital notwithstanding the introductory word.

Rule II.—The first word of a direct quotation, of an important statement, and of a direct question, should begin with a capital.

Examples:

One truth is clear: Whatever is, is right.—*Pope.*

Ask yourselves this question: Are you doing right?

Rule III.—The first word of every line of poetry should begin with a capital.

Rule IV.—All proper names begin with capitals. If the proper name consists of several words, all are capitalized except articles, prepositions, and conjunctions.

Examples:—San Diego, Burton-on-Trent, the Grand Army of the Republic.

The words *street, road, lake, river, mountain*, etc., should begin with capitals when used in connection with proper names.

Examples:—Crawford Road, Prospect Street, Lake Erie, Cuyahoga River, Little Mountain.

North, South, East, and *West*, should begin with capitals when they mean sections of the country and not points of the compass.

Example:—Chicago, the largest city of the West, is south of Lake Michigan.

Capitalize *city* only when part of the corporate name, *New York City, Washington City.*

Rule V.—Names of days and months always take a capital; but the names of seasons of the year are not commonly capitalized.

Rule VI.—Titles of office before personal names, and other titles so placed which are not mere common names of vocation, are written with capitals.

Examples:—*Senator Jones, Doctor* (or *Dr.*) *Brown, Aunt Jane, Miss* or *Master Gray;* but *coachman Smith, barber Harris*, etc.

Titles of dignity are also commonly capitalized when used alone, as in address, or with the definite article.

Examples:—*the President, Senator, Judge, the Judge, District Attorney.*

When title, with or without Christian name, precedes "de," use lower-case "d"; this rule applies also to "la," "di," "von," "van," etc.

Examples:—*Marquis de Lafayette, Di Cesnola, Prince von Moltke, Von Humboldt, Dr. la Mond, De Chaulnes, Mr. van Renssalaer.*

Rule VII.—Many special names of a common kind are, in particular uses, treated as proper nouns and capitalized.

Examples:—*Congress, Parliament, Senate, House of Representatives, State* (for one of the United States), *Hudson River Railroad, Aldine Printing Company.*

Capitalize the names of political parties; as, *Republican Party, Democratic Party, Progressive Party*, etc.

Capitalize *Christmas Day, New Year's Day, Lincoln's Birthday, Washington's Birthday, Good Friday, Decoration Day* or *Memorial Day, Fourth of July, Labor Day, Election Day, Thanksgiving Day*, etc.; a noted day, as *Black Friday*, etc.; but *blue Monday.*

Capitalize *Northerner, Southerner, Northern gentleman, Southern blood*, etc.

Capitalize names of important events and periods; as, *the Creation, the Fall, the Flood, the Reformation, the Revolution* (French or American), *Civil War* (American), *the Middle Ages, the Union, Reconstruction.*

Capitalize religious denominations; as, *Methodist Episcopal Church, St. Mark's Church, Church and State*, etc.

Church is without the capital always when used alone or when meaning congregation or building; as, *a Methodist church in Hoboken.*

Capitalize *College, Club, Society*, etc., when referring to that particular body, in by-laws, proceedings, or other publications of a college, club, society, company, etc.

Capitalize *Monsieur, Madame, Signor*, etc.

Capitalize *State* only when referring to one of the United States.

Rule VIII.—Adjectives and nouns derived from proper names are written with capitals.

Examples:—*Jacksonian, New Yorker, Congressman* (if *Congress* has a capital).

Names of countries and places, and adjectives derived from them.

Examples:—a German dictionary. The best Spanish wines.

But such words used in some other common way are not capitalized.

Examples:—morocco leather, russia leather, india rubber, plaster of paris, etc.

Rule IX.—Names of families and larger groups in natural history, and of genera, are written with capitals; also botanical specific names derived from proper names, and those that have formerly been genus-names, though zoölogical usage gives a small initial to every specific name.

Examples:—*Asplenium Trichomanes* (a fern). *Menticirrhus americanus* (a fish). *Carya alba* (a hickory tree).

Rule X.—In headings the important words only should be capitalized.

Titles of books, newspapers, plays, and the like, are written with capitals beginning the important words, most commonly nouns, principal verbs, adjectives, and adverbs. The word *the* is capitalized as part of the title if the title is quoted exactly.

Examples:—A History of the Rebellion.
Free Trade and Protection.
Put Yourself in his Place.
Milton's Select Poems.
The Beginnings of Poetry.

Rule XI.—The pronoun *I* and the interjection *O* are capitalized.

Rule XII.—All names of God, all words that may be regarded as titles of the Deity, should begin with capitals.

Rule XIII.—In compound words, as vice-president, ex-president, etc., the prefix (vice) should not be capitalized.

Rule XIV.—In personification it is usual to capitalize the personified words.

Examples:—
Vice is a monster; smiling Spring.
The Voice of Nature; but: true to nature.

ABBREVIATIONS, CONTRACTIONS AND DEGREES

Military or naval and some professional titles preceding names are nearly always abbreviated; as *Capt. Jones, Dr. Brown, Rev. Dr. Smith.*

Titles of collegiate degree are abbreviated; as, *William Lee, Ph. D., LL. D.*

In general writing, it is better to avoid abbreviation as far as possible.

PUNCTUATION

Punctuation is the indication, by means of stops, of the different pauses necessary to show the meaning of a sentence.

Stops, therefore, are used to elucidate the meaning of words in their relation to other words.

The Period [.].—Declarative and imperative sentences, when not connected in construction with what follows, are closed by periods.

Examples:—The child is father of the man.
The king is dead, long live the king.

A period should be placed after every abbreviation. The period thus used is part of the abbreviation.

Examples:—*Wash.*, Washington; *Gen.*, General; *Pro tem., pro tempore*, for the time being; *Esq.*, Esquire; *Gov.*, Governor.

Such expressions as 3d, 18th, 8mo, are not abbreviations and do not require a period after them.

A period should always be placed after the Roman numerals.

Examples:—I., II., III., IV., V., VI., VII., VIII., IX., X., etc.

Interrogation Point [?].—The interrogation point is used for marking all questions. When the question consists of several parts, or when several questions are contained in one sentence, there is some difficulty in deciding whether there should be one or more interrogation points. The principle is that if one answer is sufficient for all, one point is enough; if different answers are required, a point should be placed after each question.

Examples:—What can I do for you?
Now, you understand?

Exclamation Point [!].—The exclamation point is placed at the end of every sentence, clause, phrase, or word intended to convey strong emotion.

Examples:—Praise be thine, O God!
Lost! Lost! O that I were home!

Colon [:].—Two clauses, one or both of which are subdivided by the semicolon, should be separated from each other by the colon.

Example:—This chapter is divided into two sections: the first, which was written many years since, being a history of the institution; the second, a prophecy as to its future.

The colon is used before all direct quotations, if formally introduced, and after all words which formally introduce a sentence to follow. If the quoted matter begins a new paragraph, the colon should be followed by a dash.

Examples:—Cæsar spoke as follows: (His speech to follow.)
He replied in these words: "I shall always be prepared in future."
My dear Friend: (A letter following.)

The colon is sometimes used between complete sentences where the period would indicate too long a pause, and the semicolon too short a pause.

Examples:—It was a dark and dreary night: the wind was blowing in fitful gusts.
It is over: let us go.

Semicolon [;].—When two clauses are united by either of the conjunctions *for, but, and*, or an equivalent word—the one clause perfect in itself, and the other added as a matter of inference, contrast or explanation—they are separated by a semicolon.

Example:—Economy is no disgrace; for it is better to live on a little than to outlive a great deal.

A semicolon is placed between two or more parts of a sentence when these, or any of them, are divisible by a comma into smaller portions.

Example:—Men are not to be judged by their looks, habits, and appearances; they should be judged by the character of their lives and conversations, and by their works.

When in a series of expressions the particulars depend on a commencing or concluding portion of the sentence, they should be separated from each other by a semicolon if laid down as distinct propositions or of a compound nature.

Example:—Philosophers assert that Nature is unlimited in her operations; that she has inexhaustible treasures in reserve; that knowledge will always be progressive; and that all future generations will continue to make discoveries of which we have not the slightest idea.

When several short sentences follow one another, slightly connected in sense or in construction, they should be separated by a semicolon.

Example:—Stones grow; vegetables grow and live; animals grow, live, and feel.

A semicolon is put before *as, viz., to-wit, namely, i. e.*, or *that is*, when they precede an example or a specification of particulars, or subjects enumerated; and also between these particulars when they consist each of a disjunct pair of words, or of a single word or phrase but slightly connected with the others.

Example:—Many words are differently spelled in English; as, "Inquire, enquire; jail, gaol; skeptic, sceptic."

Comma [,].—Two words belonging to the same part of speech, or used as such, when closely connected by one of the conjunctions *and, or, nor*, are not separated by a comma from each other.

Example:—Pay supreme and undivided homage to goodness and truth.

Two words of the same part of speech and in the same construction, if used without a conjunction between them, are separated from each other by a comma.

Example:—We are fearfully, wonderfully made.

Two nouns or pronouns in apposition, or a noun and a pronoun, should not be separated by a comma if they may be regarded as a proper name or as a single phrase.

Example:—The poet Milton wrote excellent prose and better poetry.

But a noun or pronoun and a phrase, or two or more phrases, if put in apposition so that they may not be so regarded, are separated by a comma from each other, and from what follows in the same sentence.

Example:—Homer, the greatest poet of antiquity, is said to have been blind.

Words or phrases contrasted with each other, or having a mutual relation to others that follow them in the same clause, are separated by commas.

Example:—False delicacy is affectation, not politeness.

A comma is put before a relative clause when it is explanatory of the antecedent or presents an additional thought.

Example:—Behold the emblem of thy state in flowers, which bloom and die.

But the point is omitted before a relative that restricts the general notion of the antecedent to a particular sense.

Example:—Every teacher must love a boy who is attentive and docile.

Expressions of a parenthetical or intermediate nature are separated from the context by commas.

Example:—The sun, with all its attendant planets, is but a very little part of the grand machine of the universe.

A word or an expression used independently in addressing a person or an object is separated by a comma from the rest of the sentence.

Example:—Antonio, light my lamp within my chamber.

Adjectival, participial, and absolute phrases are each separated by a comma from the remainder of the sentence.

Awkward in his person, James was ill qualified to command respect.

Adverbs or adverbial phrases, when used as connectives, or when they modify not single words, but clauses or sentences, are each followed by a comma; and if used intermediately they admit a comma before as well as after them.

Example:—The most vigorous thinkers and writers are, in fact, self-taught.

When a phrase beginning with a preposition, an adverb, or a conjunction relates to or modifies a preceding portion of the sentence, a comma is unnecessary if the parts are closely connected in sense.

Example:—For that agency he applied without a recommendation.

Many phrases which, in their natural or usual order, do not require to be punctuated, are, when placed in some other or unnatural position, set off by a comma from the rest of the sentence.

Example:—By Cowley, the philosopher Hobbes is compared to Columbus.

When one of two clauses depends on the other, they are separated by a comma.

Example:—If you would be revenged on your enemies, let your life be blameless.

Two correlative expressions united by the conjunction *as* or *than* are written without a point between them.

Example:—Men are never so easily deceived as when they plot to deceive others.

But when united by any other word than one of these conjunctions, the correlative expressions are separated by a comma.

Example:—Though learned and methodical, yet the teacher was not a pedant.

Words or phrases in the same construction, forming a series, are separated from each other by commas.

Example:—Scrooge was his sole executor, his sole administrator, his sole assign, his sole residuary legatee, his sole friend, and sole mourner.—*Dickens.*

But when the members of the series are closely connected in sense, the commas should be omitted.

Example:—Government of the people by the people for the people.

When in a compound sentence the clauses have each a different nominative, but have only one verb, expressed in the first clause and understood in the others, the ellipsis, or place of the verb, should be supplied by a comma.

Example:—A wise man seeks to shine in himself, a fool to outshine others.

A short quotation, or any expression that resembles a quotation, is separated by a comma from an introductory clause.

Example:—Dr. Thomas Brown truly says, "The benevolent spirit is as universal in its efforts as the miseries which are capable of being relieved."

Dash [—].—The dash denotes an abrupt break in a sentence.

Example:—Here lies the great—false marble, where?
Nothing but sordid dust lies here.

The dash is used to indicate that something is left unfinished.

Example:—We cannot hope to succeed unless—
But we must succeed.

The dash is sometimes used instead of brackets before and after a parenthesis.

Example:—The man actually—this is in the strictest confidence—filled his pocket with my cigars when he thought I was not looking.

The dash is used instead of the colon where the word "namely" is implied but not expressed.

Example:—The sentence should be amended to read "—whenever and wherever the president shall determine."

Parentheses [()].—Parentheses are used to inclose an explanation, authority, definition, reference, translation, or any matter not belonging to the grammatical construction of the sentence.

Example:—He gained from heaven ('twas all he wished) a friend.

Brackets ([]).—The use of brackets is about the same as that of the marks of parenthesis, but is generally confined to words inserted in quotations for the sake of explanation.

Example:—Dickens has given a very lively account of this place [the Academy] in his paper entitled "Our School," but it is very mythical in many respects.

Quotation Marks [“ ”].—Quotation marks are used before and after a passage quoted in the exact words of another.

Example:—"My very dog," sighed poor Rip, "has forgotten me."

Matter quoted indirectly, or given only in substance, is not placed within quotation marks.

A quotation within a quotation is inclosed in single marks.

Example:—"His staff and knapsack, her little bonnet and basket, etc., lie beside him. 'She'll come to-morrow,' he says, when it gets dark, and goes sorrowfully home."

Where a quotation consists of several paragraphs, quotation marks should be used at the beginning of each paragraph, but at the close of the last paragraph only.

Titles of books, essays, newspapers, etc., should be placed within quotation marks, unless in italics or capitals.

Hyphen [-].—The hyphen is used between the parts of certain compound words, and to mark the division of syllables in showing the spelling of words. It is sometimes used in place of the diæresis after a prefix ending in a vowel before a word beginning with a vowel.

Example:—Horse-chestnut, Franco-Prussian, re-edit, de-vi-ate, truth-telling, text-book.

Compound Words.—Rule I.—Compounds made by omitting particles, and used literally, are generally written with a hyphen.

Many such words that coalesce in pronunciation, and have become very familiar, are written continuously.

after-events	broomstick
almond-oil	eyeball
arrow-head	milkman
battle-ax	outlook

Rule II.—Two or more normally separate words are joined with hyphens if used in an adjective sense before a noun.

A sight never to be forgotten.
A never-to-be-forgotten sight.

Rule III.—A full phrase used as the name of something not literally indicated by the phrase is written with a hyphen or hyphens.

Those here given are names of plants:

Aaron's-beard	forget-me-not

Rule IV.—Compound words showing arbitrary application of the literal idea expressed by their separated elements take no hyphen.

blackberry	pronghorn (antelope)
bluefish	marrowfat (a pea)
everybody	arrowhead (a plant)
however	matchlock (a gun)

cottonwood (a tree)

(Care should be taken not to apply this rule in cases where it does not really fit. Thus, *any one, one's self*, etc., are often wrongly printed as *anyone, oneself*, etc.)

Apostrophe ['].—The apostrophe is used in the possessive case of nouns, to denote the plural of figures and letters, and to mark the elision of letters at the beginning or middle of a word, and the omission of figures in a number or date.

Example:—John's, men's, 2's, 7's, p's and q's, I've, I'll, don't, won't, Po'keepsie, tho', '92, '76.

MISCELLANEOUS MARKS

Ellipsis [* * * *] signifies a leaving out, defect, omission.

Leaders [. . .] serve to carry the eye across the pages of indexes, tables, contents, etc.; thus:

Needle-gun invented.....1856

Brace [⎧⎨⎩].—It is the vertical curved line used to signify that two or more words or lines are to be taken together—thus:

Americans { Aboriginal / Native / Emigrants

Asterisk [*].—It is used in printing or writing as a reference to a passage or note in the margin or at the bottom of a page, and also to supply the omission of letters or words.

Dagger, or Obelisk [†] is so called from its resemblance to a dagger, or inverted obelisk. It is also a mark of reference to a note in the margin or at the bottom of the page.

Double Dagger [‡] is the third reference mark used when there are more than two used on a page.

Parallels [‖].—This character is used in writing and printing to call attention to a similarly marked note in the margin or at the foot of the page.

Section Mark [§] is the character often used to denote a division of a writing or subdivision of a chapter; a paragraph.

Paragraph [¶] is the sign which notes the division of a writing into distinct parts, sections or subdivisions.

Index, or Pointer [☞] is used to direct particular attention to a note or paragraph. It is sometimes called a *fist*.

Asterism [⁂ or ⁂], or cluster of stars, is used as a sign to direct attention to a passage, or paragraph, especially when such attention is deemed very important.

RHETORICAL FIGURES OF SPEECH

Figures of speech, or tropes, are used to make language more effective by adding special strength and beauty. They are words used in meanings not their own designed to secure a peculiarly happy effect. Thus when the poet writes:

"But yonder comes the powerful king of day,
Rejoicing in the East....."

he uses "king of day" for "sun"; and no one can fail to notice the pleasureable effect produced.

Chief Rhetorical Figures of Speech

Resemblance.	*Contiguity.*	*Contrast or Surprise.*
a. Comparison or Simile.	*a.* Autonomasia—Individual for class.	*a.* Antithesis and Epigram.
b. Metaphor—	*b.* Synecdoche—Part for whole.	*b.* Hyperbole.
1. Identification of like qualities.	*c.* Metonymy—Cause for effect, badge for class, etc.	*c.* Irony and Euphemism.
2. Identification of like things.		*Arrangement.*
c. Personification.		*a.* Climax.
d. Allegory.		*b.* Anti-climax.
		c. Emphasis, or Inversion.

But the new word images introduced must really be suited to add strength or beauty. Notice the contrast between these two descriptions of morning:

The saffron morn, with early blushes spread,
Now rose refulgent from Tithonus' bed,
With new-born day to gladden mortal sight,
And gild the courts of heaven with sacred light.
—*Pope's Homer.*

The sun had long since in the lap
Of Thetis taken out his nap;
And, like a lobster boiled, the morn
From black to red began to turn.
—*Butler's Hudibras.*

Principal Figures—The common figures are metaphor, simile, allegory, personification, apostrophe, euphemism, hyperbole, antithesis, epigram, irony, climax, onomatopœia (*ŏm-ŏn-a-tō-pœ'-i-a*), and alliteration.

Simile.—A simile is a comparison between objects that are not of the same class, and usually expressed by either *like* or *as*.

Examples:—The warrior fought like a lion.
His spear was like the mast of a ship.
His wrath was as the storm.

Metaphor.—A metaphor is a comparison which is implied between two objects that are not of the same class. Unlike the simile, it does not state the resemblance, it takes that for granted and proceeds as if the two things were one—we no longer say, "He fought *like* a lion," but, "He *was* a lion in the fight."

Allegory.—Under which head fall Fables and Parables, is an extended Metaphor generally accompanied by Personification.

Example:—Bunyan's *Pilgrim's Progress;* Spenser's *Faerie Queene.*

Personification.—Attributes life to inanimate objects. It speaks of "The *childhood* of a nation," of "a *learned* age" of "the *thirsty* ground," of "*eager* darts," of "*winged* words."

Apostrophe.—Is a Personification accompanied by an address, or an address to an absent person.

Example:—
Ye hills and dales, ye rivers, woods, and plains,
And ye that live and move, fair creatures, tell.

Hyperbole is effective exaggeration.

Example:—
Her eye in heaven
Would through the airy region stream so bright,
That birds would sing and think it were not night.

Antithesis is a contrast of words or thoughts.

Examples:—

Better be first, he said, in a little Iberian village
Than be second in Rome.

Epigram is a short antithesis. It is often of the nature of a proverb.

Examples:—

Some are too foolish to commit follies.
The child is father of the man.

Irony is hidden satire.

Example:—

'Tis pretty, sure, and very probable,
That eyes, that are the frail'st and softest things,
Should be called tyrants, butchers, murderers.

Metonymy.—Metonymy is a figure of rhetoric in which the name of one object is put for another, the two being so related that the mention of one recalls the other.

Examples:—

He writes a good hand (handwriting).
Death fell in showers (bullets).
The kettle boils (water).
The pen is mightier than the sword (intelligence *vs.* force).

Synecdoche occurs where the part is taken for the whole, the species for the genus, the material for the thing made of it, where the person is designated by the most conspicuous trait of his character or the effect he produces.

Thus we may speak of "all hands being at work," of so many "head" of cattle.

Climax.—Climax, or the rhetorical ladder, is the arrangement of a succession of words, or clauses, in such a way that the weakest may stand first; and that each in turn may rise in importance and make a deeper impression on the mind than that which preceded it.

Anti-climax reverses the order: this is often used in humorous writings.

Examples:—I came, I saw, I conquered.

Since concord was lost, friendship was lost, fidelity was lost, liberty was lost—all was lost.

We have petitioned, we have remonstrated, we have supplicated, we have prostrated ourselves before the throne.—*Patrick Henry.*

Alliteration repeats the same sound in words for the purpose of adding to the euphony.

Examples:—

*S*ilently out of the room there *gl*ided the *gl*istening *s*avage,
Bearing the *s*erpent's *s*kin and *s*eeming himself like a *s*erpent,
*W*inding his *s*inuous *w*ay in the *d*ark to the *d*epths of the forest.

***Onomatopœia** emphasizes the meaning by adapting the sound to the sense.

Example from *Cataract of Lodore:*—

And sounding and bounding and rounding,
And bubbling and troubling and doubling,
And grumbling and rumbling and tumbling,
And clattering and battering and shattering.

Euphemism is the form of expression by which bad or dangerous things are spoken of in gracious terms. As an example we say death is "parting" or "falling asleep."

*Name-making; the formation of words in imitation of the sounds made by the things signified: as, buzz, hiss, peewit, etc. It is held by some philologists that all language had its origin in onomatopœia, words formed by this principle being the most natural, and readily suggesting the actions or objects producing the sounds which the words are intended to represent.

Emphasis, or Inversion, adds greatly to the precision as well as vigor of style when temperately used. That is, when the *predicate* or *object* are much more impressive or mentally prominent than the *subject* they may with advantage precede it.

Any special emphasis may justify inversion. It is frequently used to indicate a swift or abrupt action—Commands frequently assume this form and owe to it half their force.

Examples:—

Great is Diana of the Ephesians,
Sweet is the breath of morn.
Low she lies who blessed our eyes.
Silver and gold have I *none.*
Go he shall. Stay not here.
Up goes the fool, and gets sent down again.

FORMS OF WRITTEN ENGLISH

All forms of language composition are either Prose or Poetry; and these in turn are subdivided rhetorically into certain well-recognized special forms. The following classification shows at a glance the most important of these:

I. PROSE

Letter Writing.—Business and public letters, social letters, ceremonial letters and notes.

Narration.—Letters, journals, memoirs, biographies, history, travel, news, fiction.

Description.—Descriptions of external objects, of character and its development, of intellectual processes.

Exposition.—Essays, treatises, editorials, reviews, criticisms.

Argument.—Argumentative essays, debates, briefs, etc.

Persuasion or Oratory.—Orations, addresses, lectures, sermons.

II. POETRY

Epic and Narrative Poetry.—The great epics, metrical romances, metrical tales, ballads, pastorals, idylls, etc.

Dramatic (including all narrative poetry which presents actors as speaking and acting for themselves).—Tragedy, comedy, farce, opera, melodrama, mask, interlude, etc.

Lyric.—Odes, sacred and secular songs, elegy, sonnets, simple lyrics.

Didactic.—Moral essays in verse, satiric poetry, etc.

LETTER WRITING, OR CORRESPONDENCE.

A *letter* is a written communication on any subject from one person to another. In other words, it is written conversation, or "speaking by the pen." Letters deserve very careful attention, for no species of composition is more generally used by all classes of persons. Remember that the letter "bespeaks the person," and that many will judge of a person's character and attainments from his correspondence.

The first endeavor of a writer should be to express himself as easily and naturally as in conversation, though with more method and conciseness.

So, before you begin to write a letter, arrange in your mind the ideas you wish to convey; then express them as if you were talking to the person to whom you are writing.

Divisions of a Letter.—In every business or social letter there are five things to consider: the *heading*, the *introduction*, the *body of the letter*, the *complimentary close*, and the *signature*. Business letters should have an introductory address before the salutation.

The Heading.—The heading consists of the name of the *place* at which the letter is written, and the *date*. If you write from a city like St. Louis, Boston, or New York, give the door

number, the name of the street, of the city, and of the state. If you are at a hotel or a school, its name may take the place of the door number and the name of the street. If in a small country place, give your postoffice address, the name of the county, and that of the state.

The date consists of the month, the day of the month, and the year.

Leave at least one inch vacant on the top of the first page.

Put on the first line, and to the right, your own postoffice *address;* and, either on the same line or on the next, the *date*—that is, the month, day, and year, thus:

25 Endicott Street, Boston, Mass.,
August 6, 1904.

The Introduction.—The introduction consists of the *address*—the name, the title, and the place of business or the residence of the one addressed—and the *salutation.*

The *Salutation* and the *Complimentary Close* should be appropriate to the person addressed. (See list of forms of Salutation and Complimentary Close on page 737).

Titles of respect and courtesy should appear in the address. Prefix *Mr.* to a man's name; *Messrs.* to the names of several gentlemen; *Miss* to that of a young lady; *Mrs.* to that of a married lady. Prefix *Dr.* to the name of a physician, but never *Mr. Dr.; Rev.* to the name of a clergyman, or *Rev. Mr.* if you do not know his christian name; *Rev. Dr.* if he is a Doctor of Divinity, or write *Rev.* before the name and *D. D.* after it.

Salutations vary with the station of the one addressed, or the writer's degree of intimacy with him. Strangers may be addressed as *Sir, Rev. Sir, General, Madam,* etc.; acquaintances as *Dear Sir, Dear Madam,* etc.; friends as *My dear Sir, My dear Madam, My dear Jones,* etc.; and near relatives and other dear friends as *My dear Wife, My dear Boy, Dearest Ellen,* etc. Examples:

Mr. William C. Jones,
Washington, D. C.
Dear Sir:
Your letter, etc.

American Book Co.,
New York City.
Dear Sirs:
Kindly send, etc.

The Body.—Begin the body of the letter at the end of the salutation, and on the *same* line, if the introduction consists of four lines—you may do so even if the introduction consists of but three—in which case the comma after the salutation should be followed by a dash; otherwise, on the line *below.* (See general observations as to subject matter, style, etc.)

The Conclusion consists of the *complimentary close* and the *signature.* The forms of the complimentary close are many, and are determined by the relation of the writer to the one addressed. In letters of friendship may be used *Your sincere friend; Yours affectionately; Your loving son* or *daughter,* etc. In business letters, use *Yours; Yours truly; Truly yours; Yours respectfully; Very respectfully yours,* etc. In official letters use *I am, with respect, your obedient servant; I have the honor to be your obedient servant,* etc.

The complimentary close often forms part of the last paragraph; at other times it stands separately, and then it usually begins about the middle of the line. Example:

Very sincerely,
Mary E. Shattuck.

A married woman should sign her own given name, but indicate her proper title of address; thus:

Mrs. J. F. Martin.

The Superscription, on the outside of the envelope, is the same as the address, consisting of the name, the titles, and the full directions of the one addressed. It should be written very plainly, and include the town, county, state, and country, if it goes abroad.

The number of the postoffice box, or the door number and the name of the street, or the name of the county, may stand at the lower left-hand corner.

Style of Letters.—It makes a considerable difference in our style whether we write as officials or business men, or as individual members of society.

The style sholud be determined in some measure by the nature of the subject, but in a still greater degree by the relative positions of the writer and the person addressed. On important subjects, the composition is expected to be forcible and impressive, on lighter subjects, easy and vivacious; in condolence, tender and sympathetic; in congratulation, lively and joyous. To superiors, it should be respectful; to inferiors, courteous; to friends, familiar; and to relatives, affectionate.

We may, therefore, usefully distinguish letters into three kinds—*official* or *business* letters and *personal* or *social* letters, and *ceremonial letters* or *notes.*

Official or Business Letters.—These include all those written by a person in the capacity of an officer, a professional man, a merchant, a tradesman, etc. They are classed together because they are mainly subject to the same rules.

In writing business letters, the following rules should be observed:

1. Be very *clear,* so that your exact meaning cannot fail to be understood at first sight. Read your letter over with close attention to see that all your thoughts are correctly, fully, and clearly expressed.

2. Take care that the *handwriting* be legible, else you may get *boots* for *books, matches* for *hatchets* or *latches, two ponies* instead of *one hundred pansies.*

3. Be *brief* and to the point; business men have no time to waste.

4. Confine yourself to *strict business.* If you wish to add matters of friendship, it is well to write them on a separate leaf, that the business portion may be separately filed.

5. Write *grammatical and idiomatic* English, and paragraph and punctuate as in other kinds of writing.

Personal and Social Letters.—Under this head may be placed those letters written by any person in his private capacity as an individual. Such letters may be dictated by friendship, by charity or kindness, by politeness, by respect, by gratitude, by self-interest, or by any other reasonable motive.

Among these are the following:

LETTERS OF FRIENDSHIP are such as are dictated by mutual affection between relatives and friends. They should be natural, easy, frank, without the least affectation. "I wish you to open to me your soul, not your library," said Mme. de Sévigné, who wrote exquisitely herself. Such letters may treat of any subject of common interest to the parties concerned. Their language is that of the heart. Kindness, affection, charity, good-nature should dictate, prudence and common sense supervise them.

LETTERS OF CONGRATULATION are written on occasion of the New Year, a birthday, a preferment, or when a friend has met with some uncommon good fortune, and should be dictated by genuine friendship and sincere esteem, and expressed modestly without any exaggerated praise.

LETTERS OF CONDOLENCE.—These require great skill and care. Act like the humane surgeon who touches the wound gently, and only to heal it. If your correspondent knows the sad news already, sympathize sincerely with him. If you are to announce the bad news yourself, prepare the way slowly; state the news as delicately as you can. Express your grief again before you conclude.

LETTERS OF INTRODUCTION OR RECOMMENDATION require special prudence. Think first whether it is proper to write such a letter at all for such a person. Avoid two dangers: do not offend the applicant for a recommendation, do not deceive your correspondent by exaggerated praise of the one recommended.

If the applicant is *worthy* state his merits, express reasonable confidence in him. If he is *unworthy* or doubtfully worthy, give him a letter which he will prefer not to present; for every such letter is an open letter, which the bearer is expected to read before delivering.

A letter of introduction or recommendation should never be sealed, as the bearer to whom it is given ought to know the contents.

LETTERS OF PETITION should be modest and every way moderate. Ingratiate yourself in a manly way; state your reasons briefly but forcibly; show your appreciation of the trouble your correspondent may be put to in consequence of the favor; promise gratitude.

In answering such letters favorably be brief and show your pleasure at rendering the little service asked. In refusing show how reluctantly you do so; give good reasons for it. Express your hope of finding, some other time, a better opportunity of showing your affection or esteem.

LETTERS OF THANKS should never be neglected when a favor has been received. Express your appreciation both of the favor and of the kindness with which it was bestowed. Hope for an opportunity, not of repaying the person, but of showing your gratitude.

Ceremonial Letters and Notes.—Under this heading may be classed notes of *invitation*, *acceptance*, and *regret*, both formal and informal.

Informal invitations, acceptances, and regrets are simply friendly notes written always in the *first* person. They vary in form to suit the occasion. They should be cordial in tone, but brief, and are in better taste when confined to the subject of the invitation, outside items being permissible only under special circumstances which may require their mention.

An informal invitation should never, under any circumstances, be answered in the third person.

Invitation:—

30 Rampart St.,
May 4th, 1917.

Dear Mr. Brooks:

We would be very pleased to have you dine with us on Monday next, the 12th, at seven o'clock, if disengaged.

Cordially yours,
Helen Clements,

Acceptance:

Eastern Point,
April 29th, 1917.

Dear Mrs. Clements:

I will be most happy to dine with you on Monday, the 12th, at seven o'clock.

Faithfully yours,
Arthur Brooks.

Formal notes are always expressed in the third person, and all answers to such should correspond in form and style.

Although invitations to large affairs are usually printed from engraved plates, a few forms are here given, principally to show the correct forms of reply to the several kinds of invitation.

Invitation to a reception:

Mr. and Mrs. Charles L. Harrington
request the pleasure of your company
on Thursday evening, November tenth,
from eight until eleven o'clock,
896 Fifth Avenue.

Acceptance:

Miss Evelyn Hall
accepts with pleasure
Mr. and Mrs. Charles L. Harrington's
invitation for Thursday evening,
November tenth.

Dinner invitation:

Mr. and Mrs. Henry W. King
request the pleasure of
Mr. and Mrs. Mayhew Marbury's
company at dinner
on Tuesday evening, April tenth,
at eight o'clock,
40 Maple Avenue.

Acceptance:

14 West Street,
March 31st, 1917.

Mr. and Mrs. Mayhew Marbury
accept with pleasure
Mr and Mrs. Henry W. King's
invitation to dinner on
Tuesday evening, April tenth,
at eight o'clock.

Additional Suggestions.—Always use good paper and black ink. Decorated or highly colored writing papers are in poor taste. Plain white or slightly tinted paper of medium weight is best.

All letters and notes should be written legibly and neatly, carefully punctuated, and absolutely correct as to spelling.

All letters and notes, with a few special exceptions, require a prompt acknowledgment of receipt, if not an immediate answer.

This is especially the case in business letters and those containing enclosures of any kind.

All letters and notes should be courteous. To inferiors in station be kindly; to superiors, respectful; and to equals, friendly.

All letters and notes asking information should be re-read immediately before answering.

OFFICIAL AND TITLED SALUTATIONS

Titles in the United States are either official or academic.

OFFICIAL TITLES

To the President of the United States, an official letter commences, *Sir.*

Conclusion: *I have the honor to remain your most obedient servant.*

Salutation of a social letter: *My dear Mr. President.*

Conclusion: *I have the honor to remain most respectfully* [or *sincerely*] *yours.*

Inscription on envelope: *President Woodrow Wilson.*

To the Vice-President, an official letter begins, *Sir,* or *Dear Sir.*

Conclusion: *I have, Sir, the honor to remain your most obedient servant.*

Salutation of a social letter: *My Dear Mr. Marshall.*

Conclusion: as given for president.

Inscription on envelope: *The Vice-President, Thomas R. Marshall.*

To a Justice of the Supreme Court, an official letter begins and concludes as in the case of a vice-president.

Salutation of a social letter: *Dear Mr. Justice White,* or *Dear Justice White.*

Conclusion: *Believe me, truly* [or *most sincerely*] *yours,* etc.

Inscription on envelope: *Mr. Justice Edward D. White.*

To a Senator, an official letter begins and concludes as to a vice-president.

Salutation of a social letter: *My Dear Senator Lewis.*

Conclusion: as given for a justice.

Inscription on envelope: *Senator Hamilton Lewis* or *To the Hon. Hamilton Lewis.*

To a Member of the House of Representatives, an official letter begins as to a senator.

Conclusion: as in the case of a vice-president.

Salutation of a social letter: *My dear Mr. Clark.*

Conclusion: as given for a justice.

Inscription on envelope: *Hon. Champ Clark.*

To a Member of the Cabinet, an official letter begins and concludes as to a vice-president.

The salutation and conclusion of a social letter are as in the case of a member of the House of Representatives.

Inscription on envelope: *Honorable Robert Lansing, Secretary of State.*

To the Governor of a State, an official letter begins: *Sir.*

Conclusion: *I have the honor, Sir, to remain your obedient servant.*

A social letter begins: *Dear Governor McCall* or *Dear Mr. McCall.*

Conclusion: *Believe me, truly* [or *most sincerely*] *yours.*

Inscription on envelope: *Governor* [or *Hon.*] *Samuel W. McCall.*

To a Mayor, an official letter begins: *Sir* or *Your Honor.*

Conclusion: Same as a governor.

Social letter begins: *My dear Mayor Rockwood* or *Dear Mr. Rockwood.*

Conclusion: Same as a governor.

Inscription on envelope: *His Honor the Mayor of Cambridge, Wendell D. Rockwood.*

CLERICAL TITLES

The Pope—*His Holiness Pope Benedict XV.*

To a Roman Catholic Archbishop, an official or a social letter begins: *Most Reverend and Dear Sir.*

Conclusion: *I have the honor to remain your humble servant.*

Inscription on envelope: *The Most Reverend John J. Keane, Archbishop of Dubuque, Iowa.*

To a Cardinal, whether official or social, a letter begins: *Your Eminence.*

Conclusion: as to an archbishop.

Inscription on envelope: *His Eminence Cardinal Gibbons.*

To a Roman Catholic Bishop, either an official or a social letter begins: *Right Reverend and Dear Sir.*

Conclusion: as to an archbishop.

Inscription on envelope: *To the Right Reverend Philip J. Garrigan, Bishop of Sioux City, Iowa.*

To a Protestant Bishop, an official letter begins as in the case of a Roman Catholic bishop. A social letter begins: *Dear Bishop Lawrence.*

Conclusion: *I have the honor to remain your obedient servant,* or *I remain respectfully* or *sincerely yours.*

Address on envelope: The same as to a Roman Catholic bishop.

To an Archbishop of the Anglican Church, an official letter begins: *My Lord Archbishop, may it please your Grace.*

Conclusion: *I remain, My Lord Archbishop, your Grace's most obedient servant.*

Salutation of a social letter: *My dear Lord Archbishop.*

Conclusion: *I have the honor to remain, my dear Lord Archbishop.*

Inscription on envelope: *The Most Rev. His Grace the Archbishop of York.*

To an Anglican Bishop, an official letter begins: *My Lord.*

Conclusion: *I have the honor to remain your Lordship's obedient servant.*

Salutation of a social letter: *My Dear Lord Bishop.*

Conclusion: *I have the honor to remain, my dear Lord Bishop, faithfully yours.*

Inscription on envelope: *To the Right Rev. the Lord Bishop of Oxford.*

ENGLISH TITLES OF ROYALTY, NOBILITY AND OFFICE

The following list illustrates the various titles used for the different ranks among individuals either in the complimentary address or superscription on the envelope:

1. *In Letters or Conversation.*
2. *The Directions of Letters.*

The Royal Family

The King—

1. Sir; Most Gracious Sovereign; May it please your Majesty.
2. To the King's Most Excellent Majesty.

The Sons and Daughters, Brethern and Sisters of Sovereigns—

1. Sir, or Madam, May it please your Royal Highness.
2. To His Royal Highness the Prince of Wales.

To Her Royal Highness the Duchess of Cambridge.

Other Branches of the Royal Family—

1. Sir, or Madam, May it please your Highness.
2. To His Royal Highness the Duke of Cambridge; or, To Her Highness the Princess Mary of Cambridge.

The Nobility

A Duke, or Duchess—

1. My Lord, or My Lady, May it please your Grace.
2. To His Grace the Duke of Bedford; or, To Her Grace the Duchess of Bedford.

A Marquis, or Marchioness—

1. My Lord, or My Lady, May it please your Lordship, or May it please your Ladyship.
2. To the Most Noble the Marquis, or Marchioness, of Westminister.

An Earl or Countess—The same.

To the Right Honorable the Earl, or Countess, of Shrewsbury.

A Viscount or Viscountess—
1. My Lord, or Madam, May it please your Lordship, or, May it please your Ladyship.
2. To the Right Honorable Viscount, or Viscountess, Lifford.

A Baron or Baroness—The same.
To the Right Honorable, the Lord Wensleydale, or The Lady St. John.

The Widow of a Nobleman is addressed in the same style, with the introduction of the word Dowager in the superscription of her letters.
To the Right Hon. the Dowager Countess of Chesterfield.

The Sons of Dukes and Marquises, and the Eldest Sons of Earls, have, by courtesy, the titles of Lord and Right Honorable; and all the daughters have those of a Lady and Right Honorable.

The Younger Sons of Earls, and the Sons and Daughters of Viscounts and Barons, are styled Honorable.

Official Members of the State

A Member of His Majesty's Most Honorable Privy Council—
1. Sir, or My Lord, Right Honorable Sir, or My Lord, as the case may require.
2. To the Right Honorable ——,* His Majesty's Principal Secretary of State for Foreign Affairs.

Ambassadors and Governors—
1. Sir, or My Lord, as the case may be; May it please your Excellency.
2. To his Excellency the French (or other) Ambassador.
3. To his Excellency ——,* Lieutenant General and General Governor of that part of the United Kingdom called Ireland.

Judges—
1. My Lord, May it please your Lordship.
2. To the Right Honorable ——, Lord Chief Justice of England.

The Lord Mayor of London, York, or Dublin, and the Lord Provost of Edinburgh, during office—The same.
1. My Lord, May it please your Lordship.
2. To the Right Honorable ——, Lord Mayor of London. To the Right Honorable ——, Lord Provost of Edinburgh.

The Lord Provost of every other town in Scotland is styled Honorable.

The Mayors of all Corporations (excepting the preceding Lord Mayors), and the Sheriffs, Aldermen, and the Recorder of London, are addressed Right Worshipful; and the Aldermen and Recorders of other Corporations, and the Justices of the Peace, Worshipful.

The Parliament

House of Peers—
1. My Lords, May it please your Lordships.
2. To the Right Honorable the Lords Spiritual and Temporal, in Parliament assembled.

House of Commons—
1. May it please your Honorable House.
2. To the Honorable the Commons of the United Kingdom of Great Britain and Ireland.

The Speaker of Ditto—
1. Sir, or Mr. Speaker.
2. To the Right Honorable James W. Lowther, the Speaker of the House of Commons.

A Member of the House of Commons Not Ennobled—
1. Sir.
2. To Thomas Hughes, Esq., M.P.

NARRATION

Narration is a species of composition which relates the particulars of a real or fictitious event in the order of their occurrence. In a wider meaning, narration is the statement of successive facts. In a story or drama the *plot* is the series of incidents which form the skeleton of the story.

If the subject deals with real facts, as in biography, or history, or news, the rule of *fidelity* to the truth is essential. It requires that not only the main facts shall be true as they are narrated, but also that all the striking and important details be faithfully stated as they are known to have occurred or happened.

Biography.—After the *letter*, the simplest form of composition is biography. The order of events from youth to age is established.

This style of composition is strongly to be recommended for beginners. It affords excellent practice for all. It promotes a habit of putting things in order.

Outline scheme of biography:—
1. When was he born?
2. Where was he born?
3. Who were his parents?
4. Where was he educated?
5. Whom did he marry?
6. What was his profession?
7. What great work did he do?
8. When and where did he die?
9. Where was he buried?

Answer each question in a complete sentence.

You have nine statements in chronological order.

Each of these can be expanded into one or more paragraphs.

Fiction and Drama.—If the composition is a story or drama, the principal requirements involve the following:

The story should develop one or more of the following: plot, situation, character.

The story should have interest.

1. It should begin attractively and as directly as possible.
2. It must move, and not simply "mark time."
3. It may be made effective by dramatic situations and turning points.
4. It may use description, but the description must be closely connected with the story and must not hinder the movement.
5. It should discriminate in the number and the importance of details.
6. It may make effective use of suspense and suggestion.
7. It should have no inconsistency in the speech or the actions of the characters.
8. It should have an effective ending.

News, or the Newspaper "Story," is another very important form of narrative. The newspaper is the great popular educator of the day, and in its columns are found not only excellent examples of vivid and telling narratives, but frequently excellent types of spontaneous writing.

News and news reporting require accuracy, clearness, brevity, and a style that either charms, or compels interest. Indeed, it too frequently happens that to secure the element of interest practically all else is sacrificed.

Reporting and news writing are best learned by careful study of the daily papers, and from constant practice. Shorthand is an invaluable

*Here write the name, and specify the title or rank of the person addressed, as "The Right Honorable the Earl of Wimbourne."

aid in securing the exact words of the speaker if the news takes the form of an interview, or report of a public address or meeting.

The relation of the "facts" and "story" may be illustrated in the following:

Report of exact words of the speaker:—

"*I assure you, my* friends, that *I* for *my* part, *will* do all *I* possibly *can* to resist *this* measure. *You know* that *I have* always been opposed to it; as recently as *yesterday I spoke* against it *here* in *this* very hall. *Do you* think that the people of this country *will* tolerate such injustice? *I am* sure they *will* not."

How the newspaper report appeared:—

He assured his friends that *he* for *his* part *would* do all *he* possibly *could* to resist *that* measure. *They knew* that *he had* always been opposed to it; as recently as *the day before he had spoken* against it *there* in *that* very hall. *Did they* think, he asked, that the people of this country *would* tolerate such injustice? *He was* sure they *would* not.

EXPOSITION

Exposition is a form of composition designed to explain. Its important characteristic is clearness, and it, therefore, makes large use of illustration.

The main points may be stated in various ways in order to make them clear.

Essays and editorials are among the best known forms of exposition.

Essay.—An *essay* is a short composition upon any subject. The subject may be of any kind whatever, one fit for treatment, and with great fulness, in any of the species of discourse described above, or one without sufficient dignity for such treatment. No other species of writing ranges over so wide and varied a field of topics—nothing less than that of all others combined—and none other allows such freedom and diversity in the handling.

In *style of thought* the essay may be dreamy and semi-poetical, and charm by its beauty, it may be simply instructive or critical, it may blaze with its brilliancy, sting with its satire, convulse with its humor, convince with its logic, inflame with its appeal and move to instant duty. The author may wander off in leisurely excursions to the right and the left, and load his pages with gleanings by the way; or, like the orator, he may keep his eye on the point he would reach, and move, with the directness of an arrow's flight, toward it.

The *style of expression* should fit the thought, and October woods are not more varied in color than this department of literature in utterance.

Outline of the Essay.—1. Give a clear definition of the subject or proposition to be discussed, amplified, paraphrased, or explained.

2. Set out the reason for, or the truth of, the proposition.

3. Add the confirmation of further proofs, including demonstration of the unreasonableness of the contrary.

4. Illustrate the truth of the proposition by comparison or analogy from nature or art.

5. Give direct examples or instances to corroborate the truth.

6. Quote the testimony of standard authors.

7. Conclude by summing up, with pertinent observations.

Remember that all this working to a formula is only a training in the habit of clear thinking —a mental discipline.

When you can do without the formula, and not till then, you will begin to be a writer.

Editorials are, in point of fact, simply little essays, usually following closely the news or issues of the day. Their function is to elucidate, summarize, inform, persuade, or merely comment. In their highest form they are to prose writing what the sonnet is to verse; but it must be confessed that numerous editorials are so completely dominated by the so-called "editorial policy" of newspaper owners, or colored by one of the various hues of partisanship, that their otherwise beneficent influence and power are largely neutralized.

Description.—We mean by a *description* the delineation of some object or scene. Narration deals with successive facts; description with objects that exist at the same time. We rarely find any literary production of great length which is entirely descriptive; but descriptions are often introduced into narratives with happy effect.

Sometimes they serve the purpose of making the narration impressive, by moving the passions of the reader. At other times they are intended to make the events more intelligible. Thus we have seen that some narratives of battles are hard to follow because the writer has neglected to give us a clear description of the battle-field.

Descriptions frequently serve as ornaments, affording an agreeable variety to the narration, and presenting scenes of striking interest to the imagination.

RULES.—The governing rules in description are the following:

1. In every good description a point of view should be established.

2. The description should be governed by the point of view.

3. The general outline of the picture should, ordinarily, be given first.

4. The number of details should be so few and so insignificant as to make a vivid picture.

5. The order of the details should be determined by the character of the object described.

Argument.—This form of composition is designed to prove the truth or the falsity of a proposition.

A *brief* is a summary of an argument showing the development of the argument by a series of headings and sub-headings.

The first step in the argument should be to define the terms of the proposition or to determine the facts in the case.

State reasons to establish facts.

The conclusion should be warranted by the premises.

Illustrations may be used effectively, but not conclusively.

Analogy should be used for illustration, not as a basis for conclusions.

Arguments should usually be arranged in the order of their strength, the strongest last.

POETRY AND POETICS

Poetry is usually classified as epic, lyric, dramatic, and didactic.

Epic Poetry is that which deals with the life and adventures of some real or mythic personage, called a hero.

1. The *great epic* is considered the highest effort of poetic talent, on account of the loftiness of its conceptions, the dignity of its character, and the difficulty of its execution. Few

epic poems have gained general admiration. Those most highly prized are Homer's *Iliad* and *Odyssey;* Virgil's *Æneid;* Milton's *Paradise Lost;* and Tasso's *Jerusalem Delivered.*

2. The *Metrical Romance* differs from the great epic in its theme, which is less serious; its metre, which is lighter; and its control of events, which is mainly human; the love element is more prominent in this form of the epic. Examples: Scott's *Marmion* and *The Lady of the Lake.*

3. The *Tale* is a simple form of narrative poetry telling a complete story. Examples: Chaucer's *Canterbury Tales;* Tennyson's *Enoch Arden.*

4. The *Ballad* is a direct, rapid, and condensed story, having peculiarities of phrase and poetic accent. Examples: *Chevy Chase;* Coleridge's *Ancient Mariner.*

5. *Pastorals* and *Idylls* have a great deal of description, often of simple country scenes, mingled with the narrative. Examples: Goldsmith's *Deserted Village;* Tennyson's *Idylls of the King.*

Dramatic poetry tells a story by means of characters speaking and acting in such a way as to develop a plot. The drama is divided into acts, often five, the fifth act showing the results of the plot which has been developing.

The classes of dramatic poetry are tragedy and comedy.

Tragedy deals with the grave situations and problems of life and engenders in the spectator noble emotions.

Comedy deals with the pleasanter and more trivial side of life and chooses its subjects from everyday follies, accidents, or humors.

Lyric poetry expresses the deepest emotions of sentiment of the poet. The lyric, as the word suggests, was originally designed to be sung to the music of the lyre.

Lyric poetry includes five classes, as follows: *Song* may be either sacred or secular.

The *Ode* is the loftiest form of lyric, and expresses great range and depth of feeling. This range of emotion often varies the metre. Examples: Tennyson's *Ode on the Death of the Duke of Wellington;* Lowell's *Commemoration Ode.*

The *Elegy* laments the fleeting condition of human affairs. Examples: Gray's *Elegy Written in a Country Churchyard;* Milton's *Lycidas;* Tennyson's *In Memoriam.*

The *Sonnet* is a short poem of fourteen iambic pentameter lines, and had originally a prescribed arrangement of rhyming lines. The great English sonnet writers are Shakespeare, Milton, Wordsworth, and Mrs. Browning.

Many lyrics have none of the special aims already mentioned. These may be called *Simple* lyrics. Example: Burns's *To a Daisy.*

Didactic verse is not the highest type of poetry. Its aim is not to give pleasure, but to instruct. Example: Pope's *Essay on Man.*

POETICS

Poetry differs from prose in three particulars: in its *purpose,* in its *style,* and in its *form.*

The chief object of poetry is to give pleasure. Of all literature it is the most spontaneous because addressed particularly to the feelings.

It has its own diction and imagery, conforming to the order, gradations and subtleties of its thought. Like other forms of genius, too, it is permitted certain liberties and variations of language or expressions in order to avoid monotony and maintain the life and music of the verse. These are more strictly rhetorical, however, and next in importance to the poetic *content* is poetic *form.*

By poetic *form* we mean the mould and measure whereby, in English, poetry gets itself into the expression adapted to produce its designed effect.

Metre.—All impassioned language, as in eloquence for instance, tends to fall into a more or less regular rhythmic swing. In poetry, which is both impassioned and imaginative, this rhythm is timed to definite lengths and called *metre,* which is the Greek word for measure.

The unit of poetic measure is the foot. A foot is a combination of syllables, two or three distinguished, after the Greek, as long and short, but more truly accented and unaccented, because our syllabic values, unlike the Greek, are more accentual than quantitative. A variety of poetic feet are employed in English, whose names and values are derived from Greek prosody.

Poetic Feet.—For brevity of description a notation is used to designate the foot: the sign (—) for a long, and (⏑) for a short syllable. The kinds of feet in most common English use, here marked by their signs and illustrated by a word, are: Iambic or Iambus, a short and a long (⏑ —, e, g, forbid); Trochaic or Trochee, a long and a short (— ⏑, e. g. lightly); Spondaic or Spondee, two longs (— —, e. g. all day); Anapestic, two shorts and a long (⏑ ⏑ —, e. g. arabesque); and Dactylic, a long and two shorts (— ⏑ ⏑, e. g. silently).

Other feet, such as Tribrach, three shorts (⏑ ⏑ ⏑, e. g. rapidly); Amphibrach, short long short (⏑ — ⏑, e. g. tremendous), and Amphimacer, long short long (— ⏑ —, e. g. undismayed), are used less frequently, and only as blends with other measures.

Verse.—The first combination of poetic feet results in the verse or line, somewhat analogous to the clause in a prose sentence. The word verse means by derivation a *turning;* perhaps because where it reaches a certain designed length the writer turns back and begins a new line. The kinds of verse employed are named by Greek names according to the number of feet they contain; and along with this, if the measure is fully described, is named the kind of foot.

The same notation as given above is kept up through the line, the feet being separated by an upright line. Thus, taking the Iambic foot as unit, we note: Monometer, one-measure, or one foot long (⏑ —); Dimeter, two-measure (⏑ —|⏑ —); Trimeter, three-measure (⏑ —|⏑ —|⏑ —); Tetrameter, four-measure (⏑ — | ⏑ — | ⏑ — | ⏑ —); Pentameter, five-measure (⏑ —|⏑ —|⏑ —| ⏑ —|⏑ —); and Hexameter, six-measure, (⏑ —|⏑ —|⏑ —|⏑ —|⏑ —|⏑ —). English names are sometimes used, as 8 and 7, or fourteeners.

A few poetic lines may here be given, with their notation, by way of illustration:

I wan|dered lone|ly as | a cloud
(Iambic tetrameter)

Heard the | lapping | of the | water
(Trochaic tetrameter)

This is the | forest pri|meval; the | murmuring | pines
and the | hemlocks
(Dactylic hexameter)

Oh, young | Lochinvar | is come out | of the West
(Anapestic tetrameter)

One more un|fortunate
(Dactylic dimeter)

This was|the no|blest Ro|man of | them all
(Iambic pentameter)

At some place within a long line, pentameter or hexameter, occurs a natural pause, called the *cæsura*. The continual varying of the place of the cæsura is one means of breaking up the monotony to which blank verse (Iambic pentameter unrhymed) tends.

Stanzas.—The next step of procedure as the combination of poetic elements goes on from the single verse, is some form of *stanza* structure.

The simplest approach to the stanza, employed principally in what is called Heroic verse, is the couplet (also called the Heroic couplet), two lines, Iambic pentameter, rhymed, and generally pausing at the end of the second line. They form only partially a stanza, however, because these couplets go on, according to the requirements of the thought, to group themselves in paragraphs after the manner of prose. Pope is the great master of the heroic couplet.

Sometimes, if the lines are long, a poem is made up of couplet stanzas, as in Tennyson's *Locksley Hall.*

There are certain standard stanza structures, such as the Elegiac stanza, four lines Iambic pentameter, rhymed either in pairs or alternately, of which Gray's *Elegy* (rhymed alternately) is the type; the Ballad stanza, four lines Iambic pentameter and trimeter alternating, with second and fourth lines rhymed together, sometimes also first and third; various hymn stanzas, designated Long Metre (L. M.), Common Metre (C. M.), Short Metre (S. M.), 8 and 7, 6 and 4, etc., which can be studied in any hymn-book; and most elaborate of all, the Sonnet, a fourteen-lined stanza which is also a whole poem, with a rather intricate rhyme scheme.

Generally speaking, however, the liberties and varieties of stanza structure, as to kind of measure, length of line and stanza itself, combination of long and short line, and rhyme scheme, is almost unlimited.

Rhyme.—A new poetic element enters into the stanza: the element of *rhyme.* The most prominent regulative feature of English lyric verse, perhaps, is the rhyme by which recurring periods are grouped. Technically speaking, there are three kinds of rhyme, only one of which plays an important, or at least essential part, in modern English poetry.

1. *Beginning rhyme*, or alliteration (e. g. the mother of months), which in Anglo Saxon poetry was the main principle of verse, but is now introduced only furtively and delicately.

2. *Middle rhyme*, or assonance, wherein only the vowels rhyme (e. g. blarney, charming), which is introduced with even more caution than alliteration.

3. *End-rhyme*, which is so constant and essential a principle of the stanza that it needs no further definition here.

In the skillful management and disposition of the end-rhymes, to produce its poetic effects without monotony or undue obstrusiveness, there is room for the finest poetic taste and workmanship. On single rhymes (e. g. face, embrace), double rhymes (e. g. rally, sally), and triple rhymes (e. g. pentameter, sham metre), which explain themselves, there is no occasion to enlarge.

The arrangement of lines in a stanza is indicated, in brief notation, by letters of the alphabet. Thus *a a b b* indicates a four-line stanza in which the first and second lines rhyme, and the third and fourth; *ab ab*, a stanza in which the rhymes alternate; *a b b a*, a stanza like that of Tennyson's *In Memoriam*, in which this arrangement is reversed.

In this way, with the use of the other notation mentioned, a complete description of poetic construction, from foot to stanza, may be made in very short space.

How Rhythm is Applied.—Lyric poetry, of which the type is the song; was originally designed to be associated with music. It is in this class of poetry, especially, that the stanza form and the rhyme system prevail; but besides the song and the ballad, which most suggest musical accompaniment, there are the ode, the elegy, the sonnet, the didactic poem, and many others, with which music, except in the natural melody of the verse, has little to do.

In epic poetry, the vehicle of great national deeds and ideals, and the enshrining of deep religious and moral truths, the verse employed is generally blank verse (i. e. unrhymed verse), in paragraphs instead of stanzas, and generally Iambic pentameter. For less sublime or universal purposes, however, this epic class has been enlarged to include narrative and romantic poetry, often rhymed, as in Chaucer's *Canterbury Tales* and Scott's *The Lady of the Lake;* and sometimes in stanzas, as in Spencer's *Fairy Queene.*

Dramatic poetry, designed for representation on the stage, and written in blank verse of a less severe and rigid artistic kind than in the epic, is modeled more after the natural rhythm of impassioned speech. The range and tone of such dramatic verse is very generous and elastic; from the free and colloquial, as in Browning's dramatic monologues, up to the so-called closet drama, designed to be read rather than played, wherein the artistic demands are as subtle and exacting as in the epic, and the sentiment generally more intense.

While, therefore, the ancient classification remains fundamental and true, the modern art of printing and the discontinuance of the custom of reading aloud, have operated to enlarge the scope of poetry within these elemental lines till every requirement of impassioned and imaginative utterance is freely open to it, in vital and enduring forms.

WORDS AND PHRASES FROM THE MODERN FOREIGN LANGUAGES.

Including proverbs, maxims, mottoes, idioms, allusions, references, and numerous terms used in law, literature, cookery, the drama, social life, and everyday affairs.

KEY TO PRONUNCIATION

ä, as in farm, father; *a*, as in ask, fast; *a*, as in at, fat; *ā*, as in day, fate; *å*, as in care, fare; *e*, as in met, set; *ē*, as in me, see; *ẽ*, as in her, ermine; *i*, as in pin, ill; *ī*, as in pine, ice; *o*, as in not, got; *ō*, as in note, old; *ȯ*, as in for, fought, *oo*, as in cook, look, *ōō*, as in moon, spoon; *u*, as in cup, duck; *ū*, as in use, amuse; *ů*, as in fur, urge; *th*, as in the, though; *y*, as in yet, you; *ow*, as in cow, now; *ng*, as in sing, ring; *ch*, as in church, choose.

FOREIGN SOUNDS

ȯ cannot be exactly represented in English. The English sound of *u* in *burn* is perhaps the nearest equivalent to *ȯ*. *ü* cannot be exactly represented in English. The English sound of *u* in *luke* and *duke* resembles the original sound of *ü*. N represents the nasal tone (as in French) of the preceding vowel, as in encore (*äN-kôr'*). K represents *ch*, as in German *ich, ach*. *zh*, sound of *s* in *pleasure*. *j* and *g* before *i* or *e* in Spanish, strongly aspirated *h*.

Phrases not designated are from the French; those from other languages are distinguished thus: (Ger.)—German; (It.)—Italian; and (Sp.)—Spanish.

a bas (*à bä'*), down.
a bas le traître (*à bä'le tretr'*), down with the traitor.
a beau jeu beau retour (*à bō zhů' bō retōōr'*), one good turn deserves another.
a bon chat, bon rat (*à bôN rà'*), (to a good cat, a good rat), well matched; set a thief to catch a thief.
a bon marché (*à bôN mȧr shā'*), cheap.
abonnement (*à bôn mäN'*), subscription.
a bras ouverts (*à brȧzōō ver'*), with open arms.
abrégé (*à brā zhā'*), abridgment.
absence desprit (*ȧp sȧNs des prē'*), absence of mind.
a causa persa, parole assai (It.), (*ä kä' ōō zä per'sa, pä rō'lääsä'ē*), when the cause is lost, there is enough of words.
accueil (*à ků'ē*), reception; greeting; welcome.
à charge (*à shȧrzh'*), at expense.
à cheval (*à she vȧl'*), on horseback.
à compte (*à kôNt'*), on account.
à corps perdu (*à kôr per dū'*), headlong; neck or nothing.
à coup sur (*à kōō sůr'*), with certainty; surely.
à couvert (*à kōō ver'*), under cover, protected, sheltered.
acqua Tofana (It.), (*ä kwä tō fä'nä*), a subtle poison.
à demi (*à de mi'*), by halves.
à dessein (*à de sȧN*), designedly.
à deux mains (*à dö mȧN'*), (for both hands), having a double office or employment.
adieu (*à dēö'*), (I commit you to God), good-bye.
adieu, la voiture, adieu, la boutique (*à dēö', lȧ vwä tür', à dēö lȧ bōō tēk'*), (good-bye, carriage; good-bye, shop), all is over.
à discrétion (*à dēs krā sēôN'*), at discretion, unrestrictedly.
à droite (*à drwȧt'*), to the right.
affaire d'amour (*à fer dȧ mōōr'*), a love affair.
affaired'honneur (*à fer dō nŏr'*), an affair of honor, a duel.
affaire du coeur (*à fer dū kör'*), an affair of the heart, a love affair.
affiche (*à fēsh'*), a placard; a notice; bulletin.
affreux (*à frö'*), frightful.
à fin (*à fȧN*), to the end or object.
à fond (*à fôN'*), to the bottom; thoroughly.
à forfait (*à fôr fe'*), by contract, by the job.
à gauche (*à gōsh'*), to the left.
à genoux (*à zhe nōō*), on one's knees.
agneau (*ä-nyō*), lamb.
à grands frais (*à grȧN fre'*), at great expense.
a haute voix (*à ōt vwȧ*), loudly; openly.
a huis clos (*à wē klō'*), (with closed doors), secretly; in camera.
aide-toi, et le ciel t' aidera (*ed twȧ', ä le sēel ted rȧ'*), help yourself, and Heaven will help you.
air distingué (*er dēs tȧN gā'*), a distinguished appearance.
air noble (*er nôbl'*), a distinguished, patrician air, manner, or presence.
a la (*à lȧ*), **au** (*ō*), **aux** (*ō*).—With; according to; after the manner of; as *huitres aux champignons*, oysters with mushrooms.

If a dish is cooked, or served, or made, with anything as an ingredient or garnish, the dish may be said to be "*á la*" that substance. So it may be possible to ascertain the meaning of phrases not given below by looking elsewhere in the vocabulary under the word used with the words "*a la.*"

à l'abandon (*à lȧ bȧN dôN'*), disregarded, uncared for.
à la béarnaise (*à lȧ bā-ȧr-nāz'*).—With a sauce of tarragon vinegar in which shallots have been boiled till it is reduced, then combined with egg yolks and butter, and beaten in a bain-marie, then seasoned with red pepper and lemon juice.
à la béchamel (*à lȧ bā-shā-mel'*).—After the fashion of Béchamel (a French gastronomer); said of a sauce (see Bechamel); also prepared or served with this sauce.
à la belle étoile (*à lȧ be lā twȧl'*), under the canopy of Heaven; in the open air.
à la Bercy (*à lȧ bȧr-sē'*).—Served with béarnaise sauce, stuffed green pepper and stuffed tomato.
à la bigarade (*à lȧ bē-gȧ-rȧd'*).—Flavored with (Seville) orange juice or peel.
à la bonne femme (*à lȧ bôn fȧm*).—Of, or in the style of, the housewife; specifically said of a kind of maigre soup made with fish, bouillon, legumes, and an assortment of vegetables.
à la bonne heure (*à lȧ bô nör'*), well-timed, in good time; favorably; good.
à la bordelaise (*à lȧ bôr-de-lāz'*).—With Bordeaux wine; said of various preparations containing it; as of a sauce, with garlic, shallots, or onions, chopped mushrooms, and a piece of marrow; also with sauce a la bordelaise.
à la bourguignotte (*à lȧ boor-gē-nyot*).—Generally prepared with the addition of red wine of Burgundy, or of Bordeaux, or of the Midi (*i.e.*, meridional provinces of France). At Bordeaux, or when made elsewhere with Gironde wine, the dish would be *à la bordelaise.*
à la caledo'nian (*à lȧ*).—Boiled slowly in plain water and then baked with dressing of butter, chopped parsley, and a little lemon juice; said of finnan haddie when so cooked.
à la Camerani (*à lȧ kä-mä-rä'nē*).—After the fashion of Camerani; said of a kind of rich chicken-liver soup.
à la campagne (*à lȧ käN pänyˊ*), in the country.
à la carte (*à lȧ kärt'*), by the card.
à la Chateaubriand (*à lȧ shȧ-tō-brē-äN'*).—With maître d'hotel butter.
à la chevreuil (*à lȧ she-vrů'y'*).—Served with a savory sauce; said of fillets of beef.
à la chipolata (*à lȧ chē-pō-lȧ'tä*).—Containing an addition of the strongly flavored Italian sausages, or the mince with which they are filled.
à la chiffonade (*à lȧ shē-fo-nädˊ*).—See chiffonade.
à la cocotte (*à lȧ kō-kot'*).—Baked (as eggs) in a cocotte, with butter and cream, or with cheese, or the like, and served in a cocotte.
à la crapaudine (*à lȧ krä-pō-dēn'*).—Like a crapaudine (the flat piece of iron on which a grate pivot rests;) said of grilled chicken, pigeon, etc., when prepared by boning, removing the legs and wings, and pressing flat.
à la Créole (*à lȧ krā-ōl*).—With tomatoes.
à la Croissy (*à lȧ krwä-sē'*).—Containing carrots in quantity, or at least strongly flavored with them; said specifically of a puree of onions, carrots, turnips, and parsnips stewed in coulis. According to others, containing turnips in quantity, or strongly flavored with them.
à la daube (*à lȧ dōb*).—Stewed in daube; said specifically of dishes cooked with small square pieces of salt pork, the round slices of carrots, glaced onions, and turnips.
à la Dauphiné (*à lȧ dō-fē-nā'*).—With various vegetables, spinach, lettuce, leek, onions, sorrel, beets, etc.; said of a kind of soup.
à la Dauphinoise (*à lȧ dō-fē-nwäz'*).—Generally, sauced over with a thick sauce (or with egg yolk), breadcrumbed, and then fried.
à la dérobée (*à lȧ dā rō bā*), stealthily.
à la diable (*à lȧ dē-ä'bl*).—Deviled.
à la faveur (*à lȧ fȧ vör'*), by the favor of.
à la financière (*à lȧ fē-nȧN-syȧr'*).—With extract of truffles (literally, after the style of a financier); said

of a variety of espagnole sauce, and of dishes served with it.

à la Flamande (*ä lä flä-mäNd'*).—Containing cabbage, but more particularly Brussels sprouts, and, usually turnips and carrots cut in big slices.

à la Florentine (*ä lä flō-rän-tēn'*).—See à l'Italienne.

à la Francaise (*ä lä fräN sez*), in French fashion.

à la Génevoise (*ä lä zhä-ne-vwäz'*).—Cooked with champagne; said of certain dishes of fish.

à la godiveau (*ä lä gō-dē-vō*).—With balls made of mincemeat, usually of veal.

à la Grecque (*ä lä grek'*), after the Greek fashion.

à la Holstein (*ä lä hōl'stīn*).—Fried, and served with a fried egg, sardelles, capers, pickled beets, and pickles, and sometimes scraped horse-radish.

à la Jardinière (*ä lä zhär-dē-nyär'*).—Made with a typical collection of cooked vegetables, as soups, ragoûts, and removes. See jardinere.

à la Julienne (*ä lä zhü-lyen'*).—With various vegetables sliced in strips, as carrots, turnips, leeks, onions, celery, lettuce, tarragon, sorrel; said especially of a kind of rich stock soup. Also said of potatoes cut in very slender strips and fried crisp floating in hot fat.

à l'Algérienne (*ä läl-zhā-rē-en'*). Cooked with slices of raw ham; said of a preparation of fowl.

à la Languedoc (*ä lä läNg-dok'*).—Cooked with or in olive oil; with olive oil.

à l'Allemande (*ä läl-mäNd'*).—Having a German provincial peculiarity of preparation, as a garnish of sauerkraut, prunes stewed in wine, quenelles of potatoes, etc.

à la Loren'zo (*ä lä*).—Made of minced crab meat, put on toast spread with anchovy paste, then all covered with parmesan cheese and bread crumbs, buttered, browned in the oven, and served.

à l'Alsacienne (*ä läl-sä-syen'*).—With pork and frankfurters; also with onions and pork.

à la lyonnaise (*ä lä lē-ō-nāz'*).—With flaked or sliced fried onions; as, potatoes *à la lyonnaise*, or lyonnaise potatoes; sauce *à la lyonnaise*, or Lyons sauce, that is, espagnole sauce with flaked onions fried in oil.

à la macedoine (*ä lä mä-sä-dwän'*).—Made with or of a typical collection of green vegetables, mostly in white sauce; also applied to collections of ripe fruit imbedded in jellies, etc.

à la Maintenon (*ä lä maN-te-nôN'*).—A term variously used to designate a mode of cooking mutton or lamb chops; as, (*a*) wrapped in caul; (*b*) garnished with cockscombs and truffles; (*c*) served with a soubise; (*d*) served with financière sauce; (*e*) served with d'Uxelles sauce, etc.

à la maitre d'hôtel (*ä lä mā'tr dō-tel'*).—Prepared by a substantial, but homely, modest sort of cooking. Also served with maitre d'hotel butter.

à la Marengo (*ä lä mä-ren'gō*).—With some garlic and oil.

à la Marseillaise (*ä lä mär-sāy-āz'*).—With Marsala wine.

à la Ma'ryland (*ä lä*).—With a sauce of butter and cream, with or without wine. It is like à la Newburgh, but less rich.

à l'Américaine (*ä lä mä rē ken'*), after the American fashion.

à la Meyerbeer (*ä lä mā-ûr-bâr'*).—Shirred and served with broiled kidney and truffle sauce; said of eggs.

à la Milanaise (*ä lä mē-lä-näz'*).—See à l'Italienne.

à la mode (*ä lä môd'*), in the fashion; according to the custom or fashion.

à la mode de Caën (*ä lä mōd de käN*).—A term used to designate tripe prepared with vegetables, leeks, wine cognac, etc.

à la Napolitaine (*ä lä nä-pō-lē-tän'*).—See à l'Italienne.

à la neige (*ä lä nāzh'*).—In some form that suggests snow, as with white-of-egg froth, or in balls of white boiled rice, or the like.

à la New'burgh (*ä lä*).—With a sauce made of cream, egg yolks, Madeira or sherry wine, and butter shaken in a dish over a slow fire until they thicken. Said also of this sauce.

à l'Anglaise (*ä läN glez'*), after the English fashion.

à la nivernaise (*ä lä nē-vâr-näz'*).—Containing a nivernaise; said of a kind of soup à la julienne. See nivernaise.

à la Normande (*ä lä nôr-mäNd'*).—Generally, with apples in the composition of the dish in some shape or other.

à la Parisienne (*ä lä pä rē zēen'*), after the Parisian fashion.

à la Périgord (*ä lä pā-rē-gôr'*).—Flavored with, or consisting of, truffles—alluding to the circumstance that these mushrooms grow of excellent size and quality in the province of Perigord.

à la Polonaise (*ä lä pō-lō-näz'*).—Having red beets or red cabbage, so as to have their juice, color, and taste, as Polish ragoût, or borsh, which is the type of dishes *à la Polonaise*.

à la poulette (*ä lä poo-let'*).—With white velouté sauce.

à la printanière (*ä lä praN-tä-nyär'*).—Made with a typical collection of cooked early or spring vegetables; of a somewhat wider application than à la jardinière.

à la Provençale (*ä lä prō-väN-säl'*).—Generally, prepared with more or less of olive oil, and flavored with garlic.

à la Reine (*ä lä rän*).—Of, or after the style of, the queen; said specifically of a kind of chicken soup [*potage à la reine*, (*pō-täzh' ä lä rän*)] containing white meat of chicken pounded and rubbed to a powder.

à la Ro'land (*ä lä*).—Made of minced lobster meat in the same manner as *à la Lorenzo* dishes of crab meat. See à la Lorenzo.

à la Saint Cloud (*ä lä saN'kloo*).—With sliced truffles; said of a kind of velouté sauce.

à la serviette (*ä lä ser-vyet*).—Served in or on a napkin as braised truffles.

à la Soubise (*ä lä soo-bēz'*).—Generally containing onions in quantity; or, at least, strongly garnished and flavored with them; especially, served with a white onion sauce used with lamb or mutton.

a la Sourdine (*ä la sōōr dēn'*), silently; with bated breath.

à la tartare (*ä lä tär-tär'*).—With tartare sauce, or a sauce of similar ingredients. Also, said of a steak chopped and garnished with onions, pickles, pickled beets, sardelles, and yolk of egg, to be eaten raw.

à la Tartufe (*ä lä tär tüf*), like Tartufe, the hypocritical hero of Molière's comedy, Tartufe, hence hypocritically.

à la turque (*ä lä türk*).—Shirred and served with chicken livers and mushrooms; said of eggs. Also boiled with rice and saffron; said of chicken.

à l'Aurore (*ä lō-rōr'*).—With a pink sauce made by coloring velouté sauce with lobster coral or Armenian bole. Also said of sliced hard-boiled eggs put in a dish, covered with velouté, sprinkled with grated egg yolk, and baked.

à la vert pré (*ä lä vâr prā*).—Colored green with vegetables, as with a puree of spinach.

à la Viennoise (*ä lä vyä-nwäz'*).—Applied to dishes usually and typically prepared in the Austrian capital, such as the dumplings termed nockerlin, quenelles of potatoes, and others.

à la Villerol (*ä lä vēl-rwä'*).—With atelets sauce. Also, said of a poached egg put in a thick white sauce, then covered with egg yolk and bread crumbs, and fried.

à la vinaigrette (*ä lä vē-nē-gret'*).—With vinaigrette sauce.

albuon vino non bisogna frasca (It.), (*äl bwôn vē' nō nōn bē zō' nyä fräs'kä*), good wine needs no bush.

à l'envi (*ä läN vē'*), with emulation.

à l'espagnole (*ä lä-spä-nyōl'*).—Made savory with espagnole sauce; specifically, served with a garnish of onions, garlic, green peppers, mushrooms, tomatoes, and minced ham cooked together, and bound with espagnole sauce.

à l'extremité (*ä lek strä mē tā'*), at the point of death; without resource.

al fresco (It.), (*äl fräs'ko*), in the open air.

alguazil (Sp.), (*äl gwä zēl'*), a Spanish constable.

à l'huile (*ä-lwēl*).—In olive oil; with olive oil dressing.

Alici (*ä-lē'chē*).—Anchovies, or a similar small fish preserved in oil according to the Italian fashion.

à l'imperatrice (*ä laN-pä-rē-trēs'*).—Said of shirred eggs served with a slice of pâté de fois gras upon each egg.

à l'improviste (*ä läN prô vēst'*), unawares, on a sudden.

à l'Irlandaise (*ä lēr-läN-dez'*).—Containing potatoes in some form, and often cabbage, etc., in mass or as a prevailing garnish.

à l'Italienne (*ä lē-tä-lē-en'*).—Generally made of, or garnished with, savory macaroni, or paste of that kind, or with ravioli; or made savory with Parma cheese.

all'alba (It.), (*äl läl'bä*), at daybreak.

alla Siciliana (It.), (*äl lä sē chē lē ä'nä*), in the Sicilian manner; in shepherd's dress.

allégresse (*ä lā gres'*), liveliness; geniality.

allemande (*äl mäN d'*), a kind of German dance.

Allemande sauce (*äl-mäNd'*).—Veloute sauce, with the addition of essence of mushrooms, cream, and a leason, or binding, of yolk of eggs.

alles hat seine Zeit (Ger.), (*ä les hät zīne tsīt'*), all in good time.

allez-vous en (*ä lā vōō zäN'*), away with you, be off.

allons (*ä lôN'*), come on.

allons donc (*ä lôN dôN*), nonsense.

allzuviel ist ungesund (Ger.), (*äl tsōō fēl'ist oon' gezoont*), too much of a good thing.

al occorrenza (It.), (*ä lō kō ren'dzä*), according to circumstances.

à l'ordinaire (*ä lôr dē ner'*), in the ordinary manner.

alose (*ä-lōs'*).—Shad.

à l'outrance (*ä lōō träNs'*), to the death.

aloyau (*ă-lwä-yō′*).—Loin of beef; short rib of beef.
al piu (It.), (*ăl pyōō′*), at most.
alto rilievo (It.), (*ăl tō rē lye′vō*), in high relief.
à main armée (*à măN ăr mā′*), by force of arms.
am Anfang (Ger.), (*ăm ăn′fäng*), at the beginning.
amar y saber no puede ser (Sp.), (*ä măr ē sä vär′nō pooädhä sär′*), no one can love and be wise at the same time.
âme de boue (lit., soul of mud), (*ăm de bōō*), a base minded person.
amende honorable (*à măN dô nô rȧbl′*), fit reparation; a satisfactory apology.
à merveille (*à mer vāy′*), marvelously, extraordinarily.
ami du cour (lit., a friend of the court), (*à mē dü kōōr*), a false friend; one who is not to be depended on.
ami du peuple (*à mē dü pœpl′*), friend of the people.
à moitié (*à mwȧ tēā′*), by halves.
Amontillado (*ä-mōn-tēl-yä′dō*).—A cheaper variety of wine classed as sherry, but in reality a wine from Sicily or other Mediterranean or Atlantic islands, mixed with a little real sherry.
amour propre (*à mōōr prôpr′*), vanity, self-love.
ananas (*ä-nä-nä′*).—Pineapple.
anchois (*ăN-shwä′*).—Anchovies.
anchovy (*an-chō′vi*).—A small fish of the herring family caught in the Mediterranean, and pickled for exportation.
ancienne noblesse (*ăN sē en nôbles′*), (the old nobility), French families ennobled before the revolution of 1792.
ancien régime (*ăN sēăN rā zhēm*), (the former government or administration), the rulers of the ante-revolution period.
andouille (*ăN-dooy′*).—Tripe.
anguilles (*ăn-gē′y*).—Eels.
anguilles grillée (*ăn-gē′y grē-yā′*).—Spitch-cocked, or grilled, eels.
anisette′.—A cordial or liqueur flavored with anise seeds.
à outrance (*à ōō trăNs′*), to the last extremity.
à pas de géant (*à pȧd zhȧ ăN*), with a giant's stride.
à peindre (*à pĂNdr′*), worth painting.
à perte de vue (*à pert de vü′*), till out of sight.
à peu près (*à pœ pre′*), nearly.
à pezzi (It.), (*ä ped′zē*), by the piece.
à placere (It.), (*ä pyä′chä rä*), at pleasure.
à pied (*à pēā′*), on foot.
à plomb (*à plôN′*), perpendicularly; firmly.
à point (*à pwĂN′*), just in time; exactly right.
appui (*à pwē′*), point of support; prop.
à prima vista (It.), (*ä prē mä vēs′tä*), at the first sight.
à prix d'or (*à prē dôr′*), (at price of gold), very costly; fetching a fancy price.
à propos (*à prô pō′*), to the point.
à propos de rien (*à prô pō de rēĂN′*), apropos to nothing not pertinently.
arc-en-ciel (*ȧr kĂN sēel′*), rainbow.
à rez de chaussée (*à rā d shō sā′*), even with the ground.
argent comptant (*ȧr zhĂN kôN tĂN′*), ready money.
à rivederci (It.), (*ä rē vä dȧr′chē*), adieu until we meet again.
à Rome comme à Rome (*à rôm′ kô mȧ rôm′*), at Rome do as Rome does.
arrière pensée (*à rēer pĂN sā′*), mental reservation; unavowed purpose.
arroz à la Valencia′na (*ăr-rō′ä lä*).—Valencia rice, a farinaceous substance in grains like rice.
artichaut (*ȧr-tē-shō*).—Artichoke.
asperge (*ä-spȧrzh′*).—Asparagus.
aspic (*ăs-pēk′*).—A savory jelly made of calves' feet, etc., or with extract of meat, flavored to suit the fancy, and stiffened with gelatine.
assignat (*à sē nya′*).—French paper money issued after the revolution at the end of last century.
atelier (*ȧt lēā′*), a work-shop; studio.
à tort et à travers (*à tôr ā à trà ver′*), at random.
à toute outrance (*à tōō tōō trăNs′*), desperately; tremendously; with a vengeance.
à tout hasard (*à tōō à zȧr′*), at all hazards; at all events.
à tout prix (*à tōō prē′*), at any price.
attaché (*à tȧsh′*), an official belonging to an embassy.
au (*ō*).—See *à la*.
au beurre roux (*ō bûr roo*).—With browned butter.
au bon droit (*ō bôN drwȧ′*), to the just right.
au bout de son Latin (*ō bōōd sôN lȧ tĂN′*), at the end of his Latin; to the extent of his knowledge.
au chingaras (*ō shăN-gä-rä′*).—Sandwiched with ham and grilled; said of ox palates.
au contraire (*ō kôN trer′*), on the contrary.
au courant (*ō kōō rĂN′*), fully acquainted with matters.
au désespoir (*ō dā zes pwȧr′*), in despair.
au fait (*ō fe′*), expert.
au fond (*ō fôN′*), to the bottom; in the rear (of the stage).
au four (*ō foor*).—Baked in the oven, as a stuffed fish.
au fromage (*ō frō-mȧzh′*).—With cheese.
auf Wiedersehen (Ger.), (*owf vē′der zā en*), till we meet again.
au gras (*ō grä*).—Containing meat; said of soups so made.
au gratin (*ō grä-taN′*).—With a crust made by browning in the oven; as spaghetti is often served *au gratin*.
au jus (*ō zhü*).—In juice; in broth.
au kirsch (*ō kērsh*).—With kirschwasser; as an omelet or a punch containing this liqueur is termed *au kirsch*.
au levant (*ō le vĂN′*), to the east; eastward.
aumelette (*ōm-let′*).—Omelet.
au naturel (*ō nä-tü-rel′*).—In the natural condition; as, anchovies *au naturel*—*i. e.*, without oil or seasoning.
au pis aller (*ō pē zȧ lā′*), at the very worst.
au reste (*ō rest′*), as for the rest.
au revoir (*ō re vwȧr′*), till we meet again.
au rhum (*ō rüm*).—With rum.
auro′ra sauce.—Sauce à l'aurore. See *à l'Aurore*.
aussitot dit, aussitot fait (*ō sē tō dē′, ō sē tē ˙ē′*), no sooner said than done.
au supreme (*ō sü-prĂm′*).—With supreme sauce.
autant d'hommes, autant d'avis (*ō tĂN dôm′, ō tĂN dȧ vē′*), many men, many minds.
auto da fe (Port.), (*a ōō tō dä fä′*), an act of faith; the burning of Jews and heretics.
autre droit (*ōtre drwȧ′*), another's right.
autre fois (*ōtre fwȧ′*), another time.
autre vie (*ōtre vē′*), another's life.
aut vincere aut mori (*owt vin′kārā owt mō′rē*), victory or death.
au vert pré (*ō vȧr prā*).—With sweet or fresh herbs, expecially, when they give a green color to the dish.
au vin blanc (*ō vaN blĂN′*).—With white-wine sauce, as fillets of fish.
aux (*ō*).—See *à la*.
aux armes (*ō zȧrm′*), to arms.
aux cressons (*ō kres-sôN′*).—With watercresses.
aux rognons (*ō rō nyôN′*).—With kidneys.
avant-propos (*à vĂN prô pō′*), preface; introductory matter.
avec permission (*à vek per mē sē ôN′*), by consent.
à volonté (*à vô lôN tā′*), at will; at pleasure.
à vostra salute (It.), (*ä vōs trä sä lōō′tä*), to your health.
à votre santé (*à vôtre sĂN tā′*), to your health.
à vuestra salud (Sp.) (*ä vwes trä sä lōōth′*), to your health.

B

bal champêtre (*bȧl shĂN petr′*), a country ball.
ballon d'essai (*bȧ loN de sā′*), a balloon sent up to test the direction of air currents; hence anything said or done to gauge public feeling on any question.
ballotine (*bă-lō-tēn′*).—A shoulder of lamb boned, stuffed, larded, and braised.
barbue (*bär-bü′*).—A kind of fish.
bard (*bär*).—Barbel, a kind of fish.
bardes de lard (*bärd de lär*).—Fat slices of bacon for covering meat to be braised.
bar le duc (*bär le dük*).—A kind of jam of white gooseberries.
bas bleu (*bä blō′*), a blue-stocking; a woman who seeks a reputation for learning.
Bava′rian cream.—A cream jelly thickened with gelatine and set in a mold, and variously flavored and enriched; a Bavaroise; a kind of flummery.
Bava′rian dumplings.—Boiled pudding, consisting of bread fried in fat, bread crumbs soaked in cream or milk, eggs, butter, flour, salt, and spice; or some other similar composition.
Bava′rian sauce.—A modified Dutch sauce of vinegar, eggs, and butter flavored with crayfish butter.
Bavaroise (*bä-vä-rwäz′*).—Bavarian. See *Bavarian cream*.
beau-idéal (*bō ē dā ȧl′*), a model of ideal perfection.
beau monde (*bō mônd′*), the fashionable world.
beaux esprits (*bō zes prē′*), men of wit or genius.
beaux yeux (*bō zēō′*), handsome eyes; attractive looks.
bécasse (*bā-kȧs′*).—Woodcock.
Béchamel (*bā-shȧ-mel′*), or more properly, **Béchamelle.**—Velouté white sauce mixed with cream; named after Louis de Béchamel, a French gastronome.
beignet (*bā-nyȧ′*).—A fritter.
bel esprit (*be les prē′*), a wit, a genius
bel étage (*be lā tȧzh′*), the second story of a house.
belles-lettres (*bel′letr′*), refined literature.
benedetto e quel male che vien solo (It.), (*bā nā det′tō ā kwȧl mȧ′lā kē vyăn sō′lō*), blessed is the misfortune that comes alone.
bénédictine (*ben-ē-dik′tin*).—A cordial resembling chartreuse.
ben-trovato (It.), (*bän trō vä′tō*), well invented.
bête noire (lit. a black beast,) (*bet nwȧr′*), a bugbear.
beurre (*bûr*).—Butter.
beurre frais (*bûr frā*).—Fresh (unsalted) butter.
beurre lié (*bûr lē-ā′*).—Dutch sauce with less butter than usual.
beurre noir (*bûr nwär*).—Butter browned without flour.

beurre roux (*bûr roo*).—Butter browned with flour.
bienséance (*bēăN sā ăNs'*), good manners; decorum.
bienvenue (*bēăN ve nü'*), welcome.
bijou (*bē'zhōō*), a jewel; a treasure.
bijouterie (*bē zhōō trē*), jewelry.
billet doux, or **billet d'amour** (*bē ye dōō'*), a love letter.
billets-d'état (*bē ye dā tä'*), a government paper; bank notes.
biscuit (*bē-skwē'*).—French sponge cake.
bis'cuit à couper (*ä koo-pā'*).—A form of sponge cake to be sliced and glacéd with flavored sugar or sugar mixed with fruit juice.
bis'cuit à la Génoise (*ä lä zhā-nwäz'*).—Sponge cake with anise-seed flavor, to be cut and toasted.
bis'cuit à l'Ursuline (*ä lür-sü-lēn'*).—A sponge cake with rice and apple or apricot jam mixed into the paste, and grilled orange flower.
bisque (*bisk* or *bēsk*).—A soup of crayfish, made by cooking them in broth with herbs, sliced roots, and seasoning; other similarly prepared shellfish soups or sauces are also called *bisques*.
bizarre (*be zar*), odd; quaint.
blancmanger (*blăN-maN-zhä'*) or **blamange** (*blä-mänj'*).—A jelly made with calves' feet, or gelatine, and milk of almonds; also, a jelly made of milk and starch, isinglass, or sea moss, with or without added chocolate, grenetine, or the like. This latter dish is more properly called *flummery*.
blanquette (*blăN-ket'*).—A mince of white meat, as of chicken, warmed in velouté sauce, and pointed with butter and lemon juice. It often has added to it mushrooms, morels, or truffles.
blase (*blä zä'*), surfeited.
blond (*blôN*).—Concentrated juice or extract of some viand, used to add to certain sauces to give them body; as *blond de veau* (*de vō*), a rich broth of veal made by slowly stewing veal with accessories of ham, rabbit, or the like, with standard broth, shallots, cloves, etc.
bœuf de chasse (*bûf de shäs*).—The sportsman's round of beef—the biggest joint of the animal.
bombe glacé (*bôNb glä-sā'*).—A confection consisting of an ice casing frozen in the form of a truncated cone with cream of some kind, as Bavarian cream, inside.
bon ami (*bō na mi'*), good friend.
bon bon (*bôN bôN'*), a sweetmeat; confectionery.
bon diable (*bôN dēäbl'*), a jolly good fellow.
bon gré, mal gré (*bôN'grā mäl'grā*), with good or bad grace; willing or unwilling.
bonhomie (*bô nô mē'*), good nature; easy temper; credulity.
bon jour (*bôN zhōōr'*), good day; good morning.
bon mot (*bôN mō'*), a witticism.
bonne (*bôn*), a nurse.
bonne-bouche (*bôn bōōsh'*), a luscious morsel; a toothsome tit-bit.
bonne et belle (*bô nā bel'*), good and handsome (said of a woman).
bonne foi (*bôn fwä'*), good faith.
bon soir (*bôN swär'*), good evening.
bon ton (*bôN tôN'*), high fashion; first-class society.
bon vivant (*bôN vē vāN'*), a good liver; a jolly companion.
bon voyage (*bôN vwä yäzh'*), a pleasant journey.
Bordelaise sauce (*bôr-de-läz'*).—Espagnole sauce with garlic, aromatic herbs, and Bordeaux wine.
boudoir (*bōō dwär'*), a small private apartment.
bouillabasse (*boo-e-yä-bäs'*).—A soup made of fish broiled and seasoned with onion, orange peel, saffron, oil, and other seasoning to suit the taste.
bouilli (*boo-e-yē'*).—Beef stewed, generally in one piece, and served with sauce.
boulettes de hachis (*boo-let' de hä-shē'*).—Forcemeat balls.
bouquet garni (*gär-nē'*).—A tied bunch of parsley, onions, bay leaf, and thyme, used to boil in soup to flavor it.
bourgeoisie (*bōōr zhwa zē'*), the body of citizens; burgess; the shop-keeping class.
bourguignonnes (*boor-gē-nyon'*).—Snails baked with a dressing of shallots, garlic, lemon juice, and butter.
braise (*brāz*), or **braisé** (*brā-zā'*).—A piece of braised meat, or a dish prepared by braising; also a preparation mixed and prepared of various ingredients in or with which dishes are braised.
braisé de Boulanger (*brā-zā' de boo-läN-zhā'*).—A compound sauce in which meat is smothered when being braised.
bretonne sauce (*brā-ton'*).—Espagnole sauce characterized by juice of fried onions or purée of onions.
breveté (*brev tā'*), patented.
Brie cheese, or **Brie** (*brē*).—A soft, white cream cheese.
bris'ket, or **brisquet** (*brē-skā'*).—The breast; the part of the breast next to the ribs.
broccoli (*brok'kō-li*).—A kind of cabbage resembling the cauliflower.
brochet (*brō-shā'*).—Pike; luce—a kind of fish.
brocheton (*brō-she-tôN'*).—Pickerel.
brusquerie (*brüs krē*), rudeness.
brut (*brü*).—An effervescent wine.
buckling (*bük'ling*).—Red herring.
buisson (*bwē-sôN'*).—A dish disposed in a pyramid, and having a prickly appearance.
bureau de la guerre (*bü rō dlä ger'*), the war office.
bur'goo.—Oatmeal porridge.
Burgun'dian sauce.—Espagnole sauce flavored with shallots and red Burgundy wine.

C

cabaretièr (*kä bâre tēā'*), an innkeeper.
cabillaud (*kä-bē-yō'*).—A fresh cod.
cachot (*ka shō'*), a dungeon.
café (*kä-fā'*).—Coffee.
café au lait (*kä-fā' ō lā*).—Coffee with hot milk; coffee to which milk is added during the process of infusion or boiling.
café bavaroise (*kä-fā' bä-vä-rwäz'*).—Coffee with whipped cream.
café noir (*kä-fā'nwär*).—Black coffee; that is, coffee without milk.
café parfait (*kä-fā' pär-fā'*).—A form of coffee ice cream.
café turc (*türk*).—Turkish coffee; that is, coffee prepared by pouring boiling water on very finely ground coffee in the cup.
caille (*käey*).—Quail.
calipash.—A part of a turtle next to the upper shell containing a dull greenish gelatinous substance, esteemed as a delicacy.
calipee.—A part of a turtle attached to the lower shell. It contains a fatty, gelatinous substance of a light yellowish color, esteemed as a delicacy.
camaraderie (*ka ma ra drē*), good fellowship.
Camembert cheese (*kä-mäN-bâr'*).—A rich, sweet, cream cheese, of a yellowish color, made in the neighborhood of Camembert, in Normandy, France.
canaille (*kä nä'y*), the lowest class of people; the rabble.
canard (*kä när'*), a false story.
canard (*kä-närd'*).—A duck.
canellons (*kä-ne-lôn'*).—Hollow sticks or rolls of baked puff paste.
canelons (*kä-ne-lôN'*).—Rugosities of ox palate, or preparations of them, covered with farce, rolled, and gratinated.
caneton (*kä-ne-tôN*).—Young duck; duckling.
cannelon of meat (*kä-ne-lôN'*).—A baked roll of highly seasoned mincemeat.
cap-à-pié (*kä pä pēā'*), from head to foot.
ca'pers.—The pungent, grayish green flower buds of a trailing shrub (*Capparis spinosa*) of southern Europe.
capilotade of chick'en (*kä-pē-lō-tād'*).—A kind of ragoût made of remains of fowl or game and some simple brown sauce.
ca'pon.—A castrated cock. It fattens better and is tenderer than the uncastrated ones.
carbonari (It.), (*kär bō nä'rē*), members of a secret political society in Italy.
car'dinal sauce.—Velouté variously flavored and colored red, as with cochineal.
carême (*kärem'*), fast; Lent.
carnichons (*kär-nē-shôN'*).—Gherkins.
carré (*kä-rā*).—Breast.
carrelet (*kär-lā'*).—A fish, the sole or flounder.
carte blanche (*kärt blänsh'*), full power.
carte de visite (*kärt de vē zēt'*), visiting card.
cassareep'.—A brown, slightly sweet, aromatic thick extract made from the juice of the manioc.
casserole (*kas'se-rōl;* French pron. *käs-rōl'*).—Stewpan.
cas'serole of rice.—An ornamental pie case made of paste of prepared rice.
cassis (*kä-sēs'*).—Black currants; also, a kind of jelly, and a kind of liqueur or cordial, flavored with black currants.
castello che da orecchia si vuol rendere (It.). (*käs-tel'lō kā dä ō rä'kyä sē vwôl rän dā'rā*), the fortress that parleys soon surrenders.
causerie (*kō-zrē'*), a familiar talk.
caviare (*kä-vē-är'*) or **caviar** (*kav'i-är*).—Roe of sturgeon, and other large fish, prepared and salted, and used as a relish. They often resemble morning-glory seeds in appearance.
champignons (*shăN-pē-nyôN'*).—Mushrooms.
Champs Elysées (*shăN zā lē zā'*), Elysian Fields; a public park in Paris.
cela va sans dire (that goes without saying), (*se la vä săN dēr'*), that is understood.
ce n'est que le premier pas qui coûte (*se ne kle premēā pä'kē kōōt'*), it is only the first step that is difficult.

cèpes (*sāp*), or **ceps** (*sā*).—An edible kind of mushroom.
c'est à dire (*se tà dēr'*), that is to say.
c'est une autre chose (*se tü nō tre shōz'*), that is quite another thing.
chacun à son goût (*shà kon à sôn gōō'*), everyone to his taste.
chacun tire de son côté (*shà kŏn tēr' de sôn kō tā'*), every one inclines to his own side or party.
chanson (*shăn sôn'*), a song.
chansons à boire (*shăn sôn zà bwàr'*), drinking songs.
chapeau (*shà pō'*), a hat.
chapeaux bas (*shà pō bà'*), hats off.
chapeau de bras (*shà pō de brà'*), a military cocked hat.
chapelle ardente (*shà pe làr dănt'*), the chamber where a dead body lies in state.
chapon (*shà-pôn'*).—Capon.
chapon au gros sel (*shà-pôn ō grō sel*).—Plain boiled capon; literally, capon served with a big lump of salt (placed upon it).
chargé d'affaires (*shàr zhā dà fer'*), one intrusted with state affairs at a foreign court.
charlotte russe (*shär-lot' rüs*), or **charlotte à la russe** (*shär-lot' à là rüs*).—A dish of custard or whipped cream inclosed in a cup of sponge cake.
chartreuse à la Parisienne (*shär-trûz' à là pà-re-syen'*).—A showy entrée, consisting chiefly of quenelles of forcemeat, containing ragoût and kebobs; an entrée de force; entrée à surprise.
chasse café (*shās kā-fā'*).—A drink of liqueur served after the coffee at dinner.
château (*shà tō'*), a castle.
châteaux en Espagne (*shà tō zăn nes pàyn'*), castles in Spain.
châteaubriand sauce (*shà-tō-brē-ăn'*).—See *maitre d'hôtel butter*.
chauffeur (*shō for'*), driver of an automobile.
chaufroid sauce (*shō-frwà'*).—A white or brown jelly containing some sauce; a sauced jelly, or a gelatinized sauce.
chef (*shef*), man cook.
chef de bataillon (*shef da bà tà yôn'*), a major.
chef-d'œuvre (*shā dö vr'*), a masterpiece.
chemin de fer (lit. iron road), (*she mănt* fer'), a railway.
chemin faisant (*she mân fe zăn'*), by the way; in passing.
chère amie (*she rà mē'*), a dear (female) friend, a lover.
cher'vil.—A plant (*Anthriscus cerefolium*) with finely divided leaves. Two curly varieties are used in soups and salads.
che sara, sara (It.), (*ka să ra sa ra'*), what will be will be.
cheval de bataille (lit., a war-horse), (*she vàl de bà tā'y*) chief dependence or support; one's strong point.
chic (*shēk*), stylish, smart.
chiffonade (*shē-fō-nād'*).—A salad preparation of lettuce, chervil, sorrel, and scallions, with fresh butter, and some bouillon poured over it. When milk or fresh cream is added, it is called *potage à la chiffonade;* otherwise *potage de santé* (*pō-tāzh' de săn-tā'*).
chil'i.—A kind of red pepper or capsicum.
chil'i sauce.—A sauce condiment made with chilis, tomatoes, etc.
Chinese' stur'geon soup.—A soup of beef and veal, containing pieces of cartilage from the sturgeon's head boiled tender.
chi tace confessa (It.), (*kē tā'chā kōn fes'sā*), he who keeps silent admits his guilt.
chive.—A plant allied to the onion, of which the young leaves are used in omelets, etc.
choucroute (*shoo-kroot'*).—French sauerkraut, or sauerkraut in general.
chou-fleur (*shoo-flûr'*).—Cauliflower.
choux (*shoo*).—(*a*) Cabbages. (*b*) See *choux pâtissières.*
choux de Bruxelles (*shoo de brü-sel'*).—Brussels sprouts.
choux de mer (*shoo de mâr*).—Sea kale, a kind of cruciferous pottage root.
choux pâtissières (*shoo pā-tē-syâr'*).—Soufflés in small molds; small cakes of baked batter.
ci git (*sē zhē'*), here lies. (A common inscription on tombstones.)
civet (*sē-vā'*).—A ragoût of hare [civet de liévre (*lyā'vr*)], deer [*civet de chevreuil* (*she-vrû'y*)], or other game, into which wine and onions enter as ingredients.
clare'mont sauce.—Butter sauce flavored by frying onions in it. The onions are removed after frying.
cock'a-lee'kie.—Capon soup, boiled with leeks and prunes—a favorite Scotch dish.
cock'tail of oysters or clams.—A dish containing oysters or clams seasoned with ketchup, pepper, etc., and served in a tumbler or glass.
cocotte (*kō-kot'*).—A kind of iron casserole with two loop handles and a cover.
cœurs d'artichauts (*kûr-dăr-tē-shō'*).—Artichoke heads.
cognac (*kō-nyăk'*).—A brandy distilled at Cognac, in France; hence, loosely, any French brandy.
coiffeur (*kwà-fôr'*), a hairdresser.
coiffure (*kwà fûr'*), a headdress.
coing (*kwan*).—Quince. A liqueur, or ratafia, is made flavored with quince; and a jelly of quinces is called *coing de tranches* (*de trănsh*).
collared.—This term is loosely used with no apparent definite meaning in the names of various dishes.

crême bachique (*krām bâ-shēk'*).—A custard jelly with wine and egg-froth.
crême brulée (*krām brū-lā'*).—Brown sugar, or caramel, with cream.
crême fouettée à la paysanne (*foo-et-ta' ä lä pā-zän'*), Whipped cream.
créole (*krā-ōl'*).—See *à la creole.*
crêpes (*krāp*).—Small fried cakes; a form of French pancake.
cressons (*krā-sôn'*).—Cresses.
crève-cœur (*krev kör'*), deep sorrow; grief.
crevette (*krā-vet'*).—Shrimp.
croquants *krō-kän'*).—A piece of crisp pastry or confection which makes a crunching sound between the teeth, as a macaroon or a nougat.
crouton (*kroo-tôn'*).—Small pieces of bread fried in butter or oil, for use as a garnish to salmis, fricassees, etc., or to serve with soups.
croquembouches (*krō-kän-boosh'*).—Small mounted pieces of crisp pastry, such as macaroons, nougats, gimblettes, etc.
crum'pet.—A kind of large, thin, light cake or muffin cooked on a griddle.
cuisine (*küē zēn'*), a kitchen; cookery.
cuissot (*kwē-sō'*).—Haunch.
cul-de-sac (*kül de sak'*), the bottom of the bag; a blind alley.
cyg'net.—A young swan.

D

d'accord (*dä kôr'*), agreed; in tune.
dame d'honneur (*däm dô nör'*), a maid of honor.
dantesques (*dän-tesk'*).—Frozen custards.
dariole (*dä-rē-ōl'*).—A piece of pastry consisting of a shallow cup of short paste, filled with a rich compound of cream or custard with macaroons, fruit, or the like.
darne (*därn*).—Slice; cut.
das geht Sie nichts an (Ger.), (*däs gāt zē nikts än'*), that does not concern you.
de (*de*).—Of.
de bonne augure (*de bô nō gür'*), of good omen.
de bonne grâce (*de bôn gräs'*), with good will, willingly.
débris (*dā brē'*), refuse.
début (*dā bü'*), first appearance.
débutante (*dā bü tänt'*), a young lady just entering society.
décolleté (*dā kôl tā'*), open-breasted.
dégagé (*dā gä zhā*), free, easy, without constraint.
de gaieté de cœur (*de gā tā d kör'*), in sport, sportively.
de haute lutte (*de ōt lüt'*), by a violent struggle.
dehors (*dā ôr'*), without; out of; foreign; irrelevant.
déjeuner à la fourchette (*dā zhō nā ä lä fōōr shet'*), a cold breakfast.
de mal en pis (*de mä läN pē'*), from bad to worse.
demeure (*de mör'*), dwelling; residence
demi-jour (*de mē zhōōr'*), faint light.
demi-tasse (*dā-mē-täs'*).—A small cup for black coffee.
dénouement (*dā nōō mäN'*), an unraveling or winding up.
dépêche (*dā pesh'*), a dispatch; a message.
dernier cri (*der nēā krē'*), (the latest cry), the latest fashionable fad.
dernier ressort (*der nēā re sôr'*), the last resource.
désagrément (*dā zä grā mäN'*), something disagreeable or unpleasant.
désorienté (*dā zô rēäN tā'*), confused.
désossée (*dā-sō-sā'*).—Boned.
détour (*dā tōōr'*), a circuitous march.
de trop (*de trō'*), too much or too many; not wanted.
devoir (*de vwär'*), duty.
diablotins (*dē-ab-lō-taN'*).—(*a*) Frozen custards. (*b*) Neapolitan dragées. (*c*) Chocolate bonbons in paper.
di buona volonta sta pieno l'inferno (It.), (*dē bwô nä vō lôn'tä sta pyā'nō lēN fer'nô*), hell is full of good intentions.
Dieu est toujours pour les plus gros bataillons (*dēö e tōō zhōōr' pōōr lā plü grō bä tā yôN'*), God is always on the side of the largest battalions; the largest army has the best chance.
Dieu et mon droit (*dēö ā môN drwä'*), God and my right.
Dieu vous garde (*dēö vōō gärd'*), God protect you.
di grado en grado (It.), (*dē grä'dō än grä'dō*), step by step; gradually.
dinde (*daNd*).—Turkey.
dindonneau (*daN-dō-nō'*).—Young turkey; turkey pout.
Dios me libre de hombre de un libro (Sp.), (*dē'ōs mā lē'vrā dā ōm'vrā dā ōōn lē vrō*), God deliver me from a man of one book.
di salto (It.), (*dē säl'tō*), by leaps.
di tutti novello par bello (It.), (*dē tōōt tē nō vel'lo pär bel'lō*), everything new seems beautiful.
divertissement (*dē ver tēs mäN'*), amusement; sport.
di zara (*dē zä'rä*).—A less common name for maraschino.
doctrinaire (*dôk trē ner'*), a theorist.
dolce far niente (It.), (*dōl'chā fär nyen'tā*), sweet idleness.
domino (It.), (*dō'mē nō*), a mask robe.
dorer la pilule (*dō rā lä pē lül'*), to gild the pill.
double entente (*dōō bläN täNt'*), double meaning; a play on words.
douceur (*dōō sor'*), a bribe.
doux yeux (*dōō zēö'*), soft glances.
drap d'argent (*drä där zhäN*), silver lace.
drap d'or (*drä dôr'*), gold lace.
droit des gens (*drwä dā zhäN'*), the law of nations; international law.
drôle (*drōl*), droll; funny.
drôle le corps (*drōl le kôr'*), a droll fellow; a punster.
durante vita (Sp.), (*dōō rän'tä vē'tä*), during life.
Dutch sauce.—Butter emulged with yolk of egg, or a sauce with this as a basis; Hollandaise sauce.

E

eau de cologne (*ō d kô lôn'y*), Cologne water.
eau de vie (*ō d vē'*), the water of life—applied usually to brandy.
ébauche (*ā bōsh'*), a rough drawing; a sketch.
éclanche (*ā kläNsh'*).—Shoulder of mutton.
éclat (*ā klä'*), splendor; brilliancy.
école de droit (*ā kôl de drwä'*), law school.
école de médecine (*ā kôl de mād sēn'*), medical school.
école militaire (*ā kôl mē lē ter'*), military school.
école polytechnique (*ā kôl pô lē tek nēk'*), polytechnique school.
écrevisse (*ā-kr-vēs'*).—Crayfish.
édition de luxe (*ā dē sēôN' de lüks'*), a splendid edition of a book, handsomely bound, and usually well illustrated.
égal (*ā gäl'*), equal.
égalité (*ā gä lē tā'*), equality.
égarement (*ā gär mäN'*), bewilderment.
ehrlich währt am längsten (Ger.), (*är'lik vert äm leng'sten*), honesty is the best policy.
eile mit Weile (Ger.), (*ī le mit vī'le*), the more haste, the less speed.
eine Schwalbe macht keinen Sommer (Ger.), (*ī ne shwäl'be mäkt kī nen zō'mer*), one swallow does not make a summer.
ein gebranntes Kind scheut das Feuer (Ger.), (*in ge brän tes kint' zhōit däs fōi'er*), a burnt child dreads the fire.
el corazon manda las carnes (Sp.), (*äl kō rä thōn' mändä läs kär'nās*), the heart bears up the body.
élève (*ā lev'*), pupil.
élite (*ā lēt'*), a select body of persons.
éloge (*ā lōzh'*), a funeral oration.
éloignement (*ā lwän ye mäN*), estrangement.
embonpoint (*äN bôN pwaN'*), roundness, good condition.
émigré (*ā mē grā'*), an emigrant.
employé (*äN plwä yā'*), a person employed; a clerk.
empotage (*äN-pō-täzh'*).—Consommé or gravy broth.
empressement (*äN pres mäN'*), ardor; zeal; interest.
en ami (*äN nä mē'*), a friend.
en arrière (*äN nä rē er'*), in the rear; behind.
en attendant (*äN nä täN däN'*), in the meantime.
en avant (*äN nä väN'*), forward.
en badinant (*äN bä dē näN'*), in sport, jestingly.
en bagatelle (*äN bä gä tel'*), trifling; contemptuously.
en ballon (*äN bä-lôN'*).—Boned and stuffed with forcemeat, etc.—said of fowls' legs so cooked.
en bloc (*äN blôk'*), in the lump.
en brochette (*äN brō-shet'*).—On wooden skewers.
en caneton (*äN kä-ne-tôN'*).—A term used to designate fowls' legs boned and stuffed with forcemeat, etc.
en casserole (*äN kä-s-rōl'*).—In a casserole.

grâce à Dieu (*grȧs ȧ dēö'*), thanks be to God.
grande chère et beau feu (*grȧNd sher' ā bō fö'*), good fare and a good fire; comfortable quarters.
grande parure (*grȧNd pȧ rür'*), full dress.
grande toilette (*grȧNd twȧ let'*), full dress.
grand merci (*grȧN mer sē'*), many thanks.
gratin (*grȧ-taN'*).—The brown crust formed upon a gratinated dish; also, the dish itself.
grat'inate.—To cook, as macaroni, in a savory sauce or broth until the juice is absorbed and a brown crust forms.
gren'adine.—A kind of fricandeau, with a basis of forcemeat.
grenouille (*gre-noo'y*).—Frog.
grill.—To broil.
grenadin (*grä-nä-daN'*).—A small fricandeau, or dish made with a basis of forcemeat.
grisette (*grē zet'*), dressed in gray. (Applied to French shop girls.)
groseille à maquereau (*grō-zā'y ȧ mā-k'rō'*).—Gooseberry.
gros rôti (*grō rō-tē'*).—A large joint of roast meat.
grosse tête et peu de sens (*grōs tet' ā pö d sȧNs'*), a big head and little sense.
Gruyère cheese (*grü-yȧr'*).—A kind of salted cheese in thin cakes.
guava jel'ly (*gwä'vä*).—An excellent jelly made from the slightly astringent fruit of either of two tropical trees.
guerra al cuchillo (Sp.), (*gā'rä ȧl kōō chē'lō*), war to the knife.
guerra cominciata, inferno scatenato (It.), (*gwe rȧ kō mēn chyȧ'tȧ, ēn fȧr'nō skatän'tȧ*), war begun; hell unchained.
guerre à mort (*ge rȧ môr'*), war to the death.
guerre à outrance (*ge rȧ ōō trȧNs'*), war to the uttermost.
gulash (*goo-läsh'*), or **Hunga'rian gulash.**—A ragoût of rump steak flavored with paprika.
gum'bo.—A soup thickened with the mucilaginous pods of the okra; also, the okra pods themselves.

H

habitué (*ȧ bē tüā'*), a frequenter.
hardiesse (*ȧr dēes'*), boldness.
hareng (*ȧ-rȧN'*).—Herring.
haricot (*ă-rē-kō'*).—A stew or ragoût of meat. Also, the common string bean.
haricots verts (*ȧ-rē-kō' vȧr.*).—Green string beans.
haut et bon (*ō tā bôN*), great and good.
haut gout (*ō gōō'*), high favor; elegant taste.
hauteur (*ō tör'*), haughtiness and pride.
haut ton (*ō tôN'*), highest fashion.
heureusement (*ō röz mȧN'*), happily.
historiette (*ēs tō rēet'*), a short history; a tale.
Hollandaise sauce (*ō-lȧN-dāz'; Eng.* pron. *hol'lan-dāz'*). See *Dutch sauce.*
homard (*ō-mär'*).—The European lobster—larger than the American lobster, called *homard américaine* (*ō-mär'dā-mā-rē-kȧn'*).
homme d'affaires (*ôm dȧ fer'*), a man of affairs.
homme d'état (*ôm dā tȧ'*), a statesman.
homme de robe (*ôm de rôb'*), a man in civil office.
homme de lettres (*ôm de letr'*), a literary man.
homme d'esprit (*ôm des prē'*), a man of intellect.
honi soit qui mal y pense (*ō nē swȧ' kē mȧl ē pȧNs'*), shame be to him who thinks evil of it. (The motto of the Order of the Garter.)
hors de combat (*ôr de kôN bȧ'*), disabled; unfit to continue a contest.
hors de la loi (*ôr de lȧ lwȧ*), outlawed.
hors de propos (*ôr de prō po'*), wide of the point; inapplicable.
hors de saison (*ôr de se zôN'*), out of season; unseasonable.
hors d'œuvre (*ôr dövr'*), out of course; out of accustomed place. (Used substantively of small appetizing dishes served between the soup and the second course.)
hôtel des invalides (*ō tel dā zȧN vȧ lēd'*), hospital for old and disabled soldiers.
hôtel de ville (*ō tel de vēl'*), a town hall.
hôtel Dieu (*ō tel dēö'*), a house of God; a hospital.
hôtel garni (*ō tel gȧr nē'*), furnished lodgings.
huitres (*wē'tr'*).—Oysters.
huitres au lit (*ō lē*).—Same as pigs in blankets.
hure de sanglier (*ür de sȧN-glyā'*).—Head of wild boar.
hurtar para das por Dios (Sp.), (*ōōr tär' pȧ rä där pōr dē'ōs*), to stea in order to give to God.

I

ich diene (Ger.), (*ik dēne*), I serve.
idée fixe (*ē dā fēks'*), a fixed idea; intellectual monomania.
ignorance crasse (*ī nyō rȧNs' krȧs'*), gross ignorance.

i gran dolori sono multi (It.), (*ē grän dō lō'rē sō nō mōōl'tē*), great griefs are silent.
il a le diable au corps (*ē la l dēäblō kôr'*), the devil is in him.
il faut de l'argent (*ēl fō d lar zhäN*), money is wanting.
il n'a ni bouche ni éperon (*ēl nà nē bōōsh nē ā prôN'*), he has neither mouth nor spur; he has neither wit nor courage.
il ne faut jamais défier un fou (*ēl ne fō zhà me' dāfēā ōN fōō*), one should never provoke a fool.
il n'est sauce que d'appétit (*ēl ne sōs ke dà pā tē'*), hunger is the best sauce.
il penseroso (It.), (*ēl pān sā rō'sō*), the pensive man. (The title of one of Milton's poems.)
il sent le fagot (*ēl sän le fà gō'*), he smells of the faggot; he is suspected of heresy.
impoli (*äN pô lē'*), unpolished; rude.
impolitesse (*äN pô lē tes'*), coarseness; rudeness.
impromptu (*äN prôNp tü'*), a prompt remark without study.
in bianco (It.), (*ēn byäng'kō*), in blank; in white.
in petto (It.), (*ēn pet'to*), within the breast; in reserve.
insouciance (*äN sōō sēäNs'*), indifference; carelessness.
in un giorno non si fe 'Roma (It.), (*ēn ōōn dzhôr'nō nōn sē fā rō'mā*), Rome was not built in a day.
ir por lana, y volver trasquilado (Sp.), (*ēr pōr là'nä, ē vōl vār' träs kē là'thō*), to go for wool and come back shorn.

J

jalousie (*zhà lōō zē'*), jealousy; a Venetian window blind.
jambon (*zhäN-bôN'*).—Ham.
jamais bon coureur ne fut pris (*zhà me' bôN kōō rör' ne fü prē'*), a good runner is not to be taken; old birds are not to be caught with chaff.
Jardin des Plantes (*zhär dăN dā plăNt'*), the botanical garden in Paris.
jardinière (*zhär-dē-nyâr'*).—A dish cooked à la jardinière. See *à la jardinière*. Jardinière soup has as many roots and green vegetables as can be; it differs from julienne soup by the prevalence of green vegetables in it.
je maintiendrai le droit (*zhe mäN tēäN drā le drwà'*), I will maintain the right.
je ne sais quoi (*zhe ne se kwà'*), I know not what.
je n'oublierai jamais (*zhe nōō blē zā zhà me'*), I will never forget.
je suis prêt (*zhe sü prē'*), I am ready.
jet d'eau (*zhe dō'*), a fountain; a jet of water.
jeu de mots (*zhö d mō'*), a play upon words; a pun.
jeu d'esprit (*zhö des prē'*), a witticism.
jeu de théâtre (*zhö d tā ätr'*), a stage trick; clap-trap.
jeunesse dorée (*zhö nes dô rā'*), the gilded youth.
je vis en espoir (*zhe vē zäN nes pwàr'*), I live in hope.
joli (*zhô lē*), pretty; attractive.
julienne soup (*zhü-lyen'*).—Soup à la julienne. See *à la julienne*.
jus (*zhü*).—Broth; soup juice; gravy.
juste-milieu (*zhüst mē lēö'*), the exact middle; the golden mean; the middle course is the safest.

K

kein Kreuzer, kein Schweizer (Ger.), (*kīn krôi'tser, kīn shwi'tser*), no money no Swiss.
kip'pered her'ring.—A herring split, salted, and smoked.
kirshwasser (*kērsh-vās'ûr*).—A cordial distilled from the juice of the small black cherry.
klöse (*klû'ze*).—Dumplings.
kumiss (*koo'mis*), or **kumys.**—A beverage consisting of a liquor made by fermenting milk, originally mare's or camel's milk.
kummel (*koom'mel*).—A liqueur made in Germany and Russia flavored with cumin, caraway, or fennel.

L

lâche (*läsh*), lax; relaxed.
la critique est aisée, l'art est difficile (*là krē tēk' e te zā', là're dā fē sēl'*), criticism is easy, art is difficult.
lade nicht alles in ein Schiff (Ger.), (*là de nikt à'les in īn' shif'*), do not ship all in one vessel; do not put all your eggs in one basket.

ma foi (*mà fwà′*), upon my faith; upon my word.
maigre (*mē′gr*).—Lean meat; also, any food other than meat. Also, a kind of fish. *Maigre soups* are those without meat, such as those used in Lent.
maintien le droit (*mâN tēăN le drwä′*), maintain the right.
maison d'arrêt (*mā zôN dà ret′*), house of custody; prison.
maison de campagne (*mā zôN de kăN pàn′y*), a country house.
maison de force (*mā zôN d fôrs′*), house of correction; bridewell.
maison de santé (*mā zôN d săN tā′*), lunatic asylum.
maison de ville (*mā zôN d vēl′*), a town hall.
maître des basses œuvres (*me′tre dā bās zövr′*), a nightman.
maître des hautes œuvres (*me′tre dā ōt zövr′*), an executioner; a hangman.
maître d'hôtel (*me′tre dō tel′*), a house steward.
maître d'hôtel but'ter (*mā′tr dō-tel′*).—Butter mixed with parsley, lemon juice, salt, and nutmeg—cold *maître d'hôtel sauce.*
maîtresse (*me tres′*), mistress.
malade (*mà làd′*), sick.
maladie du pays (*mà là dē′ dü pā ē′*), homesickness.
maladresse (*mà là dres′*), want of tact, awkwardness.
manchons de veau à la Gérard (*măN-shôN′ de vō à là zhā-rär′*).—A dish of slices of veal rolled and stuffed.
manège (*mà nezh′*), the art of horsemanship.
mal à propos (*mà là prō pō′*), ill-timed.
mal de dents (*màl de dăN′*), toothache.
mal de mer (*màl de mer′*), seasickness.
mal de tête (*màl de tet′*), headache.
mal entendre (*mà lăN tă NdR′*), a misunderstanding; a mistake.
malgré nous (*màl grā nōō′*), in spite of us.
malheur ne vient jamais seul (*mà lör′ ne vēăN zhà me söl′*), misfortunes never come singly.
maraschino (*mă-rä-skē′nō*).—A cherry cordial made in Dalmatia from a sour cherry called *marasca;* hence, a similar liqueur prepared elsewhere.
marasquin (*mă-rä-skaN′*).—French for maraschino.
marchand de vin (*mär-shăN′ de vaN′*).—Stewed with shallots, espagnole, and claret wine—said especially of kidneys.
march'pane.—A cake of pounded almonds or pistachio nuts and sugar.
mardi gras (*mär dē grä′*), Shrove Tuesday.
mariage de conscience (*mà rēàzh de kôN sēăNs′*), a private marriage.
mariage de convenance (*mà rēàzh de kôN vnăNs′*), a marriage of convenience; or from interested motives.
marsala (*mär′sä-lä*).—A class of white Sicilian wines, of which the best kinds resemble Madeira, but are lighter.
matinée (*mà tē nā′*), a reception, or a musical or dramatic entertainment, held in the daytime.
mauvaise honte (*mô vez ôNt′*), false modesty.
mauvais goût (*mô ve gōō′*), false taste.
mauvaise sujet (*mô ve sü zhe′*), a worthless fellow.
mauvais quart d'heure (*mô ve kär dör′*), a bad quarter of an hour; an uncomfortable time; a disagreeable experience.
mauvais ton (*mô ve tôN′*), vulgarity.
mayonnaise sauce (*mā-yō-nāz′*).—A sauce of egg yolk and oil worked together, less properly with vinegar.
médecin, guéris-toi-toi-même (*mād săN′, gā rē twätwà mem′*), physician, heal thyself.
mélange (*mā lă NzH*), a mixture.—A light entertainment of a mixed character.
mêlée (*me lā′*), a disorderly fight.
ménage (*mā nàzh′*), household.
menu (*me nü′*), bill of fare.
mennière (*me-nyâr′*).—With brown butter, lemon juice, and parsley.
meringue (*mā-raNG′*).—Icing of white of egg and sugar thoroughly beaten together, sometimes with starch added. Pure meringues are called *baisers* (*bā-zā′*) or Spanish foam.
meringue glacée (*glā-sā′*).—A glazed meringue.
merluche (*mâr-lüsh′*).—The haddock.
mesalliance (*mā zà lēăNz′*), marriage with one of lower station.
mirabelles (*mē-rä-bel′*).—Plums of a certain superior variety.
mir ist alles einerlei (Ger.), (*Mēr′ ist ä′les ī ner lī′*), it's all the same to me.
mise-en-scène (*mē zăN sen′*), the staging of a play.
mon ami (*mô nà mē′*), my friend.
mon cher (*môN sher′*), my dear (fellow).
monde chic (*môNd shēk′*), world of taste; fashionable people.
monsieur (*me sēö′*), sir, master, gentleman.
morue (*mō-rü′*).—Codfish.
mot de passe (*mō d pās′*), the watchword.
mot du guet (*mō dü ge′*), a watchword.
mot pour rire (*mō pōōr rēr′*), a witty saying; a joke.
mots d'usage (*mō dü zàzh′*), words in common use.
moules (*mool*).—Mussels.
moules à la bordelaise (*ä là bôr-de-lāz′*).—Mussels in forcemeat.
mousseline de laine (*mōōs lēn de len′*), a thin woolen material.
mousseron (*moo-srôN′*).—Mushroom (the edible kind).
mouton (*moo-tōN′*).—Mutton.
mulled (*muld*).—Properly, heated and spiced; but often used to mean, made mild by sugar (acid wines), or by dilution (alcoholized wine).
mul'ligatawny, or **mul'ligatunny.**—A spiced or curried soup of hashed chicken and rice.
muraglia bianca, carta di matto (It.) (*mōō rä′lyä byäng′kä, kär′tä dē mät′tō*), a white wall is the fool's paper.

N

naïve (*nà ēv′*), having unaffected simplicity.
naïveté'), (*nà ēv tā′,*) native simplicity.
Na'ples biscuit.—Lady fingers.

nec'tarine.—A smooth skinned variety of peach. The *Spanish nectarine* is a plum-like West Indian fruit, which is made into a sweet conserve.
née (*nā′*), born.
négligé (*nā glē zhā′*), a morning dress.
nesselrode pudding (*nes′sel-rō-de*).—Iced or frozen chestnut-and-fruit pudding.
neufchâtel cheese (*nûf-shä-tel′*).—A cheese made by thickening cream by heat and pressing it in a small mold.
neue Besen kehren gut (Ger.), (*nôi e bā′zen kā ren gōōt′*), a new broom sweeps clean.
ni l'un ni l'autre (*nē lŏN′nē lōtr′*), neither the one nor the other.
n'importe (*nâN pôrt′*), it is of no consequence.
nivernaise (*nē-vâr-nāz′*).—A ragoût-like dish of carrots stewed in consommé.

noblesse oblige (*nō ble sō blēzh'*), nobility imposes obligations; much is expected from persons of good position.
nom de guerre (*nôN de ger'*), a war-name, an assumed name, a pseudonym.
nom de plume (*nôN de plüm'*), an assumed title.
nonchalance (*nôN shȧ lȧNs'*), coolness; easy indifference.
non mi ricordo (It.), (*nōn mē rē kôr'dō*), I do not remember.
non obstant clameur de haro (*nōn ôp stȧN klȧ mör' de ȧ rō'*), despite the hue and cry.
non ogni fiore fa buon odore (It.), (*nōn ō nyē fyō'rā fȧ bwô nō dō'rā*), it is not every flower that smells sweet.
nonpareil (*nôN pȧ re'y*), unequaled.
non vender la pelle dell 'orse prima di pigliarlo (It.), (*nōn vän där lȧ pel·lā dāl lōr' sā prē mä dē pē lyär'lō'*), don't sell the bearskin before you have caught the bear.
Noth kennt kein Gebot (Ger.), (*nōt' kent kīn ge bōt'*), necessity knows no law.
Notre Dame (*nô tre dȧm*), Our Lady, the Virgin Mary.
n'oubliez pas (*nōō blēā pȧ'*), do not forget.
nougat (*noo-gä'*).—A mixture of almonds, pistachios, filberts, or the like, and honey or sugar baked together.
nouilles (*noo'y*).—Noodles.
nous verrons (*nōō ve rôN'*), we shall see.
nouvelles (*nōō vel'*), news.
nouvellette (*nōō ve let'*), a short tale or novel.
nuance (*nü ȧNs'*), shade; gradation; tint.
nul bien sans peine (*nül bēȧN' sȧN pen'*), no pains, no gains.
nulla nuova, buona nuova (It.), (*nōōl lä nwô vä, bwô'nä nwô'vä*), no news is good news.

O

octroi (*ôk trwȧ'*), a tax on articles (for sale) entering a town.
oeil de bœuf (*ö'ēd böf'*), a bull's-eye.
œufs (*ûf*).—Eggs.
œufs à la farce (*ûf ȧ lä fȧrs*).—Hard boiled eggs with stewed sorrel.
œufs à la tripe (*ȧ lä trēp*).—Hard boiled eggs with onion sauce.
œufs brouillés.—Scrambled eggs.
ognon (*ō-nyôN'*).—Onion.
ognon d'Egypte (*dā-zhēpt'*).—The rocambole, a mild, sweet onion.
o'kra.—A plant, the long green, mucilaginous pods of which are used in soups, stews, etc.
olla (*ōl'lä*).—Ragoût.
olla podrida (It.), (*ōl'lä pō drē'dä*), a heterogeneous mixture.
omelette au thon (*ōm-let' ō tôN'*).—Omelet with tunny, a kind of fish.
omelette aux confitures (*ō kôN-fē-tür'*).—An omelet served with fruit jelly. Jams do not go well with omelets.
on connait l'ami au besoin (*ôN kô ne lȧ mē' ō be zwȧN'*), a friend is known in time of need.
on dit (*ôN dē'*), they say.
oreilles (*ō-rā'y*).—Ears; as, *oreilles de veau* (*de vō*), calf's ears.
orgeade (*ôr-zhȧd'*).—Milk of almonds, made by stirring sirup of almonds in water; also, orgeat.
orgeat (*ôr-zhä'*).—Sirup of almonds; also, orgeade.
Or'leans sauce.—A mince of carrots, anchovies, hard-boiled eggs, and gherkins, with peppersauce.
oro e che oro vale (It.), (*ō'rō e kā ō'rō vä'lā*), that is gold which is worth gold; all is not gold that glitters.
oublier je ne puis (*ōō blēā'zhe n pwē'*), I can never forget.
oui-dire (*wē dēr'*), hearsay.
outrance (*ōō trȧNs'*), excess; extremity.
outre (*ōōtr'*), eccentric.
ouvrage (*ōō vrȧzh*), work.
ouvrage de longue haleine (*ōō vrȧzh de lôNg ȧ len'*), a long-winded business.
ouvrier (*ōō vrē ā'*), a workman, an artisan.

P

pabrica (*pä'brē-kä*).—Paprika.
padrone (It.), (*pä drō'nā*), master; employer; landlord.
pain (*pȧN*).—Bread.
panais (*pä-nā'*).—Parsnips.
panée (*pä-nā'*).—Bread-crumbed (over egg yolk, sauce, butter, or fat) previous to frying.
panièr (*pä-nyā'*),—A basket, as that for holding a wine bottle. Also, an entrée panée.
pannequets (*pȧn-kā'*).—French pancakes.
papeterie (*pȧ pe trē'ʰ*), a case with writing materials.
paprika (*pä'prē-kä*).—A mild kind of red-pepper condiment obtained from *Capsicum annum*.
par accord (*pȧ rȧ kôr'*), by agreement.
par avance (*pȧ rȧ vȧNs'*), in advance.
par ci, par là (*pär sē' pär lȧ'*), here and there.
par excellence (*pȧ rek se lȧNs'*), preëminently.
par exemple (*pȧ rāg zȧNpl'*), for instance.
parfaitement bien (*pär fet mäN bēȧN'*), perfectly well.
Pari'sian loaves.—Finger cakes ornamented with strips of currant jelly, green-gage jam, or the like.
Pari'sian sauce.—Allemande flavored with truffles and tinted.
pas'caline.—White mushroom sauce.
parole d'honneur (*pȧ rôl dô nör'*), word of honor.
partout (*pär tōō'*), everywhere.

piquant (*pē-kȧN'*), pointed, pungent.
piquante sauce (*pē-kȧNt'*).—Espagnole with pickles added and flavored with shallots.
pis aller (*pē zȧ lā'*), the worst or last shift.
plombière (*plôN-byär'*).—A kind of frozen fruit pudding.
poché (*pō-shā'*).—Poached.
poco à poca (It.), (*pō'kō ä pō'kō*), little by little; by degrees.
point d'appui (*pwȧN dȧ pwē'*), prop; point of support.
poisson (*pwä-sôN'*).—Fish.
poivrade (*pwä-vrȧd'*).—Peppersauce.
polen'ta.—Porridge.

polonaise cakes (*pō-lō-nāz'*).—A kind of tart made of puff paste with jelly at the corners.
pomme (*pum*).—Apple.
pomme d'api (*pum dă-pē'*).—Small rosy apple.
pomme de terre (*de târ*).—Common Irish potato.
pompa'no.—A highly esteemed marine food fish.
porte-chaise (*porte shez'*), a sedan.
poste restante (*pôs tres tăNt'*), to remain until called for; applied to letters in a post office, general delivery.
potage (*pō-tăzh'*).—Soup; pottage; broth.
potage a la Camerani (*ă lă kă-mă-rä'nē*).—A rich kind of chicken-liver soup.
potage croute au pot (*kroŏt ō pō*).—Plain broth with vegetables and crusts browned in gravy.
pot pourri (*pō poo-rē'*).—A ragoût of various meats and vegetables cooked together.
pour acquit (*pōō rä kē'*), paid; settled; the usual form of receipt.
pour faire rire (*pōōr fer rēr'*), to excite laughter.
pour faire visite (*pōōr fer vē zēt'*) to pay a visit.
pour passer le temps (*pōōr pă să l tăN'*), to while away the time.
pour prendre congé (*pōōr prăNdre kôN zhā'*), to take leave. Usually abbreviated to *P. P. C.*
précis (*prā sē'*), a summary; an epitome.
prendre la clef des champs (*prăN dre lä klā dā shăN'*), to take the key of the fields; to take French leave.
prendre la lune avec les dents (*prăN dre lä lŭ' nä vek lā dăN'*), to seize the moon in one's teeth; to aim at impossibilities.
presto maturo, presto marcio (It.) (*pres tō ma tōō'rō, pres tō mär'chyō*), soon ripe, soon rotten.
prêt d'accomplir (*pre dä kôN plēr'*), ready to accomplish.
prêt pour mon pays (*pre pōōr môN pā ē'*), ready for my country.
preux chevalier (*prŏ shvä lēä'*), a brave knight.
prima donna (*prē mä dôn'nä*), leading lady singer in opera.
printanière (*praN-tă-nyâr'*).—A dish cooked à la printanière. See *à la printanière.* Printanière soup is the same as jardinière soup, essentially.
procès verbal (*prō se ver bäl'*), a detailed statement.
profiterolles (*prō-fē-trōl'*).—Sweet entremets, a kind of cake filled with custard.
propriétaire (*prō prēā ter'*), a proprietor.
protégé (*prō tă zhā'*), one protected by another.
pumpernickel (*poom'per-nik'l*).—Black bread made in Westphalia of unbolted rye. It is of an acid taste.
purée (*pū-rā'*).—A pulpy maceration of meat, vegetables, fruit, or the like, passed through a sieve.
quartier (*kär-tyā'*).—Quarter; especially forequarter.
quasi de veau (*kä-zē'de vō*).—The thick end of a loin of veal.

Q

quelque chose (*kel ke shōz'*), something; a trifle.
quenelle (*ke-nel'*).—A kind of delicate forcemeat ball or dumpling.
qui a bu boira (*kē ä bŭ' bwä rä'*), the tippler will go on tippling; it is hard to break off bad habits.
quien poco sabe, presto lo reza (Sp.), (*kyăn pō kō să'vā, prēs tō lō rā'thä*), he who knows little soon tells it.
quien sabe? (Sp.), (*kyăn să'vā*), who knows?
qu'il soit comme il est désiré (*kēl swä' kô mē le dā zē rā'*), let it be as desired.
qui m'aime aime mon chien (*kē mem' em môN shēăN'*), love me, love my dog.
qui n'a santé, n'a rien (*kē nä săN tā', nä rē ăN'*), he who has not health, has nothing.
qui va là? (*kē vä lä'*), who goes there?
qui vive (*kē vēv'*), on the alert.

R

raconteur (*rä kôN tŏr'*), a relater; a teller.
radis (*rä-dē'*).—Radish.
ragout (*rä-goo'*).—A rich compound consisting of quenelles, mushrooms, truffles, etc., mixed with a rich sauce, and used to garnish rich dishes; also, a dish garnished with this.
raison d'état (*rā zôN dā tä'*), a state reason.
raison d'être (*rā zôN detr'*), the reason for a thing's existence.
ramequin (*ram'ē-kin;* French pron. *rä-me-kaN'*).—A pastry consisting of a preparation of cheese inclosed in or mixed with puff paste, and baked or browned. Cheese straws are thin ramequins of cheese mixed with puff paste.
rapprochement (*rä prôsh măN'*), the act of bringing together, reconciliation.
ratafiä (*rä-tä-fē-ä'*).—(*a*) Noyau, curacao, or other liqueur containing kernels of fruit, as of peaches, cherries, etc. (*b*) A small macaroon made mainly of bitter almonds.
réchauffé (*rā-shō-fā'*), or **réchauffée.**—Warmed or heated over a second time.
recherche (*re shersh'*), elegant; attractive.
recu (*re sü'*), received; receipt.
recueil choisi (*re kŏ y shwäzē'*), a choice collection.
rédacteur (enchef), (*rā dăk tŏ răN shef*), editor (of a newspaper).
régime (*rā zhēm'*), government; mode of living.
relevés (*rä-l'-vā'*).—Same as removes.
rémoulade (*rā-moo-läd'*).—A purée of anchovies, capers, parsley, shallots, and hard-boiled eggs, dressed with spices, oil, and vinegar.
rémoulade à la provençale (*ă lä prō-văN-säl'*).—Rémoulade not sieved and with more oil.
remove.—A dish removed from the table to make room for another; applied generally to the roasts, joints, turkeys, fillets, etc., which follow the soup and fish at an ordinary dinner of several courses.
renaissance (*re ne săNs'*), regeneration, revival.
rendezvous (*răN dā vōō'*), a place of meeting.
rentes (*răNt'*), the funds; government stocks.
répondez s'il vous plait (*R. S. V. P.*) (*rā pôN drăN nôr măN'*), reply if you please.
répondre en normand (*rä pôN drăN nôr măN'*), to answer in Norman; to speak evasively.
restaurateur (*res tŏ rä tŏr'*), one who provides.
résumé (*rā zŭ mā'*), a summing up.
rete nuova non piglia uccello vecchio (It.), (*rā tā nwô'vä nōn pē lyä ōōch chel'lō vek'kyō*), a new net won't catch an old bird.
revenons à nos moutons (*rev nôN zä nō mōō tôN'*), let us return to our sheep; let us come back to our subject.
rien n'est beau que le vrai (*rēăN ne bō' ke l vrā'*), there is nothing beautiful but truth.
rira bien qui rira le dernier (*rē rä bēăN' kē rē rä l der nēä'*), he laughs well who laughs last.
rire entre cuir et chair, rire sous cape (*rē răN tre kwē' rā sher', rēr sōō käp'*), to laugh in one's sleeve.
ris de veau (*rē de vō*).—The sweetbread; pancreas.
rissole (*rē-sōl'*).—A kind of pastry made of minced and spiced meat or vegetables, or fruit, wrapped in paste, and fried in fat—originally one containing rice as an ingredient.
rissolé (*rē-sō-lā'*).—Browned by baking or frying.
rissolette (*rē-sō-let'*).—A croutade, or bit of fried bread containing or holding a little portion of forcemeat.
robe de chambre (*rôb de shăN br'*), a dressing-gown; a morning gown.
robe de nuit (*rôb de nwē'*), a night-dress.
rognons (*rō-nyôN'*).—Kidneys; fries.
rôle (*rōl'*), a part in a performance.
romaine salad (*rō-măn'*).—A kind of mixed vegetable salad.
Ro'man punch.—A water ice flavored, as with lemon, and mixed with rum or other spirits. Also, a complicated punch, similar in preparation to regency punch, with added frozen white of egg froth.
roquefort (*rōk-fôr'*).—A French cheese made from the milk of ewes, cured in a cavern in the limestone rock at Roquefort, France.
rothe grütze (*rō'te grüt' se*).—A flummery of rice grits and fruit juice.
roue (*rōō*), a debauchee.
rouge (*rōōzh*), red coloring for the skin.
roulette (*roo-let'*).—A dish consisting of a slice of meat spread with stuffing, rolled, and stewed or braised.
roux (*roo*).—Browned by frying in butter or other grease.
roux blanc (*blăN*).—Starch or flour fried in fat so as to be hardly colored.
roux brun (*brŭN'*).—Fried a dark brown.
ruse de guerre (*rüz de ger'*), a military stratagem.
Rus'sian sauce.—A velouté with egg yolks and strong herbs.
Rus'sian soup.—A gravy soup of veal, fowl, etc., with souchets of salmon, eel, perch, mullet, quenelles of whiting, lobster coral, and mushroom purée.

S

salad russe (*să-läd'rüs*).—A dish of chicken meat, ham, veal, etc., sliced, arranged separately and served with truffles, and tartar sauce, or caviare and sardelles, etc.
salle (*säl*), a hall.

sanan couchilladas, mas no malas palabras (Sp.), (*sä'nän kōō chē lä'thäs, mäs nō mä läs pä lä'vräs*), wounds from a knife will heal, but not those from an evil tongue.
sang-froid (*säN frwä'*), coolness; self-possession.
sans-culottes (*säN kü lōt'*), without breeches; a term applied to the rabble of the French revolution.
sans façon (*säN fà sôN'*), without form or trouble.
sans pareil (*säN pà re'y*), without equal.
sans peine (*säN pen'*), without difficulty.
sans peur et sans reproche (*säN pör' ā säN re prôsh'*), fearless and stainless.
sans rime et sans raison (*säN rēm' ā säN rā zôN'*), without rhyme or reason.
sans souci (*säN sōō sē'*), free from care.
sauce beurrée à l'Anglaise (*bû-rā ä läN-glāz'*).—Butter sauce.
sauce blanche (*bläNsh*).—Butter sauce.
sauce Colbert (*kōl-bâr*).—Brown sauce with meat glace, lemon juice, parsley, and butter stirred in.
saucé de gourmets (*de goor-mā'*).—A coulis with a purée of tomatoes and crayfish butter.
sauce en tortue (*äN tôr-tü'*).—Espagnole sauce, a kind of sauce used for calf's head.
sauce Italienne rousse (*ē-tä-lyen' roos*).—A sauce of espagnole, varied and flavored with shallots, mushrooms, and olive oil.
sauce piquante (*pē-käNt'*).—An acid or sour sauce.
sauce Robert (French pron. *sōs rō-bâr'*).—A full-flavored espagnole sauce, strongly flavored with onions, mustard, and zested with lemon juice or vinegar.
sauce rousse (*roos*).—Brown sauce.
saumon (*sō-môN'*).—Salmon.
sauté (*sō-tā'*).—Lightly and quickly fried in little grease.
sauve qui peut (*sōv kē pö'*), save yourself.
savant (*sà väN'*), a learned man.
savoir (*sà vwär'*), knowledge.
savoir faire (*sà vwär fer'*), tact.
savoir vivre (*sà vwär vēvr'*), good breeding.
savon (*sà vôN'*), soap.
savoy' cakes.—Lady fingers or other fancy cakes of sponge-cake paste.
scones (*skōnz*).—Scotch cakes of oatmeal or flour.
scrutin d'arrondissement (*skrü täN' dà rôN dēs mäN'*), municipal ballot.
scrutin de liste (*skrü täN d lēst'*), voting by ballot; the voting for the departmental representatives.
sdegno d'amante poco dura (It.), (*zdā nyö dà män'tā pô kō dōō'rā*), a lover's anger is short-lived.
séance (*sā äNs'*), a sitting.
selle (*sel*).—Saddle.
selon les règles (*se lôN lā regl'*), according to rule.
sempre il mal non vien per nuocere (It.), (*sem'prā ēl mäl' nōn vyän' pär nwô chā rā*), misfortune is not always an evil.
se non e vero e ben trovato (It.), (*sā nōn e vā'rō e bän trō vä'tō*), if it is not true, it is cleverly invented.
siècle (*sē ekl'*), an age.
siècle d'or (*sē ekl dôr'*), the golden age (of Louis XIV).
siècles des ténèbres (*sē ekle dā tā nebr'*), the dark ages.
Sie sehen gut aus (Ger.), (*zē zā en gōōt' ows*), you look well.
sobriquet (*sō brē ke'*), a nickname.
soi-disant (*swà dē zäN'*), self-styled; would-be; pretended.
soirée (*swà rā'*), an evening party.
soubise sauce (*soo-bēz'*).—A purée of white onions or souchie.
soubrette (*sōō bret'*), on the stage a servant girl who acts in comedies the part of an intrigante.
souchet (*soo-shā'*), or **souchie** (*sōō-shē'*).—A stew of fish in a soup-like savory broth.
soufflé (*soo-flā'*).—A dish consisting of batter of starch or flour, eggs, milk or cream, and butter, beaten light and baked and served hot while light and spongy. Soufflés may be variously flavored, as with ginger, vanilla, chocolate, etc.
souffler le chaud et le froid (*sōō fla l shō' ā l frwä'*), to blow hot and cold.
spaghetti (*spä-get'tē*).—Hollow tubes of dried Italian paste, in size between macaroni and vermicelli.
Span'ish cream.—Gelatine pudding containing custard, gelatine, and beaten white of eggs, set in a mold.
Span'ish puffs.—Maringues.
spirituel (*spē rē tü el'*), possessing wit, witty.
Sturm und Drang (Ger.), (*shtoorm oont dräng'*), storm and stress.
suprême sauce (*su-prām*).—Velouté flavored with mushrooms and consommé of fowls.

T

tableau vivant (*tà blō vē väN'*), the representation of a picture by persons grouped together, silent and motionless.
table d'hôte (*tàble dōt'*), table according to the hostess.
tâche sans tâche (*tàsh säN tàsh'*), a work without a stain.
taille (*tä'y*), form; stature; shape.
tapis (*tà pē'*), the carpet.
tar'tare sauce.—Mayonnaise sauce with vinegar and chopped green herbs, pickles, and capers.
tel maître, tel valet (*tel metr', tel và le'*), like master, like man.
tendresse (*täN dres'*), passion; affection.
terra cotta (It.), (*ter'rä kôt'tä*), baked earth.
tête (*tāt*).—Head.
tête-à-tête (*te tà tet'*), a conversation between two parties.
tiens à la vérité (*tēäN zà là vā rē tā'*), maintain the truth.
tiens ta foi (*tēäN tà fwä'*), keep thy faith.
timbale (French pron. *tan-bäl'*).—A drum-like case of macaroni or rice filled with some composition, as with forcemeat or ragoût.
timbre-poste (*täN bre pôst'*), postage stamp.
toujours perdrix (*tōō zhōōr per drē'*), always partridges; the same thing over and over again.
toujours prêt (*tōō zhōōr pre'*), always ready.
tour de force (*tōōr de fôrs'*), a feat of strength or skill.
tour d'expression (*tōōr dek spre sêôN'*), an idiom.
tourner casaque (*tōōr nā kà zak'*), to turn one's coat; to change sides.
tout-à-fait (*tōō tà fe'*), wholly, entirely.
tout-à-l'heure (*tōō tà lör'*), instantly.
tout au contraire (*tōō tō kôN trer'*), on the contrary.
tout-à-vous (*tōō tà vōō'*), entirely yours.
tout bien ou rien (*tōō bēäN' ōō rēäN'*), all or nothing.
tout-de-suite (*tōō d swēt'*), immediately.
tout ensemble (*tōō täN säNbl'*), the whole.
tout le monde est sage après coup (*tōō l môN de sazh à pre kōō'*), everybody is wise after the event.
traduttori, traditori (It.), (*trä dōōt tō'rē, trä dē tō'rē*), translators are traitors.
trottoir (*trô twär'*), sidewalk.
trousseau (*trōō sō'*), wedding outfit.
truffes (*trüf*).—Truffles.
truf'fle.—A kind of edible mushroom that grows underground.
truite (*trwet*).—Trout.
Turk'ish cof'fee.—Café au Turc.
tutte le strade conducono a Roma (It.), (*tōōt'tā lā strä'dā kōn dōō'kō nō ä rō mä*), all roads lead to Rome.
tutti-frutti (*toot'tē-froot'tē*).—A confection consisting of preserved fruits of various kinds.

U

Uebung macht den Meister (Ger.), (*ü'boong mäkt den mīs'ter*), practice makes perfect.
un bienfait n'est jamais perdu (*öN bēäN fe' ne zhà me per dü'*), a kindness is never lost.
un sot à triple étage (*öN sō' à trē plä tàzh'*), a consummate fool.
un "tiens" vaut mieux que deux "tu l'auras," (*öN tēäN vō mēö' ke dö tü lō rà'*), one "take it" is worth two "you shall have it"; a bird in the hand is worth two in the bush.

V

valen'cia rice.—Rice boiled till the grains are soft and then mixed with oil and tomatoes.
valet de chambre (*và le d shäN br'*), an attendant.
vaurien (*vō rēäN'*), a worthless fellow.
veau (*vō*).—Veal.
vedi Napoli e poi muori (It.), (*vā dē nä'pō lē ā pôē mwô'rē*), see Naples and then die.
vérité sans peur (*vā rē tā' säN pör'*), truth without fear.
vers de société (*ver de sô sē ā tā'*), society verses; poetry dealing lightly with trifling subjects.
verve (*verv*), animation; spirit.
Viele Hände machen bald ein End (Ger.), (*fē le hent'-mäken bält īn ent'*), many hands make quick work.
vieux garçon (*vē ö gàr sôN'*), old bachelor.
vigueur de dessus (*vē gör' de de sü'*), strength from on high.
vin (*vaN*).—Wine.
vinaigre (*vē-nā'gr'*).—Vinegar. *Vinaigre a l'éstragon* (*ā lās trā-gôN'*) is vinegar flavored with tarragon.
vinaigrette (*vē-nā-gret'*).—A sauce made sour by acid wine or vinegar.
vino dentro, senno furore (It) (*vē'nō den'trō, sān'no fōō rō'rā*), when the wine is in, the wit is out.
vin ordinaire (*vaN ôr-dē-nâr'*).—Ordinary table wine: claret.

virtuoso (It.), (*vĕr twō′ sō*), one skilled in matters of taste or art.
vis à vis (*vē zȧ vē*), face to face.
vivat (*vē′vät*), a shout of "long live."
vive la bagatelle (*vēv lȧ bȧ gȧ tel′*), success to trifles.
vive la république (*vēv lȧ rā pü plēk′*), long live the republic.
vive l'empereur (*vēv lăN prōr′*), long live the emperor.
vive le roi (*vēv le rwä′*), long live the king.
voilà (*vwȧ lȧ′*), see there; there is, there are.
voilà tout (*vwȧ lȧ tōō′*), that is all.
voilà une autre chose (*vwȧ lȧ ü nō tre shōz′*), that is quite another thing.
voiture (*vwȧ tür′*), a carriage.
volaille (*vō-lȧ′y*).—Poultry.
vol-au-vent (*vō-lō-vȧN′*). A light puff-paste case baked and then filled with a ragoût, fricassée, or the like.

W

wagon-lits (*vȧ gô lē,*) sleeping cars.
Was fehlt Ihnen? (Ger.), (*väs fält′ ē nen*), what is the matter with you?
Wie die Arbeit, so der Lohn (Ger.), (*vē dē är′bīt, zō der lōn′*), as the labor, so the reward.
Welsh rare bit, or **rab'bit.**—A dish consisting essentially of toasted bread on which is served toasted or melted cheese. The cheese is variously prepared, as with the admixture of ale, or other flavoring material.
white sauce.—Same as velouté, or similar sauce.
wiener schnitzel (*vē′ner shnits′el*).—A cut of veal from the leg, fried in batter, and seasoned with paprika, etc., after a style attributed to the Viennese.

Z

Zeitgeist (Ger.), (*tsīt′gīst*), the spirit of the age.

PRONOUNCING DICTIONARY OF CLASSIC WORDS AND PHRASES

Including legal phrases, maxims, mottoes, quotations, proverbs, Latin abbreviations, classic allusions and references of common occurrence in books, periodicals, newspapers and speech.

KEY TO PRONUNCIATION

The long (marked) vowels are pronounced as in the following words: *fāte, fâre, cāre; mē; mīne; mōte; mūte.* The short vowels, which include all not marked as above, are pronounced as in the following words: *pat; pet; pit; pot; put.* The accented syllable in each word is indicated by a mark placed immediately after it.

A

Ab extra (*ex′trā*).—From without.
Ab initio (*in-ish′i-ō*).—From the beginning.
Ab origine (*or-i′jin-e*).—From the commencement.
Ab ovo (*ō′vō*).—From the egg—*i. e.,* the beginning. The egg in many ancient mythologies was the supposed origin of life.
Ab ovo usque ad mala (*us′kwe ad mā′la*).—From the egg to the apples—*i. e.,* from the beginning to the end (the Roman custom being to begin dinner with eggs and end with fruit).
Ab uno disce omnes (*ŭ′nō dis′se om′nēs*).—From a single instance infer the whole.
Ab urbe condita—A. U. C. (*ur′be kon′di-tā*).—From the (year of) building the city (Rome), 753 B. C.
A capite ad calcem (*ā kap′i-te ad kal′sem*).—From head to heel.
Accipe hoc (*ak′sip-e hock*).—Accept this.
Ac etiam (*ak esh′i-am*).—And also.
Ad arbitrium (*ar-bit′ri-um*).—At pleasure.
Ad captandum vulgus (*cap-tan′dum vul′gus*).—To catch the rabble.
Ad extremum (*ex-tre′mum*).—At last.
Ad finem (*fī′nem*).—To the end.
Ad hominem (*hom′in-em*).—To the man.
Ad infinitum (*in-fi-nī′tum*).—To infinity.
Ad interim (*in′ter-im*).—Meanwhile.
Ad Kalendas Graecas (*kal′en-das grē′kas*).—At the Greek kalends—*i.e.,* never (there being no kalends in the Greek year).
Ad libitum (*lib′it-um*). At pleasure.
Ad majorem Dei gloriam (*mā-jor′em Dē′ī glor′i-am*).—For the greater glory of God. The motto of the Order of the Jesuits, founded by Ignatius Loyola (1539).
Ad nauseam (*naw′se-am*).—To disgust.
Ad quod damnum (*kwod dam′num*).—To what damage.
Ad referendum (*ref-er-en′dum*).—For further consideration.
Ad rem.—To the point.
Ad unguem (*un′gwem*).—To a nail—*i.e.,* to a nicety, exactly. An expression borrowed from sculptors, who in modeling, give the finishing touch with the nail.
Ad unum omnes—Cicero (*ŭ-num om′nēs*).—All to a man.
Ad valorem (*va-lor′em*).—According to the value.
Ad vivum (*vī′vum*).—To the life.
Aegrescit medendo (*e-gres′sit med-en′dō*).—The disorder increases with the remedy, *i.e.,* the remedy is worse than the disease.
Aequam servare mentem (*ē-kwam ser-vār′e men′tem*).—To preserve a well-balanced mind; to be unmoved.
Aequo animo (*ē′kwo an′im-o*).—With resignation, contentedly.
Aetatis suae (*ē-tā′tis sū′ē*).—Of his (or her) age.
A fortiori (*for-shi-or′ī*).—With stronger reason.
Alere flammam (*al′er-e flam′mam*).—To feed the flame.
Alias (*al′i-as*).—Otherwise.
Alibi (*al′i-bī*).—Elsewhere. Legal phrase implying that the accused in a criminal case was not on the scene of a crime at the time of its committal.
Alma Mater (*al′ma mā′ter*).—Benign mother. An expression used by college men, who speak of their college as their *Alma mater.*
Alter ego (*al′ter egg′o*).—Another self.
Alter idem (*al′ter ī-dem*).—Another exactly similar.
Amantium irae amoris integratio est—(*am-an′shi-um ī′rē a-mor′iss inte-grā-shi-o est*).—The quarrels of lovers are renewals of love.
A mensa et thoro (*ā men′sā et thor′ō*).—From table and bed. A legal phrase used by the judge in pronouncing the decree of separation in the Divorce Court.
Amicus humani generis (*am-ī-cus hu-mā′nī gen′er-iss*).—A friend of the human race.
Amor patriæ (*am′or pat′ri-ē*).—Love of one's native land.
Anguis in herba—Virgil (*an′gwiss in her′bā*).—A snake in the grass.
Animo et fide (*an′im-o et fī′dē*).—By courage and faith.
Anno aetatis suae (*an′no ē-tā′tiss sū′ē*).—In the year of his (or her) age.
Anno Christi, A. C. (*an′no kriss′tī*).—In the year of Christ.
Anno Domini, A. D. (*an′no Dom′inī*).—In the year of our lord.
Anno mundi, A. M. (*an′no mun′dī*).—In the year of the world. The date of the Creation is given by Bishop Usher as 4004 B. C.
Ante meridiem, A. M. (*an′te mer-ī′di-em*).—Before noon.
A posse ad esse (*ā poss′e ad ess′e*).—From possibility to actuality.
A posteriori (*ā pos-tē-ri-or′ī*).—From the effect to the cause; that is, an argument by induction.
A priori (*ā prī-or′ī*).—From the cause to the effect; that is, an argument by deduction.
Aqua fortis (*ak′wa for′tiss*).—Strong water. A common name for nitric acid.
Aqua vitae (*ak′wa vī′tē*).—Water of life. Alcohol, brandy.
Arbiter elegantiarum (*ar′bit-er ele-gan-shi-air′um*).—An authority in matters of taste.
Arcana imperii (*ar-kā′na im-per′i-ī*).—Secrets of the state.
Ardentia verba (*ar-den′shi-a ver′ba*).—Burning words.
Argumentum ad hominem (*ar-gu-men′tum ad hom′i-nem*).—An argument to the man. An argument in refutation drawn from an opponent's own principles.
Argumentum ad invidiam (*ar-gu-men′tum ad in-vid′i-am*).—An argument appealing to low passions.
Argumentum ad judicium (*ar-gu-men′tum ad ju-dish′i-um*).—An appeal to the judgment.
Argumentum ad populum (*ar-gu-men′tum ad pop′u-lum*).—An appeal to popular prejudice.
Argumentum baculinum (*ar-gu-men′tum back-u-lī-num*).—The argument of the cudgel; appeal to force. Club-law.
Ars celare artem (*ars sell-air′e ar′tem*).—True art is to conceal art.
Ars longa, vita brevis (*ars lon′ga vī′ta brev′iss*).—Art is long, life short.
Artium magister, A. M. or M. A. (*ar′ti-um ma-jis′ter*).—Master of Arts.
Audi alteram partem (*aw′dī al′ter-am par′tem*).—Hear the other side.
Aura popularis—Cicero (*aw′ra pop-u-lair′iss*).—The shifting breeze of popular favor.
Aurea mediocritas—Horace (*aw′re-a med-i-ok′ri-tass*).—The golden mean.
Aut Cæsar, aut nullus (*awt Cæsar awt nul′lus*).—Either Cæsar or no one.

Aut vincere aut mori (*awt vin'ser-e awt mor'ī*).—Either to conquer or to die.
A verbis ad verbera (*ā ver'bīs ad ver'ber-a*).—From words to blows.
A vinculo matrimonii (*ā vin'ku-lō mat-ri-mō'ni-ī*).—From the bond of marriage.
Bis dat, qui cito dat (*bis dat kwī sī'tō dat*).—He gives twice who gives quickly.
Bona fide (*bō'nā fī'dē*).—In good faith.
Brevis esse laboro, obscurus fio—Horace (*brev'iss ess'e lab-or'ō ob-skū'rus fīo*).—When I strive to be concise I become obscure.
Brutum fulmen (*Bru'tum ful'men*).—A harmless thunderbolt.
Cacoethes loquendi (*kak-o-ē'thēs lo-kwen'dī*).—An itch for speaking.
Cacoethes scribendi (*skrī-ben'dī*).—An itch for scribbling.
Capias (*kap'i-ass*).—You may take. A writ to authorize the seizure of a defendant's person (legal).
Caput mortuum (*kap'ut mor'tu-um*).—The dead head—*i.e.*, the worthless remains.
Caret (*care'et*).—It is wanting.
Casus belli (*kā'sus bell'ī*).—A cause for war.
Caveat actor (*kav'e-at ak'tor*).—Let the doer beware. Law term signifying a notice to stay legal proceedings.
Caveat emptor (*emp'tor*).—Let the purchaser beware. Term used to show that the vendor does not hold himself responsible for the condition of the goods.
Cetera desunt (*sē'ter-a dē-sunt*).—The rest is wanting.
Ceteris paribus (*sē'ter-is pair'i-bus*).—Other things being equal.
Circa—*c.* (*sir'kā*).—About, towards (of time).
Circulus in probando (*sir'ku-lus in pro-ban'dō*).—A circle in the proof; using the conclusion as one of the arguments.
Cogito ergo sum (*coj'i-tō er'gō sum*).—I think, therefore I exist. The famous dictum of Descartes, the philosopher.
Commune bonum (*com-mū'ne bō'num*).—A common good.
Compos mentis (*com'pos men'tiss*).—Of sane mind.
Conscia mens recti (*con'shi-a mens rek'tī*).—A mind conscious of rectitude.
Contra bonos mores (*con'tra bō'nōs mor'ēz*).—Against good manners.
Copia verborum (*cō'pi-a ver-bor'um*).—Plenty of words.
Coram nobis (*cor'am nō'biss*).—In our presence; before us.
Corpus delicti (*cor'pus de-lik'tī*).—The body, *i. e.* substance, of the offense.
Crimine ab uno disce omnes (*krī'min-e ab ū'nō dis'se om'nēz*).—From one crime learn the nature of all.
Cui bono? (*kī bō'nō*).—For whose benefit is it?
Cum grano salis (*cum grā'nō sā'lis*).—With a grain of salt, *i. e.*, with some allowance.
Cum privilegio (*priv-i-le'ji-ō*).—By privilege.
Curiosa felicitas (*ku-ri-ō'sa fē-lī'si-tas*).—Felicity of expression.
Data (*dā'ta*).—Things given or taken for granted.
De auditu (*dē aw-dī'tū*).—By hearsay.
Deceptio visus (*dē-sep'shi-ō vī'sūs*).—An optical illusion.
De facto (*dē fac'tō*).—In point of fact. A legal phrase used to describe that which is fact as opposed to that which is legal.
Dei gratia (*Dē'ī grā'shi-ā*).—By the grace of God. A phrase used in respect to a sovereign, in royal proclamations, and on coins of the realm.
Disjecta membra (*dis-jek'ta mem'bra*).—Scattered remains.
Divide et impera (*dī'vi-dē et im'per-ā*).—Divide and govern.
Docendo discimus (*dō-sen'dō dis'si-mus*).—By teaching we learn.
Dominus providebit (*Dom'in-us prō-vid-ē'bit*).—The Lord will provide.
Dramatis personæ (*drā'ma-tiss per-sō'nē*).—Characters of a play.
Dulce domum (*dul'sē dō'mum*).—Sweetly homeward.
Dulce et decorum est pro patria mori—Horace (*dul'se et de-kor'um est pro pat'ri-ā mōr'ī*).—It is pleasant and befitting to die for one's country.
Dum spiro, spero (*dum spī'ro, sper'ō*).—While I breathe, I hope.
Dum vivimus, vivamus (*vī'vim-us, vī-vā'mus*).—While we live, let us live—*i. e.*, whilst we have life, let us enjoy it.
Durante vita (*du-ran'te vī'tā*).—During life.
Ecce homo! (*ek'se hom'o*).—Behold the man! A name given to representations of the suffering Savior, because Pilate used those words when Christ came forth wearing the crown of thorns and purple robe (St. John xix. 5).
Editio princeps (*e-dish'io prin'seps*).—Original edition.
Emeritus (*ē-mer'ītus*).—A soldier who has served his time, a veteran: hence, one retired from active official duties, as an Emeritus professor.
E pluribus unum (*ē plūr'i-bus ū-num*).—From many, one. Motto of United States.
Esse quam videri malim (*es'se kwam vī-dē'rī mā-lim*).—I prefer to be, rather than seem to be.
Esto quod es (*es-tō quod ēz*).—Be what thou art.
Et cetera (*et sē'ter-a*), &c., or etc. And so forth.
E tenebris oritur lux (*ē ten'e-bris or'i-tur lux*).—Out of darkness there arises light.
Et sequentes (*et se-kwen'tēs*).—And those that follow.
Et sequentia (*se-kwen'shia*)—*et seq.*—And what follows.
Et sic de ceteris (*et sik dē sē'terīs*).—And so of the rest.
Et tu, Brute (*tū Brū'te*).—And thou also, Brutus! The words were used by Cæsar when he discovered Brutus among the conspirators who assassinated him in the senate-house, B. C. 44.
Ex æquo (*ē'kwo*).—In like manner, equally.
Ex animo (*an'imo*).—From the soul, heartily.
Ex cathedra (*kath'e-drā*).—From the chair—*i. e.*, with authority. The phrase originally referred to the decisions given by popes and prelates in their pontifical character; it is now used in reference to any decision given with the air of authority.
Exceptio probat regulum (*ex-sep'shio prō-bat reg'u-lum*).—The exception proves the rule.
Ex curia (*kū'riā*).—Out of court. Originally every full Roman citizen belonged to one of the thirty curiæ or divisions of the city, and was entitled to vote on the laws submitted to his curia. The phrase *ex curia* was applied to those who had no right to vote in the curia. It is now used to denote a person who has no *locus standi* before any tribunal.
Ex delicto (*dē-lik'tō*).—From the crime.
Exempli gratia—*e. g.* (*ex-em'plī grā'shia*).—By way of example.
Exeunt (*eks'e-unt*).—They go out. Used by the older playwrights to indicate the departure of some of the performers from the stage.
Exit (*eks'it*).—He (or she) goes out.
Exitus acta probat (*ex'it-us ak'ta prō'bat*).—The event justifies the deed. Motto of George Washington.
Ex nihilo nihil fit (*ex nī'hillo nī'hill fit*).—Out of nothing nothing comes.
Ex officio (*of-fish'iō*).—By virtue of his office: *e. g.*, the president of a society is *ex officio* a member of all committees of the society.
Ex parte (*par'te*).—On one side only. A phrase indicating an application, concerning a pending action, to a judge by one party in the action in the absence of the other.
Experientia docet sapientiam (*ex-pe-ri-en'shia dō'set sap-i-en'shi-am*).—Experience teaches wisdom.
Faber est quisque fortunæ suæ—Sallust (*fab'er est kwis'kwe for-tū'nē sū'ē*).—Every man is the maker of his own fortune.
Facile princeps (*fas'il-e prin'seps*).—Easily the chief—*i. e.*, the admitted chief.
Facilis descensus Averno—Virgil (*fas'il-iss dē-sen'sus av-er'nō*).—The descent to Avernus (or hell) is easy: the downward road is an easy one. Avernus was a lake of Campania, near which was the cave through which Æneas descended to the lower world.
Fac simile (*fak sim'il-e*).—Do the like. An exact copy.
Factotum (*fak-tō'tum*).—Do everything. A man of all work.
Fecit (*fē'sit*).—He did it. Generally affixed to the pedestal of a statue by the sculptor who executed it.
Felicitas habet multos amicos (*fē-lī'si-tas hab'et mul'tōs am-ī'kōs*).—Happiness has many friends: *i. e.*, friends flock around those who are prosperous.
Feræ naturæ (*fer'ē na-tū'rē*).—Of the nature of a wild beast.
Festina lente (*fes-tī'nā len'tē*).—Hasten slowly: *i. e.*, do nothing in a hurry.
Fiat justitia, ruat cœlum (*fī'at jus-tish'i-a rū'at sē'lum*).—Let justice be done, even though the heavens should fall.
Fiat lux (*fī'at lux*).—Let there be light.
Fides Punica (*fī'dēs Pū'nik-a*).—Punic (*i. e.* Carthaginian) faith: treachery. A proverbial expression among the Romans for faithlessness.
Fidus Achates (*fī'dus Akā'tēz*).—The faithful Achates: a true friend. Achates was the distinguished companion of Æneas in his wanderings after his flight from Troy.
Fieri facias (*fī'erī fas'i-ass*).—Cause it to be done. Usually written *fi. fa.* The title of a writ of execution issued to give effect to the judgment of a court of justice.
Finem respice (*fī'nem res'piss-e*).—Look to the end.
Finis coronat opus (*fī'nis korō'nat op'us*).—The end crowns the work.
Flagrante delicto (*de-lik'tō*).—In the act of committing the crime: *i. e.*, in the very act.
Fortes fortuna juvat (*fōr'tēs fortū'na ju'vat*).—Fortune helps the brave.

Fortis cadere, cedere non potest (*for'tiss kad'er-e sē'der-e non pot'est*).—The brave may fall, but cannot yield.
Fortiter et recte (*for'tit-er et rek'tē*).—Courageously and uprightly.
Fortitudine et prudentia (*forti-tu'din-e et prūden'shi-ā*).—By fortitude and prudence.
Fortuna favet fatuis (*fortu'na fav'et fat'uīs*).—Fortune favors idiots.
Fortunæ filius (*for-tu'nē fil'ius*).—A son of fortune—*i.e.*, one favored by fortune.
Fortuna sequator (*sekwā'tur*).—Let fortune follow.
Frangas non flectes (*fran'gas non flek'tēs*).—You may break, but you shall not bend, me.
Fronti nulla fides (*fron'ti null'a fī'dēs*).—Do not judge by appearances.
Frustra laborat qui omnibus placere studet (*frus'trā labōr'at kwī om'nibus pla-sē're stū'det*).—He labors in vain who studies to please all.
Fugit irreparabile tempus—Virgil (*fū'jit ir-rep-ar-ā'bil-e tem'pus*).—Time, once gone, can never be regained.
Furor arma ministrat—Virgil (*fū'ror ar'ma min'is-trat*).—Rage supplies them with arms.
Furor loquendi (*fu'ror lo-kwen'dī*).—A rage for speaking.
Furor poeticus (*po-ēt'ik-us*).—Poetical fire.
Furor scribendi (*skrī-ben'dī*).—A rage for writing.
Gaudeamus (*gawdeā'mus*).—Let us rejoice.
Gloria in excelsis Deo (*glor'i-a in ex-sel'sis dē'ō*).—Glory to God in the highest. The opening words of the greater doxology sung in the ancient Church; chiefly used in the Communion service and private devotion.
Gratis (*grā'tiss*).—Free; for nothing.
Gutta cavat lapidem non vi, sed semper cadendo (*gut'ta kav'at lap'id-em non vī sed sem'per ka-den'dō*).—The drop hollows the stone not by force, but by constant falling.
Haud passibus æquis—Virgil (*hawd pass'i-bus ē'kwīs*).—With unequal steps.
Hic et ubique (*hik et ubī'kwe*).—Here and everywhere. ("Here, there, and everywhere.")
Hic jacet (*hik ja'set*).—Here lies. An inscription frequently carved on monuments dedicated to deceased persons.
Hoc age (*hok aj'e*).—Do this.
Homo sum: humani nihil a me alienum puto—Terence (*hom'o sum humā'nī nī'hil ā mē ali-ē'num pū'to*).—I am a man: I count nothing human indifferent to me.
Honesta mors turpi vita potior—Tacitus (*hones'ta maws tur'pī vī'tā pō'shior*).—An honorable death is preferable to a base life.
Honor virtutis præmium (*hon'or virtu'tiss prē'mium*).—Honor is the reward of virtue (or valor).
Humani generis decus (*humā'nī jen'er-iss dek'us*).—The glory of the human race. These words are inscribed on Sir Isaac Newton's monument on the rood-screen in Westminister Abbey.
Humanum est errare (*humā'num est errā're*).—It is human to err. "To err is human, to forgive, divine."—Pope.
Ibidem (*ibī'dem*).—In the same place.
Idem (*ī'dem*).—The same.
Id est (*i. e.*).—That is, that is to say.
Ignis fatuus (*ig'niss fat'u-us*).—A deceiving fire: a Will-o'-the-wisp; an inflammable gas frequently seen over marshes, which leads the traveler who pursues it into the bog.
Ignorantia legis excusat neminem (*ignoran'shia lē'jis excū'sat nem'inem*).—Ignorance of the law excuses nobody.
Imo pectore (*ī'mo pek'tor-e*).—From the bottom of the heart.
Impedimenta (*im-pedi-men'ta*).—The baggage of an army; luggage in traveling.
Imperium in imperio (*imper'ium in imper'io*).—One government within another.
Imprimatur (*imprimā'tur*).—Let it be printed. The term is used to signify the permission to print a book.
Imprimis (*im-prī'miss*).—In the first place, chiefly, especially.
In æternum (*in ēter'num*).—Forever.
In articulo mortis (*ar-tik'ulo mor'tis*).—At the point of death.
In capite (*kap'i-te*).—In chief.
In cauda venenum (*kaw'dā venē'num*).—There is poison in the tail. The sting of the scorpion is at the tip of its tail.
In cœlo quies (*se'lo kwī'ēs*).—There is rest in heaven.
In commendam (*commen'dam*).—In recommendation.
In curia (*kū'ri-ā*).—In the court.
Index expurgatorius (*in'dex expurgator'ius*).—A list of prohibited books. The term employed for the list of books which are allowed to be read after revision by the papal authorities. The I. E. was commenced by Pope Paul IV. (1555), and published by Pope Pius IV. (1559), after organization by the Council of Trent (1545-1563). Press censorship exists in Russia and some other nations.
In esse (*ess'e*).—In being.
In extenso (*exten'so*).—At full length.
In extremis (*extrē'miss*).—At the point of death.
In flagrante delicto (*flā-gran'te delik'tō*).—In the very act.
In formâ pauperis (*for'mā paw'per-iss*).—As a poor man. A law term denoting the status of a person who, having just cause of action, has no money to pay costs, counsel under these circumstances being appointed by the court.
In foro conscientiæ (*for'ō con-shi-en'shi-ē*.—Before the tribunal of conscience.
Infra dignitatem (*in'frā dignitā'tem*).—Beneath one's dignity.
In hoc signo vinces (*in hoc sig'nō vin'sēs*).—Under this standard (sign) thou shalt conquer. Motto of the Emperor Constantine, who first used it on his standard (*labarum*) in the battle against Maxentius, A. D. 312.
In limine (*lī-min-e*).—At the threshold.
In loco parentis (*lō'kō -paren'tiss*).—In the place of a parent. A law term denoting the guardian who takes charge of a child in the event of the death or mental incapacity of its parents.
In medias res (*med'i-ass rēs*).—Into the midst of things, *e. g.*, to come to the point at once.
In medio virtus (*med'i-o vir'tus*).—Virtue lies in the mean.
In memoriam (*memor'i-am*).—To the memory of.
In nomine (*nom'i-ne*).—In the name of.
In nubibus (*nū'bi-bus*).—In the clouds.
In nuce (*nū'se*).—In a nutshell.
In pace (*pā'se*).—In peace.
In perpetuum (*per-pet'u-um*).—Forever.
In posse (*poss'e*).—Possible.
In præsenti (*prē-sen'ti*).—At present, now.
In propria persona (*prō'pri-ā persō'nā*).—In person. A law term applied to a litigant who conducts his own case.
In puris naturalibus (*pūr'is naturā'li-bus*).—Stark naked.
In re (*rē*).—In the matter of (legal).
In rerum natura (*rēr'um natū'rā*).—In the nature of things.
In situ (*sī'tū*).—In its original situation.
In statu pupillari (*stā'tū pupillār'i*).—In the state of being a ward (legal).
In statu quo (*kwō*).—In the state in which it was, we were, etc. (legal).
In tenebris (*ten'e-brīs*).—In darkness.
Inter alia (*in'ter al'i-a*).—Among other things (legal).
Inter nos (*nōs*).—Between ourselves.
Inter pocula (*pō'ku-la*).—At one's cups.
Inter se (*in'ter sē*).—Among themselves.
In toto (*tō'tō*).—In the whole; entirely.
Intra muros (*in'trā mū'rōs*).—Within the walls.
In transitu (*trans'i-tū*).—On the passage.
In vacuo (*vak'u-ō*).—In a space devoid of air.
In vino veritas (*vī'no ver'i-tas*).—There is truth in wine—*i. e.*, the truth comes out under its influence.
Ipse dixit (*ip'se dix'it*).—He himself said it: dogmatic assertion.
Ipsissima verba (*ipsiss'i-ma ver'ba*).—The very words.
Ipso facto (*ip'so fak'to*).—In the fact itself.
Ipso jure (*ip'so ju're*).—By the law itself.
Ira furor brevis est—Horace (*ī'ra fū'ror brev'iss est*).—Anger is a short madness.
Ita lex scripta est (*it'a lex scrip'ta est*).—Thus the law is written.
Jacta alea est (*jak'ta ā'le-a*).—The die has been cast. Famous phrase said to have been used by Julius Cæsar on crossing (49 B. C.) the Rubicon, the sacred boundary of the domestic Roman Empire, by which act he declared war against Pompey and the Senate.
Jure divino (*jū're dīvī'no*).—By divine law.
Jure humano (*humā'no*).—By human law.
Jus civile (*jus sīvī'le*).—The civil law. The term commonly used to describe the Roman law and the various modern systems based upon it, as contrasted with the English common law.
Jus divinum (*dīvī'num*).—The divine law; the law which is right with respect to things divine.
Jus gentium (*jen'shium*).—The law of nations; the law that all nations esteemed to be equitable.
Laborare est orare (*laborār'e est orār'e*).—To labor is to pray (or Work is worship).
Labore et honore (*labōr'e et honōr'e*).—By industry and honor.
Labor ipse voluptas (*lab'or ip'se vo-lup'tas*).—Labor itself a pleasure.
Labor omnia vincit (*lab'or om'ni-a vin'sit*).—Labor conquers all things.

Lapsus calami (*lap'sus cal'a-mi*).—A slip of the pen.
Lapsus linguæ (*lin'gwē*).—A slip of the tongue.
Lapsus memoriæ (*mem-ōr'i-ē*).—A slip of the memory.
Lares et Penates (*Lār-ēs et Penā'tēs*).—Household gods.
Latet anguis in herba—Virgil (*la'tet an'gwis in her'bā*).—A snake is concealed in the grass.
Laus Deo (*laws Dē'o*).—Praise to God.
Lex non scripta (*skrip'ta*).—The unwritten law—*i. e.*, the common law.
Lex scripta.—The written law—*i. e.*, the statute law.
Lex talionis (*tal-i-ō'niss*).—The law of retaliation.
Lex terræ (*ter'rē*).—The law of the land.
Loco citato—*loc. cit.* (*lok'ō sit-ā'tō*).—In the place quoted.
Locus in quo (*kwō*).—The place in which (legal).
Locus sigilli (*si-jill'i*).—The place of the seal.
Lusus naturæ (*lū'sus natū'rē*).—A freak of nature.
Magna est veritas, et prævalebit (*mag'na est very'tass et prē-val-ē'bit*).—Great is truth, and it will prevail.
Magni nominis umbra (*mag'nī nom'i-niss um'bra*).—The shadow of a great name.
Magnum bonum (*mag'num bō'num*).—A great good.
Magnum opus (*op'us*).—A great work. The chief work of a distinguished author is frequently so called.
Mala fide (*mā'lā fī'dē*).—In bad faith.
Mandamus (*mandā'mus*).—We command: a law writ.
Manibus pedibusque—Terence (*man'i-bus pedi-bus'-kwe*).—With hands and feet—*i. e.*, with might and main.
Materia medica (*mā-ter'i-a med'ic-ca*).—Substances used in medicine.
Mea culpa (*mē'ā kul'pā*).—By my fault.
Medio tutissimus ibis (*med'i-o tū-tiss'imus ī'bis*).—The middle is the safest course.
Me judice (*jū'di-se*).—I being judge; *i. e.*, in my own opinion.
Memento mori (*me-men'tō mor'i*).—Remember that you must die. Words used at Egyptian banquets to remind the guests of their mortality.
Memorabilia (*memorabil'i-a*).—Things to be remembered. The name of a work by Xenophon, the Athenian general, historian, and philosopher (*c.* 445-359 B. C.).
Mensa et thoro (*men'sā et thor'ō*).—From bed and board.
Mens conscia recti (*mens con'shia rek'tī*).—A mind conscious of rectitude.
Mens sana in corpore sano (*mens sā'na in kor'por-e sā'no*).—A sound mind in a healthy body.
Meo animo (*mē'o an'im-o*).—In my opinion.
Meo periculo (*per-ī'kulo*).—At my own risk.
Meum et tuum (*mē'um et tū'um*).—Mine and thine.
Mirabile dictu—Virgil (*mi-rā'bil-e dik'tū*).—Wonderful to tell.
Mirabile visu (*vī'su*).—Wonderful to see.
Mirabilia (*mi-ra-bil'i-a*).—Wonderful things.
Mittimus (*mit'i-mus*).—We send. A writ by which a culprit is committed to jail. A legal phrase for the writ transferring records from one court to another.
Modo et forma (*mod'o et for'mā*).—In manner and form.
Modus operandi (*mod'us operan'dī*).—The manner of operation.
More suo (*su'o*).—In his own way.
Mors janua vitæ (*maws jan'u-a vi'tē*).—Death the gate of life.
Mors omnibus communis (*om'nibus kommū'nis*).—Death is common to all of us.
Mors ultima linea rerum est—Horace (*ul'tim-a li'ne-a rēr'um est*).—Death is the boundary line of all things.
Mos pro lege (*mōs pro lē'je*).—Custom for law (a law phrase).
Motu proprio (*mō'tū prō'priō*).—Of his own accord.
Multum in parvo (*mul-tum in par'vō*).—Much in little.
Mutatis mutandis (*mu-tā'tis mu-tan'dis*).—Things being changed which ought to be changed; *i. e.*, with necessary changes.
Necessitas non habet legem (*necess'it-ass non hab'et lē'jem*).—Necessity has no law.
Ne fronti crede (*nē front'ī krē'de*).—Trust not to appearances.
Nem. con.—abbreviation for **nemine contradicente** (*nem'in-e contra-dī-sent'e*).—No one speaking in opposition: without opposition.
Nem. dis.—abbreviation for **nemine dissentiente** (*dis-sen-shi-en'te*).—No one dissenting: without a dissenting voice.
Ne plus ultra (*nē plus ul'trā*).—No more beyond: *i. e.*, perfection.
Ne quid nimis—Terence (*nē kwid nim'iss*).—Not too much of anything; *i. e.*, shun extremes.
Nesoit vox missa reverti—Horace (*nes'sit vox miss'a rever'tī*).—The spoken word cannot be recalled.
Ne sutor ultra crepidam—Pliny (*sū'tor ul'tra crep'i-dam*).—Let the cobbler stick to his last; *i. e.*, let everyone attend to his own business.
Nihil ad rem (*ni'hil ad rem*).—Nothing to the point.
Nullum quod tetigit non ornavit (*kwod tet'i-git non ornā'vit*).—He touched nothing which he did not adorn. These Latin words form part of Dr. Johnson's epitaph on Oliver Goldsmith in Westminster Abbey.
Nil conscire sibi—Horace (*con-sī're sib'ī*).—To be conscious of no wrong.
Nil desperandum.—Never despair.
Nisi Dominus frustra (*ni'si dom'in-us frus'trā*).—Unless the Lord be with us, we strive in vain. Motto of the City of Edinburgh.
Nisi prius (*ni'si prī'us*)—literally, Unless previously. A trial at *Nisi Prius* may be defined as a trial, before a judge and jury, of a civil action that has been brought in one of the superior courts.
Nolens volens (*nō'lens vō'lens*).—Whether he will or not.
Noli me tangere (*nō'lī me tan'jer-e*).—Don't touch me.
Nolle prosequi (*noll'e prō'sek-wī*).—To be unwilling to proceed (legal term). An undertaking by a plaintiff that he will not proceed with part or the whole of his suit.
Non compos mentis (*kom'poss men'tiss*).—Not sound in mind.
Non constat (*kon'stat*).—It does not appear.
Non est inventus (*inven'tus*).—He has not been found.
Non licet (*liss'et*).—It is not lawful.
Non multa, sed multum (*mul'ta sed mul'tum*).—Not many things, but much.
Non obstante (*ob-stan'te*).—Notwithstanding.
Non omnia possumus omnes—Virgil (*om'ni-a poss'-u-mus om'nēs*).—We cannot, all of us, do all things.
Non quo sed quomodo (*kwō sed kwō'mod-ō*).—Not by whom, but in what manner.
Non sequitur (*sek'wit-ur*).—It does not follow.
Non sibi, sed patriæ (*sib'i sed pat'ri-ē*).—Not for himself, but for his country.
Nosce teipsum (*nos'se tē-ip'sum*).—Know thyself. The Latin form of the Greek inscription over the portico of the Temple of Apollo at Delphi.
Noscitur ex sociis (*noss'i-tur ex sō'si-is*).—He is known by his companions.
Nota bene (N. B.) (*nō'tā bē'nē*).—Mark well.
Novus homo (*nov'us hom'o*).—A new man—one who has raised himself from obscurity. Term applied to men who in the days of the Roman Republic and Empire rose to distinction but did not belong to an ancient *gens*.
Nulli secundus (*null'ī se-kun'dus*).—Second to none.
Nunc aut nunquam (*nunk awt nun'kwam*).—Now or never.
Obiit (*ob'i-it*).—He (or she) died. An inscription on tombs, indicating the fact of the death of the person interred.
Obiter dictum (*ob'it-er dik'tum*).—A thing said by the way, incidentally; plural, **obiter dicta.**
Odium theologicum (*ō'di-um theo-loj'i-kum*).—Hatred among divines. Theological controversy usually provoking great bitterness on the part of the disputants.
Omnia ad Dei gloriam (*om'ni-a ad Dē'ī glor'i-am*).—All things to the glory of God.
Omnia bona bonis (*om'ni-a bō'na bō'nis*).—To the good all things are good.
Onus probandi (*ō'nus pro-ban'dī*).—The burden of proving (legal).
Optimates (*op-ti-mā'tēs*).—Aristocrats. Literally, the best. In ancient times the aristocracy was composed of men selected for their superior vigor as the best in the tribe.
Opum furiosa cupido—Ovid (*op'um furi-ō'sa ku-pī'dō*).—The ungovernable greed for wealth.
Ora et labora (*ōr'ā et lab-ōr'ā*).—Pray and work.
Ora pro nobis (*ōr'ā pro nō'bis*).—Pray for us. The words of the refrain of the well-known hymn in the Roman Catholic mass.
Ore rotundo (*ōr'ē rō-tun'dō*).—With round, full voice.
O tempora! O mores!—Horace (*tem'por-a mor'ēz*).—O the times! O the manners!
Otium cum dignitate (*ō'shi-um kum dig-ni-tā'te*).—Ease with dignity.
Otium sine dignitate (*sin'e*).—Ease without dignity.
Pace tua (*pā'se tū'ā*).—With your permission.
Pacta conventa (*pak'ta con-ben'ta*).—Terms agreed on.
Pari passu (*par'i pass'u*).—With equal pace; in equal proportion.
Pariter pax bello—Cornelius Nepos (*par'it-er pax bell'o*).—Peace is produced by war: *i. e.* by a show of hostile preparations war is often averted.
Particeps criminis (*par'ti-seps krī'min-iss*).—A sharer in the guilt: an accomplice (legal).
Passim (*pas'sim*).—Everywhere.
Pater noster (*pat'er nos'ter*).—Our father. The two first words at the commencement of the Lord's Prayer.
Pater patriæ (*pat'er pat'ri-ē*).—The father of his country. The name given to Cicero by the Roman Senate. The term was also applied to some other distinguished Romans. In later times Andrea Dorea and George Washington were thus distinguished.

Patres conscripti (*pat'rēz kon-skrip'tī*), *i. e.* **patres et conscripti.**—Fathers and elect—the title of the assembled Senate.
Patria cara, carior libertas (*pat'ri-a cār'a cār'i-or lib'er-tas.*).—My country is dear, but liberty is dearer.
Pax in bello (*bell'o*).—Peace in war—*i. e.*, a weak prosecution of hostilities.
Pax vobiscum (*vo-bis'kum*).—Peace be with you.
Peccavi (*pek-kā'vī*).—I have sinned.
Pendente lite (*pen-den'te lī'te*).—While the lawsuit is pending (legal).
Peraget angusta ad augusta (*per-ag'et an-gus'ta ad aw-gus'ta*).—Through difficulties to grandeur.
Per annum.—By the year.
Per centum.—By the hundred.
Per contra.—Contrariwise.
Per diem (*dī'em*).—By the day.
Per fas et nefas (*fass et nef'ass*).—Through right and wrong.
Per mare, per terras (*mar'e ter'ras*).—By sea and by land: *i. e.*, everywhere.
Permitte Divis cetera (*per-mitt'e dī'vīs sē'ter-a*).—Leave the rest to the gods.
Per saltum (*salt'um*).—By a leap. A legal phrase frequently used.
Per se.—By itself (legal).
Perseverando (*per-sev-er-an'dō*).—By perseverance.
Petitio principii (*pet-ī'shi-o prin-sip'i-ī*).—A begging of the question.
Pinxit (*pinks'it*).—He painted it; word placed in the corner of a canvas after the signature of the artist.
Plebs (*pleb's*).—Common poeple. The name given to the third and lowest rank of the orders into which the Roman state was divided.

Pluries (*plū'ri ēz*).—Often, frequently.
Poeta nascitur, non fit—Horace (*po-ē'ta nass'it-ur non fit*).—A poet is born, not made.
Pons asinorum (*ass'in-or'um*).—The bridge of asses (applied to Euclid i. 5).
Posse comitatus (*poss'e com-i-tā'tūs*).—The power of the county. A legal phrase expressing the power of the county or citizens, who are summoned to assist an officer, as the sheriff, in suppressing a riot or executing any legal process.
Post bellum auxilium (*pōst bell'um awx-il'i-um*).—Help after the war.
Postea (*post'e-ā*).—Afterwards.
Post factum nullum consilium (*fak'tum null'um consil'i-um*).—After the deed is done there is no need for consultation.
Post meridiem—P. M. (*mer-ī'di-em*).—After mid-day.
Post mortem.—After death. Term applied to the examination of a body to discover the cause of death.
Post nubila Phœbus (*nū'bil-a fē'bus*).—After clouds the sun shines. Phœbus Apollo, "the radiant Apollo," a god who personified the sun.
Post obitum (*ob'it-um*).—After death. An undertaking given to a usurer to repay a loan on the death of a relative, from whom money is expected, is called a *post obit*.
Post tenebras lux (*ten'e-bras*).—After darkness comes light.
Postulata (*post-u-lā'ta*).—Things demanded.
Prima facie (*prī'mā fā'si-ē*).—On the first view or appearance. A legal term frequently employed to denote that on the evidence already given there is a good case for further investigation.
Primum mobile (*prī'mum mō'bil-e*).—The source of motion: the mainspring.
Primus inter omnes (*prī'mus in'ter om'nēs*).—The first among all.
Primus inter pares (*par'ēs*).—The first among his equals or peers: *e. g.*, an archbishop among bishops.
Principia, non homines (*prin-sip'i-a non hom'in-ēs*).—Principles, not men.
Principiis obsta (*prin-sip'i-īs ob'sta*).—Withstand the beginnings (*i. e.* of evil).
Pro aris et focis (*ar'is et fō'sis*).—For our altars and our hearths.
Pro bono publico (*prō bōnō pub'li-kō*).—For the public good.
Pro et con.—For and against.
Profanum vulgus—Horace (*pro-fā'num vul'gus*).—The common herd.
Pro forma (*for'mā*).—For the sake of form.
Pro hac vice (*hak vī'se*).—For this time.
Pro patria (*pat'ri-ā*).—For our country.
Pro rata (*rā'ta*).—Proportionally.
Pro rege, lege, et grege (*rē'je lē'je et grej'e*).—For the king, the law, and the people.
Pro re nata (*rē na'tā*).—Under the present circumstances, as matters are.
Pro salute animæ (*sal-ū'te an'im-ē*).—For the welfare of the soul.
Pro tanto (*tan'to*).—As far as it goes.
Pro tempore—*pro. tem.* (*tem'por-e*).—For the time being.
Punica fides (*pū'nik-a fīdēs*).—Punic (or Carthaginian) faith, *i. e.* treachery.
Quantum (*kwan'tum*).—As much, so much.
Quantum sufficit (*kwan'tum suf-fi'sit*).—As much as is sufficient. A term frequently used in medical prescriptions, as Q. S.
Quasi (*kwā'sī*).—As if, just as, as it were.
Quid nunc? (*kwid nunk*).—What now? What news? Also applied as a name to a person who is always seeking to satisfy his curiosity as to current news.
Quid pro quo (*kwid prō kwō*).—One thing for another.
Quoad hoc (*kwō'ad hok*).—To this extent.
Quo animo? (*kwō an'im-ō*).—With what purpose or intention?
Quod erat demonstrandum—Q. E. D. (*kwod er'at dem-on-stran'dum*).—Which was to be proved. A term used in geometry at the end of propositions, to indicate that the theorem is proved.
Quod erat faciendum—Q. E. F. (*fas-i-en'dum*).—Which was to be done. A term used in geometry at the end of problems, to show that they have been solved.
Quod scripsi, scripsi (*skrip'sī*).—What I have written, I have written. Words used by Pilate when he refused to alter the inscription he had written over the crucified Savior.
Quod vide—*q. v.* (*vi'de*).—Which see.
Quo jure (*kwō jū're*).—By what right.
Quomodo (*kwō-mod-o*).—In what manner, how.
Quondam (*kwon'dam*).—At one time, once, formerly.
Quos Deus vult perdere, prius dementat (*kwōs dē'us vult per'der-e, prī'us dē-men'tat*).—Those whom God has a mind to destroy, He first deprives of their senses.
Rara avis in terris, nigroque simillima cygno—Ovid (*rār'a av'iss in ter'rīs nī-grō'kwe sim-ill'im-a sig'nō*).—A rare bird on the earth, and very like a black swan: *i. e.*, a prodigy. This species being almost entirely unknown in the time of the Romans.
Recipe (*res'ip-e*).—Receive.
Recte et suaviter (*rek'tē et swa'vit-er*).—Justly and pleasantly.
Redeunt Saturnia regna (*red'e-unt sat-ur'ni-a reg'na*).—The age of Saturn (*i. e.* the golden age) returns.
Reductio ad absurdum (*re-duk'shi-o ad ab-surd'um*).—A reducing à position to an absurdity.
Rem acu tetigisti (*rem ak'ū teti-gist'i*).—You have hit the nail on the head (*lit.* touched the matter with a needle-point).
Requiescat in pace—R. I. P. (*rek-wi-ess'kat in pā'se*).—May he (or she) rest in peace. Symbol used on monuments, expressing a prayer for the repose of the soul.
Res gestæ (*rēs jest'ē*).—Exploits.
Res judicata (*jūdi-ka'ta*).—A case or suit already decided.
Respice finem (*res'-piss-e fī'nem*).—Look to the end.
Respublica (*rēs-pub'lik-a*).—The common weal; the commonwealth. Name applied to the Roman state prior to the time of the Empire.
Resurgam (*re-sur'gam*).—I shall rise again. Frequently inscribed on memorials to the dead.
Ride si sapis (*rī' de si sap'iss*).—Laugh if you are wise; *i. e.*, the wise cultivate a cheerful habit of mind.
Ruat cœlum (*rū'at sē'lum*).—Let the heavens fall.
Rus in urbe (*russ in ur'be*).—The country in town.
Sal atticum (*sal at'tik-um*).—Attic salt—*i. e.*, wit. Salt was used both by the Greeks and Romans as the common term for wit; Attic (*i. e.* Athenian) wit being especially delicate and elegant.
Salus populi suprema est lex (*sal'us pop'u-li su-prē'ma est lex*).—The welfare of the people is the supreme law.
Salve (*sal'vē*).—How are you? I hope you are well. A form of familiar salutation among the Romans.
Salvo jure (*sal'vō jū're*).—Saving the right.
Sanctum sanctorum (*sank'tum sank-tor'um*).—The holy of holies. In ecclesiastical law the chancel of a church is so called; also frequently applied to a private room or study.
Sartor resartus (*sar'tor re-sar'tus*).—The tailor patched. The title of Carlyle's well-known work.
Satis superque (*sat'iss su-per'kwe*).—Enough and more than enough.
Satis verborum (*ver-bor'um*).—Enough of words.
Secundum artem (*sek-un'dum ar'tem*).—According to rule.
Secundum naturam (*na-tūr'am*).—According to nature.
Semper avarus eget—Horace (*sem'per av-ār'us ej'et*).—The covetous man is ever in want.
Semper felix (*fē'lix*).—Always happy.
Semper fidelis (*fid-ē'liss*).—Always faithful.
Semper idem (*ī'dem*).—Always the same. (This is the masculine form; the feminine form is *e'a-dem*, and the neuter *id'em*—all three singular.)
Semper paratus (*par-a'tus*).—Always ready.

Senatus populusque Romanus—S. P. Q. R. (*sen-ā'tus popu-lus'kwe Ro-mā'nus*).—The senate and the Roman people.
Seniores priores (*sen-i-or'ēz pri-or'ēz*).—Elders first. Elderly persons being accorded in ancient times special reverence. Cicero (106-43 B. C.) wrote a work, *De Senectute*, in praise of old age.
Seriatim (*ser-i-ā'tim*).—In a series.
Servabo fidem (*ser-vā'bō fid'em*).—I will keep faith.
Sic (*sik*).—Thus: so. General used ironically to call attention to a literary error.
Sic itur ad astra—Virgil (*sik it'ur ad ass'tra*).—Such is the way to immortality (*lit.*, to the stars).
Sic passim (*pas'sim*).—So everywhere.
Sic transit gloria mundi (*sik trans'it glor'i-a mun'dī*).—Thus passes away earthly glory. Words said to have been used at the inauguration of the early Popes.
Sic vos non vobis—Virgil (*sik vōs non vō'bliss*).—Thus you toil, but not for yourselves. The poet here refers to bees, who make honey, but not for their own use.
Similia similibus curantur (*sim-il'i-a sim-il'i-bus kuran'tur*).—Like things are cured by like. Motto of homœopathic school of medicine.
Sine die (*sin'e dī'ē*).—Without a day being appointed: indefinitely.
Sine invidia (*in-vid'i-ā*).—Without envy.
Sine odio (*ō'di-ō*).—Without hatred.
Sine qua non (*sin'e kwā non*).—An indispensable condition.
Siste, viator (*sis'te vi-ā'tor*).—Stop, traveler.
Si vis pacem, para bellum (*sī viss pā'sem par'ā bell'um*).—If you wish for peace, prepare for war.
Sola nobilitas virtus (*sō'la no-bil'i-tas vir'tus*).—Virtue alone is true nobility.
Sola virtus invicta (*sō'la vir'tus in-vik'ta*).—Virtue alone is invincible.
Spectemur agendo (*spek-tē'mur a-jen'dō*).—Let us be tried by our actions.
Spes mea in Deo (*spēs mē'a in Dē'o*).—My hope is in God.
Spes tutissima cœlis (*spēs tu-tiss'im-a sē'lis*).—The safest hope is in heaven.
Sponte sua (*spon'te su'ā*).—Of one's own accord.
Stat magni nominis umbra—Lucan (*stat mag'nī nom'in-iss um'bra*).—He stands the shadow of a mighty name.
Status quo (*stā'tus kwō*).—The state in which. A legal term indicating the position in which a case stood before certain action was taken in it.
Status quo ante bellum (*an'te bell'um*).—The state in which both parties were before the war.
Stet.—Let it stand—*i. e.*, remain as it was.
Sua cuique voluptas (*sū'a ku-ī'kwe vol-up'tas*).—Every man has his own pleasures.
Suaviter in modo, fortiter in re (*su-ā'vit-er in mod'o for'ti-ter in rē*).—Gentle in the manner, but vigorous in the deed.
Sub judice (*jū'diss-e*).—Under consideration. A legal phrase used to indicate that a case is still under consideration, during which time it is held to be contempt of court to comment upon the case in the public press or elsewhere.
Sub pœna (*pē'nā*).—Under a penalty.
Sub rosa (*rō'sā*).—Under the rose: privately. The rose in ancient times was the emblem of silence, and was used in decorations to show that anything said during the entertainment was not to be divulged. Cupid presented Harpocrates (the god of Silence) with a rose, not to betray the amours of Venus.
Sub silentio (*sil-en'shi-o*).—In silence.
Sufficit (*suf-fi'sit*).—It is enough.
Sui generis (*sū'i jen'er-iss*).—Of its own kind; *i. e.*, not referable to any particular class.
Summum bonum (*sum'mum bō'num*).—The chief good.
Suo marte (*sū'o mar'te*).—By one's own exertions, without the assistance of others.
Suppressio veri (*sup-press'i-o vēr'ī*).—Suppression of the truth.
Suum cuique (*su'um ku-ī'kwe*).—Let every man have his own.
Tabula rasa (*tab'u-la rā'sa*).—A smooth or blank tablet. From the waxen tablets on which the ancients wrote with a sharp instrument called a *stilus* or style, and with the broad upper end of which writing was erased.
Tanto melior! (*tan'tō mel'i-or*).—So much the better! well done! excellent!
Telum imbelle sine ictu—Virgil (*tē'lum im-bell'e sin'e ik'tū*).—A feeble weapon, thrown without effect.
Tempora mutantur, et nos mutamur in illis (*tem'por-a mū-tan'tur et nōs mū-tā'mur in ill'īs*).—The times are changed, and we with them.
Tempus fugit (*fū'jit*).—Time flies. A Latin inscription frequently seen upon sun-dials and old church clocks.
Tempus omnia revelat (*om'nia re-vē'lat*).—Time unveils all things.
Terra firma (*ter'ra firm'a*).—Solid earth; a safe footing.
Terra incognita (*ter'ra in-kog'nit-a*).—An unknown country.
Tertium quid (*ter'shi-um kwid*).—A third something. A logical term.
Toga virilis (*tog'a vir-ī liss*).—The garb of manhood, assumed by Roman youth in their sixteenth year with considerable ceremony, usually at the feasts of Bacchus in March.
Totidem verbis (*tot'id-em ver'bīs*).—In just so many words.
Toto cœlo (*tō'tō sē'lō*).—By the whole heavens: diametrically opposite.
Tria juncta in uno (*tri'a junk'ta in ū'no*).—Three joined in one.
Troja fuit (*Trō'ja fū'it*).—Troy was—*i. e.*, exists no longer. Refers to the destruction of Troy by the Greeks (1184 B. C.).
Tu quoque, Brute! (*tū kwō'kwe Brū'tē*).—And thou too, Brutus! When Brutus, the friend and favorite of Julius Cæsar, struck the latter at his assassination, he uttered the words *Tu quoque, Brute!* pulled his toga over his face, and sank, pierced with wounds, at the foot of Pompey's statue.
Ubique (*ub-ī'kwe*).—Everywhere.
Ubi supra (*ub'ī su'prā*).—Where above mentioned.
Ultima ratio regum (*ul'tim-a rā'shi-o rē'jum*).—The last argument of kings. Louis XIV. placed this inscription on his great guns.
Ultima Thule (*ul'tim-a Thū'lē*).—The utmost boundary or limit. *Thule* was an island regarded by the ancients as the most northerly point in the whole earth, and variously supposed to have been Iceland and one of the Shetland group.
Ultimus Romanorum (*ul'tim-us Ro-man-or'um*).—The last of the Romans.
Ultra vires (*ul'trā vī'rēs*).—Beyond one's powers; beyond the rights possessed (legal).
Uno animo (*ū'no an'im-o*).—Of the same opinion.
Usque ad nauseam (*us'kwe ad naw'se-am*).—To utter disgust.
Ut infra (*in'frā*).—As below.
Ut supra (*su'prā*).—As above.
Vade mecum (*vā'de mē'cum*).—Go with me: a constant companion. Title given to medical and other handbooks for convenient reference.
Vale (*valē'*), or **Valeas** (*val'e-ass*).—Farewell, adieu. The usual parting salutation of the Romans.
Valeat quantum valere potest (*val'e-at kwant'um val-ēr'e pot'est*).—Let it pass for what it is worth.
Valete, ac plaudite (*val-ē'te ak plaud'it-e*).—Farewell, and clap. (The concluding words of a Latin comedy.)
Vanitas vanitatum (*van'it-ass van-it-ā'tum*).—Vanity of vanities.
Variæ lectiones (*var'i-ē lek-shi-ō'nēs*).—Various readings.
Variorum notæ (*var-i-or'um nō'tē*).—The notes of various authors.
Varium et mutabile semper femina—Virgil (*var'i-um et mū-tā'bil-e sem'per fē'min-a*).—A woman is ever changeable and capricious.
Velis remisque (*vē'lis rē-mīs'kwe*).—With sails and oars—*i. e.*, with tooth and nail, with might and main.
Veni, vidi, vici (*vē'nī, vī'dī, vī'sī*).—I came, I saw, I conquered. By these three words—so easy was the victory—Julius Cæsar informed the Senate of his having defeated Pharnaces near Zela, 47 B. C.
Ventis secundis (*ven'tis se-kun'dīs*).—With favorable winds.
Verbatim et literatim (*ver-bā'tim et lit-er-ā'tim*).—Word for word and letter for letter.
Verba volant, scripta manent (*ver'ba vol'ant, scrip'ta man'ent*).—Words fly, writings remain.
Verbum sat sapienti (*ver'bum sat sap-i-en'tī*).—A word is enough to a wise man.
Veritas odium parit—Terence. Truth procures hatred.
Veritas vincit (*very'tass vin'sit*).—Truth conquers.
Versus (*ver'sus*).—Against. A legal term.
Vestigia (*ves-ti'ji-a*).—Tracks; traces.
Vestigia nulla retrorsum (*ves-ti'ji-a null'a ret-ror'sum*).—No steps backward.
Vetera extollimus, recentium incuriosi—Tacitus (*vet'er-a ex-toll'im-us re-sen'shi-um in-ku-ri-ō'sī*).—We exalt the deeds of old, being indifferent to those of recent times.
Vexata quæstio (*vex-ā'ta kwēs'ti-o*).—A much-debated question.
Via (*vī'ā*).—By way of.
Via media (*vī'a med'i-a*).—A middle course.
Vice (*vī'se*).—In the place of.
Vice versa (*vī'se ver'sā*).—The terms being exchanged.
Vide (*vī'dē*).—See.

Vide et crede (*vī'de et krē'de*).—See and believe.
Vide ut supra (*vī'de ut sū'prā*).—See as above; see the preceding statement.
Videlicet—*viz.* (*vid-ē'liss-et*).—To wit; namely.
Vi et armis (*vi et ar'mis*).—By force and arms—*i. e.*, by main force.
Vincit amor patriæ (*vin'sit am'or pat'ri-ē*).—The love of our country prevails.
Vincit omnia veritas (*vin'sit óm'ni-a very'tass*).—Truth conquers all things.
Vincit veritas (*vin'sit very'tass*).—Truth conquers.
Vinculum matrimonii (*vin'ku-lum mā-tri-mō'ni-i*).—The bond of marriage.
Vindex injuriæ (*vin'dex in-jū'ri-ē*).—An avenger of injury.
Vir sapit qui pauca loquitur (*vir sap'it kwi paw'sa lok'-wit-ur*).—He is a wise man who says but little.
Virtus est vitium fugere—Horace (*vir'tus est vish'i-um fū'jer-e*).—It is virtue to avoid vice.
Virtuti nihil obstat et armis (*vir-tū'ti ni'hil ob'stat et ar'mis*).—Nothing can resist valor and arms.
Virtuti non armis fido (*vir-tū'ti non ar'mis fi'dō*).—I trust to virtue, and not to arms.
Virtutis amor (*vir-tū'tiss am'or*).—The love of virtue.
Vis inertiæ (*viss in-er'shi-ē*).—The power of inertia: passive resistance.
Vivat regina! (*vī'vat rē-ji'na*).—Long live the Queen! The phrase formerly used at the conclusion of royal proclamations.
Vivat rex! (*vī'vat rex*).—Long live the King!
Viva voce (*vī'vā vō'se*).—By the living voice: by oral testimony. That portion of an examination in which the candidate is tested as to his knowledge of the subject by an examiner who personally interrogates him.
Vivida vis animi (*vī'vid-a viss an'im-ī*).—The vigorous strength of intellect; the lively vigor of genius.
Vivit post funera virtus (*vī'vit post fū'ner-a vir'tus*).—Virtue survives the grave.
Vox et præterea nihil (*vox et prē-ter'e-ā ni'hil*).—A voice and nothing more.
Vox populi, vox Dei (*pop'u-lī, Dē'i*).—The voice of the people is the voice of God. Quoted as a proverb by William of Malmesbury, author of "De Gestis Regum Anglorum," twelfth century.
Vulgo (*vul'gō*).—Generally, commonly.
Vultus est index animi (*vul'tus est in'dex an'im-ī*).—The countenance is the index of the mind.

LITERATURE

Literature, in the widest sense, is the record of the impressions made by external realities of every kind upon great men, and of the reflections which these men have made upon them.

VAST RANGE OF LITERATURE

The subject matter of literature covers the whole range of human life and activity, as well as every known manifestation of physical nature. For not only are actual events and the doings and sayings of actual persons reproduced in it, but the rules deduced from the observation of the conditions of man's life are included in its records. Similarly it presents to us not merely what individual men found to interest them in particular countries in a particular epoch, but also the general laws which have been gradually formulated by long-continued observation of the processes of nature.

Literature, therefore, plays a very important part in the life of man. It is the greatest of the secondary sources of knowledge, and it makes an immense contribution to the sum total of facts—the joint result of the experience of the individual and of the race—which gives to each one of us a wide outlook upon the world at large. But we must remember that literature—as literature—is concerned solely with the *subjective* outlook upon the world.

WHY WE STUDY LITERATURE

In order to realize to how large an extent the subjective existence of man is made up of the material of books, we will pause a moment to consider what literature does for us. Through literature we converse with the great dead, with Plato, with Buddha, with Montaigne, with Addison; we walk the streets of Babylon, of Athens, of Rome, of Alexandria; we see great monuments, reared ages ago and long since crumbled to the dust; we recreate the life of distant epochs, and thus by comparison gauge the progress achieved by the men of today. Through literature we learn wisdom from Aristotle, geometry from Euclid, law from Justinian, morality from Christ and St. Paul. Literature makes the physical features, the inhabitants, the climate, the products of the antipodes as familiar as those of the neighboring county.

HOW IT HAS CREATED NEW WORLDS AND PEOPLES

More than this, the masters of creative literature have made regions of their own which they have peopled with the children of their genius. Homer has given us an Ægean of sun-lit islands and purple seas; Dante, a dark and mysterious Inferno; Milton, a Garden of Eden; Shakespeare, an Elizabethan England, with landscapes more brightly hued, and men and women more finely real, than the landscapes or the people of the England of Elizabeth; Molière, a France more natural and more vivid than the France of the Grand Monarque. And so it is that Odysseus, Antigone, Beatrice, Hamlet, Tartufe and the rest, these spiritual offspring of great souls, live side by side with Moses, Alexander, Cæsar, Joan of Arc, Henry VIII., and Washington: for literature has made the personalities of each almost as familiar to us as those of our dearest or most intimate friends.

HOW LITERATURE HELPS US INTERPRET LIFE

There is one other important point which must be noticed. It is this: the *subjective* outlook reacts upon the *objective*. The knowledge of the world which we gain through our own previous experiences, and through literature, increases our capacity for understanding the objective world, and heightens and intensifies the pleasure which we derive from the contemplation of works of art or of nature. It is this principle which underlies the truth which Goethe states when he says that a traveler does not take anything out of Rome which he has not first brought into it.

LITERATURE IS THE BRAIN OF HUMANITY

Just as in the individual the brain preserves a record of his previous sensations, of his experience, and of his acquired knowledge, and it is in the light of this record that he interprets every fresh sensation and experience, so the race at large has a record of its past in literature, and it is in the light of this record alone that its present conditions and circumstances can be understood. The message of the senses is indistinct and valueless to the individual without the co-operation of the brain; the life of the race would be degraded to a mere animal existence

without the accumulated stores of previous experience which literature places at its disposal.

BOOKS AS LIBERAL EDUCATORS

So great is the part that books play in our life, or, at least, in the formation of our several personalities, that to master the contents of certain books of admitted excellence has always been considered a chief element in a liberal education; that is to say, it is a recognized method of introducing the mind to the world at large. We must, nevertheless, recognize a broad distinction in the manner in which books render us this assistance. In the case of some books the value of the contribution consists mainly, though not exclusively, in the actual facts which they contain; in others, the actual facts are of secondary importance and their chief value consists in the manner in which these facts are brought before our minds. No hard and fast line can be drawn between the two classes, but the difference may be broadly indicated by saying that while the former give us the *facts* of life, the latter give us *pictures* of life.

The distinction may be illustrated by one or two examples. Such works as Locke's *Essay on the Human Understanding*, and Gibbon's *Decline and Fall of Rome*, must obviously be placed under the head of books in which the facts are of first importance. Equally, the novels of George Eliot, in which she gives us a full and truthful picture of English midland life, must be included among those books where the presentation of the facts is of more importance than the facts themselves. And so, too, in the case of *The Story of an African Farm*, where we have a picture of rural life in South Africa, or in *Diana of the Crossways*. Only in the latter work the personality of the central character is so commanding that the book is not so much a picture as a portrait—a portrait of a beautiful and wayward woman exposed to temptation by the very abundance of her own gifts.

Here, then, we have two distinct elements, matter and manner; and it is upon the degree in which these elements are respectively present in any given work that the main divisions of literature—the division which separates works of creative literature from works of literature, simply so-called—is based.

Poetry, drama, history, biography, essays, description, criticism, the great masterpieces of fiction—all open up to us the untold wealth of reality and imagination.

ENGLISH LITERATURE

The English is the most remarkable as well as the most prolific of modern literatures. Before the Saxons invaded Britain there was a Celtic literature of a rhythmic character, preserved, in the main, orally by the Gaelic and Cymric elements of the population. Gaelic literature is associated with Fionn, Ossian, and the battle of Gabhra, alleged to have been fought A. D. 284, while Cymric literature finds powerful utterance in Aneurin's poem, the *Gododin*, which celebrates the battle of Cattraeth, fought, according to tradition, in the year 570. During the fifth and sixth centuries various Teutonic tribes effected a settlement in Britain, and the island was ultimately subjugated by the Saxons. In the middle of the eleventh century it again suffered conquest at the hands of the Normans. The institutions and language of the conquerors were largely imposed upon the natives, and so great has been the vitality of the Saxon speech that about two-thirds of the words now composing the English language are, radically or derivatively, of Saxon origin.

So, the fabric of English literature is colored with the varying tints of racial characteristics—the somber imagination of the Celt, the flaming passion of the Saxon, the golden gaiety of France, and the prismatic fancy of the South. There have been many influences brought to bear upon its speech; yet, in this composite texture, the Anglo-Saxon element is dominant. That is the first outstanding fact of importance.

THE ANGLO-SAXON PERIOD, 449-1066

The existing remains of Anglo-Saxon literature include compositions in prose and poetry, some of which must be referred to a very early period, one or two perhaps to a time before the Angles and Saxons emigrated to England. Gildas, the author of a Latin treatise on British history, is the precursor of the Anglo-Saxon writers, but the earliest author of real distinction is St. Columbanus, an Irish missionary to western Europe, who wrote religious treatises and Latin poetry, and died in 615.

Cædmon, a monk of Whitby, was the first Anglo-Saxon writer of eminence who composed in his native tongue. Encouraged by the Abbess Hilda, he wrote his *Paraphrase*, in which he discoursed of the Creation and the Fall, and other Biblical themes. His verse was constructed neither in measure nor rhyme, but it was differentiated from prose by a kind of rough poetic alliteration.

The most important Anglo-Saxon poem is that called *Beowulf*, after its hero, extending to more than six thousand lines. This poem may be described as the heathen complement to Cædmon's Christian *Paraphrase*. Beowulf is a Scandinavian prince, who slays a fiendish cannibal, after encountering supernatural perils, and is at last slain in a contest with a frightful dragon. Its scene appears to be laid entirely in Scandinavia. Its date is uncertain; parts of it may have been brought over at the emigration from Germany, though in its present form it is much later than this.

The next great name in the early literature is that of the Venerable Bede, who was born at Jarrow, and became the great monastic teacher of Wearmouth, dying in 735. He wrote numerous works in Latin, the chief of which was his famous *Ecclesiastical History of the Anglo-Saxons*.

Alcuin, a native of northern England and an earnest student and teacher, became the chief intellectual light in the court of Charlemagne. John Scotus Erigena wrote, among other things, a work on the *Division of Nature*, which is regarded as laying the foundation of the scholastic philosophy. King Alfred (901), great in arms and noble and enlightened in character, translated into Anglo-Saxon the histories of Bede

and Orosius, and Boethius's *Consolations of Philosophy*. Other contributions to literature are likewise attributed to him. Ælfric, the grammarian, who died in 1006, wrote his eighty *Homilies* for the use of the common people.

The well-known *Saxon Chronicle* is a survey of early English history, written by various authors. It began soon after the time of Alfred, and continued to the death of Stephen in 1154. Among its entries in verse is a spirited poem on the battle of Brunanburh, fought victoriously by Athelstan against his combined Danish and Celtic foes in 937. Besides the leading writers above cited, there were others of less importance who graced the Anglo-Saxon period—a period embracing some five hundred years from the time of Columbanus to the Norman Conquest.

THE NORMAN-FRENCH PERIOD, 1066-1400

New conditions were imported into the learning and literature of England by the Norman Conquest. Although the Anglo-Saxon Chronicle, referred to above, was continued until 1154, the native language practically ceased for a time to be employed in literature. For nearly a century and a half the old language was supplanted, Latin being employed in law, history, and philosophy, French in the lighter forms of literature. Monastic chronicles were the order of the day, and these were only of real value as they drew near to, and actually dealt with, contemporary events. The Norman *trouvère* displaced the Saxon *scop*, or gleeman, introducing the *Fabliau* and the Romance.

English literature was not greatly influenced by the *Fabliau* until the time of Chaucer; but the Romance attained an early and striking development in the Arthurian cycle, founded upon the legends of Geoffrey of Monmouth, Bishop of St. Asaph, who wrote the *History of British Kings*.

Much of this Latin chronicle is imaginative. It began with a mythical Brutus of Troy, and ended with Cadwallader. King Arthur was a prominent figure in the book, and from this time the romantic legends concerning him and his court became a prominent feature in the Anglo-Norman literature. Geoffrey of Monmouth's *Chronicle* was abridged by Alfred of Beverley, and rewritten in French verse by Geoffrey Gaimar and "Maistre" Wace, the latter version becoming permanent as the *Roman de Brut*. Wace, who died in 1184, was also the author of the *Roman de Rou*.

Walter Map or Mapes, poet and prose writer, gave form and substance to the Arthurian legends, uniting them into a harmonious whole as the spiritual allegory of the Holy Grail. Map attacked the abuses and corruptions of the Church in a series of witty and vigorous Latin poems. Hitherto there had been no man of such genius among the early writers.

Two of the most important of the monastic chroniclers were Ordericus Vitalis, who wrote the *Ecclesiastical History of England and Normandy*, a conscientious if disorderly record, and William of Malmesbury, who flourished at the same time and wrote a *History of English Kings*. The latter writer has been placed by Milton next to Bede.

Early in the thirteenth century English began to recover its position, and Layamon's *Brut* was the first important piece of literature in transition English. Layamon, who was "a priest of Ernleye-upon-Severne," wrote in English verse, and he interpolated many things into Wace's narrative. His work was completed about 1205. A St. Augustine canon, named Ormin, was the author of *Ormulum*, a metrical paraphrase, with expositions, of the Gospel of the day. To the same period belong the early ballads of the Robin Hood type and the rendering into English verse of *Havelok the Dane* and other metrical romances.

Roger Bacon, the great scientific investigator, was a Franciscan who settled at Oxford. Bacon enshrined the results of his knowledge in his *Opus Majus*, *Opus Minus*, and *Opus Tertium*. Robert of Gloucester was a monk in the time of Henry III. and Edward I. who wrote in English rhyme a chronicle from the siege of Troy to the death of Henry III.

Period of Chaucer.—The first great era of English literature may be said to begin about the year 1300, and to extend to the introduction of printing by Caxton in 1477. The overshadowing name in this period is that of Chaucer, who has been styled the Father of English Poetry.

The accounts of Chaucer's early life are uncertain, but he acquired the favor of Edward III. through John of Gaunt. In the reign of Richard II., however, he fell upon evil times, and he died in the year 1400 at the age of seventy-two. His *Canterbury Tales* are immortal, alike for their poetic qualities, their unrivaled delineations of character, and their pictures of the middle-class English life of the period. Although the poet was influenced in his style and choice of subject by Dante and Boccaccio, he infused into his creations a dramatic force and a breath of sympathy which are the characteristics of the highest genius. His earlier and minor poems—such as *The Romaunt of the Rose*, *The Court of Love*, and *The House of Fame*—were the fruit of his French and Italian studies. Hallam classes Chaucer with Dante and Petrarch in the mighty poetic triumvirate of the Middle Ages.

John Gower, next in contemporary importance to Chaucer, wrote the *Confessio Amantis*, an English poem, which included a number of tales that were moralized to illustrate the seven deadly sins.

Langlande, or Longlande, author of *The Visions of Piers Plowman*—a poem which stands out for its graphic force—"sought to animate men to the search for Christ, and battled vigorously with Church corruptions." Langlande is more distinctly English in his language than Chaucer, and his poem was a representative one as showing the workings of the national mind in religion and politics.

James I. of Scotland takes high rank for *The King's Quhair*, and Lawrence Minot for his series of poems on the victories of Edward III. Barbour's heroic poem of the *Bruce* also calls for mention. Thomas Occleve, author of a poem on the duty of kings, and John Lydgate, to whom we owe the *Falls of Princes*, and other compositions, were likewise considerable poets.

For a long period Sir John de Mandeville was regarded as "the father of English prose," but this claim is now abandoned. The larger por-

tion of his *Travels* was borrowed from a worthy Friar Odoric and from other writers, while the whole narrative is more entertaining than veracious. John Wyclif, who gave to his countrymen the first English version of the whole Bible, has been not inaptly styled the "Morning Star of the English Reformation." Sir John Fortescue, Chief Justice in the reign of Henry VI., was the author of a fine legal treatise, *De Laudibus Legum Angliæ*, and of an admirable constitutional work on the *Difference Between Absolute and Limited Monarchy*, in which he contrasted the French rule with the English to the disparagement of the former.

Influence of Caxton.—WilliamCaxton,who introduced the art of printing into England, gave an impetus to literature whose effects have been of incalculable value. The earliest work which can with certainty be maintained to have been printed in England was the *Dictes and Sayings of the Philosophers*, published in 1477. In 1474, however, Caxton had issued at Bruges the first book printed in the English tongue, the *Recuyell of the Historyes of Troye*, and soon after this he printed the *Game and Playe of the Chesse*. Caxton was a most assiduous workman, and produced editions of Chaucer, Lydgate, Gower, and Sir Thomas Mallory's *King Arthur*, translations of Cicero's *De Senectute* and *De Amicitia*, and other works.

William Dunbar, the Chaucer of the North, is placed by Sir Walter Scott at the head of the roll of Scottish poets. Dunbar led a checkered life, and his works are remarkable for their strong human lights and shadows. His allegorical poem, *The Thistle and the Rose*, was written in celebration of the marriage of James IV. with Henry VII.'s daughter Margaret. *The Golden Terge*, another of his poems of fantasy, is very descriptive and rhetorical. *The Dance of the Seven Deadly Sins* powerfully depicts—under the lead of Pride—a procession of the seven deadly sins in the infernal regions. Dunbar was equally remarkable in the comic as in the serious vein.

At the close of the fifteenth century many of the best spirits of the age were drawn to Oxford for the study of Greek. It was taught by William Grocyn and the physician Linacre. Erasmus came over from Paris to acquire it, and while at Oxford he made the acquaintance of young Thomas More, who wrote a defense of the new branch of learning. More afterwards entered upon the thorny paths of statecraft, and paid for his opposition to Henry VIII. with his head. More was the leading prose writer of his time, and his *Life and Reign of Edward V.*—in which he draws a somber picture of the usurper Richard—is the earliest specimen of classical English prose; but his real fame rests upon the *Utopia*, in which he imagines an ideal commonwealth in the New World, discovered by a supposed companion of Amerigo Vespucci. The root idea was borrowed from Plato.

When William Tyndale completed his famous translation of the New Testament in 1525, More adversely criticized it on the ground of its Lutheran bias in the choice of words. Tyndale replied with spirit, however, and also defended against More the exposition of the Lord's Supper published by John Frith. In 1530 Tyndale completed, with the help of Miles Coverdale, his translation of the Pentateuch, and six years later he was put to death for heresy in Belgium. Coverdale's translation of the whole Bible appeared in 1535.

Many Church writers and reformers flourished at this time. To Cranmer was largely due *The Book of Common Prayer*, a work which contains some of the noblest specimens of English in our literature. He was also responsible for a book of *Twelve Homilies* and a revised translation of the Scriptures, known as *Cranmer's Bible*. The martyr Latimer was the author of sermons which are rare specimens of vigorous eloquence, while Bishop Fisher preached and wrote trenchantly on the other side. John Knox, the great Scottish reformer, wrote a *History of the Scottish Reformation*, and he was so indignant at the fact that three ruling sovereigns were women that just before the accession of Elizabeth he issued from Geneva his *First Blast of the Trumpet against the Monstrous Regiment of Women*. John Foxe, the martyrologist did much for Protestantism by his work on the *Acts and Monuments of the Church;* and Roger Ascham, classical tutor to Queen Elizabeth, and author of *Toxophilus* and *The Schoolmaster*, was the first writer on education in the language. Mention must not be omitted here of the unfortunate Earl of Surrey, who was the first writer of blank verse in England, and who did much to invest English poetry with accuracy, polish, and a general spirit of refinement. Surrey used the medium of blank verse in translating two books of the *Æneid*. With his friend, Sir Thomas Wyatt, he also transplanted the sonnet into the garden of English verse.

THE ELIZABETHAN AND PURITAN PERIODS, 1559-1660

The most brilliant, as well as the most virile, era in English literature was that extending from the accession of Elizabeth in 1558 to the closing of the theaters by the Long Parliament in 1648. No other period of ninety years in English history exhibits such a profusion of literary effort and achievement, especially on the dramatic and imaginative sides. The former portion of this period, however, known as the Elizabethan age—but really extending to the middle of the reign of James I.—was the greater in conception. It witnessed not only the rise but the culminating splendor of the drama. Miracle plays or mysteries were the forerunners of the drama. They were acted in churches and convents, and by their dramatic representations of Biblical episodes it was sought to influence the people in favor of virtue.

There was something grotesque, however, in the choice of Satan as the first comedian, while the general treatment of sacred subjects was most objectionable. In course of time the plays changed into moralities, in which abstract qualities such as Justice and Vice took the place of Scripture characters. Next to these, and before the drama proper, came a series of farcical productions, of which Heywood's *Interludes* may be taken as a type.

Edmund Spenser.—One great name interposes between these early plays and the drama, namely, that of Edmund Spenser. He restored the glory of English poetry from the long eclipse it suffered after the death of Chaucer. Spenser's *Shepherd's Calendar* applied pastora

images to the religious conflicts of the time, and under the name of Algrind he introduced Archbishop Grindal, whose firmness in encouraging free search for Scripture truth he applauded. To his master, Chaucer, the poet paid tribute under the name of Tityrus. In 1590 Spenser published his great but unfinished allegorical epic *The Faerie Queene*, in which he depicted man with all his capacity for good striving heavenwards. The work is "an intense utterance of the spiritual life of England under Elizabeth." Spenser's *Colin Clout Come Home Again* was written in memory of his friendship for Sir Walter Raleigh. The purely poetic qualities were redundant in Spenser, and these have made him a favorite with all his singing brethern since his death.

Sir Philip Sidney has gained a reputation as an English classic for his *Defense of Poesie*, but his romance of *Arcadia* is the more widely known, as it was the more warmly appreciated on its publication. Later critics have censured it, but it is rich and highly finished in its phrases, and "full of fine enthusiasm and courtesy of high sentiment, and of the breath of a gentle and heroic spirit."

Beginning of English Comedy and Tragedy.—The first English comedy, *Ralph Roister Doister*, was written by Nicholas Udall, Master of Eton, between 1534 and 1541. It was avowedly modeled upon *Plautus*, and intended for the edification of Eton boys.

The first tragedy was *Gorboduc*, a new rendering of the old British story of Ferrex and Porrex by Thomas Sackville (Lord Buckhurst), and Thomas Norton. It was acted at the Inner Temple in 1561, and also before the queen by command. It substituted English for Latin in a play constructed after the manner of Seneca, and "its grave dwelling upon the need of union to keep a people strong, a truth of deep significance to England at that time, pleased Elizabeth." But nearly twenty years yet elapsed before the drama obtained a stable hold, and theaters began to be built.

John Lyly, author of the *Euphues*, wrote a number of mythological plays, and George Peele produced *The Arraignment of Paris* and *The Device of the Pageant* in 1584-1585; but Christopher Marlowe, with his "mighty line," was the first great Elizabethan dramatist. His genius was somber, and his tragedies dark and terrible. His *Tamburlaine the Great* was produced in 1587, but his *Doctor Faustus* was not published until ten years after his death, which occurred in 1593.

William Shakespeare.—In the latter part of the sixteenth century began the career of the greatest poet the world has ever seen, William Shakespeare. A period of less than twenty-five years covers the production of all those comedies and histories which are the wonder of modern literature. We marvel what kind of man that could be whose intellect could conceive such widely different works as *A Midsummer Night's Dream, Venus and Adonis, Romeo and Juliet, The Rape of Lucrece*, the famous *Sonnets, The Merchant of Venice, Othello, Macbeth, King Lear*, and *Hamlet*. Shakespeare seems to sum up within himself the whole of poetry and of human philosophy. His power and universality are unique, and will probably ever remain so.

Ben Jonson, the greatest and most scholarly of his contemporaries, wrote from 1596 to 1637; but he lacked the freedom and naturalness of Shakespeare. Beaumont and Fletcher worked in unison with a success rarely attained by collaborators. Massinger was a dramatist of undoubted power, as his *New Way to Pay Old Debts* testifies; and Dekker, Heywood, Marston, and Middleton would all have taken a higher niche in the temple of fame had they lived in a less prolific age. Ford and Webster produced plays of a dark and terrible cast, and the list of Elizabethan dramatists closes with James Shirley who was purer in thought and expression than any of his predecessors. Other poets of this period were Thomas Tusser, who gave an excellent picture of English peasant life in his *Five Hundred Points of Good Husbandry*, and Michael Drayton described this favored isle itself in his *Polyolbion*. The learned John Donne gave utterance to his metaphysical conceits, while Drummond of Hawthornden attested his claim to the title of the finest Scottish poet of his day. Carew, Herrick, and Suckling produced their exquisite lyrics, and Herbert chanted the solemn strains of *The Temple*.

Elizabethan Prose Writers.—The great prose writers of the period must be headed with the illustrious name of Francis Bacon. The father of the inductive philosophy was regarded by those of his contemporaries who knew him best as "one of the greatest men and most worthy of admiration that had been for ages." His adventurous intellect could not be bound by mere tradition. He brought his keen analytical faculty to bear upon the study of man and nature, so that in his matchless *Essays* we have the result of his penetration into the human mysteries, while his philosophy of nature stands revealed in the two books of the *Advancement of Learning*, in which he laid the basis for his *New Organon*.

"Who is there," Burke demands, "that upon hearing the name of Lord Bacon does not instantly recognize everything of genius the most profound, everything of literature the most extensive, everything of discovery the most penetrating, everything of observation of human life the most distinguishing and refined?"

George Buchanan ranks as the Scottish Virgil from the elegance of his Latin verse, while he exhibited equal command over Latin prose. Richard Hooker gave a new elevation and dignity to English prose by his *Laws of Ecclesiastical Polity*. Sir Walter Raleigh, the admirable Crichton of his age, carried the English name abroad, but returned only to find imprisonment and the scaffold. He glorified his prison life by the production of his great *History of the World*, which is especially memorable for its vivid recital of the histories of Greece and Rome. Camden the antiquary constructed his *Britannia*, and Hakluyt and Purchas indited their wonderful records of travel. James I. threw his ill-digested learning into treatises on Divine Right, Witchcraft, etc.; Burton wrote his quaint and erudite work, *The Anatomy of Melancholy;* Selden, the chief of the learned men of his time, according to Milton, alternated politics with the production of his *Treatise on Titles of Honour* and his *History of Tithes;* Hobbes of

Malmesbury, the terseness of whose style is unique, promulgated his theory of action and morals, as well as his absolutism in politics, in *The Leviathan;* Howell first showed what correspondence might become in his *Familiar Letters,* and genial old Izaak Walton wove an immortal spell over all lovers of good literature by his *Lives of Donne, Hooker,* and others, and *The Complete Angler.* Altogether the age was one eminently full of intellectual life.

THE PURITAN PERIOD.—The decline of the drama, and the end of what we may call the Pagan Renaissance, were contemporaneous with the birth of the great constitutional struggle which began with James I. and did not terminate until the English Revolution.

It is strange that such a time of upheaval should have produced the greatest Christian epic, *The Paradise Lost,* and the greatest Christian allegory, *The Pilgrim's Progress,* which are to be found in any literature. Three great men represented the various forms of the religious struggle going forward; the saintly Jeremy Taylor, a poet among preachers, upheld the cause of Episcopacy; Richard Baxter, while desiring the church discipline and the form of belief, advocated a greater liberty for the individual conscience; and John Milton was a type of the religious freedom and toleration which found best exposition in the principles of the Independents. Milton's *Eikonoklastes* broke down the buttresses of kingly authority; his *Areopagitica* was a noble argument in behalf of intellectual liberty; while his *Paradise Lost, Paradise Regained,* and *Samson Agonistes* were not merely magnificently great as poetry, but Christian evidences of the most sublime type.

John Bunyan, a man of the people, came forward with words that burn and images that enthrall, to show the way from a world of vice to a pure and Holy City. Thomas Fuller, remembering that "blessed are the peacemakers," sought to heal that strife between king and people which was beyond all healing save that of the sword. Some men held themselves aloof from violent controversy while yet maintaining independence of thought—as, for example, Thomas Browne in the *Religio Medici,* published in 1642.

The anti-Puritans had their champions in Samuel Butler, whose fierce wit blazed forth in *Hudibras;* in the great Royalist writer, Clarendon; and in that staunch Royalist and Churchman, Bishop South, whose antipathy to the Nonconformists may be partly condoned by his brilliant wit. Among other writers of the time may be mentioned the versatile Barrow; the powerful satirists Wither, and Bishop Hall; Harrington, the author of the *Oceana;* the patriotic Algernon Sidney, with his admirable *Discourses on Government;* and those garrulous but inimitable chroniclers, Pepys and Evelyn.

The poets were many and varied, including Waller, Davenant, Denham, Marvell, Lovelace, and Cowley.

PERIOD OF THE RESTORATION TO THE RISE OF THE NOVEL, 1660-1740

Extremes always lead to revulsion, and from Puritanism we pass to the licentious court of Charles II., with the songs of Rochester, and the works of Etherege. The comic dramatists of the Restoration and the period immediately succeeding—Wycherley, Congreve, Vanbrugh, and Farquhar—vividly and wittily reflect the glittering life and base morality of the age. One stronger intellect did bring with it for a time the sense of a fresher and diviner air, when John Dryden sang with vigor and insight, and also produced his best comedies and tragedies. Otway likewise showed a momentary gleam of the old Elizabethan dramatic fire. In the sphere of mental and natural philosophy, Locke, Newton, and Boyle grappled with problems hitherto considered unsolvable, and illumined for the world the devious and mysterious paths of scientific inquiry. The selection of names in every branch of English literature, and in every age, can, of course, only be illustrative, not exhaustive.

PERIOD OF DRYDEN AND POPE.—The eighteenth century witnessed a great revolution in English literature, especially on the poetic side. Imagination, passion, and nature were dethroned, and poetry became didactic, philosophical, and political.

Dryden manifested something of the qualities of both schools, but when Alexander Pope arose the new order triumphed. Everything was sacrificed to precision and artificiality.

Pope was the most brilliant and impressive of the new writers. His *Essay on Man* and his *Essay on Criticism* enshrined many old philosophical truths in epigrammatic form. The heroic couplet became in his hands an instrument for cutting diamonds, but the lover of poetry longs after a time to exchange his dazzling couplets for the flowers of poesy. In all that he did, however, whether the work took the form of satires, essays, epistles, or translations, Pope was the finished artist.

The minor poets of Pope's period included John Philips, known by his *Splendid Shilling;* John Gay, the author of the *Shepherd's Week,* and the *Fables;* Samuel Garth, the writer of the mock heroic poem of *The Dispensary;* and Richard Blackmore, who tried to restore the epic in *Prince Arthur.*

Prose literature had many distinguished exponents. Jonathan Swift looms up before us as a gloomy, overshadowing figure, whose saturnine genius found bitter yet powerful expression in *Gulliver's Travels,* the *Battle of the Books,* and the *Tale of a Tub.* His command of English was masterly, but his wit was coarse, his life hopelessly sad, and his death miserable.

Daniel Defoe was not only one of the most vigorous of political pamphleteers, but practically the father of the English novel by his *Robinson Crusoe,* a work which has surpassed almost every other in its uninterrupted popularity. Defoe invested fictitious events with an unapproachable semblance of truth. Metaphysical literature had its best representative in the philosopher Bishop Berkeley, the founder of Idealism in English philosophy; Bernard de Mandeville unfolded a new satirical philosophy in *The Fable of the Bees,* which was intended to prove that the vices of society are the foundation of civilization; and Bishop Butler sought to reconcile reason and revelation by his closely argumentative work, the *Analogy of Religion.*

RISE OF THE ESSAY AND MODERN NEWSPAPER.—A new and interesting form of literary

effort, which popularized letters and criticism, was the periodical essay, instituted by Joseph Addison and Sir Richard Steele.

The latter began the *Tatler*, which dealt in humorous and incisive fashion with the social and political life of the times. Steele was aided by Addison, and they afterwards founded the more famous *Spectator*, which was inimitable in its humor and criticism. The *Guardian* and the *Freeholder* followed, and a higher tone was given to both literature and manners by these admirable publications.

The modern newspaper had its origin in the *Public Intelligencer*, begun in August, 1663, by Sir Roger L'Estrange. The *Oxford Gazette* began in November, 1665, and the *London Gazette* on the 5th of February, 1666. Defoe, while in prison, began the publication of the *Review* (February, 1704).

The drama at the close of the seventeenth century had, besides the greater names already mentioned, Sedley, Shadwell, Mrs. Behn, and Mrs. Centlivre, all of whose comedies, however, were licentious. Nicholas Rowe wrote heavy tragedies, which are no more likely to rise again in popularity than Addison's *Cato*. Foote, Cibber, and Fielding reproduced the follies of the times in their comedies and farces; and the *Beggar's Opera*, by Gay, produced in 1728, was the first specimen of the English ballad opera. Sentimental comedy is associated with Macklin, the Colmans, Murphy, Cumberland, and others; but the two greatest names in English comedy in the eighteenth century are Goldsmith and Sheridan. The delightful humor of *The Good-natured Man* and *She Stoops to Conquer* is only to be matched by the sparkling wit of the *Rivals* and the *School for Scandal*.

Samuel Johnson, born in 1709, began to write in 1744, and from that period until his death in 1784 he was an acknowledged leading power in letters. His *Lives of the Poets*, his *Rasselas, The Rambler*, and the great *Dictionary* were remarkable undertakings in various fields; while the world could afford to part with a thousand masterpieces rather than lose that immortal *Biography* by Boswell which has enshrined his master's opinions and conversations. The *Letters of Junius* remind us of the right of criticism over public events and public men, and of the struggle by which the freedom of the press was ultimately won.

RISE OF THE NOVEL AND PERIOD OF ROMANTICISM, 1740-1837

The modern novel of actual life and manners dates from 1740, when Samuel Richardson published his *Pamela*, a story that was the talk and wonder of the town. It was followed by *Clarissa Harlowe*, its author's masterpiece—a book charged with pathos, and instinct with tenderness and morality. Henry Fielding, "the prose Homer of human nature," and, if not so delicate, a more powerful artist than Richardson, issued his *Joseph Andrews* in 1742, and his world-famous *Tom Jones* in 1749. Tobias Smollett wrote his *Roderick Random* in 1748, and this was followed by other stories as realistic as Fielding's but much more marred by caricature. Laurence Sterne's *Tristram Shandy* and the *Sentimental Journey* were novelties in prose writing, and, although they are thin as novels, they will live for their peculiar wit and pathos. Goldsmith's *Vicar of Wakefield*, published in 1766, stands alone for its idyllic beauty and charming simplicity. Fanny Burney's *Evelina* and *Cecilia* were noticeable for invention and observation and skill in portraiture.

The poetry of the second half of the century was varied in character, but it closed with a noble elevation in Burns. To the heavy religious poems of Blair and Young succeeded the more artistic strains of Gray and Collins and Goldsmith, and the mystical yearnings and Elizabethan fervor of Blake. Thomson, one of the most excellent of descriptive poets, had given place to Shenstone, who had less genius but more taste, and a third writer of the Spenserian stanza was found in Beattie. Percy's *Reliques of Ancient English Poetry* brought the ballad again into favor; while Chatterton deceived the very elect by his marvelous imitation of the older forms of poetry.

William Cowper, notwithstanding his fastidiousness and over-refinement, was a poet of a high and genuine order. He let nature have its way in such exquisite poems as the *Lines to His Mother's Picture* and the *Loss of the "Royal George,"* while any humorist might envy the delightful abandonment of *John Gilpin*. His larger poems are severer in style, yet many of their pictures, testifying to a reverent love of nature, remain imprinted on the memory; and they are full of happy phrases and turns of expression.

The new life infused into Scottish poetry was heralded by Michael Bruce, a sweet singer who died at twenty-one, and by Allan Ramsay, whose pastoral drama of the *Gentle Shepherd* affords one of the most beautiful and tender pictures of Scottish rural life. The ballad acquired a new pathos and interest in such productions as Lady Anne Barnard's *Auld Robin Gray*.

But the poetic genius of Scotland found its ripest and fullest expression in Robert Burns. His love songs have the freshness and fervor of the Elizabethan lyrics; his poems of man and of nature, like those of Cowper, reveal the highest aspirations for the welfare of humanity; his humorous compositions are as lifelike in their character-painting as they are full to overflowing of fun; and his serious poems reveal a pathos which has never been excelled. Nature seemed to put on new beauties when Robert Burns chanted her praises, and the daisy can never again seem commonplace since he immortalized it. The poor at length acquired their laureate in this sweet singer of the North.

Historical and philosophical literature attained a high level at this period. Edward Gibbon, though lacking human sympathy, had great creative power and originality, and his *Decline and Fall of the Roman Empire* is one of the most massive of historical conceptions, worked out with stately eloquence. David Hume, whose *History of England* does not take such high rank, was more original in his philosophical speculations, referring all actual knowledge to experience, and making utility the standard of virtue.

Adam Smith, by his *Wealth of Nations*, established his claim to be regarded as the founder of the modern system of political economy, and one of the benefactors of his

species. All questions of labor and capital were placed by this work on a scientific basis, and it paved the way for the doctrine of free trade.

Edmund Burke's *Reflections on the French Revolution* caused a revulsion of feeling against France, while his *Letters on a Regicide Peace* increased the war fever in England. The former work was answered by Thomas Paine in his *Rights of Man*, and the latter by Sir James Mackintosh in his *Vindiciæ Gallicæ*. Burke's philosophical works are models of eloquence and construction. William Paley, in his *Evidences of Christianity* and other works, skillfully defended revealed religion against the attacks of its enemies.

Towards the close of the century the newspaper press received a strong impetus by the establishment of *The Times* and other important journals; knowledge likewise began to be condensed and methodized in Cyclopædias; while criticism took a wider as well as a more popular range in the first decade of the nineteenth century by the foundation of the *Edinburgh* and *Quarterly Reviews*.

We cannot pass from the eighteenth century without noticing the remarkable development in hymnology. George Wither issued the earliest English hymn-book in 1623, *Hymns and Songs of the Church;* but the first hymn-book of the modern type was published by John Wesley for use in the Church of England in 1737. Among the hymnologists of the eighteenth century whose compositions remain in general use until this day may be mentioned A. M. Toplady, John Newton, the Wesleys, Isaac Watts, William Cowper, and Philip Doddridge.

Romanticism and the Early Nineteenth Century.—The literature of the nineteenth century is almost overwhelming in its magnitude and variety. In nearly every branch it has attained a higher level than in the preceding century, and in nothing is this more noticeable than in poetry. Although the century opened when Crabbe, the reporter of rural life, was painting his Dutch-like pictures, we soon pass on to higher things. There was a great revival in imaginative poetry before 1820.

Byron, with his precociousness in love and genius, took a high flight in his *Childe Harold*, and although all his works—*Don Juan*, *Manfred*, *Cain*, etc.—were impressed by his own gloomy personality, he yet made living verse.

Shelley, imbued with revolutionary ideas and aspirations after an ideal being, was one of the greatest poets of the age, now Miltonic in his elegiac verse in *Adonais*, and now unapproachable in his lyrics. No singer has ever drawn deeper from the wells of poetic inspiration.

Wordsworth, contemplative and philosophic the patriarch of the Lake School, taught the dependence of the poet on nature, and from the *Lyrical Ballads* to the *Excursion* he illustrated his own saying in his works, that "poetry is emotion recollected in tranquillity." He threw off the conventional, and endeavored to pierce to the heart of things, whether in man or in nature.

Fancy and imagination were made perfect in the exquisite creations and sensuous verse of Keats; wit and pathos abounded in Thomas Hood; while historic and romantic poetry found notable exemplars in Southey, Scott, Rogers, Campbell, and Coleridge. Hannah More and Joanna Baillie sought to galvanize the classical drama; Cunningham sang his Scottish songs; and Keble consecrated sacred hopes in the *Christian Year*.

The historic novel was made memorable by Sir Walter Scott, whose extraordinary fecundity was the wonder of his generation. His novels were the first and greatest prose result of the revived spirit of romanticism. Jane Austen did for the domestic novel what Scott did for the historical. The pictures of English life in *Pride and Prejudice*, *Mansfield Park*, and the remaining stories by this writer, have never been excelled. Her painting of manners was exquisite, and while her characters and incidents were of the most every-day description, she lifted them out of the commonplace by her exquisite touch and her absolute truthfulness to nature.

THE VICTORIAN PERIOD TO THE PRESENT, 1837- ——

The Victorian age may justly be called great in history, philosophy, biography, fiction, and poetry. Macaulay, in the earlier half of the Victorian period, illumined history by the brilliant glow of his imagination; while in the latter half Carlyle was not only his equal in history, but the first man of letters of his time. In his prose epic, *The French Revolution*, there was the vigor of a Rembrandt; biography was ennobled by his *Cromwell;* while throughout all his works—from *Sartor Resartus* to the latest of his utterances—he upheld the dignity of labor, and the sacredness of duty.

English history in all periods, and the progress and growth of the constitution, found brilliant chroniclers or scholarly interpreters in Hallam, Freeman, Froude, Green, Stubbs, Brewer, and Gardiner; while the philosophical aspects of history have been vividly presented by Buckle and Lecky. Rome lived again in the pages of Merivale; the Jewish race in those of Milman; and Greece in those of Grote and Thirlwall.

Turning to philosophy and science, John Stuart Mill exercised a profound influence upon the age as metaphysician, logician, politician, and moralist. Charles Darwin revolutionized scientific thought by promulgating the theory of evolution, which Herbert Spencer, its most conspicuous philosophical exponent, applied to psychology, morals, and politics. Logic and science had other exponents in Brewster, Whately, Bain, Hugh Miller, John Tyndall, T. H. Huxley, T. G. Tait, and W. K. Clifford. John Ruskin has eloquently wedded art and morality, while biography and criticism have found representative writers in Lockhart, Forster, De Quincey, Masson, Arnold, "Christopher North," Lewes, Helps, Trevelyan, John Morley, and others. Religious thought was deeply impressed by the school of religious literature which arose with the Oxford movement. In poetry, its greatest result was Keble's *Christian Year*, while its greatest product in prose was the beautiful and haunting style of Cardinal Newman, best shown in his *Apologia*.

Pusey, Arnold, Maurice, Robertson, Stanley, Liddon, Martineau, Gladstone, Spurgeon, and many more of all creeds contributed in a lesser degree.

ALFRED TENNYSON'S BEAUTIFUL "LADY OF SHALOTT"

From the exquisite painting of J. W. Waterhouse, who has interpreted for us in flesh and blood Tennyson's far-famed Poem. This is the dramatic moment when the curse is falling upon the lady of the silent isle

The literature of fiction was suprising in its growth, and practically limitless in its variety. Thackeray showed to what a pitch of literary excellence and finish the novel might attain, and also demonstrated its power as a moral scourge. Dickens, the Hogarth of modern novelists, evoked smiles and tears in myriads of homes by his vivid pictures of life; and George Eliot reflected much of the sadness and unrest of the time in her searching and minutely conscientious works. Charlotte Brontë uttered a passionate note on behalf of her suffering sisters; and Mrs. Gaskell proved herself a genuine artist in the delineation of human life.

Of later women writers, mention must be made of Mrs. Oliphant, Miss Braddon, Mrs. Henry Wood, and "Ouida"—all different in style, yet all equally prolific. Marryat, James, Ainsworth, Warren, and others still find readers.

Charles Kingsley struck a sympathetic human note in his fictions; Anthony Trollope was the most interesting even of all his brethren; Wilkie Collins was a master of mystery; Richard Jefferies was the interpreter of nature; Charles Reade was an intense moral reformer; George Meredith has delighted and puzzled his admirers by his brilliant powers and genius; Lord Lytton is still read for two or three of his healthiest works; and Lever and Lover for their rollicking Irish wit.

It would be invidious to attempt to give a catalogue of all contemporary novelists worthy of mention; but in addition to those already mentioned the names will occur of R. D. Blackmore, Thomas Hardy, Robert Buchanan, George Macdonald, and William Black—all widely different in their gifts and work, but all imbued with a sense of the dignity of the novelist's art. Newer writers of imaginative and adventurous fiction have sprung up in Hall Caine, J. M. Barrie, Rider Haggard, R. L. Stevenson, and Rudyard Kipling.

Tennyson and Other Poets.—In poetry two names stand out above the rest through the Victorian age. Tennyson, the most artistic of all poets, deservedly occupies the first place from the breadth of his range. His lyrics are the finest since Shelley; his *Idylls of the King* deserve the name of epic poetry; his dramas are finely conceived; and his *In Memoriam* sums up the religious aspirations of the time.

Robert Browning, massive and profound in thought, was of all modern poets the most full of pith, energy, and moral aspiration. Mrs. Browning may well be called the daughter of Shakespeare, for never did poet play more divinely upon the Æolian harp of the human heart. Walter Savage Landor exhibited the classical spirit, and Matthew Arnold had an unbroken elevation in his verse. Swinburne is a master of music and rhythm, Rossetti is a perfect artist in construction, while William Morris is a Spenserian singer cast upon a later age.

Among later poets of undoubted gifts are Alfred Austin, William Watson, Clough, Christina Rossetti, Coventry Patmore, and Sir Lewis Morris.

The dramas of Talfourd, Sheridan Knowles, R. H. Horne, Lord Lytton, and Sir Henry Taylor exhibited striking but widely varying merits.

The minor poetic singers and writers of fugitive verse of both sexes are too numerous for particularization.

SUMMARY OF ENGLISH LITERATURE

Note.—Titles of words in *italics* indicate that they are poetic or dramatic.

I. THE ANGLO-SAXON PERIOD, 449-1066

Author and Dates	Representative Works	Literary Characteristics
Unknown..... 700	*Traveller's Song*.....	Illustrates the sentiment of a wandering singer and the Anglo-Saxon's love of home.
Unknown.....	*Beowulf*.....	An epic song, illustrating the powerful imagination of the race.
Unknown..... 700-1154	Anglo-Saxon Chronicle.....	Contains in addition to historical data, one or two war-songs: Battle of Malden, etc.
Caedmon..... 600-?	*Paraphrase of Scripture*.....	Showing how strong an appeal the Bible Story made to the reverence of the race.
Bede..... 673-735	Ecclesiastical History; *Poems*	Inspired by early Christian sentiment.
Unknown..... 710-?	*Judith*.....	Paraphrase of Bible narrative.
Cynewulf..... 750-?	*Poems*.....	Serious poems of moral simplicity and power.
Alfred the Great..... 849-901	*Translations*.....	Some original matter interpolated, e. g., narrative of Othere, versified by Longfellow.
Alcuin..... 735-804	Letters, Biographies; *Crist, Elene Andreas, etc.*.....	Friend of Charlemagne. Wrote a comparatively pure Latin.
Ælfric..... 955-1020	Homilies, Grammar.....	Writings in Latin; a man of power and sincerity.

II. THE NORMAN-FRENCH PERIOD, 1066-1400

William of Malmesbury..... 1095-1142	History of Kings of England.	Of some value as an original.
Goeffrey of Monmouth..... 1154	History of English Kings...	Largely legendary. The stories are rehashed in subsequent authors down to Spenser, Shakespeare and Milton.

SUMMARY OF ENGLISH LITERATURE—Continued

Author and Dates	Representative Works	Literary Characteristics
Wace, Richard..... 1112-1184	*Romance of Rollo; Brut d'Angleterre*.....	In reality a French trouvere though a subject of the King of England. First mention of Arthur's Round Table.
Mapes, Walter..... 1143-1210	De Nugus Curialium; *Queste de Saint Graal, etc*.....	First mention of the Holy Grail.
Layamon..... 1150-1210	*Chronicles of Britain*.....	A devout priest and the first to make the new English a literary medium.
Orm..... 1187-1237	*Ormulum (paraphrase)*.....	Also English. Some of the homilies are simple and touching expressions of devotion.
Bacon, Roger..... 1214-1294	Natural Science Philosophy..	A man in advance of his age, he is said to have anticipated Francis Bacon in making experiment the basis of knowledge.
Gloucester, Robert of..... 13th Century	*Chronicle of England*.....	Valuable for giving outlines of history of Norman England.
Mandeville, Sir John..... 1300-1371	Travels.....	Possibly a pen-name. His travels are an extraordinary farrago of invention and report.
Barbour, John..... 1316-1395	*The Bruce*.....	Spirited and patriotic, loved by true Scotchmen.
Langland, William..... 1330-1400	*Piers, the Plowman*.....	Extraordinary man of broad humanity. First expression of the voice of the poor.
Wycliffe, John..... 1324-1384	Translation of Bible.....	A man of great power and sincerity. A philosopher and scholar.
Gower, John..... 1325-1408	*Ballads; Lover's Confession*...	Friend of Chaucer. A voluminous poet, not of high rank.
CHAUCER, GEOFFREY.. 1330-1400	*Canterbury Tales; Short poems*	A scholar. A poet of chivalry and a witty narrator of stories in verse. Introduced French and Italian metres. Equally eminent in description and characterization.
III. ENGLISH PERIOD TO THE TIME OF ELIZABETH, 1400-1559		
James I. of Scotland..... 1394-1437	*The King's Quhair, (Choir, etc.)*.....	A decided poetic talent in the chivalric fashion.
Malory, Sir Thomas..... 1430	*Morte d'Arthur*.....	Worked over a large part of the Arthurian legends in prose. The original for Tennyson's "Idylls of the King."
Caxton, William..... 1422-1492	The Game of Chess; Translation of the Æneid.	Introduced the Art of printing, brought out Malory's book and made and published many translations and adaptations.
Dunbar, William..... 1460-1530	*Thistle and Rose; Golden Terge*.....	The Scotch Chaucer; much inferior to Chaucer and less of a popular poet.
More, Sir Thomas..... 1478-1535	Utopia, Life of Edward V...	A man of fine character. "Utopia" first written in Latin and translated into nervous English. Plan suggested, perhaps, by Plato's "Republic."
Tyndale, William..... 1484-1536	Translation of Bible.....	On his translations of the Scriptures, later versions are founded.
Wyntoun, Andrew..... 15th Century	*Chronicle of Scotland*.....	Story of Wallace. Much admired by Walter Scott.
IV. THE ELIZABETHAN AND PURITAN PERIODS, 1559-1660		
Wyatt, Sir Thomas..... 1503-1542	*Sonnets and Lyrics*.....	Introduced with Howard the Italian forms; sonnet and madrigal, made Italian literature a new force in England.
Howard, Henry, Earl of Surrey—1517-1547.....	*Translation of the Aeneid; Songs and Sonnets*.....	Introduced Italian forms and blank verse.
Foxe, John..... 1517-1587	Book of Martyrs.....	His book had great influence in strengthening the reformers and was one of the literary influences on the Puritans who came to America.
Sackville, Thomas..... 1536-1608	*Mirror for Magistrate*.....	A poet of force and imagination. Afterwards, as Lord Buckhurst, a courtier and politician, worked in collaboration with others and had a hand in first English Tragedy.
SPENCER, EDMUND..... 1552-1599	*Faerie Queen; Shepherd's Calendar*.....	Called the "poet's poet." Great in romantic allegory, the ode, and the sonnet.
Raleigh, Sir Walter..... 1552-1618	History of the World.....	A politician and adventurer; friend of Spenser. Some fine passages in his work.
Hooker, Richard..... 1553-1600	Ecclestical Polity.....	His prose has dignity and force. His book is the authority for the Church of England.
BACON, FRANCIS..... 1561-1626	Essays, Novum Organum...	Many beautiful and acute things in his essays and his philosophical works.
SHAKESPEARE, WM..... 1564-1616	*Dramas, Sonnets, (37 plays)*..	Compounded of all writers best: wit, humor, characterizations, philosophy, musical phrase, power and construction.
Chapman, George..... 1559-1634	*Translation of Homer*.....	Full of vigor and verve, especially his Homer.
JONSON, BEN..... 1574-1637	*The Alchemist; Sejanus; Timber, etc.*	A scholar and literary man. A learned constructor of plays, had also the true lyrical faculty.

SUMMARY OF ENGLISH LITERATURE—Continued

Author and Dates	Representative Works	Literary Characteristics
Beaumont, Francis. 1584-1616	*Dramas: Philaster; Maid...*	Well constructed plays but of a decidedly low moral tone. Beaumont is supposed to have been the more promising but died before Fletcher, who continued to produce plays alone, about forty.
Fletcher, John. 1579-1625	*Tragedy: Woman Hater; etc.*	
Burton, Robert. 1577-1640	Anatomy of Melancholy.....	Full of out-of-the-way learning and quotations bearing on the subject.
Herbert, George. 1593-1633	*The Temple, etc.*.....	Animated by a devotional spirit and an aesthetic spiritualism.
Herrick, Robert. 1591-1674	*Poems*.....	Lyrics, many of them of charming quality and ingenious construction.
Walton, Izaak. 1593-1683	The Compleat Angler.....	Prose of a delightful character, full of simple piety and love of our-door nature.
Fuller, Thomas. 1608-1661	Church History of England, etc.....	A chronicle, with passages of wit or natural pathos.
MILTON, JOHN. 1608-1674	Areopagitica; *L'Allegro and Il Penseroso; Comus; Paradise Lost; Paradise Regained, etc.*	A poet, grave, learned, of mental dignity but gifted with musical power as much as Shakespeare.
Taylor, Jeremy. 1613-1667	Holy Living, etc.....	The "Shakespeare of Divines." Passages of rare poetic beauty and organ-like volume.
Baxter, Richard. 1615-1691	Saint's Rest.....	One of the "Vade mecums" of the later Puritans. Earnest and sincere.
V. PERIOD OF THE RESTORATION TO THE RISE OF THE NOVEL, 1660-1740		
BUNYAN, JOHN. 1628-1688	Pilgrim's Progress; Holy War.	Simple, idiomatic, with passages of rare beauty. Animated by simple, natural piety. A classic too much neglected.
Butler, Samuel. 1612-1680	*Hudibras*.....	A rhyming jingle, destitute of elevation but with here and there a witty couplet. Anti-Puritan throughout—favorite book of Charles II.
DRYDEN, JOHN. 1631-1700	*Virgil Translated; St. Cecilia's Day, etc.*.....	A fine critic. The father of fluent prose. Many energetic lines of verse, especially in his satires. A man of fine talent but limited genius.
Pepys, Samuel. 1633-1703	Diary.....	His Diary, not intended to be public, throws light on the life and habits of a capable business man of the 18th century.
LOCKE, JOHN. 1632-1704	On Human Understanding; Essays; Thoughts on Education, etc.	A sound, practical thinker, whose works illustrate the common sense and unspiritual tone of his age.
Newton, Sir Isaac. 1642-1727	Principia, etc.....	A great mathematician, he laid the foundation of our understanding of the mechanical structure of the universe.
Defoe, Daniel. 1661-1731	Robinson Crusoe.....	A born story-teller and pamphleteer.
Swift, Jonathan. 1667-1745	Tale of a Tub; Gulliver's Travels.....	Unequalled as a satirist, and writer of allegories, in simple, nervous, idiomatic English.
Steele, Sir Richard. 1672-1729	Essays (established the Tatler).....	A good second to Addison.
Addison, Joseph. 1672-1719	Essays in The Tatler and The Spectator.....	Originator of the Social essay marked by kindly, gentlemanlike humor in the urbane style.
Berkeley, Bishop. 1684-1753	Philosophy.....	A very acute thinker, English founder of one form of idealism.
Young, Edward. 1683-1765	*Night Thoughts*.....	Rather a ponderous poet, on semi-doctrinal subjects.
POPE, ALEXANDER. 1688-1744	*Essays on Man, etc.*.....	The model poet of his time and century. Used the decasyllabic couplet almost exclusively, but imparted to it vigor, pungency, and some variety.
Butler, Bishop. 1692-1752	Natural and Revealed Religion.....	The orthodox moralist of his day, ponderous in style and commonplace in method.
Carey, Henry. 1700-1743	*Sally in our Alley, etc.*.....	A light gift of doggerel satire.
Thompson, James. 1700-1748	*The Seasons, etc.*.....	A delicate feeling for the quieter aspects of nature, harmoniously expressed.
VI. RISE OF THE NOVEL AND PERIOD OF ROMANTICISM, 1740-1837		
Richardson, Samuel. 1689-1761	Clarissa Harlowe; Pamela; Sir Chas. Grandison.....	Sentimentally moral, but gifted with the story-telling faculty.
FIELDING, HENRY. 1707-1754	Tom Jones; Amelia; Jonathan Wild, etc.....	Depicts life broadly and faithfully. The first great realistic novelist.
Johnson, Samuel. 1709-1784	Dictionary; Rasselas; Lives of the Poets.....	A man of eighteenth century learning and letters. The critical authority of his day.
HUME, DAVID. 1711-1776	History of England.....	The first learned historian of England. A philosopher of acumen.
Sterne, Laurence. 1713-1768	Tristram Shandy; Sentimental Journey.....	A writer in whom affectation becomes an art. Some pathetic passages have become classic.

SUMMARY OF ENGLISH LITERATURE—Continued

Author and Dates	Representative Works	Literary Characteristics
Gray, Thomas..... 1716-1771	*Elegy in Country Churchyard, etc*.....	A scholar-poet. Production limited, but of fine workmanship.
Smollet, T. George..... 1721-1771	Humphrey Clinker, Roderick Random, etc.....	Originator of the Sea-Story. Inclined to vulgar coarseness.
Akenside, Mark..... 1721-1770	*Pleasures of the Imagination.*	A man of scholarship and culture, who wrote poetry without a decided gift.
Smith, Adam..... 1723-1790	Wealth of Nations.....	The first great economist. The moderns hardly equal to him in natural keenness of insight.
Goldsmith, Oliver..... 1728-1774	Vicar of Wakefield; Essays; *She Stoops to Conquer; Deserted Village, etc*.....	A true and graceful touch both in prose and poetry. Makes hack-work literature. Supposed to be the original compiler of "Mother Goose's Melodies."
Blackstone, Sir William.. 1723-1780	Commentaries on Laws of England.....	Learned and careful, with a conception of the dignity of law.
Burke, Edmund..... 1729-1797	Essays, Orations.....	Prose, sometimes musical and poetical and at the same time, a statesman's grasp of principle.
GIBBON, EDWARD..... 1737-1794	Decline and Fall of Roman Empire.....	A pains-taking and learned historian. Constructive powers of broad scope.
Boswell, James..... 1740-1795	Life of Samuel Johnson....	The true reporter's instinct for the point of a story. Otherwise, a toady.
COWPER, WILLIAM..... 1731-1800	*The Task; John Gilpin; etc...*	Divests poetry of the affectations of Pope. Writes on simple themes.
Paley, William..... 1743-1805	Evidence of Christianity, Natural Theology.....	A cogent reasoner on the old premises.
More, Hannah..... 1745-1833	Coelebs in Search of a Wife; *Sacred Dramas*.....	Something of a minor poet, something of a dramatist and story-teller.
Sheridan, Richard B..... 1751-1816	Speeches; The Rivals; School for Scandal; Song; etc....	Writer of witty dialogue and constructor of telling stage situations. Comedies still acted.
BURNS, ROBERT..... 1759-1796	*Cotter's Saturday Night, etc...*	Lyrics, songs and satires in Scotch dialect, marked by music, pathos and wit.
Edgeworth, Maria..... 1767-1849	Popular Tales, etc.....	Stories of middle-class domestic life of excellent moral tone and some power of characterization.
WORDSWORTH, WM..... 1770-1850	*The Excursion; Poems*.....	Nature poems and descriptive poems. Many fine sonnets. First expression of modern feeling for nature.
Hogg, James..... 1770-1835	Shepherd's Calendar; *Pastorals*.....	Scotch verses. One or two lyrics of sweetness and simplicity.
Montgomery, James..... 1771-1854	*Hymns, Poems*.....	A man universally esteemed; best remembered now for his hymns of which some hundred are found in our Hymnals.
SCOTT, SIR WALTER.... 1771-1832	Waverly Novels, etc; *Lady of the Lake, etc*.....	Originator of the historical novel. Tone natural and wholesome. Secure in the estimation of posterity.
Smith, Sidney..... 1771-1845	Sermons, Essays, etc.....	A witty divine. Master of the expository style.
Coleridge, Samuel T..... 1772-1834	Essays; *Rhyme of Ancient Mariner, etc*.....	A man of remarkable gifts, both intellectual and poetic; a natural master of verbal melody.
Southey, Robert..... 1774-1843	Biographies of Nelson, Wesley; *Poems, etc*.....	A man of industry and worth. Better as a prose stylist than a poet.
Lamb, Charles..... 1775-1834	Essays of Elia, etc.....	A quaint and delicate essayist—friend of Coleridge.
Landor, Walter Savage... 1775-1864	Imaginary Conversations, etc; *Count Julian; Heroic Idyls, etc*.....	Classic scholar and writer. Reactionary and old-fashioned in his thought but a remarkable stylist.
Austen, Jane..... 1775-1817	Pride and Prejudice, Emma, etc.....	Her novels depicting upper middle-class life are delightfully realistic and full of quiet life.
Porter, Jane..... 1776-1850	Scottish Chiefs, Thaddeus of Warsaw.....	Novels in an antiquated style of exaggerated romance.
Campbell, Thomas..... 1777-1844	*Pleasures of Hope, Lyrics, etc.*	Something of a critic, his lyrics have much vigor and verve.
Hallam, Henry..... 1777-1859	Europe during Middle Ages, Introduction to Literature, Constitutional History of England.....	Strong, vigorous, historical writing from a standpoint now antiquated.
Hazlitt, William..... 1778-1830	Table Talk, English Poets, etc.....	Critical essays; contain some true eloquence, and many powerful phrases.
Moore, Thomas..... 1779-1852	Biographies; *Lalla Rookh, Irish Melodies, etc*.....	Songs of much melody, but of an unreal sentimentality.
DeQuincey, Thomas..... 1785-1859	Confessions of an Opium Eater, etc.....	Passages of magnificent color. A learned man, lacking in sound realistic judgment.
Hunt, Leigh..... 1784-1859	Essays, Sketches, Memoirs; *Poems*.....	A minor poet. A litterateur of appreciation rather than of creative power.
Wilson, John..... 1785-1854	Noctes Ambrosianae, etc.; *Poems*.....	A virile man. As a writer, "of his age, not for all time" nor indeed for an entire century.

SUMMARY OF ENGLISH LITERATURE—Continued

Author and Dates	Representative Works	Literary Characteristics
Peacock, Thos. L. 1785-1866	Crotchet Castle, Rododaphne, etc.	A litterateur, novel writer, and verse writer of wit and epigrammatic power but no constructor.
Byron, Lord 1788-1824	*Poems*	Vigorous, eloquent, sardonic, iconoclastic, lacking in divine sympathy. A great satirist, and in many regards a great poet.
SHELLEY, PERCY BYSSHE—1792-1822	*Queen Mab, Adonais, The Sky Lark, etc.*	A remarkable gift of lyrical melody. Full of generous impulse and the unbalanced judgment of youth. A genius.
Marryat, Capt. Fred 1792-1848	Peter Simple, Jacob Faithful, etc.	Boy's stories but evincing considerable narrative skill.
Hemans, Felicia 1793-1835	*Lyrics*	A minor poet of grace, sweetness and tenderness.
Grote, George 1794-1871	History of Greece	A learned and sound historian, but superseded by modern exact research.
Arnold, Thomas 1795-1842	Roman History, Sermons, Essays	A man of wide influence as head-master of Rugby. An historian of the old school.
Keats, John 1795-1821	*Endymion, Hyperion, etc.*	A true poet, dying too young to reach full fruition of his remarkable artistic powers.
Pollock, Robert 1798-1827	*Course of Time*	A poet, sound, serious and heavy; suits Scotch theologians.
Hood, Thomas 1798-1845	*Poems*	A humorous poet of the first rank; some pathetic verses of high quality.
VII. THE VICTORIAN PERIOD TO THE PRESENT, 1837- ——		
Lover, Samuel 1797-1868	Handy Andy, Rory O'More; *Songs, Ballads*	A writer of slap-dash Irish and other good stories.
CARLYLE, THOMAS 1795-1881	French Revolution, Cromwell, etc.	A very great though one-sided man. A prose poet, an historian of insight and industry, impatient of shams.
Macaulay, Thomas B. 1800-1859	Essays, History of England; *Lays of Ancient Rome*	He makes history alive and readible. A partisan but on the right side.
James, G. P. R. 1801-1860	Novels (historical)	Historical novels of an antiquated pattern, popular in their day for good reasons.
Miller, Hugh 1802-1856	Old Red Sandstone Schools and Schoolmasters, etc.	A self-made scientific geologist, who did good service in popularizing science.
Praed Winthrop Mackworth 1802-1839	*The Vicar: The Red Fisherman*	The best writer of "Society Verse," urbane, cultured, witty. His verses are beautifully finished.
Martineau Harriet 1802-1876	Political Economy, etc.	A woman of remarkably strong intellect. Her positions well argued but perhaps too radical.
Lytton, Sir Edward Bulwer 1803-1873	Last Days of Pompeii, Last of the Barons, etc.	A versatile and successful litterateur, successful in several forms of the novel, but pre-eminent in none.
Disraeli, Benjamin 1804-1881	Lothair, Vivian Grey, etc.	Society novels eminently readable but thoroughly artificial.
Martineau, James 1805-1900	Philosophical Works, etc.	A philosophical thinker of insight and honesty.
Mill, John Stuart 1806-1873	Political Economy	Of thorough intellectual honesty and diamond-clear intellect, he furthered the cause of political justice and personal freedom.
Lever, Charles 1806-1872	Tom Burker, Charles O'Malley, etc.	Irish tales full of pith and spirit.
DARWIN, CHARLES 1809-1882	Origin of Species, Descent of Man	Lucid and attractive in style, and an unflinching lover of truth; he has had a greater influence on thought than any man of his time.
Milnes, Richard Monckton (Lord Houghton) 1809-1885	Life and Remains of Keats; *Poems, lengendary and historical*	A man of culture not without distinction as a minor poet. A true lover of literature.
FitzGerald, Edward 1809-1883	Euphranor, etc.; *The Rubaiyat*	The Rubaiyat is the only instance where a translation of a classic equals the original. —FitzGerald was one of the last of the great "Letter Writers."
Browning, Elizabeth Barrett—1806-1861	*Aurora Leigh, Poems*	A pleasing lyrical gift and warm, human sympathy made her a favorite poetess in the Victorian era.
TENNYSON, ALFRED 1809-1892	*In Memoriam, Idyls of the King*	The national poet of the late 19th century; a painstaking artist and master of verbal melody.
Kinglake, Alex. William 1809-1890	Eothen	A brilliant historian of the Crimean War.
Gaskell, Elizabeth 1810-1865	Cranford, Mary Barton, etc.	A writer of charming quiet feminine humor. One of the first to make the economic problems the basis of a story.
Thackeray, William Makepeace—1811-1863	Vanity Fair, The Newcomes.	Satirist and humorist, but with great powers of characterization, especially of the every-day social elements.
Dickens, Charles 1812-1870	David Copperfield, Oliver Twist, etc.	A broader humorist than Thackeray, appealing to the common human sympathies and the ordinary sense of the ridiculous.

SUMMARY OF ENGLISH LITERATURE—Continued

Author and Dates	Representative Works	Literary Characteristics
BROWNING, ROBERT... 1812-1889	*Dramatic Lyrics, Poems, The Ring and the Book*.....	A powerful poet, intent more on subtlety than lucidity, intellectual rather than sympathetic.
Reade, Charles..... 1814-1884	Peg Woffington, Cloister and Hearth, etc.....	A vigorous narrator, animated by hatred of injustice. Analysis of human motives, superficial.
Rawlinson, George..... 1815-1902	Five Great Monarchies.....	A learned Assyrian and Oriental scholar.
Trollope, Anthony..... 1815-1882	Barchester Towers, etc.....	Admirably realistic presentation of English society, political and ecclesiastical.
Froude, James Anthony..... 1818-1894	History of England.....	A brilliant prose writer, makes history human and interesting and suggestive.
Kingsley, Charles..... 1819-1875	Hypatia, etc.; *Poems*.....	His novels, in spite of slight affectations and a taint of sentimentality, are vigorous and wholesome.
Ruskin, John..... 1819-1900	Stones of Venice, Modern Painters.....	A great stylist. As art-critic too subjective and governed by the moral suggestiveness of the object. As political economist, too idealistic and regardless of human nature.
Bronte, Charlotte..... 1816-1855	Jane Eyre, The Professor, etc.	Great power in her novels which however, are based on narrow experience.
SPENCER, HERBERT.... 1820-1903	First Principles, etc.....	Applied principle of evolution to sociology, history, etc. A thinker, but ponderous in style.
Eliot, George..... 1819-1880	Silas Marner, etc.; *Spanish Gypsy, Poems*.....	The greatest woman novelist. A realist with insight. Powers of wit and characterization; construction not remarkable.
Tyndall, John..... 1820-1893	Scientific Papers.....	Unsurpassed as a popularizer of Darwin's ideas, unless it be by Huxley.
Arnold, Matthew..... 1822-1888	Essays and Criticisms; *Sohrab and Rustum, etc*.....	Critic and poet. Liberal in thought but dominated by aristocratic prejudice on the literary side. As a poet, inclined to despairing pessimism; weak in the power of verbal melody.
Muller, Max..... 1823-1900	Science of Language, etc.....	Did much to spread knowledge of the general facts and principles of philology and Oriental learning.
Freeman, Edward A..... 1823-1892	Histories.....	A conscientious, honest, painstaking historian, destitute of the power to make his subject interesting except to himself.
Hughes, Thomas..... 1823-1896	Tom Brown at Oxford, etc...	A manly, breezy person, who wrote one good book for boys.
Collins, Wilkie..... 1824-1889	Woman in White, etc.....	Unsurpassed as a constructor of plots, i. e. a born story-teller, not misled by psychological analysis.
Macdonald, George..... 1824-1905	Sir Gibbie, Alec Forbes, etc.	Wrote many novels showing some power of writing dialogue. Essentially of his day.
Huxley, Thomas Henry... 1825-1895	Man's Place in Nature.....	A master of exposition and, with Tyndall, very effective in presenting the idea of evolution.
Blackmore, R. D..... 1825-1900	Lorna Doone, etc.....	Infused an element of romance into the modern novel, "Lorna Doone."
Bagehot, Walter..... 1826-1877	Physics and Politics.....	Original, sound, and striking on political and economic topics.
Mulock, Dinah Naria..... 1826-1887	John Halifax, etc.....	Author of some twenty novels of which "John Halifax" is the best. Also of pleasing minor verse.
Rossetti, Dante Gabriel..... 1828-1882	*The Blessed Damozel, etc*.....	A highly imaginative poet; a master of color in verse and on canvas.
Oliphant, Margaret..... 1828-1897	Chronicles of Carlingford, etc.	Novels of middle-class life, of excellent tone, full of quiet observation. Plots, slight, but hold the attention.
Meredith, George..... 1828-1910	The Egoist, Diana of the Crossways, etc.....	Novels of extraordinary power. Style epigrammatic and not attractive.
McCarthy, Justin..... 1830-1912	History of our own Times, Novels.....	A prolific journalist, novelist and historian of modern times.
Ingelow, Jean..... 1820-1897	*Poems, High Tide on Coast of Lincolnshire*.....	A charming lyrical talent, of limited productive power.
Meredith, Owen..... 1831-1891	Biography of Bulwer Lytton; *Lucile*.....	Fluent writer of light verse and society verse.
Arnold, Edwin..... 1832-1904	*Light of Asia, Poems*.....	An able journalist and prolific minor poet.
Seeley, John Robert..... 1834-1895	Ecce Homo, etc.....	An able historical writer, his "Ecce Homo" had considerable influence on contemporary philosophies—religious thought.
Morris, William..... 1834-1896	Essays on Art, etc.; *Poems, Earthly Paradise*.....	Prolific as a narrative poet, fond of classic and medieval legends. As a poet, more fluent than thoughtful.
Hamerton, Philip I..... 1834-1894	Intellectual Life.....	An excellent critic of pictorial art and interpreter of French life and character for Englishmen.
Green, John Richard..... 1837-1883	History of the English People.	Industrious and conscientious, he viewed the "History of the English People" as something more than a record of war and politics. Clear and simple as a stylist.

SUMMARY OF ENGLISH LITERATURE—Continued

Author and Dates	Representative Works	Literary Characteristics
Swinburne, Algernon Chas., 1837-1909	*Poems*	A poet of remarkable musical power, a master of headlong but involved prose, a critic of enthusiasm and eloquence, caring little for principles or reasoned judgment.
Bryce, James, 1838-	American Commonwealth, Holy Roman Empire	A writer on politics of great common sense and statesmanlike scope. A trustworthy authority.
Besant, Walter, 1838-1901	East London, etc., Novels	A voluminous writer of novels, his History of London is a real contribution to knowledge of the past.
Morley, John, 1838-	English Men of Letters	A sound literary historian and critic and a thinker of force and scope.
Pater, Walter Horatio, 1839-1891	Marius the Epicurean, etc.	A wonderfully finished prose style which sometimes diverts attention from the justness and beauty of the thought.
Dobson, Henry Austin, 1840-	Vignettes in Rhyme, Proverbs in Porcelain	The English Horace. An authority on eighteenth century social and literary life, Charming light verses.
Hardy, Thomas, 1840-	Tess of D'Urbeville, etc., Novels	Novels depicting country life. A writer of broad humanity. His books possess at once wit, realism and an idyllic quality.
Black, William, 1841-1898	In Silk Attire, etc., Novels	His stories have considerable charm but not much force. They depict Gaelic Scotland pleasantly but unconvincingly.
Buchanan, Robert W., 1841-1901	Alone in London; *Poems*	A minor poet and dramatist of considerable output. Known for his mistaken attack on Rosetti in "The Fleshly School of Poetry."
Stevenson, Robert Louis, 1850-1894	Essays, Novels; *Child's Garden of Verses, etc.*	Careful and finished as a stylist, an excellent story-teller: "Treasure Island" and his Scottish Tales are true classics.
Zangwill, Israel, 1864-	Novels, Dramas, Essays	As Jew, an exponent of the Zionistic movement. Successful in the essay and especially in the novels depicting Jewish scenes and characters.
Kipling, Rudyard, 1865-	Stories, Novels, *Poems*	A vigorous, audacious, efficient writer. The most original genius among English literary men of today.
Phillips, Stephen 1868-	*Ulysses, Paolo and Francesca.*	A writer of lyric tragedies in blank verse, akin in spirit to the French classic drama.

AMERICAN LITERATURE

The development of American literature may be treated under three distinctly marked periods: (1) a colonial or ante-revolutionary period (1620-1775), during which the literature of the colonies was closely assimilated in form and character to that of England; (2) a first American period (1775-1865), which witnessed the transition from a style for the most part imitative to one in some degree national; and (3) a second American period from 1865 to the present time, in which the literature of the country has assumed a more decided character of originality.

THE COLONIAL PERIOD, 1620-1775

The literary traditions of the United States were in large part inherited from England. Although from the time of the Stuart restoration in England, in 1660, there are indications of a divergence in social and political temper, which in the long run must find expression in a distinct American literature, yet the literary emancipation of America was much more gradual than the political.

The first literature in America was the product of men educated in other lands, who happened to be drawn to the New World, and who wrote about the new country.

The first work of broad interest concerning the colonies that subsequently became the United States was the famous Captain John Smith's *True Relation of Such Occurrences and Accidents of Note as Hath Happened in Virginia.* This is an interesting and romantic work; but Smith was in America for three years only of his adventurous life, and consequently his narrative is highly colored. *The History of the Plymouth Plantation,* by Governor Bradford, and the *History of New England,* by John Winthrop, are productions of a colder clime than Virginia and of a less glowing imagination than Captain John Smith's.

Aside from such records, more interesting always from the standpoint of history than from that of literature, the sum of colonial production, north or south, is very small. In New England, where most books were written, if not always there published, we find chiefly theological polemics, often presented with attractive titles but rarely with any other power to carry them to posterity.

The *Poems* of Anne Bradstreet were very highly praised in their day, but almost the only book of lasting value and interest written in the century was Cotton Mather's *Magnalia Christi Americana* (1702). Mather was one of a great clerical and literary family. He wrote many other books, but none retains the interest of posterity. The *Magnalia,* however, is still a noble monument of a wonderful generation.

Franklin's *Poor Richard's Almanac,* begun in 1732 and carried on by him for twenty-five years, was a book of almost literary rank. "Poor Richard" was a fictitious character in whose

mouth Franklin put a simple philosophy which became as widely popular in its sphere as the more scholarly utterances of the Spectator.

The two great literary figures of the eighteenth century may be properly considered together. Jonathan Edwards (1703-1758) may represent to us the passing domination of theology; Benjamin Franklin, the domination just beginning of politics and secular common sense. They are the first Americans to make a lasting reputation by letters, and, curiously enough, with each literature was but a means to an end.

The remarkable effect of the preaching and writing of Jonathan Edwards came largely from the direct simplicity and clearness which makes his style almost no style at all. As for Franklin, he learned to write systematically, as he did everything else, and regarded his power to express himself chiefly as one of the means whereby he accomplished his purposes for the good of society. Edward's great works on the *Freedom of the Will* and other theological topics are probably read now by few, and the same may be said of much of Franklin's writings. But Franklin's *Autobiography* is still one of the most interesting things of its kind. Both men belonged to the time and place: America was expressing herself, whether in literary form or not.

In the years preceding the Revolution another real opportunity opened, and oratory became one of the genuine modes of national expression. Patrick Henry, James Otis, John Adams, Joseph Warren, Richard Henry Lee, Samuel Adams, spoke under the best conditions for literature, because they had something that had to be said. Yet their eloquence now is more a matter of fame than of fact. Of some, hardly more than a few slight reports remain to give us a notion of the powers that fired an earlier generation. This summary of colonial literature gives an idea of a very meagre literary production that was but natural. There was little written in America, and that little was compelled by the practical issues of the politics or theology of the time.

We shall readily understand that though such a review indicates slight literary appreciation as we understand the term, it does not imply a lack of intelligence. If the colonists had been less intelligent they might have produced more literature. Folk poetry and legend, with which true literature is apt to begin, is not the result of education.

The Americans were, comparatively speaking, a well-educated people. They very early provided for that literary scholarship training which comes from scholastic training. The colleges of the colonies, Harvard (1636), William and Mary (1693), Yale (1701), Princeton (chartered as the College of New Jersey, 1746), Columbia (originally King's, 1754), Brown (College of Rhode Island, 1764), Rutgers (originally Queens, 1766), Dartmouth (1769), and the University of Pennsylvania (founded as an academy by Franklin, 1754; chartered 1779), show a great appreciation of learning on the part of the colonists.

A somewhat wider if less scholastic culture is evidenced by the foundation of libraries, the Library Company of Philadelphia (1731), the Redwood Library of Newport (1747), the Charleston Library (1748), and the New York Society Library (1754), being the earliest.

FIRST NATIONAL PERIOD, 1775-1865

The two decades that brought the eighteenth century to a close were full of exciting political events, but barren of literature. The fathers could make a nation by adopting a constitution and abiding by it, but the creation of a national literature was not so easy a matter. National poetry did not come with national life. The efforts of Trumbull (1750-1831), and Barlow (1754-1812), are as good as the ordinary poetical work of the time in England, but they are not the expression of the soul of the new nation.

The first real literature was in prose, arising from natural imitation of past models under conditions of culture which led to appreciation of such imitation.

Washington Irving, then twenty-four years old, living the pleasant life of a clever young fellow in a small provincial city, joined with his brother William and James Kirke Paulding in one of the periodicals modeled after the *Spectator* common in the eighteenth century. Their venture was called *Salmagundi*, and although not remarkable in itself, its success gave confidence, so that two years afterward, feeling his own power, Irving wrote *Knickerbocker's History of New York*, one of the first pieces of American *belles-lettres* to become known in Europe as well as America. These productions came naturally from the conditions of Irving's life; so did the *Sketch Book*, with which he became a professed man of letters, the representative, we may say, of the first period of our national literature.

Irving had pre-eminently the gift for literary expression; in his hands everything became literature—history, biography, descriptive as well as satire, story, essay. He showed the possibility of giving literary form to American material.

The same thing was done in a special department of literature by James Fenimore Cooper. Charles Brockden Brown had written novels, but they have not survived. Cooper, on the other hand, so far saw the essential quality of certain elements of American life, that the figures of Leatherstocking, the American pioneer, Harvey Birch, the patriot, and Long Tom Coffin, the sailor, are still living figures.

In fiction also two masters of equal power were shortly to develop a form of literature in which America has produced much of the first order. Nathaniel Hawthorne and Edgar Allan Poe made of the short story a means of artistic presentation, which has been more highly appreciated in our day than it was in their own.

The first true poet was William Cullen Bryant. In the same year with Cooper's first American novel (1821) appeared a volume of Bryant's poems, of which one at least, *Thanatopsis*, had already excited admiring attention. Bryant's long and honorable life was devoted to many interests beside poetry, but he maintained throughout the pure and idealistic touch, and the intimate appreciation of nature that characterized his first work.

The first quarter of the nineteenth century, then, saw a beginning, slight indeed, but such as to endure, of a true literature in the departments of poetry, fiction, *belles-lettres*. The fifty years

following saw more substantial production in each direction.

The American poets of the middle of the century are not of the very first rank, but each is genuinely representative of some true poetic quality or way of looking at things.

Henry Wadsworth Longfellow presents the beauty and charm of American life and history in melodious and figured verse; John Greenleaf Whittier expresses the soul of our life and history in lyrics of most sincere human quality; Edgar Allan Poe gives a few most intense emotions in singularly perfect and individual form, while Walt Whitman expresses a certain American ideality in a strange mode of utterance, which despite its faults is characteristically strong.

As a poet Lowell is at his best in satire, Holmes in wit, Emerson in sententious wisdom.

In the field of fiction there was not so much that was good. It was not till he had written short stories for twenty years that Hawthorne found time for the novel for which he had so long felt himself capable. He wrote four, of which three at least are masterpieces. As a novelist he had no rivals; but there were not a few who carried on the tradition of the short story, of whom the most noteworthy were Fitz James O'Brien (1828-1862), Harriet Prescott, 1835 (afterward Mrs. Spofford), and Edward Everett Hale. *The Diamond Lens*, *The Amber Gods*, and *The Man Without a Country* of the latter are very typical works.

In history also there was first-rate expression. George Bancroft, William H. Prescott, John Lothrop Motley, and Francis Parkman, were all original workers and all men of literary power. The first two were rather too much influenced by the literary ideals of the past, but Motley and Parkman attain a perfection of literary history which seems impossible in our day of development and division of labor.

More specifically American, though perhaps more temporary, is the oratory of the period. Political conditions were still such as to encourage eloquence. Three names stand together as representative of American public life: Daniel Webster, Henry Clay, and John C. Calhoun. Their oratory has dignity, representative character and force. Three other orators should be mentioned: Edward Everett, Wendell Phillips, and Henry Ward Beecher, one eminent on great public occasions, one in public discussion and agitation, and the third in the pulpit. And we must add the name of a speaker whose simple sincerity gave him at times a greater power of speech than that of any other man of his day, Abraham Lincoln.

Several other elements of the literature of this time are important. The New England movement of idealistic thought, somewhat expressed by Transcendentalism, is represented by Ralph Waldo Emerson, a figure more thoroughly characteristic of American thinking than any other writer. Singularly individual and different from any other man of his time, he is yet typical of a combination of ideality and common sense thoroughly American.

James Russell Lowell is another important figure of the period: noteworthy as a poet, a critic, a scholar, an essayist, he is especially interesting as the successor of Irving as the representative man of his literary generation. He made literature an active factor in life and yet never allowed it to lose its literary quality.

Oliver Wendell Holmes is best known as a humorist, and perhaps the most American in that field in which America has a very special place. Humor is more than most branches of literature a matter of taste. It must be enough, therefore, to note, without attempting to discriminate or describe, the achievements of Artemus Ward (1834-1867), of Mark Twain and of Frank R. Stockton (1834-1902). In this second period of our literature occurred the Civil war. Such an event could not have been without its effect upon men of letters both South and North. In the North especially do we perceive the strongest influence: the anti-slavery element cannot be dissociated from the work of Lowell or Whittier. Yet in literature the war produced little of permanence. It is the backbone of Mrs. Harriet Beecher Stowe's title to remembrance; but powerfully effective as was *Uncle Tom's Cabin*, it is probable that there was more real genius in those presentations of that old New England life of which she was herself a product.

SECOND NATIONAL PERIOD, 1865- ——

In considering the period from the Civil war to the present, the most remarkable thing is the great increase of production and the slight accession to the rolls of genius. Such is especially the case with fiction; there have been very many good novels and short stories written, but there is no such commanding personality as Hawthorne.

The two chief figures of the seventies and eighties, at least, were Henry James and William Dean Howells. With great differences, they are yet both masters of the realistic school which was dominant in the second half of the century, in Europe as well as in America. Their superiority might remain unquestioned, were it not for the decline of interest in the kind of novel in which they excelled. In the early eighties a change in tone was perceptible.

The first noteworthy American representative of romantic or idealistic fiction which then began to appear was Marion Crawford, who has retained power and popularity for twenty-five years. He and a few other innovators were followed by a number of writers who found and presented the charm and romance of American history. These have now in their turn passed away except Winston Churchill who would seem really to have more enduring power than his companions. But the realistic movement was not without its results, for it directed American novelists, and especially story writers, into an appreciation of the specific qualities of different parts of their country.

The first writer to have this especial flavor was, it is true, the romanticist Bret Harte. His followers were more realistic: George Washington Cable gave a charming presentation of Creole life in New Orleans, and since the *Grandissimes* (1880) there have been a great number who have drawn pictures of the especial life of particular localities. Most noteworthy of these are Miss Mary N. Murfree ("Charles Egbert Cradock"), Miss Mary E. Wilkins (now Mrs. Freeman), James Lane Allen, Thomas Nelson Page, and Hamlin Garland.

If we are to mention any other novelist of the present day whose work seems likely to endure, it must be Mrs. Edith Wharton, who rather continues the traditions of Henry James.

In poetry no one has for forty years appeared who has been considered the equal of the earlier generation. Sidney Lanier and Edmund Clarence Stedman will probably be considered the chief figures of the seventies, while Richard Hovey (1864-1900) and James Whitcomb Riley are superior to their later contemporaries.

There has been much history in recent years, and if there are no historians of the rank of Motley and Parkman, the reason may lie in the difference that has come into the methods of historical study. John Fiske was a philosopher before he became a historian. Justin Winsor was a master of authorities, and his labors as an editor rendered possible one of the characteristic productions of the time, the *Narrative and Critical History of America,* written by a number of special scholars. Of other contemporary writers most noteworthy are probably Henry C. Lea, whose works deal with different phrases of the history of civilization, and Captain A. T. Mahan, whose studies of the influence of sea power on history have attracted the attention of the world.

Coincidently, a new school of humor has risen in the writing of F. P. Dunne, creator of the sagacious *Mr. Dooley,* and George Ade, author of *Fables in Slang.* Earlier humorists, aside from "Mark Twain" and Charles F. Browne ("Artemus Ward"), are Henry W. Shaw ("Josh Billings") (1818-1885), Joel Chandler Harris (1848-1908), the author of *Uncle Remus' Stories,* amusing dialect fantasies. In the summary of American literature one can hardly omit the names of Sarah Margaret Fuller ("Ossoli"), R. H. Dana, author of *Two Years Before the Mast,* and Donald G. Mitchell, author of *Reveries of a Bachelor* and *Dream Life.*

Recent and contemporary historians and essayists deserving of mention are T. W. Higginson, C. E. Norton, and William James.

Another form of writing should be mentioned' though its results are perhaps too ephemeral to be called literature. The newspaper is, however, a very important part of everybody's reading. It has been learning, however, to appeal more and more to an enormously wide audience, with the result that whatever literary character it may have had is now hard to find. In the middle of the century certain great editors had very definite literary standing, as Bryant of the New York *Evening Post,* Henry J. Raymond (1820-1869) of the *Times,* Horace Greeley (1811-1872) of the *Tribune.* Later figures must include Charles A. Dana (1819-1897), who gave a very distinctive character to the *Sun;* James Gordon Bennett (1841) of the *Herald,* and E. L. Godkin (1831-1902) of the New York *Evening Post,* and Henry Watterson of the Louisville *Courier-Journal.*

SUMMARY OF AMERICAN LITERATURE

NOTE.—Poetic and dramatic writings are indicated by *italics.*

AUTHOR AND DATES	REPRESENTATIVE WORKS	LITERARY CHARACTERISTICS
John Smith.... Virginia—1580-1631	True Relation of Virginia....	A romantic recital of thrilling adventures.
William Bradford..... Plymouth Col.—1588-1657	History of Plymouth Plantation.....	A full and clearly written account to 1649.
John Winthrop..... Massachusetts—1590-1649	History of New England—1630-1649.....	A simple, personal narrative, with occasional freshness of style.
Anne Bradstreet..... Massachusetts—1613-1672	*Poems; The Tenth Muse*.....	An affected and cumbersome didactic poem.
Henry Norwood..... Virginia—1628-1670 (?)	A Voyage to Virginia.....	Surprisingly well written in parts, and informative.
William Penn..... Pennsylvania—1644-1718	Brief Account of Pennsylvania	Confidently religious and philanthropic in tone.
James Blair..... Virginia—1656-1742	Sermons, No Cross, No Crown	Comparatively modern prose, written with pious zeal.
Cotton Mather..... Massachusetts—1663-1728	Elegy of Rev. Nathaniel Collins, Sermons, etc.....	Voluminous ecclesiastical writings of "pedantic and fantastic quaintness."
William Byrd..... Virginia—1674-1744	The Dividing Line, and other tracts.....	Full of fresh, humorous observations on life.
Robert Beverly..... Virginia—1675-1716	History of Virginia.....	A straightforward narrative of slightly polemic purpose.
JONATHAN EDWARDS..... Connecticut—1703-1758	Sermons, Surprising Conversions, etc.....	Strong and highly imaginative proclamations of Calvinism.
BENJAMIN FRANKLIN..... Pennsylvania—1706-1790	Poor Richard's Almanac, Autobiography.....	Wise and sagacious utterances of a fair, avowed utilitarian.
THOMAS JEFFERSON..... Virginia—1743-1826	Notes on Virginia, Declaration of Independence.....	Full of wise foresight and keen acumen.
JOHN MARSHALL..... Virginia—1755-1835	Life of Washington, Decisions etc.....	Profound and wise, but rather heavy.
ALEXANDER HAMILTON..... New York—1757-1804	Contributions to the Federalist.....	Keen and ingenious, full of information.
Alexander Wilson..... Scotland—1766-1813	American Ornithology.....	Pioneer investigations of a shrewd observer.
Charles Brockden Brown.... Pennsylvania—1771-1810	Wieland, Ormond, etc.....	Weird and sensational, of the Godwin type.
William Wirt..... Maryland—1772-1834	Life of Patrick Henry, Letters of a British Spy.....	Interesting and informative, but also imaginative.
Robert Treat Paine..... Massachusetts—1773-1811	Adams and Liberty; *Poems*..	Superficial, but of noticeable metrical facility.

SUMMARY OF AMERICAN LITERATURE—Continued

Author and Dates	Representative Works	Literary Characteristics
Henry Clay..... Kentucky—1777-1852	Speeches, Letters.....	Attractive because of personality and power.
Washington Allston..... South Carolina—1779-1843	Art Lectures; *Poems*.....	Highly artistic in intent and achievement.
James Kirk Paulding..... New York—1779-1860	Novels.....	Romances of little present interest.
Francis Scott Key..... Maryland—1780-1843	*Poems, Star Spangled Banner, etc*.....	The chief poem is a national song of patriotic ardor.
William E. Channing..... Massachusetts—1780-1842	Addresses, Sermons, Essays...	Social papers, clear, tolerant, thoughtful.
John James Audubon..... Louisiana—1780-1851	Birds of America, Quadrupeds of America.....	Marked by keen observation and wide interest.
John C. Calhoun..... South Carolina—1782-1850	Speeches, Papers, etc.....	Forceful in logical thinking and clear exposition.
Daniel Webster..... New Hampshire-1782-1852	Orations.....	Elevated in thought and eloquent.
Thomas Hart Benton..... North Carolina—1782-1858	Thirty Years View.....	Rich and racy observations of wide experience.
Washington Irving..... New York—1783-1859	Knickerbocker's History of New York, Sketch Book, etc.....	Humorous, with delicate sentiment and grace.
Richard Henry Dana..... Massachusetts—1787-1879	*Poems, The Buccaneer, etc*....	Overambitious and not wholly successful.
James Fenimore Cooper... New Jersey—1789-1851	Leather Stocking Tales, The Spy, etc.....	Romantic and overfortunate in coincidence, but readable.
Jared Sparks..... Connecticut—1789-1866	American Biographies.....	Commendable efforts of a pioneer biographer.
Fitz Greene Halleck..... Connecticut—1790-1867	*Poems, Marco Bozzaris, etc*...	Frankly humorous and delightfully fresh.
George Ticknor..... 1791-1871	History of Spanish Literature.	Scholarly and authentic.
John Howard Payne..... New York—1792-1852	*Home Sweet Home, Poems*....	Universal in appeal and satisfying in form.
Samuel G. Goodrich..... Connecticut—1793-1860	Peter Parley Books.....	Popular introductions with a flavor of fiction.
William Cullen Bryant.. Massachusetts—1794-1878	Addresses, Letters; *Poems, Thanatopsis.*	Dignified and poised, serious and helpful.
Joseph Rodman Drake..... New York—1795-1820	*The Culprit Fay, Poems*.....	Cleverly executed, but ingeniously fanciful.
James G. Percival..... Connecticut—1795-1856	*Poems; Prometheus, etc*.....	Unsustained, though not without positive merits.
John Pendleton Kennedy... Maryland—1795-1870	Swallow Barn, Horse Shoe Robinson, etc.....	Old-fashioned but interesting pictures of southern life.
WILLIAM H. PRESCOTT. Massachusetts—1796-1859	Conquest of Peru, Ferdinand and Isabella, etc.	Excellent history, very interestingly told.
Amos Bronson Alcott..... Massachusetts—1799-1888	Concord Days, Table Talks; *Sonnets and Canzonets*.....	Suggestingly idealistic, but lacking in general interest.
George Bancroft..... Massachusetts—1800-1891	History of the United States.	Faithfully prepared and honestly presented.
Horace Bushnell..... Connecticut—1802-1876	Nature and the Supernatural, Work and Play.....	Serious, didactic efforts with spiritual purpose.
George D. Prentice..... Connecticut—1802-1870	Essays; *Poems*.....	Witty, sarcastic, daring and effective
RALPH WALDO EMERSON, Mass.—1803-1882...	Conduct of Life, Representative Men, Essays; *Poems*..	The prophet of American culture. Coalesces oriental conceptions and occidental individualism.
Jacob Abbott..... Maine—1803-1879	Rollo Books.....	Popular favorites of unsophisticated youth.
NATHAN'L HAWTHORNE Massachusetts—1804-1864	Twice Told Tales, Scarlet Letter, Marble Faun, etc...	Marked by a subtle mastery and the touch of genius.
Charles E. A. Gayarré..... Louisiana—1805-1895	History of Louisiana, Fernando de Lemos, etc.....	Entertaining and scholarly bilingual productions.
Nathaniel P. Willis..... Maine—1806-1867	*Poems;* Sketches, Editorials, etc.....	Skillfully elaborated but diminishing in fame.
William Gilmore Simms.... South Carolina—1806-1870	*Poems;* Novels, Biography, etc.....	Versatile, original and artistic.
HENRY W. LONGFELLOW Maine—1807-1882	*Outre Mer, Hyperion, Poems, Hiawatha, etc*.....	Popular in appeal and simple in form.
John G. Whittier..... Massachusetts—1807-1892	Editorials; *Household Poems.*	With Burns' love of nature and human nature.
EDGAR ALLAN POE..... Maryland—1809-1849	Tales; *Poems, Raven, Annabel Lee, etc*.....	Excellent in artistic "totality of effect."
Albert Pike..... Massachusetts—1809-1891	*Hymns to the Gods, Poems, etc.*	Of recognized interest and merit.
Oliver Wendell Holmes.. Massachusetts—1809-1894	Autocrat of the Breakfast Table, Novels; *Poems*.....	Clever, witty, versatile, and skillful.
Margaret Fuller Ossoli..... Massachusetts—1810-1850	Summer on the Lakes, Papers on Literature and Art.....	Notable in transcendental aim and in merit of achievement.

SUMMARY OF AMERICAN LITERATURE—Continued

Author and Dates	Representative Works	Literary Characteristics
Harriet Beecher Stowe..... Connecticut—1811-1896	Uncle Tom's Cabin, etc.....	Far-reaching in its influence.
JOHN LOTHROP MOTLEY Massachusetts—1814-1877	Dutch Republic, United Netherlands.....	A rapid, easy style in presenting results of research.
Rufus W. Griswold..... Vermont—1815-1857	*Christian Ballads;* Poets and Poetry of America, Famous Poets.....	Valuable critical studies marred by partisanry.
John G. Saxe..... Vermont—1816-1887	*The Money King, New Rape of the Lock,* etc.....	Humorous and sprightly.
Samuel A. Allibone..... Pennsylvania—1816-1889	Literature and Authors, etc.	Laborious and valuable.
HENRY D. THOREAU..... Massachusetts—1817-1862	Walden, Excursions.....	Redolent of nature love, and cultured scholarship.
J. G. Holland..... Massachusetts—1819-1881	Timothy Titcomb's Letters, Katrina.....	Enjoyed a large popularity.
Edwin P. Whipple..... Massachusetts—1819-1886	Essays and Reviews, American Literature.....	Of very distinct cultural value.
JAMES RUSSELL LOWELL.... Massachusetts—1819-1891	Among My Books, My Study Windows, Bigelow Papers, *Poems, Sir Launfal, etc.....*	Keen, sparkling, scholarly, and artistic.
WALT WHITMAN..... New York—1819-1892	*Poems, Leaves of Grass, My Captain, etc.....*	Unique in claim and form.
Julia Ward Howe..... New York—1819-1910	Social and Philosophical Papers, *Battle Hymn of the Republic*.....	Representative of the spirit of the times.
Margaret J. Preston..... Virginia—1820-1897	Beechen Brook, Cartoons, *Colonial Ballads*.....	Cultured and of human interest.
Richard Grant White..... New York—1821-1885	Words and Their Uses; Everyday English.....	Scholarly and suggestive.
Thomas Buchanan Read.... Pennsylvania—1822-1872	*Poems; Drifting; Sheridan's Ride, etc.*.....	Commendable, especially in form.
Edward Everett Hale..... Massachusetts—1822-1909	The Man Without a Country, His Level Best.....	Vigorous and pointed, but provincial.
Donald G. Mitchell..... Connecticut—1822-1909	Dream Life, Reveries of a Bachelor.....	Attractive in meditation and grace.
FRANCIS PARKMAN..... Massachusetts—1823-1893	Oregon Trail, Montcalm and Wolfe, etc.....	Romantic, picturesque and of real interest.
George W. Curtis..... New York—1824-1892	Potiphar Papers, Prue and I, etc.....	Widely popular and effective.
BAYARD TAYLOR..... Pennsylvania—1825-1878	Northern Travel, Greece and Russia; *Poems of the Orient, Translation of Faust*.....	Too good at many things to be best at any.
Stephen Collins Foster..... Pennsylvania—1826-1864	*Old Folks at Home, Old Uncle Ned, etc.*.....	Popular in vein and melody.
LEW WALLACE..... Indiana—1827-1905	The Fair God, Prince of India, Ben Hur.....	Uneven, but at times highly successful.
Chas. Dudley Warner..... Massachusetts—1829-1900	My Summer in a Garden, Little Journeys, etc.....	Catholic in interests and attainments.
John Esten Cooke..... Virginia—1830-1886	Novels, Curvey of Eagle's Nest, etc., Lives of Lee and Jackson.....	Prime favorites with romantic youth.
Paul Hamilton Hayne..... South Carolina—1831-1886	*Sonnets, Legends, Lyrics*.....	In sonnets excellent, in other poems too prolific.
LOUISA MAY ALCOTT..... Massachusetts—1832-1888	Little Women, Little Men...	Influential in their popular appeal.
Edmund C. Stedman..... Connecticut—1833-1908	Victorian Poets, Poets of America, Alice of Monmouth.....	Showing creative power and critical ability.
Chas. Farrar Browne (Artemus Ward), Maine—1834-1867.....	Artemus Ward, His Book, etc.	Humorous in exaggeration and perversion.
Frank R. Stockton..... Pennsylvania—1834-1902	Rudder Grange, The Lady or the Tiger.....	Ingenious in plot, straightforward in style.
Moses Coit Tyler..... Connecticut—1835-1900	History of American Literature.....	Accurate and exhaustive.
SAMUEL L. CLEMENS..... Missouri (1835-1910)	Innocents Abroad, Huckleberry Finn, etc.....	Thoroughly representative of American humor.
Thomas Bailey Aldrich..... New Hampshire-1836-1907	Novels, Marjorie Daw, etc...	Cultivated and of literary talent.
WILLIAM DEAN HOWELLS... Ohio—1837-	Venetian Life; Rise of Silas Lapham, etc.....	Realistic and entertainingly descriptive.
John Burroughs..... New York—1837-	Wake Robin, Winter Sunshine.....	Strongly uttering the charms of nature.
Mary Mapes Dodge..... New York—1838-1905	Hans Brinker.....	In high favor with children.
Albion W. Tourgee..... Ohio—1838-1905	A Fool's Errand, Bricks Without Straw.....	Valuable for the point of view.

SUMMARY OF AMERICAN LITERATURE—Concluded

Author and Dates	Representative Works	Literary Characteristics
Thomas R. Lounsbury..... New York—1838-1915	Life of Cooper, Studies in Chaucer, etc.....	Of recognized scholarship and ability.
Francis Bret Hart..... New York—1839-1902	Luck of Roaring Camp, Gabriel Conroy; *Poems*...	Of international fame. Faithful and skillfull character portrayal.
Joaquin Miller..... Indiana—1841-1913	*The Danites in the Sierras Surge of the Sierras*.....	With the sweep and breadth of the prairies.
Sidney Lanier..... Georgia—1842-1881	The Boy's Froissart; *Tiger-Lilies, Poems*.....	Artistic to a high degree.
John Fiske..... Connecticut—1842-1901	Myths and Mythmakers Histories.....	Scholarly and fairminded.
Henry James..... New York—1843-1916	Daisy Miller, Portrait of a Lady, etc.....	Of characteristic conception and style.
George W. Cable..... Louisiana—1844-	Old Creole Days, etc.....	Successful in achievement of purpose.
Elizabeth S. Phelps Ward... Massachusetts—1844-1911	Gates Ajar, etc.....	Widely read for religious sentiment.
Arthur S. Hardy..... 1847-	Passe Rose, etc.....	Of trained literary ability.
James Lane Allen..... Kentucky—1849-	Flute and Violin, The Choir Invisible, etc.....	Reaching a high standard of excellence.
Francis Marion Crawford... New York—1854-1909	Novels, Travel, Descriptive Sketches.....	Best known for his Saracinesca series, the scenes of which are laid in modern Rome.
James Whitcomb Riley.... Indiana—1852-1916	*Poems, Rhymes of Childhood, The Book of Joyous Children, etc.*	His combination of humor, pathos, and sentiment appeals to high and low alike.
Mary N. Murfree (Charles Egbert Craddock), Tenn.—1850-	Novels, In the Tennessee Mountains, etc.....	Absorbing studies in southern life and character.
Eugene Field..... Missouri—1850-1895	*Poems, Little Boy Blue, A Dutch Lullaby, Love Song of Childhood, etc*.....	Holds a special place in American literature as the poet of Christmas and childhood.
Amelie Rives..... Virginia—1863-	Novels, Virginia of Virginia, The Quick or the Dead, etc. *Poems*.....	Her later writings show more charity of thought and richness of expression than was characteristic of her earlier productions.
Thomas Nelson Page..... Virginia—1853-	Novels, On Newfound River, Marse Chan, etc.....	An interpreter of local life and color of unusual insight.
Henry J. van Dyke..... Pennsylvania—1852-	Novels, The Other Wise Man, etc.; *Poems*.....	Keen in observation, healthful in tone, delightful in style.

PRONOUNCING DICTIONARY OF LITERARY ALLUSIONS

Concise, explanatory paragraphs concerning Famous Books, Poems and Dramas; Literary Characters, Plots and Scenes; Pen Names of Famous Writers; Soubriquets and Nicknames; Literary Geography, Shrines and Haunts; and numerous other literary references.

KEY TO THE SOUNDS OF LETTERS

ă, as in farm, father; *ȧ*, as in ask, fast; *a*, as in at, fat; *ā*, as in day, fate; *ȧ*, as in care, fare; *a*, as in final; *e*, as in met, set; *ē*, as in me, see; *ĕ*, as in her, ermine; *i*, as in pin, sin; *ī*, as in pine, line; *o*, as in not, got; *ō*, as in note, old; *ŏ*, as in for, fought; *ŏ*, as in sole, only; *o̧*, as in fog, orange; *ŏ*, sound cannot be exactly represented in English. The English sound of *u* in *burn* is perhaps the nearest equivalent to *ŏ*; *oo*, as in cook, look; *o͞o*, as in coon, moon; *u*, as in cup, duck; *ū*, as in use, amuse; *u̇*, as in fur, urge; *u̇* sound cannot be exactly represented in English. The English sound of *u* in *luke* and *duke* resembles the original sound of *ū*. The letter N represents the nasal tone of the preceding vowel, as in *encore* (*ȧN-kōr′*).

Aaron (*ā′ron* or *ar′on*).—A character in Shakespeare's *Titus Andronicus*, a Moor of unnatural wickedness beloved by Tamora, queen of the Goths. The character shows originality of conception, but is otherwise repellant.

Abaddon (*a-bad′on*).—The Hebrew name of an evil spirit or destroying angel called Apollyon in Greek. In mediæval literature he is regarded as the chief of the demons of the seventh hierarchy and the one who causes wars and uproars. Klopstock introduced him in his *Messiah* under the name of Abbadona. He represents him as a fallen angel still bearing traces of his former dignity and repenting of his part in the rebellion against God. In Bunyan's *Pilgrim's Progress* he meets and fights with Pilgrim.

Abdalla (*ab-dal′ă*).—(1) The Mufti, a character in Dryden's tragedy *Don Sebastian*. (2) One of Sir Brian de Bois Guilbert's slaves, in Scott's *Ivanhoe*. (3) Brother and predecessor of Giaffer, pasha of Abydos, by whom he was murdered, in Byron's *Bride of Abydos*.

Abdiel (*ab′di-el*).—A seraph in Milton's *Paradise Lost*, the only seraph who remained loyal when Satan stirred up the angels to revolt.

Abonde (*a-bōn-de′*).—A character in French literature that corresponds to our Santa Claus, the good fairy who comes at night, especially New Year's night, to bring toys to children while they sleep.

Abu-Hassan (*ă-bō-has′an*).—As related in the *Arabian Nights*, Abou Hassan is a merchant of Bagdad who is carried in his sleep to the bed of the Caliph Haroun-al-Raschid and on awaking is made to believe himself the caliph. Twice in this way he was made to believe himself caliph and afterward became in reality the caliph's favorite and companion.

Absalom and Achitophel (*ab′sa-lom* and *a-kit′ō-fel*).—A poetical satire by John Dryden, directed against the political faction led by the Earl of Shaftesbury. The names in the title are given to the duke of Monmouth and the earl of Shaftesbury. Like Absalom, the son of David, Monmouth was remarkable for his personal beauty, his popularity, and his undutifulness to his father.

Absolute, Captain.—A character in Sheridan's comedy, *The Rivals*. He is distinguished for his gallant, determined spirit, his quickness of speech, and dry humor.

Absolute, Sir Anthony.—An amusing character in Sheridan's *Rivals*. He is represented as testy, positive, impatient, and overbearing, but yet of a warm and generous disposition.

Acadia (*a-kā′di-ă*), **Acadie** (*ă-kă-dē′*).—The original, and now the poetic, name of Nova Scotia. In 1755, the French inhabitants were seized, forcibly removed and dispersed among the English colonists on the Atlantic coast. Longfellow has made this event the subject of his poem *Evangeline*.

Acrasia (*a-krā′zi-ă*).—In Spencer's *Faërie Queene*, a witch represented as a lovely and charming woman, whose dwelling is the Bower of Bliss, which is situated on an island floating in a lake or gulf, and is adorned with everything in nature that can delight the senses. The word signifies intemperance. She is the personification of sensuous indulgence and intoxication. Sir Guyon, who illustrates the opposite virtue, is commissioned by the fairy queen to bring her into subjection, and to destroy her residence.

Acres, Bob.—A character in Sheridan's *The Rivals*, celebrated for his cowardice and his peculiar method of allegorical swearing.

Adam.—(1) Adam is a character frequently alluded to in the *Talmud*. Many strange legends are related of him. He was buried, so Arabian tradition says, on Aboncais, a mountain of Arabia. (2) In *As You Like It*, Shakespeare, he is an aged servant to Orlando and offers to accompany Orlando in his flight and to share with him his carefully-hoarded savings of five hundred pounds. (2) In Shakespeare's *Comedy of Errors*, Adam is an officer known by his dress, a skin-coat.

Adamastor (*ad-am-ȧs′tor*).—The phantom of the Cape of Good Hope in the *Lusiad*: a terrible spirit described by Camoens as appearing to Vasco da Gama and prophesying the misfortunes which should fall upon other expeditions to India.

Adam Bede (*bēd*).—A novel by George Eliot, the chief character of which is a young carpenter, a keen and clever workman, somewhat sharp-tempered and with a knowledge of some good books. He has an alert conscience, good common sense and "well-balanced shares of susceptibility and self-control." He loves Hetty Sorrel, but finally marries Dinah Morris.

Adams, Parson.—A character in Fielding's story of *Joseph Andrews*, distinguished for his goodness of heart, poverty, learning, and ignorance of the world, combined with courage, modesty, and a thousand oddities.

Adonais (*ad-ō-nā′is*).—An elegiac poem by Shelley, commemorating the death of Keats. The name was coined by Shelley probably to hint an analogy between Keats' fate and that of Adonis.

Advancement of Learning, The.—A prose treatise by Francis, Lord Bacon, which contains not only the germ of his Latin work, *De Augmentis Scientiarum*, but really the pith and marrow of the Baconian philosophy, if taken in connection with the second book of the *Novum Scientiarum Organum*. An analysis of the work may be read in Hazlitt's *Lectures on the Literature of the Age of Elizabeth*.

Æneid (*ē-nē′id*), or **Æneis** (*-is*).—An epic poem, in twelve books, by Vergil, recounting the adventures of Æneas after the fall of Troy, founded on the Roman tradition that Æneas settled in Latium and became the ancestral hero of the Roman people. The hero, driven by a storm on the coast of Africa, is hospitably received by Dido, queen of Carthage, to whom he relates the fall of Troy and his wanderings. An attachment between them is broken by the departure of Æneas, in obedience to the will of the gods, and the suicide of Dido follows. After a visit to Sicily, Æneas lands at Cumæ in Italy. In a descent to the infernal regions he sees his father, Anchises, and has a prophetic vision of the glorious destiny of his race as well as of the future heroes of Rome. He marries Lavinia, daughter of Latinus, king of the Latini, and a contest with Turnus, king of the Rutuli, the rejected suitor follows, in which Turnus, is slain. The poem is a glorification of Rome and of the Emperor Augustus, who, as a member of the Julian gens, traced his descent from Julus (sometimes identified with Ascanius), the grandson of Æneas.

Agamemnon (*ag-ă-mem′non*).—The greatest of the tragedies of Æschylus. The scene is laid in Argos, in the palace of Agamemnon, at the time of the king's return from the capture of Troy; the catastrophe is the murder (behind the scenes) of Agamemnon and Cassandra (whom he has brought captive with him) by the queen Clytemnestra, urged on by her paramour Ægisthus.

Agnes.—(1) A young girl in Molière's *L'Ecole des Femmes*, who affects to be remarkably simple and ingenuous. The name has passed into popular use, and is applied to any young woman unsophisticated in affairs. (2) A strong womanly character in *David Copperfield* who proves a true friend to David's "child-wife," Dora, and to David himself. Later Dora dies and David marries Agnes.

Agnes, The Eve of St.—(1) A poem by John Keats. It is characterized by Leigh Hunt as "the most delightful and complete specimen of his genius; . . . exquisitely loving; . . . young but full-grown poetry of the rarest description; graceful as the beardless Apollo; glowing and gorgeous with the colors of romance." St. Agnes

was a Roman virgin who suffered martyrdom in the reign of Diocletian. (2) A poem by Tennyson, published in 1842.

Agapida (*ă-gă-pē'thă*), **Fray Antonio.**—The fictitious writer to whom Washington Irving originally attributed the authorship of the *Conquest of Granada.*

Agib (*ă'gib*).—(1) The third Calendar in the story of "The Three Calendars" in the *Arabian Nights' Entertainments.* (2) In the story of Noureddin Ali and Bedredden Hassan in *The Arabian Nights,* a son of Bedredden Hassan and the Queen of Beauty.

Agramant (*ă'grā-mănt*).—In Boiardo s *Orlando Innamorato* and Ariosto's *Orlando Furioso,* the young king of Africa.

Ague-Cheek (*ā'gū-chēk*), **Sir Andrew.** A character in Shakespeare's comedy *Twelfth Night,* a timid, silly but amusing country squire, to whom life consists only of eating and drinking. He is stupid even to silliness, but so devoid of self-love or self-conceit that he is delightful in his simplicity.

Ahasuerus (*a-haz-ū-ē'rus*).—Chief character in Sue's *A Wandering Jew,* the cobbler who pushed away Jesus when, on the way to execution, He rested a moment or two at his door. "Get off! Away with you!" cried the cobbler. "Truly, I go away," returned Jesus, "and that quickly; but tarry thou till I come." And from that time Ahasuerus became the "wandering Jew," who still roams the earth, and will continue so to do till the "second coming of the Lord."

Ahmed (*ăh'med*), or **Achmet** (*ăch'met*).—In the *Arabian Nights,* noted for a magic tent he possessed which would cover a whole army but might be carried in the pocket. He also possessed a magic apple which would cure all diseases.

Aladdin (*a-lad'in*).—In the story of "Aladdin or the Wonderful Lamp," in the *Arabian Nights' Entertainments,* the son of a poor widow in China, who becomes possessed of a magic lamp and ring which command the services of two terrific jinns. Learning the magic power of the lamp, by accidentally rubbing it, Aladdin becomes rich and marries the Princess of Cathay through the agency of the "slave of the lamp" who also builds in a night a palace for her reception. One window of this palace was left unfinished, and no one could complete it to match the others. Aladdin therefore directs the jinns to finish it, which is done in the twinkling of an eye (hence the phrase "to finish Aladdin's window"; that is, to attempt to finish something begun by a greater man). After many years the original owner of the lamp, a magician, in order to recover it, goes through the city offering new lamps for old. The wife of Aladdin, tempted by this idea, exchanges the old rusty magic lamp for a brand new useless one (hence the phrase "to exchange old lamps for new"), and the magician transports both palace and princess to Africa, but the ring helps Aladdin to find them. He kills the magician, and, possessing himself of the lamp, transports the palace to Cathay, and at the sultan's death succeeds to the throne.

Al Araf (*ăl ă rāf*).—The Mohammedan limbo, between paradise and jehennam, for those who die without sufficient merit to deserve the former, and without sufficient demerit to deserve the latter. Here lunatics, idiots, and infants go at death, according to the Koran. The subject of an uncompleted poem by Edgar A. Poe.

Alasnam (*a-las'nam*).—The hero of a story in the *Arabian Nights* entitled "The History of Prince Zeyn Alasnam and the Sultan of the Genii," Alasnam has eight diamond statues, but had to go in quest of a ninth more precious still, to fill the vacant pedestal. The prize was found in the lady who became his wife, at once the most beautiful and the most perfect of her race.

Albracca (*ăl-brăk'kă*).—In Bojardo's *Orlando Innamorato,* a castle of Cathay to which Angelica retires in grief at being scorned and shunned by Rinaldo, with whom she is deeply in love. Here she is besieged by Agricane, King of Tartary, who resolves to win her, notwithstanding her indifference to his suit.

Alceste (*ăl-sest'*).—The principal character in Molière's comedy *The Misanthrope:* a disagreeable but upright man who scorns the civilities of life and the shams of society.

Alcina (*ăl-che'na*).—A fairy, the embodiment of carnal delights, in Boiardo's *Orlando Innamorato* and Ariosoto's *Orlando Furioso* the sister of Logistalla (reason) and Morgana (lasciviousness). When tired of her lovers she changed them into trees, beasts, etc., and was finally, by means of a magic ring, displayed in her real senility and ugliness. Compare *Acrasia, Armida,* and *Circe.*

Aldine (*al'din*) **Press.**—The press established at Venice by Aldus Manutius. See *Manutius*

Aldingar (*al'ding-gär*), **Sir.**—A character in Percy's *Religues.* This ballad relates how the honor of Queen Elianor, wife of Henry Plantagenet, impeached by Sir Aldingar, her steward, was submitted to the chance of a duel, and how an angel, in the form of a little child, appeared as her champion, and established her innocence.

Alhambra (*al-ham'bră*).—A volume of legends and descriptive sketches by Washington Irving. "The account of my midnight rambles about the old place," says the author, "literally true, yet gives but a feeble idea of my feelings and impressions, and of the singular haunts I was exploring. Everything in the work relating to myself and to the actual inhabitants of the Alhambra is unexaggerated fact; it was only in the legends tha' I indulged in *romancing,* and these were founded on material picked up about the place."

Ali Baba (*ă'lē bă'bă*).—A character in *The Arabian Nights' Entertainments,* in the story "Ali Baba and the Forty Thieves" a poor wood-cutter who, concealed in a tree, sees a band of robbers enter a secret cavern, and overhears the magic words "open sesame" which opens its door. After their departure he repeats the spell and the door opens, disclosing a room full of treasures with which he loads his asses and returns home. His brother Cassim, who discovers his secret, enters the cave alone, forgets the word "sesame," and is found and cut to pieces by the robbers. The thieves, discovering that Ali Baba knows their secret, resolve to kill him, but are outwitted by Morgiana, a slave.

Alice in Wonderland.—A little girl through whose dream pass the scenes of *Alice's Adventures in Wonderland* and *Behind the Looking-glass,* two popular stories for children by Lewis Carroll (Charles Dodgson). They have been translated into several European languages.

Alice Brand.—In Scott's *Lady of the Lake,* Alice signed Urgan the dwarf thrice with the sign of the cross, and he became "the fairest knight in all Scotland"; when Alice recognized in him her own brother.

Allan-a-Dale.—A friend of Robin Hood's in the ballad. He is introduced into Sir Walter Scott's *Ivanhoe* as Robin Hood's minstrel.

All's Well That Ends Well.—A comedy by Shakespeare. The hero and heroine are Bertram, Count of Roussillon, and Helena, a physician's daughter, who are married by the command of the king of France, but part because Bertram thought the lady not sufficiently well-born for him. Bertram flees to Florence, but, ultimately, Helena wins his love and all ends well.

Allworthy, Mr.—In Fielding's novel of *Tom Jones,* a man of amiable and benevolent character; intended for Mr. Ralph Allen, who was also celebrated by Pope.

Almighty Dollar.—A personification of American worship. Washington Irving originated the phrase in *The Creole Village.*

Alp.—*Siege of Corinth,* Byron. The hero of this poem.

Amadis de Gaul.—The hero of an ancient and celebrated Portuguese romance.

Amanda (*a-man'dă*).—A young woman who impersonates Spring in Thomson's *Seasons.*

Amaryllis, Amarillis (*am-a-ril'is*).—In Spenser's pastoral *Colin Clout's Come Home Again,* is the countess of Derby. Her name was Alice, and she was the youngest of the six daughters of Sir John Spenser, of Althorpe, ancestor of the noble houses of Spenser and Marlborough. After the death of the earl, the widow married Sir Thomas Egerton, keeper of the great seal (afterward baron of Ellesmere and viscount Brackley). It was for this very lady, during her widowhood, that Milton wrote his *Arcades.*

Ambrose.—A sharper in Lesage's *Gil Blas,* who assumed in the presence of Gil Blas the character of a devotee, He was in league with a fellow who assumed the name of Don Raphael, and a young woman who called herself Camilla, cousin of Donna Mencia. These three sharpers allure Gil Blas to a house which Camilla says is hers, fleece him of his ring, his portmanteau, and his money, decamp, and leave him to find out that the house is only a hired lodging.

Amelia (*a-mē'liă*).—The title of one of Fielding's novels, and the name of its heroine, who is distinguished for her tenderness and affection. The character of Amelia is said to have been drawn from Fielding's wife.

Amine (*ă-mēn'*).—In *Arabian Nights* a female character who leads her three sisters by her side as a leash of hounds.

Aminte (*ă-mant'*).—*Les Précieuses Ridicules,* Molière. A contradictory character in this comedy. She dismisses her admirers for proposing to marry her, scolds her uncle for not carrying himself as a gentleman, and marries a valet whom she believes to be a nobleman.

Amlet (*am'let*).—The name of a gamester in Vanbrugh's *Confederacy.*

Amoret (*am'ō-ret*).—(1) The name of a lady married to Sir Scudamore, in Spenser's *Faërie Queene*. She is the type of a devoted, loving wife. (2) The heroine of Fletcher's pastoral drama, *The Faithful Shepherdess*.

Amys and Amylion.—Two faithful friends. The Pylades and Orestes of the feudal ages. Their adventures are the subjects of ancient romances.

Ancient Man.—In Tennyson's *Idylls of the King*, means Merlin, the old magician, King Arthur's protector and teacher.

Ancient Mariner, The.—A poem by Samuel Taylor Coleridge. The hero, an ancient mariner "with a long gray beard and glittering eye," suffers terrible evils, and likewise inflicts them on his companions, from having shot an albatross, a bird of good omen. All his comrades perish of hunger, but, as he repents, he is permitted to regain the land. At intervals his agony returns, and he is driven from place to place to ease his soul by confessing his crime and sufferings to his fellows, and enforcing upon them a lesson of love for "all things, both great and small."

"*The Ancient Mariner*," says Swinburne, "is perhaps the most wonderful of all poems. In reading it we seem rapt into that paradise revealed by Swedenborg, where music and color and perfume were one, where you could see the hues and hear the harmonies of heaven. For absolute melody and splendor it were hardly rash to call it the first poem in the language."

Andrews, Joseph.—The hero in Fielding's novel by the same name, written to ridicule Richardson's *Pamela*. Fielding presents Joseph Andrews as a brother to the modest and prudish Pamela, and pictures him as a model young man.

Angelica (*an-jel'i-kă*).—In Bojardo's *Orlando Innamorato*, is daughter of Galaphron, king of Cathay. She goes to Paris, and Orlando falls in love with her, forgetful of wife, sovereign, country and glory. Angelica, on the other hand, disregards Orlando, but passionately loves Rinaldo, who positively dislikes her. Angelica and Rinaldo drink of certain fountains, when opposite effects are produced in their hearts, for then Rinaldo loves Angelica, while Angelica loses all love for Rinaldo. (2) The heroine of Congreve's comedy of *Love for Love;* in love with Valentine, but the ward of Sir Sampson Legend, who seeks to marry her. She jilts the old man, however, and marries the younger lover. Angelica is supposed to represent Mrs. Bracegirdle; Valentine the author himself who was enamoured of the actress, and was the rival of the dramatist, Rowe, in her affections. (3) The heroine of Ariosto's *Orlando Furioso*. She was beloved by Orlando, but married Medoro. Also the name of the heroine of Farquhar's plays of the *Constant Couple*, and *Sir Harry Wildair*.

Angelic Doctor.—A name bestowed upon Thomas Aquinas, great Italian theologian and philosopher, in recognition of his virtues and talents.

Angelo (*an'je-lō*).—A character in Shakespeare's *Measure for Measure;* also the name of a goldsmith in the *Comedy of Errors*.

Angiolina.—The wife of the doge of Venice, in Byron's *Marino Faliero*.

Anna Karênina (*ăn'nă kä-rā'nē-nă*).—A novel of Tolstoy, perhaps the most representative of his works. It first appeared serially, but with long intervals, in a Moscow review, and was published in 1877.

Annabel Lee.—The title and subject of a poem by Edgar Allan Poe, which begins—

> It was many and many a year ago,
> In a kingdom by the sea,
> That a maiden there lived whom you may know
> By the name of Annabel Lee.

Anne.—Perrault's *La Barbe Bleue*, the sister of Fatima, the seventh and last wife of Bluebeard. Fatima, having disobeyed her lord by looking into the locked chamber, is allowed a short respite before execution. Sister Anne ascends the high tower of the castle, with the hope of seeing her brothers, who were expected to arrive every moment. Fatima, in her agony, keeps asking "sister Anne" if she can see them, and Bluebeard keeps crying out for Fatima to use greater dispatch. As the patience of both is exhausted the brothers arrive, and Fatima is rescued from death.

Annie Laurie, eldest of the three daughters of Sir Robert Laurie, of Maxwelton. In 1709 she married James Fergusson, of Craigdarroch, and was the mother of Alexander Fergusson, the hero of Burns' song *The Whistle*. The song of *Annie Laurie* was written by William Douglas, of Fingland, in the stewardy of Kirkcudbright, hero of the song *Willie Was a Wanton Wag*.

Antipholus of Ephesus (*an-tif'ō-lus ov ef'e-sus*), and **Antipholus of Syracuse** (*sir'a-kūs*).—Twin brothers, sons to Ægeon and Æmilia, in Shakespeare's *Comedy of Errors*.

Antonio (*ăn-tō'nē-ō*).—(1) The merchant of Venice in Shakespeare's play of that name, the friend of Bassanio, and the object of Shylock's hatred. (2) The usurping Duke of Milan, and brother to Prospero, in Shakespeare's *Tempest*. (3) The father of Proteus, in Shakespeare's *Two Gentlemen of Verona*. (4) A minor character in Shakespeare's *Much Ado About Nothing*. (5) A sea captain, friend to Sebastian, in Shakespeare's *Twelfth Night*.

Antony and Cleopatra.—Historical tragedy by Shakespeare which may be considered as a continuation of *Julius Cæsar*. In the opening scene of *Julius Cæsar* absolute power is lodged in one man. In the conclusion of *Antony and Cleopatra* a second Cæsar is again in possession of absolute power, and the entire Roman world is limited under one imperial ruler. There are four prominent characters in this play: Cleopatra, voluptuous, fascinating, gross in her faults, but great in the power of her affections; Octavius Cæsar, cool, prudent, calculating, avaricious; Antony, quick, brave, reckless, prodigal; Enobarbus, a friend of Antony, at first jocular and blunt, but transformed by penitence into a grief-stricken man who dies in the bitterness of despair.

Apocalypse.—The Greek name of the last book of the Testament, termed in English *Revelation*. It has been generally attributed to the Apostle St. John, but some wholly reject it as spurious. In the first centuries many churches disowned it, and in the fourth century it was excluded from the sacred canon by the council of Laodicea, but was again received by other councils, and confirmed by that of Trent, held in the year 1545. Most commentators suppose it to have been written after the destruction of Jerusalem, about A. D. 96; while others assign it an earlier date. Its figures and symbols are impressive.

Apocrypha (*a-pok'ri-fă*).—The word originally meant secret or hidden, and it is said that books of the *Apocrypha* are not found in either the Chaldean or the Hebrew language. These books were not in the Jewish canon, but they were received as canonical by the Catholic church, by the council of Trent. The apocryphal writings are ten in number: *Baruch, Ecclesiasticus, Wisdom of Solomon, Tobit, Judith*, two books of the *Maccabees, Song of the Three Children, Susannah*, and *Bell and the Dragon*. Their style proves that they were a part of the Jewish-Greek literature of Alexandria, within three hundred years before Christ; and as the Septuagint Greek version of the Hebrew Bible came from the same quarter, it was often accompanied by these Greek writings, and they gained a general circulation. No trace of them is found in the Talmud; they are mostly of legendary character, but some of them are of value for their historical information, their moral and maxims, and for the illustrations they give of ancient life.

Apologia pro Vita Sua: "Being a History of His Religious Opinions," published by John Henry Newman. The *Apologia* will probably never be equaled as a specimen of acute self-analysis. The only subsequent work of a similar nature with which it can be compared or associated is Mr. Gladstone's *Chapter of Autobiography*, which was designed to defend the consistency of his action in reference to the Irish church.

Arabian Nights Entertainments, consisting of one thousand and one stories, told by the sultana of the Indies to divert the sultan from the execution of a bloody vow he made to marry a lady every day and have her head cut off next morning, to avenge himself for the disloyalty of the first sultana. The story on which all the others hang is familiar. Scheherezade, the generous, beautiful young daughter of the vizier, like another Esther, resolves to risk her life in order to save the poor maidens of her city, whom the sultan is marrying and beheading at the rate of one a day. She plans to tell an interesting story each night to the sultan, breaking off in a very exciting place in order that the sultan may be tempted to spare her life so that he may hear the sequel.

Aram (*ā'ram*), **Eugene.**—A romance by Lord Lytton, founded on the story of the Knaresborough schoolmaster who committed a murder under peculiar circumstances.

Archimage (*ār'ki-māj*), or **Archimago** (*ār-ki-mā'gō*).—A character in Spenser's *Faërie Queene*, a hypocrite or deceiver. He is opposed to holiness embodied in the Red Cross Knight, wins the confidence of the knight in the disguise of a reverend hermit, and by the help of Duessa, or Deceit, separates him from Una, or Truth.

Barons' Wars, The.—An historical poem, in six books, by Michael Drayton. "In some historic sketches," says Campbell, "he reaches a manner beyond himself. The pictures of Mortimer and the queen, and of Edward's entrance into the castle, are splendid and spirited."

Bartholomew (*bär-thol'ō-mū*) **Fair.**—A comedy by Ben Jonson, valuable for its lively pictures of the manners of the times. It is chiefly remarkable for the exhibition of odd humors and tumblers' tricks.

Basilisco (*bas-i-lis'kō*).—*Soliman and Perseda*, old play. A boasting knight who became so popular with his foolish bragging that his name grew into a proverb.

Bassanio (*ba-sā'ni-ō*).—*Merchant of Venice*, Shakespeare. The lover of Portia who won her when he chose a leaden casket in which her portrait was hidden.

Bath, Major.—*Amelia*, Henry Fielding. A noble-minded gentleman, pompous in spite of poverty, and striving to live according to the "dignity and honor of man." He tries to hide his poverty under bold speech even when found doing menial service.

Battle, Sarah.—*Essays of Elia*, Lamb. Sarah considered whist the business of life and literature one of the relaxations. When a young gentleman, of a literary turn, said to her he had no objection to unbend his mind for a little time by taking a hand with her, Sarah declared, "Whist was her life business; her duty; the thing she came into the world to do. She unbent her mind afterward over a book."

Beatrice (*bē'a-tris*, or *-trēs*).—*Divine Comedy*, Dante. Daughter of an illustrious family of Florence for whom Dante had a great love. In his poem she is represented as being his guide through paradise. Beatrice is also the name of the heroine of Shakespeare's *Much Ado About Nothing*.

Beauty and the Beast.—Fairy tale by Mme. Villeneuve. Oft repeated in stories for children, *Beauty and the Beast* are known in many forms. In the original tale young and lovely Beauty saved the life of her father by putting herself in the power of a frightful but kind-hearted monster, whose respectful affection and deep melancholy finally overcame her aversion to his hideousness, and induced her to consent to marry him. By her love Beast was set free from enchantment and allowed to assume his own form, a handsome and graceful young prince.

Bede, Adam.—*Adam Bede*, George Eliot. An ideal workman, hero of the novel.

Bedivere (*bed'i-vēr*).—*Tales of the Round Table*. Bedivere was the last knight of King Arthur's Round Table.

Beggar's Opera, The, by John Gay, first acted at Lincoln's Inn Fields, in 1727, is the first, and perhaps the best, specimen of English ballad opera. It was acted in London amid unprecedented applause, and obtained scarcely less popularity through the provinces. It was said that it made Rich, the manager, gay; and Gay, the poet, rich. Hazlitt says of the *Opera*, that "it is indeed a masterpiece of wit and genius, not to say of morality."

Belarius (*be-lā'ri-us*).—A nobleman and soldier in the army of Cymbeline, king of Britain.

Belch (*belch*), **Sir Toby.**—*Twelfth Night*, Shakespeare. Uncle to Olivia, a jolly, carefree fellow, type of the roysterers of Queen Elizabeth's days.

Belinda (*be-lin'dă*).—*Rape of the Lock*, Pope. Poetical name of the heroine, whose real name was said to be Arabella Fermor. In a frolic Lord Petre cut a lock from the lady's hair. This was so much resented that it broke the great friendship between the two families. The poem, *Rape of the Lock*, was written to bring the people into a better temper and lead to reconciliation. Belinda is also the name of the heroine in a novel written by Maria Edgeworth.

Bell, Adam.—*Old Ballad*. A famous wild outlaw belonging to the north country and celebrated for his skill as an archer.

Bell, Laura.—*Pendennis*, Thackeray. One of the sweetest heroines in English literature.

Bellman.—*L'Allegro*, Milton. The watchman who patrolled the streets and called out the hour of night. Sometimes he repeated scraps of pious poetry in order to charm away danger.

Bell-the-Cat.—Name given to a nobleman at Lauder, Scotland, early in the sixteenth century. King James II. called an assembly of Scottish barons to resist a threatened invasion of his realm by Edward IV. of England. After long discussion one of the barons related the nursery tale of a convention of mice in which it was proposed to hang a bell on the cat's neck, to give warning of her presence. No one would serve on the mouse committee. To the story Archibald Douglas responded by saying, "I will bell the cat," and was afterward known by the name, Bell-the-Cat.

Belphœbe (*bel-fē'bē*).—*Faërie Queene*, Spenser. A delicate and graceful flattery offered to Queen Elizabeth through the huntress, Belphœbe, intended as a likeness of the queen. The name taken from belle, meaning beautiful, and Phœbe, a name sometimes bestowed on Diana.

Belvawney, Miss.—*Nicholas Nickleby*, Dickens. She belonged to the wonderful Portsmouth theater, always took the part of a page and gloried in silk stockings.

Belvidera (*bel-vē-dā'rā*).—*Venice Preserved*, Otway. The beautiful heroine of the almost forgotten tragedy. Sir Walter Scott said "more tears have been shed, probably, for the sorrows of Belvidera and Monimia than for those of Juliet and Desdemona."

Benedick (*ben'ē-dik*).—*Much Ado About Nothing*, Shakespeare. A young lord of Padua who is gentleman, wit, and soldier. He was a pronounced bachelor, but after a courtship full of witty sayings and coquetry he marries the lovely Beatrice. From this gentleman comes the name Benedick or Benedict, applied to married men who were not going to marry.

Benengeli (*ben-en-gē'lē*), **Cid Hamet.**—*Don Quixote*, Cervantes. Supposed to be a writer of chronicles among the Moors and claimed as authority for the tales of adventure recorded by Cervantes. The name, Cid Hamet, has been often quoted by writers.

Ben Hur.—A novel by General Lew Wallace. Messala, the Roman playmate and young friend of Ben Hur, afterward became his remorseless enemy. Ambitious, hard, and cruel, when he came into power he made Ben Hur a galley slave, confiscated his property and imprisoned the mother and sister. Ben Hur escaped, returned later as a wealthy Roman, and entered in the famous chariot race against Messala, who had put up enormous sums in wagers. Messala recognized Ben Her, and hoped to win the race and bring him to final ruin; but Messala himself was thrown and seriously injured. His cruelties were made known, and he was at last slain by his wife, Isas, the daughter of Balthasar.

Bennet, Mrs.—*Amelie*, Fielding. An improper character.

Benvolio (*ben-vō'li-ō*).—*Romeo and Juliet*, Shakespeare. One of Romeo's friends who would "quarrel with a man that had a hair more or a hair less in his beard than he had." Mercutio says to him, "Thou hast quarreled with a man for coughing in the street."

Beowulf (*bā'ō-wulf*).—The name of an Anglo-Saxon epic poem of the sixth century. It received its name from Beowulf, who delivered Hrothgar, King of Denmark, from the monster Grendel. This Grendel was half monster and half man, and night after night stole into the king's palace, called Heorot, and slew sometimes as many as thirty of the sleepers at a time. Beowulf put himself at the head of a mixed band of warriors, went against the monster and slew it. This epic is very Ossianic in style, full of beauties, and most interesting.

Bertram (*ber'tram*).—*Guy Mannering*, Scott. The character was suggested by James Annesley, Esq., rightful heir of the earldom of Anglesey, of which he was dispossessed by his uncle Richard. He died in 1743. Bertram was also the name of the haughty and dissolute count, husband of Helena in Shakespeare's comedy *All's Well That Ends Well*.

Bianca (*bi-an'kă*).—(1) The youngest daughter of Baptista of Padua, as gentle and meek as her sister Katherine was violent and irritable. (2) The sweetheart, "almost" wife of Cassio, in Shakespeare's *Othello*.

Biglow Papers, The.—A series of satirical poems, in the quaint Yankee dialect, ascribed to a certain Hosea Biglow, but really written by the American poet, James Russell Lowell.

Birch, Harvey.—*The Spy*, Cooper. The chief character of the novel.

Biron (*bē-rôn'*).—*Love's Labor's Lost*, Shakespeare. A merry madcap young lord, in attendance on Ferdinand, king of Navarre.

Black-Eyed Susan.—*Ballad*, John Gay. The heroine of the popular sea song.

Black Knight of the Black Lands.—Sir Peread. Called by Tennyson *Night* or *Nox*. He was one of the four brothers who kept the passages of Castle Dangerous, and was overthrown by Sir Gareth. *Idylls* (*Gareth and Lynette*).

Blatant Beast.—*Faërie Queene*, Spenser. A bellowing monster typical of slander; or, an impersonation of what we now call *Vox Populi*, or the *Voice of the People*.

Bleak House.—A novel by Charles Dickens, the title of which was suggested, it is said, by the situation of a certain tall brick house at Broadstairs, which stands high above and far away from the remainder of the town, and in which the author resided for several seasons.

Blimber (*blim'er*), **Miss Cornelia.**—*Dombey and Son*, Dickens. The daughter of Dr. Blimber, the head of a first-class educational establishment conducted on the forcing, or cramming, principle. She is a very learned, grave, and precise young lady, "no light nonsense about her," who has become "dry and sandy with working in the graves of deceased languages."

Blithedale (*blith'dāl*) **Romance, The.**—A story by

Nathaniel Hawthorne, founded on the author's experience as a member of the Brook Farm community. "Its predominant idea," says R. H. Hutton, "is to delineate the deranging effect of an absorbing philanthropic idea on a powerful mind; the unscrupulous sacrifices of personal claims which it induces, and the misery in which it ends. There is scarcely one *incident* in the tale properly so called except the catastrophe."

Blowzelinda (*blou-ze-lin'dă*), or **Blowsalinda** (*blou-za-lin'dă*).—*Shepherd's Week*, John Gay. The country girl, heroine of this pastoral poem, written more than one hundred and fifty years ago, but quoted as a picture of the poverty and rudeness of rural life at that time.

Bobadil (*bob'a-dil*), **Captain.**—*Every Man in His Humor*, Jonson. A boasting coward, who passes himself off with young and simple people for a Hector.

Bœuf, Front de (*beuf, fron du*).—*Ivanhoe*, Scott. One of King John's followers. A ferocious scoundrel.

Bois-Guilbert (*bwa'gel-bâr'*), **Brian de.**—*Ivanhoe*, Scott. A brave but cruel, crafty, and dissolute commander of the Knights Templar.

Boniface (*bon'i-fās*).—*The Beaux's Stratagem*, Farquhar. A fine representation of an English landlord. Hence applied to landlords generally.

Bontemps (*bôn-ton'*), **Roger.**—*Song*, Beranger. Known in France as the personification of care-free leisure. The equivalent, among the French peasantry, for the English proverb, "There's a good time coming," is *Roger Bontemps*. This one of Beranger's most celebrated songs was written in 1814.

Bottom, Nick.—*A Midsummer Night's Dream*, Shakespeare. A man who fancies he can do everything, and do it better than anyone else. Shakespeare has drawn him as profoundly ignorant and with an overflow of self-conceit. Oberon, the fairy king, desiring to punish Titania, his queen, commissioned Puck to watch her till she fell asleep, and then to anoint her eyelids with the juice of a plant called "love-in-idleness," the effect of which, when she awoke, was to make her dote upon Bottom, upon whom Puck had fixed an ass's head.

Bourgeois Gentilhomme, Le (*bōōr-zhwă' zhon-tē-yōm' lŭ*).—A comedy by Molière, with music by Lulli, produced in 1670. The hero is a tradesman, M. Jourdain, who is ambitious to marry his daughter to a titled husband.

Bowling, Tom.—*Roderick Random*, Smollett. A name made almost famous as hero of the novel. Critics have said, "The character of Tom Bowling, in *Roderick Random* will be regarded in all ages as a happy exhibition of those naval heroes to whom Britain is indebted for so much of her happiness and glory." The Tom Bowling referred to in Dibdin's famous sea song was Captain Thomas Dibdin, brother of Charles Dibdin, who wrote the song.

Boz (*boz*), **Sketches by.**—By Charles Dickens. They were the first of their class. Dickens was the first to unite the delicately playful thread of Charles Lamb's street musings—half experiences, half bookish fantasies—with the vigorous wit and humor and observation of Goldsmith's *Citizen of the World*, his *Indigent Philosopher*, and *Man in Black*, and twine them together in the golden cord of essay, which combines literature with philosophy, humor with morality, amusement with instruction. The most powerful and popular of the sketches are probably those entitled, *A Visit to Newgate, The Drunkard's Death, Election for Beadle, Greenwich Fair*, and *Miss Evans at the Eagle*.

Bracebridge Hall, or *The Humorists.*—Miscellaneous sketches, in fiction and essay, by Washington Irving, published in 1822.

Brag, Jack.—*Jack Brag*, Theodore Hook. Hero of the novel and a spirited embodiment of the arts employed by a vulgar pretender to creep into aristocratic society, and of his ultimate discomfiture. General Burgoyne figures in an old ballad known as *Sir Jack Brag*.

Bramble, Matthew.—*Humphrey Clinker*, Smollett. Noted character in the novel described as "an odd kind of humorist," afflicted with the gout, and "always on the fret," but full of generosity and benevolence.

Brass, Sally, and Sampson.—*Old Curiosity Shop*, Dickens. Brother and sister, well mated, he a shystering lawyer and she getting ahead of him in villainy. Sampson was dishonest, sentimental, and affected in manner, and both are interesting characters to read about.

Brentford (*brent'fôrd*), **The Two Kings of.**—*The Rehearsal*, Villiers. Much question has been raised as to who was to be ridiculed under these characters. The royal brothers, Charles II. and James II., have been suggested; others say the fighting kings of Granada. In the farce the two kings are represented as walking hand in hand, as dancing together and singing in concert.

Briana (*brī-ā'nă*).—Spenser's *Faërie Queene*. The lady of a castle who demanded for toll the locks of every lady and the beard of every knight that passed. This toll was established because Sir Crudor, with whom she was in love, refused to marry her till she had provided him with human hair sufficient to purfle a mantle with. Sir Crudor, having been overthrown in knightly combat by Sir Calidore, who refused to give the passage pay, is made to release Briana from the condition imposed on her, and Briana swears to discontinue the discourteous toll.

Brick, Jefferson.—In Dickens' *Martin Chuzzlewit*. A very weak, pale young man, the war correspondent of the *New York Rowdy Journal*, of which Colonel Diver was editor.

Bride of Abydos, The.—A Turkish tale, told in octosyllabic verse by Lord Byron, and published in 1813. It is in two cantos, and opens with the well-known song imitated from Goethe, beginning: "Know ye the land where the cypress and myrtle." The name of the "bride" is Zuleika, and that of her lover, Selim.

Bride of Lammermoor, The.—A romance of Sir Walter Scott, published in 1819, and characterized as a tragedy of the highest order, uniting excellence of plot with Scott's usual merits of character and description.

Brook Farm.—The full name was "Brook Farm Institute of Agriculture and Education," a stock company of nearly seventy members, located on a farm of two hundred acres at West Roxbury, Mass. Among the members were George Ripley, Charles A. Dana, George William Curtis, Margaret Fuller and Nathaniel Hawthorne. Among their frequent visitors were Ralph Waldo Emerson, Theodore Parker, Bronson Alcott. This idyllic life lasted about five years, from 1841 to 1846. Brook Farm was a financial failure but it was important in intellectual results. Hawthorne has written the story of the experiment in *Blithedale Romance*.

Brown, Tom.—*Tom Brown's School Days* and *Tom Brown at Oxford*, Thomas Hughes. The hero of these stories of school days, a typical English schoolboy and undergraduate.

Brunhild (*brōn'hild*).—*Nibelungenlied*. The story of Brunhild holds large place in ancient German romance. She was, herself, a warrior, proud and skillful, and she promised to be the bride of the man who could conquer her in three trials, in hurling the lance, in throwing the stone, and in leaping after the stone when thrown. By the arts and bravery of Siegfried, she was deluded into marrying Gunther, king of Burgundy; but, discovering the trick, she planned and accomplished the destruction of Siegfried, and the humiliation of Chriemhild, his wife.

Bumble, Mr.—*Oliver Twist*, Dickens. A pompous, disagreeable beadle, who figures largely in the beginning of the story. The name Bumble has since attached itself to the office.

Bunsby (*bunz'bi*), **Jack.**—*Dombey and Son*, Dickens. A commander of a ship looked up to as an oracle by his friend Captain Cuttle. He is described as wearing a "rapt and imperturbable manner," and seeming to be "always on the lookout for something in the extremest distance."

Bunthorne (*bun'thôrn*).—*Patience*, Sullivan. A gloomy poet showing most distinctly in his gloom surrounded by the characters of a comic opera. He was inserted as a satire on the æsthetic craze, turning into ridicule the imitators of Rossetti.

Burchell (*ber'chel*), **Mr.**—*Vicar of Wakefield*, Goldsmith. A prominent character who passes himself off as a poor man, but is really a baronet in disguise. He is noted for his habit of crying out "Fudge!" by way of expressing his strong contempt for the opinions of others.

Burd Helen.—*Scotch Ballad*. A traditional name standing for constancy. She was carried to England by fairies and imprisoned in a castle. The youngest brother of the fair Burd Helen was guided by the enchanter Merlin and accomplished the perilous task of rescuing his sister. This is recited in the line "Childe Rowland to the dark tower came," quoted by Shakespeare. Only a fragment of the old ballad has been preserved.

Buskin.—Tragedy. The Greek tragic actors used to wear a sandal some two or three inches thick, to elevate their stature. To this sole was attached a very elegant buskin.

Buzfuz, (*buz'fuz*) Serjeant.—*Pickwick Papers*, Dickens. A pompous, chaffing lawyer, who bullies Mr. Pickwick and the witnesses in the famous breach of promise suit, Bardell vs. Pickwick.

Byfield.—A New England parish, the scene of an historical novel by John Lewis Ewell. Here lived the ancestor of Longfellow to whom the poet dedicated *The Village Blacksmith*, himself a blacksmith, keeping his accounts in peculiar orthography. According to the deed of sale in 1681, the Byfield Indians got a larger price from the first English settlers than was paid for Manhattan Island.

C

Caius (*kā'yus*), **Doctor.**—*Merry Wives of Windsor*, Shakespeare. A physician in the comedy who adds a touch of humor. He is most conspicuous as the lover of Anne Page.

Calandrino (*kä-län-drē'nō*).—A simpleton frequently introduced in Boccaccio's *Decameron;* expressly made to be befooled and played upon. His mishaps, as Macaulay states, "have made all Europe merry for more than four centuries."

Caleb.—(1) The enchantress who carried off St. George in infancy. (2) A character in Dryden's satire of *Absalom and Achitophel*, meant for Lord Grey, one of the adherents of the Duke of Monmouth.

Caleb Quotem.—A parish clerk or jack-of-all-trades, in Coleman's play *The Review, or Ways of Windsor*. Coleman borrowed the character from *Throw Physic to the Dogs*, an old farce.

Caliban (*kal'i-ban*).—A savage and deformed slave of Prospero in Shakespeare's *Tempest*. He is represented as being the "freckled whelp" of Sycorax, a foul hag, who was banished from Argier (or Algiers) to the desert island afterward inhabited by Prospero. From his rude, uncouth language we get the phrase "Caliban style," "Caliban speech," meaning the coarsest possible use of words.

Calidore (*kal'i-dōr*).—A knight in Spenser's *Faërie Queene*, typical of courtesy, and said to be intended for a portrait of Sir Philip Sidney.

Calista.—The name of a celebrated character in Rowe's *Fair Penitent*.

Callipolis (*ka-lip'o-lis*).—*Battle of Alcazar*, George Peele. A character in the *Battle of Alcazar*, used by Sir Walter Scott and others as a synonym for lady-love, sweetheart, charmer. Sir Walter always spells the word Callipolis, but Peele calls it Calipolis.

Calydon (*kal'i-don*).—A forest celebrated in the romances relating to King Arthur and Merlin.

Camaralzaman, Prince.—*Arabian Nights.*—One of the stories of the *Arabian Nights* and the name of a prince who fell in love with Badoura, princess of China, the moment he saw her.

Camancho (*kä-mä'chō*).—*Don Quixote*, Cervantes. A character in an episode in *Don Quixote*, who gets cheated out of his bride after having made great preparations for their wedding.

Camballo (*kam-bal'o*), or **Cambel.**—*Faërie Queene*, Spenser. A brother of Candace.. He challenged every suitor to his sister's hand, and overthrew all except Triamond, who married the lady.

Cambalu.—In the *Voyages* of Marco Polo the chief city of the province of Cathay.

Cambuscan (*kam-bus-kan'*, or *kam-bus'kan*).—A Tartar king identical with Genghis Khan. The king of the Far East sent Cambuscan a "steed of brass, which, between sunrise and sunset, would carry its rider to any spot on the earth." All that was required was to whisper the name of the place in the horse's ear, mount upon his back, and turn a pin set in his ear. When the rider had arrived at the place required, he had to turn another pin, and the horse instantly descended, and, with another screw of the pin, vanished till it was again required. This story is begun by Chaucer in the *Squire's Tale*, but was never finished.

Camelot (*kam'e-lot*).—A parish in Somersetshire, England (now called Queen's Camel), where King Arthur is said to have held his court. In this place there are still to be seen vast intrenchments of an ancient town or station—called by the inhabitants "King Arthur's Palace."

Camilla (*ka-mil'ä*).—(1) The virgin queen of the Volscians, famous for her fleetness of foot. She aided Turnus against Æneas. (2) Wife of Anselmo of Florence in *Don Quixote*. Anselmo, in order to rejoice in her incorruptible fidelity, induced his friend Lothario to try to corrupt her. This he did, and Camilla was not trial-proof, but fell. Anselmo for a time was kept in the dark, but at the end Camilla eloped with Lothario. Anselmo died of grief, Lothario was slain in battle, and Camilla died in a convent.

Camille (*kä-mēl'*).—(1) In Corneille's tragedy of *Les Horaces*. When her brother meets her and bids her congratulate him for his victory over the three curiatii, she gives utterance to her grief for the death of her lover. Horace says, "What! can you prefer a man to the interests of Rome?" Whereupon Camille denounces Rome, and concludes with these words: "Oh, that it were my lot!" (2) Whitehead dramatized the subject and called it *The Roman Father*.

Canace (*kan'a-se*).—*Faërie Queene*, Spenser. A paragon among women, the daughter of King Cambuscan, to whom the king of the East sent as a present a mirror and a ring. The mirror would tell the lady if any man on whom she set her heart would prove true or false, and the ring (which was to be worn on her thumb) would enable her to understand the language of birds and to converse with them. Canace was courted by a crowd of suitors, but her brother gave out that anyone who pretended to her hand must encounter him in single combat and overthrow him. She ultimately married Triamond, son of the fairy, Agapë.

Candide (*käN-dēd'*), **ou l'Optimisme** (*ōō lop-tē-mēzm'*).—A philsosphical novel by Voltaire, published in 1759. It is named from its hero, who bears all the worst ills of life with a cool, philosophical indifference, laughing at its miseries. Written ostensibly to ridicule philosophical optimism, and on the spur given to pessimist theories by the Lisbon earthquake, *Candide* is really as comprehensive as it is desultory. Religion, political government, national peculiarities, human weakness, ambition, love, loyalty—all come in for the unfailing sneer. The moral, wherever there is a moral, is, "Be tolerant, and *cultivez vôtre jardin*"; that is to say, Do whatsoever work you have to do diligently.

Candor, Mrs.—A most energetic slanderer in Sheridan's *School for Scandal*.

Canterbury Tales, The, by Geoffrey Chaucer, consist of a *Prologue* and twenty-four narratives of which only two, *Chaucer's Tales of Melibœus* and *The Parson's Tale*, are in prose, the remainder being written in couplets of ten syllables, which have laid the foundation for the most popular form of English verse.

The plan of the poem is as follows: The author supposes that, on the evening before he starts on a pilgrimage to the shrine of St. Thomas-à-Becket, at Canterbury, he stops at the Tabard Inn, in Southwark, where he finds himself in the midst of a company of twenty-one, of all ranks and ages and both sexes, who are also bound for the same destination. After supper, the host of Tabard, Harry Baillie by name, proposes that, to beguile the journey there and back, the pilgrims shall each of them tell two tales as they come and go; and that he who by the general voice shall have told his story best, shall, on their return to the hostelry, be treated to a supper at the common cost. This is agreed to with acclamation; and, accordingly, the pilgrims start next morning on their way, listening, as they ride, to the heroic tale of the brave and gentle knight who has been chosen to narrate the first tale.

It will be understood that Chaucer does not profess to give to the world all the stories told. As a matter of fact, he gives only twenty-four, of which two have been already named, the remainder being those told by the Knight, the Miller, the Reeve, the Cook, the Man of Law, the Wife of Bath, the Friar, the Sompnour, the Clerk, the Squire, the Franklin, the Doctor, the Pardoner, the Shipman, the Prioress, the Monk, the Nun's Priest, the second Nun, the Canon's Yeoman, the Manciple, and Chaucer himself (Sir Topas). Unfinished, as it is, however, the poem was immensely popular, even in the author's time; and it was one of the first books that was issued from the press of Caxton, probably in 1475.

Caora (*kä'ō-rä*).—*Description of Guiana*, Raleigh. A river on the banks of which are a people whose heads grow beneath their shoulders. Their eyes are in their shoulders, and mouths in the middle of their breasts. The original picture is found in Hakluyt's *Voyages*, 1598.

Capulet (*kap'ū-let*).—The head of a noble Veronese house in Shakespeare's tragedy of *Romeo and Juliet*, hostile to the house of Montague. He is at times self-willed and tyrannical, but a jovial and testy old man.

Capulet, Lady.—The proud and stately wife of Capulet, and mother of Juliet.

Caradoc (*kar'a-dok*).—A knight of the Round Table. Also, in history, the British chief whom the Romans called Caractacus. Caradoc is the hero of an old ballad entitled *The Boy and the Mantle*.

Carker (*kär'ker*).—A scoundrelly clerk in Dickens' *Dombey and Son*.

Carton, Sidney.—A hero transformed by unselfish love in Dickens' *Tale of Two Cities*. He voluntarily goes to the guillotine to save his successful rival in love.

Casca (*kas'kä*).—*Julius Cæsar*, Shakespeare. A blunt-witted Roman, one of the conspirators against Julius Cæsar.

Cassandra (*ka-san'drä*).—A daughter of Priam, king of Troy, gifted with the power of prophecy; but Apollo, whom she had offended, brought it to pass that no one believed her predictions. Shakespeare makes use of this character in *Troilus and Cressida.*

Cassibelan.—Great uncle to Cymbeline, in Shakespeare's play by that name.

Cassio (*kash'iō*).—A Florentine, and lieutenant of Othello, and a tool of Iago, in Shakespeare's tragedy of *Othello.* Iago made Cassio drunk, and then set on Roderigo to quarrel with him. Cassio wounded Roderigo. Othello suspended Cassio, but Iago induced Desdemona to plead for his restoration. This interest in Cassio confirmed the jealous rage of Othello to murder Desdemona and kill himself. After the death of Othello, Cassio was appointed governor of Cyprus.

Castle Dangerous.—A keep belonging to the Douglas family, which gives its name to one of Sir Walter Scott's *Tales of My Landlord.* It was so called by the English because it was always retaken from them by the Douglas.

Castle of Indolence.—The title of a poem by Thomson, and the name of a castle, described in it as situated in a pleasing land of drowsiness, where every sense was steeped in the most luxurious and enervating delights.

Castlewood, Beatrix.—The heroine of Thackeray's novel *Henry Esmond,* a picture of splendid, lustrous, physical beauty.

Caudle, Mrs. Margaret.—The feigned author of a series of curtain lectures by Douglas Jerrold, published in *Punch,* purporting to be the lectures delivered by Mrs. Margaret Caudle to her patient husband, Job Caudle, between the hours of ten at night and seven in the morning.

Cauline, Sir.—A knight in Percy's *Reliques,* who served the wine to the king of Ireland. He fell in love with Christabelle, the king's daughter, and she became his troth-plight wife, without her fathe'rs knowledge. When the king knew of it, he banished Sir Cauline. After a time the soldain asked the lady in marriage, but Sir Cauline challenged his rival and slew him. He himself, however, died of the wounds he had received, and the Lady Christabelle, out of grief, "burst her gentle hearte in twayne."

Cecilia, St.—A patron saint of the blind, also patroness of musicians, and "inventor of the organ." According to tradition, an angel fell in love with her for her musical skill, and used nightly to visit her.

Celadon (*sel'a-don*) **and Amelia.**—Lovers of matchless beauty and most devoted to each other. Being overtaken by a thunderstorm, Amelia became alarmed, but Celadon, folding his arm about her, said, "'Tis safety to be near thee, sure"; but while he spoke Amelia was struck by lightning and fell dead in his arms.

Celia.—*Faërie Queene,* Spenser. (1) Mother of Faith, Hope and Charity. She was herself known as Heavenliness and lived in the hospices Holiness. (2) Celia, cousin to Rosalind in Shakespeare's comedy *As You Like It.* Celia is a common poetical name for a lady or a lady-love.

Chadband (*chad'band*), **The Rev.**—A clerical character in Dickens' *Bleak House.* He will always stand as a type of hypocritical piety.

Chanticleer (*chan'ti-klēr*).—The cock in the tale of *Reynard the Fox,* and in Chaucer's *Nonne Prestes Tale.*

Charlemagne (*chär'le-mān*).—The romance of Charlemagne and his paladins is of French origin, as the romances of King Arthur and the Knights of the Round Table is of Celtic or Welsh origin. According to one tradition Charlemagne is not dead, but waits, crowned and armed, in Odenberg, near Saltzburg, till the time of the antichrist, when he will wake up and deliver Christendom. According to another tradition, Charlemagne appears in seasons of plenty. He crosses the Rhine on a golden bridge, and blesses both cornfields and vinyards.

Charmian (*chär'mi-an*).—A kind-hearted but simple-minded female attendant on Cleopatra in Shakespeare's play of *Antony and Cleopatra.*

Cheeryble (*chēr'i-bl*) **Brothers, The.**—A firm of benevolent London merchants in Dickens' *Nicholas Nickleby.*

Chery and Fair-Star.—*Countess d'Aulnoy's Fairy Tales.* Two children of royal birth, whom their father's brothers and their mother's sisters cast out to sea; they are found and brought up by a corsair and his wife. Ultimately they are told of their birth by a green bird and marry each other. A similar tale is found in *The Arabian Nights.*

Chibiabos.—The musician in Longfellow's *Hiawatha,* personifying harmony in nature.

Childe Harold's Pilgrimage.—A poem, in the Spenserian stanza, by Lord Byron. It consists of four cantos, of which the first and second were published in 1812, the third in 1816, and the fourth in 1818; and the preface to the first two cantos contained the following explanation of the origin and purpose of the poem.

"It was written," says Lord Byron, "for the most part, amid the scenes which it attempts to describe. It was begun in Albania; and the parts relative to Spain and Portugal were composed from the author's observations in those countries. . . . the scenes attempted to be sketched are in Spain, Portugal, Epirus, Acarnania, and Greece (the third canto describes scenes in Belgium, Switzerland, and the Valley of the Rhine; and canto four is chiefly occupied with Rome) . . . A fictitious character is introduced for the sake of giving some connection to the piece, which, however, makes no pretensions to regularity. It has been suggested to me by friends, on whose opinion I set a high value, that in this fictitious character, Childe Harold, I may incur the suspicion of having intended some real personage; this I beg leave, once for all, to disclaim. Harold is the creation of imagination, for the purpose I have stated. In some trivial particulars, and those merely local, there might be grounds for such a notion; but in the main points, I should hope, none whatever. It is almost superfluous to mention that the appellation 'Childe' is used as more consonant with the old structure of versification which I have adopted."

Children in the Wood.—Two characters in an ancient and well-known ballad entitled *The Children in the Wood,* or *The Norfolk Gent's Last Will and Testament.* This is said to be a disguised recital of the alleged murder of his nephews by Richard III.

Chillingly, Kenelm.—The hero in a novel by this name by Bulwer.

Chillon (*shē-yôn*), **The Prisoner of.**—A poem by Lord Byron, founded on the story of Francois de Bonnivard, the hero of Genevan independence, and published in 1816. Bonnivard was born in 1496, and died in 1571. An account of his life, in France, is prefixed to the poem.

Chingachgook.—A sagamore of the Mohicans and father of Uncas, in Cooper's *Leather-Stocking Tales.*

Chloe (*klō'ē*).—*Daphnis and Chloe,* Longus. (1) The shepherdess loved by Daphne. (2) *Paul and Virginia* by St. Pierre is founded on this romance. (3) Chloe is also a shepherdess in Shakespeare's *As You Like It.*

Chœreas.—The lover of Callirrhoë, in Chariton's Greek romance.

Chriemhild, or **Kriemhild** (*krēm'hild*).—The heroine of the German epic poem, the *Nibelungenlied.* She is represented as a woman of the rarest grace and beauty, and rich beyond conception. By the treacherous murder of her husband she is transformed into a furious creature of revenge. For plot of this epic cycle, see "Kriemhild."

Christabel (*kris'ta-bel*).—(1) The subject and heroine of an old romance by Sir Eglamour of Artois. (2) The heroine of an ancient ballad *Sir Cauline.* (3) The lady in Coleridge's poem *Christabel.*

Christian (*kris'tian*).—The hero of John Bunyan's allegory *Pilgrim's Progress.* He flees from the "City of Destruction," and journeys to the "Celestial City." He starts with a heavy burden on his back, but it falls off when he stands at the foot of the cross. All his trials on the way are depicted.

Christiana (*kris-tē-ä'nä*).—The wife of Christian, who, starting with her children and Mercy from the "City of Destruction," forms the subject of Bunyan's *Pilgrim's Progress,* part II. She was placed under the guidance of Mr. Great-Heart, and met her husband at the Celestial City.

Christmas Carol, A.—A ghost story of Christmas, by Charles Dickens, published in 1843, with illustrations by John Leech. "We are all charmed," wrote Lord Jeffrey to the author, "with your *Carol,* chiefly, I think, for the genuine goodness which breathes all through it, and is the true inspiring angel by which its genius has been awakened. The whole scene of the Cratchits is like the dream of a benevolent angel, in spite of its broad reality, and little Tiny Tim in life and death almost as sweet and touching as Nelly."

Christmas Eve.—A poem by Robert Browning, in which, "after following through a long course of reflection the successive phases of religious belief, he arrives at the certainty that, however confused be the vision of Christ, where His love is, there is the Life; and that, the more direct the revelation of that Love, the deeper and more vital is its power."

Christopher, St.—The giant that carried a child over a brook, and said, "Chylde, thou has put me in grete peryll. I might bere no greater burden." The Chylde was the Christ and the burden was the "Sin of the World." This has been a favorite theme for painters.

Chrysalde (*krē-zäld'*).—A character in Molière's *L'Ecole des Femmes;* a friend of Arnolphe.

Chrysale (*krē-zäl'*).—An honest, simple-minded, henpecked tradesman, in the same comedy by Molière.

Chuzzlewit, Martin.—The hero of Dickens' novel of the same name. The story is remarkable for the attention it directed to the system of ship hospitals and to the workhouse nurses whose prototype in Sarah Gamp has become famous all over the world.

Chuzzlewit, Jonas.—A miser and a murderer, the opposite type of character from Martin.

Cimmerians (*si-mē'ri-anz*).—A people described by Homer dwelling "beyond the ocean stream," in a land where the sun never shines.

Cinderella.—Heroine of a fairy tale. She is the drudge of the house, while her elder sisters go to fine balls. At length a fairy enables her to go to the prince's ball; the prince falls in love with her, and she is discovered by means of a glass slipper which she drops, and which will fit no foot but her own. She is represented as returning good for evil and heaping upon her half-sisters every kindness a princess can show.

Cipango (*si-pang'gō*).—A marvelous island, described in the *Voyages* of Marco Polo, the Venetian traveler. It is represented as lying in the Eastern seas, some one thousand five hundred miles from land, and of its beauty and wealth many stories are related. Columbus made a diligent search for this island.

Clärchen (*klär'chen*).—A female character in Goethe's *Egmont*, noted for her constancy and devotion.

Clare, Ada.—The wife of Carstone, and one of the most important characters in Dickens' *Bleak House.*

Clavileño (*klä-vē-lān'yō*), **El Alígero.**—The wooden horse on which Don Quixote got astride in order to disenchant the Infanta Antonomasia, her husband, and the Countess Trifaldi. It was "the very horse on which Peter of Provence carried off the fair Magalona, and was constructed by Merlin." This horse was called Clavileño, or Wooden Peg, because it was governed by a wooden pin in the forehead.

Cléante (*klā-ont'*).—Brother-in-law of Orgon in Molière's *Tartuffe.* He is distinguished for his genuine piety, and is both high-minded and compassionate. The same name occurs in two other plays by Molière.

Cleishbotham (*klēsh'boтн-am*), **Jedediah.**—Schoolmaster and parish clerk of Gandercleuch, who employed his assistant teacher to arrange and edit the tales told by the landlord of the Wallace inn of the same parish. These tales the editor disposed in three series, called by the general title of *The Tales of My Landlord.* Of course the real author is Sir Walter Scott.

Clementina, Lady.—A beautiful and accomplished woman, deeply in love with Sir Charles Grandison, in Richardson's novel of this name.

Cleon (*klē'on*).—(1) In Shakespeare's *Pericles,* governor of Tarsus, burned to death with his wife Dionysia by the enraged citizens, to revenge the supposed murder of Marina, daughter of Pericles, prince of Tyre. (2) The personification of glory in Spenser's *Faërie Queene.*

Clifford, Paul.—An attractive highwayman and an interesting hero in Bulwer's novel by the same name. He is familiar with the haunts of low vice and dissipation, but afterward is reformed and elevated by the power of love.

Clinker, Humphrey.—A novel by Smollett. The hero, by the same name, a philosophic youth, meets many adventures. Brought up in the workhouse, put out by the parish as apprentice to a blacksmith, he was afterward employed as a hostler's assistant. Having been dismissed from the stable, and reduced to great want, he at length attracts the notice of Mr. Bramble who takes him into his family as a servant. He becomes the accepted lover of Winifred Jenkins, and at length turns out to be a natural son of Mr. Bramble.

Cloten (*klō'ten*).—A rejected lover of Imogen, in Shakespeare's play of *Cymbeline.*

Clorinda (*klō-rin'dä*).—*Jerusalem Delivered,* Tasso. Clorinda, the heroine of this poem, is represented as an Amazon inspiring the most tender affection in others, especially in the Christian chief Tancred; yet she is herself susceptible of no passion but the love of military fame.

Clouds, The.—A famous comedy by Aristophanes. Strepsiades ("Turncoat") sends his spendthrift son Phidippides to the phrontistery ("thinking shop") of Socrates, who appears as a sophist, to be reformed by training in rhetoric. Phidippides refuses to go; so Strepsiades goes himself, and finds Socrates swinging in a basket, observing the sun and ether. Socrates summons the Clouds, his new deities, and undertakes to make a sophist of him and free him from the religion of his fathers. Unfortunate results of his new knowledge show Strepsiades his error, and he abandons Socrates and sets the phrontistery on fire.

Cock, The.—A famous tavern in Fleet street, London, opposite the Temple. Tennyson has immortalized it in his *Will Waterproof's Lyrical Monologue.*

Cœlebs (*sē'lebz*).—The hero of a novel by Hannah More, *Cœlebs in Search of a Wife.*

Colada. (*kō-lä'тнä*).—The sword taken by the Cid from Ramon Berenger, count of Barcelona. This sword had two hilts of solid gold.

Colin Clout (*kol'in klout*).—A name that Spenser applies to himself in the *Faërie Queene* and *Shepherd's Calendar.* Colin Clout also is introduced into Gay's pastorals.

Cologne (*kō-lōn'*), **The Three Kings of.**—The three magi who visited the Infant Savior, and whose bodies are said to have been brought by the Empress Helena from the East to Constantinople, whence they were transferred to Milan. Afterward they were removed to Cologne and placed in the principal church of the city. Their names are commonly said to be Jaspar, Melchior, and Balthazar.

Comedy of Errors.—A comedy by Shakespeare. Twin brothers of exact likeness named Antipholus are served by attendant slaves named Dromio also of striking resemblance. The humor of the play lies in the complications that arise. The two brothers are lost at sea with their servants and are picked up by different vessels. After long separation they all reappear in Ephesus. There is great entanglement of plot until both brothers face each other in a trial before the duke and all is explained.

Complete Angler, The (or, *The Contemplative Man's Recreation,* "A discourse, of Fish and Fishing, not unworthy the Perusal of most Anglers").—A famous treatise by Izaak Walton, published in 1653. "Whether," says Sir John Hawkins, "we consider the elegant simplicity of the style, the ease and unaffected humor of the dialogue, the lovely scenes which it delineates, the enchanting pastoral poetry which it contains, or the fine morality it so sweetly inculcates, it has hardly its fellow in any of the modern languages."

Comus.—A masque, or dramatic poem, by John Milton, published in 1637. It was written for the earl of Bridgewater, and acted at his residence, Castle Ludlow, in Shropshire, on Michaelmas night, 1634. The music is by Henry Lawes. Comus (a revel) was the Roman god of banqueting and festive amusements; but in Milton's poems he appears as a lewd enchanter, whose pleasure it is to deceive and ruin the chaste and innocent.

Coningsby (*kon'ingz-bi*).—A novel by B. Disraeli. The characters are meant for portraits: thus, "Rigby" represents Croker; "Monmouth," Lord Hertford; "Eskdale," Lowther; "Ormsby," Irving; "Lucretia," Mme. Zichy; "Countess Colonna," Lady Strachan; "Sidonia," Baron A. de Rothschild; "Henry Sidney," Lord John Manners; "Belvoir," duke of Rutland, second son of Beaumanoir.

Consuelo (*kôn-sū-ā-lō'*).—A noted novel by George Sand. The heroine has the same name, and is an impersonation of noble purity sustained amidst great temptations.

Cophetua (*kō-fet'ū-ä*).—An imaginary African king, of whom a legendary ballad told that he fell in love with a beggar maid and married her. This ballad is found in Percy's *Reliques.* Tennyson has given us a modern version in *The Beggar Maid.*

Copperfield, David.—A novel by Charles Dickens. David is Dickens himself, and Micawber is Dicken's father. According to the tale, David's mother was nursery governess in a family where Mr. Copperfield visited. At the death of Mr. Copperfield, the widow married Edward Murdstone, a hard, tyrannical man, who made the home of David a dread and terror to the boy. When his mother died, Murdstone sent David to lodge with the Micawbers, and bound him apprentice to Messrs. Murdstone and Grinby, by whom he was put into the warehouse, and set to paste labels upon wine and spirit bottles. David soon became tired of this dreary work, and ran away to Dover, where he was kindly received by his [great-]aunt Betsy Trotwood, who clothed him, and sent him as day-boy to Dr. Strong, but placed him to board with Mr. Wickfield, a lawyer, father of Agnes, between whom and David a mutual attachment sprang up. David's first wife was Dora Spenlow, but at the death of this pretty little "child-wife," he married Agnes Wickfield.

Cordelia (*kôr-dē'liä*).—*King Lear,* Shakespeare. The youngest of Lear's three daughters, and the one that truly loved him.

Corinne (*ko-rēn'*).—The heroine of a novel, of the same name, by Madame de Staël.

Coriolanus (*kō'ri-ō-lā'nus.*)—An historical play by William Shakespeare. In the plot, and in many of the speeches, Shakespeare has followed Sir Thomas North's *Life of Coriolanus,* included in his translation of Amyot's *Plutarch.* "The subject of *Coriolanus,*"

says Prof. Dowden, "is the ruin of a noble life through the sin of pride. If duty be the dominant ideal with Brutus, and pleasure of a magnificent kind be the ideal of Antony and Cleopatra, that which gives tone and color to Coriolanus is an ideal of self-centered power. The greatness of Brutus is altogether that of the moral conscience; his external figure does not dilate upon the world through a golden haze like that of Antony, nor bulk massively and tower like that of Coriolanus. A haughty and passionate personal feeling, a superb egoism, are with Coriolanus the sources of weakness and of strength."

Corsair, The.—A poem, in three cantos, by Lord Byron, published in 1814. The hero is called Conrad, and is described, in a well-known passage, as leaving

"a Corsair's name to other times,
Link'd with one virtue, and a thousand crimes."

The heroines are Medora, whom Conrad loves, and Gulnare, "the Harem queen," whose love is given to Conrad, and who kills her master, Seyd, in order that Conrad may be free.

Corydon (*kor'i-don*).—A shepherd in one of the *Idylls of Theocritus*, and one of the *Eclogues* of Vergil. Used by Shakespeare and later poets to designate a rustic swain.

Costard (*kos'tärd*).—A clown, in Shakespeare's *Love's Labor's Lost*, who apes the display of wit, and misapplies, in the most ridiculous manner, the phrases and modes of combination in argument that were then in vogue.

Cotter's Saturday Night, The.—A poem by Robert Burns of which his brother remarks: "Robert had frequently remarked to me that there was something particularly venerable in the phrase, 'Let us worship God,' used by a decent, sober head of a family introducing family worship. To this sentiment of the author the world is indebted for the *Cotter's Saturday Night*. The hint of the plan and title of the poem are taken from Ferguson's *Farmer's Ingle*."

Count of Monte Cristo.—A celebrated romance by Alexander Dumas, in which Edmond Dantes, the hero, suffers unjust imprisonment for many years. He finally escapes, only to be apprised of the death of his father and the marriage of his former sweetheart. From information derived from a fellow prisoner, he then comes into possession of great riches through the successful discovery of hoards of treasure in the island of Monte Cristo. His remaining years are given over to a vindication of his former life.

Coverly (papers by Steele and Addison), **Sir Roger de,** was a member of a hypothetical club, and was noted for his modesty, generosity, hospitality, and eccentric whims. He was most courteous to his neighbors, most affectionate to his family, most amiable to his domestics. Sir Roger, who figures in thirty papers of the *Spectator*, is the very beau-ideal of an amiable country gentleman of Queen Anne's time.

Crabtree.—A character in Smollett's novel, *The Adventures of Peregrine Pickle*.

Crane, Ichabod.—The name of a Yankee schoolmaster, whose adventures are related in the *Legend of Sleepy Hollow*, in Irving's *Sketch-Book*.

Crawley (*krâ'li*), **Rawdon.**—The husband of Becky Sharp in *Vanity Fair*, Thackeray's novel without a hero.

Creakle (*krē'kl*), **Mr.**—A tyrannical and cruel schoolmaster in Dickens' *David Copperfield*.

Cressida (*kres'i-dä*).—The heroine of Shakespeare's play, *Troilus and Cressida*, also the heroine of one of Chaucer's *Canterbury Tales*.

Croaker.—A character in Goldsmith's comedy, *The Good-Natured Man*.

Crummles (*krum'lz*), **Vincent.**—A theatrical head of a theatrical family in Dickens' *Nicholas Nickleby*.

Crusoe, Robinson.—Title and hero of a novel by Daniel Defoe. Robinson Crusoe is a shipwrecked sailor, who leads a solitary life for many years on a desert island, and relieves the tedium of life by ingenious contrivances (1719). The story is based on the adventures of Alexander Selkirk, a Scotch sailor, who in 1704 was left by Captain Stradding on the uninhabited island of Juan Fernandez. Here he remained for four years and four months, when he was rescued by Captain Woodes Rogers and brought to England.

Cuttle, Captain.—A character in Dickens' *Dombey and Son*, good-humored, eccentric, pathetic in his simple credulity.

Cymbeline (*sim'be-lin*).—Title and hero of Shakespeare's play. Imogen, daughter of Cymbeline, king of Britain, married clandestinely Posthumus Leonatus; and Posthumus, being banished for the offense, retired to Rome. One day, in the house of Philario, the conversation turned on the merits of wives, and Posthumus bet his diamond ring that nothing could tempt the fidelity of Imogen. Through the villainy of Iachimo, Cymbeline was forced to believe Imogen untrue. The villainy was in time disclosed, and the beautiful character of Imogen revealed.

D

Dalgetty (*dal'get-i*), **Captain Dugald.**—A soldier of fortune in Sir Walter Scott's *Legend of Montrose*, distinguished for his pedantry, conceit, valor, vulgar assurance, knowledge of the world, greediness, and a hundred other qualities, making him one of the most amusing, admirable, and natural characters ever drawn by the hand of genius.

Damocles (*dam'ō-klēz*).—A flatterer in the court of Dionysius of Syracuse. By way of answer to his constant praises of the happiness of kings, Dionysius seated him at a royal banquet, with a sword hung over his head by a single horsehair. In the midst of his magnificent banquet, Damocles, chancing to look upward, saw a sharp and naked sword suspended over his head. A sight so alarming instantly changed his views on the felicity of kings. The phrase signifies now evil foreboding or dread, a tantalizing torment.

Damon and Pythias (*pith'i-as*).—(1) A play by Richard Edwards, printed in 1571. Its main subject is tragic, but it calls itself a comedy. (2) A tragedy by John Banim and Richard Lalor Sheil, produced in 1821. (3) Two noble Pythagoreans of Syracuse, who have been remembered as models of faithful friendship. Pythias having been condemned to death by Dionysius, the tyrant of Syracuse, begged to be allowed to go home, for the purpose of arranging his affairs, Damon pledging his own life for the reappearance of his friend. Dionysius consented, and Pythias returned just in time to save Damon from death. Struck by so noble an example of mutual affection, the tyrant pardoned Pythias, and desired to be admitted into their sacred fellowship.

Dandie Dinmont.—A jovial, true-hearted store-farmer, in Sir Walter Scott's *Guy Mannering*.

Daphnis (*daf'nis*) **and Chloe** (*klō'ē*).—A prose-pastoral love story in Greek, by Longus, a Byzantine. Gessner has imitated the Greek romance in his idyll called *Daphnis*. In this love story Longus says he was hunting in Lesbos, and saw in a grove consecrated to the nymphs a beautiful picture of children exposed, lovers plighting their faith, and the incursions of pirates, which he now expresses and dedicates to Pan, Cupid and the nymphs. Daphnis, of course, is the lover of Chloe.

Darby and Joan.—This ballad is frequently called *The Happy Old Couple*. The words are sometimes attributed to Prior. Darby and Joan are an old-fashioned, loving couple, who are wholly averse to change of any sort. It is generally said that Henry Woodfall was the author of the ballad, and that the originals were John Darby (printer, of Bartholomew Close, who died 1730) and his wife Joan. Woodfall served his apprenticeship with John Darby.

Dares (*dā'rēz*).—One of the competitors at the funeral games of Anchises in Sicily, described in the fifth book of Vergil's *Æneid*.

David.—(1) He was the uncle of King Arthur. St. David first embraced the ascetic life in the Isle of Wight, but subsequently removed to Menevia, in Pembrokeshire, where he founded twelve convents. (2) One of the Israelite kings. (3) In Dryden's satire called *Absalom and Achitophel*, represents Charles II.; Absalom, his beautiful but rebellious son, represents the duke of Monmouth.

Davy.—*Henry IV.*, Shakespeare. The varlet of Justice Shallow, who so identifies himself with his master that he considers himself half host, half varlet. Thus when he seats Bardolph and Page at table, he tells them they must take "his" good will for their assurance of welcome.

Dawfyd.—*The Betrothed*, Scott. The one-eyed free-booter chief.

Dawkins (*dâ'kinz*).—*Oliver Twist*, Dickens. Known by the sobriquet of the *Artful Dodger*. He is one of Fagin's tools. Jack Dawkins is a scamp, but of a cheery, buoyant temper.

Dayonet, Sir.—In the romance *Le Mort d'Arthur* he is called the fool of King Arthur.

Deans, Douce Davie.—A poor herdsman at Edinburgh, and the father of Effie and Jeanie Deans, in Sir Walter Scott's novel, *The Heart of Midlothian*.

Deans, Effie.—A beautiful but unfortunate character in Sir Walter Scott's *Heart of Midlothian*.

Deans, Jeanie.—The heroine of Sir Walter Scott's *Heart of Midlothian*, described as a perfect model of sober heroism, of the union of good sense and strong affections, firm principles, and perfect disinterestedness, and of calm superiority to misfortune, danger, and difficulty which such a union must create.

Decameron (*de-kam'e-ron*), **The.**—A collection of romances by Giovanni Boccaccio. It derives its name from its framework. Seven gentlemen and three ladies retire from Florence, during the plague, to a pleasant garden retreat, where they beguile the time by narrating various stories of love adventure.

Dedlock, Lady.—Wife of Sir Leicester, beautiful, and apparently cold and heartless, but suffering constant remorse. The daughter's name is Esther Summerson, the heroine of the novel.

Dedlock, Sir Leicester.—A character in *Bleak House*, by Charles Dickens. An honorable and truthful man, but of such fixed ideas that no man could shake his prejudices. He had an idea that the one thing of greatest importance to the world was a certain family by the name of Dedlock. He loved his wife, Lady Dedlock, and believed in her implicitly. His pride had a terrible fall when he learned the secret of her life before her marriage and knew the terrible fact she had been hiding from him that she had a daughter.

Deerslayer, The.—The title of a novel by J. F. Cooper, and the nickname of its hero, Natty, or Nathaniel Bumppo. He is a model uncivilized man, honorable, truthful, and brave, pure of heart and without reproach. He is introduced in five of Cooper's novels: *The Deerslayer*, *The Pathfinder*, *The Last of the Mohicans*, *The Pioneers*, and *The Prairie*. He is called "Hawk-Eye" in *The Last of the Mohicans;* "Leather-Stocking" in *The Pioneers;* and "The Trapper" in *The Prairie*, in which last book he dies.

Defarge (*da-färzh'*), **Mme.**—Wife of the following, a dangerous woman, everlastingly knitting.

Defarge, Mons.—*Tale of Two Cities*, Dickens. Keeper of a wine shop in the Faubourge St. Antoine in Paris. He is a bull-necked, implacable-looking man.

Della Crusca Accademia (*del'lä krös'kä äk-kä-dä'mē-ä*). —Applied in England to a brotherhood of poets, at the close of the eighteenth century, under the leadership of Mrs. Piozzi. This school was conspicuous for affectation and high-flown panegyrisc on each other. It was stamped out by Gifford, in *The Baviad*, in 1794, and *The Mæviad*, in 1796. Robert Merry, who signed himself *Della Crusca*, James Cobb, a farce-writer, James Boswell, biographer of Dr. Johnson, O'Keefe, Morton, Reynolds, Holcroft, Sheridan, Colman the Younger, Mrs. H. Cowley, and Mrs. Robinson were its best exponents.

Delphin Classics.—For the use of the dauphin, son of Louis XIV. the writings of thirty-nine Latin authors were collected and published in sixty volumes. Notes and an index were added to each work. An edition of the *Delphin Classics* was published in London in the year 1818.

Delphine, Madame.—*Old Creole Days*, George W. Cable. A free quadroon connected with the splendor of Lafitte, the smuggler and patriot. Madame Delphine disowned her beautiful daughter Olive in order to assure to her the rights of a white woman.

Demetrius (*de-mē'tri-us*).—*Midsummer Night's Dream*, Shakespeare. The young Athenian to whom Egeno promised his daughter Hermia in marriage.

Dempster, Janet.—A character from George Eliot's *Scenes From Clerical Life*. She was a woman of generous impulse, succumbed to drink through the brutality of her husband, but was restored by a clergyman to a life of nobility.

De Profundus.—*Out of the Depths*. The one hundred and thirtieth Psalm is so called from the first two words in the Latin version. In the Catholic liturgy it is sung when the dead are committed to the grave.

Deronda, Daniel.—One of George Eliot's strongest character sketches in her novel of the same name.

Deserted Village, The.—A poem by Oliver Goldsmith. It was "instantaneously popular. Two new editions of it were called for in the following month, and a fourth in August, and passages from the poem were in every mouth, and the topics which it suggested, of depopulation, luxury, and landlordism, were discussed in connection with it."

The Deserted Village has been identified with Lissoy, a quaint Irish village in the parish of Kilkenny West, of which Goldsmith's father was the pastor, and whose natural features are accurately described in the poem.

Desmas.—The repentant thief is so called in *The Story of Joseph of Arimathea*. Longfellow, in *The Golden Legend*, calls him Dumachus. The impenitent thief is called Gestas, but Longfellow calls him Titus.

Dhu, Roderick.—A highland chieftain and outlaw in Scott's poem *Lady of the Lake*, cousin of Ellen Douglas, and also her suitor. He is slain by James Fitz-James.

Diana.—In Shakespeare's *All's Well That Ends Well*, daughter of the widow of Florence with whom Helena lodged on her way to the shrine of St. Jacques le Grand. Count Bertram wantonly loved Diana, but she brought about a reconciliation between Bertram and his wife Helena.

Diggon (*dig'on*), **Davie.**—A shepherd in the *Shepherd's Calendar*, by Spenser. He drove his sheep into foreign lands, hoping to find better pasture; but was amazed at the luxury and profligacy of the shepherds whom he saw there.

Diggory (*dig'ō-ri*).—In Goldsmith's *She Stoops to Conquer*, a barn laborer, employed on state occasions for butler and footman by Mr. and Mrs. Hardcastle. He is both awkward and familiar, laughs at his master's jokes and talks to his master's guests while serving.

Dimmesdale (*dim'dāl*), **Arthur.**—In Hawthorne's romance, *The Scarlet Letter*, a Puritan minister of great eloquence, whose conscience compels him to make a public confession of sin.

Dinah.—(1) *St. Ronan's Well*, Scott, Daughter of Sandie Lawson, landlord of the Spa hotel. (2) A character in Mrs. Stowe's *Uncle Tom's Cabin*.

Dinah, Aunt.—In Sterne's *Tristram Shandy*. She leaves Mr. Walter Shandy one thousand pounds, which he fancies will enable him to carry out all the schemes that enter into his head.

Dinah Friendly.—*The Bashful Man*, Moncrieff. Daughter of Sir Thomas Friendly.

Dingley Hall.—*Pickwick Papers*, Dickens. The home of Mr. Wardle and his family.

Divina Commedia (*dē-vē'nä kom-mä'dē-ä*), (or, *Divine Comedy*).—The first poem of note ever written in the Italian language. It is an epic by Danté Alighieri, and is divided into three parts: Hell, Purgatory, and Paradise. Danté called it a *comedy*, because the ending is happy; and his countrymen added the word *divine* from admiration of the poem. The poet depicts a vision, in which he is conducted, first by Vergil (*human reason*) through hell and purgatory; and then by Beatrice (*revelation*), and finally by St. Bernard through the several heavens, where he beholds the Triune God.

"Hell" is represented as a funnel-shaped hollow, formed of gradually contracting circles, the lowest and smallest of which is the earth's center. "Purgatory" is a mountain rising solitary from the ocean on that side of the earth which is opposite to us. It is divided into terraces, and its top is the terrestrial paradise. From this "top" the poet ascends through the seven planetary heavens, the fixed stars, and the "primum mobile."

In all parts of the regions thus traversed there arise conversations with noted personages. The deepest questions of philosophy and theology are discussed and solved; and the social and moral condition of Italy, with the corruptions of church and state, are depicted with indignation. Fifty-two years after the poet's death the republic of Florence set apart an annual sum for public lectures to explain the *Divine Comedy* to the people in one of the churches, and Boccaccio himself was appointed first lecturer.

Doctor Syntax.—The hero of a work entitled *The Tour of Dr. Syntax in Search of the Picturesque*. Doctor Syntax is a simple-minded, pious, hen-pecked clergyman, but of excellent taste and scholarship, who left home in search of the picturesque. His adventures are told in eight-syllable verse by William Combe.

Dods.—The old landlady in Scott's novel called *St. Ronan's Well*. An excellent character, a mosaic of oddities, all fitting together and forming an admirable whole. She was so good a housewife that a cookery book of great repute bears her name.

Dodson and Fogg.—The lawyers employed by the plaintiff in the famous case of "Bardell *vs.* Pickwick," in the *Pickwick Papers*, by Charles Dickens.

Doeg (*dō'eg*).—*Absalom and Achitophel*, Dryden. Doeg was Saul's herdsman, who had charge of his mules and asses. He told Saul that the priests of Nob had provided David with food; whereupon Saul sent him to put them to death, and eighty-five were ruthlessly massacred.

Dogberry (*dog'ber-i*) **and Verges** (*ver'gēz*).—Two ignorant conceited constables, in Shakespeare's *Much Ado About Nothing*.

Dolla Murrey.—A character in Crabbe's *Borough* who was devoted to playing cards. She died at the card table.

Dolly Varden (*vär'den*).—*Barnaby Rudge*, Dickens. Daughter of Gabriel Varden, locksmith. Dolly dressed in the Watteau style, and was lively, pretty, and bewitching.

Dombey and Son.—A novel by Dickens. Mr. Dombey is a self-sufficient, purse-proud, frigid merchant who feels satisfied there is but one Dombey in the world, and that is himself. When Paul was born, his ambition was attained, his whole heart was in the boy, and the loss of the mother was but a small matter. The boy's death turned his heart to stone.

Dombey, Florence.—A motherless child, hungering and thirsting to be loved, but regarded with indifference by her father, who thinks that sons alone are worthy of regard.

Domesday Book (or, *Doomsday Book*).—The name of one of the oldest and most valuable records of England, containing the results of a statistical survey of that country made by William the Conqueror, and completed in the year 1086. The origin of the name—which seems to have been given to other records of the same kind—is somewhat uncertain; but it has obvious reference to the supreme authority of the book in doom or judgment on the matters contained in it.

Dominie Sampson.—*Guy Mannering*, Scott. A village schoolmaster and scholar, poor as a church mouse, and modest as a girl. He cites Latin like a *porcus literarum* and exclaims "prodigious!" He is no uncommon personage in a country where a certain portion of learning is easily attained by those who are willing to suffer hunger and thirst in exchange for acquiring Greek and Latin.

Don Adriano de Armado.—A pompous, fantastical Spaniard in Shakespeare's *Love's Labor's Lost*, who had a mint of phrases in his brain.

Donatello (*don-ä-tel'lō*).—The hero of Hawthorne's romance *The Marble Faun*. He is a young Italian with a singular likeness to the Faun of Praxiteles. He leads an innocent but purely animal existence, until a sudden crime awakens his conscience and transforms his whole nature.

Don Cherubim.—The *Bachelor of Salamanca*, in Le Sage's novel of this name; a man placed in different situations of life, and made to associate with all classes of society, in order to give the author the greatest possible scope for satire.

Donegild.—*Man of Law's Tale*, Chaucer. The mother of Alla, king of Northumberland, hating Constance, the wife of Alla, because she was a Christian, she put her on a raft with her infant son and turned her adrift. When Alla returned from Scotland and discovered this cruelty of his mother, he put her to death. The tradition of St. Mungo resembles the *Man of Law's Tale* in many respects.

Don Juan (*don jū'an;* Sp. pron. *dōn hō-ān'*).—Typifies in literature a profligate. He gives himself up so entirely to the gratification of sense, especially to the most powerful of all the impulses, that of love, that he acknowledges no higher consideration, and proceeds to murder the man that stands between him and his wish, fancying that in so doing he had annihilated his very existence. He then defies that Spirit to prove to his senses his existence. The Spirit returns and compels Don Juan to acknowledge the supremacy of spirit, and the worthlessness of a merely sensuous existence. The traditions concerning Don Juan have been dramatized by Tirso de Molina. Glück has a musical ballet, *Don Juan*, and Mozart has immortalized the character in his opera *Don Giovanni;* and Byron in a half-finished poem.

Don Quixote (*dōn kē-hō'tā*).—A celebrated Spanish romance by Cervantes. Don Quixote is represented as "a gaunt country gentleman of La Mancha, full of genuine Castilian honor and enthusiasm, gentle and dignified in his character, trusted by his friends, and loved by his dependents," but "so completely crazed by long reading the most famous books of chivalry that he believes them to be true, and feels himself called on to become the impossible knight-errant they describe, and actually goes forth into the world to defend the oppressed and avenge the injured, like the heroes of his romances." The fame of Cervantes will always rest upon this incomparable satire.

Dorrit.—See *Little Dorrit*.

Doorm.—*Idylls of the King* (*Enid*), Tennyson. An earl called "the Bull," who tried to make Enid his handmaid; but, when she would neither eat, drink, nor array herself in bravery at his bidding, "he smote her on the cheek"; whereupon Geraint slew the "russet-bearded earl" in his own hall.

Dora.—*David Copperfield*, Dickens. The child-wife to David, affectionate and tender-hearted. She was always playing with her poodle and saying simple things to her "Dody." She could never be his helper, but she looked on her husband with idolatrous love. When quite young she died.

Dorastus.—The hero of an old popular "history" or romance, upon which Shakespeare founded his *Winter's Tale*. It was written by Robert Greene, and was first published in 1588, under the title of *Pandosto, the Triumph of Time*.

Dorothea.—The heroine of Goethe's celebrated poem of *Herman und Dorothea*.

Dory, John.—A character in *Wild Oats* or *The Strolling Gentleman*, a comedy by John O'Keefe.

Dotheboys Hall (*dō'the-boiz hâl*). — *Nicholas Nickleby*, Dickens. A school for boys kept by a Mr. Squeers, a puffing, ignorant, overbearing brute, whose system of education consisted of alternately beating and starving.

Doubting Castle.—The castle of the giant Despair, in which Christian and Hopeful were incarcerated, but from which they escaped by means of the key called "Promise," which was able to open any lock in the castle.

Dousterswivel (*dōs'ter-swiv-el*), **Herman.**—Scott, *The Antiquary*. A German schemer, who obtains money under the promise of finding hidden wealth by a divining rod.

Drawcansir (*drâ'kan-ser*).—A bragging, blustering bully, in George Villiers, duke of Buckingham's *The Rehearsal*, who took part in a battle, and killed everyone on both sides, "sparing neither friend nor foe."

Driver.—*Guy Mannering*, Scott. Clerk to Mr. Pleydell, advocate, Edinburgh.

Dromio.—*The Brothers Dromio*. Twin brothers exactly alike, who serve two brothers exactly alike, in Shakespeare's *Comedy of Errors*, based on the *Menæchmi* of Plautus.

Dry-as-dust, The Rev.—An imaginary personage who serves to introduce Scott's novels to the public.

Dudu.—One of the three beauties of the harem, into which Juan, by the sultana's order, had been admitted in female attire.

Duessa (*dū-es'sa*).—A foul witch, in Spenser's *Faërie Queene*, who under the assumed name of Fidessa, and the assumed character of a distressed and lovely woman, entices the Red-cross Knight into the House of Pride.

Duff, Jamie.—*Guy Mannering*, Scott. The idiot boy attending Mrs. Bertram's funeral.

Dulcinea del Toboso (*dul-sin'ē-ā del tō-bō'zō*).—A country girl whom Don Quixote courts as his lady love.

Dumain (*dū-mān'*).—A lord attending on the king of Navarre in Shakespeare's *Love's Labor's Lost*.

Duncan.—(1) A king of Scotland immortalized in Shakespeare's tragedy of *Macbeth*. Shakespeare represents him as murdered by Macbeth, who succeeds to the Scottish throne, but according to history he fell in battle. (2) A highland hero in Scott's *Lady of the Lake*.

Dunder, Sir David, of Dunder Hall.—A conceited, whimsical old gentleman, who forever interrupts a speaker with "Yes, yes, I know it," or "Be quiet, I know it." *Ways and Means*, by Colman.

Dundreary (*dun-drēr'i*), **Lord.**—A grotesque character in Taylor's comedy, *Our American Cousin*, noted for his aristocratic haughtiness of manner. The character is said to have been created by the actor Sothern.

Durandana (*dö-rän-dä'nä*).—The name of the marvelous sword of Orlando, the renowned hero of romance, said to have been wrought by the fairies, who endued it with such power that its owner was able to cleave the Pyrenees with it at a blow.

Durandarte (*dö-rän-där'te*).—A fabulous hero of Spain. Cervantes has introduced him, in *Don Quixote*, in the celebrated adventure of the knight in the cave of Montesinos.

Durden (*der'den*), **Dame.**—(1) The heroine of a popular English song. She is described as a notable housewife, and the mistress of five serving-girls and five laboring men. The five men loved the five maids. (2) A sobriquet playfully applied to Esther Summerson, the heroine of Dickens' *Bleak House*.

Durward (*der'wȧrd*), **Quentin.**—A novel by Scott. Quentin Durward is a young archer of the Scottish guard in the service of Louis XI. of France. When Liège is assaulted, Quentin Durward and the Countess Isabelle, who has been put into his charge, escape on horseback. The countess publicly refuses to marry the Duc d'Orléans, to whom she has been promised, and ultimately marries the young Scotchman.

Dwarf, Alberich.—In the *Nibelungen Lied* the dwarf "Alberich" is the guardian of the famous hoard won by Siegfried from the Nibelungs. The dwarf is twice vanquished by the hero, who gets possession of his "Tarn-Kappe" (cloak of invisibility).

Dwarf, The Black.—A novel by Sir Walter Scott. The dwarf is a fairy of the most malignant character; a genuine northern Duergar, and once held by the dalesmen of the border as the author of all the mischief that befell their flocks and herds. In Scott's novel the black dwarf is introduced under the aliases of Sir Edward Mauley; Elshander, the recluse; Cannie Elshie; and the Wise Wight of Mucklestane Moor.

E

Ecce Homo (*ek'sē hō'mō*).—The title of a semi-theological work, attributed to Professor Seeley, and published in 1865, in which the humanity of Christ is considered and enforced, apart from his divinity. The phrase, "The enthusiasm of humanity," was

originated in this work; to which, it may be mentioned, Dr. Joseph Parker replied in his *Ecce Deus* published in 1866.

Eckhardt, The Faithful.—A legendary hero of Germany, represented as an old man with a white staff, who, in Eisleben, appears on the evening of Maundy Thursday, and drives all the people into their houses, to save them from being harmed by a terrible procession of dead men, headless bodies, and two-legged horses, which immediately after passes by. Other traditions represent him as the companion of the knight Tannhäuser, and as warning travelers from the Venusberg, the mountain of fatal delights in the old mythology of Germany. Tieck has founded a story upon this legend, which has been translated into English by Carlyle, in which Eckhardt is described as the good servant who perishes to save his master's children from the seducing fiends of the mountain. The German proverb, "Thou art the faithful Eckhardt; thou warnest everyone," is founded upon this tradition.

Eclecta.—The "Elect" personified in *The Purple Island*, by Phineas Fletcher. She is the daughter of Intellect and Voletta (free-will).

Ector, Sir.—The foster-father of King Arthur, and lord of many parts of England and Wales. Father of Sir Kay, seneschal to King Arthur.

Edenhall, The Luck of.—A painted goblet in the possession of the Musgrave family of Edenhall, Cumberland, said to have been left by the fairies on St. Cuthbert's Well. The tradition runs that the luck of the family is dependent on the safe-keeping of this goblet. The German poet Uhland embodied the legend in a ballad, translated into English by Longfellow.

Edgar.—Son to Gloucester, in Shakespeare's tragedy of *Lear*. He was disinherited for his half-brother Edmund.

Edgar, or **Edgardo.**—Master of Ravenswood, in love with Lucy Ashton in Scott's *Bride of Lammermoor*.

Edith.—The *Maid of Lorn* in Scott's *Lord of the Isles*, who married Ronald when peace was restored after the battle of Bannockburn.

Edith, The Lady.—*Ivanhoe*, Scott. Mother of Athelstane "the Unready" (thane of Coningsburgh).

Edith Granger.—Daughter of the Hon. Mrs. Skewton, married to Colonel Granger of Ours, who died within two years. Edith became Mr. Dombey's second wife, but the marriage was altogether unhappy.

Edith Plantagenet (*plan-taj'e-net*), **The Lady.**—*The Talisman*, Scott. Called "The Fair Maid of Anjou," a kinswoman of Richard I., and attendant on Queen Berengaria.

Edmund.—A bastard son of Gloucester in Shakespeare's tragedy of *King Lear*.

Edward, Sir.—*The Iron Chest*, Colman. He commits a murder, and keeps a narrative of the transaction in an iron chest. Later, he trusts the secret to his secretary, Wilfred, and the whole transaction now becomes public.

Edward.—*Count Robert of Paris*, Scott. Brother of Hereward, the Varangian guard. He was slain in battle.

Edwin.—(1) The hero of Goldsmith's ballad entitled *The Hermit*. (2) The hero of Mallet's ballad *Edwin and Emma*. (3) The hero of Beattie's *Minstrel*.

Edyrn.—*Idylls of the King* (*Enid*), Tennyson. Son of Nudd. A suitor for the hand of Enid and an evil genius of her father, who opposed him. Later, Edyrn went to the court of King Arthur and became quite a changed man—from a malicious "sparrow-hawk" he was converted into a courteous gentleman.

Egeus (*ē-jē'us*).—Father of Hermia in Shakespeare's *Midsummer Night's Dream*.

Eglamour.—A character, in Shakespeare's *Two Gentlemen of Verona*, who is an agent of Silvia in her escape.

Eglamour (*eg'la-mōr*), **Sir.**—A valiant knight of the Round Table, celebrated in the romances of chivalry, and in an old ballad.

Eglantine (*eg'lan-tīn*), **Madame.**—The prioress in Chaucer's *Canterbury Tales*, who was "full pleasant and amiable of port." She was distinguished for the ladylike delicacy of her manners at table, and for her partiality to "small hounds," and a peculiar mixture in her manner and dress of feminine vanity and slight worldliness, together with an ignorance of the world.

Egyptian Thief.—A personage alluded to by the Duke in Shakespeare's *Twelfth Night*. The reference is to the story of Thyamis, a robber-chief and native of Memphis.

Elvir.—*Harold the Dauntless*, Scott. A Danish maid, who assumes boy's clothing, and waits on Harold "the Dauntless," as his page.

Elaine.—A mythical lady in the romances of King Arthur's court. She is called "the lily maid of Astolat" in Tennyson's *Idylls of the King*. She died for love of Sir Launcelot, and then at her request was borne on a barge to the castle of King Arthur, holding a lily in one hand, and a letter to Launcelot in the other.

Elbow.—A constable, in Shakespeare's *Measure for Measure*, modest and well-meaning, though of simple mind and the object of wit among those who are wiser but not better.

El Dorado.—A name given by the Spaniards to an imaginary country, supposed, in the sixteenth century, to be situated in the interior of South America, and abounding in gold and all manner of precious stones.

Electra.—The daughter of Agamemnon and Clytemnestra, and the heroine of a tragedy by Sophocles and of another by Euripides.

Elegy Written in a Country Churchyard.—By Thomas Gray. Dr. Johnson gives 1750 as the date of publication; and declares that the piece "abounds with images which find a mirror in every mind, and with sentiments to which every bosom returns an echo." The churchyard was that of Stoke Pogis, near Eton.

Elim.—*The Nessiah*, Klopstock. The guardian angel of Libbeus the Apostle. Libbeus, the tenderest and most gentle of the apostles, at the death of Jesus also died from grief.

Elissa.—Step-sister of Medina and Perissa, in Spenser's *Faërie Queene*. They could never agree upon any subject.

Elliott, Hobbie.—There are seven by this name in the *Black Dwarf*, by Sir Walter Scott. The farmer Elliott himself and his bride-elect, Grace Armstrong; Mrs. Elliott, Hobbie's grandmother; John and Harry, Hobbie's brothers; Lilias, Jean, and Arnot, Hobbie's sisters.

Elops.—Milton gives this name to the dumb serpent which gives no warning of its approach.

Elsie.—The daughter of Gottlieb, a farm tenant of Prince Henry of Hohenneck, who offered her life as a substitute for the prince. She was rescued as she was about to make the sacrifice. Longfellow has told this story in *The Golden Legend*.

Elspeth (*el'speth*).—(1) A character in Sir Walter Scott's *Antiquary*. (2) An old servant to Dandie Dinmont in Scott's *Guy Mannering*.

Elvira.—(1) In Cibber's *Love Makes a Man*, sister of Don Duart, and niece of the governor of Lisbon. She marries Clodio, the coxcomb son of Don Antonio. (2) The young wife of Gomez, a rich old banker, in Dryden's *The Spanish Fryer*. She carries on a liaison with Colonel Lorenzo, by the aid of her father-confessor Dominick, but is always checkmated, and it turns out that Lorenzo is her brother.

Emelye.—The sister-in-law of "Duke Theseus," beloved by the two knights, Palamon and Arcyte.

Emile (*ā-mēl'*).—A philosophical romance on education by Jean Jacques Rousseau (1762). Emile, the chief character, is the author's ideal of a young man perfectly educated, every bias but that of nature having been carefully withheld.

Emilia (*ē-mil'i-ā*).—(1) A lady attending Hermione in Shakespeare's *Winter's Tale*. (2) Wife to Iago, and waiting woman to Desdemona, in the tragedy of *Othello*, a woman of thorough vulgarity and loose principles, united to a high degree of spirit, energetic feeling, strong sense, and low cunning. (3) The sweetheart of Peregrine Pickle in Smollett's novel *The Adventures of Peregrine Pickle*.

Em'ly, Little.—*David Copperfield*, Dickens. Daughter of Tom, the brother-in-law of Dan'el Peggotty, a Yarmouth fisherman, by whom the orphan child was brought up. David Copperfield and Em'ly were at one time playfellows. While engaged to Ham Peggotty (Dan'el's nephew) Little Em'ly runs away with Steerforth, a friend of David's, who was a handsome but unprincipled gentleman. Being subsequently reclaimed, she emigrates to Australia with Dan'el Peggotty and old Mrs. Gummidge.

Empyrean.—According to Ptolemy, there are five heavens, the last of which is pure elemental fire and the seat of Deity; this fifth heaven is called the empyrean.

Endell, Martha.—*David Copperfield*, Dickens. A poor girl, to whom Em'ly goes when Steerforth deserts her.

Endymion (*en-dim'i-on*).—A beautiful shepherd boy whom Diana kissed while he lay asleep on Mount Latmus. The story was made the subject of an English poem by Keats, in memory of his much loved friend, the poet Shelley. Shelley pronounced it "full of some of the highest and the finest gleams of poetry."

Also a lyric by Henry Wadsworth Longfellow founded on the old mythic story of the mortal youth who was beloved by Diana, and received her kiss—

> When, sleeping in the grove,
> He dreamed not of her love.

Enid.—A mythical lady mentioned in a Welsh triad as one of the three celebrated ladies of Arthur's court—a beautiful picture of conjugal patience and affection. Her story is told in the *Mabinogion* and in Tennyson's *Idylls of the King*. In the midst of an impure court she is the personification of purity.

Eolian Harp.—Baruch. There is a rabbinical story of the aërial harmony of the harp of David, which, when hung up at night, was played upon by the north wind.

Epigram.—A short, pointed or antithetical poem; or any short composition happily or antithetically expressed.

Epithalamium (*ep"i-thā-lā'mi-um*).—Was a species of poem which it was the custom among the Greeks and Romans to sing in chorus near the bridal-chamber of a newly married couple. Anacreon, Stesichorus, and Pindar composed poems of this kind, but only scanty fragments have been preserved. Spenser's *Epithalamium*, written on the occasion of his marriage, is one of the finest specimens of this kind of verse.

Eppie.—(1) *St. Ronan's Well*, Scott. One of the servants of the Rev. Josiah Cargill. In the same novel is Eppie Anderson, one of the servants at the Mowbray Arms, Old St. Ronan's, held by Meg Dods. (2) In George Eliot's *Silas Marner* the child of Godfrey Cass, brought up and adopted by Silas Marner, whose love transformed him from a miser into a tender, loving father.

Ermangarde of Baldringham, Lady.—*The Betrothed*, Scott. Aunt of the Lady Eveline Berenger, "the Betrothed."

Ermeline.—The wife of Reynard, in the tale of *Reynard the Fox*.

Ermina.—The heroine of Tasso's *Jerusalem Delivered*, who fell in love with Tancred. When the Christian army besieged Jerusalem, she dressed herself in Clorinda's armor to go to Tancred, but, being discovered, fled, and lived awhile with some shepherds on the banks of the Jordan. Meeting with Vafrino, sent as a secret spy by the crusaders, she revealed to him the design against the life of Godfrey, and, returning with him to the Christian camp, found Tancred wounded. She cured his wounds, so that he was able to take part in the last great day of the siege.

Ernest, Duke.—A poetical romance by Henry of Veldig (Waldeck), contemporary with Frederick Barbarossa. It is a mixture of Greek and oriental myths and hero adventures of the crusader.

Error.—*Faërie Queene*, Spenser. A monster who lived in a den in "Wandering Wood," and with whom the Red-cross Knight had his first adventure. She had a brood of one thousand young ones of sundry shapes, and these cubs crept into their mother's mouth when alarmed, as young kangaroos creep into their mother's pouch. The knight was nearly killed by the stench which issued from the foul fiend, but he succeeded in "rafting" her head off, whereupon the brood lapped up the blood, and burst with satiety.

Escalus (*es'ka-lus*).—An ancient and kind hearted lord, in Shakespeare's *Measure for Measure*, whom Vincentio, the duke of Vienna, joins with Angelo as his deputy during a pretended absence on a distant journey.

Escanes (*es'ka-nēz*).—A lord of Tyre, in Shakespeare's *Pericles*.

Esmeralda.—*Notre Dame de Paris*, Victor Hugo. A beautiful gypsy girl, who, with tambourine and goat, dances in the "place" before Notre Dame.

Esmond, Henry.—A cavalier and fine-spirited gentleman in the reign of Queen Anne. Hero of Thackeray's novel by the same name.

Esmond.—A novel by W. M. Thackeray, published in 1852. Its most striking feature is its elaborate imitation of the style and even the manner of thought of the time of Queen Anne's reign, in which its scenes are laid.

Esprit des Lois [*es-prē' dā lwa* (or, *Spirit of the Laws*)].—A celebrated philosophical work by Montesquieu, published at Geneva in 1748. The author begins somewhat formally with the old division of politics into democracy, aristocracy, and monarchy. He discusses the principles of each, and their bearings on education, on positive law, on social conditions, on military strength (offensive and defensive) on individual liberty, on taxation and finance. Then an abrupt return is made from the effects to the causes of constitutions and polity. The theory of the influence of physical conditions, and especially of climate, on political and social institutions—a theory which is perhaps more than any other identified with the book—received special attention, and a somewhat disproportionate space is given to the question of slavery in this connection. From climate Montesquieu passes to the nature of the soil as in its turn affecting civil polity. He then attacks the subject of manners and customs as distinct from laws of trade and commerce, of the family, of jurisprudence, of religion. The book concludes with an elaborate examination of the feudal system in France.

Essay on Man.—A poem by Alexander Pope, in four epistles: *Of the Nature and State of Man With Respect to the Universe; Of the Nature and State of Man With Respect to Himself as an Individual; Of the Nature and State of Man With Respect to Society;* and *Of the Nature and State of Man With Respect to Happiness*. Its fundamental idea is to the effect that the system of the universe is a "benevolent system, in which every virtue, as well as every passion, has its object and end."

"If," says Professor Ward, "the *Essay on Man* were shivered into fragments, it would not lose its value; for it is precisely its details which constitute its moral as well as literary beauties. Nowhere has Pope so abundantly displayed his incomparable talent of elevating truisms into proverbs, in his mastery over language and poetic form."

Essays (or, *Counsels Civil and Moral*).—By Francis, Lord Bacon. In the dedication to his brother Anthony, the author says he published the *Essays* "because many of them had been stolen abroad in writing," and he desired to give the world a correct version of his work. The word *Essays*, he says, "is late; but the thing is ancient, for Seneca's Epistles to Lucilius, if you mark them well, are but essays, that is, dispersed meditations, though conveyed in the form of epistles." "The transcendent strength of Bacon's mind is visible," says Hallam, "in the whole tenor of these *Essays*, unequaled as they must be, from the very nature of such compositions. They are deeper and more discriminating than any earlier, or almost any later, work, in the English language; full of recondite observations, long matured, and carefully sifted."

Estella.—The heroine of Dickens' novel of *Great Expectations*.

Estotiland, or **Estotilandia.**—An imaginary region in America, near the arctic circle, referred to by Milton as "cold Estotiland," and variously fabled to have been discovered by Frisian fishermen in the fourteenth century, and by a Pole named John Scalve, in 1477.

Etzel (*et'sel*), *i. e.*, **Attila.**—King of the Huns, a monarch ruling over three kingdoms and more than thirty principalities; being a widower, he married Kriemhild, the widow of Siegfried. In the *Nibelungenlied*, where he is introduced, he is made very insignificant.

Eugénie Grandet (*u-zhā-nē' gron-dā'*).—A novel by Balzac, written in 1833, published in 1834. The heroine, Eugenie, is sacrificed to the cold-blooded avariciousness of her father. This is one of Balzac's best novels.

Eulalia (*ū-lā'li-ā*), **St.**—In the calendar of saints there is a virgin martyr called Eulalia. She was martyred by torture February 12, 308. Longfellow calls Evangeline the *Sunshine of St. Eulalia*.

Eulenspiegel (*oi'len-spē-gel*).—The hero of a German tale, which relates the pranks and drolleries of a wandering cottager of Brunswick.

Euphrasy.—*Paradise Lost*, Milton. The herb eyebright, so called because it was once supposed to be efficacious in clearing the organs of sight. Hence, the Archangel Michael purged the eyes of Adam with it, to enable him to see into the distant future.

Evan Dhu M'Combich.—*Waverley*, Scott. The foster-brother of M'Ivor.

Evan Dhu of Lochiel.—*Legend of Montrose*, Scott. A Highland chief in the army of Montrose.

Evangeline.—The title and heroine of a tale in hexameter verse by Longfellow, in two parts. Evangeline was the daughter of Benedict Bellefontaine, the richest farmer of Acadia (now Nova Scotia). At the age of seventeen she was legally betrothed by the notary-public to Gabriel, son of Basil the blacksmith; but next day all the colony was exiled by the order of George II., and their houses, cattle, and lands were confiscated. Gabriel and Evangeline were parted, and now, sustained by the brightness of hope, she wandered from place to place to find her betrothed. Basil had settled in Louisiana; but when Evangeline reached that distant land, Gabriel had gone. She sought him on the prairies, and, again far north, in Michigan, but ever a few days, a few weeks, too late. At length, grown old in this hopeless quest, she came to Philadelphia and became a sister of mercy. The plague broke out; and, as she visited the almshouse in ministration, she saw an old man who had been smitten with the pestilence. It was Gabriel. He tried to whisper her name; but death closed his lips. "All was ended now;" and "Side by side, in nameless graves, the lovers are sleeping."

Evangelist.—In Bunyan's *Pilgrim's Progress*, represents the effectual preacher of the gospel who opens the gate of life to Christian.

Evans, Sir Hugh.—In Shakespeare's *Merry Wives of Windsor*, a Welsh parson and school-teacher, ignorant but pedantic, who has a ludicrous quarrel with Dr. Caius.

Excalibur (*eks-kal'i-bẽr*), or **Excalibar,** or **Escalibor.**—The sword of the mythical King Arthur. Arthur received it from the hands of the Lady of the Lake. It had a scabbard the wearer of which could lose no blood. There seems, however, to have been also another sword called Excalibur in the early part of the story. This was the sword, plunged deep into a stone, which could be drawn forth only by the man who was to be king. After two hundred knights had failed, Arthur drew it out without difficulty.

Excursion, The.—A poem, in blank verse, by William Wordsworth, published in 1814, and forming the second part of a poem in three parts, to be entitled *The Recluse*, which the author had at one time contemplated. It consists of nine books, respectively entitled *The Wanderer, The Solitary, Despondency, Despondency Corrected, The Pastor, The Churchyard Among the Mountains, The Same Subject Continued, The Parsonage, Discourse of the Wanderer*, and *An Evening Visit to the Lake.*

Eyre (*ãr*), **Jane.**—A novel by Charlotte Brontë, published in 1847, with a dedication to William Makepeace Thackeray, as "the first social regenerator of the day." The early scenes are laid in the Lowood Institution, which has been identified with a school established by the Rev. W. Carus Wilson, at Cowen's Bridge, near Leeds, and which is described with stern but unpleasing realism. Much of the book was derived from the author's own personal experience.

Ezzelin, Sir.—*Lara*, Byron. The gentleman who recognizes Lara at the table of Lord Otho, and charges him with being Conrad the Corsair. A duel ensues, and Ezzelin is never heard of more. A serf used to say that he saw a huntsman one evening cast a dead body into the river which divided the lands of Otho and Lara, and that there was a star of knighthood on the breast of the corpse.

F

Faa, Gabriel.—*Guy Mannering*, Scott. Nephew of Meg Merrilies. One of the huntsmen at Liddesdale.

Fadladeen.—The hypercritical grand chamberlain in Moore's poem *Lalla Rookh*. Fadladeen's criticism upon the several tales which make up the romance are very racy and full of humor; and his crestfallen conceit when he finds out that the poet was the prince in disguise is well conceived.

Faerie Queene (*fā'e-ri kwēn*), **The.**—A poem by Edmund Spenser, published in 1590. This great allegorical epic is divided into six books, of which the first contains the Legend of the Knight of the Red Cross, or Holiness; the second the Legend of Sir Guyon, or Temperance; the third the Legend of Britomartis, or Chastity; the fourth the Legend of Cambal and Telamond, or Friendship; the fifth the Legend of Artegall, or Justice; and the sixth the Legend of Sir Calidore, or Courtesy. There originally existed twelve books, but the last six, excepting two cantos on Mutability, were lost by the poet's servant in crossing from Ireland to England—a circumstance to be deeply regretted by every lover of true poetry. The finest things in Spenser are the character of Una, in the first book, the House of Pride, the Cave of Mammoth, and the Cave of Despair; the account of Memory; the description of Belphœbe; the story of Florimel and the Witch's Son; the gardens of Adonis and the Bower of Bliss; the Mask of Cupid; and Colin Clout's Vision, in the last book.

Fag.—A lying servant to Captain Absolute in Sheridan's *Rivals.*

Fagin.—An old Jew in Dickens' *Oliver Twist*, who employs young persons of both sexes to carry on a systematic trade of robbery.

Fainall, Mr. and Mrs.—Noted characters in Congreve's comedy *The Way of the World.*

Faineant, Le Noir (*The Black Idler*).—In Sir Walter Scott's *Ivanhoe*, a name applied to Richard Cœur de Lion in disguise, by the spectators of a tournament, on account of his indifference during a great part of the action, in which, however, he was finally victorious.

Fair Maid of Perth.—The title of a novel by Sir Walter Scott, and the name of the heroine.

Fair Rosamond.—Prototype of many heroines of fiction, a daughter of Walter de Clifford. According to a popular legend, which has no foundation in fact, Henry II. built a labyrinth or maze to conceal her from Queen Eleanor, who discovered her by means of a silken clew and put her to death. She is commonly, though erroneously, stated to have been the mother of William Longsword and Geoffrey, archbishop of York.

Fairservice, Andrew.—A shrewd Scotch gardener at Osbaldistone Hall in *Roб Roy*, Sir Walter Scott.

Fairy of the Mine.—A malevolent being, supposed to live in mines, busying itself with cutting ore, turning the windlass, etc., and yet effecting nothing.

Faithful.—One of the allegorical personages in Bunyan's *Pilgrim's Progress*, who dies a martyr before completing his journey.

Faithful, Jacob.—The title and hero of a sea tale, by Captain Marryat (1835).

Fakenham Ghost.—A ballad by Robert Bloomfield, author of *The Farmer's Boy.* The ghost was a donkey.

Fakreddin's Valley.—Over the several portals of bronze were these inscriptions: (1) *The Asylum of Pilgrims;* (2) *The Traveler's Refuge;* (3) *The Depository of the Secrets of All the World.*

Falkland.—In Godwin's novel called *Caleb Williams.* He commits murder, and keeps a narrative of the transaction in an iron chest. Williams, a lad in his employ, opens the chest, and is caught in the act by Falkland. The lad runs away, but is hunted down. This tale, dramatized by Colman is entitled *The Iron Chest.*

Falstaff (*fâl'stâf*), **Sir John.**—A famous character in Shakespeare's comedy of the *Merry Wives of Windsor*, and in the first and second parts of his historical drama of *Henry IV.* He is as perfect a comic portrait as was ever sketched. In the former play he is represented as in love with Mrs. Ford and Mrs. Page, who make a butt and a dupe of him; in the latter he figures as a soldier and a wit; in both he is exhibited as a monster of fat—sensual, mendacious, boastful, and cowardly. In *Henry V.* his death is described by Mrs. Quickly.

Fang.—(1) A sheriff's officer, in the second part of Shakespeare's *King Henry IV.* (2) *Oliver Twist*, Charles Dickens. A bullying insolent magistrate, who would have sent Oliver Twist to prison, on suspicion of theft, if Mr. Brownlow had not interposed.

Fata Alcina.—*Orlando Innamorato*, Bojardo. Sister of Fata Morgana. She carried off Astolfo on the back of a whale to her isle, but turned him into a myrtle tree when she tired of him.

Fata Morgana (*fā'tā mor-gā'nā*).—The name of a potent fairy, celebrated in the tales of chivalry, and in the romantic poems of Italy. She was a pupil of the enchanter Merlin, and the sister of Arthur, to whom she discovered the intrigue of his queen, Geneura, or Guinever, with Lancelot of the Lake. In the *Orlando Innamorato* of Bojardo, she appears at first as a personification of fortune, inhabiting a splendid residence at the bottom of a lake, and dispensing all the treasures of the earth, but she is afterward found in her proper station subject to the all potent Demogorgon. Also, as sister to King Arthur and pupil of Merlin. She lived at the bottom of the lake and dispensed good fortune as she liked.

Fat Boy, The.—A laughable character in Dickens' *Pickwick Papers;* a youth of astonishing obesity whose employment consists in alternate eating and sleeping.

Fathom, Ferdinand, Count.—The title of a novel by Smollett, and the name of its principal character, a complete villain, who proceeds step by step to rob his benefactors and finally dies in misery and despair.

Fatima (*fā'tē-mā*).—(1) A female worker, in the story of *Aladdin*, in the *Arabian Nights' Entertainments.* (2) The last of the wives of Bluebeard, and the only one who escaped being murdered by him.

Faust (*foust*).—A celebrated tragedy by Goethe, the materials of which are drawn in part from the popular legends of Dr. Faustus, a famous magician of the sixteenth century. A rich uncle having left him a fortune, Faust ran to every excess, and, when his fortune was exhausted, made a pact with the devil (who assumed the name of Mephistopheles, and the appearance of a little gray monk), that, if he might indulge his propensities freely for twenty-four years, he would at the end of that period consign to the devil both body and soul. The compact terminated In 1550, when Faust disappeared. His sweetheart was Margherita, whom he seduced, and his faithful servant was Wagner.

Faustus (*fâs'tus*).—A tragedy name; represented as a vulgar sorcerer tempted to sell his soul to the devil (Mephistopheles), on condition of having a familiar spirit at his command, the possession of earthly power and glory, and unlimited gratification of his sensual appetites, for twenty-four years; at the end of which time, when the forfeit comes to be exacted, he shrinks and shudders in agony and remorse, imploring yet despairing of the mercy of heaven. This has been the theme of many writers. It is the subject of an opera by Gounod.

Femmes Savantes (*fam sȧ-vȧN'*), **Les** (or, *The Learned Women*).—Comedy by Molière. These women go in

for women's rights, science, and philosophy, to the neglect of domestic duties and wifely amenities. The "blue-stockings" are (1) Philaminte, the mother of Henriette, who discharges one of her servants because she speaks bad grammar; (2) Armande, sister of Henriette, who advocates platonic love and science; and (3) Bélise, sister of Philaminte, who sides with her in all things, but imagines that everyone is in love with her. Henriette, who has no sympathy with these "lofty flights," is in love with Clitandre; but Philaminte wants her to marry Trissotin, a *bel esprit*. However, the father loses his property through the "savant" proclivities of his wife, Trissotin retires, and Clitandre marries Henriette, the "perfect" or thorough woman.

Fenella.—A fairy-like creature, a deaf and dumb attendant on the countess of Derby, in Sir Walter Scott's *Peveril of the Peak*.

Fenton (*fen'ton*).—A character in Shakespeare's *Merry Wives of Windsor*, who wooes the rich Anne Page for her money, but soon discovers inward treasures in her which quite transform him.

Feramorz (*fer'a-môrz*).—*Lalla Rookh*, Thomas Moore. Feramorz in *Lalla Rookh* is the young Cashmerian poet, who relates poetical tales to Lalla Rookh, in her journey from Delhi to Lesser Bucharia. Lalla Rookh is going to be married to the young sultan, but falls in love with the poet. On the wedding morn she is led to her future husband, and finds that the poet is the sultan himself, who had gallantly taken this course to win the heart of his bride and beguile her journey.

Ferdinand (*fer'di-nand*).—(1) A character in Shakespeare's *Tempest*. He is a son of the king of Naples, and falls in love with Miranda, the daughter of Prospero, a banished duke of Milan. (2) King of Navarre, character in *Love's Labor's Lost*.

Ferrers (*fer'erz*)—*Endymion*. The hero of Benjamin Disraeli's novel *Endymion*.

Ferrex and Porrex.—Two sons of Gorboduc, a mythical British king. Porrex drove his brother from Britain, and when Ferrex returned with an army he was slain, but Porrex was shortly after put to death by his mother. One of the first, if not the very first, historical plays in the English language was *Ferrex and Porrex*, by Thomas Norton and Thomas Sackville.

Fib.—*Nymphidia*, Drayton. One of the fairy attendants to Queen Mab.

Fidele (*fi-dē'lē*, or *fi-dāl'*).—Subject of an elegy by Collins.

Fidelle.—*Cymbeline*, Shakespeare. The name assumed by Imogen, when, attired in boy's clothes, she started for Milford Haven to meet her husband Posthumus.

Fidessa.—*Faërie Queene*, Spenser. The companion of Sansfoy; but when the Red-cross Knight slew that "faithless Saracen," Fidessa turned out to be Duessa, the daughter of Falsehood and Shame. See "Duessa."

Figaro (*fē'gä-rō*).—A character introduced by Beaumarchais in his plays *Le Barbier de Seville*, *Le Mariage de Figaro*, and *La Mère Coupable*, used later by Mozart, Paisiello, and Rossini in operas. In the *Barbier* he is a barber; in the *Mariage* he is a valet. In both he is gay, lively, and courageous; his stratagems are always original, his lies witty, and his shrewdness proverbial. In the *Mère Coupable* he has become virtuous and has lost his nerve. He also appears in Holcroft's *Follies of a Day*, taken from Beaumarchis' *Mariage de Figaro*.

Finetta (*fi-net'tä*).—*The Cinder Girl*. A fairy tale by the Comtesse d'Aulnoy. This is merely the old tale of Cinderella slightly altered.

Fingal (*fing'gal*).—A mythical hero, whose name occurs in Gaelic ballads and traditions, and in Macpherson's *Poems of Ossian*.

Fleance (*flē'ans*).—A son of Banquo, in Shakespeare's tragedy of *Macbeth*. The legend relates that after the assassination of his father he escaped to Wales, where he married the daughter of the reigning prince, and had a son named Walter. This Walter afterward became lord high steward of Scotland, and called himself Walter the Steward. From him proceeded in a direct line the Stuarts of Scotland, a royal line which gave James VI. of Scotland, James I. of England. This myth has been seriously accepted by some as fact.

Fledgeby.—*Our Mutual Friend*, Dickens. An overreaching, cowardly sneak who pretends to do a decent business under the trade name of Pubsey & Co.

Florentius.—A knight whose story is related in the first book of Gower's *Confessio Amantis*. He bound himself to marry a deformed hag, provided she taught him the solution of a riddle on which his life depended.

Florian (*flō-ryon'*).—*The Foundling of the Forest*, W. Dimond. Discovered in infancy by the Count de Valmont, and adopted as his own son, Florian is lighthearted and volatile, but with deep affection, very grave, and the delight of all who know him.

Florimel (*flor'i-mel*).—A female character in Spenser's *Faërie Queene*, of great beauty, but so timid that she feared the "smallest monstrous mouse that creeps on floor," and was abused by everyone. She was noted for sweetness of temper amid great trials. The word Florimel signifies "honey-flower."

Florizel (*flor'i-zel*).—A prince of Bohemia, in Shakespeare's *Winter's Tale*, in love with Perdita.

Fluellen (*flō-el'en*).—A Welsh captain, who is an amusing pedant, in Shakespeare's *Henry V*.

Flying Dutchman.—A spectral ship, seen in stormy weather off the Cape of Good Hope, and considered ominous of ill-luck. Captain Marryat has taken this theme for his novel *The Phantom Ship*.

Folk.—Fairies, also called "people," "neighbors," "wights." The Germans have their kleine volk (little folk), the Swiss their hill people and earth people. See *Fairies*.

Ford.—Mr. and Mrs. Ford are characters in *The Merry Wives of Windsor*. Mrs. Ford pretends to accept Sir John Falstaff's protestations of love, in order to punish him by her devices.

Fortinbras (*fôr'tin-bras*).—Prince of Norway, in Shakespeare's tragedy *Hamlet*.

Fortunatus (*fôr-tū-na'tus*).—The hero in one of Straparolla's fairy tales. The nursery tale of Fortunatus records that he had an inexhaustible purse. It is from the Italian fairy tales.

Fortunio's (*fôr-tu'ni-o*) **Horse.**—Comrade not only possessed incredible speed, but knew all things, and was gifted with human speech.

Francesco.—The Iago of Massinger's *Duke of Milan*.

Francesca da Rimini (*fran-ches'kä dä rē'mē-nē*).—A dramatic poem by James Henry Leigh Hunt published in 1816. Francesca was the daughter of Guido da Polenta, Lord of Ravenna, in the latter part of the thirteenth century, and was married to Lanciotto, son of Malatesta da Rimini, who, discovering her criminal intercourse with his brother, revenged himself by putting them both to death. Her story forms an episode in Dante's *Inferno*.

Frankenstein (*frängk'ken-stīn*) (or, the *Modern Prometheus*).—A novel by Mrs. Shelley, published in 1818. It was commenced in the summer of 1816, when Byron and the Shelleys were residing on the banks of the Lake of Geneva, and when, "during a week of rain, having amused themselves with reading German ghost stories, they agreed at last to write something in imitation of them. 'You and I,' said Lord Byron to Mrs. Shelley, 'will publish ours together.' He then began his tale of the *Vampire;*" but "the most memorable result," writes Moore, "of their story-telling compact, was Mrs. Shelley's wild and powerful romance of *Frankenstein*, one of those original conceptions that take hold of the public mind at once and forever."

The hero of the book, a native of Geneva, and a student, constructs a monster of grewsome human remains and gives it life by galvanism. The monster feels that he is unlike all other human beings, and in revenge for the injury inflicted upon him by his creator, murders his friend, his brother, and his bride, and finally seeks out Frankenstein himself, with a view to wreaking a similar revenge on him. The hero, however, happily escapes his enemy, who retires to the utmost extremity of the globe, in order to put an end to his miserable life; and Frankenstein himself falls ill and dies on his way home after his last final flight from the monstrosity whom he has himself brought into the world.

Freeport, Sir Andrew.—The name of one of the members of the imaginary club under whose direction the *Spectator* was professedly published. He is represented as a London merchant of great eminence and experience, industrious, sensible and generous.

French Revolution, The.—A history, in three parts, by Thomas Carlyle, published in 1837, and described by Lowell as "a series of word-pictures, unmatched for vehement power, in which the figures of such sons of earth as Mirabeau and Danton loom gigantic and terrible as in the glare of an eruption; their shadows swaying far and wide, grotesquely awful. But all is painted by eruptive flashes in violent light and shade. There are no half tints, no gradations, and we find it impossible to account for the continuance in power of less Titanic actors in the tragedy, like Robespierre, on any theory, whether of human nature or of individual character, supplied by Mr. Carlyle."

Friar Lawrence.—The Franciscan monk who attempted to befriend the lovers in *Romeo and Juliet*.

Friar Tuck.—Chaplain and steward of Robin Hood. Introduced by Sir Walter Scott in *Ivanhoe*. He is a self-indulgent, combative Falstaff, a jolly companion to the outlaws in Sherwood forest.

Friday.—Robinson Crusoe's faithful man Friday pictured by Defoe.

Froissart (*froi'sărt*).—*The Cronicles of England, Fraunce, Spayne, Portyugale, Scotlande, Bretayne, Flanders, and other places adjoynynge, translated out of Frenche into our maternalle Englysche Tonge*, by "John Bourchier, knight, Lord Berners." Printed in 1523. The history extends from 1326 to 1400. Froissart resided in England as secretary to Queen Philippa from 1361 to 1366, and visited it again in 1395, when he paid a visit to Scotland.

Frollo, Archdeacon Claude.—A noted character in Victor Hugo's *Notre Dame de Paris*, absorbed in a bewildering search for the philosopher's stone.

Front de Bœuf.—*Ivanhoe*, Sir Walter Scott. A follower of Prince John of Anjou, and one of the knight's challengers.

Froth, Master.—A foolish gentleman in Shakespeare's *Measure for Measure*. His name explains his character.

Fusbos (*fus'bos*).— *Utopia*, Sir Thomas More. Minister of state to Artaxaminous, king of Utopia.

Fyrapel, Sir.—The Leopard, the nearest kinsman of King Lion, in the beast epic of *Reynard the Fox*.

G

Gadshill.—A companion of Sir John Falstaff, in the first part of Shakespeare's *King Henry IV*.

Galahad (*gal'a-had*), **Sir.**—A celebrated knight of the Round Table who achieved the quest of the Holy Grail. Tennyson has made him the subject of one of his idylls. In Malory he is also represented as the perfect knight, clad in wonderful armor. He was the only knight who could sit in the "Siege Perilous" a seat reserved for the "knight without a flaw," who achieved the quest of the "Holy Grail."

Galapas (*gal'a-pas*).—A giant of marvelous height in the army of Lucius, king of Rome. He was slain by King Arthur.

Galaphrone, or **Galafron.**—A king of Cathay and father of Angelica in Bojardo's *Orlando Innamorato* and Ariosto's *Furioso*.

Gamp, Mrs.—A nurse who is a prominent character in Dickens' novel of *Martin Chuzzlewit*. She is celebrated for her constant reference to a certain Mrs. Harris, a purely imaginary person, for whose feigned opinions and utterances she professes the greatest respect, in order to give the more weight to her own.

Gan, Ganelone, Ganelon, or **Gano.**—The character of Sir Ganelon was marked with spite, dissimulation, and intrigue, but he was patient, obstinate, and enduring. He loved solitude, disbelieved in the existence of moral good, and has become a by-word for a false and faithless friend. Dante has placed him in his *Inferno*.

Gander-Cleugh.—"Folly-Cliff," that mysterious place where a person make a goose of himself, in *Tales of My Landlord*, Sir Walter Scott.

Garcia, Pedro.—A mythical personage, of whom mention is made in the preface to Gil Blas, in which is related how two scholars of Salamanca discovered a tombstone with the inscription "Here lies interred the soul of the Licentiate Pedro Garcia," and how, on digging beneath the stone, was found a leathern purse containing a hundred ducats.

Gareth.—In *Arthurian Romance* a knight of the Round Table, who was first a scullion in King Arthur's kitchen, but afterward became champion of the Lady Linet, or Lynette, whose sister Lionês, or Lyonors, he delivered from Castle Perilous.

Garganelle (*gär-ga-nel'*).—The mother of Gargantua in Rabelais' celebrated romance of this name.

Gargantua (*gär-gan'tū-ä*).—Rabelais' celebrated romance, the hero of which is a gigantic personage, about whom many wonderful stories are related. He lived for several centuries, and at last begot a son, Pantagruel, as wonderful as himself. The *Pleasant Story of the Giant Gargantua and of his Son Pantagruel*, so satirized the monastic orders of his time that it was denounced by the spiritual authorities. Francis I., however, protected the author, and allowed him to print the third part of it in 1545.

Gargery (*gar'jer-i*), **Mrs. Joe.**—*Great Expectations*, Dickens. Pip's sister. A virago, who kept her husband and Pip in constant awe. Joe Gargery, a blacksmith, married to Pip's sister. A noble-hearted, simple-minded young man, who loved Pip sincerely. Joe Gargery was one of nature's gentlemen.

Gaspar, or **Caspar.**—(The white one), one of the three magi or kings of Cologne. His offering to the infant Jesus was frankincense, in token of divinity.

Gaunt, Griffith.—Hero of a novel by Charles Reade, of same title.

Gavotte.—Name given to a certain dance common among people in the upper Alps.

Gawain, or **Gawayne** (*gä'wān*), **Sir.**—A nephew of King Arthur, and one of the most celebrated knights of the Round Table; noted for his sagacity and wonderful strength. He was surnamed "the courteous." His brothers were Agravaine, Gaheris, and Gareth.

Gebir (*gā'bēr*).—A legendary eastern prince, said to have invaded Africa and to have given his name to Gibraltar. He is the subject of a poem of the same name by Walter Savage Landor.

Gellatley (*gel'at-li*), **Davie.**—The name of a poor fool in Sir Walter Scott's novel of *Waverley*.

Geneviève (*zhen-vyāv'*).—(1) The heroine of a ballad by Coleridge. (2) Under the form *Genovefa*, the name occurs in a German myth as that of the wife of the Count Palatine Siegfried, in the time of Charles Martel. Upon false accusations her husband gave orders to put her to death, but the servant intrusted with the commission suffered her to escape into the forests of Ardennes, where she lay concealed, until by accident his husband discovered her retreat, and recognized her innocence.

Genevra.—A lady in Aristo's *Orlandos' Furioso*. Her honor is impeached, and she is condemned to die unless a champion appears to do combat for her. Her lover, Ariodantes, answers the challenge, kills the false accuser, and weds the dame. Spenser has a similar story in the *Faërie Queene*, and Shakespeare availed himself of the main incident in his comedy of *Much Ado About Nothing*.

Geraint (*ge-rānt*), **Sir.**—One of the knights of the Round Table. His story is told in Tennyson's *Idylls of the King* under *Geraint and Enid*.

Geraldine.—A name frequently found in romantic poetry, especially Scott's *Lay of the Last Minstrel*. The name is said to have been adopted from the heroine connected with Surrey, whose praises are celebrated in a famous sonnet.

Gertrude of Wyoming.—Heroine of a poem by Thomas Campbell.

Gesta Romanorum (*jes'tä rō-ma-nō'rum*).—A collection of old romances compiled by Pierre Bercheure, prior of the Benedictine convent of St. Eloi, Paris. Shakespeare, Spenser, Gower, and many later writers have gone to this source. It took its present form in England about the beginning of the fourteenth century, the foundation coming from Roman writers, to which were added religious and mystical tales.

Giaour (*jour*), **The.**—Byron's tale called *The Giaour* is represented as told by a fisherman, a Turk, who had committed a crime which haunted him all his life. See *Hassan*.

Gibbie, Goose.—A half-witted boy in Scott's *Old Mortality*.

Gibbie, Sir.—A simple-hearted, fine character in George Macdonald's novel by the same name.

Giant Despair.—*Pilgrim's Progress*, Bunyan. A giant who is the owner of Doubting Castle, and who, finding Christian and Hopeful asleep upon his grounds, takes them prisoners, and thrusts them into a dungeon.

Giant Grim.—*Pilgrim's Progress*, Bunyan. A giant who seeks to stop the march of the pilgrims to the Celestial City, but is slain in a duel by Mr. Great-heart, their guide.

Giant Slay-good.—*Pilgrim's Progress*, Bunyan. A giant slain in a duel by Mr. Great-heart.

Gil Blas (*zhēl blās*).—A romance by Le Sage. The hero is the son of Blas of Santillanê, squire or "escudero" to a lady, and brought up by his uncle, Canon Gil Perês. Gil Blas went to Dr. Godinez's school of Oviedo and obtained the reputation of being a great scholar. He had fair abilities, a kind heart, and good inclinations, but was easily led astray by his vanity. Full of wit and humor, he was lax in his morals. Duped by others at first, he afterward played the same devices on those less experienced. As he grew in years, however, his conduct improved, and when his fortune was made, he became an honest, steady man.

Glaucus (*glâ'kus*).—A fisherman of Bœotia who has become the fisherman's patron deity.

Glaucus.—Son of Hippolytus. Being smothered in a tub of honey, he was restored to life by Æsculapius.

Gloriana.—In Spenser's *Faërie Queene*, the "greatest glorious queen of Faëry land."

Glumdalca (*glum-dal'kä*).—*Tom Thumb*, Fielding. Queen of the giants, captive in the court of King Arthur.

Glumdalclitch (*glum-dal'klich*). — *Gulliver's Travels*, Swift. A girl nine years old "and only forty feet high." Being such a "little thing," the charge of Gulliver was committed to her during his sojourn in Brobdingnag.

Glumms.—*Peter Wilkins*, Robert Pullock. The male population of the imaginary country Nosmubdsgrsutt, visited by Peter Wilkins. Both males and females had wings which served both for flying and for clothes.

Godiva (*gō-dī'vă*).—A poem by Alfred Tennyson. The story of the lady and *Peeping Tom of Coventry* is told in full by Dugdale. Godiva was the wife of Leofric, earl of Mercia, and undertook to ride naked through the town if he would remit a tax under which the people groaned. The earl consented and the lady kept her word.

Golden Ass, The.—A romance in Latin by Apuleius. It is the adventures of Lucian, a young man who had been transformed into an ass, but still retained his human consciousness. It tells us the miseries which he suffered at the hands of robbers, eunuchs, magistrates, and so on, till the time came for him to resume his proper form. It is full of wit, racy humor, and rich fancy, and contains the exquisite episode of Cupid and Psyche.

Golden Legend, The.—The title of an ecclesiastical work in one hundred and seventy-seven sections, dating from the thirteenth century, written by one James de Voragine, a Dominican monk, and descriptive of the various saints' days in the Roman calendar. It is deserving of study as a literary monument of the period, and as illustrating the religious habits and views of the Christians of that time.

Goneril (*gon'er-il*).—The oldest of the three daughters to King Lear, in Shakespeare's tragedy. Having received her moiety of Lear's kingdom, the unnatural daughter first abridged the old man's retinue, then gave him to understand that his company was not wanted and sent him out a despairing old man to seek refuge where he could find it. Her name is proverbial for filial ingratitude.

Gonzalo (*gon-zā'lō*).—An honest old counselor in Shakespeare's *Tempest*, a true friend to Prospero.

Goody Blake.—A character in Wordsworth's poem entitled *Goody Blake and Harry Gill*. A farmer forbids old Goody Blake to carry home a few sticks, which she had picked up from his land, and in revenge she invokes upon him the curse that he may "never more be warm;" and ever after "his teeth they chatter, chatter still."

Goody Two-Shoes.—The name of a well-known character in a nursery tale by Oliver Goldsmith. Goody Two-Shoes was a very poor child, whose delight at having a pair of shoes was unbounded. She called constant attention to her "two-shoes" which gave her the name.

Gradgrind (*grad'grīnd*).—A hardware merchant in Dickens' *Hard Times*. He is a man of hard facts and cultivates the practical. His constant demand in conversation is for "facts." He allows nothing for the weakness of human nature, and deals with men and women as a mathematician with his figures.

Gradgrind, Mrs.—Wife of Thomas Gradgrind. A little, thin woman, always taking physic, without receiving from it any benefit.

Gradgrind, Tom.—Son of the above, a sullen young man, much loved by his sister.

Gradgrind, Louise.—A faithful daughter and sister.

Grandison, Sir Charles.—The hero of Richardson's novel *The History of Sir Charles Grandison*. Designed to represent his ideal of a perfect hero—a union of the good Christian and the perfect English gentleman.

Gratiano (*grā-tē-ā'no*).—A friend to Antonio and Bassanio in Shakespeare's *Merchant of Venice*. He "talks an infinite deal of nothing, more than any man in Venice." (2) Brother to Brabantio, in Shakespeare's tragedy of *Othello*. (3) A character in the Italian popular theater called *Commedia dell' Arte*. He is represented as a Bolognese doctor, and has a mask with a black nose and forehead and red cheeks.

Great-Heart, Mr.—In Bunyan's *Pilgrim's Progress*, the guide of Christian's wife and children upon their journey to the Celestial City.

Gremio (*grē'mi-ō*).—In Shakespeare's *Taming of the Shrew*, an old man who wishes to wed Bianca.

Griffin-feet.—*Fairy Tales*, Comtesse d'Aulnoy. The mark by which the Desert Fairy was known in all her metamorphoses.

Grimalkin.—A cat, the spirit of a witch. Any witch was permitted to assume the body of a cat nine times.

Grimwig.—*Oliver Twist*, Dickens. An irascible old gentleman, who hid a very kind heart under a rough exterior. He was always declaring himself ready to "eat his head" if he was mistaken on any point on which he passed an opinion.

Griselda (*gri-zel'dă*), **The Patient.**—A lady in Chaucer's *Clerk of Oxenford's Tales*, immortalized by her virtue and her patience. The model of womanly and wifely obedience, she comes victoriously out of cruel and repeated ordeals. The story of Griselda is first told in the Decameron. Boccaccio derived the incidents from Petrarch, who seems to have communicated them also to Chaucer, as the latter refers to Petrarch as his authority.

Grub Street, London, is thus described in Dr. Johnson's dictionary: "Originally the name of a street near Moorfields, in London, much inhabited by writers of small histories, dictionaries, and temporary poems, whence any production is called Grub street." The name was freely used by Pope, Swift, and others.

Grundy.—"What will Mrs. Grundy say?" (What will our rivals or neighbors say?) The phrase is from Tom Morton's *Speed the Plough*, but "Mrs. Grundy" is not introduced into the comedy as one of the *dramatis personæ*. The solicitude of Dame Ashfield, in this play, as to "what will Mrs. Grundy say?" has given the latter great celebrity, the interrogatory having acquired a proverbial currency.

Gudrun (*gō-drön'*).—*Edda*, Sämund Sigfusson. A lady, married to Sigurd by the magical arts of her mother and on the death of Sigurd to Atli (Attila), whom she hated for his cruelty, and murdered. She then cast herself into the sea, and the waves bore her to the castle of King Jonakun, who became her third husband.

Gudrun.—North-Saxon poem. A model of heroic fortitude and pious resignation. She was the daughter of King Hettel (Attila), and the betrothed of Herwig, king of Heligoland.

Guendolen (*gwen'dō-len*).—A fairy whose mother was a human being.

Guildenstern.—The name of a courtier in Shakespeare's tragedy *Hamlet*.

Guinevere (*gwin'e-ver*), or **Guenever.**—A corrupt form of *Guanhumara*, daughter of King Leodegrance of the land of Camelyard. She was the most beautiful of women, was the wife of King Arthur, but entertained a *liaison* with Sir Launcelot du Lac. Arthur, when informed of the conduct of Launcelot, went with an army to Brittany to punish him. Mordred, left as regent, usurped the crown, proclaimed that Arthur was dead, and tried to marry Guinevere; but she shut herself up in the Tower of London, resolved to die rather than marry the usurper. When she heard of the death of Arthur, she stole away to Almesbury, and became a nun.

Gulliver, Lemuel.—The imaginary hero of Swift's celebrated satirical romance known as *Gulliver's Travels*. He is represented as being first a surgeon in London, and then a captain of several ships. After having followed the sea for some years he makes in succession four extraordinary voyages.

Gummidge (*gum'ij*), **Mrs.**—In Dickens' novel of *David Copperfield*, described herself as a "lone, lorn, creetur, and everythink that reminds me of creeturs that ain't lone and lorn goes contrairy with me."

Gurton, Gammer.—The heroine of an old English comedy, long supposed to be the earliest in the language.

Guy Mannering.—The second of Scott's historical novels, published in 1815, just seven months after *Waverley*. The interest of the tale is well sustained; but the love scenes, female characters, and Guy Mannering himself are quite worthless. Not so the character of Dandy Dinmont, the shrewd and witty counselor Pleydell, the desperate, sea-beaten villainy of Hatteraick, the uncouth devotion of that gentlest of all pedants, poor Dominie Sampson, and the savage, crazed superstition of the gypsy-dweller in Derncleugh.

Guyon (*gī'on*).—The impersonation of Temperance or Self-government in Spenser's *Faërie Queene*. He destroyed the witch Acrasia, and her bower, called the "Bower of Bliss." His companion was Prudence. Sir Guyon represents the quality of temperance in the largest sense; meaning the virtuous self-government which holds in check not only the inferior sensual appetites but also the impulses of passion and revenge.

Guy, Sir, Earl of Warwick.—The hero of a famous English legend, which celebrates the wonderful achievements by which he obtained the hand of his ladylove, the fair Felice, as well as the adventures he subsequently met with in a pilgrimage to the Holy Land. He is reputed to have lived in the reign of the Saxon King Athelstan. The romance of Sir Guy, mentioned by Chaucer in the *Canterbury Tales*, cannot be traced further back than the earlier part of the fourteenth century. His existence at any period is very doubtful.

H

Hadad.—One of the six wise men led by the guiding star to Jesus.

Hagen.—The murderer of Siegfried, in the German epic, the *Nibelungenlied*. He is a pale-faced dwarf, who knows everything and whose sole desire is mischief. After the death of Siegfried he seized the "Nibelung hoard," and buried it in the Rhine, intending to appropriate it. Kriemhild invited him to the court and had him slain.

Haidee (*hī-dē'*).—A beautiful young Greek girl in Byron's poem, *Don Juan*. She is called the "beauty of the Cyclades."

Hakim.—*The Talisman*, Scott. Saladin, in the disguise of a physician, visited Richard Cœur de Lion in sickness; gave him a medicine in which the "talisman" had been dipped, and the sick king recovered.

Hamlet.—A tragedy by Shakespeare. The chief character is Hamlet, prince of Denmark. Th ghost of his father appears to him, and urges him to avenge his murder upon his uncle. But the prince feigns madness, and puts off his revenge from day to day by "thinking too precisely on the event." Hamlet's mother had married Claudius, king of Denmark, after the death of her former husband. Claudius prepared poisoned wine, which he intended for Hamlet; but the queen, not knowing it, drank it, was poisoned and died. Hamlet, seeing his mother fall dead, rushed on the king and killed him almost by accident, and is killed himself by a poisoned rapier in the hands of Laertes.

Hanswurst (*hăns'wŏrst*).—A pantomimic character formerly introduced into German comedies. It corresponds to the Italian *Macaroni*, the French *Jean Potage*, and the English *Jack Pudding*.

Hardcastle, Mr.—A character in Goldsmith's comedy of *She Stoops to Conquer*, represented as prosy and hospitable.

Hardcastle, Mrs.—A very "genteel" lady indeed. Tony Lumpkin is her son by a former husband.

Hard Times.—A novel by Dickens. Bounderby, a street Arab, raised himself to banker and cotton prince. When past fifty years of age he married Louisa, daughter of Thomas Gradgrind. The bank was robbed, and Bounderby believed Stephen Blackpool to be the thief, because he had dismissed him from his employ. The culprit was Tom Gradgrind, the banker's brother-in-law, who escaped out of the country. In the dramatized version, the bank was not robbed, but Tom removed the money to another drawer for safety.

Harlequin (*hăr'le-kin*, or *-'kwin*).—The name of a well-known character in the popular extemporized Italian comedy.

Harlowe, Clarissa.—The heroine of Richardson's novel entitled *The History of Clarissa Harlowe*. In order to avoid a marriage urged upon her by her parents, she casts herself on the protection of Lovelace, who grossly abuses the confidence thus reposed in him. He subsequently proposes to marry her, but Clarissa rejects the offer.

Haroun-al-Raschid (*hă-rōn'ăl-rash'id*).—Caliph of the Abbasside race, contemporary with Charlemagne, and, like him, a patron of literature and the arts. Many of the tales in the *Arabian Nights* are placed in the caliphate of Haroun-al-Raschid.

Harpagon (*ăr-pā-gōn'*).—The hero of Molière's comedy of *L'Avare*, represented as a wretched miser.

Harpier, or **Harper.**—Some mysterious personage referred to by the witches in Shakespeare's tragedy *Macbeth*.

Hassan (*hăs'săn*).—*The Giaour*, Byron. Caliph of the Ottoman empire, noted for his hospitality and splendor. In his seraglio was a beautiful young slave named Leila, who loved a Christian called the Giaour. Leila is put to death by an emir, and Hassan is slain by the Giaour. Caliph Hassan has become the subject of popular romance.

Hassan, Al.—The Arabian emir of Persia, father of Hinda, in Moore's *Fire Worshipers*.

Hatto (*hăt'tō*).—In German legend, an archbishop of Mentz in the tenth century, who, for his hardheartedness to the poor in time of famine, was eaten by mice in the "Mouse Tower" on an island in the Rhine near Bingen. Robert Browning has made this legend the subject of a poem.

Havelock the Dane (*hav'e-lok*).—A fisherman, known as Grim, rescued an infant named Havelok, whom he adopted. This infant was the son of the king of Denmark, and when the boy was restored to his royal sire Grim was laden with gifts. He built the town which he called after his own name. This is the foundation of the mediæval tales about *Havelock the Dane*.

Hazlewood, Sir Robert.—The old baronet of Hazlewood.

Hazlewood, Charles.—*Guy Mannering*, Scott. Son of Sir Robert. In love with Lucy Bertram, whom he marries.

Heart of Midlothian, The.—A novel by Sir Walter Scott, published in 1818. It has for heroines Jeanie and Effie Deans. Among the other characters are Dumbiedykes and Madge Wildfire. It has often been dramatized. "The Heart of Midlothian" was the popular name for the tollbooth at Edinburgh, the capital of the county of Midlothian.

Heep, Uriah.—*David Copperfield*, Dickens. A detestable character, who, under the garb of the most abject humility, conceals a diabolic malignity. Mrs. Heep, Uriah's mother, was a character equally to be despised for her hypocritical assumption of humility.

Helena.—(1) A lady in Shakespeare's *Midsummer Night's Dream*, in love with Demetrius. (2) The heroine of Shakespeare's *All's Well That Ends Well*, in love with Bertram, who marries her against his will and leaves her, but is finally won by the strength of her affection. (3) A character in an old popular tale, reproduced in Germany by Tieck.

Hermann and Dorothea.—The hero and heroine of Goethe's poem of the same name.

Hermengyld (*her'men-gild*).—*Canterbury Tales*, Chaucer. The wife of the lord-constable of Northumberland. She was converted by Constance, but was murdered by a knight. Hermengyld at the bidding of Constance restored sight to a blind Briton.

Hermia (*her'mi-ă*).—A lady in Shakespeare's *Midsummer Night's Dream*, in love with Lysander.

Hermione.—The heroine of the first three acts of Shakespeare's *Winter's Tale*.

Hernani, or **Ernani.**—The hero of Victor Hugo's tragedy of the same name, and of Verdi's opera, founded on the play. He was a Spanish noble in revolt against the Emperor Charles V. and killed himself from a high sense of honor.

Hiawatha (*hi-a-wâ'tă*, or *hi-a-wâ'thă*), **The Song of.**—A poem by Henry Wadsworth Longfellow, written in the following peculiar measure:

> Should you ask me, "Whence these storied?"
> . . . . . .
> I should answer, I should tell you,
> . . . . . .
> "I repeat them as I heard them
> From the lips of Nawadaha,
> The musician, the sweet singer."

The poem is entirely devoted to a description of life among the aboriginal tribes of America. It was published in 1855. Hiawatha is a mythical person believed by some of the North American Indians to have been sent among them to clear their rivers, forests, and fishing-grounds, and to teach them the arts of peace. When the white man came, then Hiawatha knew that the time of his departure was at hand, when he must go

> To the kingdom of Ponemah,
> The land of the Hereafter.

Highland Mary.—A song by Robert Burns, which Burns himself thought was in his happiest manner, and which refers, he says, to one of the most interesting passages of his youthful days. By this he means his attachment to Mary, a servant in the family of Mr. Hamilton, "who will be remembered," says Alexander Smith, "with Dante's Beatrice and Petrarch's Laura." It was arranged that the lovers should become man and wife, and that Mary should go to her friends to prepare for the wedding. But before her departure came the farewell scene so touchingly described in the poem:

> Our parting was fu' tender;
> And, pledging aft to meet again,
> We tore oursels asunder:
> But oh! fell death's untimely frost
> That nipt my flower sae early!
> Now green's the sod, and cauld's the clay,
> That wraps my Highland Mary!

Hilda.—A New England girl of the most sensitive delicacy and purity of mind, in Hawthorne's romance, *The Marble Faun*. She is an artist, living in Rome, and typifies, perhaps, the conscience.

Hildebrand (*hil'de-brand*).—The Nestor of German romance, a magician and champion.

Hildesheim (*hil'des-hīm*).—In an old German legend, the monk of Hildesheim, doubting how a thousand years with God could be "only one day," listened to the melody of a bird, as he supposed, for only three minutes, but found that he had been listening to it for a hundred years.

Hobbididance.—The name of one of the fiends mentioned by Shakespeare in *Lear*, and taken from the history of the Jesuits' impostures.

Hohenlinden (*hō"en-lin'den*).—A poem by Thomas Campbell, published in 1802, celebrating the battle of Hohenlinden, gained by Moreau and the French over the Austrians. The poet visited the battle field on December 3, 1800.

Holofernes (*hol-ō-fer'nēz*).—(1) A pedant living in Paris, under whose care Gargantua is placed for instruction. (2) A pedantic schoolmaster in Shakespeare's *Love's Labor's Lost*.

Holt, Felix.—The hero of George Eliot's novel by the same name.

Home, Sweet Home.—A popular lyric contained in the drama of *Clari, the Maid of Milan*, by John Howard

Payne. The beautiful melody to which it has been wedded is said to be of Italian or Sicilian origin, though by some it is attributed to Sir Henry Rowley Bishop. Perhaps the latter merely arranged and harmonized it.

Homilies.—The latter entries in the Peterborough *Chronicle* and a few homilies are almost all that we have left of the literature of the twelfth century. Some of these homilies are copied or imitated from those of Ælfric.

Honeycomb (*hun'i-kōm*), **Will.**—One of the members of the imaginary club by whom the *Spectator* was professedly edited. He is distinguished for his graceful affectation, courtly pretension, and knowledge of the gay world.

Honeyman, Charles.—A fashionable preacher in Thackeray's novel, *The Newcomes*.

Hopeful.—A pilgrim in Bunyan's *Pilgrim's Progress*, who accompanies Christian to the end of his journey.

Hop-o'-my-Thumb.—A character in the tales of the nursery. Tom Thumb and Hop-o'-my-Thumb are not the same, although they are often confounded. Tom Thumb was the son of peasants, knighted by King Arthur, and was killed by a spider. Hop-o'-my-Thumb was a nix, the same as the German "*daumling*," the French "*le petit pouce*," and the Scotch "Tom-a-lin" or "Tamlane." He was not a human dwarf, but a fay.

Horatio (*hō-rā'shi-ō*).—*Hamlet*, Shakespeare. An intimate friend of Hamlet, a prince, a scholar, and a gentleman.

Horatius Cocles.—Captain of the bridge gate over the Tiber. He and two men to help him held the bridge against vast approaching armies. Subject and title of a poem by Lord Macauley.

Horner, Jack.—The name of a celebrated personage in the literature of the nursery. A Somersetshire tradition says that the plums which Jack Horner pulled out of the Christmas pie alluded to the title deeds of the abbey estates at Wells, which were sent to Henry VIII., in a pasty, and were abstracted on the way by the messenger, a certain Jack Horner.

Hortense (*hôr-ten's*, or *or-tons'*).—*Bleak House*, Dickens. The vindictive French maid-servant of Lady Dedlock. In revenge for the partiality shown by Lady Dedlock to Rosa, Hortense murdered Mr. Tulkinghorn, and tried to throw the suspicion of the crime on Lady Dedlock.
